INTRODUCTION TO SELECTING A MICROPHONE—THE BASICS

Dynamic or Condenser?

One of the first things that you need to know before purchasing is whether you need a dynamic or condenser microphone. This is the component which captures sound by changing one form of energy into another. In this process, acoustic energy is transformed into electrical energy. Mic transducers utilize either dynamic or condenser transducer elements.

Dynamic Microphones:

These fall into two main groups, ribbon and moving coil. All dynamic microphones utilize the more rugged moving coil principle. This is like a loudspeaker in reverse: a coil of wire is connected to the microphone diaphragm and is held in a magnetic field. Sound waves change the pressure of the air they travel through. This causes the diaphragm to vibrate, thus, the coil moves in the magnetic field and an audio frequency voltage is induced. This signal is balanced, grounded and of low resistance and can be connected directly to the microphone output of a tape recorder or mixing console without any electronics or supply voltage being needed in the microphone. Moving coil mics are extremely rugged and reliable. Consequently, they can be used in difficult working situations where more fragile microphones would not be suitable. The main uses are in broadcast reporting situations and in live stage work.

Condenser and Electret Condenser Microphones:

The condenser transducer is made up of two plates in a capacitor arrangement. The front plate is the diaphragm and responds to acoustic pressure changes. The back plate is fixed. An electrical charge is applied to either the front diaphragm or back plate depending on the design. As acoustic pressure moves the diaphragm, the capacitance changes between the plates and a voltage proportionate to the acoustic signal is produced. The electrodes used in electret (pre-polarized) condensers are manufactured from a special synthetic material. This material has a unique quality, being able to permanently store an electric charge; the charge is thus ‘frozen’ in the electret material. No external polarizing voltage is required for the capsule and a low voltage power source can power the remainder of the mic’s circuitry. In contrast to dynamic mics, electret condenser mics can be very compact. This makes it possible to design ultra-small clip-on lavalier mics, and small modular capsules. Back-electret condenser mics use 48v phantom power (P 48) for external power.

Pros:

Dynamic

• Rugged
• Low self-noise
• Lower Cost
• No power required
• Less prone to weather and RF interference

Condensers

• More sensitive
• Better transients and frequency response
• Useful small or large diaphragms
• Multiple patterns in one housing

Cons:

Dynamic

• Lower sensitivity/output level
• Slower transient response
• Usually larger and heavier

Condensers

• Higher self-noise
• More fragile, more expensive
• Require power source
• Prone to weather/RF interference

Reading Microphone Specifications

The most common and useful specs for the microphone selection process are Polar (or pick-up) Pattern, Polar Response Graphs and Frequency Response Graphs. These specs, in addition to, the most important decision factor of all, your ear, can tell you how appropriate a specific mic will be for your application.

Polar Patterns:

One of the goals in microphone design is to make the transducer element more sensitive to sounds coming from a certain direction. Its directionality plays a key role the application it will be selected for — whether it’s capturing live vocals or a kick drum. A polar pattern illustrates this directionality by showing the general sensitivity of a microphone from different directions using a 1 kHz (kiloHertz) test tone. This is sometimes referred to as “Rejection @ 1 kHz.” There are 5 common polar patterns: Omni-directional, Bi-directional or Figure-8, Cardioid, Super Cardioid and Lobar.

Pros:

• Better transients and frequency response
• More sensitive

Cons:

• Prone to weather/RF interference
• Less prone to weather and RF
• No power required
• Lower Cost
• Lower self-noise

For Any Inquiries Regarding Your Order, Call Our Customer Service:

(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549

As you look at the representation of a microphone’s polar pattern you can see its ability to reject sounds from a given direction. The area where a mic completely rejects sound is its “null” point. A cardioid mic has a null point that is directly to the rear of the mic. A super-cardioid mic or lobar mic has null points at its rear sides. Knowledge of a microphone’s null point is paramount for proper mic placement relative to loudspeaker arrays and other microphones.

Polar Response Graphs:

Polar response charts, like those shown at right, illustrate a mic’s pickup pattern at various frequencies. By comparing the size and shape of the various frequency plots, you can get a good sense of a mic’s off-axis response or, how the mic discriminates frequencies hitting its capsule from different angles. The graph is drawn as if the mic capsule was positioned in the center of the graph facing 0 degrees. To make polar plots less cluttered, only one side of each frequency plot is shown even though its pattern is symmetrical. Generally, directional mics become more omni-directional at lower frequencies. This is because higher frequencies have shorter wavelengths than lower frequencies and are easier to control in terms of their directivity.

As you look at the representation of a microphone’s polar pattern you can see its ability to reject sounds from a given direction.
SELECTING A MICROPHONE—THE BASICS

Frequency Response Graphs:
Polar response graphs are often accompanied by frequency response graphs, which illustrate output levels of the microphone over its operating range from lowest to highest frequency. The limits of human hearing are contained within the frequency spectrum from 20 Hertz (cycles per second) to 20,000 Hertz. As you look at the graph notice that these are shown from left to right along the bottom. The vertical figure on the left can either be a measurement of the relative response measure in decibels (dB) [see MKH 40 Graph below]. In this scale, a 3 dB increase or decrease is considered to be noticeable to most individuals and a 10 dB change is considered to be twice as soft or twice as loud as the original sound. Other graphs will use a dBv scale as a means of expressing the output voltage of a microphone at different frequencies [see MD 421 II Graph below]. The flat response of the MKH 40 will have a more neutral character and is suitable for a wide range of applications. The peaked response of the MD 421 II in contrast shows a mic with a “presence peak” beginning at around 2 kHz to add emphasis to upper mid-range frequencies and increase vocal intelligibility. Also, certain mics feature bass roll-off switches which attenuate low-end rumble without altering the general character of the microphone. These roll-off effects will also be illustrated on the graph by dashed lines.

Sensitivity:
The rating of a microphone’s output voltage for a particular SPL input. Sennheiser mics are subjected to 1 kHz sine wave at a level of 1 Pascal which is the same as saying 94 dB SPL. The resulting output voltage of the microphone is given in millivolts and expressed as “1.8 mV/Pa” for example. This provides a means of comparison between microphones.

Maximum SPL:
A measure of how much Sound Pressure Level (SPL) the microphone can tolerate before distortion. A 1 kHz tone is presented to the mic and the maximum output prior to distortion is measured. The spec sometimes written as a two-part figure, for example “140 dB SPL, 1 kHz z @ 0.5% T.H.D.”

Impedance (Nominal):
The lower the better. You want an impedance of at least five times lower than that of the console you’re connecting the microphone to. The term “nominal” refers to an average since impedance changes slightly over the frequency range. A lower impedance value also means you can run a longer cable without loss of signal integrity.
Remember: Regardless of the number of mics you use and whichever miking techniques you employ, experimentation is the key to optimizing sound.

Microphone introduction courtesy of Sennheiser USA.

Microphone Setup and Miking Techniques

3-to-1:
Whenever multiple mics are used in a stage setup, the 3-to-1 rule may be employed to minimize phase cancellation. The rule states that the distance between mics must be three times the distance from each microphone and its sound source. The sound picked up by the more distant mic will be at least 12dB less than the sound picked up by the closer mic. Generally, the 3-to-1 rule is based on use with omni-directional mics. It can be relaxed to some extent for unidirectional mic use.

Stereo Mic Techniques:
Stereo miking refers to a number of miking setups where we position and aim usually two microphones to capture left-to-right soundscapes of one or more sound sources. The auditory nerves inside our ears can detect phase and amplitude differences from played back sounds recorded in stereo. This allows us to localize sounds that are wider, spacious and more pronounced in the mix. Stereo miking is sometimes used when the size of an ensemble makes close-miking impractical.

There are four common miking arrangements for stereo recording: XY or Coincident Pair, Near Coincident Pair, Spaced Pair and MS (mid-side):

XY or Coincident Pair: XY miking uses two directional or cardioid mics angled between 90 and 135° apart and placed as close together as possible. Sound hits both mic capsules at the same time, hence the term coincident to describe the technique. However, sounds to the left or right of center hit one mic on-axis and one mic off-axis resulting in an audible level discrepancy between both capsules, creating a stereo image.

Near Coincident Pair: The only difference between XY and Near Coincident Pair stereo miking is the introduction of space between both mic capsules. This effectively creates a time difference and level difference between both receiving capsules. The result is a well-defined stereo image that has more depth and sharpness than a coincident pair. There are several industry references for this type of setup. For instance, French Broadcasting utilize the ORTF technique which specifies angling cardioid mics at 110° with a capsule spacing of approximately 7 inches.

Spaced Pair: This stereo miking arrangement points two mics in the same direction with a large space between them. Only sounds emanating from the direct center arrive at both mics at the same time. Sounds to the left or right of center arrive sooner or later than the other. As a result, time delay cues occur between capsules while no significant amplitude differences occur. Usually, two omni-directional mics are positioned at least two feet from each other or as distant as 10 to 12-ft. from each other. Sometimes a very large spacing between two mics produces a sonic hole and a third microphone may be added.

MS (Mid-Side) Pair: Mid-side stereo miking is a specific type of coincident pair miking using one cardioid and one bi-directional mic. This arrangement positions the bi-directional mic at 90° to the sound source while the cardioid is pointed directly at the sound source. This miking technique is more complex because it requires a decoding process for playback. Basically, the bi-directional mics output is split and one side is phase-reversed. Upon playback, the two mic outputs must be panned hard left and hard right. The resulting stereo image has outstanding center stage sharpness and localization accuracy.

Microphone introduction courtesy of Sennheiser USA.
C 451 B Classic Condenser Microphone

Tapping the sound of a legendary capsule, AKG has created a modern version of the classic microphone. Combining modern design with a classic sound, the C 451 B is the modern interpretation of AKG’s former C451 EB + CK1 modular microphone. Back by popular demand, the C 451 B duplicates the C 451 EB + CK1’s acoustics, while incorporating state-of-the-art electronics in an integrated mechanical design (not a modular one). The result is dramatically improved specifications with outstanding price/performance while the legendary response of the CK1 capsule—including the characteristic slight high-frequency boost—is maintained.

At home anywhere from commercial recording facilities to the personal studio and live touring sound, the cardioid C 451 B offers a switchable 10dB/20dB pad and a 12 dB/octave bass low frequency cut filter. Transformerless output ensures a flat uncolored low frequency response and eliminates potential distortion from low frequencies at high SPL’s. Ideal for any application where sounds, particularly their transient content, need to be captured with maximum accuracy, such as overhead miking of drums, percussive instruments, or guitar. The C 451 B’s airy sound, high overload limit of the capsule and electronic circuitry, and improved engineering are a solid foundation for creating another legend.

In the 1960s, US sound engineers regarded big, heavy microphones as the epitome of acoustic quality while their European colleagues demanded much smaller microphones. Large-diaphragm transducers have a characteristic response that is perfectly suited for the natural sound of certain instruments and provides a pleasant, warm sound. However, if a sound is to be captured with maximum accuracy small mics are superior because the vibrations of a small diaphragm are much easier to control. In addition, small mics cause much less turbulence within a sound field.

In 1969 a compromise was reached and the C 451 was launched. The C 451 system (also called the CMS Condenser Modular Series) comprised a preamp and several interchangeable screw-on capsules. It was made until 1993 and then replaced with the AKG Blue Line. However, the specific response of the CK1 capsule has remained in demand until this day.

Microphones That Sound Better

Designing microphones and headphones is both a science and an art. This is a concept well understood at AKG. Over the past 50 years, they have consistently married the two to create some of the truest and most natural-sounding microphones in history. AKG was founded in 1947 in the city of Vienna, Austria, home to some of the finest composers of all time—Beethoven, Mozart, Brahms, Haydn, Schubert, Mahler, Schoenberg and, of course, the Strauss family, to name a few. When it comes to crafting products such as theirs, the critical judgements of a finely trained ear—something Vienna has no shortage of—can make the crucial difference between a good microphone and a legendary one. The recipient of over 1400 patents, AKG’s research and development laboratories are the largest, best-equipped and most productive of their kind in the world. They employ more than 50 engineers in full-time research and development, and provide them with the most advanced tools available for computerized design, testing and performance simulation.
C 1000S Dual Pattern Microphone
A “do-it-all” microphone famous for its flexibility, the C 1000S is a condenser mic designed for assignment on stage or in the studio. By placing the supplied acoustical converter over the end of the mic capsule— its polar pattern can be quickly converted from cardioid to hypercardioid — without affecting its on-axis response. The on-axis response of the C 1000S has a gentle (-6 db/octave) roll-off below 200 Hz which has been tailored for the normal close-in use of cardioid and hypercardioid microphones in studio recording and sound reinforcement applications. The mic also includes an attachable Presence Boost Adapter (PB1000) for increased intelligibility.

- Rugged construction qualifies the C 1000S for demanding road work, yet pristine condenser response and low noise make it ideal for recording in home/project studios.
- High sensitivity, high SPL handling with low distortion (137 dB for 1.0 % THD).
- Extended low and high frequency response is tailored for close proximity to sound sources.
- Presence Boost Adapter (PB1000) can be attached to create an emphasis of the higher frequencies around 5 to 9 kHz by 3 to 5 dB. This not only improves intelligibility but is also advantageous when recording instruments with high frequency content.
- PPC1000 Polar Pattern Converter allows quick change from cardioid to hypercardioid when a more directional pickup pattern is required.
- Powered by 9-volt battery or 9 to 52v DC phantom power.
- Silent on/off switch is recessed to prevent inadvertent shutoff.
- Includes PB1000, PC1000S, A43 stand adapter, foam windscreen, and gig bag.

C 2000 B Cardioid with Roll-Off and Pad
An affordable high quality recording microphone, the C 2000 B is a small diaphragm condenser that captures the high frequency harmonic detail and true transient nature of the sound source while at the same time offers the higher sensitivity, low noise and extended bass response (flat to 100Hz) of a large diaphragm condenser. Ideal for acoustic instruments and percussion on stage or in the studio, the C 2000 B’s almost ruler-flat response provides a crystal-clear, “up-front” sound. A switchable bass rolloff filter for eliminating proximity effect and a switchable 10dB pre-attenuation pad let you adjust the mic’s response to all recording or live miking situations. Built-in pop screen reduces unwanted noise that may be caused by plosive sounds when you use the mic extremely close-in. Rugged construction, an elegantly styled die-cast metal housing, and silver-gray finish add to the professional level quality of the C 2000 B.

- Versatile, side-address cardioid condenser mic designed for professional and home studio applications or on-stage.
- Cardioid pattern provides an extremely flat on-axis frequency response with a 3 to 4 dB upper high-frequency boost between 8 and 12 kHz that adds clarity, even with ambient miking.
- One-half inch capsule element placed in a large baffle ring gives the C 2000 B more forward directionality at high frequencies.
- An integral bass cut switch provides a gentle 6 dB per octave roll-off below 500 Hz, compensating for the proximity effect (low frequency boost) associated with close miking.
- Added presence at very high frequencies is an asset in many miking situations, especially home recording studios.
- Self-noise floor is 20 dB (A), giving the mic an effective dynamic range of 120 dB.
- High SPL level 140 dB (150 dB with the integral 10 dB pre-attenuation pad engaged).
- Internal wiremesh grills and a massive metal housing protect against unwanted electrostatic interference.
- Includes SA41/1 stand adapter. Optional accessories include the B18E battery supply, and H100 external elastic shock suspension.
C 3000 B Cardioid with Roll-Off and Pad

Combining innovative design and efficient manufacturing, the all-purpose C 3000 B offers premium sound quality and durability for stage and studio—but at a price far below that of a premium studio mic. Ideal for cost-conscious performers and home/project studio owners, the C 3000 B’s capsule design features a gold-sputtered 1” mylar diaphragm to capture the distinctive character and purity of sound that is pure AKG. Sound is smooth, clear and open, with a vibrant presence that projects to the front of a mix. Bass roll-off and pre-attenuation switches let you tailor the mic for stage or studio. An internal suspension supports the capsule assembly, an integrated windscreen allows outdoor use, and a safety flange provides secure connections in hanging applications. Rugged die-cast construction and scratch-resistant silver-gray matte finish make the C 3000 B well suited to the rigors of touring as well.

- Gold-sputtered 1” (25mm) diameter mylar foil offers the warmth and transparency typically found in AKG mics.
- Capsule is internally shock mounted for low handling noise, while an internal foam sheath minimizes breath noise/pop with minimal attenuation of high frequencies.
- Mic is transformerless and accepts phantom power from 9 to 52v DC.
- Tailored for the modern studio, the C3000B has the typical AKG large diaphragm "signature contour," a slight dip at 2.5 kHz followed by a rise at 5 - 6 kHz and 9 - 11 kHz.
- Very low self noise floor of 14-dB-A and maximum level capability of 140 dB, produces an overall dynamic range of 126 dB. Via the 10 dB pad, mic range can be shifted up to 150 dB for close instrument miking.
- Cardioid pickup pattern is extremely well controlled, providing excellent off-axis rejection across the entire frequency band.
- A bass cut switch provides a gentle 6-dB per octave rolloff below 500 Hz, compensating for proximity effect in vocal recording.
- Supplied with H100 elastic suspension mount. Optional accessories include B18 battery, pop filter, and wind screen.

C 4000 B Multi-Pattern Microphone

Designed for studio use, the multi-pattern (omnidirectional, cardioid, and hypercardioid) C 4000 B condenser mic is equally at home in broadcast operations or on stage for the highest quality vocals. A true 1” large diaphragm premium microphone, the C 4000 B’s capsule has been carefully tuned to preserve the integrity of the source while offering mild compliments in the high frequencies. Open, clear and natural highs coupled with smooth, accurate lows make the C 4000 B an exemplary choice when employed on vocals and on a varying array of string instruments, brass and woodwinds. With all the on-board options the C4000B has the versatility to take on many tasks in commercial, project and personal studios as well as on a stage and in the broadcast studio.

- 1” thick gold-sputtered diaphragms provide extended high frequency performance.
- Transformerless output ensures low frequency accuracy and nearly non-existent self-noise of 8 dB-A.
- Switchable 12-dB/octave low cut filter at 100 Hz removes rumble or excessive proximity effect.
- Maximum SPL is 145 dB and overall dynamic range is an incredible 137dB—enough headroom for all day-to-day recording situations.
- Switchable 10 dB pad extends operating range even more. Use for distortion-free reproduction of extremely high sound pressure levels (up to 155 dB SPL)
- Mic is transformerless and accepts phantom power from 9 to 52v DC.
- Capsule is internally shock mounted for low handling noise, while an integrated windscreen reduces wind and breath noise.
- Includes the H 100 spider-type shock mount and W 4000 windscreen for demanding situations.

MICROPHONES

1˝ LARGE DIAPHRAGM CONDENSER MICS

12
**AKG**

1" LARGE DIAPHRAGM CONDENSER MICS

C 4500 B-BC “On Air” Broadcast Microphone

The C 4500 B-BC was developed to meet the demands associated with digital broadcasting. A front-address, large-diaphragm condenser microphone, the C 4500 B-BC is immune to electrostatic and magnetic fields and provides an extremely wide dynamic range and low self-noise. With the ever-increasing number of broadcast stations becoming “digital”—at least with their automatic control facilities—the on-air studios are more and more clustered with control computers. These computers and their associated monitors radiate electro-magnetic RF fields which can be a serious problem for nearby microphones. The C 4500 B-BC solves this problem with an all-metal housing and double screening of all acoustically open sections of the housing. Additional features include internal shock mounting, switchable -20 dB pre-attenuation pad, and a switchable low-frequency roll-off (6 dB/octave below 120 Hz).

- Main axis for sound entry is in the front of the mic. This allows the C 4500 B-BC to be positioned in front of the talent’s mouth without impeding their field of vision
- Multi-layer pop filter between the front grille and the capsule provides excellent suppression of vibrations and pop noise
- 6 dB per octave below 120 Hz bass-cut filter for frequency roll off and additional reduction of proximity effect
- Switchable -20 dB pre-attenuation pad for undistorted reproduction of extremely high sound pressure levels
- Operates on phantom power (9 to 52v DC)
- Extremely "voice-friendly" acoustics, requires no further processing after the mic
- Supplied with the H 100 spider-type shock mount and W 4000 windscreen for demanding situations

**SOLIDTUBE ‘Experience the Warmth’**

It has been said that the SOLIDTUBE is what a modern large diaphragm condenser microphone would look like if the transistor had never been developed. Everything about it is in fact modern, except the use of the ECC 83 (12AX7) vacuum tube. Designed from the ground up as a new expression of the tube philosophy—sound warmth and the generous margin of overload that tube/transformer output stages are known for—only the mic’s power supply makes use of solid state components. Much of the “signature” of large format condenser microphones lies in the geometry that surrounds the diaphragm assembly.

The SOLIDTUBE has a large housing/screen assembly which reacts minimally with the capsule, creating a broad +6 dB peak in response only above 10 kHz. Over most of the range the response lies within a window of ±2 dB. Midband pattern rejection at 180° is in excess of 20 dB. The microphone is response tailored for solo vocal and instrumental pickup in the studio, and as such has only a dedicated cardioid pattern.

- Dedicated cardioid pattern with response tailored to solo vocals and instrumentals in the modern studio
- Sensitivity is 20 mV/Pa and maximum SPL is 130 dB.
- Switchable -20 dB pre-attenuation pad for undistorted reproduction of extremely high sound pressure levels (up to 145dB SPL)
- Wide dynamic range of 110 dB in the studio
- Switchable 12-dB/octave low cut filter at 100 Hz removes rumble or excessive proximity effect
- Includes N-SOLIDTUBE power supply, all necessary cabling, an isolation shock mount, foam windscreen and a custom aluminum flight case
Multi-Pattern Large-Diaphragm Reference Microphones — The Classic Twins

The worldwide studio standard, the C 414 B-ULS delivers flawless performance and uncommon flexibility in the most demanding studio and concert sound applications. The crisp, full-bodied, and naturally open character of the C 414 B-ULS makes it a preferred choice for critical recording or reinforcement of vocals, piano, percussion, and other instruments with delicate transient content. The most ubiquitous studio condenser microphone in the world, the C 414 B-ULS is designed around dual back-to-back large one-inch, gold-sputtered diaphragms for multiple pickup patterns. The four selectable polar patterns (omni-directional, cardioid, hypercardioid, figure-8) precisely tailor response for maximum versatility, while two bass filter settings suppress unwanted low frequencies. Extremely low self-noise (14 dB-A) and high overload points combine for a remarkably wide 126 dB dynamic range. Switchable 10 or 20 dB internal pre-attenuation pads allow use on instruments producing over 150 dB SPL.

The C 414 B-TLII combines legendary C 12 acoustics and the latest generation of transformerless FET electronics. Although similar to the C 414 B-ULS in shape and features, the C 414 B-TL II differs in two important respects. First, the capsule is a faithful sonic recreation of the one used in AKG’s classic C12 tube microphone. Above 3 kHz, the C 414 B-TL II takes on vintage C12 characteristics, while below this point the response is ruler flat. Additionally, AKG’s computer-aided manufacturing techniques assure greater uniformity in response from microphone to microphone (early CK12’s were all slightly different in response, a consequence of individual hand-crafting). Second, the “Vintage TL” incorporates transformerless electronics for extended low-end reproduction with extremely low distortion. The result is a remarkable microphone that exceeds all requirements for digital recording, yet also captures the warmth, smoothness, and delicate openness cherished by artists the world over. Switchable polar patterns, pre-attenuation pads, and bass roll-off filters are the same as in the C 414 B-ULS.

Both mics include windscreen, spider suspension, and individually tested frequency response graphs.
Vintage Re-Issue Tube Microphone

Production of the original C 12 ceased in 1963, and over the years it gradually became a sought-after collectors’ item—a true legendary recording instrument acclaimed worldwide for its exquisite sound. The new C 12 VR is true to the original C 12’s electronic and acoustic design with only subtle refinements (made possible by modern manufacturing techniques and improvements in basic circuit components) made to increase overall robustness and reduce susceptibility to hum and noise.

With the recreated 1” twin diaphragm capsule design and the same 6072 vacuum tube at the heart of its circuitry, the C 12 VR ensures that even the most discriminating users will enjoy the trademark warmth, clarity and presence that characterized the original. Nine different polar patterns are available, any of which may be remotely selected from the N12 VR powering unit. Other user control features include two bass roll-off filters (also remotely selectable), switchable pre-attenuation pads, and a switchable 10 dB boost in nominal sensitivity. A large core-section output transformer minimizes low frequency distortion, and special shock mounting elements protect circuitry and provide acoustic isolation.

Supplied with power/remote unit, H15/T elastic shock mount suspension, 30’ cable, W42 foam windscreen, individually tested frequency response graph and a rugged aluminum carrying case.

H100 Spider Suspension

Supplied with the C 2000 B, C 3000 B, C 4000 B and C 414 B-TL II, the H100 is a universal shock mount that can be used for all microphones with shafts from 0.85 to 1”. The H100 Spider Suspension accepts most microphones, fits any standard mic stand, and is adjustable to any angle.

AKG Large-Diaphragm Technology

The heart of any high quality studio condenser microphone is its transducer capsule. The specific sound of a microphone depends on the way the transducer diaphragm is made and installed. For over 50 years, AKG has been making large-diaphragm condenser microphones with a vibrating diaphragm diameter of one inch (25mm). Electrical contact is established by the clamping ring so the entire diaphragm can vibrate freely.

The secret behind AKG’s pristine sound is the specific design of the diaphragms that shape the frequency response typical of AGK microphones. Between 2 and 3 kHz there is a 2-3 dB dip in sensitivity that is wide enough to remove any harshness and aggressiveness from the human voice. In addition, the diaphragm is designed to boost the frequency range from 4 kHz to 15 kHz. This high frequency emphasis contributes to actual and perceived “up-front localization” as demonstrated by measurements and listening tests. This is why AKG microphones are so popular worldwide. They will cut through the mix naturally and the signal will be up front, even at low levels.
AKG

ULTRA LINEAR SERIES (ULS)

Modular Condenser Microphone System

Based around the C 480 B preamplifier powering unit, the ULS system combines unparalleled performance with exceptional flexibility. Offering switchable cardioid, hypercardioid, omnidirectional, and highly directional shotgun elements, the ULS Series is designed for studio, broadcast and a variety of live sound and speech reinforcement applications in which state-of-the-art performance is mandated. Patented electronic circuitry coupled to a transformerless output stage assures completely linear transfer characteristics across the entire audio bandwidth, while achieving very low self-noise. This, in combination with a typical SPL handling capability of 140 dB means a dynamic range exceeding 125 dB, making the system suitable for the most critical digital recording applications. Gold plated switch and connector contacts guarantee consistent performance. A specially designed output stage drives excessively long cables with no signal degradation. A complete line of accessories is available.

C 480 B Preamplifier

The C 480 B accommodates the CK 61-ULS, CK 62-ULS, CK 63-ULS and the CK 69-ULS capsule. Newly designed, the preamp has a vastly improved noise floor, permitting self noise performance with the four capsules in the range of 9 to 11 dB-A. Maximum sound pressure levels in the range of 144 dB (with the -10 dB pad) can be attained with no greater than 0.5 % distortion. It has an integral low cut filter (12 dB/octave) can be set for either 150 or 75 Hz, and a three position control for normal (0 dB), elevated sensitivity (+6 dB), and attenuated (-10 dB) sensitivity. The C 480 B operates on 48v phantom powering.

CK 60 SERIES CONDENSER CAPSULES

Each of the “ULS” series capsules must surpass the strictest tolerances for accurate presentation of both on and off-axis source material. A three micron, gold sputtered diaphragm utilizes AKG’s uni-tension, double-stretched mylar for superb transient and frequency response unaltered by temperature and humidity shifts.

CK 61-ULS Cardioid Capsule

The broadband, ultra linear frequency response and uniform polar pattern of the CK 61-ULS make it ideal for critical recording/reinforcement applications where suppression of off-axis sound is desired. Includes the W 32 foam windscreen.

CK 62-ULS Omnidirectional Capsule

Same as CK 61-ULS, except for omnidirectional polar pattern. For more reverberant sound recordings. Includes W 32 foam windscreen.

CK 63-ULS Hypercardioid Capsule

Same as CK 61-ULS, except for hypercardioid polar pattern. Better off-axis rejection provides better channel separation and in many cases, higher gain before feedback. Includes W 32 foam windscreen.

CK 69-ULS 2-in-1 Shotgun Capsule

Two shotgun capsules in one, with quick and easy conversion from long to short shotgun applications without compromising sonic integrity. In its long shotgun configuration, the CK 69-ULS delivers perfect results for outdoor applications—getting sounds in sync with picture—or indoor front of stage recording/reinforcement from approximately 20 to 24”. Unscrew the front half of the interference tube and the same capsule becomes a short shotgun for use in TV, film and video close-up work. Additionally, the short shotgun mode resolves the problems associated with performing interviews in noisy environments.

The CK 69-ULS operates flawlessly in high humidity environments, and windscreens are provided for both long and short configurations. Convenient, quiver-type carrying case accommodates capsules, powering module, and W 48 and W 49 windscreens. Includes original frequency response curves. Matte black finish.

B & H EQUIPMENT LEASING AVAILABLE
Modular Condenser Mic System

The Blue Line Series consists of directional prepolarized condenser capsules and microphone configurations that are all compatible with a single powering/output assembly. With their unique snap-on attachment and modular construction, you can change capsules with different characteristics in seconds. Eight different capsules and a complete line of optional accessories—including an extension cable for operating the mic capsule up to 10’ from the powering/output module—offer a solution for every recording situation. Ideal for studio, live sound, and a variety of speech reinforcement applications—especially where the facility for switching capsules is a major advantage.

- The positive Modulok bayonet design allows changes to be made quickly
- Capsule designs employ gold sputtered diaphragms
- Self noise and maximum operating levels are exemplary, creating a very wide usable dynamic range for the most demanding operations. They also exhibit accurate axial response and uniform pattern control

**SE 300 B Transformerless Powering/Output Module**

The SE 300 B powering/output assembly is for use with all AKG Blue Line modular capsules. The SE 300 B operates from any 9-52V phantom power supply, and incorporates a 3-position switch offering linear response, -10dB pre-attenuation and 12dB/octave 75Hz bass-cut filter. Because of the general popularity of the cardioid pattern, the CK 91 cardioid capsule and SE 300 B powering/output assembly are sold as a single unit: the C 391 B microphone.

**CK 91 Cardioid**

The flat frequency response and uniform polar pattern of the CK 91 make it ideal for general applications where suppression of off-axis sound is desired.

**CK 92 Omnidirectional**

The CK 92 offers exceptionally neutral presentation of a source in its ambient sound field, providing uniform results regardless of the distance between microphone and source. This characteristic, combined with linear frequency response across the entire audio band, makes the CK 92 an excellent choice for capturing the natural acoustic subtleties of a recording environment.

**CK 93 Hypercardioid**

Similar to the CK 91, the CK 93 provides additional attenuation of 90° off-axis sounds. In addition to a higher ratio of direct to ambient sound, it also offers a virtually ruler-flat frequency response.

**CK 94 Figure-Eight**

Single diaphragm membrane construction provides precise reproduction of information from opposing directions. Excellent on-axis response combined with linear rejection of side information make the CK 94 ideal for Blumlein and MS stereo recording, studio vocals, and broadcast interviews.

**CK 97-O Omnidirectional Lavalier**

This tiny lavalier capsule has linear bass and midrange response, while a gentle rise around 8 kHz crisply accentuates voices. Omnidirectional pattern allows natural sound reproduction with no proximity build-up, while high sensitivity and low self-noise combine for exceptional S/N performance.

**CK 97-C Cardioid Lavalier**

The CK 97-C is ideal for a variety of sound reinforcement and film set applications. It offers a bass roll-off at 400 Hz to reduce chest resonance, gentle 10 kHz rise to improve vocal clarity, and uniform cardioid pickup pattern for excellent gain-before-feedback.

**CK 97-CVR**

Acoustically identical to the CK 97-C, the CK 97-CVR incorporates the same capsule into a 15-inch mini gooseneck to create an unobtrusive, high quality microphone for podium, pulpit or boardroom use.

**CK 98 Short Shotgun Capsule**

The CK 98 combines high sensitivity and controlled directivity. It offers excellent reach, thanks to a very tight polar pattern and exceptionally low self noise. Small size and light weight make the CK 98 ideal for boom applications, while the smooth, wideband frequency response makes it a superb choice for edge-of-stage and ceiling placements.

With the 10-dB pad engaged, all SPL values for 1.0 % THD can be raised 10 dB. Specifications measured with capsules attached to SE 300 B.
C 426 B Stereo Microphone
A compact and highly refined mic system designed for the most critical single-point stereo recording applications. A direct descendent of AKG’s renowned C 422 and C 24 large diaphragm stereo condensers, the C 426 B incorporates new technology for significant improvements across virtually all performance parameters: dynamic range, self-noise, sensitivity, linearity, frequency response between channels, and crosstalk. Two gold-sputtered twin-diaphragm capsules are arranged in a coincident pair; the microphone head may be rotated 45° against the shaft and the upper system rotated 270° against the lower to facilitate quick changeover from M/S to X/Y techniques. Two tightly focused LEDs mounted on each rotating capsule provide quick visual verification of capsule angle from a distance. Switches on the mic housing select bass roll-off (12 dB/octave at 75 Hz) and -10 dB pre-attenuation. Included remote control system allows completely noiseless selection among the nine polar patterns available for each capsule. Complete system also includes shock mount/stand adapter, foam windscreen, 66’ connecting cable, and rugged carrying case.

C 568 EB Shotgun Microphone
High directivity and wide frequency response in a relatively short integrated unit make this an ideal microphone for theater, sound reinforcement, and film/video recording. Due to its compact and lightweight design, the C 568 EB is ideal for camera mount applications. The C 568 EB is a backplate electret condenser design which operates on both pressure gradient and interference principles. Below 500 Hz it functions as a hypercardioid microphone; above 500 Hz the acoustic interference tube introduces increasing directivity. A switch selectable 12 dB/octave 150 Hz roll-off filter effectively suppresses rumble and wind noise. Robust, all-metal housing contains the built-in preamp/impedance converter. Phantom powering (9-52v) required. Foam windscreen and stand adapter included.

D230 Rugged Dynamic ENG Microphone
A robust ENG (electronic news gathering) mic that incorporates a high output rare earth magnet structure designed to deliver exceptional sensitivity and clarity in the demanding news gathering field. Its response has been tailored for maximum intelligibility of close-in speech, and its omnidirectional pattern is immune to proximity effects. An internal hum compensation coil allows microphone use in environments where ac hum fields may be significant. It has an integral windscreen and is designed for very low handling noise. The extended shaft allows for easy placement of station flags without typical handling problems. The housing is made of an extremely rugged die cast metal and has a dark matte finish for minimum reflection or glare on television. Comes complete with stand adapter.

‘The Sound That Rocks’

AKG’s Emotion series incorporate a unique design and the revolutionary Varimotion process to far surpass the performance parameters of other microphones. In addition, handling and cable noise is all but eliminated by AKG’s Doubleflex Anti-Vibration System. The end result are mics with the performance characteristics of an expensive studio mic at the price of a music store standard. Patented technology, the Tiefzieh Varimotion System allows AKG to produce a diaphragm of varying thickness in a single press. By doing so AKG almost eliminates the need for tuning resonators so that the microphone’s sonic characteristics can now be tuned at the capsule, effectively reducing the cost of production by more than half. The microphones come in a rugged all metal housing, some utilizing 24 karat gold plated connectors. Last, they feature a neodymium magnet system to provide an extremely powerful output signal. This will make your vocals cut through the loudest of rhythm sections. For vocal or instrumental music, for moderators, lead, or backing vocalists, Emotion Series mics are the ideal tool on stage.

Varimotion Technology

Varimotion refers to the patented process used to create the diaphragm. For the first time, diaphragms can be made whose thickness varies along their diameter. Using this technology, diaphragm thickness can be varied during the manufacturing process resulting in a more accurate and natural reproduction of the sound while also reducing the need for expensive mechanical tuning resonators.

The Doubleflex Shock Mount

A patented dual shock mount system, the extremely efficient Doubleflex shock mount system comprises two separate shock absorbing suspension rings for the transducer. These work together to provide optimum suppression of all kinds of unwanted noise such as handling and cable noise—especially important on stage. Allows the mic to “focus” on your voice rather than picking up unwanted noise.

D 660 S

Dynamic Microphone

The D 660 S is a unidirectional dynamic microphone with rugged die-cast metal body developed specifically for miking speech, vocals, and instruments on stage, and for Karaoke and home recording applications. A professional entry-level vocal microphone, the D 660 S offers a price/performance ratio that is unbeatable.

◆ The transducer element of the D 660 S has been designed for use with both sound reinforcement systems and cassette or home studio recorders. Neutral low and mid frequency response combined with a 6 dB presence boost between 4 and 8 kHz ensures smooth sound and excellent intelligibility.
◆ Extremely rugged protective basket ensures incredible durability and keeps the highly sensitive transducer out of harms way. It is easy to remove and the internal windscreen is easy to clean.
◆ Uses a dual shock mount to suppress of unwanted noise.
◆ Integrated on/off switch indicates microphone status.
◆ Includes stand adapter and carrying case.

D 770

Multipurpose Instrument/Vocal Microphone

The D 770 is a rugged dynamic cardioid microphone intended for on-stage instrumental and vocal pickup. Its cardioid pattern is uniform with frequency, and response has been boosted at mid and high frequencies for crisp instrumental pickup and improved speech intelligibility. The microphone has a heavy duty steel screen with an integral diecast support frame. The capsule’s elastic Doubleflex suspension eliminates handling and cable noise. Outstanding performance is obtained by means of AKG Varimotion diaphragm technology, a high output magnet, and a super-cardioid polar pattern for excellent gain-before-feedback and superb off axis rejection.

◆ Frequency response is shaped especially for instrumental/vocal performance. The wide frequency response is slightly boosted in the mid and high frequency ranges for a crisp instrumental sound (wind instruments, mouth-organ, guitar amps, percussion instruments and backing vocals) and for better speech intelligibility.
◆ Utilizing AKG’s Varimotion technology, diaphragm thickness varies from 20 microns at the edge to 40 microns at the center. This produces extended bass response, virtually eliminating the need for a tuning resonator.
◆ XLR plug with 24 carat gold-plated pins.
◆ Doubleflex shock mounted transducer system used with the capsule assembly places the primary resonance of the moving system well below the audible range, resulting in excellent isolation of handling and cable induced noises.
◆ Duraflex spring steel wire-mesh cap with integrated wind an pop screen is resistant to deep denting providing optimum protection for the transducer capsule beneath it.
◆ The light-weight body is made of die cast zinc alloy. Has a dark matte finish for minimum reflection and glare.
◆ Includes a vinyl carrying case and SA 44 stand adapter.
**D 880/ D 880S**

**Dynamic Vocal Microphone**

Performance microphone with a frequency response designed specifically for lead and backing vocals. Wind noise and sibilance are eliminated by an integrated wind and pop screen. Its outstanding performance is obtained by means of the newly developed AKG Varimotion diaphragm technology and a frequency-independent supercardioid polar pattern that provides very effective feedback suppression. Handling noise is all but eliminated with the Doubleflex anti-vibration system. The D 880/D 880 S comes complete with a vinyl carrying case and SA 44 stand adapter. S version has on/off switch.

---

**C900**

**Condenser Vocal Microphone**

The key to getting your emotions across to your audience is in your hand—the microphone. Knowing this, AKG left conventional wisdom behind and set the standard with the Emotion line of dynamic microphones. Now AKG is raising the standard again with the C 900 condenser microphone.

- A professional condenser vocal microphone, the C900 will make your voice cut through the loudest mix - on any stage
- Features a frequency independent cardioid polar pattern that has not only been optimized for exceptionally high gain before feedback, but also for use with in-ear monitor systems
- The transducer is 24-carat gold plated for optimum protection from corrosion and humidity. The entire transducer element is shock mounted in a special elastic ring
- In addition to the transducer case and decorative ring, the XLR connector is also 24-carat hard gold plated for exceptionally reliable electrical contact
- The C 900 is extremely insensitive to handling noise. A resonance weight tunes the transducer resonance frequency to a value where handling noise is almost totally eliminated

- Presence Boost Adapter can be installed to boost the 5 to 9 kHz range by 2 to 4 dB for even more brilliant high-frequency sound and better intelligibility. This improvement adds to the mic's versatility in vocal performance as well as overhead, cymbal, or hi-hat miking
- The impact resistant die-cast metal body is finished with “soft-touch” enamel that feels pleasant to the touch, while the wire-mesh grill is made of first-rate spring steel to provide added protection from the hardships of touring
- The C 900 package includes the microphone with its rugged die-cast metal body, a stand adapter, PB 1000 Presence Boost Adapter and carrying case

---

**PERFORMER SERIES**

AKG's low cost Performer Series includes three mic each designed and manufactured in Austria. Equipped with high output Neodymium capsules and precision AKG engineering these mics meet the needs of professionals at a price accessible to amateurs and beginning musicians. Each mic comes with removable grills for easy washing of windscreens, on/off switches, and extremely rugged housings designed for the rigors of live performance.

---

**D 40 S**

Unidirectional dynamic microphone with rugged plastic case. Includes fixed 5m (16`) cable with gold plated mini and 1/4˝ plugs.

**D 50 S**

Unidirectional dynamic microphone with rugged die-cast metal case and on/off switch. Supplied with fixed 5m (16`) cable with gold plated mini and 1/4˝ plugs.

**D 60 S**

Unidirectional dynamic microphone with rugged die-cast metal case and on/off switch. Supplied with separate 5m (16`) cable with XLR connector, gold plated mini and 1/4˝ plugs.
**Tri-Power Condenser Vocal Microphone**

The C 5900 combines the detailed transparency of a premium AKG studio condenser with the road tough construction, low-handling noise, and feedback rejection required of a true stage performance microphone. At the heart of the C 5900 is AKG’s condenser capsule with an ultra-thin, gold-sputtered, double-stretched diaphragm which precisely captures every subtle nuance of a vocal performance. Transient response is superb, yet vocal quality remains full and warm with no trace of harshness. Vocal contoured response projects to the front of the mix, and a 3-way switch allows performers to customize proximity effect by choosing flat response or one of two bass roll-off curves. A tightly controlled hypercardioid pattern and uniform polar response ensure maximum gain-before-feedback, with consistently predictable performance when used close-in on monitors. A four-layer filter assembly effectively suppresses P-pops and wind noise, while the integrated and hardened protective basket of AKG’s DuraShell system safeguards all internal components. AKG’s InterSpider three-point internal elastomer suspension isolates the capsule from handling noise so energetic performers can work the stage without worry.

**FEATURES**

- Rugged condenser mic designed for on-stage instrumental and vocal pickup
- Hypercardioid pattern is uniform with frequency, and response has been boosted slightly at mid and high frequencies for crisp instrumental pickup and improved speech intelligibility
- Mic capsule is shock mounted with a removable wire mesh grill. The smooth triangular shape of the mic is easy to hold and is stable when placed on a surface
- Switchable 6 dB/octave bass rolloff at 150Hz and 12 dB/octave bass cut at 100Hz provide flexibility in dealing with proximity effect
- Light-weight die cast metal body with dark matte finish for minimum reflection and glare
- Broad high frequency rise (4 dB) for added presence
- Internal elastic suspension for reduced handling noise
- Universal phantom powering

**C 535 EB Cardioid Mic**

The C 535 EB has the clean, open characteristic of AKG’s best studio condensers, enhanced by a 2dB rise between the 7 to 12 kHz range to give added presence to vocalists. An integral four-position switch tailors output level and bass roll-off for a variety of uses. A sharp LF cut at the full output level reduces pops and handling noise in vocal applications, while a more gradual roll-off at the reduced output is ideal for most instrument applications.

- Versatile condenser microphone for studio and vocal applications
- Operates on phantom powering from 9 to 52v DC

**Tri-Power Dynamic Vocal Microphones**

Rugged construction, distinctive Tri-Power styling, and outstanding sonic performance for on-stage instrumental and vocal pickup. The D3700 and D3800 offer a combination of unsurpassed performance and exclusive features unmatched by any other dynamic vocal mics. At the heart of both mics is AKG’s Maximum Flux neodymium/iron-boron rare earth transducer. This high output element, coupled with a uniformly tight hypercardioid pickup pattern, provides exceptional gain-before-feedback right on top of high level stage monitors.

- Vocal contoured response rises gently starting at 2 kHz to pull vocals in the front of the mix, while a smooth low end boost adds fullness and body.
- Extremely high SPL levels are handled easily without harshness or boombiness.
- Smoothly triangulated PowerGrip body balances perfectly in the hand, and rugged die-cast body with Iso-Damp internal suspension guarantees reliability under the most severe touring conditions.
- Built-in windscreens/pop filters removes easily for cleaning.

- They are made of die cast zinc alloy and have a dark matte finish for minimum reflection and glare.
- The D3700S is identical to the D3700 except for the addition of a noiseless, recessed on/off switch. The D3800 offers even more sensitivity than the D3700.

**C 747 Podium Condenser Mic**

Practically invisible, the pencil-sized C 747 picks up voices and instruments at surprising distances with phenomenal fullness and clarity. The C 747 is a premium quality “spot” or “accent” mic designed to solve difficult placement problems in a variety of exacting orchestral, choir, podium, and boardroom applications. Smooth, extended frequency response makes it suitable for high quality live music recording, while its hypercardioid response is designed to be “forgiving”, making it an excellent choice for critical podium/pulpit or boardroom applications where speakers tend to wander off-axis.

A tuned interference tube provides extended bass response, high sensitivity, and excellent S/N ratio. A LF roll-off switch filters out low-frequency rumble. Mounting accessories include shock mount/adapter, windscreen, mini gooseneck, swivel stand adapter, mounting clamp, and thread link. It operates on 9-52v DC phantom power.

**HSC200SR Broadcast Headset**

The HSC200SR is a combination of semi-open stereo headphones and an electret microphone that is both mechanically and electrically adjustable. The mic elements rests in a shock mount that suppresses both cable noise and acoustic headphone leakage. Solderered jumpers in the phantom powering adapter allow you to optimally adjust the mic's frequency response to individual requirements. It operates on 9-52v DC phantom power. Mic sensitivity is 7 mV/Pa at 1 kHz. Has a XLR mic connector and headphone stereo jack.

**HSD200SR Communications Headset**

The HSD200SR is a combination stereo headset and close-talking dynamic microphone intended for hands-free operation in a communications environment. Response is tailored with a gentle rolloff below 200Hz and a broad peak centered at 3 kHz to increase speech intelligibility. The semi-open, supra-aural headphone provides a comfortable fit around the ears, while the semi-open design enables the user to directly hear sounds and speech originating near by.
Plug in the Giants
The MicroMic III Series gives you a wide choice of dynamic or condenser miniature microphones as well as accessories.

D 409 Wind Instruments, Drums and Percussions MicroMic
A dynamic hypercardioid, cost-efficient alternative to the C419 condenser version. Its smooth frequency response ensures uncolored audio. A neutral sound with a little proximity effect and a slight presence rise between 3 and 7 kHz will make your instrument cut through the loudest mix on stage. Clips onto the bell of the trumpet, saxophone, trombone, tuba, etc.
D 409 with standard XLR connector
D 409 L with mini XLR connector

C 418 Drum and Percussion MicroMic
The frequency response of the C 418 PP has been specifically tailored for drum and percussion miking. Compensating for the bass boost which is inherent when putting the microphone so close to the drum, the microphone reproduces a punchy sound that suppresses rumble and unwanted upper head ringing.
C 418 PP for phantom powering, with preamp/XLR connector
C 418 L with 1/8” gold-plated lockable mini jack

C 419 Wind Instruments, Drums and Percussions MicroMic
Clips onto the bell of a trumpet, saxophone, trombone, tuba, etc. giving freedom to horn players. Its tight hypercardioid pattern makes it problem-free for stage work near floor monitors. The natural sound of the horn is retained via the flat response with a gentle high frequency peak of the transducer element, allowing the horn player to reach the audience with power and clarity.
C 419 PP for phantom powering, with preamp/XLR connector
C 419 L with 1/8” gold-plated lockable mini jack

C 420 Headset MicroMic for Vocals and Flute
The C 420III is a condenser design with a full bandwidth 20 - 20 kHz frequency response. It captures the voice with a detailed, brilliant sound quality. The mic provides the performer with a pure, powerful sound that carries the punch and presence to cut through to the audience. Ideal for singing keyboard players, drummers, guitarists, dancers and anyone who needs high quality vocals in a hands-free application.
C 420 PP for phantom powering, with preamp/XLR connector
C 420 L with 1/8” gold-plated lockable mini jack

C 430 Cymbal and Overhead MicroMic
Designed for cymbal and overhead miking, the frequency response of the C 430 ensures a unique crisp sound. With its extremely compact external dimensions, this microphone will keep a low profile on the drum kit without compromising audio quality.
C 430 with W32 windscreen and SA 40 stand adapter

C 444 Headset MicroMic
The C 444 L is extremely easy to use, rests securely and comfortably on the head, and is perspiration-proof. A dedicated moisture shield prevents perspiration and water from penetrating into the transducer capsule.
C 444 L with mini XLR connector and W444 windscreen
DB 1
Double Bass Bridge Pickup

The piezoelectric transducer element is incorporated into a conventional, wooden double bass bridge. It therefore permits a non-compromising, natural audio quality. Providing seamless performance and quality in acoustical bass sound reproduction, the DB 1 is designed to fit every conventional standard double bass. The pickup is an easy-to-install piezoelectric transducer element integrated into a conventional wooden double bass bridge. The DB 1 installs on the double bass like a standard bridge is mounted on the instrument.

DB-1 with a preamp/XLR connector

INSTRUMENT MICROPHONES

D440
A cardioid dynamic mic, designed primarily as an instrument microphone for rough onstage use on percussion instruments, guitar amps, wind instruments etc. The wide frequency response of the D 440 that slightly favors the mid frequency and treble regions ensures good intelligibility.

D550
A cardioid dynamic microphone, designed primarily as a bass instrument microphone for rough onstage use on bass drum, tuba, trombone, bass amps, etc. The wide frequency response of the D 550 that slightly favors the low frequency and treble ranges ensures a very powerful sound and good intelligibility.

D112
Developed for clean kick drum and bass guitar performance with a powerful, punchy sound. The D112 is absolutely free of distortion even at high sound pressure levels, and offers very low diaphragm resonance, a relatively narrow-band rising high frequency response at 4 kHz and an extremely robust construction.

B 15 MicroMic In-line Battery Supply
The B 15 is an in-line battery supply for all C 400 PP versions of MicroMic III Series microphones that also connects directly to the C 430 overhead MicroMic. An integrated on/off switch helps prolong battery life. The B 15 uses a single AAA size 1.5-V battery (average battery life is 30 hours). The B 15 can also be used for all commercial condenser microphones operating off 12v phantom power.

B 29 L Power Supply and Mini Mixer
The B 29 L powers one or two C 400 MicroMic III Series microphones. It features an on/off switch and status LED as well as a mic/line selector for matching the output level to the input of the connected mixer or recorder, etc. The B 29 L operates on a 9v battery, with an average battery life of 50 hours. Two volume controls allow you to balance the levels of the two microphones. A supplied clip makes it easy to attach the B 29 L to a belt or guitar strap, etc.

MPA III L MicroMic
Phantom Power Adapter
Adapter cable with 1/8” lockable jack socket and male 3-pin XLR connector. The MPA III L reduces the usual phantom powering voltage (9 to 52v) supplied by mixing consoles to the operating voltage (9v maximum) of AKG MicroMics.
Cardioid Condenser Microphone

A versatile large-diaphragm microphone, the AT4040 features a true condenser design (externally polarized) and utilizes A-T’s latest transducer technology with state-of-the-art surface-mount electronics and transformerless circuitry. It also features a new large-diaphragm element designed specifically to provide smooth, natural sonic characteristics with a wide dynamic range and the ability to handle extremely high SPLs. The AT4040 has a cardioid polar pattern and utilizes an aged, vapor-deposited-gold large-diaphragm condenser element. A precision-machined, nickel-plated brass element baffle provides enhanced element stability and optimal sensitivity. An open acoustical environment of the symmetrical housing assembly minimizes unwanted internal reflections. In addition, the AT4040’s 2-micron-thick diaphragm provides accurate reproduction of even the subtlest sounds without sacrificing high-frequency performance.

- Has an extended flat frequency response (20-20,000 Hz), wide dynamic range (133 dB, 1 kHz at max SPL), and can handle high SPLs (up to 155 dB with the 10 dB pad on).
- Distinctive transformerless circuitry virtually eliminates low-frequency distortion and enables it to deliver high-speed transients.
- Operates on 48V phantom power and has a switchable low-frequency roll-off (at 80 Hz, 12 dB/octave).

AT4047/SV

Cardioid Condenser Microphone

A large-diaphragm, cardioid condenser microphone, the AT4047/SV incorporates a transformer-coupled output and specially-tuned element to provide sonic characteristics reminiscent of early F.E.T. studio microphone designs, while utilizing modern manufacturing techniques to ensure consistency and reliability. The AT4047/SV offers exceptional transient response and clean output signal even under the most adverse conditions. A specially contoured, vapor-deposited gold diaphragm provides accurate reproduction of even the subtlest sounds, especially high-frequency signals. The AT4047/SV has a wide dynamic range of 140 dB without the built-in attenuator, and it accepts up to 159 dB SPL with the 10 dB pad on.

- Has a wide dynamic range of 140 dB without the built-in attenuator, and it accepts up to 159 dB SPL with the 10 dB pad on.
- Coupled with exceptionally low self-noise (9dB), the AT4047/SV excels under the stringent demands of digital recording systems.
- Floating construction mounting of the element provides isolation from noise and vibration, while an integral 80 Hz hi-pass filter provides easy switching from a flat frequency response to a low-end roll-off.

AT4033/CL

Cardioid Condenser Microphone

In 1992, Audio-Technica rocked the audio world with the introduction of the legendary AT4033 Cardioid Condenser Microphone. Now, a decade later, A-T pays tribute to this classic transducer technology with the AT4033/CL. Embraced by professionals enamored with its strong up-front presence and low-noise circuitry, the AT4033/CL offers exceptional transient response and clean output signal even under the most adverse conditions. A specially contoured, vapor-deposited gold diaphragm provides accurate reproduction of even the subtlest sounds, especially high-frequency signals not easily reproduced by conventional large-diaphragm mics. The symmetrical housing assembly surrounds the mic capsule, creating an open acoustical environment ideally suited for studio work where natural reproduction of off-axis sound is paramount.

- Has an extended flat frequency response (20-20,000 Hz), wide dynamic range (133 dB, 1 kHz at max SPL), and can handle high SPLs (up to 155 dB with the 10 dB pad on).
- Distinctive transformerless circuitry virtually eliminates low-frequency distortion and enables it to deliver high-speed transients.
- Operates on 48V phantom power and has a switchable low-frequency roll-off (at 80 Hz, 12 dB/octave).

AT40407/ SV

Cardioid Condenser Microphone

A large-diaphragm, cardioid condenser microphone, the AT4047/SV incorporates a transformer-coupled output and specially-tuned element to provide sonic characteristics reminiscent of early F.E.T. studio microphone designs, while utilizing modern manufacturing techniques to ensure consistency and reliability. The AT4047/SV features a dual-diaphragm configuration that allows undistorted reproduction of high sound pressure level signals at all frequencies. The 2-micron-thick, vapor-deposited gold diaphragms provide accurate reproduction of even the most subtle sounds, especially high-frequency signals.

- Includes the heavy-duty AT8449 shock mount to provide mechanical isolation and secure mounting. Also includes a dust cover and protective microphone carrying case.
- Like all 40 Series microphones, each AT4040 is individually tested to ensure it maintains optimum performance characteristics and consistency from model to model.

Includes the heavy-duty AT8449 shock mount to provide mechanical isolation and secure mounting. Also includes a dust cover and protective microphone carrying case.

- Like all 40 Series microphones, each AT4040 is individually tested to ensure it maintains optimum performance characteristics and consistency from model to model.

◆ Includes the heavy-duty AT8449 shock mount to provide mechanical isolation and secure mounting. Also includes a dust cover and protective microphone carrying case.

◆ Like all 40 Series microphones, each AT4040 is individually tested to ensure it maintains optimum performance characteristics and consistency from model to model.

◆ Includes the heavy-duty AT8449 shock mount to provide mechanical isolation and secure mounting. Also includes a dust cover and protective microphone carrying case.

◆ Like all 40 Series microphones, each AT4040 is individually tested to ensure it maintains optimum performance characteristics and consistency from model to model.
Multi-Pattern Condenser Microphone

The AT4050/CM 5 is a transformerless, multiple-pattern studio microphone designed for use in the most demanding applications. The condenser element utilizes dual, gold-plated and aged, large diaphragms for extended frequency response. The mic’s polar pattern can be switched for cardioid, omnidirectional or figure-of-eight operation. This, coupled with low-noise transformerless electronics, makes this microphone ideal for the most critical digital recordings. The dynamic range of the AT4050/CM 5 is 132 dB without the built-in attenuator and it accepts up to 149 dB SPL without capsule or electronic-system distortion above 1% T.H.D.

- The AT4050/CM 5’s low-noise circuitry is symmetrical and transformerless, resulting in exceptional transient response and clean output signals, even under high-output conditions.
- To ensure optimum performance, floating-construction mounting of the element provides isolation from noise and vibration.
- Handles very high sound pressure levels with ease. A switchable 10 dB pad is built-in, increasing the SPL capabilities to 159 dB.
- An integral 80 Hz hi-pass filter provides easy switching from a flat frequency response to a low-end roll-off. The hi-pass switch is recessed to prevent accidental activation.

Cardioid Vacuum Tube Condenser Studio Microphone

The AT4060 is a cardioid vacuum tube condenser microphone designed for use in the most demanding studio applications. It utilizes dual, gold-plated and aged, large-diaphragm elements for extended frequency response. The AT4060 has a wide dynamic range of 131 dB and the ability to accept up to 150 dB SPL without capsule or electronic-system distortion above 1% T.H.D. These capabilities, coupled with the benefits of exceptionally low self-noise and very high output, combine in a versatile microphone that meets the diverse requirements of contemporary recording situations, while still providing the warm sound of vintage valve design. Each hand-selected tube is individually aged and tested, then employed in a uniquely-configured circuit for enhanced tube performance. Specially-tuned elements improve dynamic range and the ability to handle high SPLs without sacrificing high-frequency characteristics. Floating-construction mounting of the elements provides isolation from noise and vibration.
MODULAR EXPANSION CAPABILITY

AT-40 series microphones consist of two modular sub assemblies which are threaded together: the AT 4900a-48 handle containing the mic's electronics, and either the AT 4049a-EL (omnidirectional), AT 4051a-EL (cardioid) or the AT 4053a-EL (hypercardioid) condenser head capsules. The head capsules may be easily removed, stored and replaced with an optional omnidirectional, cardioid or hypercardioid capsule to provide the widest range of miking capability.

The AT 4049a-EL capsule provides the precision recording and audio measurement advantages of a flat, wide-response omnidirectional side pattern.

The AT 4051a-EL capsule provides the advantages of a smooth, wide-response cardioid pattern.

The AT 4053a-EL hypercardioid element offers excellent side rejection for increased working distance, and a highly uniform polar pattern that virtually eliminates off-axis coloration.

- They handle high sound pressure levels with ease—up to 146 dB SPL while producing no greater than 1% T.H.D.
- Integral 80 Hz hi-pass filter provides easy switching from a flat frequency response to a low-end roll-off. The switch is recessed to prevent accidental activation.
- Included foam windscreen helps reduce wind and “popping” noise.
- Constructed of turned brass and is plated in black chrome for durability and low reflectivity.
- Requires remote “phantom” or “simplex” power source supplying 48 volts DC.
- DC biased condenser element design.
- Omnidirectional polar pattern with optional capsules offering cardioid or hypercardioid polar patterns.
- Output impedance of 100 ohms and output shall be transformerless balanced.
- Length of 6.10” a diameter of 0.83” (21.0 mm), and a weight of 4.2 oz. (120g).
- A compartmentalized protective carrying case accommodates the microphone, stand adapter, windscreen and two optional head capsules.

They combine the benefits of exceptionally low self-noise with very high sound pressure levels with ease. An integral 80 Hz hi-pass filter provides easy switching from a flat frequency response to a low-end roll-off. The hi-pass position reduces mic sensitivity to “popping” in close vocal use and to handling noise. It also attenuates unwanted low-frequency ambient noise. Use of the supplied foam windscreen helps reduce wind and “popping” noise. Their housings are constructed of turned brass, rather than thin-wall aluminum. The surface is plated in black chrome for durability and low reflectivity. They operate on 48v DC phantom power. A compartmentalized protective carrying case accommodates the microphone, stand adapter, windscreen and two optional head capsules.
Small Diaphragm Cardioid Condenser Microphone

The AT4041 is a pressure-gradient condenser microphone with a uniform cardioid polar pattern that is ideal for professional recording and broadcast applications. Very similar to the AT4051a except for interchangeable capsules. The AT4041 features a transformerless output for low self-noise, high output and very high SPL handling capability (up to 145dB). The balanced output is direct-coupled, resulting in a clean signal even under high-output conditions.

Integral high-pass filter provides easy switching from a flat frequency response to a low-end roll-off. In addition to preventing the pickup of low-frequency ambient noise (such as air-conditioning) the high-pass filter may also be used to compensate for proximity effect in close-miking situations.

Use of the supplied foam windscreens further reduces wind and “popping” noise. Ruggedly built, the AT4041 is housed in a case made of turned brass, not thin-wall aluminum. The surface is painted black for low reflectivity. Compatible with any remote “phantom” or “simplex” power source supplying 48v DC.

AT-4071a/AT-4073a
Line + Gradient Condenser Microphones

The AT4071a and AT4073a are transformerless line + gradient condenser microphones designed to meet the critical long-distance pickup demands of broadcasting, film/TV sound, professional recording and theater sound reinforcement. They feature a broad-band, linear on-axis frequency response, with maximum rejection of sounds from their sides and the rear. Rear polar lobing, common in shotgun microphones is greatly reduced and their off-axis response remains highly uniform. The resulting lack of sound coloration on- and off-axis makes them particularly suited for miking dynamic action in film/TV audio as well as in “spot” miking techniques in the music studio or theater.

◆ They set new standards in small size and light weight. Overall length is 9.13” (AT4073a) and 15.55” (AT4071a) and at 4 and 5.5 oz. respectively, they add practically no noticeable weight to the end of a fish pole or the top of a minicam.

◆ Through the use of an advanced design, both the diaphragm and the side ports are exposed to the same acoustic environment. One result of this is that they are less sensitive to noise caused by wind turbulence or the “encounter” noise of panning action. And there is a marked reduction in proximity effect. Recordings made at varying distances remain more consistent in response, making both production and editing quicker, easier and less costly.

◆ They are exceptionally resistant to mechanical or handling noise. An integral 150 Hz hi-pass filter is available to “roll-off” the low-frequency response, thereby attenuating unwanted low-frequency ambient noise (such as air conditioning). The switch is recessed to prevent accidental activation. Built to withstand rigorous use in the field, they are powered with any remote “phantom” or “simplex” power source supplying from 11 to 52v DC.
Audio-Technica's 30 Series offer all the advantages of high-quality microphones at an affordable price. They feature rugged construction and high performance specifications as well as AT's legendary engineering and manufacturing technology. This provides an exceptional level of consistency from model to model, critical when any of the 30 Series are purchased in pairs. The 30 Series consists of four models: the AT3031 cardioid and AT3032 omnidirectional small-diaphragm condenser mics, the AT3035 large-diaphragm side-address cardioid condenser mic and the large-diaphragm AT3060 cardioid tube mic.

**AT3031 and AT3032**

The low-profile AT3031 and AT3032 condenser mics offer outstanding performance in critical recording applications. They have a frequency response of 30Hz to 20kHz; high SPL capability of 148 dB (158 dB with 10 dB pad); 48v phantom power; and a switchable roll-off (at 80 Hz, 12 dB/octave). The AT3031's cardioid pattern reduces pickup of sounds from the sides and rear, improving isolation of desired sound source. The AT3032's omnidirectional pattern provides maximum ambient pickup.

**AT3060**

To offer that warm classic tube sound, the AT3060 uses hand-selected tubes that are individually tested and aged to maintain peak performance. It requires no dedicated power supply or special cable—operates exclusively on 48v phantom power. Shock-mounted tube assembly dampens mechanically-coupled vibrations, while the precision nickel-plated brass, acoustic element baffle provides enhanced element stability and optimal sensitivity.

**AT3035**

The AT3035 is a precision-crafted, large-diaphragm condenser microphone that represents a value while offering all the performance of a high-quality studio microphone. Designed to provide versatility in the most demanding recording applications, the AT3035 has a fixed cardioid polar pattern and features excellent performance specifications, including:

- 20 Hz - 20 kHz flat extended frequency response; SPL capability of 148 dB (158 dB with the 10 dB pad); and an extremely low self-noise (12dB).
- Every aspect of the AT3035 has been tailored for a very smooth, natural sound while ensuring maximum accuracy, making it a perfect complement for today's digital recording equipment.
- To ensure optimum performance and isolation from noise and vibration, the AT3035 includes a professional shock mount. It uses 11-52v phantom power.
- Switchable low-frequency roll-off (at 80 Hz, 12 dB/octave) reduces sensitivity to pops and the pickup of low-frequency ambient noise and mechanically-coupled vibrations.

Live Performances Mics

Recent advances in the quality and sophistication of professional live-sound systems have been nothing short of revolutionary. Tours, clubs, broadcast events, corporate facilities and worship venues sound better than ever, utilizing better system design and better components in the audio chain. So Audio-Technica partnered with top touring companies, FOH and monitor engineers, audio consultants and artists – to learn what it takes to make the best-sounding, most reliable and consistent microphones for the live-sound industry. They listened carefully. Then they applied this knowledge to the creation of a high performance line — the Artist Elite Series.

**AE 5400 Cardioid Condenser Mic**
True condenser, large-diaphragm element design delivers pristine sound for the most discriminating vocalist. The AE5400 utilizes an aged, vapor-deposited gold diaphragm for a flat frequency response with improved dynamic range and easily handles high SPLs. Featuring a robust design to combat the rigors of the road, the mic also has a switchable 80Hz high-pass filter and a 10dB pad. It also provides excellent natural vocals with off-axis response that is linear and uniform across the entire frequency range. To ensure optimum performance, the AE5400 features anti-shock engineering for superior isolation from noise and vibration, a multi-level windscreen design, and includes AT’s AT8470 Quiet-Flex stand clamp.

**AE 3300 Cardioid Condenser Mic**
Offers exceptional performance for venues ranging from the largest arenas to the most intimate club settings. Featuring a well-tempered cardioid polar pattern with outstanding rejection qualities, the AE3300 provides exacting detail, brilliant clarity and uncolored realism. Has a switchable 80Hz high-pass filter and 10dB pad, superior anti-shock engineering, multi-level windscreen and includes the AT8470 stand clamp.

**AE 6100/AE 4100 Hypercardioid and Cardioid Dynamic Mics**
The AE6100 delivers clean articulation for great on-stage presence and excellent monitor cut. The AE4100 provides focused vocal pickup while offering superior gain-before-feedback. AT tailored the performance of the AE4100 for a more aggressive sound quality that keeps the vocals up-front in the mix. Both mics have superior anti-shock engineering for low handling noise and include the AT8470 Quiet-Flex stand clamp.

**AE2500**
Features a revolutionary dual-element design that combines condenser and dynamic capsules within a single housing and positioned in a perfect phase relationship – nearly impossible to accomplish with separate microphones. Ideal for kick/bass drum applications, the mic will survive extreme SPLs while providing uncompromising audio quality. The AE2500’s dynamic element cleanly captures the attack transients of the beater, while the condenser element renders the internal tonalities of the shell and the instrument as a whole.

The Artist Elite Series instrument mics combine robustness, versatility and consistent performance night after night in the most demanding areas of live sound instrument miking. They have an integral 80 Hz high-pass filter switch, 10 dB pad and include the new AT 8471 isolation clamp. The AE5100 is a large-diaphragm end-fire cardioid condenser; the AE3000 is a large-diaphragm side-address cardioid condenser; and the revolutionary AE2500, a combination condenser/dynamic model, is the ultimate mic for kick drums.

- The **AE5100** is a live-sound instrument mic designed for drum overheads and percussion, acoustic guitar, strings and other acoustic instruments. The large diaphragm delivers a natural sound with accurate response, while the end-fire design allows it to be placed where other large diaphragm mics are unable to go.
- The **AE3000** is designed to take the highest sound pressure levels encountered on stage from sources such as guitar cabinets, toms, snare, tympani and overheads while still delivering uncolored performance, thanks to an open-architecture headcase and large-diaphragm condenser capsule. The mic features a small-format side-address design with tapered grille for optimum placement versatility.
- The **AE2500** features a revolutionary dual-element design that combines condenser and dynamic capsules within a single housing and positioned in a perfect phase relationship – nearly impossible to accomplish with separate microphones. Ideal for kick/bass drum applications, the mic will survive extreme SPLs while providing uncompromising audio quality. The AE2500’s dynamic element cleanly captures the attack transients of the beater, while the condenser element renders the internal tonalities of the shell and the instrument as a whole.

Great stage and studio sound starts with the microphone. Today, more musicians and sound engineers find that their best sound starts with Artist Series microphones. The wide range of condenser mics is ideal for both studio and sound reinforcement applications. Unique, specialized models solve the most difficult pickup problems with innovative engineering and ultra-precise manufacturing. In addition, a select group of rugged Artist Series dynamic microphones are the first choice of many touring musicians as well as major recording studios. Carefully tailored response assures effective sound reinforcement. Every Artist Series microphone has withstood the close scrutiny of industry professionals in extensive field testing. Each also benefits from some of the most rigorous production testing available anywhere in the world.

**ATM10a**
Omnidirectional condenser microphone for vocal/instrumental use when maximum ambient pickup is desired. Excellent for hi-hat, strings, guitar and piano. Extremely smooth extended response on and off axis. Low sensitivity to popping and overload. Internal AA battery or phantom power operation ...............136.50

**ATM31a**
Cardioid condenser microphone for general studio/stage use. Has wide frequency response, and added warmth when used close up. Large protective screen. Excellent for close-up vocals, piano, reeds and brass. Low-mass diaphragm ensures minimum distortion. Sound is similar to far more expensive studio microphones. Operates on internal AA battery or 9-52v phantom power............................................................162.50

**ATM33a**
Cardioid condenser microphone for more critical studio/stage use. Has outstanding linearity both on and off axis, high SPL capability, wide frequency response and low-mass diaphragm. Provides balanced sound for strings and solo vocals, plus crisp reproduction of pianos, reeds, brass and drums. Internal AA battery or phantom power operation ......188.50

**ATM89R**
Hypercardioid condenser microphone delivers smooth, accurate vocal reproduction for studio-quality sound on stage. Special internal shock mounting eliminates virtually all handling and cable noise. Accepts interchangeable elements for a variety of polar patterns available in cardioid, subcardioid and omni. Features high sensitivity and SPL capability with a rugged design for reliable performance. Operates on 48v phantom power...............................................................206.50

SPECIAL PURPOSE CONDENSER MICROPHONES

ATM35

High-intensity cardioid condenser microphone includes unique UniMount that attaches directly to brass or reed instruments. Ideal for active active stage performances. UniMount foam windscreen holds microphone for accurate positioning while protecting element. Also clips to piano, string bass, or to drum kit hardware for clean reproduction of toms and snares. Crisp, clear, well-balanced response, even at high SPLs............................................222.50

ATM87R

A high SPL cardioid condenser boundary microphone, the ATM 87R excels in picking up highly dynamic instruments such as kick drum, piano, etc. Low-profile design is ideal for applications requiring minimum visibility. Heavy die-cast case and rubber non-slip bottom pad minimize mechanical coupling of surface vibrations to the microphone, while low-roll-off switch helps control undesired ambient noise. Operates on 48v DC phantom power. A 25-ft. cable with TA3F and XLRM-type connectors is included..................194.50

ATM73a

Headworn cardioid condenser microphone ideal for drummers, keyboardists or anyone who needs to keep their hands free. Unobtrusive headband. Flexible mic boom. Belt-mounted power. Includes battery and windscreen.

ATM 79ac: Same as ATM 73a less battery/remote power module. Untermirnated for wireless and custom applications.....................................................181.95
ATM73cW: Same as ATM 73a less battery/remote power module. Terminated for use with Audio-Technica professional wireless systems.................................109.95

ATM75

Headworn cardioid condenser microphone provides superior vocal performance with hands-free operation. Pivot-mounted flexible mic boom descends from left or right side of comfortable, secure headband. Moisture-resistant protective coating on headband and boom. Belt-mounted power module. Includes battery and windscreens.

ATM 75c: Same as ATM 75 less battery/remote power module. Untermirnated for wireless and custom applications.....................................................142.95
ATM75cW: Same as ATM 75 less battery/remote power module. Terminated for use with Audio-Technica professional wireless systems.................................76.95

1. re 1V at 1 Pa 2. 1kHz @ 1Pa 3. 1 kHz @ Max SPL
These dynamic handheld and instrument mics feature Hi-Energy neodymium magnets and low-mass, copper-clad aluminum wire voicecoils to offer high SPL output capabilities with exceptional output sensitivity.

**ATM23HE**
Hypercardioid instrument microphone combines excellent performance characteristics and rugged dependability for superior results on snare drum, as well as other highly dynamic instruments such as floor and rack toms, piano and electric guitar cabinets. Low profile design permits versatile placement around drum kit hardware ...............152.95

**ATM27HE**
This handheld hypercardioid microphone offers superb value and outstanding performance for vocal applications. The double-dome diaphragm, low-mass voice coil and close-tolerance neodymium magnet structure provide crisp high-frequency performance. The element is double-isolated to greatly reduce handling noise ..............89.95

**ATM29HE**
Designed for instrumental pickup and general stage use, this hypercardioid microphone is a versatile live-sound producer. Low-mass voice coil and neodymium magnet structure ensure excellent transient response. Double-dome diaphragm captures acoustic and electronic instrument sound with accuracy and ease. Double-isolation of the element assures low mechanical noise ..............84.95

**ATM41HE**
This handheld hypercardioid mic, designed for close-up vocals, features excellent off-axis rejection for minimizing feedback and a tailored response that provides natural, full-range sound reproduction. Patented floating diaphragm reduces handling noise..............129.95

**ATM61HE**
A hypercardioid vocal microphone that utilizes a unique high-output element and an advanced, ultra-precise diaphragm that extends response and reduces coloration of off-axis sounds — similar to much more expensive stage condenser mic’s. Patented floating diaphragm reduces handling noise. Offers excellent gain before feedback and best stage presence.................................148.95

**ATM61HE/S** Same as above with an integral on/off switch and non-removable grille .149.95

**ATM63HE**
Close-working hypercardioid microphone for both vocal and instrumental pickup. Extended frequency response is ideal for pickup of toms, snares, electric guitar and piano with excellent isolation and peak-free response. Wide-range uniform polar pattern ensures natural, balanced pickup both on and off axis. Extremely rugged with all-metal grille..............................119.95

Hard-Rockin’ Cardioid Microphones

With their cardioid pickup pattern, the MB1000, MB2000 and MB3000 (Dynamic) and MB4000 (Condenser) mics reduce unwanted background noise and control feedback, especially when used extremely close. Miking instruments or vocalists at very close range also effectively reduces “leakage” from one performer to the next. Low-frequency noise is also reduced by a low-frequency roll-off of sounds more than one foot away from the microphone. Enclosed in a rugged die-cast housing, they feature a special, baked-on “Midnight Blues” finish. In addition to being attractive and comfortable to hold, this special finish further reduces handling noise and increases durability.

A multi-stage windscreens reduces wind noise and “popping” when performers work extremely close. The supplied microphone clamp permits mounting on any mic stand with 5/8”-27 threads.

MB1000L and MB1000H

Available in low-and high-impedance versions, the MB1000L and MB1000H are wide-range dynamic mics designed specifically for close-up vocal and instrumental use. A special internal shock mount system minimizes handling and case noise. The microphone also features the MagnaLock on/off switch for silent operation. The switch may be locked in the “on” position to prevent accidental turnoff during use. High-output Neodymium design and low-mass diaphragm and voice coil assure excellent signal-to-noise ratios with mic mixers, tape recorders, and other electronic inputs. The MB1000 is capable of undistorted output even in very intense sound fields...

Audio-Technica

UniPoint Series

Miniature Condenser Microphones

Designed to be worn on the clothing of performers, Audio-Technica's miniature condenser microphones provide excellent yet unobtrusive sound pickup. Their mic element is enclosed in a rugged housing with low-reflectance finish and internal construction minimizes handling and clothing noise. The wide-range capability of these mics ensures clean, accurate reproduction with high intelligibility for lecturers, singers, stage and TV performers, as well as musical instruments.

### Microphones

**AT803b**

**Omnidirectional Condenser Microphone**

The AT803b provides excellent yet unobtrusive sound pickup. The wide-range capability of the AT803b ensures clean, accurate reproduction with high intelligibility for lecturers, singers, stage and TV performers.

- Powered by AA battery (up to 1200 hours) or 9-52v phantom power
- 6' (1.8 m) cable is provided between the mic and power module
- A built-in 3-position switch on the power module allows selection of off, on/flat response, or on/low-roll-off
- Includes AT8417 clothing clip, AT8116 windscreen and carrying case

**MT830R**

**Subminiature Omnidirectional Condenser Mic**

The MT830R's wide-range capability ensures clean, accurate reproduction with high intelligibility for lecturers, singers, stage and TV performers, as well as instruments. Runs on 9-52v phantom power only.

- 25' cable is provided between the mic and power module
- Includes AT8417 clothing clip and AT8130 windscreen

**AT831b/AT831R**

**Cardioid Condenser Microphone**

Cardioid versions of the AT803b, the miniature AT831b and AT831R (phantom power only) are designed for hands-free applications in sound reinforcement systems, and for use by musicians, especially for pickup of acoustic guitar. Cardioid pattern provides improved gain before feedback. Close-up voice and instrument pickup are crisp and clean, yet full sounding. Suppression of background noise is significantly better than that of full-size microphones. Same features and accessories as the AT803b plus they add the AT8444 guitar adapter.

### New! AT899

**Subminiature Omnidirectional Condenser Mic**

Designed for high-quality, unobtrusive operation, the AT899 provides maximum intelligibility and clean, accurate reproduction for vocalists, lecturers, stage and television talent, and houses of worship. A mere 5mm in diameter the AT899 is ideal for applications requiring minimum visibility. The omni element is enclosed in a rugged, low-profile housing to minimize handling and wind noise. Supplied accessory kit includes single and double mounts, clothing clip, clip, magnetic clip, two open-pore foam windscreens, and two metal mesh element covers to protect the condenser element from moisture, makeup, and other contaminants. Also includes a convenient carrying case to hold the microphone and accessories.

Available in four terminations and two colors (low-reflectance black or "theater" beige)

**AT899:** Wired model with TA3F connection to the supplied AT8537 battery/phantom power module. The module features battery/phantom power operation, low-frequency roll-off switch, and an XLR3M connector supplying a low-impedance balanced output.

**AT899cW:** 55” cable terminated with professional 4-pin locking connector for use with AT’s UniPak wireless transmitters

**AT899cT5:** 55” cable terminated with 5-pin connector for ATW-U101 wireless body-pack systems

**AT899c:** 55” cable unterminated for custom applications

Boundary Condenser Microphones

Audio-Technica's wide range boundary condenser microphones are designed for surface-mounted applications such as high-quality sound reinforcement, professional recording and conferencing, television, and other demanding sound pickup situations. Their small size makes them ideal for use in applications where minimum visibility is required. Available in omnidirectional (half space) or hemi-cardioid (half-space cardioid) polar patterns, the microphones are enclosed in a rugged die-cast case and protected by two layers of perforated steel. The combination of heavy die-cast case and rubber non-slip bottom pad minimizes mechanical coupling of surface vibrations to the microphone.

AT841a Omnidirectional (Half Space) Mic
- 25' cable with TA3F-type connectors for use between the microphone and the AT8531 power module is provided
- Built-in 3-position switch on the power module allows selection of off, on/flat response or on/low-roll-off
- Powered by a AA battery (1200 hrs) or 9-52V phantom power
AT841a Black finish......225.95 AT841Wa White finish......254.95

AT851a Hemi-Cardioid Mic
- 25' cable with TA3F-type connectors for use between the microphone and the AT8531 power module is provided
- Built-in 3-position switch on the power module allows selection of off, on/flat response or on/low-roll-off
- Powered by a AA battery (1200 hrs) or 9-52V phantom power
AT851a Black finish......225.95 AT851Wa White finish......254.95

AT891R Hemi-Cardioid Mic with Programmable Switch
- Programmable three mode touch-sensitive on/off switch: touch-on/touch-off, touch-to-talk (momentary on) and touch-to-mute (momentary off)
- Red LED on the unit indicates when the microphone is “on.”
- Powered from any external 11-52V DC phantom power supply

AT851RX Hemi-Cardioid Mic
- Requires 9V to 52V DC phantom power
- Recessed switch in the power module permits choice of flat response or low-frequency roll-off to help control undesired ambient noise
- Includes 25' miniature cable with a TA3F plug for connecting to the microphone
AT851RX Black finish...188.50 AT851RW x White finish...216.95

AT871R Hemi-Cardioid Mic
- Requires 9V to 52V DC phantom power
- A 25' (7.6 m) cable is provided with TA3F and XLRM-type connectors for use between the microphone and electronics input
AT871R Black finish..........................235.95 AT871RW White finish.........................262.50

AT891R Hemi-Cardioid Mic
- A switch on the bottom of the unit permits choice of flat response or low-frequency roll-off to help control undesired ambient noise
- A 25' (7.6 m) shielded cable with TA3F and XLRM-type connectors is provided for use between the microphone and electronics inputs

1. re 1V @ 1 Pa 2. 1 kHz at 1% T.H.D. 3. 1kHz @ 1 Pa 4. 1 kHz @ Max SPL
Audio-Technica's wide-range of miniature cardioid condenser hanging microphones are designed for use in high-quality sound reinforcement, professional recording, television, and other demanding sound pickup applications. They are furnished with a vinyl-coated steel hanger that allows them to be positioned inconspicuously over a choir, orchestra, stage, etc., for very low-profile situations. Supplied as cardioid mics, they also accept easily interchangeable elements to permit selection of angle of acceptance from 100° to 360°. They all include an AT8102 windscreens, AT8451 steel hangar, power module, and a permanently attached 25´ cable. Elements are enclosed in either a low-reflectance black finish or a white-finished housing, cable and steel hanger.

**AT853a**
- Powered by a single AA battery for up to 1200 hours or 9-52V DC phantom power
- Built-in 3-position switch on the power module allows selection of off, on/flat response, or on/low-roll-off
- Roll-off is 18 dB/octave at 80 Hz
- 25´ permanently-attached cable to mic with TA3F connector at power module

**AT853Wa**
- White finish

**AT853Rx**
- Accepts 9-52V DC Phantom power
- Recessed switch in the power module permits choice of flat response, or a low-frequency roll-off of 6 dB/octave at 150 Hz
- 25´ cable connects to the power module via internal solderless screw terminals for simple length adjustment in the field. Module output is XLRM-type

**AT853PMx**
- Accepts 9-52v DC phantom power
- Roll-off of 6 dB/octave at 150 Hz is enabled by cutting jumper on PC board
- 25´ cable may be cut to any length and connected to screw terminals on the supplied wall/ceiling plate power module
- Power module features a white-finished standard electrical cover plate for easy, secure installation. Output is low impedance balanced via screw terminals

**AT853PMx**
- Black finish

**AT853PMWx**
- White finish

**AT853Rx**
- Black finish

**AT853RWx**
- White finish

**AT853PM**
- Accepts 9-52v DC phantom power
- Roll-off of 6 dB/octave at 150 Hz is enabled by cutting jumper on PC board
- 25´ cable may be cut to any length and connected to screw terminals on the supplied wall/ceiling plate power module
- Power module features a white-finished standard electrical cover plate for easy, secure installation. Output is low impedance balanced via screw terminals

**AT853PM**
- Black finish

**AT853RW**
- White finish

**AT853**
- Supplied with AT851, AT853, AT857, AT871 and AT873R easily accept interchangeable elements to permit selection of angle of acceptance from 100° to 360°. Optional elements include:

**AT853C-ELE Cardioid**
- Supplied with AT851, AT853, AT857 and AT871. 120° frontal pickup pattern

**AT853SC-ELE Subcardioid**
- Allows a wide 170° frontal working area than a standard cardioid...

**AT859b**
- Relatively small vocal mic well suited for lectern and stand applications
- Superior internal shock mounting eliminates handling and cable noise
- Balanced low impedance output
- Easily accepts optional interchangeable elements
- Requires 48V phantom power
- Rugged housing; low-reflectance black finish

**AT873R Handheld Hypercardioid Condenser Mic**
- Relatively small vocal mic well suited for lectern and stand applications
- Superior internal shock mounting eliminates handling and cable noise
- Balanced low impedance output
- Easily accepts optional interchangeable elements
- Requires 48V phantom power
- Rugged housing; low-reflectance black finish

**AT853H-ELE Hypercardioid**
- Supplied with AT873R. Increases directionality to provide better gain-before-feedback or reduction of background noise over other patterns. 100° pickup

**AT853O-ELE Omnidirectional**
- Allows operation in all directions with a 360° pickup pattern

**AT853SC-ELE Subcardioid**
- Allows a wide 170° frontal working area than a standard cardioid...

**AT859b Miniature Interview Mic**
- Elegant, long and slender (16”) handheld interview mic
- Cardioid condenser element
- Response is specifically tailored for crisp speech
- Battery or phantom power
- Includes stand clamp

**AT873R Handheld Hypercardioid Condenser Mic**
- Relatively small vocal mic well suited for lectern and stand applications
- Superior internal shock mounting eliminates handling and cable noise
- Balanced low impedance output
- Easily accepts optional interchangeable elements
- Requires 48V phantom power
- Rugged housing; low-reflectance black finish

**AT859b Miniature Interview Mic**
- Elegant, long and slender (16”) handheld interview mic
- Cardioid condenser element
- Response is specifically tailored for crisp speech
- Battery or phantom power
- Includes stand clamp

**AT873R Handheld Hypercardioid Condenser Mic**
- Relatively small vocal mic well suited for lectern and stand applications
- Superior internal shock mounting eliminates handling and cable noise
- Balanced low impedance output
- Easily accepts optional interchangeable elements
- Requires 48V phantom power
- Rugged housing; low-reflectance black finish

**AT859b Miniature Interview Mic**
- Elegant, long and slender (16”) handheld interview mic
- Cardioid condenser element
- Response is specifically tailored for crisp speech
- Battery or phantom power
- Includes stand clamp
Gooseneck Condenser Microphones

Audio-Technica’s gooseneck wide-range condenser microphones are designed for quality sound reinforcement, professional recording, television, and other demanding sound pickup applications. Standing at either 12 or 19˝ above the mounting surface, their small-diameter alternating gooseneck design permits highly flexible positioning while maintaining a smooth, well-contoured appearance. Microphone elements are enclosed in a rugged housing with a low-reflectance black finish. Supplied as cardioid microphones, all except the AT85QXLx accept easily interchangeable elements for selection of angle of acceptance from 100° to 360°. Switchable low frequency roll-off filters minimize background ambiance, air conditioning rumble and mechanical noise, ensuring the highest sound quality, even under adverse conditions.

PRO SERIES— ProPoint Mics

Installed-Sound Condenser Microphones

From ceilings to stage floors, from podiums to tabletops, ProPoint microphones have your miking needs covered.

- Wide-range condenser elements with low-mass diaphragms for superior performance
- Uniform cardioid polar pattern for maximum rejection of unwanted sounds
- Flat, smooth frequency response, high-SPL handling for voice, choir and orchestra
- They operate on 9-52v DC phantom power
- Self-contained electronics eliminate the need for external power modules
- Podium mics feature quiet, fixed-placement, long-life goosenecks
- Low-profile boundary mics for minimum visibility
- Rugged design and construction for reliable service

1. 1 kHz at 1% T.H.D. 2. 1kHz @ 1 Pa 3. 1 kHz @ Max SPL

Pro42/ Pro44

Cardioid Boundary Mics

The miniature PRO42 and low-profile PRO44 are wide-range condenser microphones with a hemi-cardioid (half-space cardioid) polar pattern designed for surface-mounted applications in high-quality sound reinforcement and other demanding sound pickup situations.

- Miniature PRO42 measures 1.44 x 2.14 x 0.61” (W x D xH) while the low-profile PRO44 measures 2.87 x 3.56 x 0.59” (W x D xH)
- The PRO42 (permanently-attached) and PRO44 (detachable) include a 25’ cable with XLRM-type connector
- Mic elements are enclosed in a rugged case and protected by heavy perforated steel. The rubber non-slip bottom pad minimizes mechanical coupling of surface vibrations to the microphone

Pro45/ Pro45W

Cardioid Hanging Mics

Designed for high-quality sound reinforcement, the PRO45 is furnished with a vinyl-coated steel hanger that allows it to be positioned inconspicuously over a choir, orchestra, stage, etc., for low-profile situations.

- Has a 25’ permanently-attached cable with XLRM-type connector
- Enclosed in a rugged housing with a low-reflection black finish. Also available with a white-finished (PRO45W) mic housing, cable and steel hanger for the times you need the mic hung against a light background

Pro47T/ Pro47TL

Cardioid Thread-Mount Gooseneck Mics

The PRO47T and PRO47TL are designed for high-quality sound reinforcement and other demanding sound pickup situations. Standing 12.4” (PRO47T) and 15.7” (PRO47TL) above the mounting surface, their small-diameter alternating gooseneck design permits highly flexible positioning while maintaining a smooth, well-contoured surface.

- 9.8’ permanently-attached cable with an XLRM-type connector
- Mic element is enclosed in a rugged housing with a low-reflection black finish. A 5/8”-27 threaded flange allows the mic to mate with the threads of a standard microphone desk or floor stand. A 5/8”-27 threaded stud is also provided so it can be secured to a permanent mounting surface

Pro49Q/ Pro49QL

Cardioid Quick-Connect Gooseneck Mics

With an overall length of 13.07” (PRO49Q) and 16.46” (PRO49QL), their small-diameter alternating gooseneck design permits highly flexible positioning while maintaining a smooth, well-contoured appearance.

- XLRM-type connector insert at their base allows them to be plugged directly into an XLRF-type jack or cable connector
PRO SERIES - Handheld/Stand Mics

With an incredibly wide selection of offerings, the Pro Series has a microphone to suit any budget and any application. Includes a hefty assortment of handheld, lavalier, instrument, gooseneck and headphone microphones.

**PRO 2ax Handheld Dynamic Cardioid Mic**

The PRO 2ax is dynamic microphone designed for close-up vocal and instrumental use. Very affordable, the PRO 2ax offers unusually smooth response and uniform off-axis rejection of unwanted sound due to its cardioid pickup pattern. Cardioid pattern reduces unwanted background noise and controls feedback, especially when used extremely close. Miking instruments or vocalists at very close range also effectively reduces “leakage” from one performer to the next. Low-frequency noise is also reduced by a low-frequency roll-off of sounds more than one foot away from the microphone. When used close-up, bass response increases because of proximity effect. This characteristic adds a mellow sound to both voice and instruments.

Enclosed in a rugged housing with a low-reflectance finish and a conveniently located on/off switch, the mic has a 2-stage ball-type screen to reduce wind noise and “popping” when performers work really close. Also includes a 5 meter (16.5”) cable with an XLR-F connector at the mic end, and a standard 1/4” phone plug at the equipment end. ..............................34.95

**PRO 4L Handheld Dynamic Cardioid Mic**

Dynamic microphone designed for close-up vocal and instrumental use, the PRO 4L is also ideal for general stage use and other sound reinforcement applications. Unusually smooth response, uniform off-axis rejection of unwanted sounds, and dependable performance have made the PRO 4L the industry standard in its class. When used ultra-close, the PRO 4L provides proximity effect (extra bass emphasis) which can be used to achieve a fuller sound, or to further reduce feedback in conjunction with equalization of the microphone input.

The PRO 4L is enclosed in a rugged housing with a low-reflectance finish and a conveniently located on/off switch. Internally shock-mounted capsule reduces handling and cable noise while the multi-stage windscreen effectively controls “popping”, wind noise. There is also a conveniently located on/off switch. Includes a 5 meter (16.5”) XLR cable and soft case. ........................................79.50

**PRO 5x Handheld Dynamic Cardioid Mic**

Designed for use in high-quality sound reinforcement systems and to meet the demands of professional musicians, the PRO 5X is equally suited to any application requiring absolute dependability and where quality sound reproduction cannot be sacrificed. Response is tailored to provide natural, full-range reproduction when used by vocals and instrumental performers at very close distances. The PRO 5X is enclosed in a rugged housing with a low-reflectance finish. Superior internal shock mounting provides effective isolation from handling and cable noise while the multi-stage windscreen effectively controls “popping”, distortion, and wind noise. Includes a 20’ XLR cable and soft case. .................................87.95

**PRO 10HE Handheld Dynamic Cardioid Mic**

A dynamic hypercardioid microphone, the PRO 10HE features a Hi-ENERGY neodymium magnet with alni-chromate magnet coating to ensure excellent transient response coupled with high efficiency. Designed for high-quality recording and sound reinforcement applications, the PRO 10HE has a double-dome diaphragm that unlike most dynamic mics provides both high sensitivity and extremely fast transient response for musical instrument and orchestral pickup. ....................................................109.95

PRO SERIES - Specialty Instrument Mics

PRO 7a
Miniature Cardioid Condenser
Lavalier/Instrument Microphone
A miniature cardioid condenser mic, the PRO 7a is designed for pickup of acoustic guitar and other acoustic instruments, and for hands-free applications in sound reinforcement systems. Close-up voice and instrument pickup are crisp and clean, yet full sounding, while suppression of background noise is significantly improved over that of stand-mounted full-size cardioid microphones.
- Mic element is enclosed in a rugged housing with low-reflectance finish
- Internal construction minimizes handling and clothing noise
- A built-in 3-position switch on the power module allows selection of off/flat response/low-roll-off
- Integrated 6-ft. cable with XLR-M connector between the mic and power module
- Runs 3500 hours on a single AA battery
- Includes clothing clip, guitar adapter and windscreen

PRO 25
High-SPL Hypercardioid
Dynamic Instrument Microphone
With high SPL capability, the PRO 25 meets the critical requirements of professional musicians and high-quality sound reinforcement systems. Efficient motor system, large diaphragm and well-controlled polar pattern make it very effective in picking up highly dynamic instruments such as drums (kick, tom, snare), timpani, piano, acoustic and electric bass, and trombone. Also suitable for vocal pickup where low-frequency emphasis is desirable. When used ultra-close, the PRO 25 provides proximity effect (extra bass boost) which can be used to achieve a fuller sound.
- Rugged housing with a low-reflectance finish
- Internal shock mount provides effective isolation of the mic element from handling and cable noise
- Multi-level steel grille is extremely sturdy and provides "pop" protection for vocals
- Has an XLR output (no cable) and includes an integral stand clamp and soft protective pouch

PRO 35
High-Intensity Cardioid Clip-on Instrument Microphone
A miniature cardioid condenser mic, the PRO 35 is uniquely capable of picking up high-intensity sound without distortion. With a very small diaphragm (for excellent transient response) and the ability to handle high sound pressure levels, it is an effective tool in recording and sound reinforcement applications. Ideal for closely-miked instruments such as woodwinds, brass, strings, piano and specifically, snare and toms. The supplied AT8418 UniMount surrounds the mic with foam, shielding the element against accidental damage, isolating the mic from noise, and providing an efficient windscreen. The flexible boom lets you aim the microphone in any direction, while cable strain reliefs reduce cable-transmitted noise and cable damage. The "rubber-grip" spring clamp holds the microphone securely to the instrument without scratching the surface. A 5.9’ cable is provided between the mic and power module. A switch in the power module permits choice of flat response or low-frequency roll-off to help control undesired ambient noise. Also available as the PRO 35xcW: Same as above less power module and with a 55” (1.4 m) cable terminated with 4-pin HRS connector for Audio-Technica UniPak wireless system.

PRO 95
Acoustic Instrument Condenser Microphone
The PRO 95 is designed for professional musicians, especially for reproduction of acoustic guitar and other string instruments. Uniquely capable of being mounted inside a guitar, the mic provides sound pickup that is crisp and clean, yet full sounding.
A "rubber-grip" spring clamp holds the microphone securely to the instrument without marring the surface. The flexible boom allows you to aim the mic in any direction, while a cable strain relief reduces cable-transmitted noise and the possibility of cable damage. The mic element is enclosed in a rugged housing with a low-reflectance finish. The PRO 95 is permanently connected to an ultra-flexible 24’ cable and in-line power module with an on/off switch. A clip for the power module and a battery (runs for about 400 hours on a single 1.5v LR44-type battery) are provided as well as a wind screen. Also includes an end-pin jack and 1/4” phone plug for optional permanent installation inside a guitar.
Hi-ENERGY Headworn Hypercardioid Dynamic Microphone

The PRO 8HEx is a light-weight, headworn dynamic mic ideal for performing musicians, aerobics instructors and for anyone who needs a professional-quality mic with hands-free operation. Featuring a Hi-ENERGY Neodymium magnet with alni-chromate coating, the motor structure ensures excellent transient and frequency response, reduces distortion, and provides a high output level not normally achieved by other headworn dynamic microphones. The result is crisp, clean vocal pickup.

The combination of hypercardioid polar pattern and headworn design provides suppression of background noise that is significantly improved over that of full-size, stand-mounted cardioid microphones.

Features include a mic capsule moisture barrier, a durable cable assembly, and a covered stainless steel headband which can be gently flexed to adjust for a comfortable, stable fit around the back of any head. The PRO 8HEx includes a permanently attached 7.2´ cable with XLR-M connector, two wind screens (large and small) and a clothing clip.

Small-Diaphragm Cardioid Condenser Recording Microphone

A wide-range cardioid condenser mic, the PRO 37R is an excellent choice for high-quality sound reinforcement systems and for pickup of instruments such as drums, piano and brass. It can also be used for professional recording, broadcasting and situations demanding the highest-quality sound performance coupled with excellent reliability in a small package.

With the addition of an AT8106 metal-frame pop filter, the PRO 37R becomes a studio-grade vocal and dialog mic suitable for professional studio and sound reinforcement applications. The PRO 37R is enclosed in a rugged housing with a low-reflectance finish. Internal shock mounting is designed to minimize handling and cable noise. Includes snap-in clamp for standard 5/8˝-27 threaded stands and a foam windscreen. Accepts external phantom power from 9v to 52v DC, output is via XLR-M.

Single-Gooseneck Unidirectional Dynamic Console Microphone

A uni-directional dynamic console mic designed for use as a quality talk-back microphone, the PRO 11 provides excellent intelligibility and dependable performance in entertainment, commercial and industrial voice applications. Features include a conveniently-located on/off switch, balanced low-impedance output, and an integral 3-pin XLR connector that plugs directly into a panel jack or mic cable. A protective screen reduces wind noise and “popping” when used extremely close, while internal construction reduces handling and shock noise.
AT822/AT825 OnePoint X/Y Stereo Mics

The AT822 and AT825 are X/Y stereo condenser microphones designed for broadcast, professional recording and field applications. The AT822 features unbalanced connections ideally suited for use with portable MiniDisc and DAT recorders, or for mounting onto a prosumer camcorder. On the other hand, the AT825 features balanced XLR connections compatible with professional mic preamps, mixers and video cameras, as well as the more substantial digital field recorders. Both the AT822 and the AT825 provide excellent channel separation with full, natural stereo ambience in a compact, lightweight design and are equally at home mounted on a stand, fishpole or camera and can even be as hand-held mics for electronic news gathering. The two wide-range, closely-matched, optimally-positioned cardioid condenser elements exhibit a uniform frequency response throughout their polar range. This provides the spatial impact and realism of a live sound field—while simultaneously remaining fully mono (L+R) compatible.

- Consistent natural-sounding response over an arc of approximately 170° (AT822) and 220° (AT825)
- Excellent channel separation
- Switchable low-frequency roll-off
- Distortion-free signal even in sound fields as high as 125 dB SPL
- The AT822 runs on a single AA, the AT825 can run on phantom power or a AA battery

AT849 Stereo Condenser Boundary Mic

The AT849 is a X/Y stereo condenser boundary microphone designed for surface-mounting. The two wide-range, optimally-positioned miniature condenser cardioid elements provide natural stereo ambience ideally suited for broadcast, professional recording and live sound reinforcement applications.

- Consistent, natural sound over an arc of approximately 220°
- Fully mono compatible L+R polar pattern is virtually free of lobes and comb effects.
- Uniform polar response over an extended, smooth and peak-free frequency response of 30Hz to 20kHz
- Requires 9V to 52V DC phantom power per channel
- 2-position switch selects flat or low-roll-off response
- Rugged low-profile housing protected by two layers of perforated steel. The heavy case and rubber non-slip bottom pad minimizes mechanical coupling of surface vibrations to the microphone.
- Low-reflectance black finish
- Includes a soft pouch and 25’ shielded cable with a five-pin TA5F input connector and two standard three-pin male XLR output connectors

AT854R Multi-channel Condenser Boundary Mic

A multi-channel boundary microphone with four cardioid condenser elements mounted in a low-profile housing that ensures minimum visibility. Ideal for high-quality sound reinforcement and a variety of video and audio conferencing applications. The four independently phantom powered quadrants can be used individually or in any combination and integrated easily with a standard or automatic mic mixer.

- Four mic channels mounted in separate quadrants
- Rugged low-profile housing protected by two layers of perforated steel. The heavy case and rubber non-slip bottom pad minimizes mechanical coupling of surface vibrations to the microphone.
- Requires 9-52V DC phantom power per channel.
- Includes a rugged 30’ cable with a miniature multi-contact metal-body plug and four separate shielded and jacketed pairs terminating to four male XLR connectors
- Low-reflectance black finish

AT822 includes a 1.7’ cable (XLR-female to stereo 3.5 mm mini-plug); and a 10’ cable (XLR-female to two mono 1/4˝ plugs); gun-grip/stand clamp; camera shoe-mount adapter; windscreen; battery; case.

AT825 includes a 16.5’ cable (5-pin XLR to two standard 3-pin XLR connectors), stand clamp; windscreen; battery; case.
AT804 Omnidirectional Moving Coil Dynamic Mic

Designed for use in professional recording and broadcasting studios, high-quality sound reinforcement, and other demanding sound pickup situations. Hardened-steel grille and die-cast case make the mic ideal for field applications where rugged construction is essential. The omnidirectional polar patterns ability to pick up sound equally from all directions means that with close-up miking, the mic won’t accentuate bass frequencies due to proximity effect. The omnidirectional pick-up pattern is also ideal for distant miking where the reproduction of ambient environments is desired.

- Rugged die-cast housing with a low-reflectance finish
- A protective hardened-steel screen reduces wind noise and plosives
- Internal shock mounting reduces handling and cable noise
- Includes a snap-in stand adapter with 5/8”-27 threads and a soft protective pouch are included

813a Battery/Phantom Cardioid Condenser Mic

Designed for use in high-quality sound reinforcement systems and for use by professional musicians, especially for vocal pickup. It can also be used for professional recording, broadcasting and other applications demanding the highest quality sound performance coupled with excellent reliability.

- Powered by a single AA battery for up to 1200 hours or 9-52V DC phantom power
- Cardioid polar pattern controls feedback and provides extra bass emphasis (proximity effect) when used ultra-close
- Low-mass diaphragm ensures minimum distortion
- Large windscreen is especially effective in reducing “popping” and distortion from sibilant sounds
- Includes stand clamp; battery and protective pouch

AT808G Subcardioid Dynamic Console Mic

Designed for use as a quality talk-back microphone.

- Dependable performance for entertainment, commercial and industrial applications
- Custom-tailored frequency response ensures excellent intelligibility in environments with excessive ambient noise
- Protective windscreen and rugged construction
- Plugs directly into an XLR-type surface or cable connector
- Overall length of 16.2”
AUDIO-TECHNICA

SHOTGUN MICS

AT815b and AT835b
Line + Gradient Condenser Mics

The 18” AT815b and 14.5” AT835b are wide-range condenser microphones with a line + gradient polar pattern specifically designed to provide the narrow acceptance angle desirable for long distance sound pickup. They are ideal for use in professional recording, broadcasting, film/Tv/video production, high-quality sound reinforcement and other demanding applications requiring excellent sound rejection from the sides and rear. The shorter AT835b is well suited for boom/fishpole use as well as mounting on professional video cameras, whereas the longer AT815b has a narrower acceptance angle and is particularly useful for applications that require a longer reach.

- Rugged housing with a low-reflectance matte satin nickel finish
- Recessed switch lets you choose either flat or a bass roll-off of 180 Hz at 12dB/octave
- Powered by a single AA battery or 9-52v DC phantom power
- Includes AA battery, foam wind-screen, microphone stand adapter with 5/8˝-27 threads, and a compartment carrying case designed to hold the microphone and accessories

AT815ST/AT835ST
Stereo Condenser Shotgun Microphones

Developed at the request of broadcasters for cost effective, compact stereo shotguns, the 9” AT815ST and 14” AT835ST combine professional audio quality, outstanding versatility, ease of use and robust construction, making them essential audio tools for today’s high-quality stereo video production. Both mics feature independent line-cardioid and figure-of-eight condenser elements to provide a choice of three stereo modes including non-matrixed M-S (Mid-Side) stereo as well as two internally-matrixed left/right stereo modes.

- Two internally-matrixed left/right stereo modes and non-matrixed M-S mode are switch selectable
- Switchable low-frequency roll-off
- Compact, lightweight design provides exceptional mounting versatility including camera-mount
- Includes foam wind-screen, microphone stand adapter with 5/8˝-27 threads, and compartment carrying case

### Three Stereo Modes

- **M-S mode** provides an independent cardioid element (Mid) and figure-8 element (Side). The advantage of this design is that the stereo balance of the separate Mid-Side signals can be adjusted later on in post-production instead of in the field.

- **Two internally-matrixed modes** provide traditional “left-right” stereo that accommodates varying acoustic environments. The LR-W pattern is wider, allowing increased ambient pickup, while the LR-N pattern is more narrow to offer greater rejection with less ambience.
Adaptive-Array Microphone System

Utilizing AT’s proprietary DeltaBeam technology, the AT895 system manipulates the amplitude and phase of its 5-element array by acoustical, analog and digital means, providing off-axis rejection of up to an astounding 80 dB.

The system continuously adapts to a changing soundscape, and is especially effective at suppressing unwanted low-frequency information. Background interference, mechanical noise, wind noise, proximity effect—all are minimized automatically. And, unlike some attempts at directive devices, the audio quality remains wideband and natural. The AT895 provides great operating versatility and ease of use with three polar-pattern choices, three EQ selections and three powering options.

Functioning equally well for handheld interview use and long-range sound pickup, the AT895 excels at tasks from ENG to sports broadcast to film production to surveillance operations.

About DeltaBeam Technology

DeltaBeam technology is a unique, groundbreaking optimization of acoustic, analog and digital design that produces unmatched directional performance, operating versatility and ease of use.

- Provides an adaptive array to substantially reduce background acoustic interference
- Improves sensitivity, pickup distance and gain-before-feedback as compared to currently-available professional microphone technology
- Provides a tool for the discrimination of specific sources, even in very high-noise environments
- Provides greatly increased off-axis rejection, even for very loud interference
- Provides outstanding low-frequency directivity (an amazing 78 dB maximum rejection at 20 Hz!) in a mic only 14˝ long
- Minimizes the audibility of proximity effect
- Minimizes nearfield effect on the low-frequency directivity of the array
- Reduces susceptibility to mechanical noise, wind noise and racking as compared to other professional mics

The Ultimate Audio Acquisition Solution

High-directivity, wideband audio quality, and the ability to suppress unwanted low-frequency information make the AT895 the best solution for many broadcast, film/video and surveillance/security applications.

Used in football or soccer, the AT895 delivers vivid audio of player contact, ball strikes and sideline conversations. Covering golf, it eliminates wind noise rumble while providing precise directivity. Also very effective in track & field, equestrian events and tennis.

The AT895’s ability to attenuate audio clutter that masks desired sounds is invaluable for a multitude of field production situations such as interviewing, sound effects gathering and dialog acquisition.

The same capabilities that make the AT895 such an effective tool in broadcast also apply to security applications. Used alone or in conjunction with surveillance cameras, the AT895 provides exact audio pickup in locations such as hotels, casinos, banks, schools and parks.

*Compared to typical performance of a professional-quality 15.5” line + gradient microphone (measurement conditions: 1 Pa at 0.5 m). Due to the adaptive nature of its digital processing, AT895 performance in actual field conditions will vary with the environment encountered.

The AT895 is available in two system configurations: As the AT895/RK “Remote Kit” for field use, and as the AT895/MK “Mount Kit” for fixed-install applications.

**AT895/RK Remote Kit**
- AT895MIC Adaptive-array Microphone
- AT895CP Control Pack w/ attached belt clip
- AT895BH Click-on Battery Housing
- AT895PG Pistol-grip Shock Mount
- AT895Z Zeppelin-type Windscreen
- AT895C-10 6-conductor shielded 10’ cable
- AT895CC Carrying Case

**AT895/MK Mount Kit**
- AT895MIC Adaptive-array Microphone
- AT895CP Control Pack
- AT895SC Shock-mount Stand Clamp
- AT895PS1 Multi-input AC Adapter with “120v” IEC detachable power cord
- AT895C-25 6-conductor shielded 25’ cable
4-and 5-Channel SmartMixers

The AT MX-341A and AT MX-351 are automatic mixers ideal for meetings, seminars, teleconferencing, worship services, courtroom proceedings, radio and TV broadcasting and A/V applications. All switching is under microprocessor control with proprietary algorithms for instant, seamless operation. An individual priority pre-select switch for each mic/line channel allows choice of one-channel-at-a-time operation, all active, or any mix of moderator override. The last microphone on stays on so that ambient sound is never muted. Plus, any number of SmartMixers can be linked to create a system for large multi-mic installations. The priority control system extends throughout the entire chain.

What is a SmartMixer?
Field-proven to be the easiest, most flexible way to automatically control a sound system, SmartMixers deliver fast, quiet and incredibly “smart” performance in a variety of applications. By keeping the number of open channels to a minimum, they reduce background noise and other distractions. And they provide instant, completely transparent switching between channels. Now available in two models, SmartMixers offer a host of innovative features that ensure easy setup, effortless operation and unrivaled versatility.

Flexible Operation
SmartMixers feature priority pre-select switches for each channel. If all channels are priority “off” (no one has priority), the system opens just one microphone at a time, switching to the next only after the controlling channel falls quiet. The operation is so fast and silent that this is the recommended mode. A single channel set to priority “on” will override all the others, useful for moderators and chairpersons. If all channels are priority “on,” any number of people can talk at once. Regardless of the priority switch settings, all mics not in use are attenuated by the mixer. SmartMixers also have a switchable manual mode, permitting them to function as conventional mixers.

AT-MX341A
- Four Mic/Line inputs with individual priority pre-select switch for each channel
- Balanced inputs and output are individually switchable between mic and line-level
- 12v phantom power individually selectable for each channel
- Master output level control
- Individual gain controls for each channel
- Output level meter with Peak and RMS modes

AT-MX351
- Four automatic mic/line inputs, plus Aux in
- Automatic threshold setting
- 48v phantom power individually selectable for each channel
- Limiters on each mic channel prevent individual channel overload
- Balanced inputs and output, selectable Mic/Line-level
- Headphone output with adjustable level
- Internal AC supply
- Single threshold setting for all channels
- TTL logic output signals available to control speaker or camera switching, tally lights, etc.
- -20 dB adjustable attenuation for inputs
- Mounts in a single 19” rack space, includes rack mount adapters
- Sub-D connector for TTL output, plus closure-control input for external control of each channel
- Off attenuation for each input adjustable to -40 dB
- NOMA operation (can be turned on/off)
- Mounts in a single 19” rack space, includes rack mount adapters
**AT8202 Adjustable In-Line Attenuator**

The AT8202 provides -10dB, -20dB or -30dB attenuation, preventing overload of sensitive input stages. For use with balanced Lo-Z microphones, it is compatible for use in phantom power applications. Durable steel case provides optimum shielding from hum. Input impedance is 1000 ohms (-10 dB), output impedance is 200 ohms (-10 dB). Has a XLR-F input and XLR-M output.

**AT8801/CP8506 Single- and Four-Channel 48v Phantom Power Supplies**

The AT8801 and CP8506 are 120v AC powered devices that provide 48v phantom power to remote-powered microphones such as those in the 40 Series, UniPoint, and Artist Series. The AT8801 powers a single microphone while the CP8506 can power up to four. Their rugged steel case is finished in enamel and provides shielding from electrostatic interference.

**CP8201 Line Matching Transformer**

The CP8201 matches low-impedance microphones to high-impedance electronic inputs. Reduces noise pickup, maintains high frequency response and permits use of long mic cables. Input impedance is 250 ohms, output impedance is 50,000 ohms. Has a XLR-F input, 1/4” plug out.

**CP8305 Line Matching Transformer Cable**

Same as the CP8201 except the CP8305 adds 16’ of cable. XLR-F in, 1/4” plug out.

**AT8410a & AT8415 Shock Mounts**

These shock mounts provide excellent mechanical isolation while offering unusual versatility and ease of use. Equally adapted to cylindrical and tapered mics, they attenuate noise, shock and vibration transmitted through stands, booms and fixed mic mounts. The AT8410a permits easy mic insertion and removal without detaching the mic cable; its spring-loaded clamp holds even heavy mics securely. The AT8415’s light weight and low profile make it an excellent choice for “fishpole” booms and for video use. The AT8410a is compatible with 5/8”-27 threaded stands and includes a 180° swivel for easy, positive mic adjustment. Isolation is accomplished with elastic shock cord. The AT8415 is compatible with 3/8”-16 and 5/8”-27 threaded stands, and features a constant-tension clutch and 360° rotation. Isolation is accomplished with four chloroprene bands.

**AT8416 Shock Mount**

Designed for UniPoint and similar gooseneck mics mounted on lecterns, pulpits, conference tables and similar surface, the AT8416 effectively isolates them from impact vibration and shock handling. A slot is provided in the mounting flange to allow a small-diameter cable to pass down the mounting hole. A cable channel secures the cable in the flush mount assembly and helps to further deaden the transmission of vibration.

**AT8418 UniMount Microphone Instrument Mount**

Rubber grip spring clamp holds mic securely to instrument without marring finish. Flexible boom permits aiming the microphone in any direction. Cable strain reliefs reduce cable-transmitted noise and cable damage. Foam windscreen entirely surrounds mic for best performance and protection.

**Shock Mount Plates**

Designed for UniPoint and similar gooseneck mics mounted on lecterns, pulpits, conference tables and similar surface, these shock-mount plates effectively isolate mounted microphones from impact vibration and mechanical noise normally transmitted from the surface. All three models incorporate a sturdy yet flexible suspension panel which provides the mechanical isolation. The AT8646AM has a 5/8”-27 threaded adapter-mount, while the AT8646QM has an XLR-F connector. The AT8647QM/S accepts plug-in mics and features a phantom-powered mute switch with a lighted “on” indicator.

**Microphone Desk Stands**

The AT8601 is compatible with any 5/8”-27 threaded stand clamps. The AT8614 is the same, plus it has a thru-hole in 5/8”-27 stud for cable passage. The AT8615 is a quick-mount plug-in cast-metal stand for any gooseneck mic with XLRM output. The AT8615 is the same plus it has a press-on/off mute switch for phantom-powered mics.

**AT8646AM/AT8646QM/AT8647QM/S Shock Mount Plates**

Designed for UniPoint and similar gooseneck mics mounted on lecterns, pulpits, conference tables and similar surface, these shock-mount plates effectively isolate mounted microphones from impact vibration and mechanical noise normally transmitted from the surface. All three models incorporate a sturdy yet flexible suspension panel which provides the mechanical isolation. The AT8646AM has a 5/8”-27 threaded adapter-mount, while the AT8646QM has an XLR-F connector. The AT8647QM/S accepts plug-in mics and features a phantom-powered mute switch with a lighted “on” indicator.
UniTools

Phantom-powered in-line microphone accessories to overcome commonly-encountered sound installation challenges quickly, easily and effectively. Available in two function-specific models, they are intended primarily for use with UniPoint and similar condenser microphones. Both have XLR input/output connectors, and require balanced cables and 24-48v phantom power for operation.

- Rugged steel housings
- Phantom power passes thru to the mic
- Can be installed anywhere in-line, either at the mixer input or near the mic

AT8681 UniMix
2-to-1 Mic Combiner with Balance Control
Combines the output from two microphones into one channel. The balance control attenuates each microphone by 6 dB (typical) at midpoint.

AT8684 UniMute
Mic Attenuator with User-Definable Switch Function
Versatile attenuator permits easy in-line switch installation and flexible application. Type of external single-pole switch the user supplies determines muting function; closed contact causes muting. Use for on/off, push-to-talk, push-to-mute, etc.

Specifications

- Frequency Response: 20-20,000 Hz
- Noise: (A-weighted) -115 dBV typical
- Weight: 8.8 oz
- Size: 5.12 x 2.36 x 1.73” (WxDxH)

SGM-2X Professional Shotgun Microphone

Designed for pro-sound and broadcast applications, the SGM-2X comes with two barrels, an omni (8.11” long) or, by adding the extension barrel, a supercardioid (15.75” long). Either configuration provides a sensitive (-50dB), low-noise, wide bandwidth signal (40Hz - 20kHz) through its balanced, low-impedance XLR output. Comes complete with an integrated shock-mount, both camera shoe-mount and mic stand-mount, and two foam windscreens.

- 2 barrels - an 8 1/8” omni and extension barrel – make it a 15.75” supercardioid
- Balanced low impedance (680 ohm) XLR output
- Integrated shockmount attaches to camera shoe or mic stand
- Plugs into the 41XT transmitter to make a wireless shotgun mic
- Switchable low-cut filter
- Runs 1000 hours on a single AAA battery

SGM-1X • SGM-X

Following up on the success of the SGM-2X, Azden offers two shorter versions— the SGM-1X and SGM-X— specifically designed for today’s smaller DV camcorders.

Ideal for the Canon GL-2, Sony DCR-VX2000 and other similar type camcorders, the 8.5” SGM-X is a complete system, including windscreen, shoe-mount holder and mini cable. Has a mini output.

At 11.75” the SGM-1X is designed for camcorders like the Canon XL-1s and Sony PD-150. It features an XLR output and comes supplied with Azden’s unique shockmount holder with integrated shoe mount.
Other miniature mics require external power supplies that are bulky, cumbersome, and require extra cabling. Not only do the Micros eliminate the additional power supply, but the preamp they use is very special. The circuitry is the same topology used in Audix's SCX series. The Micros are studio quality mics with very low noise, wide dynamic range, and high quality performance. And with a sound that is absolutely astounding, just think of the possibilities for live sound, location recording, and installations.

The M 1245 and M 1290 'Micros' are the world's small condenser microphones with an integrated preamp and detachable cable. The M 1245 is less than 2" long and weighs a mere .6 oz while the M 1290 is 3.5" in length and weighs in at 1 oz. Characterized with precision machined brass body and black E-coat finish, each is laser etched with its model and serial number. Individual models include a variety of polar patterns to choose from including cardioid, hypercardioid, omni-directional and shotgun capsules.

Other miniature mics require external power supplies that are bulky, cumbersome, and require extra cabling. Not only do the Micros eliminate the additional power supply, but the preamp they use is very special. The circuitry is the same topology used in Audix's SCX series. The Micros are studio quality mics with very low noise, wide dynamic range, and high quality performance. And with a sound that is absolutely astounding, just think of the possibilities for live sound, location recording, and installations.

The M 1245 has a smooth uniform response frequency range is 80Hz-20kHz, while the M 1290 has a wider response of 40Hz-20kHz. Phantom powered, the mics are low impedance, fully balanced, and allow cable runs of up to 150´. The mics are packaged in a classic rosewood case, and include 12´ cable, mic stand adapter, and snap on foam windshield. Optional accessories include cables, insulated shock mount clip, and a clip for for overhead hanging applications. They are also compatible with the D-Vice and D-Clamp for a wide variety of instrument miking.

**www.bhphotovideo.com**
OM-Series
Dynamic Hypercardioid Vocal Microphones

OM-Series microphones are designed for live vocal performances. Combining high performance, high levels of gain and very low feedback, they challenge the best of much more expensive brands. When it comes to handling high sound pressure levels, off-axis rejection and purity of sound, these mics will simply blow you away! They are also designed for artists and engineers who refuse to compromise and, as such are manufactured to exacting standards and built to last a lifetime.

“Application specific”, you can choose a microphone based on the type of music you play, vocal style, size of the group, stage volume, and type of PA equipment. Audix mics will give you the freedom to optimize your performance each and every time. So whether you’re on a world tour, playing a small club, or recording your next demo, there is an Audix mic for you.

- **OM-1 Vocal Mic**
  - First produced in 1985 and re-introduced for the new millennium, the OM-1 provides original cutting edge sound with a stylish two-stage, machined brass body. Updated composite capsule housing and mounting system allows very high output with extremely low handling noise.
  - Frequency response of 50 Hz-15 kHz
  - Frequency response, 140 dB SPL handling, electronically cut blast filter and a durable unique two-piece brass body
  - Supplied with a cordura carrying case and nylon mic clip

- **OM-2 Vocal/Instrument Mic**
  - Designed to provide high quality sound for a wide variety of vocal styles, the highly affordable OM-2 is an all purpose mic that sounds great on just about everything. It incorporates hallmark Audix features and characteristics including rich, natural vocal sound with exceptional clarity and detail; superior off-axis rejection; and the ability to perform at high levels without feedback or distortion. A worthwhile addition to any live sound or home studio application.
  - Frequency response of 50Hz-16kHz, 140 db SPL handling, durable zinc alloy construction, electronically cut blast filter with black E-coat finish
  - Comes with cordura carrying case and nylon mic clip

- **OM-3 Vocal/Instrument Mic**
  - An excellent choice for any size stage, the OM-3 produces highly accurate, natural sound with minimal bass proximity. It provides over 25dB of feedback rejection off-axis and handles up to 144dB SPL without distortion. A dent-resistant spring-steel grill adds to the OM-3’s road-worthiness. Also available with an on/off switch (OM-3-S).
  - Uniform frequency response of 50-18kHz
  - Clear, natural sound for mid to large PA. Compared to the OM-2, the OM-3 has slightly less bass proximity and will provide higher gain before feedback in the monitors
  - Overall natural sound quality and consistency, make the OM-3 the mic of choice for many sound companies and high profile vocalists
  - Transformerless design, low impedance, and balanced output allow interference-free performance even with long cable runs

- **OM-4 Vocal Mic**
  - Vocals can be heard above the stage mix
  - Dent and scratch-resistant spring-steel grill ball — 10 times the tensile strength of typical grille balls

- **OM-5 PA/Vocal Mic**
  - A truly remarkable performance vocal microphone, the OM-5 has appeared in many high level concert performances including Alanis Morisette, Foo Fighters and Bonnie Raitt as well as becoming a standard on many TV shows and music videos.
  - The OM-5 is attenuated in the lower mid-bass with a slight presence peak in the upper mid-range. It sounds excellent on full range PA systems and is characterized as being natural, articulate, and able to cut through the stage mix without sounding harsh or shrill
  - An exceptionally tight pattern mic, the OM-5 allows for very high level monitor gain without feedback
  - Also successful at reducing the sound of guitar and drums coming through the vocal mix, a real plus for the performer and engineer

For Any Inquiries Regarding Your Order, Call Our Customer Service:

OM-Series, Fusion Series, CD-Series

OM-6
Full, rich sound. Ideal for in-ear monitor systems. The OM-6 has also met with critical acclaim in the world of pro sound. Unlike the OM-5 which has a natural attenuation of bass frequencies (below 100 Hz), the OM-6 is a very full range microphone capable of reproducing tones down to 63 Hz. Characterized as being extremely pure and accurate, the OM-6 has a more “studio-like” sound and appeals to vocalists who want minimal coloration.

OM-7
There is no competition when it comes to gain before feedback. Having become a standard on the touring rock concert scene, the OM-7 is considered to provide the highest gain before feedback of any microphone on the market, especially in the monitor system. The unconventional low output gain stage of the OM-7 acts as a natural pad and allows for incredible sound pressure levels to be achieved during live performances, without sacrificing tonal quality.

Fusion Series
Affordable dynamic microphones, the Fusion series offer exceptional performance at a breakthrough price. They are designed for a wide variety of applications including music, speech, corporate AV presentations, karaoke, worship and education.

- An excellent all purpose mic for both live sound reinforcement and recording. The F50’s cardioid pattern helps minimize feedback and unwanted off-axis noise from other mics or instruments on stage.
- The F50 is a dynamic mic designed to handle a wide variety of vocal and instrument applications for both live sound and recording. Characterized with a wide cardioid pickup pattern and a 50 Hz to 16 kHz frequency response, the F50 is designed with a slight bass proximity and mid-range presence boost. This results in a warm natural response for nearly every type of voice.
- The F50 is engineered to handle very high levels of gain without distortion and provides over 20 dB of off-axis feedback rejection.
- Solidly built with a cast zinc alloy body and steel mesh grille ball with an internal pop screen. The F50-s includes an on/off switch.

F50-BP Band Pack includes 3 F-50 and 1 F50-S in an aluminum case

CD-Series
The CD series mics are cost effective solutions designed for a wide variety of applications including music, karaoke, speech, presentations, worship and education. Rugged and road worthy, they each feature a cardioid polar pattern to minimize feedback, on/off switch, and an internal pop filter to control breath and wind noise. Each mic comes with 20’ mic cable, stand adapter and carry case.

CD-11: Low impedance dynamic mic characterized with a very clear midrange vocal presence to suit portable sound systems. Includes XLR-XLR mic cable.

CD-11H: A high impedance version of the CD-11 allowing it to be used with equipment such as guitar amps, recording tape decks and karaoke systems with high impedance inputs. Includes a XLR – 1/4” mic cable.

CD-21: A step up to the next level of vocal performance, the stylish and compact CD-21 offers a wider frequency response and a rich, warm sound. Includes XLR-XLR mic cable.
VX-10

The VX-10 is a true condenser microphone designed to set new performance standards in live sound and broadcast applications—where sonic performance is everything.

◆ With a smooth uniform response over a frequency range of 40Hz to 20kHz, the VX-10 is highly sensitive to transient response and will reproduce vocals and speech with exceptional detail and realism.
◆ Cardioid pattern provides excellent gain before feedback.
◆ Runs on 48-52v phantom power.
◆ While it provides high sensitivity and studio quality sound reproduction, the mic can also handle the very high sound pressure levels (up to 140 dB) of instruments.
◆ The VX-10 handles close miking with minimal proximity effect and will not lose signal if the user is slightly off-axis from the front of the microphone.
◆ Even with its extended low end response, the VX-10 offers sonic clarity without “boominess” in the lower mids—usually difficult to attain with live vocals.

SCX-25

Studio Condenser Microphone

The SCX-25 is a compact, brass condenser microphone with an elegant design and a revolutionary patented capsule suspension system. Featuring a low-noise, high-output preamp and 1” gold sputtered diaphragm, this innovative mic delivers a pure, open-air sound that places it among the world’s finest—regardless of size or cost. The patented suspension-mounting system isolates the capsule from the housing and electronics, which minimizes acoustic reflections and diffraction. This phenomenal feat of engineering distinguishes the SCX-25 from all other mics—in fact it’s the closest thing to hanging the capsule in mid-air. Expensive shock-mount clips are unnecessary, and with the mic’s compact size, setup time is significantly reduced. Ideal for recording a wide variety of acoustic instruments, vocals, and piano, the SCX-25 also thrives as an ambient room and field recording mic.

◆ With a smooth uniform cardioid frequency response from 20Hz to 20kHz, the SCX-25 reproduces vocals and acoustic instruments with exceptional detail and realism.
◆ Employs miniaturized low noise components (preamp circuitry is housed in a brass microphone body 4” long). The result is the smallest footprint of any large diaphragm mic—allowing more convenience and freedom for mic placement.
◆ Very consistent when responding to incoming off-axis signals, exhibiting excellent phase coherence and minimal proximity effect.
◆ Operates on 48-52v phantom power.

D-SERIES The Ultimate Drum Mics

With the success and acceptance of the D-Series microphones, Audix is now the recognized leader in percussion microphones. Compact and lightweight yet featuring full size diaphragms, the D-Series mics employ exclusive Sub-Impulse Technology which allow them to pick up transients and nuances which substantially contribute to the accuracy and richness of the sound. The low mass of the diaphragm, coupled with a sensitive internal air suspension, allows the outer wall of the diaphragm to react to sound waves, harmonics, and sub-harmonics more quickly than other microphones. This results in a more precise sampling of the original sound. Furthermore, their tight hypercardioid pickup pattern allows clear definition of sound without the feedback problem commonly associated with placing multiple mics in close proximity.
D1
Snare Drum, Bongos, Flute, Hi-Hat, Clarinet, Cowbell
The D1 is characterized with natural articulation and attack in the upper mid-range and will complement instruments requiring crisp, clean reproduction. The D1 requires little or no EQ and provides great results when close miking techniques are employed.

D2
Rack Toms, Floor Toms, Congas
Designed to capture the warmth and punch of instruments with upper mid bass, the D2 is the perfect combination of attack and decay and can be successfully used with very little or no gating. With a wide dynamic range, the D2 can also be used on guitar cabs and saxophone.

D3
Timbales, Piccolo Snare, Trumpet, Electric Guitar
The D3 employs a unique low output gain stage which acts as a natural pad in order to compensate for instruments that would normally overload most mics. Characterized with a very flat and accurate frequency response, the D3 is perfect for extremely high SPL instruments with short blasts of percussive sound.

D4
Floor Toms, Kick Drum, Djembe, Bass Cabs, Piano, Saxophone
The D4 utilizes a new capsule design enabling it to capture instruments with extended frequencies below 100Hz. In fact, the D4 extends down to 38Hz! A remarkable feat for a microphone of this size and versatility. The D4 has not only great low end response, but is a full-range microphone making it an ideal choice for a wide variety of instruments. It is important to note that when using the D4 to mic a kick drum, it should be placed just slightly inside the hole on the front head. This will provide a warm, fat sound with plenty of punch.

D6
Kick Drum, Cajon
The D6 is designed for anyone looking for a huge, clean, undistorted kick drum sound. About twice the size of the normal D series microphone, it is still extremely easy to use and position. It utilizes the same low profile mounting clip as the D series mics, and it will work with the Dvice and D-flex clips, as well as a variety of other popular clips on the market.

The D6 has a frequency response of 30 Hz - 15 kHz and is characterized with a cardioid pick-up pattern. The D6 is designed to sound good in any position and it is not dependent on finding the “sweet spot” of the drum. The D6 capsule features the same legendary VLM technology that has made the D series percussion and instrument microphones very popular for today’s live stages and recording studios. Includes a cordura pouch and nylon mic stand adapter.

AUDIX

INSTRUMENT MICS

ADX-51

Overheads, Hi-Hat, Cymbals, Toys, Acoustic Instruments, Group Vocals

The ADX-51 is an affordable pre-polarized condenser microphone designed to handle a wide variety of live and studio applications. Characterized with a smooth uniform response over a frequency range of 40Hz - 20kHz, the ADX-51 is very versatile and can be used for a variety of instruments as well as overheads. The ADX-51 has the added value of a 10dB pad and a bass roll-off switch. Capable of 142dB sound pressure levels, the ADX-51 is ideal for hi-hat and applications with very high stage volumes.

ADX-60

Kick Drum, Piano, Plays

The ADX-60 is a pre-polarized condenser boundary microphone capable of a very wide variety of applications. With a frequency range of 50Hz - 18kHz, the ADX-60 provides a warm, full-bodied sound not typical of microphones this size. Housed in a heavy-duty zinc die-cast base with a low reflective black finish, the ADX-60 operates on phantom power and is supplied with an in-line preamplifier and 25’ mic cable. A boundary microphone is unique in that it picks up sounds that are parallel to the surface. This allows the ADX-60 to be placed on surfaces such as floors, the inside of a piano lid, or the inside of a bass drum.

D-Series Drum Packs

Audix Drum Packs are a matched collection of drum and percussion mics and clamps in an aluminum road case that let you take control of your sound at substantial savings.

Designed for both studio and live applications, Audix mics get you right to the heart of the mix with consistent, high-quality sound.

Each microphone consists of a VLM (very low mass) capsule housed in a precision-machined lightweight aluminum body. Their compact size, in conjunction with the D-Vice gooseneck clip, allows for quick and easy set-up and perfect mic placement. And there are four packages to choose from (the DP3 and DP Elite also include condenser mics). So whether you are a performing artist or an engineer, there is a package designed for you.

Fusion Series Drum Packs

Fusion series mics effectively capture the sound of any drum or percussion instrument. Built to withstand the rigors of live stage applications, they can also be successfully used in a studio recording environment. The two packages are available complete with a foam padded road case. The F-10 and F-12 mics come with integral mic clips, and the F-15 mics come with mic stand adapters.

Micro-D

The Micro-D is a miniature electret condenser microphone that is very low profile and is exceptionally easy to use. The unique design works for a wide variety of applications including drums and percussion, guitar cabinets, cymbals, speech, vocals, and acoustic instruments. Available with three different types of specialized clips and two different types of capsules, the Micro-D becomes a modular system that can fulfill a multitude of creative miking needs.

The Micro-D comes equipped with a phantom power adapter, D-vice spring tension gooseneck clip, windscren, carrying pouch, and thread adapter. The D-vice is ideally suited for mounting to the rims of most drums. The thread adapter allows the Micro-D to be used with normal mic and boom stands.

- Basic version has a hypercardioid pick-up pattern and is capable of handling sound pressure levels of 140 dB
- The mic is housed in a protective aluminum ring and isolated by means of a rubber shock mount system

SCX1 Series

The SCX1 Series high quality transformerless condenser microphones have exceptional performance value in both studio and sound reinforcement applications. The SCX1-c has a cardioid pattern and is designed for overheads, acoustic instruments, choir, and room miking.

If more isolation is required, the SCX1-hc, a hypercardioid mic, will provide excellent focus and gain before feedback.

The SCX1-o is an omnidirectional mic, optimized for recording, room miking, and measurement. A true condenser, requiring 48-52v phantom power, the SCX1 Series will provide audio detail beyond your expectations.

INSTRUMENT MICS

SCX1 Series

The SCX1 Series high quality transformerless condenser microphones have exceptional performance value in both studio and sound reinforcement applications. The SCX1-c has a cardioid pattern and is designed for overheads, acoustic instruments, choir, and room miking.

If more isolation is required, the SCX1-hc, a hypercardioid mic, will provide excellent focus and gain before feedback.

The SCX1-o is an omnidirectional mic, optimized for recording, room miking, and measurement. A true condenser, requiring 48-52v phantom power, the SCX1 Series will provide audio detail beyond your expectations.

ADX-20i

The ADX-20i (cardioid) is an electret condenser mic that is designed to handle a wide variety of clip-on applications. Sonically superior as well as aesthetically pleasing, the ADX20i is perfect for saxophone, trombone, trumpet and other brass instruments.

- Smooth frequency range of 40 Hz - 20 kHz provides a rich, warm sound not typical of a microphone this size.
- Machined from solid brass with a low reflective black e-coat finish.
- Operates on phantom power (9-52v ) with the preamp module provided (APS-910). It can also be used in battery mode with the APS-911 adapter.

Microphone Mounts

D-Vice

A new solution for drum miking, D-Vice will eliminate drummer’s concerns about microphone positioning. The D-Vice has a low profile and unique mounting system that allows precise positioning and attachment (using only one hand) to the rim of most drums and rimmed percussion. Precision molded out of composite material, the patent pending D-Vice can easily accommodate any 5/8” microphone clip. Works with the Micro-D and D-series mics.....24.99

D-Clamp

A tension clamp for the Micro-D and D-Series, the extra long metal gooseneck allows precise mic placement on congas, bongos and percussion lugs. Also interchangeable with D-Vice gooseneck for modular use.................................24.99

D-Flex

A dual pivot clip with extra wide jaws, the D-Flex insures that your Micro-D or D-Series mic is positioned perfectly. It also minimizes vibration and unwanted resonances........................................13.95

ADX-20i

The ADX-20i (cardioid) is an electret condenser mic that is designed to handle a wide variety of clip-on applications. Sonically superior as well as aesthetically pleasing, the ADX20i is perfect for saxophone, trombone, trumpet and other brass instruments.

- Smooth frequency range of 40Hz - 20kHz provides a rich, warm sound not typical of a microphone this size.
- Machined from solid brass with a low reflective black e-coat finish.
- Operates on phantom power (9-52v ) with the preamp module provided (APS-910). It can also be used in battery mode with the APS-911 adapter.

ADX-20i Includes shock-mount adapter
BEYERDYNAMIC

DYNAMIC VOCAL MICS

Founded in 1924 by Eugene Beyer, Beyerdynamic is the oldest audio company in the world that remains under its original ownership. Interestingly, Eugene was best friends with George Neumann, and the two legends actually started together in business. But they soon discovered that each had his own ideas with respect to transducer designs. So shaking hands, it was agreed that George Neumann would only produce condenser transducers, while Eugene Beyer would produce only dynamic capsules. This agreement remained in place until the mid-1970's, after they both passed away. Today of course, Beyerdynamic is known not only for the quality of its dynamic mics but condenser and ribbon mics, wireless products, and headsets.

**TG-X 58**
Hypercardioid Dynamic Vocal Mic

The TG-X 58 is designed for vocals as well as the miking of instruments. It can be used as a handheld or on a stand. Hypercardioid pattern provides high gain before feedback. The mic barrel is finished with a soft lacquer coating which makes the microphone very comfortable to hold in the hand. The TG-X 58 also features an integrated pop shield which reduces "pop" noise associated with close vocal miking. The On/Off switch can be locked into position to avoid accidental switching off. Built to withstand serious abuse during live performances. Includes mic clamp and bag.................................67.50

**TG-X 60**
Hypercardioid Dynamic Vocal Mic

The TG-X 60 is a very high quality dynamic microphone intended for use handheld or stand-mounted by lead vocalists, particularly in rock bands where maximum volume before feedback is required. It also has the ability to withstand high sound pressure levels, making it suitable for close miking of musical instruments or speaker cabinets. Dubbed the ultimate "Rock n' Roll" microphone, the TG-X60 is ruggedly constructed and has a shock absorbing rubber ring to withstand touring damage..............................................................279.95

**M 69 TG**
Hypercardioid Dynamic Vocal Mic

In service for almost thirty years, the M 69 TG has been used in just about every application possible. A classic all-around mic with a superb response characteristic, the M 69 TG makes the human voice sound real, be it spoken or sung, chanted or shouted. The unique shape and sound of the M 69 TG coupled with high SPL capability, makes it a natural choice for the recording of guitars, brass and woodwind as well. Ideal for live applications, it has an excellent hypercardioid pickup pattern that guarantees high gain before feedback, while a reinforced basket allows it to withstand rough handling. Also well suited for sound contractors for use in churches or as an announcers microphones.............189.95

High Performance Instrument and Vocal Mics

The Opus range of microphones is a cohesive family of products optimized for music performance. Combining cutting-edge microphone technology, 21st century materials and over 75 years of transducer design and development, beyerdynamic has created a complementary range of microphones that capture the dynamism of music performance, new music styles and spontaneous creativity—on stage or in the studio. The Opus series includes a full range of popular microphone types and is designed to take the mystery and luck out of choosing the right type. All microphones are made in Germany from the highest quality materials and tested to the most rigorous standards.

Opus 39  
High Performance Dynamic Mic
A high performance, general purpose dynamic mic, the ruggedly constructed Opus 39 is ideal for live-performance vocals, close musical instrument pickup and club PA. It offers a flat, wide range frequency response for uncolored sound reproduction, while its supercardioid pattern provides excellent isolation from unwanted sound. Mic handle is soft-lacquered for comfort and grip.

Opus 59  
High Performance Dynamic Mic
A high performance dynamic microphone for professional vocal use in live performance, the Opus 59 features a high output Neodymium magnet and extended high-frequency response tailored for vocals. Supercardioid pattern provides high gain before feedback and excellent isolation from unwanted sources. Soft-lacquered for comfort and grip. Rugged all metal body and legendary Beyerdynamic quality guarantee years of service.

Opus 69  
High Performance Dynamic Mic
A singer’s dream, the Opus 69 delivers spectacular vocal reproduction. A wide, uncolored frequency response and warm proximity effect, gives the performer the ability to create a sonically unique style. Remarkable response and tightly controlled hypercardioid pattern enhances usable gain before feedback while rejecting off-axis sound sources, producing a crisp, natural sound.

Opus 81  
High Performance Condenser Mic
Advanced technology and extraordinary engineering has produced this state of the art condenser microphone. The Opus 81 can be used on the stage or in the studio. The condenser element withstands sound pressure up to 138 dB SPL without a loss of performance.

**Opus 53**

High-Quality Condenser Instrument Mic

The Opus 53 is a high-quality condenser microphone at a reasonable price. It consists of a lightweight, but rugged, plastic casing strengthened with carbon fibers. Its small and short design allows flexible and unobtrusive positioning. The frequency response has been optimized for universal miking of instruments. In particular, it is suitable for miking drums such as snare or hi-hat. But it is also a great microphone for miking brass and woodwinds instruments.

**Opus 64**

Headworn Microphone

Designed for “hands free” applications that require a high quality and lightweight microphone, the Opus 64 is ideal for entertainers, dancers, drummers, and keyboard players. It interfaces with wireless systems to provide a low profile neckworn microphone for aerobic instructors, sales, and product presentations. Its hypercardioid polar pattern allows a high gain before feedback. The Opus 64 features a rugged yet adjustable headband that can be shaped for personal comfort with a secure fit. The microphone can be worn on the left or right side of the headband. To interface with the TS 100 beltpack transmitter the Opus 64 has been equipped with a mini jack plug (3.5 mm).

**Opus 65**

Kick Drum Microphone

Only a special large diaphragm dynamic mic can reproduce the low frequency energy created by kick drums, congas, and timpani. The Opus 65 combines a 1.5” diameter diaphragm with a powerful neodymium magnet to effortlessly capture and reproduce low frequency signals and harmonics — requiring little or no EQ. Though primarily designed for close miking of the kick drum, it is also well-suited for floor toms, bass drum etc. Ability to withstand extremely high sound pressure levels allows it to be used for close miking of musical instruments or speaker cabinets.
Opus 62 Hypercardioid Dynamic Wind Instrument Microphone
The Opus 62 is a high performance, low profile clip-on dynamic mic designed for miking wind instruments such as trumpets, trombones and saxophones. The capsule is attached to a 4" gooseneck and is externally shock isolated to prevent excessive transient response. Neodymium element provides increased output, while a tight polar pattern enhances off-axis noise rejection. The flexible gooseneck ensures optimal positioning.

- For miking trumpets, trombones, and saxophones
- Clip ensures solid and easy mounting to the instrument
- Hypercardioid pattern ensures high gain before feedback
- Flexible 4" gooseneck for optimum positioning
- Small and rugged construction
- Supplied with bag
- Frequency range: 40 Hz to 12 kHz

Opus 67 Hypercardioid Dynamic Drum & Percussion Microphone
The Opus 67 is a dynamic microphone designed for close miking of drums such as snare and toms and percussion such as congas and bongos. The mic's hypercardioid polar pattern achieves very high gain before feedback while the flexible gooseneck ensures optimal positioning to suit both musician and sound engineer.

- For miking toms, snare, congas and bongos
- Very high gain before feedback
- High SPL capability
- Flexible gooseneck for optimal positioning
- Small, ruggedly constructed for on-tour applications
- Frequency range: 40 Hz to 12 kHz

Opus 66 Dynamic Supercardioid Drum & Percussion Microphone
The Opus 66 is a small and ruggedly constructed percussion microphone perfect for miking snares, hi-hats and rack-toms. It rejects mechanical and handling noise making it ideal for mounting on drum hardware. The mic mount ensures optimal positioning to suit both musician and sound engineer. Also has a 3/8” (5/8”) thread for mounting on a conventional mic stand if required.

- For miking snare, hi-hat and rack-toms
- Extra stiff Macrolon diaphragm ensures exact reproduction or percussion and drums
- Excellent transient behavior
- Extremely high SPL (140 dB)
- Supplied with special mic mount and bag
- Frequency response: 40 Hz to 12 kHz

Opus 87 Cardioid Condenser Drum & Percussion Microphone
The Opus 87 is a superb electret back condenser mic for miking drums. It features a patented microphone clamp with integrated pre-amp that is an absolute innovation. The microphone capsule is mounted on a short gooseneck allowing optimum positioning. Ruggedly constructed the mic can withstand the worst abuse. Includes a case.

- Ideal for snare and toms
- Cardioid pattern with high gain before feedback
- Innovative mic clamp with integrated preamp
- Runs on 12-48v phantom power
- Maximum SPL of 136 dB
- Frequency response: 30 Hz to 20 kHz

Opus 82 Cardioid Condenser Wind Instrument Microphone
Ruggedly constructed, the Opus 82 is an electret condenser microphone for miking brass instruments. Its clip ensures a solid mounting to the instrument, while the flexible 4" gooseneck allows optimum positioning. Unwieldy mic stands are no longer needed. Cardioid polar pattern ensures the Opus 82 achieves high-gain-before feedback.

- For miking trumpets, trombones, and saxophones
- Cardioid pattern ensures high gain before feedback
- High SPL capability (135 dB)
- Flexible 4" gooseneck for optimum positioning
- Runs on 12-48v phantom power
- Supplied with CVU 82 fixed preamp and bag
- Frequency range: 30 Hz to 20 kHz
BEYERDYNAMIC

STUDIO MICROPHONES

MCD-100/MCD-101
Cardioid and Omnidirectional Digital Microphones

Equipped with a 24-bit analog-to-digital converter placed immediately behind their capsule, the MCD-100 and MCD-101 offer the optimum conversion of an analog signal into the digital domain. As a result, they are able to provide a flawless reproduction of the mic capsule's dynamic range and frequency response. To accept 6-10v digital phantom powering and to facilitate connection to a digital console, a separate power supply (MPD-200) is available as an option. For high SPL applications up to 140 or 150dB a remote attenuator (-10/-20 dB) controlled from the MPD-200 is provided. And since they are digital, they can allow very long cable runs (up to 1000') without signal degradation. Digital output is AES/EBU.

**MC-740**
5-Pattern Condenser Mic

With five polar patterns (omni, cardioid, wide cardioid, hypercardioid, figure-8), the M C-740 can be adapted to a variety of recording situations in the studio—while capturing every sound detail with absolute clarity and purity. The M C-740's double diaphragm capsule is characterized by a frequency response that remains constant in all patterns. Switchable 10 dB pad allows close miking of instruments up to 144 dB SPL. Also has a two-position low-frequency roll-off (80 and 160 Hz). Use for choir recordings, for vocals, wood and brass wind instruments, piano and string instruments, even as an overhead mic for percussion instruments. Includes M KV-11 mic clamp, EA-37 external suspension mount and case.

**MC-834**
Condenser Mic

A true condenser large diaphragm cardioid mic, the M C-834 has a wide range, natural frequency response that makes it ideal for a host of applications. Equipped with a large diameter gold vaporized membrane element, it features exceptional S/N ratio and high SPL capability (up to 150dB with the switchable -10/-20 dB pad). Cardioid pattern allows high gain before feedback. To adjust for proximity effect or extraneous low frequency sounds, the mic offers a three position low-frequency roll-off: LIN (flat, with no roll-off) and 6 dB per octave below 80 or 160 Hz. Use for lead and back up vocals, voice-overs, miking of pianos, strings and brass instruments, and home recording. Includes EA 37 ext. suspension mount.
**M 130**

**Bi-Directional Ribbon Mic**

The M 130’s unique double ribbon element has superb transient response, creating a highly detailed sound with unequalled accuracy and transparency. The bi-directional figure-8 pattern effectively suppresses unwanted interference from the sides. The M 130’s balanced, uncolored sound handles a wide variety of applications. In conjunction with the hypercardioid M 160, the M 130 is ideal for creating an authentic stereo image through the use of the M-S (Mid-Side) technique. Use for digital recordings, ambient miking, piano, harpsichord, harp and strings.

**MCE 91**

**Condenser Vocal Microphone**

A handheld cardioid condenser microphone, the MCE 91 delivers high output with very low self-noise making it ideal for recording in the studio or at home. A faithful purveyor of the human voice, the MCE 91 has a linear frequency response curve that has been optimized for clear and neutral voice reproduction. It also has a sophisticated elastic transducer suspension system that ignores heavy-handed vocalists, and can reproduce high pressure sound levels of up to 139 dB to handle even the most passionate arias. Includes MKV-8 mic clamp and padded bag.

**M 160**

**Hypercardioid Ribbon Mic**

The M 160 is a dynamic ribbon microphone with an extremely tight polar pattern and extended frequency response that is ideal for stringed instruments. The M 160’s hypercardioid characteristic with a noise cancellation of 25 dB at 110° effectively suppresses lateral sound reflections and external noise. Recommended for picking up the sound of stringed instruments such as violins, violas and cellos as well as for zithers and dulcimers. The mic’s black chromium plating and compact size makes it very popular in TV and film studios. Use with the M 130 to create an authentic stereo image via the M-S (Mid-Side) technique.

**MCE 90**

**Condenser Vocal Mic**

A project studio multi-purpose microphone, the MCE 90 features a linear frequency response, switchable controls to vary functionality, and is constructed in a rugged die-cast housing. Easily handles high sound pressure levels up to 139 dB without pre-attenuation and up to 154 dB with the pad. If necessary, low frequency noise can be attenuated with switchable LO-CUT filter.
M58 Omnidirectional Dynamic Microphone
The M 58 is designed specifically for electric news gathering (ENG) and electronic field production (EFP) applications. Its sophisticated internal shockmount dramatically reduces handling noise, while the mic’s frequency response is tailored to provide broadcasters with a very accurate and intelligible sound. The M 58's weight-balanced design provides journalists with a high degree of comfort during lengthy interviews. Its rugged construction enables the mic to withstand physical and environmental punishment typically encountered during field production operations. Slim profile and non-reflective Nextel finish result in a low profile on camera. Includes WS-58 windscreen.

M59 Hypercardioid Dynamic Broadcast Mic
The M 59 is a general purpose stereo condenser microphone that offers true MS, XY, and mono recording without an additional matrix. The mic is equipped with three true condenser systems. The polar pattern of each cartridge is cardioid and almost independent of the frequency. The middle system supplies the mono signal or the M-signal with MS stereophony. The system located to the left and right of the middle system are switched together to form a figure-8 polar pattern and supply the S-signal. At XY stereophony only the two side system are used. They can be mechanically adjusted. Therefore, at XY recording the recording angle can continually varied over a large range. Includes EA-833 elastic suspension, MKV-11 mic clamp and a case.
SHOTGUN MICROPHONES

**MCE 86/86S • MCE 87/87VS**

Short Shotgun Mics

The MCE 86 and MCE 87 are short shotgun microphones designed to meet the rigors of studio and on-location assignments in broadcasting. They can be used with a pistol grip, on a fishpole boom or on cameras and camcorders. Their condenser element and hypercardioid/lobe polar pattern provide high sensitivity, excellent off-axis rejection and accurate reproduction of each sound source. Their rugged design and integrated filter make them insensitive to wind and vibrations. For greater flexibility, they can be fed with 8-48v phantom power. If phantom power isn’t available, the battery/phantom powered version MCE 86S or the battery-powered MCE 87S can be used. The MCE 87VS can be powered directly by the camcorder or an output for external devices is provided (5-9v, 2.5 mm jack plug). The balanced output of the MCE 86 enables the use of long cables. The output of the MCE 87 is unbalanced. The MCE 87 is extremely insensitive to interference caused by view finders.

Available with two elastic suspensions: the EA 19/25 with the MKV 11 microphone clamp for fishpole booms and stands or EA 86 with horsehoe connection for the use on video cameras.

*MCE86* with EA86 elastic suspension and mounting kit ..................364.95
*MCE86S* (same as above, plus On/Off switch) ......................374.95
*MCE87S* Battery powered (switchable); with EA86 and mounting kit ..................348.95
*MCE87VS* Powered by camera; with EA86 and WS716 windscreen ......279.95

**MC 836 / MC 837 Shotgun Mics**

The rugged and lightweight MC 836 (Lobe/Cardioid polar pattern) and MC 837 (Lobe pattern) shotgun microphones have been designed to meet the demands of ENG and EFP applications. Due to their acoustical characteristics they are also suited for studio, film and theatre applications. The directional polar pattern helps to suppress lateral and background noise.

Both mics operate according to the pressure gradient/line transducer technique. A switchable low frequency roll-off eliminates unwanted low frequencies at a cut-off frequency of 90Hz. An integrated footfall sound insulation avoids the transmission of noise below 40 Hz. (To avoid wind noise when used outdoors, a wind shield is needed). Both run on 11-52v phantom power.

**Fishpole Booms**

*MZA-716*: 4-piece fishpole boom in matte black with swivel joint MZG-2 for mounting the mic at any desired angle. The pickup direction can be varied within 360° simply by turning the fiber glass tubes. Fitted with 3/8” thread for microphone clamps of flexible mounts (with EA 19/25 shock mount). Working length (extended) is 10’, collapsed length is 3’. Weighs 1.3 lbs…………………..258.95

*MZA-717*: 2-piece light fishpole boom made of matte aluminum. Adjustable from 2’ to 5’ ……………………..108.95

*MZA-718*: 3-piece light fishpole boom made of matte aluminum. Adjustable from 3’ to 10.5’ ……………………..163.50

**Shock Mounts**

*EA 19/25 Elastic Suspension for the M 59…………..49.95
*EA-37 Elastic Suspension for the M CD-100 and M CD-101 ……………………..59.95

**Windscreens**

*WS-59* Charcoal-gray for M 59……………..28.95
*WS-91* Charcoal-gray for M CE-58……………Call
*WS-716* Charcoal-gray. For MCE-86, MCE-87, M CB-36…………………..35.95

**BLUE BOTTLE**

**Tube Condenser Mic with Interchangeable Capsules**

A classic modern vacuum tube microphone, the Bottle is a precision recording tool that combines the low noise and superb transient response of top grade electronics with the sonic magic of legendary vintage vocal microphones. With eight different interchangeable capsules the Bottle is not just a microphone, but a complete mic system. In an instant, capsules can be changed to deliver different tonality, patterns and uses while the mic is still turned on—eliminating the need for multiple mics. The Bottle mic incorporates the EF86 pentode (used in triode mode) and is packaged with one B6 Lollipop capsule, a power supply with Soft Start and a Champagne tube mic cable all housed in a Blue velvet lined ATA approved flight case. So if there is a large orchestra tuning up, a legendary singer about to record, or an impromptu gathering of famous musicians and there is no room for failure—you want the Bottle— you want only the best.

- **The ultimate in hand built craftsmanship, Class A discrete circuitry, integrated capsule shock mounting, custom wound mic transformer, hand-tuned and tested.**
- **The Bottle is huge — 14.75” and 4 lbs.**
- **EF86 pentode (used in triode mode) and a custom-built output transformer can**
- **Choice of eight interchangeable capsules, completely hand-built and individually voiced. The eight lolly pop shaped capsule heads for the Bottle mic are:**
  - **B0:** Cardioid, large diaphragm— superior bright, silky, and intimate presence
  - **B1:** Cardioid, small diaphragm— accurate sound with detailed high end
  - **B2:** Figure 8, large diaphragm— big, warm sound of vintage ribbon mic
  - **B3:** Cardioid, midsized diaphragm— very transparent, neutral sound
  - **B4:** Perspex sphere pressure omni (like on the Neumann M 50)— sweet highs, robust lows, unique design and sound perfect for ambient recordings
  - **B5:** Presence Omni, large diaphragm— very unique compressed quality, accentuated lows and highs
  - **B6:** Cardioid, large diaphragm— dual backplate (like an AGK CK-12). “Larger than life” sound with enhanced lows and high frequency presence
  - **B7:** Cardioid, large diaphragm— single backplate (like a Neumann M 7). Classic vintage tube detail in mids and airy presence.
- **Power supply has a SOFT START feature to assure the longevity of the vacuum tube, and the stability of the mic circuitry. First it turns on the heater. After approx. 80 seconds — when the cathode is fully heated — the plate voltage is gradually applied and the microphone output is muted. After about three (long) minutes, when the mute has settled into its correct operating mode, the muting is disabled and audio is output from the supply.**
- **Although optimized for 60v, one can step it up to 90v or down to a minimum of 34v. This is useful for matching the sensitivity requirement of different program material; it also changes the sound of the mic from most aggressive (at higher voltages) to mellow and laid-back (at lower voltages).**

**CACTUS**

**Multi-Pattern “Vintage Sound” Tube Mic**

A blend of the past with the cutting-edge of the future. With detailed information in the mid-range area and a soft silky response in the top-end, Cactus fills the need of detailing and mellowing the program material. Ideal for vintage pop vocal, brass, and electric guitar.

- **Multi-pattern condenser-omni, cardioid, figure-8**
- **Vintage tube and Class A discrete circuitry**
- **Blue’s famous hand-built large diaphragm capsule**
- **Vintage sound— rich lows, detailed mid-range, silky presence in the highs**
- **Integrated capsule shock mounting; mic hand-tuned and tested**
- **Includes premium quality Cactus power supply with SOFT START, Champagne tube mic cable, Series 1 shock/pop integrated shock mount and pop filter, and ATA-style storage case**
Multi-Pattern Studio Condenser Mic

Blue's top-of-the-line Class A Discrete model, the Kiwi (like the Cactus) has three capsule patterns (Cardioid, Figure-8, Omni) and selections in between for a total of nine different choices. This is achieved in a careful, unique manner using the Blue double backplate capsule. Mounting to the Kiwi microphone amplifier is provided by a mold injected rubber stem to help isolate unwanted rumble. Additional protection from low end rumble is provided by the use of the elastic spider type shockmount. This microphone provides the recordist's with many options for the most critical of all recordings. Ideal for silky lead vocal, piano, and multi-pattern recording.

- The capsule is modeled after the B6 capsule used in the Bottle mic but in a multi-pattern version using the same large diaphragm, dual-backplate design. A switch on the back provides settings for cardioid, omni and figure-8, as well as three intermediate settings for each (nine patterns total).
- A wide, smooth presence boost that starts at about 6.5 kHz with a +3dB peak around 12 kHz that's particularly nice on male lead vocals and adds a nice airiness to male and female background tracks.
- Kiwi's attractive green body houses modern, transformer-less electronics — Class A, all-discrete design (no ICs), using high-quality components such as metal film resistors. The approach is minimalist; the signal path has no attenuation pads or low-cut filters that could compromise the signal.
- Modern sound — rich lows, contoured mid-range, extra airy presence in the highs. Adds punch, clarity and a low-end warmth on spoken and singing tracks — a trait that male and female vocalists will appreciate.
- In addition to the outboard shock-mount, Kiwi's capsule is mounted on a rubber stem, providing near-total isolation from external vibration and rumblings.
- Includes "The Shock," a robust elastic shock-mount and a cherrywood storage box. Kiwi Cable and a stainless steel pop filter are available as options.

MOUSE Cardioid Studio Condenser Mic

The Mouse mic amplifier consists of top grade quality components such as polystyrene condensers and metal film resistors. The single pattern, cardioid handbuilt capsule uses only the highest quality mylar film and is sputtered with a special mixture of 24 karat gold (99.99%) of absolute pure quality and aluminum. The mic capsule is shockmounted in two areas, internally in the grill assembly and within the rotating grill armatures. Finished in a dark royal blue, the Mouse uses a transformerless circuit design. However, a transformer-based (matte black finish) Mouse is available as well, allowing the use of extra long mic cables for special applications while providing the utmost protection from outside interference such as RF. Both include a cherrywood storage box.

- Multi-purpose mic ideal for broadcast vocal, lead vocal, voice-over, bass amp, and kick drum.
- Big sound — robust lows, contoured mid-range, and an airy presence in the highs.
- Integrated suspension shockmount and rotating head for optimal placement.
- Optional accessories include "The Shock" shock mount, "The Pop" pop filter and Cranberry cable.
**BLUE**

**BLUEBERRY**

The Blueberry consists of a Class A discrete mic amplifier perfectly chosen to the handbuilt, large-diaphragm, cardioid pattern capsule. BLUE’s entry level microphone, The Blueberry is designed to fill the needs of the home musician and professional alike. The timbre of the microphone capsule has been tuned to provide the end user with a silky bright and airy top end reminiscent of the best vintage microphones. This provides the engineer with a recorded signal, such as a vocal, minus unwanted low end resonates that can cause a compressor to breathe or pump. The final results are vocals and instruments that sit and blend with the basic track of recorded program material.

- Intimate sound—tight lows and mids, contoured top end for superior air presence in the highs
- Multi-purpose mic that is ideal for lead vocal, acoustic guitar and backing vocal
- Hand tuned and tested
- Includes cherrywood storage box, optional accessories include the Series 1 Shock/Pop, Series 2 Shockmount and Blueberry cable

**MICROPHONES**

**DRAGONFLY**

Complete with an integrated elastic shockmount, this class A discrete, transformerless microphone offers a rotating capsule grill that can be positioned in the most difficult of areas. Countless hours were spent to test and select the most suitable active and passive components. This no compromises process ensures the low noise, high dynamic range and unappreciable distortion of the microphone circuitry. The end result give the Dragonfly a complete sonic neutral electronics with a low output impedance and no side effects from cable capacitance and load impedance. This way only the capsule determines the sound. The Dragonfly is packaged in an attractive linen box. Available in a matched set.

- Cardioid condenser with Class A discrete circuitry
- Versatile sound—rich lows, contoured mid-range, silky presence in the highs
- Integrated elastic shockmount and rotating head for optimum placement
- Multi-purpose mic—ideal for pop vocal, electric guitar and drum overheads
- Includes linen storage box
- Optional accessories include the Cranberry Cable

www.bhphotovideo.com
BLUE’s most affordable microphone to date, the Baby Bottle employs the styling, attention to detail, and hand-crafted quality for which BLUE has become famous. Each and every part of this solid-state, class A discrete condenser has been hand selected to insure nothing short of a stellar performance. Enclosed in a Lollipop spherical grille is a precision-machined, gold-sputtered capsule with a fixed cardioid pattern. Ideal for recording vocals, percussion, or any acoustic instruments. Comes nestled inside a velvet pouch protected by a beautiful cherrywood box.

- Cardioid condenser Class A discrete circuitry
- Hand tuned and tested
- Upfront sound—robust lows, detailed mid-range and an accurate presence
- Multi-purpose mic ideal for classic lead vocals, brass and string instruments

Champagne Tube Mic Cable
A perfect blend of the best materials, the Champagne cable will tickle the finest taste buds, as well as warm the coldest critic. The perfect compliment to the ultimate tube microphones, Champagne is the only cable designed to reproduce the quality sound you would expect to hear out of the best tube microphones in the industry.

A 2 conductor 22 Awg with 60 strands of 40 awg using only the finest of BLUE’s virgin proprietary materials available for the microphones transmission line. BLUE then twist the pair to totally eliminate noise and covers then with the finest tinned copper braid to insure your listening environment. To guarantee voltage and power, BLUE incorporates 5 more conductors or 24 gauge. When you listen to the bouquet, it could only come from BLUE’s classic Champagne. Supplied with the Bottle and Cactus tube mics.

Blueberry (BB)
A two conductor 22 Awg cable using only BLUE’s virgin proprietary materials. The twisted pair construction eliminates any noise caused by electromagnetic interference emanating from equipment used in the studio or stage environments. Furthermore, the tinned copper 95% braided shield makes this cable a dream to handle in any temperature condition where microphonic pick-up might come into play. When it comes to maximum frequency response, this is definitely a fruit of a different color.

Cranberry (CB)
A rugged two conductor 20Awg twisted pair mic cable using BLUE’s virgin proprietary materials. This cable is the perfect compliment for any type of radio, TV, or sound reinforcement applications. The twisted pairs reject any electromagnetic interference that may be caused by surrounding equipment. Also, this cable has a 95% tinned copper braided shield. The braided shield is excellent in eliminating microphonic pick-up which will allow a noise free listening environment. Ultra-flexible and ultra quiet, this cable might taste sour, but it will never be sour to your ears.

Kiwi (KB)
The ultimate in quad mic cable design, the Kiwi cable uses BLUE’s hand picked virgin proprietary materials. The quad design gives the cable an advantage when trying to achieve the highest quality recording where exquisite tonal quality is the utmost importance. By using 4-22 Awg twisted pair conductors and a 95% tinned copper braided shield, this will eliminate any matters of electromagnetic interference and microphonic pick-up. When you’re looking for the sweetest in sound, pick a Kiwi!
COUNTRYMAN

B3

Broadway Series Lavalier Microphone

The B3 is a very small, round, omnidirectional electret microphone specially-equipped to withstand moisture and makeup when placed in the hair or on the body. It will even survive an overnight bath in your favorite cola beverage. Extremely small, the B3 looks great when you want to see it, hides easily when you don't. Hide it in hair of actors, news anchors and lecturers. Ideal for use in churches, schools and general lavalier applications, the B3 features up to 150dB SPL on 48v phantom power, has field-selectable high-frequency response, and with Kevlar reinforced cable and an ultra thin diaphragm, sets a new standard for low handling noise. Available in five colors (Black, White, Light Skin, Cocoa, Gray).

- Excellent choice for hair miking in theater work. Features include moisture resistance, small size, and flat frequency response.
- The protective cap on the B3 is easily removed for cleaning or replacement when clogged with makeup.
- Includes tie clip, wind screen, belt clip for connector and two High-Frequency response control protective caps.

OPTIONAL ACCESSORIES FOR THE B3 AND B6:

B6 Incredibly Tiny Lavalier Microphone

Only one tenth of an inch (2.5mm) in diameter, the B6 is smaller than the cable of other lavalier microphones, yet out performs microphones many times its size. The B6 is effectively hidden when it’s in plain sight. For example choose a protective cap near the color of a shirt and poke the B6 out through a button hole. Tape the cable to the back of the shirt to secure it and your done. Say goodbye to the hassle and degraded sound quality you get burying mics under clothing! Hide it in hair or glue on the faces of actors, news anchors and lecturers. It is also designed to survive. Highly resistant to moisture, makeup and other hazards found in a production environment, the B6 will even survive an overnight soak in your favorite cola beverage. The outer screen in the B6’s replaceable cap stops makeup and sweat before it enters the mike element. If it clogs you can simply remove the cap for cleaning or replacement. The B6 includes a tie clip, wind screen, belt clip for connector and a set of three high frequency protective caps so you can match your application.

www.bhphotovideo.com
Ultra Light Headset Microphone

The E6 EarSet is truly revolutionary combination of beautiful form and outstanding sound a package so small, it’s all but invisible. Perfect on stage or in church for clergy, performers, trade show presenters, auctioneers, teachers and lecturers, the Isomax E6 EarSets are the answer when you need the highest quality voice pickup without the bulk and appearance of a conventional headset. Light and springy, Isomax E6 EarSets clip around your ear, not around your head so they never interfere with hairstyles, headphones or hats. Available in Light Beige, Tan, Cocoa and Black colors.

- The industry’s smallest, lightest and least visible headworn microphones.
- Clips directly to your ear. No conflict with hairstyles. No adjustment needed for the width of your head. The cable attaches with a quick connect connector for easy service.
- Has the wide 50Hz to 20kHz response of a world class vocal microphone.
- Cardioid and hypercardioid patterns available for tough feedback situations.
- Handles high sound levels (up to 145dB)
- Available for use with most wireless transmitters or hard-wired phantom power with adapter.
- Good rejection of feedback and unwanted noise
- Resistant to the sweat and moisture on stage
- High frequency response can be adjusted by changing the provided protective caps.
- Available in four colors (light beige, tan, cocoa and black) and three sensitivities: E6OW5 for normal speaking (135dB SPL), E6OW6 for general theater (145dB SPL), E6OW7 for very loud vocals (155dB SPL)

CROWN

MB SERIES
Mini-Boundary Microphone System

With their incredibly small size, Crown’s MB Series mics offer a wide range of options and flexibility— making boardroom installations much easier and a lot more affordable. Using a miniature, low-profile designs these mini-boundary, supercardioid microphones virtually disappear when installed, yet provide the same great sound as Crown’s highly-acclaimed PCC microphone series while providing substantial savings compared to traditional microphones.

Designed with the help of leading audio consultants and contractors, the MB Series is a comprehensive system of microphones and electronics that’s perfect for a wide range of applications. Comprised of five microphones— three that work with the innovative MB-100 and MB-200 interfaces and two that operate in a traditional stand-alone manner— the MB System lets you mix and match microphones as needed for multiple configurations.

Designed to accommodate up to four microphones, the MB interfaces provide four separate inputs, outputs and programmable switching connections. With easy-hookup Phoenix connectors and a low profile, the MB interface mounts quickly and conveniently beneath a tabletop. All MB System microphones feature a surface-mounted supercardioid capsule for extended reach and clarity. Each microphone also features a built-in red LED that illuminates when the microphone is active.

The MB-1, MB-2, MB-3 and MB-4 are each designed for multi-miking applications such as teleconferencing, distance learning, boardrooms, and courtrooms. The MB-3 can also be used for surveillance in security applications, and the MB-4 in TV or theatrical applications.

FEATURES

◆ Removable grille assembly can be painted
◆ Remote sensing of switch closure (in MB-200)
◆ A common interface for up to four mics reduces the size and cost of the system
◆ Electret condenser mic elements deliver clean, clear, natural sound
◆ Low-Z balanced output prevents hum and high-frequency loss
◆ On/off switches can be added
◆ Switches can be internally programmed for touch-on/touch-off, momentary on, or momentary off (not on MB-3)
◆ Defeatable LED (not on MB-3)
◆ They operate on 12-48v DC phantom power
◆ Three year warranty

MB SYSTEM ELECTRONICS INTERFACE

The MB-100 and MB-200 are electronic interfaces that power up to four Crown mini-boundary MB-1, MB-2, or MB-4/E microphones. Interfacing up to four mics reduces the size and cost of the mic system and reduces installation time.

The MB-100 provides programmable switching to turn the mic on or off if desired (switches not provided). The MB-200 is the same plus it also has remote switch sensing via an optical coupler.

Two microphones can be wired to each pluggable terminal block, which plugs into the MB-100 or MB-200. Pluggable terminal blocks are also provided for the balanced outputs on the interface, and for remote switch sensing. They are powered by 18 to 48v phantom power from a mixer or a phantom power supply.

◆ Powers and equalizes up to four mics
◆ Provides balanced outputs from the interface
◆ Common interface for up to four microphones reduces the size and cost of the system
◆ Pluggable microphone inputs

MB-100 .................................................. 229.95
MB-200 .................................................. 307.95
A low-profile circular microphone just 1.3” wide, the MB-1 features a bottom-mounted 1/4” stereo phone plug for quick insertion and removal from the supplied table insert.

A table insert with a phone jack that accepts the mic is included. Featuring a black anodized aluminum finish, the insert flush-mounts in a hole drilled in the table. It can be permanently installed, and includes a black dust cap for use after meetings when the mic is removed.

Thanks to its supercardioid pickup pattern, the MB-1 greatly reduces ambient noise and pickup of room reverberation. The result is a clearer sound.

In combination with an MB-100 or MB-200 Interface, the MB-1 can be programmed for multiple switching functions.

Available in black anodized (MB-1), solid brass (MB-1BR) and paintable aluminum (MB-1AL) finishes.

The MB-2 (less than 1x1½”) is a removable low-profile rectangular microphone featuring a 1/4” stereo phone plug for quick insertion and removal from a standard contractor-supplied jack (Switchcraft 152B Thick Panel Phone Jack or equivalent). A locating pin (removable) prevents the microphone from being rotated.

Thanks to its supercardioid pickup pattern, the MB-2 greatly reduces ambient noise and pickup of room reverberation. The MB-2 features multiple switching modes when used with an MB Interface.

A stand-alone unit with a built-in electronics package, the low-profile MB-3 mounts easily into tabletops, lecterns, walls or ceilings for permanent installation.

On the bottom of the mic is a tubular power module with a 3-pin XLR-type output connector. It is powered by 12-48V DC phantom power, and has a low-impedance balanced mic-level output.

Thanks to its supercardioid pickup pattern, the MB-3 greatly reduces ambient noise and pickup of room reverberation. The result is a clearer, more intelligible sound.

The MB-3 is a mini rectangular microphone designed for temporary installations. A power module with an attached 15’ XLR cable has all the required mic electronics built-in. The mic is powered by 12-48V DC phantom power, and is low-impedance balanced.

Double-sided sticky tape is provided for attaching the unit under shelves, on walls, etc.

Thanks to its supercardioid pickup pattern, the MB-4 greatly reduces ambient noise and pickup of room reverberation. The result is a clearer sound.

The MB-4 is available in a pigtail version. The MB-4E is the same, but without the electronics connector. Its cable fits through a small hole in the mounting surface and is intended for use with the MB Interfaces. (Must be used with the MB-100 or MB-200).

Phase Coherent Cardioid Microphones for Stage Floor, Altar Tables, Boardrooms and Teleconferencing

Crown's Phase Coherent Cardioid (PCC) Series microphones offer exceptional acoustic performance in handsome, low-profile enclosures. Designed for high-end theatrical work, the PCC Series has become the standard for stage miking applications. These mics also provide an elegant solution for discrete multi-mic applications, such as lecterns and boardroom tables as well as altars, teleconferencing and distance-learning applications.

Each mic employs Crown's Phase Coherent Cardioid boundary mic technology to provide impressive gain before feedback and directional pickup without sacrificing tonal quality. This results in microphones with a wide, smooth frequency response, free of phase interference from surface sound reflections.

Designed to withstand the rigors of the stage, each microphone has been finely crafted using the very best materials while maintaining affordability. Their low profile enables them to be placed inconspicuously on the stage floor, on a lectern, or any other appropriate surface.

Flexibility is further enhanced by a membrane switch control option for boardroom and podium applications. This unique, silent operating switch can be configured three ways: touch on/off, momentary on, or momentary off operation.

- They are surface-mounted miniature cardioid microphone of professional quality. Handsomely styled, they are appropriate for use on the most elegant boardroom table or lectern. Other applications include churches, courtrooms and teleconferencing.
- The microphones use the principle of phase coherency achieved by mounting a small-diameter mic capsule very near a surface or boundary. Direct and reflected sound waves arrive at the mic in-phase. This increases sensitivity 6 dB and ensures phase coherency up to the highest frequencies in the audible spectrum, resulting in a wide, smooth frequency response free of phase interference. Clarity and reach are also enhanced.
- Electret-condenser capsules provide a wide, smooth frequency response from 50 Hz to 20 kHz. RFI suppression is included. Self-noise is low and sensitivity is very high.
- They are capable of withstanding up to 120 dB SPL without distortion, they will never overload in practical use.
- All include three-position (Flat, Cut and Boost) bass-tilt switch on the bottom of the microphones allows you to adjust low-frequency response:
  - The FLAT position provides a flat low-frequency response, for normal usage. They are shipped from the factory in flat position
  - The CUT position rolls off the bass, useful in noisy or boomy surroundings
  - The BOOST position boosts the bass for a more natural sound when the mic is used on a small surface such as a lectern
- All except the PCC-160 are available with a 1/4" stereo phone plug on the bottom of the base plate instead of a cable. They have the suffix "SPP" added to the model number. For example, PCC-130SPP or PCC-170SWSPP.
- Self-contained electronics eliminate the need for an in-line preamp. Powered by 12-48v DC phantom power, they have a low-impedance balanced output which permits long cable runs without hum pickup or high-frequency loss.
- They use a Switchcraft TB3M mini-XLR as their standard connection. In addition, all except the PCC-160 can be ordered with a 1/4" stereo phone plug on the bottom of the base plate (they have the suffix "SPP" added to the model number).
- All mics (except SPP versions) include a black 15' cable with Switchcraft TA3F (mic end) and an XLR-M connector (output).
- Because of their highly directional pickup pattern, they minimize background noise and feedback.
- Permanent mounting is enabled by screw holes in the base.
- Engineering attention-to-detail assures years of reliable use.
- All except the PCC-160 (all steel construction) are made of high-impact molded plastics and steel mesh grille.
- They each include a three-year warranty.
- All mics are available in an off-white version to blend with church altars or any situation where a lighter color is called for.

All except the PCC-160 are available with a 1/4" stereo phone plug on the bottom of the base plate instead of a cable. They have the suffix "SPP" added to the model number. For example, PCC-130SPP or PCC-170SWSPP.
PCC-130/130W
Mighty Mini Boundary

Sometimes, unobtrusive just isn’t enough. Enter the PCC-130, featuring exceptional performance with the appearance of the PCC-170 in a package only about half the size. When the situation simply demands that a mic be heard but not seen, the PCC-130 with its small size, gives you an obvious choice. Its cardioid pattern reduces background noise, reverb, and feedback.

PCC-130SW
Mighty Mini Boundary

Same as the PCC-130, the PCC-130SW also offers a membrane switch control option. This makes it ideal for multiple-microphone use on a conference table where each person can control his or her microphone. A bottom-mounted slide switch configures the silent-operating membrane switch for touch on/off, momentary on or momentary off. A high-intensity LED lights when the unit is on. In the off position, the microphone is attenuated 70 dB.

PCC-130SW ................................................................. 233.50
PCC-130SW/SPP 1/4” (6.35-mm) stereo phone-plug version ................................................................. 233.50

PCC-130SW
Mighty Mini Boundary

Same as the PCC-130, the PCC-130SW also offers a membrane switch control option. This makes it ideal for multiple-microphone use on a conference table where each person can control his or her microphone. A bottom-mounted DIP switch configures the membrane switch for touch on/off, momentary on or momentary off. A high-intensity LED lights when the unit is on. In the off position, the microphone is attenuated 70 dB.

PCC-130SWSPP base-mounted, 1/4” stereo phone plug version ........ 254.95
PCC-130SWO Includes all the features of the PCC-130SW, and adds remote sensing via a patented opto-coupled MOS switching circuit. A pair of extra leads in the mic cable allows remote sensing of the switch closure....... 286.50

PCC-160/160W Industry-Standard Boundary Mic

Long recognized as an industry-standard stage-floor microphone, the supercardioid PCC-160 is also great for lecterns, conference tables and news desks—anywhere maximum gain and articulation are essential. Thanks to its low profile and black finish, the microphone becomes almost invisible in use. A side-mounted connector complements the form factor of the PCC-160, allowing the unit to be placed effectively at the stage edge, at the top of a lectern or in other tight spots. If desired, the cable can be hard-wired for bottom entry. The heavy-gauge, all steel body protects the unit from abuse. Available in off-white finish (PCC-160W) for blending with church altars and other surroundings where a lighter color is appropriate.

PCC-160 ......................................................... 249.95  PCC-160W white color .............................................. 249.95

PCC-170/170W
The Elegant Boundary

A larger, more elegant version of the PCC-130, the PCC-170 features a frequency response carefully tailored to create extremely natural voice reproduction. Equally adept in the boardroom, at the lectern, or for teleconferencing. Available in off-white finish (PCC-170W) for blending with church altars and other surroundings where a lighter color is appropriate.

PCC-170 Black ......................................................... 224.95  PCC-170W White ......................................................... 224.95

PCC-170SW
The Elegant Boundary

Same as the PCC-170, the PCC-170SW also offers a membrane switch control option. This makes it ideal for multiple-microphone use on a conference table where each person wants control of his or her microphone. A bottom-mounted DIP switch configures the membrane switch for touch on/off, momentary on or momentary off. A high-intensity LED lights when the unit is on. In the off position, the microphone is attenuated 70 dB.

PCC-170SWSPP base-mounted, 1/4” stereo phone plug version ........ 254.95
PCC-170SWO Includes all the features of the PCC-170SW, and adds remote sensing via a patented opto-coupled MOS switching circuit. A pair of extra leads in the mic cable allows remote sensing of the switch closure....... 286.50
Crown's LM (lectern microphones) series is designed to provide clear, precise vocal reproduction with superior noise rejection in an elegant, functional package. Simple installation and stylish looks complement any lectern application, from the corporate boardroom to the bully pulpit, while their durable high-quality design provide years of consistent, reliable performance. Featuring a supercardioid element, they virtually eliminate the potential for undesirable noise to enter the system, even at high gain levels. Performance is further enhanced by specially designed pop filters that effectively reduce explosive breath sounds. Add their silent-operating gooseneck and shock mount designs, and you understand why LM Series microphones are so easy to position and use. Designed for the most demanding applications, they are manufactured with top-quality materials and feature reinforced joints and connections. Each microphone is individually tested to ensure perfect performance out of the box.

**LM-300A/300AL**
Supercardioid Condenser Dual Gooseneck Lectern Microphones

No matter the situation, the elegant LM-300A, LM-300AL and LM-301A can meet the need. Dual-gooseneck microphones for lecterns, pulpits, or similar applications, each is a professional-quality, electret-condenser mic with superb supercardioid performance and noise rejection. Explosive breath sounds are effectively reduced with the supplied foam 2-stage pop filter, while a flat/low-cut switch further reduces breath pops.

The LM-300A (17.25”) and the 22” LM-300AL (extended) plug directly to an XLR female panel connector. The microphone screws onto a standard 5/8˝-27 thread. Includes LM-SM shock mount for situations requiring even more isolation from noise.

**LM-301A**
Supercardioid Condenser, Miniature Dual Gooseneck Microphone

The LM-301A is designed for professional use on lecterns as well as inconspicuous miking of musical instruments. The LM-301A comes in two parts: microphone cable and a cylindrical electronics housing. The microphone has a built-in 5/8˝-27 threaded collar that can be screwed onto a mic stand, mic boom or an Atlas AD-12 male flange. Because of the unique design of the mounting collar, the mic cable can be routed either outside or inside the mounting collar. Includes the LM-301SMA shock mount adapter for use with the LM-SM shock mount.

**LM-201/ LM-201L**
Supercardioid Condenser Lectern Microphones

Slim, rugged and unobtrusive, the LM-201 (16” arm) and LM-201L (24” arm) are professional-quality, supercardioid condenser microphones ideal for legislature, city council and other demanding lectern applications. They easily install with the included mounting screws. When swiveled to the desired position, adjustment is far quieter than conventional gooseneck microphones.

- Rugged and is built to withstand daily use.
- Ball-and-socket joint combines with a rugged mic arm to provide quiet, long-term operation.
- Wire-screen grille with two-stage pop filter reduces pickup of explosive breath sounds.
- An external foam windscreens is supplied for extra pop rejection or for outdoor use.
- The base and mic capsule are shock-mounted to attenuate handling noise and lectern thumps.
- Powered by 9-48v DC phantom power

GLM-100/GLM-200
Miniature Omni and Hypercardioid Condenser Mics

The GLM ("Great Little Mic") series are miniature omnidirectional (GLM-100) and hypercardioid (GLM-200) condenser microphones designed for vocals and musical instruments in professional recording, broadcast and sound reinforcement applications. They offer all the quality of large studio microphones, yet are nearly invisible in use. Built to the exacting standards of the film and broadcast industry, they incorporate miniature electronics in a rugged housing that resists damage from demanding professional use and provides lasting performance under the most rigorous of conditions.

◆ Their output is balanced, low impedance, which allows long cable runs without high-frequency loss
◆ The frequency response of large microphone capsules is often degraded by the microphone housing (due to sound diffraction). In contrast, their housing is designed to actually improve the high-frequency re-response of the microphone capsule
◆ Used as a lavalier microphone, suspended over a choir or orchestra, or hidden on a film set, the GLM-100/200 disappear in use yet provides excellent sound quality
◆ The GLM-100/200 can be clipped or taped onto an acoustic guitar, sax or flute to allow the performer freedom of movement. They can also be attached to drum rims to pick up a drum set without the unsightly clutter of boom stands

GLM-100
MINIATURE FLEXIBILITY

For instrument applications, the GLM-100's miniature size and gigantic performance make it a natural for recording, sound reinforcement, broadcast and motion pictures. An omnidirectional condenser mic, it features a smooth, wide-range frequency response for truly professional sound quality.

◆ Permanently attached 8`XLR cable
◆ Frequency response is wide and smooth, with emphasized high frequencies for presence and brilliance
◆ They accept 12-48v phantom power supply
◆ Excellent transient response, minimal off-axis coloration and high overload levels (GLM-100:150 dB SPL, GLM-200:131 dB SPL)
◆ The GLM-100E version of the mic comes without electronics for use with a wireless transmitter
◆ GLM-100 includes the GLM-TB Tie Bar, GLM-BC Belt Clip and WS-2 windscreen.
◆ GLM-200 includes the GLM-UM Universal Mount, GLM-TB Tie Bar, and GLM-BC Belt Clip and WS-2 windscreen

GLM-200
EXTENDED RESPONSE

Also for instrument applications, the GLM-200 offers the same size advantages as the GLM-100 but provides extra gain-before-feedback for critical sound reinforcement applications. Another feature is uniform off-axis rejection. Ideal for musical instrument reinforcement or recording.

Optional Accessories
GLM-SM Surface Mount
Mounts a GLM to a surface, PZM -style
GLM-DM Drum Mount
Provides permanent mounting on drums
GLM-HM Horn Mount
Includes a large, soft clip to prevent marring
GLM-CH Choir Hanger
For overhead miking
GLM-OHM Overhead Mount
Boom stand mount for overhead miking of drum sets. Screws onto a standard mic stand with 5/8˝-27 thread
GLM-CM Cymbal Mount
Includes clamp, rod/elbow assembly and vertical rod

CROWN

PZM SERIES

Crown’s PZM (Pressure Zone Microphones) are serious tools for the sound reinforcement and recording professional, as well as cost-effective solutions for a variety of other applications. The first licensed manufacturer of the Pressure Recording Process (the foundation of PZM technology), Crown offers the most successful line of PZM microphones available today.

With the PZM advantages of a 6 dB increase in sensitivity and S/N ratio, Crown’s PZM series provide you with the ability to optimally place microphones in the performance venue. Designed for use on flat surfaces, PZM’s can be placed where conventional mics do not work well. Small size and low profile also make them an excellent choice for recording projects, conference rooms and security applications. Their wide, smooth frequency response makes them ideal for miking pianos, harps and other orchestral instruments. In fact, top recording engineers all over the world are using Crown’s professional PZM microphones to improve the quality of their recordings.

**Sound Grabber II**

The Sound Grabber II is an affordable PZM mic designed to meet the needs of the home or business recordist and bring them the benefits of PZM technology. Ideal for conferences, group discussions, interviews, home video production, lectures, and recordings, the Sound Grabber II can be placed on a large surface such as a table, floor, wall, or lectern.

- Offers the opportunity for vast improvement in the quality of recordings
- Picks up sounds at distances you never thought possible with a clarity that other mics, because of the limitations of their construction, cannot match
- Sound Grabber II does not need to follow the action, since it has a wide-angle pickup pattern. So long as the mic “sees” the sound, in whatever direction or angle, it will pick it up clearly; it does not need to be between you and the other person
- Speakers or vocalists can move freely around the Sound Grabber II without their tone quality changing

**PZM-185 General Purpose Mic**

An affordable, all-around performer, the PZM-185 is ideal for applications such as conferences, group discussions, interviews, broadcast, home video production, lectures, and recordings. The mic can be placed on a large surface such as a table, floor, wall, or lectern.

- Powered either by an internal AAA 1.5V battery or 12-48v phantom power
- The boundary “paddle” can be detached so the mic will fit in your pocket. Attached to the mic is an 8’ cable leading to a tubular power module.
- Low-profile reduces “mic fright” and minimizes clutter. Nearly invisible on camera
- The PZM-185 minimizes pick up of vibration and handling noise. Its electret condenser capsule provides a wide, smooth frequency response from 50 Hz to 16 kHz
- Hemispherical polar pattern allows clear pickup of everyone surrounding the mic
- The mic is protected against static and RFI. Output is XLR-balanced, low impedance, which allows long cable runs without hum pickup or high-frequency loss

**Pressure Zone Microphone Technology**

PZM mics use Pressure Zone Microphone technology in which sound waves reinforce themselves in the area nearest a flat surface, usually referred to as the boundary. Crown’s PZM mics use a miniature mic capsule mounted very near a sound-reflecting plate or boundary in the Pressure Zone. In this zone, direct sound from the sound source combines in phase at all frequencies with reflected sound off the boundary. The benefits are many: 6 dB more sensitivity, 6 dB less noise, a wide smooth frequency response free of phase interference, excellent clarity and “reach,” and consistent pickup anywhere around the microphone.

**Equipment Leasing Available**
PZM-20R Special Purpose Pro

Perfect for permanent flush-mounting to conference tables, lecterns, pulpits, walls, you name it. A hemispherical pickup pattern, rising high-frequency response and low-frequency roll-off makes the PZM-20R a great choice for clear speech pickup. It also mounts in shallow cavities or a standard “double gang” electrical wall box and can be powered directly from phantom power via screw terminals. A white version also available.

- Designed for permanent flush-mounting in tables, lecterns, pulpits, and judicial benches
- Unobtrusive appearance and hemispherical pickup pattern makes it ideal for conference table use.
- Three small guard-posts prevent papers from sliding underneath the cantilever arm and altering the frequency response.

PZM-20R (Black) ................................................................. 279.95
PZM-20RW (White) ............................................................. 279.95

PZM-30D Switchable Performance

Added acoustical gain. Clean, clear high frequencies. Uniform polar response. The PZM-30D offers all of these in addition to the PZM advantages in a rugged, durable package. A switchable dual-frequency response provides a “rising” position that adds brilliance and articulation, while the “flat” position maintains a smooth, flat and natural high-frequency response. Miniaturized electronics allow direct 12-48v phantom powering without external interface.

- Switchable dual frequency response: rising (R) or flat (F). The “rising” position adds brilliance. This makes it useful wherever a crisp attack is desired, such as on percussion, drums, or piano. You can get a bright sound without boosting high frequencies on the recording console; the result is lower noise. The “flat” position provides a smooth, flat, high-frequency response for natural sound reproduction.
- The sturdy PZM-30D is especially reliable because it can be used with a rugged detachable cable. The output is 3-pin XLR-M balanced and low impedance, which permits long cable runs without hum pickup or high-frequency loss.

PZM-30D ................................................................. $291.95

PZM-6D Indisputably Inconspicuous

With 100 percent of the performance but only one-quarter the footprint of the PZM-30D, the PZM-6D is the smallest high-performance PZM available. Designed for professional recording, sound reinforcement, teleconferencing and broadcasting, the PZM-6D is ideal for miking grand pianos, mounting overhead or for placement on conference tables. Like the PZM-30 it offers switchable dual-frequency “rising” or “flat” response.

- Unobtrusive appearance is great for conference rooms, as well as on TV/film and video productions
- Suspended over an orchestra on a clear panel, the PZM-6D practically disappears. Miniature, permanently attached cable also reduces visual clutter
- Capable of withstanding up to 150 dB SPL without distortion. Self noise is low, and sensitivity is high enough to override mixer noise in distant-miking applications

PZM-6D ................................................................. $279.95
PZM-10/10LL Security and Surveillance

Designed for security, surveillance, and conference table use, the PZM-10 is a low-profile omni pressure zone mic that doesn't look like a microphone, so it is inconspicuous. Featuring a cylindrical design for ceiling, wall or tabletop installations, it is practically invisible. The mic's tubular housing mounts in a 25/32” diameter hole in a ceiling panel, wall or table.

- In the PZM-10, low frequencies below the voice range are rolled off to reduce pickup of air conditioning rumble. The high-frequency response is boosted slightly to help articulation.
- Because of its tailored response and PZM construction, the PZM-10 will pick up conversations or other desired sounds with extra clarity and definition.
- Unique mounting system allows quick installation
- Output is XLR-balanced, low impedance, which allows long cable runs without hum pickup or high-frequency loss. Powering is by 12 to 48 V phantom power.
- The mic's humbucking transformer and steel case prevent hum pickup, even near fluorescent lights.

PZM-11 Security and Surveillance Mic

The PZM-11 presents a low-cost solution for security and surveillance applications. Mounted on a standard wall plate, the PZM-11 doesn't look like a microphone but rather an ordinary light switch. Intelligibility is excellent, with low frequencies below the voice range rolled off to reduce the pickup of HVAC rumble. Electronics on the rear of the plate offer screw terminals, eliminating the need for connectors. The PZM-11 uses 12-48 volts phantom power, while the PZM-11LL features line-level output and is powerable by 12-24V DC or 24V AC.

- Ideal for security, surveillance, and conference-room applications, the PZM-11 can be mounted in the ceiling or wall in a standard electrical outlet box. Providing excellent intelligibility, the PZM-11 is designed to look like something other than a microphone so as not to draw attention.
- In the PZM-11, low frequencies below the voice range are rolled off to reduce pickup of air-conditioning rumble. The high-frequency response is boosted slightly to aid clarity and articulation.
- The microphone connector is a row of screw terminals for easy installation. The output is balanced, low impedance, which allows long cable runs without hum pickup or high-frequency loss. Powering is via 12 to 48 volts phantom power.
- The PZM-11LL looks and sounds like the PZM-11, but has a line-level output and is powered by 24V DC or phantom power. And since it has a high output, the PZM-11LL can be plugged directly into a VCR line input—no costly mic preamp required.

PZM-11LL – Same as the PZM-11, with a line-level output and is powered by 24v DC or phantom power. The PZM-11LL can be installed without a box because its electronics are shielded inside a removable metal housing .......................................................... 106.50

* Omnidirectional at lower frequencies; Unidirectional at higher frequencies
PZM-11LWR Security & Surveillance

Similar to the PZM-11LL, the PZM-11LWR is a weather-resistant PZM microphone with a balanced line-level output designed for outdoor use. A plastic membrane inside the microphone protects the mic capsule from water damage. The mic mounts in a standard electrical outlet box. Applications include fast-food restaurants, outdoor intercoms, toll booths, bridges, theme park security and home automation.

- Frequencies below the voice range are rolled off to reduce traffic rumble. The high-frequency response is boosted to help articulation. Tailored response and PZM construction picks up conversations or other desired sounds with extra clarity.
- Mic is "weather resistant," which means:
  - Works during and after rainfall
  - Frequency response changes temporarily if the membrane gets wet or if water freezes on the membrane. Frequency response returns to normal when the membrane dries
  - High-pressure water sprayed directly on the membrane (through the louvered wall plate) may damage the membrane

- Can be plugged directly into a VCR line input — no costly mic preamp is needed
- Output (via screw terminals) can be balanced or unbalanced.
- Powering is by 12-24V AC or DC

SASS-P Mk II Natural Stereo Imaging

The SASS-P Mk II is a patented stereo condenser microphone using PZM technology. A mono-compatible, near-coincident array design makes it perfect for professional recording, broadcast and sampling. It uses two premium-quality PZM mics mounted on boundaries to make each directional. The carefully controlled polar patterns and human-head-sized spacing between the capsules create well-focused natural stereo imaging without a “hole in the middle.” Reproduction is precise and realistic, with the SASS-P Mk II accurately conveying ambient environment for location recording, film sound or synced audio ambience. Separate left and right outputs are balanced. A low-frequency cut switch attenuates frequencies below 100 Hz by 12 dB-per-octave, reducing wind noise and low-end rumble. Powered by two 9-volt batteries or phantom power.

- Provides a very warm smooth sound with more high-frequency brilliance (“air”) and less midrange “hardness.”
- Reproduction of the sound field is precise and realistic. The SASS MkII accurately conveys the ambient environment for location recording film-wide sound, or synced audio ambience (movement of traffic) where movement heard must precisely match movements in the screen image
- A foam barrier/baffle between the capsules shapes the pickup angle of each capsule in the front, and limits overlap of the two sides at higher frequencies. Although the mic capsules are spaced a few centimeters apart, there is little phase cancellation when both channels are combined to mono because of the shadowing effect of the baffle.
- Powered in the field by two 9-volt batteries or 12-48V phantom power. Separate left and right outputs are low-impedance balanced
- Professional applications include:
  - Classical music recording (ensembles)
  - Stereo electronic news gathering (ENG)
  - Sports ambience and crowd reaction
  - Televised theatre and dance
  - Film ambience
  - Stereo sampling for keyboards
  - Stereo sound effects

- Frequencies below the voice range are rolled off to reduce traffic rumble. The high-frequency response is boosted to help articulation. Tailored response and PZM construction picks up conversations or other desired sounds with extra clarity.
Crown’s CM Series of condenser mics offer exceptional quality at truly affordable prices. With application specific microphones, ranging from professional-grade headworn microphones to critical response microphones for the most demanding applications, the CM series can fit almost any miking requirement. With innovations such as Crown’s patented Differoid technology, these microphones combine years of technical know-how with durable, high-quality materials and workmanship.

CM-150 Recording/Acoustical Measurement Microphone

The CM-150 is a 1/2”-diameter omni-directional electret-condenser microphone designed for professional recording applications. It is also ideal for accurate acoustical measurement (free-field measurement and sound-level measurement) applications. The CM-150 is extremely stable over a wide range of environmental conditions and features a flat, wide-range frequency response. It includes a calibrated frequency response curve, WS-15 foam windscreen, ASA-4 stand clamp and a male XLR output.

- Pre-aged titanium diaphragm makes the CM-150 extremely stable over a wide range of environmental conditions.
- Very flat, wide-range frequency response.
- Powered by 18-48v DC phantom power.
- Supplied with a proof-of-performance sheet, which shows frequency response and sensitivity. This information can be used to calibrate the microphone.
- Mic capsule grille fits into a Brue & Kjær 4220 pistonphone or similar mic calibrator.
- When used for recording, the CM-150 sounds natural and accurate. It preserves the delicate timbre of acoustic instruments, yet can reproduce all the power of a pipe organ.
- Can handle very loud sounds (127 dB SPL) without distortion. It is protected against static and RFI.
- The off-axis response is also smooth, so any leakage picked up has little coloration. Self-noise is low, permitting clean recordings — especially with close miking.
- Output is balanced, low impedance, which allows long cable runs without hum pickup or high-frequency loss.
- Supplied foam windscreen reduces wind noise outdoors.

CM-200A/CM-200ASW Vocal and Instrumental Mics

The CM-200A is a cardioid condenser microphone that delivers studio-quality sound in a rugged package able to withstand the toughest field conditions. Its smooth, articulate performance combined with a wide frequency response make it an excellent choice for professional applications. Its outstanding performance is complemented with handsome styling and a comfortable balance. The CM-200ASW is the same plus it adds an on/off switch.

- They offer studio quality sound, yet are rugged enough to withstand harsh professional use in the field.
- Sound is smooth and non-harsh – yet very articulate – with a wider frequency range than standard vocal microphones.
- Used up-close, their proximity effect boosts the low-frequency response for a warm, robust sound.
- Upper-midrange “presence peak” adds intelligibility.
- Cardioid pattern increases gain-before-feedback and ejects unwanted background noise.
- Built to withstand extremely loud sound pressure levels without distortion as well as repeated drops and abuse.
- They accept 12-48v DC phantom power (411x169) Multi-stage pop filter effectively suppresses explosive breath sounds. Handling noise is extremely low.
- Balanced, low impedance output allows long cable runs without hum pickup or high-frequency loss.
- They include carrying case, adjustable mic stand adapter and a foam windscreen to further reduce breath popping and wind noise.

CM-310A/CM-310ASW Noise-Cancelling Condenser Mics

A hand-held noise-cancelling microphone for singers, sporting events or other applications with high ambient sound level, the CM-310A features Crown’s patented Differoid technology to provide sizzling performance combined with the best gain before feedback in the industry. Used by top touring professionals worldwide, the CM-310A is ideal for high SPL sound reinforcement applications.

And while it offers studio-quality sound, it is still rugged enough to withstand hard use on the road. The CM-310ASW adds switches for on/off operation and rising/flat high-frequency response.

- Differoid technology is differential or noise cancelling, so it rejects sounds that are not close to the microphone. It also discriminates against distant sound sources such as monitor speakers or instruments. An announcer can sit in the stands with the audience, with the P.A. loudspeakers playing loudly and not experience feedback.
- Cardioid pattern rejects sound from the rear, giving them exceptional gain before feedback.
- They accept 12-48v DC phantom power.
- Flat (sounds warm and smooth) or rising (sounds clear and crisp) frequency response can be selected via DIP switch inside the mic handle. Flat position has slightly more gain before feedback. Announcers may prefer the rising position for its extra intelligibility.
- Built-in pop filter suppresses explosive breath sounds. Handling noise is very low.
- Balanced, low impedance output allows long cable runs.
- Outstanding performance is complemented with handsome styling and a comfortable balance in the hand.
- They include pouch case, mic stand adapter, and foam windscreen for outdoor use.

CM-700/CM-700MP Cardioid Condenser Mics

The CM-700 is a condenser microphone intended for use in professional recording and sound reinforcement applications. With a cardioid pickup pattern and extremely low self-noise, this mic is perfect for clean, noise-free recordings of acoustic instruments, drum overheads and studio vocals. Able to handle up to 151 dB SPL, it features a smooth, wide frequency response and a three-position bass roll-off switch.

- Rugged enough for the road, the CM-700 is well suited for acoustic instruments, drum overheads and studio vocals. It works equally well for popular music (multi-miking) or classical music (stereo and spot miking). Small and inconspicuous, it is a good choice for miking a lectern.
- Very smooth, wide-range frequency response gives it a natural sound. It preserves the delicate timbre of acoustic instruments, yet it can reproduce all the power of a pipe organ.
- Cardioid pickup is uniform with frequency and reduces background noise, room reverb and feedback. Self-noise is also very low, allowing clean, noise-free recordings.
- Handles extremely loud sounds without distortion (151 dB maximum SPL) and is protected against static and RFI.
- To achieve pristine sound quality, the CM-700 incorporates an ultralight diaphragm, humbucking transformer, polycarbonate capacitors and a gold-plated 3-pin XLR connector.
- Output is balanced, low impedance, which allows long cable runs without hum pickup or high-frequency loss.
- Supplied 2-stage foam pop filter softens breath pops and a foam windscrean reduces wind noise outdoors.
- Accepts 12-48v DC phantom power.
- Three positions bass-tilt switch (flat, low-cut and rolloff).

ALSO AVAILABLE IN STEREO MATCHED PAIRS AS THE CM700MP

The CM-700MP is a matched pair of CM-700 cardioid condenser microphones. They are matched in sensitivity and frequency response within 1.5 dB. A pair of the CM-700’s are an excellent choice for stereo recording of a classical music ensemble, folk group, drum set, piano, vocals, percussion and so on. Includes carrying pouch, ASA-4 swivel mount, foam pop filter and foam windscrean.

CM-310A  $224.95
CM-310ASW $254.50

CM-700  $234.50
CM-700MP $479.50
CM311A Differoid Headworn Cardioid Condenser Microphone

Offering Differoid technology in a comfortable but rugged headworn package, the CM-311A sounds like the best handheld mic—even with the loudest singers. Designed for demanding touring and live sound applications, cardioid pattern rejects sounds from the rear, such as floor monitors while noise-canceling ability rejects sounds at a distance, such as instruments on stage and crowd noise. The result is full, clear, distortion-free sound with exceptional isolation and gain before feedback—the ideal choice for hands-free work directly in front of loudspeakers. Also available in a version that mounts on Sony MDR-7506 headphones (CM-311AHS) making it ideal for broadcast applications, and with a pigtail output (CM-311AE) for connection to the wireless transmitter of your choice. (CM-311A and CM-311AHS have a 3-pin XLR output).

- The headband and mic boom are adjustable to any vocalist, and because of the boom’s unique behind-the-ear design, it does not cover up the singer’s face.
- Supplied with a pop filter to greatly reduce breath noise and pops, and a 9V battery/phantom-powered beltpack
- The beltpack has an on/off switch, a programmable mute switch for hardwired use, and a “Mic On” LED

CM-311A .......................................................... 259.95  
CM-311AHS mounts on a Sony MDR-7506 headphone............................ 244.95  
CM-311AE connects directly to any wireless transmitter................. 192.95

CM312A Headworn Hypercardioid Condenser Microphone

The CM-312A is a headworn mic with the fit and comfort of the CM-311A—and without Differoid technology. However, its hypercardioid pattern reduces feedback and aids isolation, making it ideal for live sound, aerobics and broadcast situations where a little less discrimination against high stage levels is required. (For more difficult situations though, the CM-311A is recommended). Sound can be tailored by moving the mic closer or farther from the corner of the mouth. And with the mic to the side of the mouth, breath pops are eliminated. Two other versions are available: The CM-312AHS mounts on a Sony MDR-7506 headphone making it ideal for broadcast applications. The CM-312AE offers pigtail output for connecting to the wireless transmitter of your choice (the CM-312A and CM-312AHS have a 3-pin XLR output).

- Smooth, wide-range response makes them ideal for natural reinforcement or recording of the singing voice, organ or other musical instruments
- Ultra-tight supercardioid pattern provides impressive gain-before-feedback while rejecting unwanted noise and reverb
- Extreme low frequencies are filtered out to reduce pickup of room rumble and are protected against static and radio frequency interference

CM-30/CM-31 Miniature Supercardioid Condenser Mics

Professional-quality, supercardioid condenser microphones, the CM-30 is designed for inconspicuous miking of a choir, orchestra or stage. Virtually invisible and with a built-in (removable) hanger for easy positioning, it is the mic of choice for church choir and overhead stage miking. It can also hang over conference tables or discussion groups for inconspicuous isolated miking. Accepts 12-48v phantom power and includes 30’ mic cable which connects to the electronics/faceplate which fits a standard electrical outlet box.

Matching the CM-30’s tiny size, outstanding performance and ease of use, the CM-31 is attached via a 30’ cable to an in-line power supply with a low-frequency cut switch and XLR output.

- The beltpack has an on/off switch, a programmable mute switch for hardwired use, and a “Mic On” LED

**Crown Microphone Accessories**

**PH-1A Single Channel Battery Supply**
A single-channel phantom power supply that operates from two standard 9v batteries or PS-24 AC/DC adapter. (Battery power provides 17v phantom and AC power provides 24v phantom.) The PH-1A powers all condenser mics that operate with phantom power of 18 to 24 v. It includes sufficient hum filtering for extremely quiet operation and is transformer isolated. If AC power fails, the batteries automatically take over. The rugged steel and aluminum chassis is designed to withstand daily abuse in professional applications ..................**93.95

**PS-24 AC Adapter**
A plug-in AC/DC adapter for the PH-1A. It will also provide power for the LM-200A and LM-201 microphones .................**29.50

**PH-4B Phantom Power Supply**
The PH-4B is an AC powered 4-channel power supply providing 48V DC phantom power for up to four condenser and electret-condenser microphones. It uses XLR-type connectors for each channel of input and output. DC blocking is provided for easy coupling to input circuits ..................**25.95

**CM-30-SA**
Adapts the CM-30 and CM-31 for use on a mic stand or boom ..................................................**29.95

**CM-SM**
Shock mount for CM-700 and CM-150 ..........**74.95

**CM-SB**
A stereo bar for the CM-700MP matched-pair mics.............Call

**LM-SM**
A fully adjustable shock mount for the LM-300a and LM-300aL, the LM-SM reduces mechanically induced noise. The rubber isolator is highly stable and securely holds the mic in place ..................**39.95

**LM-301-SMA**
Adapts the LM-301a for use with the LM-SM shock mount ..................Call

**ASA-2**
A stand adapter for the CM-200a and CM-310a hand-held microphones ..................**29.95

**ASA-4**
A stand adapter for the CM-700 and CM-150 microphone ..................**29.95

Miniature Microphones

Designed for close-miking applications, the 4060, 4061 and 4062 are almost invisible pre-polarized omnidirectional miniature condenser microphones with a 5.4mm vertical diaphragm that deliver unsurpassed audio quality. Specially designed for maximum performance under the often difficult conditions when mounted directly on the human body, the utmost attention has been paid to the microphones’ resistance to humidity. A double vent protection system together with water resistant materials inside the microphones make it almost impossible for moisture to cause the mics to fail. Furthermore, by changing the protection grids, the mics can be acoustically modified according to the placement of the microphone on the body. A wide range of connection adapters makes it possible to use the mics with almost any professional wireless systems available — even on 48v phantom power.

The three mic types are acoustically identical, but differ in their sensitivity and self-noise:

- The 4060 has the highest sensitivity (20mV/Pa), and is able to handle sound pressure levels up to 134dB before clipping occurs.
- The 4061’s sensitivity is 10dB lower to match some of the more sensitive transmitters on the market and offers a maximum SPL of 144dB. The 4062 is the high-SPL specialist, capable of handling up to 154dB before clipping occurs.

Two different protection grids are supplied with mic for acoustic equalization. If the mic is mounted on a performer’s head, the short plastic protection grid can be used to provide a 3dB soft boost at 8-20kHz. When the placement is on the performer’s chest, a 10dB boost at 12kHz is required for the microphone to sound neutral. This unique acoustic equalization is noiseless and is provided by the longer protection grid. The grids can be cleaned if they become clogged with make-up, etc.

- The self-noise of the 4060 is only 23dB(A), absolutely unique for a microphone of this size. Effective dynamic range is 97dB, and there is 14dB headroom before clipping occurs.
- The 4060 and 4061 are primarily designed for use with wireless systems in theater or TV. A variety of ultra-compact adapters make it possible to match any of the miniature mics to virtually any wireless system — even on 48v phantom power.

4065/ 4066

Miniature Microphone Headband Solutions

The 4065 and 4066 are headband mounted condenser microphone with the same prepolarized omnidirectional cartridge element as in the 4061. They are specially designed for maximum performance when mounted directly on the human body. A double vent protection system, a drop stopper on the tube, and water resistant materials inside the microphone, make it almost impossible for the 4065 or 4066 to fail because of humidity.

The 4065 offers maximum performance for stage, broadcast and home studio applications. It is designed for everyday use on the same performer. The headband is exceptionally lightweight and easily formed to the individual shape of each performer’s head, providing a firm yet comfortable fit. Any adjustment in the bend is easily done with a soft touch, around a wide curved object.

The 4066 is primarily for head mounting on actors, public speakers, broadcast hosts, musicians and singers. The system is quickly and simply adjustable — and extremely versatile. It is designed for a different user everyday. The headband features very robust construction, choice of left or right mounting and color change (simply by changing to a boom in another color). It even enables two mics to be used on the same headband for situations in which continuity can never be compromised. The boom can be used separately when the headband isn’t needed.
Miniature Microphone with Presence Boost

A miniature omnidirectional condenser microphone, the 4071 features a specially-designed, fixed microphone grid with a soft presence boost of typically 5dB at 4-6kHz—the area of speech intelligibility, clarity and definition of voices and instruments. While clarity seems to be missing from chest-worn microphone placement, the 4071 will make voices cut through. Ideal for ENG/EFP use on the reporter in studio or in the field. Or for film production use, with hidden microphone placements on the actors.

Otherwise identical to the 4061 (uses the same prepolarized omnidirectional miniature condenser capsule), the 4071 does add an acoustic low-cut filter so the built-in pre amp (or wireless system) will have much larger headroom.

When recording voices from mic placement on a performers body, no frequency below 100Hz is attractive. For this reason, the airing vent in the capsule has been specially designed to make the frequency response 2dB attenuated at 100Hz, with a 3dB per octave roll-off. Also reduces low-frequency rumble from wind noise when used outside.

DAK4060 Accessory Kit
This is a complete accessory kit with room for a Miniature Mic and one or more connection adaptors. The box is extremely rugged so it gives both microphone and accessories perfect protection. The box has a transparent lid, so you can make sure you have a complete kit without opening the box all the time.

Includes: 5 colored (mix) miniature windscreens (DUA0565), Black Vampire Pin, Black Magnet, single clip lapel and 3 single tie pins

DAK4070 Accessory Kits
Designed for use with the 4071 Microphone, the DAK4071-E Accessory kit is made for ENG/EFP when the mic can be visible, while the DAK4071-F is for film or TV when the mic can't be visible. Each kit includes a hard case with a transparent lid and one or more connection adaptors.

DAK4071-E: Black Double Pin, Single Pin Holder, Double Lock Clip, windscreens (7 colors), windjammer and mesh ............................................................84.95
DAK4071-F: Miniature concealer, Tie Pod, Mic Tape, Double-sided Tape for Concealer and Tie Pod, windjammer and mesh ................................................119.95

IMK4061 Instrument Microphone Kit
Designed for close miking a wide variety of musical instruments, the IMK4061 consists of a 4061 miniature Mic, and an XLR adapter, together with a selection of unique mounting accessories including holders for attachment to stringed instruments, universal surface mounts with double sided tape for use with guitars, wind instruments, drums and percussion, a magnet holder for attaching the mic to drum rims or the frames of pianos, and foam windscreens.

Single Clip (DM M 0001) .............................................17.95
Single Pin, Black (DM M 0002-B) ..................................16.95
Single Pin, White (DM M 0002-W) ................................16.95

Acoustic Modification Kits

Soft Boost

These kits consist of 5 protection grids. When fitted the grids introduces a 3dB soft boost around 8-20kHz for applications where the mics need to be placed on the head of the performer. The metal grid is anodized stainless steel.

DUA6001 (Black) ..................................................56.95
DUA6003 (Beige) ..................................................56.95
DUA6005 (White) ..................................................56.95

High Boost

These kits consist of 5 protection grids. When fitted the grids introduces a 10dB soft boost around 12kHz for applications where the mics need to be placed on the chest of the performer. The metal grid is anodized stainless steel.

DUA6002 (Black) ..................................................56.95
DUA6004 (Beige) ..................................................56.95
DUA6006 (White) ..................................................56.95

Compact Cardioid Microphones

When microphones have to be out of sight, but maximum clarity and signal are essential, there is only one choice— DPA’s high performance Compact Cardioid microphones. Phantom-powered condenser mics, the 4021, 4022 and 4023 use the same type of cartridge as the 4011 Standard, but are preamplified using a built-in, ultra-small, thick-film mounted FET-preamplifier. The result is exceptionally compact, high performance mics ideally suited for the unobtrusive miking of all types of television, film, theater and live performances—as well as for studio applications. In fact, their linear frequency response from 40Hz to 20kHz (±2dB) together with their ultra-small design makes them the perfect choice whenever high definition audio and insignificant size is paramount.

The 1.2” 4021 has its cable (5m) side-mounted, which mechanically is perfect for situations where the mic needs to be mounted directly on string or wind instruments or on a stand.

The 1.38” 4022 has its cable (5m) rear-mounted, for situations where the microphone needs to be suspended from its own cable or mounted on a stand.

The 1.18” 4023 has a standard LEMO-connector for simple and safe mounting and removal of the microphone and to provide maximum ruggedness when in use.

◆ For on-camera recordings with live audiences and artists, their matte black finish gives them a classic yet unobtrusive appearance.
◆ For sound reinforcement in concert halls, theaters and churches, they provide clean, natural sound, with a high gain-to-feedback ratio that limits the effect of reflections.
◆ In film and TV studios, they are excellent for off-camera recording of voice or Foley work.
◆ They include the SM4000 Suspension Mount and DUA0020 windscreen.

3521 Compact Cardioid Stereo Kit

The 3521 is a complete stereo kit with two 4021 Compact Cardioid Mics carefully matched within 2dB on frequency response, sensitivity and self-noise. Designed especially for low-profile mounting inside a piano, with the supplied XY/ORTF holder the kit is also exceptional as a compact stereo pair for applications such as overhead for drums, horn or strings sections, choirs, main or additional spot pair for small or big acoustic ensembles. In addition to the two 4021 mics, the kit includes two GM 4000 Gooseneck Mounts, two MB4000 Magnet Bases and the CX04000 compact XY and ORTF holder.

Compact Wide Cardioid Microphones

The 4026, 4027 and 4028 are phantom-powered compact condenser microphones with the same type of cartridge as the 4015 Standard Series wide cardioid microphone, but are preamplified using a built-in, ultra-small, thick-film mounted FET-preamplifier. Their linear frequency response together with a nice and subtle high frequency lift give that brilliant sparkle of purity, which will bring your sound to a higher level. And with unbelievable depth and precision, they will exceed your expectations on choirs, percussion, grand pianos, reed and brass instruments and much more. They include the SM 4000 Suspension Mount and DUA0020 windscreen.

The 4026 has its cable (5m) rear-mounted, for situations where the microphone needs to be suspended from its own cable or mounted on a stand.

The 4027 has its cable (5m) side-mounted, which mechanically is perfect for situations where the microphone needs to be mounted directly on the musical instrument or on a stand.

The 4028’s 5-meter cable is attached with a standard LEMO-connector for easy mounting and removal of the microphone capsule, and for maximum ruggedness when in use.
Compact Omni (12mm Cartridge) Microphones

These phantom-powered omnidirectional condenser mics use the same type of mic cartridge as the 4007 Standard reference mic but are preamplified using a built-in, ultra-small, thick-film mounted FET-preamplifier. This 12mm (0.417˝) diameter cartridge gives them impressive SPL handling capabilities, as well as extended frequency range and excellent phase response. They are also insensitive to handling noise and humidity. Extremely linear frequency response from 20Hz to 40kHz (+/−2dB) and 144dB SPL capability makes them the professional choice in close miking situations with percussion, saxes, horns, wind instruments or grand piano. They include the DUA0030 windscreen.

Compact Omni (16mm Cartridge) Microphones

When mics need to be small, lightweight and inconspicuous, but quality is paramount, the 4051, 4052 and 4053’s compact design and clean transparent sound make them the perfect choice for theater opera and concert halls where there is a live audience, as well as film applications—both in the studio or on location. They use the same type of mic cartridges as the 4006 Standard where their 16mm (0.63˝) cartridge provides impressive sensitivity characteristics, an extremely linear frequency response and a low-noise floor. This makes them ideally suited for all types of low SPL recordings while their wide dynamic range also enables recording at higher SPLs without worrying about clipping or distortion. Additionally, the mics are insensitive to handling noise, pop-noise and humidity, and exhibit no proximity effects. The 16mm Compact Omni’s include the DD0251 Near Field Grid and DD0297 Diffuse Field Grid.

3552 Compact Omni Stereo Kit

The 3552 is a complete stereo kit with two carefully matched 4052 Compact Omni Mics. Designed especially for low-profile mounting inside a piano, the supplied goosenecks can also be mounted directly on mic stands for various A-B stereo applications such as a full orchestra, choirs and other ambient recordings. In the A-B stereo principle, time differences will act as stereo cues to enable the listener to “capture the space” in the recording, and experience a vivid stereo image of the complete sound-field with a full bass response.

In addition to the two 4052 mics, the kit includes two (of each) DD0251 Near Field Silver Grids, DD0297 Black Diffuse Field Grids, UA0777 Nose Cones, GM4050 Gooseneck Mounts and MB4000 Magnet Bases.

Low Noise Omnidirectional Microphone

Using a German silver diaphragm and a pre-aged capsule, the 4006 is in use all over the world with professional studios, broadcasting facilities, and anywhere the utmost in reliability and repeatability are required. The 4006 exhibits no proximity effect and an inherent insensitivity to popping, making it ideal for close-miking vocals, strings, woodwind or plucked instruments.

The 4006 is an omnidirectional condenser microphone with an extremely linear frequency response from 20Hz to 20kHz, high sensitivity and a low noise-floor. The 4006 is phantom powered (P48), which together with the extended range of acoustic pressure equalizers and different protection grids turns the 4006 into an extremely cost effective solution. All in all the 4006 can be changed into 7 different microphone versions acoustically.

- Superior sensitivity characteristics, an extremely linear frequency response and a low noise floor make the 4006 the ideal choice in most miking applications.
- The capsule holds a 16mm (0.63-inch) diaphragm on a housing of German silver. During production capsules are pre-aged and rigorously tested, ensuring that the mic remains extremely stable over time, in all kinds of environments.
- Use at high SPL levels (up to 124dB) without worrying about clipping or distortion
- Inherently insensitive to popping and exhibiting no proximity effect, the 4006 is equally well-suited for close-miking vocals, strings, woodwind or plucked instruments.
- In addition to the silvered protection grid that gives it the greatest possible accuracy on-axis, the 4006 also includes a Diffuse-Field Grid (D0297) as standard. The grid guarantees excellent linear frequency response in the diffuse field, and in addition, provides a high-frequency boost when miking closer to a sound source.
- Includes a windscreen, mic clip, calibration chart and a rugged case. The chart contains individually-measured on-axis frequency response, sensitivity and A-weighted equivalent noise level with other essential data.
- Optional accessories include a Nose Cone (UA0777) which gives a true omnidirectional response, even at higher frequencies, and Acoustic Pressure Equalization (APE) Kits that modify the directivity and frequency response characteristics of the mic without compromising audio integrity.

4007 High SPL Omnidirectional Microphone

A high-SPL, omnidirectional microphone, the 4007 is a phantom powered (P48) close miking specialist with an extremely linear on-axis frequency response from 20Hz to 40kHz (±2dB). This high-performance condenser microphone has an unbeatable dynamic range of 124dB from the noise floor to 1% THD and is capable of handling up to 155dB SPL peak before clipping occurs. The 4007 has through its total acoustical transparency and ultra-high SPL handling capability gained a reputation as being the first choice for picking up drums, percussion and brass instruments, whenever the natural and non-distorted result is paramount. Last, due to its linear qualities, the 4007 can also be used as reference mic in both microphone comparisons and acoustic test equipment.

- Specially designed to handle extremely high SPLs with optimum performance, the 4007’s 12mm cartridge can handle peak sound pressure level to 155dB before clipping.
- Small cartridge diameter also results in an extended on-axis frequency response, and excellent phase response and a high degree of omnidirectivity.
- The ultra-high pre-polarization voltage allows for a larger diaphragm-to-backplate distance, lowering distortion levels to an absolute minimum.
- Close-mike drums, percussion and brass with total accuracy for a clean, undistorted dynamic sound as never before.
- Includes windscreen, mic clip and a calibration chart.
Cardioid Microphone

The 4011 is a cardioid condenser microphone with a linear frequency response from 40Hz to 20kHz (±2dB), totally flat off-axis qualities, so any leakage that occurs from off-axis sound sources is still a faithful reproduction of these sounds, though attenuated according to the true first order cardioid pick-up pattern. The 4011 is phantom powered (P48), transformerless and has an extremely high SPL handling capability of 158dB before clipping occurs. These special qualities have made the 4011 one of the most popular microphones in the recordist’s toolbox and the span of applications is limited only by your imagination.

- First order cardioid pick-up pattern offers superb separation between sound sources. Ideal for multi-track recording applications, classical recording or live situations.
- Flat on-axis frequency response, together with an excellent phase response, delivers clean, uncolored sound that is totally faithful to the original.
- The off-axis response is similarly smooth so that any leakage is likewise an accurate reflection of the original.

4015 Wide Cardioid Microphone

The 4015’s polar pattern is a wide cardioid (also known as hemisphere), attenuating less to the sides and back than a traditional first order cardioid. It is designed with a linear on-axis frequency response from 40Hz (±2dB) to 20 kHz (+3/-1dB) at 60 cm, with a soft high frequency lift from 10 to 15 kHz of max. 3dB. The 4015 is the perfect fill-in when an omni is too ambient and a cardioid is too narrow. The 4015 features the supreme accuracy, definition and resolution of the legendary 4011 to offer natural sounding recordings, however it has a richer bass response than the 4011 and will therefore serve you well both in close-up work as well as diffuse field tasks. The 4015 is phantom powered (P48), transformerless and can handle 158dB SPL peak before clipping occurs. Ideal for recording vocals, supporting sections of an orchestra, miking a conference panel, a percussion set-up or a grand piano.

4003/ 4004/ 4012/ 4016

130v Omnidirectional and Cardioid Microphones

DPA also offers the 130v high-voltage equivalents of the 4006, 4007, 4011 and 4015. Acoustically identical, these models differ in the powering system. The high-voltage system enables them to handle approximately 10dB higher SPL. The extra headroom, together with the excellent phase, transient and distortion performance offered by the 130v powering system, offers a true investment in versatility. To power a 130v microphone, you need the optional HMA4000 Hi-Voltage Microphone Amplifier. A high quality power supply and mic amp, the HMA4000 has a transformerless, high-level, single-ended or electronically balanced signal path that preserves the integrity of the audio signal and delivers excellent phase and distortion characteristics. These powerful features make the 4003 (Omnidirectional), 4004 (Hi-SPL Omnidirectional), 4012 (Cardioid) and 4016 (Wide Cardioid) with the HMA4000 perfect for direct-to-track recordings.
4006/4011

**3530-A**
A complete A-B Stereo Kit with two factory-matched phantom-powered 4006 condenser mics, stereo boom and a complete range of acoustic modification accessories, in an attractive but sturdy carrying case with a foam insert. The hand selected 4006 mics are guaranteed to match within 1dB on both frequency range, sensitivity and self-noise. The ultimate portable solution for making sharply focused, realistically ambient stereo recordings—from acoustic soloist to full orchestra. In addition to two 4006 Omni Mics, the kit includes:

- UA0836 Stereo Boom with Holders
- 2 UA0777 Nose Cones
- 2 DD0251 Near Field Grids, Silver
- 2 DD0297 Diffuse Field Grids, Black
- 2 L110C 110mm Acoustic Pressure Equalizer Cylinders
- 2 each L30B (30mm), L40B (40mm) and L50B (50mm) Acoustic Pressure Equalizer Balls (see next page for full description)

**3511**
The 3511 is a complete stereo kit for a broad range of recording applications using two 4011 Cardioid Microphones, carefully matched within 2dB on frequency response, sensitivity and self-noise. Several standard set-ups such as ORTF and XY are possible. Often used for piano recordings of jazz or pop with a placement closer to the hammers or as overheads for drums, the 4011s handle very high SPL and will therefore allow close placement as well as more distant. In addition to two 4011 Cardioid Mics, the kit includes:

- 2 UA0897 Shock Mounts
- UA0836 Stereo Boom with Holders. Precision-crafted stereo boom for secure mounting of microphone pairs for A-B stereo recordings
- DUA0019 Spacer for Stereo Boom. Allows XY or ORTF stereo set-ups on the boom
- DUA0075 XY Windscreen
- 2 UA0896 Windscreens for 19mm

**4041** Large Diaphragm Microphones
The 4041 series are 1” omnidirectional microphones with the totally transparent MM P4000 preamp (except the 4041-SP) to deliver outstanding performance. They have extremely low self-noise of 6dB (typical) and 7dB (maximum). With a THD less 0.5% at 120dB SPL peak, they are a top choice with a dynamic range of 113dB. The specially treated stainless steel diaphragm and housing give the capsule unique immunity against ambient temperature differences. The backplate is polarized with 200v providing extremely high sensitivity and SPL handling of up to 144dB (134dB on the 4041-SP) before clipping. The frequency response is 10Hz to 20kHz with a 4-6 dB soft boost around 8kHz.

The 4041 mics have a unique modular design enabling the capsule to be unscrewed from the preamp and offering you the choice between a 130v or 48v phantom-powered solid-state preamplifier and a 130v tube technology preamp. The solid state is used for the most transparent and faithful reproduction, whereas the tube system adds a slight musical coloration to the recording.

**4041-SP**
The 4041-SP uses 48v phantom power. It offers the same superior sound quality as the high voltage versions, since the capsule is the same, with very slight changes in the specifications. Because it is part of the modular system, it is possible to upgrade to the 130v solid-state or tube preamp.

**4041-S**
The 4041-S uses the MM P4000-S solid-state preamp which offers a total linear and transparent signal path. The low noise output stage is driven as a class A unity gain impedance converter. HM A4000 Mic Amplifier supplies 130v power allowing extremely high audio signals without adding any distortion.

**4041-T**
The 4041-T uses the MM P4000-T mic preamp module and incorporates a pentode vacuum tube driven as a cathode follower in a class A unity gain output stage. The high-quality subminiature vacuum tube is heated by the 6v supplied with the HM A4000 Mic Amplifier.
**UA0897 Shock Mount**

Ultra-compact, robust design significantly reduces the amount of vibration, that reaches the microphone without having adverse acoustical effects. Unlike other shock mounts, the vibration reduction is clearly specified. It can be used stand mounted in the studio, or in hand-held boom applications. Fitted with a thread adapter, which allows usage on up to three of the most popular international standard threads used on microphone stands.

**UA0836/UA0837 Stereo Booms**

The UA0836 and UA0837 are precision-crafted microphone booms for secure mounting of microphone pairs for A-B stereo recordings. They have adjustment possibilities for both mic spacing and angle. The boom can be mounted on a stand, or suspended from wires, and has centimeter graduations on the boom and angle graduations on the microphone holders for quick and easy configuration of the recording set-up. (The UA0836 includes microphone holders, the UA0837 does not). The stereo boom can be fitted with the DUA0019 19mm spacer, which allows you to assemble an XY stereo or ORTF stereo setup with any two 4000 series mics.

**UA0777 Nose Cone**

Designed for the 4003, 4006, 4051, 4052, and 4053 mics. The Nose Cone gives your mic a perfect omnidirectional response across the whole audio frequency range. It counteracts the directional characteristics that omnidirectional mics exhibit at higher frequencies, and guarantees an even tonal balance of sound arriving at all angles of incidence, but with a high-frequency boost on-axis. Especially suited for increasing the ambiance to your recordings, or for miking a variety of sound sources that are positioned around the microphone.

**Acoustic Pressure Equalizers (for 4003 and 4006)**

The 30mm sphere-shaped L30B gives a mild modification of the mic's on- and off-axis frequency responses, and a slight change in the direction-to-reverberation ratio. This gives recordings greater presence, nearness and clarity on-axis (especially around 4kHz). An on-axis boost, between 2 and 8kHz, and high-frequency roll-off off-axis, will sometimes help you capture the subtle audible details of both musical instruments and voices.

The L40B (40mm) offers a more noticeable on-axis boost between 2 and 8kHz, and a stronger off-axis attenuation than the L30B. This gives a marked increase in the directivity of your recordings (at 4kHz, the front-to-back sensitivity ratio is 8dB), and decreases the effects of reverberation and off-axis sources. Modify the spectral characteristic of a source by simply altering the angle of incidence to give a frequency boost, a flat response or an attenuation.

The L50B (50mm) offers a stronger on-axis boost and off-axis attenuation than the L30B and L40B. Its larger dimensions accentuate the on-axis boost at lower frequencies and allow off-axis sources to be strongly attenuated above 1kHz. This gives recordings a more intense sensation of source clarity and presence, a marked increase in brightness, and extend the effective reach of your mics.

The 110mm cylinder-shaped L110C creates two distinct directional responses - or a combination of both - depending on the position of the sound source. Vertically oriented, there is maximum attenuation between 150° and 250°; horizontally oriented, there is a stronger high-frequency roll-off in the entire rear hemisphere. Plus, a strong on-axis boost between 3 and 4kHz, and powerful attenuation off-axis, allows excellent highlighting and close-miking source-separation without the problems of proximity boost.

**UA0639 Mic Clip**

Of a traditional design, but with additional modifications, that ensure a tighter and firmer grip on the microphone, while still enabling it to be secured and removed repeatedly with ease. Ideal for 4000 Series Standard Mics. Thread adapter allows use on three of the most popular international standard threads used on mic stands.

**DUA0090 Pop-filter**

Designed for the everyday use in the recording studio where acoustic performance and mechanical reliability is of the utmost importance.

Elegant yet sturdy mechanical design allows a quick and easy positioning of the pop-screen in front of the mic. Thread adapter allows attachment to three of the most popular international standard threads used on mic stands. The (5.12-in) pop-screen does not attenuate the higher frequencies beyond the tolerance field of the microphone's frequency response and can be replaced with new filters if necessary. Can be used with any microphone.
**EARTH WORKS**

**QTC1**

**Omni-Directional Studio Microphone**

The QTC1 provides flat, extended frequency response, superb impulse response, very high sensitivity and that great Earthworks sound with lower self noise than other omni models. It is an extraordinarily accurate microphone, typically within ±0.5dB from 20Hz to 20kHz. More importantly, the QTC1’s impulse response is super clean. (Impulse information embedded within the tones of music is the detail needed to capture the experience of being there.) Clean impulse performance allows the QTC1 to transduce wave forms exactly. The QTC1 will provide a true and accurate representation of sonic events as they happened in the air, the experience of being there.

- The QTC1 is ideal for ambient miking and for quiet sources. It is also great for close miking.
- Capture the full size and natural texture of many difficult and complex sources.
- An excellent choice for all applications where natural, uncolored pick up of sound is the desired result.
- Excellent mic for Percussion, Piano, Guitar, Upright Bass, Strings, Vocals, Brass, Woodwinds, Location Recording of Classical, Jazz, Ethnic, Folk and Pop music. Also useful for Foley, ADR, sound effects and sampling.
- If you prefer transparency to coloration this is the microphone for you.

**TC30MK** **Omni-Directional Studio Microphone**

The TC30K is a cost effective general purpose omni which is accurate yet has a warm, life-like sound. It is optimized for fast, clean impulse response. Using a very small, very accurate omnidirectional capsule, a carefully crafted stainless steel body and innovative circuitry the TC30K delivers flat, Time Coherent response from 9Hz to 30kHz. It effortlessly handles explosive transients and simultaneously reveals subtle detail, delivering all of the sound as it happen in the air. By keeping time relationships coherent and transducing wave forms exactly, Earthworks TC30K accurately captures the experience of being there.

- The TC30K is superb for a surprising range of applications, capturing the full size and texture of many difficult sources ranging from moderate to extremely loud.
- Use for sources with significant impulse information, such as Percussion (Overheads, kick drum, hand drums, timbales & etc), Piano, Guitar (Acoustic and Electric), Upright Bass, Brass, Strings, recording live bands and many other applications. The TC30K is even useful for live sound in certain circumstances.
- The TC30K can be positioned very close to a source because it doesn't exhibit the bass proximity effect. This allows you to apply the inverse square law to great effect when isolation is desired and to capture the range of up close sounds which are simply unavailable to mics which get boomy when you get too close. And although it delivers startling bass performance there is almost no handling noise.

The TC30MK and QTC1 are both available as matched pairs. All Earthwork matched pairs include beautiful solid cherry boxes.
Earthworks Omnis are flat from well below 20Hz to well above 20kHz. However, flat and extended frequency response is not the sole reason for Earthworks great sound. It results from the speed and accuracy of Earthworks Time Coherent impulse response. Accuracy in the time domain allows you to capture the performance as it sounded in the room.

The QTC1 and TC30K are optimized to deliver time accurate performance, they don’t smear the time domain as much as most other microphones do. The impulse time settling time of 85 uses (TC30K) and 45 uses (QTC1) is faster than any other mic available. The QTC1 and TC30K are true and accurate but not in a cold, sterile way. They reveal all the warmth and texture of the source. They can be positioned close enough to a source to provide tremendous separation without boominess and to capture the incredible range of up close, detailed sounds which are simply unavailable to directional mics due to the bass proximity effect. And yet when used at a distance they capture the entire sound complete with a feel of being there. They also handle massive SPL (TC30K 150dB, QTC1 142dB), so it is unlikely that you will ever distort them even when close miking a kick drum. And despite having flat bass response to below 9Hz, Earthworks omnis have effectively no handling noise.

SRO Sound Reinforcement Omni
The SRO is a general purpose omni for live sound and recording. It handles huge SPL, has no proximity effect and no handling noise. It has fast clean impulse response and delivers accurate uncolored sound. Omnidirectional microphones are limited by feedback and leakage for many amplification applications. However, there are several types of applications for which they will deliver superior results.

For live sound try using the SRO to close mic loud stationary sources, like guitar amps, pianos and drums. Try it also for picking up on stage or room ambiance. This can be useful as a real world reference for in-ear monitors, as a reference for monitoring on-stage sound or to give the FOH (front of house) mixer a real world reference of what it sounds like in the room. An affordable SRO Box Set (not matched but close) is available for recording gigs and rehearsals as well as for general studio use.

The Earthworks Philosophy
Earthworks believes that there is more to human hearing than the range of frequencies which are heard as tones. Most recordings don’t live up to the sonic experience of being there with the live music. That is why Earthworks is convinced that audio equipment with extended frequency response and faster, cleaner time domain performance will yield more life-like results than with the slower more colored equipment of yesterday.

The time resolution of human hearing is 5 microseconds or better. This corresponds to frequencies beyond 80kHz. Most microphones smear frequencies in relation to time to such a degree that the relationships which existed in the air are audibly degraded. When you choose a microphone you get its time domain imprint on the track. Mics with poor time resolution will distort the signal beyond any practical recovery of the original.

Earthworks supports the concept that you can and should record acoustic events accurately enough to capture the sound as it happened in the room. This approach allows you to make your sonic coloration and texture choices later when you can consider them carefully and you still have recourse.

Traditional audio methodology is based on working around the limitations, personalities and quirks of the equipment—with Earthworks you never have to settle for less. That’s because Earthworks is dedicated to an audio nirvana they call ‘Perceptual Perfection.’
SR Series

Using carefully machined aircraft grade aluminum alloys plated with handsome hard coat finishes, the SR series mics are rugged and beautiful. They offer Earthworks being there quality in durable light-weight packages. They effortlessly handle high SPL transients while simultaneously revealing subtle details which lesser mics may miss. Bass response is flat at about 6-inches. Moving closer gives a little more warmth. They also have low handling noise. The cardioid models have an open easy to use pickup pattern with smooth uncolored rejection of off-axis arrivals. Every SR mic offers superb value and doubles for recording applications as well. Matched pairs of the SR77 and SR78 are available in a beautiful solid cherry box.

SR77
Precision Cardioid Studio Mic

The SR77 is a directional condenser microphone which delivers a natural, uncolored representation of the sound as it arrives at the front of the mic—maintains most of the being there quality of Earthwork’s omni microphones. On-axis performance is smooth and open. Its sonic timbre is uniform across its entire front hemisphere of pick up. On-axis, its frequency response is flat from 30Hz to 20kHz at 15cm; closer there is a little more bass, at ambient distances there is a little less. The SR77’s impulse response is fast and smooth. It can handle very hot signals. It has very low handling noise. The off-axis rejection is very thorough and uncolored.

The SR77 offers superior performance for a wide variety of applications, especially guitar, sax, flute, drums and voice. It is also rugged enough for high quality sound reinforcement (there are no peaks to encourage feedback and the rear rejection is unusually good), and powerful enough for broadcast and vocal production where its lifelike clarity and detail enhance communication through realism.

SR78
Precision Hypercardioid Studio Mic

An exceptionally directional condenser microphone, the SR78 delivers a natural uncolored representation of sounds as they arrive at the front of the mic. Its impulse response is fast and smooth so it maintains most of the being there quality of Earthwork omnis.

The SR78 cleanly picks up what it is aimed at while just as cleanly rejecting arrivals from off-axis. And yet, the sonic timbre is uniform across the entire frontal hemisphere. The SR78 effortlessly handles quite hot signals while simultaneously revealing subtle detail. In the studio or on stage the SR78 can pick a real acoustic instrument, like guitar, bass, sax, flute, drums or voice, out of an ensemble and still sound real. It is usable for any situation where you want natural uncolored sound but need supernatural rejection.

Concert tapers love the SR78 when they want to avoid bad sounding rooms. It is a powerful tool for broadcast and vocal production applications where its lifelike clarity and detail will enhance intelligibility and communications through realism.

Its light weight, low handling noise and awesome ratio of open on-axis pick up to uncolored off-axis rejection make it an excellent choice for boom work.

1021/1022/1024
Single-, Two- and Four-Channel Zero Distortion Technology (ZDT) Preamps

The 1021 (single channel), 1022 (dual channel) and 1024 (4-channel) have no whistles and bells and no hum or distortion either. They provide exceptionally accurate gain. In the time domain they are picture perfect. Their frequency response is flatter and more wideband than most people dream of. In the real world, what you can hear with your ears, they are perceptually perfect. The primary gain path (XLR input- stepped gain- XLR output) is entirely differential. The total distortion is unmeasurable by normal measurement equipment. They are cleaner than most wire, but they have gain. Lots of it!
SR69
Cardioid Mic for Stage and Studio

Specs alone don't convey the quality of this mic's sound. When you hear it you will understand. As a vocal microphone the SR69 is spectacular. It accurately captures voice with just a bit of bass warmth available if you need it but no presence peak. It offers clean easy to use on-axis pick up and uncolored off-axis rejection. It is well protected from all popping of P's and has low handling noise. It sounds great. As with other Earthworks mics you will need to use less EQ because what is there is all there and it is done right.

Superb performance makes the SR69 a good choice for many other live sound and studio applications as well. It covers a wide range of real acoustic sources, like choir, guitars, horns, flute and especially, drums and other percussion. The SR69 will cleanly handle kick drum. For hand drums alone every stage and every studio will benefit from using the SR69.

SR68
Hypercardioid Mic for Stage and Studio

As a vocal mic the SR68 provides an accurate representation of voice with excellent gain before feedback. It is lightweight and user friendly. It handles massive acoustic input levels and is well protected from popping Ps and wind noise. Up close the SR68 has punchy bottom end yet its handling noise is low. It is unsurpassed for choirs, as well as horns & woodwinds.

Removing the windscreen assembly reveals the SR68's alternate persona. The SR68 delivers the sound of any instrument with uncanny realism and separation. Frequency response chart shows that it has flatter response above 10kHz with the windscreen off. For acoustic guitar and other stringed instruments the SR68 sounds perfect at 6" yet rejects off-axis arrivals, especially bass. For drums the SR68 will spot a snare or high hat, kick drum or even overheads. It is also good for miking piano.
Gooseneck Mics for Podiums, Choirs and Instruments

Flex Series microphones offer the same great sound and open easy to use cardioid pickup as the SR69 and SR71 but with a range of quiet, flexible neck lengths. These allow real time and real world adjustment of microphone positioning. Earthworks Flex mics are intended for podium use, hanging choir mics and for reaching into hard to reach places such as drums and hammer dulcimers. Their on-axis sound quality is natural and uniform all the way out to 90° and yet arrivals from off-axis are rejected smoothly with very little coloration. This is a strong plus for church, civic and corporate podium vocal applications because an orator moving about in front of the mic will be picked up more evenly than with most microphones. The sound quality of the Flex mics is every bit as good as Earthworks’ other cardioids for applications ranging from acoustic guitar to choirs. The Flex mics will also cleanly handle very loud sources like drums and guitar amps. Flex mics are flat from 50Hz to 20kHz within ±2 dB at 6 inches. This level of accuracy is unusual in flexible microphones. The Flex mics facilitate intelligibility and communication through time accurate response. They are optimized for fast clean impulse response. This results in uncolored sound because the relationships between frequency and time are less smeared than with normal mics. They sound true to life and are user friendly.

M 720
The extra long M 720 is the best hanging choir mic. It can also be used to pick up a group of mixed musicians with minimal visibility. Its flexible neck allows it to stand cobra-like on a desk top without a stand. For extra flexible reach the FM 720 is superb.

FM 500
Half a meter is just the right length for most podium and church applications. The FM 500’s swan-like neck can be adjusted with very little handling noise and it will stay where you put it. It is a good size to position unobtrusively into an instrumental ensemble or in front of a choir for sound reinforcement or recording.

FM 360
Don’t let its diminutive size fool you. The FM 360 is the Napoleon of the bunch. It is powerfully equipped to totally dominate in situations which require a very low profile in order to get it right in tight places. The FM 360 will effortlessly handle applications ranging from tall podiums for short people to piano, drums and guitar amplifiers.

SIGMA 6.2
40kHz Time Coherent Reference Monitors

Available in black or cherry, Earthwork’s Sigma 6.2 system provides a reality check, delivering precision, time accurate soundfield reproduction. Accurate in time and frequency, their near perfect performance lets you hear all of the detail in your recordings. Their sonic accuracy is beyond question, the frequency response is flat and wideband, impulse response is fast and well behaved, and their step function chart looks like the theoretical text book ideal. The impedance vs. frequency chart shows them to have remarkably stable impedance which means the Sigma 6.2 is less subject to differences in amplifier quality. Imaging is pristine. Their front to back depth of image is unparalleled. The way they sit in the room is more natural and less problematic than most loudspeaker boxes because care has been taken to avoid putting acoustic energy into the air beside and behind the cabinet. Their unique port design provides accurate bass reproduction and doubles as a convenient handle. The low frequencies are put into the room in the correct relationship to the rest of the signal. In conjunction with Earthworks microphones and preamps you will be able to hear the sound of the source through the loud-speaker for the very first time. The only way to hear it with better clarity is to be there when it is recorded.
Earthworks has become the standard for affordable, reliable reference microphones. These mics are accurate in the time domain as well as in frequency. Most microphones smear time information to such a degree that the relationships which existed in the air are degraded beyond any practical recovery of the original. Earthworks measurement mics are optimized for fast clean impulse performance. Having such fast impulse response dictates that these mics must have accurate wideband frequency response. For measurement the M 30 is a very cost effective reference for SMAART, MLSSA, TEF, RTA and all audio band measurements. It has very clean and fast impulse response. Typically the M 30 is within 1dB from 20Hz to 20kHz. The M 550 is astonishingly accurate over an even wider frequency range.

**M30**

The M 30 is a very accurate microphone. It utilizes a very small, very accurate omni directional capsule, a carefully crafted stainless steel body and innovative circuitry to deliver time coherent response from 9Hz to 30kHz. 20 to 20kHz is not enough! This extended frequency response is essential for capturing sonic events accurately. In terms of the standard audio range the M 30 is typically well within 1dB from 20Hz to 20kHz.

Operating the M 30 is extremely simple. Using a good quality standard XLR mic cable connect the M 30 to an active electronic microphone preamp which provides 48 volt phantom power with at least 10mA of current available. Adjust the preamp gain to the level required for your test equipment. The M 30 has extremely low handling noise and does not require a shock mount. All windscreens effect the higher frequency performance, so they are to be avoided. When needed, a small ball type intended for a 1/4˝ lavalier will do the job.

**M30BX**

The M 30BX delivers the same calibrated 30kHz performance as the M 30 reference mic—without the need for phantom power. It is powered by a single AA cell which will last 1,500 hours. An internal switch allows14dB of gain. If your sound card has any gain at all, and the sound level is even moderately loud, the output of the M 30BX will be enough that you won't need an external preamp. The M 30BX is a handy and powerful tool for laboratory, field and production measurements. It also sounds great for recording.

**M550**

Extraordinary impulse response. 30mV/Pa sensitivity. 4 Hz to 40 kHz ±1 dB, to 50 kHz +1/-3db. Laboratory grade accuracy for research beyond the brick wall. Omnidirectional. 48 volt phantom power.
**Vocal and Instrument Microphones**

15 years ago EV started a revolution in mic technology when they introduced a radical neodymium-based magnet structure to microphone design. For the first time, engineers, musicians and audio professionals had available to them mics with extended frequency response and increased power input, at very affordable prices. Now EV continues the revolution with VOB (“vocally optimized bass”) technology. This cutting-edge innovation provides the performer with reduced resonant distortion at low frequencies. In other words, it efficiently controls the “proximity effect,” or bass boost you hear in close-up microphone use, which tends to create “boomy” or “muddy” vocals, and replaces it with greater warmth and increased vocal clarity. The increased clarity permits greater working distances and ensures a clean, clear consistent sound that “cuts through the mix.”

**N/ D167**

*Handheld Vocal Microphone*

Your entry into the world of high-performance N/DYM microphones, the N/D167’s innovative design harnesses the increased power of a neodymium based magnet design, allowing for dynamic, efficient microphone performance. With the power and clarity to “cut through the mix”, the N/D167’s acoustic response offers optimal performance in a live sound environment.

- Close proximity frequency response of 50Hz to 12kHz with a far range response of 100Hz to 12kHz
- Cardioid pattern for superior feedback rejection and acoustic isolation
- Neodymium-based magnet structure provides greater sensitivity and S/N ratio
- Comes complete with a stand adapter, zippered gig bag and EV’s exclusive Warm Grip handle a for more comfortable feel

**N/ D267a and N/ D267as**

*Handheld Vocal Microphones*

Designed for live performances, the N/D267a and N/D267 are equipped with a controlled proximity effect that eliminates the boomy effects found in typical vocal microphones. Provides superior vocal clarity across all frequencies and in any environment. Also available in a switchable version (N/D267as).

- Close proximity frequency response is 45Hz to 12kHz with a far response of 100Hz to 12kHz
- VOB technology provides tailored bass response for controlled “proximity effect” and exceptional vocal clarity
- Cardioid pattern for superior feedback rejection and acoustic isolation. Has an integral microphone element shock mount.
- Neodymium based magnet structure provides greater sensitivity and signal-to-noise ratio
- Comes complete with a stand adapter, zippered gig bag and EV’s exclusive Warm Grip handle a for more comfortable feel.
- N/D267a and N/D267as are the same except the latter features an On/Off switch

**N/ D767a**

*Dynamic Vocal Microphone*

The mic of choice among singers and engineers for concert and touring sound environments, the N/D767a provides outstanding vocal clarity in any application. VOB design provides the N/D767a with a tailored bass response for proximity control and excellent gain-before-feedback while supercardioid polar pattern provides superior feedback rejection and acoustic isolation. The mic also features multistage shock mounting for extremely low handling noise.

- Neodymium based magnet structure provides greater sensitivity and S/N ratio
- VOB technology provides tailored bass response for controlled “proximity effect” and exceptional vocal clarity
- Supercardioid pattern for superior feedback rejection and acoustic isolation
- Close frequency response is 25Hz to 22kHz, far response is 50Hz to 22kHz
- Multistage shock mount for unmatched low-handling noise
- Warm Grip handle for comfortable feel and lower handling noise
- Includes stand adapter and gig bag

---

**ONE HOUR FREE PARKING**

AT 349 W. 34th STREET (with purchase of '100 or more)
N/D468 Instrument Microphone

Designed for miking horns, drums, and acoustic and electric guitar, the N/D468’s unique pivoting head insures perfect placement providing smooth, natural sound while capturing the inherent sonic excitement produced by any instrument. Supercardioid pattern provides superior rejection and acoustic isolation in any application. Innovative EV design harnesses the increased power of a neodymium based magnet design, allowing a large-diameter voice coil (up to 50% larger than other mics) for dynamic, efficient microphone performance.

N/DYM offers the power and clarity to “cut through the mix.” Whatever your instrument application the N/D468 will be a top performer.

- Provides a smooth frequency response independent of proximity. Easily withstands the high sound pressure levels and sharp transients generated by the close miking of musical instruments
- Supercardioid pattern for exceptional acoustic isolation and feedback rejection
- Close range frequency response is 30Hz to 22kHz, far range is 60Hz to 22kHz
- Flexible mechanical design for optimum positioning. Rugged steel construction for exceptional durability
- Includes stand adapter and gig bag

N/D478 Instrument Microphone

The N/D478 is a high performance instrument microphone that offers outstanding vocal performance as well. Designed for miking of acoustical and electric instruments as well as vocals, the N/D478’s acoustic response presents optimal performance in both a live sound or studio environment. A “must have” in any microphone mix.

- Neodymium based magnet provides greater sensitivity and signal to noise ratio
- Cardioid pattern for superior feedback rejection and acoustic isolation
- VOB technology provides tailored bass response for controlled “proximity effect” and exceptional sound clarity
- Warm Grip handle for comfortable feel and lower handling noise
- Includes stand adapter and gig bag

N/D868 Kick Drum/Bass Drum Microphone

The N/D868 is truly a top performer in any application. Whether in a live sound or studio environment, the N/D868 is able to handle incredibly high sound pressure levels without distortion or overriding the input mixer. With a response specifically designed to “kick” the N/D868 can be used as “as is”—no additional EQ required.

- Designed specifically for kick drum applications in live or studio environments, sensitivity is optimized for the high sound pressure levels found in bass drum miking
- No additional EQ required
- Frequency response is 20Hz to 10kHz
- Rugged steel construction for exceptional durability
- Includes stand adapter and gig bag

Professional Vocal and Instrument Mics

Designed for the working musician, the Cobalt series sets the standard for performance and value. A perfect blend of aesthetics, high performance, and durability, Cobalt mics offer excellent vocal intelligibility, EV’s radical neodymium-based magnet structure, exceptional feedback rejection at high SPLs, low handling noise, extended frequency, and controlled proximity effect—professional-quality performance at a price that working musicians can afford. Whether you’re a lead vocalist or miking an antique dobro, a vintage guitar amp, brass or percussion, Cobalt mics keep your tone “intact.” Additionally, each includes a rugged carrying case and gig bag—perfect for the rigors of the road.

Co4 Instrument Mic

The Co4 yields outstanding performance when miking acoustic and electric instruments, as well as vocals. It uses a dynamic neodymium element with a cardioid pattern (excellent for stage or studio) providing a frequency response of 50Hz – 18kHz. The Co4 also features a unique “floating head” construction. The mic capsule is encased in a die cast zinc inner housing that is shock mounted inside an outer zinc housing. This gives it tremendous durability combined with superb shock isolation. Yet, the Co4 maintains a small profile that makes it perfect for tight miking applications. Excellent for stage or studio, the Co4’s versatility make it a “must have” in any mic mix.

Co5 Classic Vocal Microphone

Designed for the performer who prefers a careful balance of highs, midrange, and bass, the Co5 offers exceptional vocal intelligibility with controlled proximity effect. Got the blues? Pull out your harp. With the Co5 you get clarity and power—when you want it. Dynamic cardioid mic with a neodymium magnet structure and a frequency response of 50Hz - 18kHz.

Co7 Crossroad Vocal Mic

The perfect choice for the performer who wants hassle-free sound—whether on tour or getting serious in the studio, the Co7 performs without the feedback problems of competitive models. Built to the same standards as EV’s N/DYM microphones, the Co7’s low handling noise and versatility make it perfectly suited for critical acoustic settings as well. Features include a dynamic neodymium element, cardioid pattern for superior feedback rejection and a frequency response of 50Hz -18kHz.

Co9 Premium Vocal Mic

A favorite among vocalists across musical genres. A slight bass roll-off and accentuated mid range make this a superb, world-class sound transducer. Features a dynamic neodymium element, cardioid pattern, and a frequency response of 50Hz -18kHz.

Co11 Condenser Vocal Mic

A high quality handheld condenser microphone with extended frequency response and wide dynamic range, the Co11 is ideal for anyone that appreciates the crisp high end and warm proximity effect that comes from a top condenser mic. Features a high compliance shock mount that makes handling noise “go away”, and comes in a rugged die cast housing with the famous EV Memraflex dent resistant grille screen.

635A Dynamic Omnidirectional ENG/EFP Mic

Probably the most popular and well-known ENG/EFP microphone in the world, the 635A has survived being dropped, run over, thrown and even being shot while on location for film, TV and radio remotes. The 635A's uniform frequency response (80Hz-13kHz) is specially shaped for up-close vocals. Also available in black (635A/B) and with a Neodymium element (635N/D-B).

- Low-battery LED indicator
- 50Hz to 20kHz on-axis frequency response that reduces handling noise
- Balanced XLR connector
- Supplied with windscreen and pouch

635A • 635A/B
- Completely pop-free performance
- Four-stage pop and dust filter
- Internal effective shock absorber
- Includes stand adapter

635N/D-B
- N/DYM element offers higher output
- Acoustalloy diaphragm material for very smooth response over a wide frequency range
- Integral windscreen and blast filter

RE50/B • RE50N/D Omnidirectional Dynamic Mics

The RE50/B and RE50N/D are specially shock-isolated, omnidirectional, dynamic microphones created for the most exacting professional applications. Incorporating advanced shock-mounting techniques, they are designed particularly for hand-held broadcast and sound reinforcement use. Handling and clothing noise, even cord shock are isolated from the mic element so that mechanical induced noise is greatly reduced.

- No muddy lows when used near lips
- Acoustalloy diaphragm material for very smooth response over a wide frequency range
- Dyna-Damp for extremely effective handling noise isolation
- Four-stage pop filter prevents dust and magnetic particles from reaching the diaphragm
- RE50/B's attractive, non-reflecting, semi-gloss black finish is ideal for on-camera use
- Integral windscreen and blast filter provides excellent protection from wind noise, excessive sibilance, and "popping"
- They include a stand adapter, vinyl carrying pouch and hard shell case

ENG-618 Integrated Boom Pole/Shotgun Mic

Integrating a shotgun microphone and a boom pole with built-in headphone amplifier, the ENG-618 is ideal for ENG work. It features a perfectly balanced, ergonomically designed graphite fiber K-Tek boom pole that provides great strength with minimum weight and a permanently attached back electret shotgun microphone with superior selective pickup performance. The six foot boom pole and microphone collapses to a mere 18” for easy transport.

- Hypercardioid-line (shotgun), back electret condenser microphone
- 200 Hz roll-off circuit lets you precisely tailor the sound quality
- Finely crafted, high-density K-Tek graphite fiber boom-pole with a burnished finish
- Low-battery LED indicator
- 50Hz to 20kHz z on-axis frequency response that reduces handling noise
- Balanced XLR connector
- Supplied with windscreen and pouch
- Powered by external 12-52v phantom power or by the 9v internal battery that is used to power the headphone amplifier
RE20 and RE27N/D Dynamic Cardioid Microphones

The RE20 and RE27N/D are professional-quality dynamic microphones designed for broadcast, high-quality recording, and sound reinforcement applications. Exceptional sensitivity and wide frequency response, coupled with excellent transient response and inherently low noise of the dynamic transducer, all combine to ensure a superior S/N ratio—comparable to the finest condenser cardioid microphones. Plus they incorporate EV’s Continuously Variable-D design making them virtually free of the “proximity effect” when used close. True cardioid mics, they offer the greatest rejection at 180° off axis—directly to the rear of the microphone.

- Directional control is so effective that the frequency response is nearly independent of angular location of sound source, creating virtually no off-axis coloration yet providing greatest possible rejection of unwanted sounds.
- An integral blast and wind filter covers each acoustic opening on the mics. In the studio or on stage, singers can “close talk” the microphone, singing with their lips almost touching the grille screen with no worry of “P-pop,” breath sounds or excessive sibilance.
- Part of the filter also shock mounts the internal mic element, reducing vibrations. This, along with a rugged exterior steel casing allows them to withstand all the rigors of professional use.
- The RE20 has a “bass tilt down” switch, while the RE27N/D has two bass rolloff switches (sharp low-frequency cut at 200 Hz or a gentle rolloff) for situations where bass attenuation is required. A third switch is available for reducing the high-frequency treble boost.
- Physically identical, the RE27N/D steps up with a neodymium alloy magnet and a reinforced diaphragm dome to offer increased sensitivity (up to 6 dB more output), undistorted output at high SPLs nd an extended high-frequency response. To further reduce noise, a highly effective hum-bucking coil is used to attenuate hum from lighting and other sources.

The RE Series is the first choice of microphones for smooth and accurate sound reproduction. Its unique and famous performance make it a favorite in the broadcast, studio and professional touring business. RE20 and RE27N/D incorporated EV’s Variable-D design to ensure true and accurate response across all frequencies without the upclose boominess associated with proximity effect. As a result, they have become the industry standard for radio studios worldwide. And when it comes to studio recording or concerts, the RE20, RE200, RE510 and RE1000 condenser mics provide you with the tools you need to get the sound you’re after when recording vocals, guitars, drums or brass.

RE16 Dynamic Supercardioid Mic

The RE16 is designed for professionals who need an exceptional super-cardioid mic for ENG interviews, voice-overs and music production recording. It has an excellent, built-in heavy duty pop/blast filter, switchable bass roll-off, hum-bucking coil and a Memraflex grille screen that retains its shape if dropped.

- Utilizing the Variable-D design the RE16 features a directional characteristic independent of frequency. The result is a mic that generates little off-axis coloration while providing the greatest rejection of unwanted sounds.
- Transducer is a nearly solid mechanical structure that is highly resistant to damage from mechanical shock.
- Blast filter permits hand-held and out-door use without “P-popping” or excessive wind noise.
- Easily operated “bass-tilt” switch corrects spectrum balance for boom use and other longer reach situations.
- Humbuck coil and screw-machined steel outer casing provide 25 dB of hum rejection.
- Memraflex grille screen and carefully designed steel outer case provide additional protection. Finish is non-reflecting fawn beige micromatte.
RE200 Condenser Instrument Mic

The RE200 is a cardioid condenser instrument microphone designed for the exacting acoustic reproduction of choirs, strings, percussion and brass instruments in live performance and sound recordings. It is designed to be used in professional remote recordings, sound reinforcement systems, sound studios and motion picture/TV scoring stages. The RE200’s frequency response has a continuous presence rise to enhance the sound quality. The excellent transient response and smooth frequency response is gently lifted above 1000 Hz, lending an open, transparent detail to the recorded sound.

- Ultra-thin, gold-laminated, and ultra-low mass diaphragm
- AcoustiDYM shock-mount system for mechanical isolation
- Runs on 12-52v DC phantom power
- Includes stand adapter and external foam windscreen
- Small, light and rugged, it can be used for variety of applications without being obtrusive.

RE510 Hand Held Condenser Microphone

The RE510 is a professional quality hand-held condenser microphone designed especially for vocalists. It features a 5/8” diameter capsule, advanced electronic design, and, best of all, a sound that will enhance any vocal performance. The high frequency response provides just the right amount of definition and “air” without the stridency so common in other condenser vocal microphones. The wide bandwidth, high SPL handling capability, and low frequency selector switch of the RE510 also make it a versatile instrument microphone for most any application.

- 5/8” diameter self biased condenser capsule offers the warmth of a larger capsule design without sacrificing off-axis performance or transient response.
- Warm Grip handle for more comfortable feel.
- Low-frequency roll-off switch enables tailoring of low-frequency response
- Supercardioid polar pattern for superior feedback rejection and acoustic isolation.
- Multistage pop filter eliminates breath pop noises
- Modern high-speed electronic design for extremely low distortion, and outstanding transient response.
- High current differential output stage can drive long microphone cables without loss of performance.

RE1000 Supercardioid Condenser Microphone

A condenser studio microphone, the RE1000 provides flat frequency response, low self-noise and an externally biased transducer. It is designed with rugged and reliable EV durability while providing excellent performance. Designed for high-quality recording and sound reinforcement, the combination of very low self-noise, excellent transient response and smooth frequency response makes the RE1000 an ideal choice for use in the most demanding of situations.

- Transducer is a short-D, high-efficiency unit, with the high output level of a large diaphragm and the tighter polar pattern and better transient response of a smaller diaphragm.
- The diaphragm itself is an ultra-thin, gold-laminate, environmentally stabilized, low-mass design.
- 12dB-per-octave low-frequency roll-off at 130 Hz
- The output electronics provide no voltage gain to ensure the lowest self-noise.
- Includes a hard-shell case for storage and transport.
- Internal two-stage pop filter reduces explosive breath blasts and wind noise.
Using an EV RE90 Series architectural microphone is easy and enjoyable for everyone. The presenter will sound his or her natural best, without fear of feedback, cut-out, noise or distortion – or of sounding like a different person when switching microphones. These miniature electret condenser microphones are available in podium, hanging, lapel and boundary models. Fixed. Portable. Omnidirectional. Unidirectional. An EV family of microphones suitable for many applications and venues. Each with the same great sensitivity to sound pick-up and a remarkable clarity and consistency. Even when shifting from one RE90 to another — they have the same frequency response characteristics. No need to remix. It’s all in the family. But there is more. Streamlined, they blend seamlessly into the architecture. For easy installation and use, the power module is integrated within each microphone — no need to install a separate unit. Yet, the lapel mic is smaller, the hanging mics more shapely, the podium mics more slender, and the boundary mics lower in profile, than others on the market.

**Microphones**

**RE90P-12/RE90P-18**

**Unidirectional Podium Microphone**

Acoustically designed for high-quality sound reinforcement and public address applications, this slim-profile podium microphone picks up and reproduces sound naturally for either distant or close-up delivery. The gooseneck, 12” (RE90P-12) or 18” (RE90P-18), can be precisely positioned without excessive twisting and turning. Small in diameter, it has two supple joints and a rigid center tube. The electronics module is housed in the gooseneck base, which makes installation and service quick and easy. The RE90P mounts to a lectern, pulpit, or podium equipped with the proper receptacle. Or install with the optional flange-mount and shock-mount kits. Unobtrusive, however it is used.

- Small, streamlined appearance
- Quick-connect to female XLR-type, 3-pin receptacle
- Permanent installation with optional FMK flange-mount kit and CPSM shock-mount kit
- Choice of 12” or 18” gooseneck
- Microphone can be exactly positioned without unsightly twisting and turning
- Uniform cardioid polar pattern
- Steel construction reduces noise from magnetic field and RFI

**RE90P-12** 12” gooseneck **RE90P-18** 18” gooseneck

**RE90H/RE90HW**

**Unidirectional Hanging Microphone**

Ideal for choir, instrumental and vocal groups, and live theatre, this hanging microphone is so sensitive it catches the smallest sigh, the softest note. So faithful to the performance so natural in delivery, everyone in the audience can hear every word, experience every nuance. It’s ideally suited for distant sound pick-up, with a precisely controlled polar response designed to suppress feedback without coloring the sound. The RE90H/RE90HW features an exclusive braided, shielded cable which prevents the microphone from rotating, keeping it firmly in place, even with wide swings in temperature or humidity. There’s no need for awkward “fish-line” tethering.

- Non-reflecting black (RE90H) or low-gloss white (RE90HW) with matching cable
- Shielded pre-amp is highly-resistant to electrical noise and radio frequency interference
- High gain electronics for added reach
- 25’ braided, shielded cable maintains microphone’s position (no rotation)
- Cardioid polar pattern
- Three-pin male XLR-type output connector

**RE90H** non-reflecting black **RE90HW** low-gloss white
RE90B/RE90BW
Boundary Microphone

With the lowest profile of any boundary microphone, the RE90B/RE90BW is one of the smallest available. Unidirectional, it picks up every word and delivers it fully and naturally, without the distraction of ambient noise.

The RE90B is specifically designed for surface-mounted applications such as distance learning centers, video- or teleconferencing systems, classrooms, and houses of worship. It can be placed on a surface for temporary use, routing its miniature cable from the rear where it's barely visible. Or installed permanently, with the hidden cable routed through a hole in the surface.

The mic is equipped with internal padding, printed circuit board, fiber washers for the mounting screws, and a rubber, non-slip pad covering the entire base. These elements combine to give you the advantage of extremely low surface-to-microphone vibration. And built-in equalization provides a fuller, more natural sound than other typical boundary microphones.

- Non-reflecting black (RE90B) or low gloss white (RE90BW)
- Heavy-duty zinc die-cast body and strong, perforated steel screen
- Low profile • Half-cardioid polar response promotes excellent gain

POLARCHOICE

The first podium microphone with four polar patterns, the PolarChoice gives you unprecedented performance and flexibility. It's like four microphones in one!

PolarChoice offers the option of four different pickup patterns, allowing the selection of the best pattern for the application. The ability to conveniently select from omnidirectional, cardioid, supercardioid or hypercardioid assures the maximum protection against system feedback and ambient background noise. No need to inventory single-pattern microphones or expensive interchangeable heads. Just select the pattern that fits your needs with a convenient and easy turn of a rotary switch.

PolarChoice microphones feature EV's exclusive dual-mounted condenser transducer and sophisticated electronics to ensure that regardless of the pattern selected, the response will remain smooth, accurate and uniform. The use of EV's patented triple-layer Acoustifoam windscreen minimizes the level of annoying "P pops" commonly associated with other podium microphones.

Whether your requirement is for houses of worship, hotels, meeting rooms, or other multipurpose facilities where exceptional sound quality and unmatched flexibility are critical, the first choice is PolarChoice.

**All-in-One Podium Microphone**
Cardioid Vacuum Tube Studio Microphone

Introduced three years ago, the M 147 Tube is an affordable top-of-the-line studio cardioid microphone designed for project, home, and professional recording studios. At the heart of the M 147 is the K 47 capsule—made famous over 50 years ago in the legendary U 47 microphone and then later by the U 47 FET. Employing the K 47 pressure-gradient capsule ensures that the M 147 delivers the same warmth and clarity produced by its legendary predecessors.

Exceeding traditional designs, Neumann uses a modern tube complemented by a transformerless output circuit. This innovative combination of current tube technology with the most advanced solid-state circuitry results in a more controlled, uncolored audio signal from capsule to output. Bass response extends quite low while avoiding phase problems or low level signal losses typical of transformers. Similar to all Neumann mics, the response characteristics are achieved acoustically. The mic also maintains excellent impulse response and faithfully reproduces transient signals found in music and speech.

The M 147 has a fixed cardioid pattern that becomes more directional as frequency increases—giving the microphone more of a supercardioid pattern in the high frequency range. The M 147 also features extremely low self noise for a tube microphone (12 dB-A) and handles high pressure acoustic signals up to 134 dB SPL without distortion. An excellent microphone for acoustic guitar or bass, horns, instrument amps, and any kind of vocals, the M 147 like all Neumann tube mics, comes with an elegant satin nickel finish.

**FEATURES**

**Polar Pattern**
- The M 147 has a cardioid characteristic, leaning more toward super-cardioid due to its distinctive capsule design. At higher frequencies the pattern becomes more directional. This is very similar to the U 47 and U 47 FET.

**Acoustic Features**
- The M 147 is addressed from the side where the body has the diamond-shaped Neumann logo. The black color identifies tube mics.
- The K 47 capsule (equivalent to the one in the U 47) is the deciding factor in determining the sound characteristic. The M 147 is flat from 60Hz to 2 kHz. It has a small, wide 1 dB peak from 3 to 5 kHz, and a 2dB peak at about 10 kHz.
- Reproduces extremely low frequency signals without distortion.
- Headgrille design protects the capsule effectively against popping and wind noise.
- Capsule and the entire circuitry are shock mounted to prevent structure-borne noise.

**Common Applications**
- Use as announcer’s mic for broadcasting and voice overs or as a vocalist mic where its warm and yet transparent sound gives volume and presence. Use as a spot mic for close miking of solo instruments especially strings, wind instruments, and piano.

**Electronics**
- Compared to other tube mics the M 147 is distinguished by its extremely low self-noise level of only 12 dB-A / 24 dB CCIR weighted.
- Combines a specifically selected vacuum tube (triode) with modern circuitry. This technique takes full advantage of the special transfer characteristics of the tube and passes the processed audio signal of the capsule to the microphone output, without any coloration or unwanted side effects.
- The tube amplifies the capsule’s signal by approximately 10 dB, thus preventing any possible influences from subsequent electronics. The M 147 delivers a high output voltage, and can feed mic cables up to 300m without signal degradation.

**N 149 A Power Supply**
- To maintain optimum anode current and heater voltage for the tube regardless of cable length, a built-in sensor lead monitors voltage levels. If it detects any voltage drop at the heater, the N 149 A power supply compensates for the difference. The N 149 A also employs a slow start-up to maximize the life of the tube.

**Supplied Accessories**
- Includes N 149 A universal AC power supply (100-240v, 50-60 Hz) and 30-ft. cable, SG-1 metal swivel stand adapter, and attractive aluminum case.

**Optional Accessories**
- To reject unwanted low-frequency interference from structure-borne or wind noise the invincible EA 1 elastic suspension and the WS 87 windscreen are available as optional accessories.
- For close miking of vocals the optional PS 30 pop screen is also available.
Multi-Pattern Tube Studio Microphone

Like the M 147 Tube, the M 149 Tube is the perfect combination of vintage sound and modern technology. A transformerless tube microphone optimized to have the sound "character" of the classic U 47 and the multi-pattern capability of the M 49 microphones, the M 149 gives you the unmistakable tube warmth that audiences love, while at the same time delivering the clarity and precision of a modern capsule. The ideal choice for a wide range of recording situations, the M 149 has nine polar patterns to choose from as well as a seven-position high-pass filter.

### Polar Patterns
- Easily switch between 9 directional patterns: Omnidirectional, wide-angle cardioid, cardioid, hypercardioid, figure-8, and one additional intermediate pattern between each major position.

### Acoustic Features
- The M 149 is addressed from the front, marked with the Neumann logo.
- Large headgrille surrounds the capsule. Acoustically very open, it therefore increases the sonic realism. In addition, the wedge-shaped grille reduces internal reflections.
- The M 149 is distinguished by its extremely low self-noise level of only 13 dB-A / 28 dB CCIR weighted (in cardioid).

### Filter
- Seven-position slide switch on the back of the mic selects a high-pass filter, advancing in half-octave steps between 20 Hz and 160 Hz (-3dB). This filter suppresses rumble from air-conditioning and is an effective tool to control proximity effect when the mic is used up close.

### Applications
- With nine polar patterns to choose from, this mic is ideal for a wide range of recording situations. As its ancestors, the M 149 Tube is superb as a vocalist microphone, for piano, strings and orchestral recording.

### Supplied Accessories
- Includes N 149 universal AC power supply (100-240v, 50-60 Hz), EA 170 elastic suspension, dust cover, and a wooden box for protecting and storing the mic safely. Optional PS30 pop screen is available when close miking vocals.

---

### 75 Years of Microphone Greatness

It all began in 1928, when George Neumann split with Eugen Reiz, with whom he had collaborated to design the historic "Reisz Microphone", and founded his own firm, George Neumann & Co., in Berlin, Germany. That year saw the company's first product, and what is now recognized as the first commercial condenser microphone: the CMV3. With its omni capsule (and later with directional capsules) and innovated tube amplifier, this groundbreaking mic is known as the "Neumann Bottle" and is still today sought after for its sound.

In the late 1940s, Neumann began the period in which it would become known the world over for making the benchmark recording studio mic. The long reign of the ribbon microphone came to an end with the widespread acceptance of Neumann's U 47, introduced in 1949. This mic was the first with variable polar patterns (omni and cardioid) and has remained one of the most famous microphones ever produced. In fact, the majority of the Beatles vocals were recorded with the U 47.

Other legends from Neumann's great history include the M 49 and its omni relative, the M 50, both introduced in the early 1950s. Like the U 47, the M 49 used the M 7 capsule, while the M 50 used a unique pressure transducer with a pure metal membrane. Practically all "Decca Tree" orchestra recordings from the 1950s to the present rely on the M 50 or its new version, the M 150 Tube, for their unique polar and frequency response.

Neumann's small diaphragm mics have earned their keep in innumerable studios for their clear sound, excellent off-axis characteristics, and tremendous value. The KM 54, introduced as a small microphone for television and broadcast use in the mid 1950s, remains in service today as a premier mic for acoustic instruments. The KM 84, introduced in 1966 as the first phantom 48V powered condenser mic, was an enormously popular mic right up through its discontinuation in 1988 and is already considered a "classic". Today, scarcely a studio would consider itself serious without at least one Neumann mic on hand, often the U 87, which was introduced in its original form in 1967. The current product line, including such microphones as the M 149 Tube, TLM 103, KM 5 105 and KM 184, pays homage to the company's rich history while pushing the limits of what is possible in microphone design and application.
Omnidirectional Tube Studio Microphone

Since the 1950s, the Neumann M 50 has been heralded as the ideal microphone for orchestral recording and string scoring. With its phenomenal transient response and unique directional characteristic, this classic mic has endeared many fans, both in the control room and on the soundstage. Now using modern materials and technology, Neumann has recreated the beauty of the vintage M 50.

The M 150 Tube delivers the same unique omni-directional characteristics—however, that's where the similarity ends. With low self-noise, a Titanium membrane and capsule, transformerless tube amplifier and sophisticated power supply, the M 150 Tube is not a re-issue but an entirely new microphone in its own right. Destined to join the ranks of Neumann's classic microphones, the M 150 Tube is also excellent for full-bodied vocals and ensemble stereo recording. Ideal for any stereo, 5.1 or 7.1 surround recording, particularly DECCA Tree technique.

- Much lauded for its desirable mechanical characteristics, titanium was, until recently, difficult to machine as well as to obtain the quality necessary for use in microphones. Now with the necessary materials at hand, Neumann is using this lightweight element for the M 150's thin, 12mm capsule to deliver low self noise, a smooth extended frequency response, and unprecedented transient response.
- The headgrill is formed just like the original M 50, and the capsule mounting employs the same 40mm sphere that rendered the M 50's famous pick-up pattern: circular at low frequencies and increasingly narrow up the spectrum. This means, at the lowest frequencies, the system is a pure omni pressure transducer with a perfectly circular polar pattern. But in the mid- and upper frequencies, pickup becomes more narrow.
- Wide 119 dB dynamic range allows reproduction of the full musical expression, without restraint. Self noise is low, only 15 dB-A so more gain can be used without risk of adding noise to the final product.
- The transformerless output circuit of this microphone allows for extremely fine reproduction of small signals and low frequency information. Also, long cable runs can be used with no loss of signal quality.

“Decca Tree” Recording

The specialized Decca Tree configuration is characterized by having three omnidirectional microphones in a “T” shaped setup. Two of the microphones are positioned about two meters apart. The third microphone is positioned between the first two, but about 1.5 meters forward (closer to the source) of them. This configuration is often used for orchestral recordings and film scoring due to its natural sound with good separation. It is useful in film because the image doesn't usually cause problems with Dolby or other surround processes. In most cases a trio of Neumann M50 microphones (or now, the new M 150 Tube) are used due to their unique directional and frequency response characteristics and smooth sound.

**Large Diaphragm Microphone**

With a universal cardioid pattern, straightforward handling, extremely low self-noise level, and an affordable price, the large diaphragm TLM 103 is designed for applications that require the utmost in sound quality—but on a limited budget. Utilizing the tried and true transformerless circuit found in numerous Neumann microphones, the TLM 103 achieves incredibly low self-noise and the highest sound pressure level transmission. The K 103 capsule, derived from the used in the U 87, has a cardioid pattern, is acoustically well-balanced and provides extraordinary attenuation of signals from the rear. The TLM 103 is available in satin nickel and matte black. Includes an SG 1 metal swivel mount and a wooden jeweler’s box.

**FEATURES**

**Polar Pattern**
- Equipped with a large diaphragm capsule with cardioid pattern. By focusing on this pattern – used in most recording situations – the attenuation of unwanted rear sound is optimized. Off-axis sounds are rendered naturally while isolation is increased. This also leads to a high feedback suppression when the mic is used in live situations or where loud-speaker playback is a factor.

**Electronics**
- Just 7 dB-A / 17.5 dB CCIR self-noise level allows even the smallest signals to be reproduced noise-free. And with SPL capability up to 138 dB without distortion, the TLM 103 provides a dynamic range of 131 dB.

**Acoustic Features**
- The TLM 103 is addressed from the front, marked with the red Neumann logo on the microphone body. The K 103 large diaphragm capsule is based on the K 87, well known from the U 87 microphones.
- The capsule has a flat frequency response up to about 5 kHz, and above that, a wide flat 4 dB presence boost.
- The large wire mesh headgrille protects the capsule from plosive sounds and effectively prevents pop noises. These characteristics are achieved without resorting to corrective resonance effects. Therefore, the microphone maintains an excellent impulse response and reproduces the finest details of music and speech without coloration.

**Applications**
- Use as announcer’s mic for broadcasting and voice overs or as a vocalist mic. With minimal self-noise, the TLM-103 is ideal as on-air mic for radio/broadcast, sampling, foley/sound effect. Use as a spot mic for wind instruments, strings, percussion, pianos, guitar amps and drum overheads.

**Optional Accessories**
- EA 1 elastic suspension and WS 87 wind-screen for rejection of unwanted low-frequency interference from structural or windborne noise. The optional PS 30 pop screen is for close miking of vocals.

**TLM 170 R**

**Multi-Pattern Large Diaphragm Microphone**

Introduced 20 years ago, the TLM 170 R is a large diaphragm condenser mic with multiple polar patterns, as well as the first Neumann microphone to use FET 100 technology. Its sound has a very transparent characteristic, in contrast to other Neumann microphones that have a distinct personality. Therefore it can be used for many diverse applications in professional recording studios, in broadcasting, film and television, and for semiprofessional productions. Along with a balanced, transformerless output stage it features extremely low self-noise and an impressive dynamic range. Five directional characteristics are selectable by means of a rotary switch. In the sixth position, marked “R”, the directional patterns can be remote controlled with the optional N 48 R-2 power supply. There is no special cable necessary for this purpose. The microphone has at its rear a 10dB attenuation switch for extremely high sound pressure levels, and a high-pass filter to suppress structure born noise.
Polar Patterns
- The TLM 170 R offers five polar patterns: omnidirectional, cardioid, hypercardioid, wide-angle cardioid, and figure-8.
- Compared to the standard cardioid pattern, the hypercardioid characteristic suppresses sound from the side more efficiently. The wide-angle polar pattern is especially useful to record large sound sources.

Applications
- For universal use, very transparent without coloration. Ideal announcer's mic for broadcasting, dubbing, voice-overs. For close miking of high SPL instruments such as kick drums and guitar amps, or as a spot mic for wind instruments, strings, and pianos.
- Optional remote control of polar patterns, allows the mic to be placed anywhere, even suspended from the ceiling.

Acoustic Features
- The mic is addressed from the front, marked with the Neumann logo. The large diaphragm capsule inside the headgrille has a very smooth frequency response for all polar patterns over a wide acceptance angle.
- The curves are flat and parallel to the 0° frequency curve up to 10 kHz within an angle of ± 100° the result of which is a very even diffuse-field response for all polar patterns.
- This ensures that even in reverberant environments—more reflections arrive at the mic from different directions—the mic maintains an excellent impulse response and reproduces all transient phenomena of music and speech without any coloration.
- Low self-noise level of 14 dB-A / 26 dB CCIR weighted. SPL capability up to 144 dB without distortion, dynamic range of 130dB.

Side Bracket
- The TLM 170 R has a tilting side bracket to attach the mic to booms or stands. The bracket is equipped with rubber elements to protect the mic from mechanical shock. If necessary, it can be mounted on the other side of the microphone as well.

Optional Remote Control
- The N 48 R-2 provides remote control of the mic's polar patterns by varying the phantom voltage. The range is ± 3V of the nominal 48v value.

Filter and Attenuation
- A 10 db attenuation switch prevents the input from being overloaded. A second switch at the rear lets you attenuate the frequency response below 100 Hz to suppress undesired structure noise.

The U 87 Ai, “The Standard”
Since the late 1960s, the Neumann U 87 has been the standard by which all other studio microphones have been measured. Not only is it a legendary audio product, but in recent years, it has also become the most imitated mic in the world. This microphone got its start as a solid-state version of the older U 67, which was a tube mic. The U 67 was introduced in 1960 as a more modern, versatile, and capable microphone than the venerable U 47. In comparison to the U 47, the U 67 had three polar patterns (instead of two), a -14dB pad switch for louder sound sources, and a high pass filter to reduce low frequency sounds.

The capsule developed for the U 67 was a radical design and a departure from anything that had come before. During the process of creating this capsule, more than 40 prototypes were tested with broadcast and recording engineers throughout the world. The result was the K67, which as survived today in the thoroughly modern U 87 Ai studio microphone. This capsule, when compared to previous designs, exhibits very linear off-axis pickup (especially for such a large capsule), excellent transient response and a very even response across all polar patterns. In terms of sound quality, the K67 capsule provides a sublime capture of anything placed before it.

Over the last three decades, the U 87 has only undergone one significant change: from the original U 87 to the newer U 87 Ai. This change took place in 1986, and involved mostly the re-design of the audio and powering circuits. The addition of a DC-DC converter allows the modern U 87 Ai to operate at a very high level of sensitivity but with exceptionally low self noise.

Today, if you run a professional recording studio, the U 87 Ai should be a part of your collection. Since there are more of these mics throughout the world, and their legendary performance is well known by artists and engineers alike, clients looking to book your rooms will expect this microphone to be available. Whether you are recording strings, vocals, drums or piano, this is one microphone you simply can not do without.
Multi-Pattern Large Diaphragm Studio Microphone

The U 87 Ai is the best known and most widely used Neumann studio microphone. It is equipped with a large dual-diaphragm capsule with three directional patterns (cardioid, omnidirectional and figure-8) and a unique frequency and transient response characteristic. Users recognize the microphone immediately by its distinctive design. The U87 Ai is ideal for most general purpose applications in studios, for broadcasting, film and television. It is used as a main microphone for orchestra recordings, as a spot mic for single instruments, and extensively as a vocal mic for all types of music and speech. Patterns are selectable with a switch below the headgrille. A 10dB pad enables the mic to handle sound pressure levels up to 127 dB without distortion. Low frequency response can be reduced to compensate for proximity effect. Available in black or nickel finish, standalone or in packaged with popular accessories for stand mounting.

Polar Patterns
- The dual-diaphragm capsule is elastically mounted and protected by a large headgrille. A switch below the grille selects the three patterns: omnidirectional, cardioid and figure-8. A window above the switch shows the symbol of the selected pattern.
- The cardioid characteristic maintains a smooth frequency response at a distance of 30 to 40 cm, the figure-8 characteristic even at a distance of 15 to 20 cm.

Acoustic Features
- The U 87 Ai is addressed from the front, marked with the Neumann logo. The frequency response of the cardioid and figure-8 directional characteristics are very flat for frontal sound incidence, even in the upper frequency range. The mic can be used very close to a sound source without the sound becoming unnaturally harsh.
- High-pass filter practically eliminates interference from subsonic and low frequencies.
- SPL capability of 117 dB without distortion and self-noise of 12dB-A gives the mic an overall dynamic range of 105 dB.
- Switchable -10 dB pre-attenuation pad lets the mic handle up to 127dB SPL without distortion.
- Low-frequency roll-off filter lets you change the mic's cutoff frequency thus reducing low frequency interference directly at the input of the mic amplifier. Also compensates for proximity effect.

Applications
- For universal use
- The classical studio mic for vocalists (soloists & background vocalists)
- Announcer’s mic for broadcasting, dubbing, voice-over; as overhead mic
- Spot mic for wind instruments, strings (especially cello & double bass), piano, and percussion

NEUMANN

Digital Microphone System

Setting new standards in microphone applications and recording techniques, Neumann’s Solution-D digital microphone closes the final gap in the all-digital signal path. By transferring the dynamic range and fidelity of the best analog studio microphones into the digital domain, one of the last parts of the audio chain—the microphone—has become part of the digital revolution. Thanks to a revolutionary new A/D conversion process, a specially developed synchronization method, and remote control of typical microphone parameters and mixing console functions, Solution-D satisfies even the highest demands of professional audio production. It consists of three components: the Digital Microphone D-01, the Digital Microphone Interface DMI-2, and the software (RCS) that permits operation and remote control of the microphone. Solution-D also introduces a new AES standard. AES 42-2001 identifies the transmission of output signals, power supply for the microphones, and remote control of all typical microphone functions and parameters.

The wide variety of Solution-D features permits small productions in excellent quality with just a microphone and a recording device. Every sound designer who is familiar with digital recording technology, can begin using Solution-D immediately without a learning curve. As with analog microphones, the same acoustic principles and recording techniques apply. However, the additional features of digital microphones open up new possibilities during production.

FEATURES

Integrated Digital Audio Signal Processing

Neumann developed a completely new A/D converter specifically for the signal levels directly after the mic capsule. Necessary gain adjustments can be performed inside the mic in the digital domain. This eliminates traditional peripherals devices such as preamplifier and A/D converter, as well as reduces costs. The front-end conversion of the analog signal provides a marked improvement in dynamic range. This is noticeable throughout the entire signal chain and makes level adjustments less critical. Other signal processing functions, such as mute and phase reverse, which are usually inside a mixing console, are integrated into the mic. Other possibilities include the use of remote commands, such as an LED to indicate Red Light (“On Air”). Features include the transient limiter, which for the first time can be applied at the most efficient point, that is, at the signal source. This can reduce damaging transients that are very short, however exhibit a large amplitude. Analog microphones require extremely large headroom in the following signal path to accommodate such signals. Additional features will include a noise gate function and switchable test signals inside the microphone.

D-01 Digital Microphone

At first glance, the D-01 mic looks no different than its analog counterparts. Right behind the mic capsule, however, is an A/D converter developed by Neumann and optimized for the signal level of the microphone capsule. The signal sent by the microphone capsule is converted directly into a digital signal. The result is an internal digital 28-bit signal with a dynamic range of more than 130 dB (A-weighted, including microphone capsule). The digital signal will be processed by the help of an FPGA (Field Programmable Gate Array) built right into the microphone. This means that parameters such as polar pattern, pre-attenuation, low-cut, pre-amplification and various switching functions can be realized digitally and remote controlled. This eliminates previously required devices such as analog pre-amps and A/D converters. For positive self-identification, the microphone transmits information such as manufacturer name, type, serial number, and implemented software level to the connected receiver. The microphone is equipped with a 3-pin XLR connector via which the supply voltage, phantom power, and remote control data stream are transmitted. The signal components for a control loop as required for synchronous transmission are also contained in this data protocol. The output signal of the microphone conforms to the AES 42-2001 format.
DMI-2 Digital Microphone Interface

The Solution-D microphone connects directly to any equipment that supports the new AES 42-2001 Standard. In all other situations, the Neumann DMI-2 Digital Microphone Interface is necessary. This separate, two-channel device converts the AES 42-2001 data format of the microphone into an AES/EBU signal. The system will be operated by the Neumann remote control software with a computer connected to the DMI-2 interface via a USB connection. If a large number of microphones are used, it is possible to cascade multiple DMI-2’s and still provide each interface with an individual address. Besides word-clock input and output, the unit also has an integral master word clock generator that, in the future, will support sample rates of up to 192 kHz. If there is no word clock at the input, then the internal master is used automatically to synchronize both microphone channels and is switched to the word-clock output. External commands—e.g., a red “On Air” light—can be controlled via the 9-pin port.

RCS Remote Control Software

The Solution-D is controlled by Remote Control Software, which would ideally be part of a recording system, but can also run on a standalone desktop or laptop computer. All important parameters are shown on the screen and can be changed at any time. During production, the recording engineer has complete control over the status and parameters of all mic’s and can change settings quickly and conveniently if necessary. The parameters include polar pattern, pre-attenuation, low-cut, pre-amplification, various indicators of microphone status, command indicators, mute and phase reverse functions. It is also possible to follow signal levels on the screen. The information is transmitted by the mic, (manufacturer name, type, serial number, etc.) is displayed and used for positive self-identification of the microphone connected. In addition, it is possible to add self-written notes. For example, the name of the source and positioning of the microphone. Of course, it is also possible to store and retrieve the setup for the entire recording session.

DMI-2 SPECIFICATIONS

| Inputs | XLR 3 F, AES 42-2001 data format: transmission of audio and status data from the microphone, phantom powering and remote control data to the microphone |
| Outputs | XLR 3 M, AES/EBU data format, switchable between one and two channel operation. Configuration via Remote Control Software RCS |
| Phantom Power | +10V, max. 250 mA per channel, short circuit protected |
| Remote Control Data | 750 Bits pulses overlaid on the phantom power |
| Device Address | Selectable via coding switch on the rear side |
| Aux User Port | 2 RJ45 jacks, connecting with included Neumann interface to USB-Port (Windows 2000, Win 98SE, Win ME), cascading of up to 16 DMI units (2 or 8 channel) possible |
| Synchronization | AES 42 - Mode 2, clock control via PLL (Default setting). Without external word clock master, the internal master is used for synchronization of both microphone channels |
| AES 42 - Mode 1, clock free running at center frequency, necessitates Sample Rate Converter (SRC) on receiver side. Reduction of dynamic range depending on the quality of the SRC. |
| Word Clock Input | BNC, 75 Ohm |
| Word Clock Output | BNC, 75 Ohm, set automatically to internal word clock master when no signal is present on word clock input |
| Internal Word Clock Generator | Selectable sampling rates: 48 kHz, 96 kHz, 192 kHz, 44.1 kHz, 88.2 kHz, 176.4 kHz |
| Indications | Data Valid (AES 42) and Sync Locked (Mode 2) per channel, Power On and Ext.Word Clock |
| Power Supply | 100-240 V, 50/60 Hz. |
Designed with superlative vocal reproduction in mind, the KMS 105 brings Neumann quality to the demanding sound reinforcement environment. With its supercardioid polar pattern, low self noise and uncolored off-axis pickup, the KMS 105 complements in-ear monitor systems. By employing a unique 4-layer acoustic filter, the KMS 105 minimizes popping and wind noise, and with special mechanical and electrical filters, handling noise is virtually eliminated. Because of the superior resolution and linear frequency response, it is very easy for the artist using the KMS 105 to identify whether he or she is “on mic.”

**Highest Quality Vocals**
- Compared to other handheld vocal mics, the KMS 105 offers a superior resolution of the voice, with extended frequency response and accurate transient detail. Sibilance problems common to other handheld condenser mics are eliminated.
- The K 105 capsule features a supercardioid pattern, achieved by specially modifying the response of the pressure gradient transducer. The frequency response characteristic developed in the acoustic realm, allows for accurate representation of transient details found in music and speech, thus transmitting a very “open” and detailed capture of the human voice.
- Due to the tight supercardioid polar pattern and the coloration-free off axis response, a very high level of gain before feedback is achieved. This polar pattern offers the highest degree of isolation while still allowing for a generous “sweet spot” in front of the microphone.
- The KMS 105 has a dynamic range of 132 dB, allowing reproduction of the artist’s full expression, without restraint. Maximum SPL is 150 dB, and with low self noise (18 dB-A) greater gain can be used without risk of adding noise to the mix. This way, the artist is able to use the microphone at a greater distance therefore maintaining a wide range of creative freedom during the performance.
- And by employing a transformerless output circuit, this microphone can incorporate long cable runs with no loss of signal quality or high-frequency response.

**The Microphone Basket**
Most vocal mics rely on the attenuating effects of foam layers inside the basket. Although this is certainly a cost-effective procedure, the detrimental effects of this foam layer can be shown quite easily. Treble frequencies are attenuated, and furthermore the polar pattern can be deformed.
- No foam is used in the basket, thus eliminating any “clouding” or “muffling” of the sound. Also, by using a DC-polarized studio condenser capsule, all the nuances of the voice come through with subtlety, power and focus.
- These drawbacks can be eliminated by selecting open mesh constructions. With careful dimensioning and selection of different mesh sizes, excellent pop and wind attenuation can be delivered, as is well known from the standard studio-use pop screen PS30, made of two layers of spaced fabric.
- Naturally, the outer microphone basket is hardened steel, due to the required ruggedness for on-stage use.

Condenser Vocalist Microphones

The KMS 140 (cardioid) and KMS 150 (hypercardioid) vocalist microphones have been developed for the use of instrumental and vocal soloists at very short range, and can also be hand-held. They incorporate a special acoustic filter and a transformerless, high-loadability amplifier to provide very effective protection against pop and other explosive sounds. Pop stability is excellent and sibilants and S-sounds are reproduced with all their natural accentuation. Although the acoustic filter effectively suppresses interference by plosive sounds, the distinctive directional characteristics of the capsules are retained all the way down to the bass region, lending the mics a high degree of feedback imperviousness when used for stage work. With two easily operated recessed switches, sensitivity can be reduced by 10 dB, and the transmission characteristics of the microphones matched to the vocal character of the soloist and the preferred pick-up distance (proximity effect).

The thick walled metal case of the microphones effectively blanket holding noises. The acoustic filters can be easily un-screwed and cleaned if necessary.

KU 100 Dummy Head

The KU 100 dummy head is a binaural stereo microphone. It resembles the human head and has two microphone capsules built into the ears. When listening through high-quality headphones it gives the illusion of being right at the scene of the acoustic events. When using the KU 100 the binaural stereo experience moves the listener into the scene of the original performance, in contrast to other space-related recording techniques, where the acoustic event is moved to the listener.

The dummy head is also used in industrial applications as a measuring device, for example in acoustic research. The KU 100 can be operated with 48v phantom powering, from an external power supply, or from the built-in battery. At the bottom of the unit is a switch for the different power supply modes, as well as connectors for balanced and unbalanced output signals. Inside the head are additional switches for 10dB attenuation and the high-pass filter.

- The KU 100 is a replica of the human head with a mic built into each ear. When the recorded audio signal is reproduced through high-quality headphones the listener perceives a sound image almost identical to the one he would have heard at the recording location of the dummy head (head-related stereophony).
- Balanced (XLR) and unbalanced (BNC) outputs
- When played back through loudspeakers, the sound matches that of stereo microphones, placed in the same position. However, a superior quality is added, that of a distinct spatial depth perception.
- The KU 100 is just as easy to use during creative radio drama productions, and music recordings where the room acoustics should be recorded at the same time
- It is also an important tool to preserve natural sounds of all kinds. In addition, the dummy head is used to examine and document the influence of noise in industrial applications under realistic conditions.
- Includes a robust aluminum carrying case, external power supply, 5-pin XLR cable, and an adapter cable that splits the 5-pin XLR output into two 3-pin XLR connectors
The “Series 180” consists of three compact miniature microphones with patterns that satisfy the demands of all common studio applications. Designed for economy-minded production, their slender shape and the transmission characteristics make them ideal for a wide range of applications in radio and television. The KM 183 (omni), KM 184 (cardioid), and KM 185 (hypercardioid) are available in either matte black or nickel finish. The mics come in a folding box with a windshield and two stand mounts that permit connection to the microphone body, or the XLR-connector.

The KM 183 is a pressure transducer with a boost of approximately 7dB at 10 kHz in the free field. In the diffuse sound field it has a flat frequency response. The pressure gradient transducers KM 184 and KM 185 feature very smooth frequency responses not only for the 0° axis, but also for lateral (off-axis) sound incidence. In typical usage, there is no coloration of sound over a wide pickup angle. The KM 185 features attenuation of sound incidence from the side or rear of about 10 dB, with minimum sensitivity at an angle of 120°. The KM 184 has a gentle rise at about 9 kHz.

The “Series 180” microphones have the same transformerless circuitry as is used in the KM 100 system, resulting in excellent technical specifications. Their output as in all Neumann microphones, is balanced and phantom (48v) powered. The KM 183 and KM 184 are available in stereo sets, packaged in wooden boxes.
Shotgun Microphones

The KMR 81i and KMR 82i are shotgun microphones with a high directivity that remains within the acceptance angle independent of the frequency. The advantage is that a sound source, for example an actor on stage, will not change its apparent tonal balance when moving within this area.

Shotgun microphones are particularly useful in recording situations where a microphone cannot be positioned within the desired distance of the sound source to produce a sufficiently loud signal level. Typical applications are film and video recordings, where the microphone should not appear in the picture. The KMR 82i is very often used on stage. The KMR 81i has been specifically designed for electronic news gathering.

### Acoustic Features

- These mics use a combination of a pressure gradient transducer and an interference tube. If the wavelength of the frequency is longer than the tube length, the mics work as pressure gradient transducers. At higher frequencies they operate as interference transducers for lateral sound.

- Off-axis sound sources are picked up with reduced level, but without coloration. Therefore, the microphones are well suited to record individual instruments of an orchestra. The pickup areas of several shotgun microphones may even overlap, like during recordings on a large stage, without causing any problem.

- They are less sensitive to wind and pop noise when compared to other mics with similar high directivity. The KMR 81i/82i both feature extremely low self noise, good impulse response, and high output level.

### Polar Pattern

- These mics have a very directional characteristic. Their mic capsule is positioned inside a housing tube that is acoustically open but has a high flow resistance. The directional patterns of the mics are lobe shaped. The attenuation of lateral sound is practically independent of the frequency. The KMR 82i has a frequency independent directivity within a pickup angle of 45° for audio signals that determine the tonal balance of the program material. For the KMR 81i, this angle is 90°.

### Filter and Attenuation (KMR 81i)

The microphone has a 10dB attenuation switch to prevent the input of the following unit from overloading. A second switch activates a 200 Hz high-pass filter. Toward the lower frequencies the sensitivity of the microphone is attenuated by approximately 15dB at 50Hz. The frequency range above 200 Hz is unaffected.

### Using on Location

The shotgun microphones feature very high output capability and a markedly low self-noise level. Their low power consumption, light weight, and low sensitivity to wind and handling noise, make them ideal tools for news gathering on location. Small dimensions, together with a balanced center of gravity, make handling easy without any whiplash effect.

However, when on location and during strong wind conditions, it is recommended you use the using an additional wind screen (included). The wind screen is made of polyurethane foam and also serves as soft padding of the microphone in its leather carrying case. For mobile use a handle and an elastic suspension are available. An active handle with a built-in battery power supply makes an external phantom supply unnecessary.

### Filter KMR (82i)

Between 2 kHz and 15 kHz the KMR 82i has a boost to compensate for HF transmission losses in air when recording distant sound sources. This may overemphasize any sibilance if the microphone is used close-up. Therefore, a two-position slide switch allows to select the setting that is best for balanced upper frequencies. The KMR 82i has a high-pass filter to suppress subsonic interference. The cutoff frequency may be raised to 120 Hz (-3 dB) with a built-in two-position slide switch.

* at 1 kHz into 1 kohm
SM 69 / USM 69

Stereo Microphones

The SM 69 and USM 69 are condenser studio stereo microphones suitable for XY and MS recordings. The construction of the capsules is the same in both microphones. Therefore, the acoustic features of the transducers are identical. The only difference is the method of switching the polar patterns and the way the microphones are connected to the system. The SM 69 and USM 69 stereo microphones each have two separate dual-diaphragm capsules. These are mounted vertically and rotate against each other. The directional polar patterns can be selected separately for each capsule. The capsules operate independently from each other.

They can also be used as completely independent mono microphones. There are many applications when it is important to have a second mono microphone as a backup, or when the outputs of microphones with different polar response characteristics must be available simultaneously. The outputs of the two microphone channels can be linked (cascaded). In addition to the individual directional patterns, other characteristics are available through the combination of both channels.

 FEATURES

◆ Two completely separate microphone capsules are positioned closely above each other within the capsule head. Their diaphragms are made out of gold-sputtered polyester film. The upper capsule rotates against the lower one over a range of 270°. Color markings on the lower capsule system help to identify the angle by which the upper capsule has been rotated.

◆ When sound waves reach the microphone capsules from different directions they will generate audio signals with different intensity only, but not with time differences, since the capsules are in close proximity and the sound arrives at both capsules simultaneously. The result is an intensity stereo signal that can be summed together for excellent mono compatibility without causing interference.

◆ The amplifiers feature high output capability and extremely low self noise. Distant as well as very loud sound sources at close range are easily recorded. Each amplifier has an active filter to suppress wind or structure borne noise.

◆ Mic systems operate independent from each other. The second amplifier will be unaffected, even in case of a faulty ground for one of the channels, or a short circuit in one of the outputs. The mic is reliable in mono usage, even if only one of the systems is operated and connected.

Polar Patterns SM 69

In addition to omnidirectional, cardioid and figure-8 polar patterns, this mic has six intermediate positions. The narrower characteristics suppress sound from the side more efficiently, while the wide-angle polar patterns are especially useful to record large sound sources. Patterns are selected remotely from the NS 69 i power supply. Two rotary switches are used to switch between nine different polar patterns for each system. The switches are marked in color and numbered corresponding to the respective microphone capsule.

Polar Patterns USM 69

Like the SM 69, the USM 69 has two built-in rotary switches. However, the five polar patterns of both capsules can be selected at the microphone itself. No special AC power supply or power adapters are necessary.

In addition to the omnidirectional, cardioid, and figure-8 pattern, Neumann added a hypercardioid and a wide-angle cardioid pattern. A built-in DC converter generates the required capsule polarizing voltages.

Boundary Layer Microphone

The GFM 132 is a boundary layer microphone.

Through computer simulation, Neumann optimized the design to be free of any comb filter effects due to reflections, typical of other such microphones.

The smooth frequency response for all angles of incidence exhibits a rise in the upper frequency range. This assures that all sound sources, even distant ones, will be recorded with clarity and presence. Therefore, typical applications are for live recordings, such as in the orchestra pit of opera houses, theaters and on stage. The back of the microphone has non-slip pads for its use in a horizontal or inclined position, and holes for wall suspension. It is supplied with a wooden case and a wind screen.
Stereo Shotgun Microphone

The RSM 191 is a stereo microphone system consisting of the microphone and the MTX 191 A matrix amplifier. It has an adjustable pick-up angle and high directivity. The microphone has two separate capsule systems, a hypercardioid element and a figure-8, both in a single, lightweight body. Together they generate the mid and the side signals. The matrix amplifier controls the width of the stereo image by changing the gain of the side signal relative to the middle signal in six 3dB steps.

The output signals of the matrix amplifier are either mid-side (MS) or left/right (XY). The signals are converted through transformerless sum-and-difference circuitry. The balanced, transformerless technology permits the use of long cables between the mic, the matrix amplifier and the following mic input of other signal processing equipment.

The RSM 191 consists of a capsule head containing two separate transducer systems and an amplifier section with two independent transformerless microphone amplifiers. An interference tube system with a hypercardioid characteristic generates the middle signal, while a horizontal figure-8 assembly provides the side signal. The RSM 191 is an ideal microphone for outdoor stereophonic news coverage, even in extremely noisy surroundings and stereo recordings for film and television where the actors are recorded simultaneously with acoustic ambiance, or an orchestra.

Features

- The RSM 191 achieves its high directivity and special acoustic features through a unique construction. The microphone capsule assembly is mounted inside a housing tube that is acoustically open but has a high flow resistance.
- This results in a high driving force for the diaphragm, even with a low pressure gradient factor of the capsule. Therefore, the microphone can suppress unwanted off-axis interference to a considerably higher degree than other microphones without such an interference tube.
- The middle system (M-signal) combines high attenuation of lateral sound incidence, similar to a hypercardioid characteristic (which is about 10 dB), with the large front-to-back ratio of the super-cardioid characteristic.
- Therefore, sound from the rear is likewise attenuated by approximately 10 dB. This design makes the mic less sensitive to wind or pop noise than other shotgun mics.
- The side system (S-signal) consists of two single capsules arranged back to back, closely behind the interference tube (M-signal) capsule. Arrows engraved on the mic housing show their orientation.
- The uniform and balanced performance characteristic of the microphone system is achieved without resorting to corrective resonance effects. Therefore, the microphone maintains an excellent impulse response, reproducing all transient phenomena in music and speech without coloration. The entire internal construction is decoupled from the housing to avoid structure borne and handling noise.
- Output signals of the included matrix amplifier are in MS or XY format. The small capsules are mounted in close proximity to ensure transparent and coloration-free stereo sound with excellent mono-compatibility. The stereo acceptance angle is variable and controlled remotely.
- Filter and Attenuation
- For the handling of very high sound pressure levels, a 10dB attenuation can be switched ON to avoid overloading of the following equipment.
- To suppress structure borne noise, a high-pass filter in the matrix box provides cutoff frequencies of 40 Hz, 80 Hz, and 200 Hz.
- Battery Supply
- The RSM 191 system is fed from either 2 x P 48 phantom power or from a 9 V battery inside the matrix box. One alkaline battery provides 8 hours of operation.
- The complete microphone system comes in a robust aluminum case. Along with the microphone and the matrix amplifier the case contains a windscreen, the special interconnecting cable and an adapter cable that splits the 5-pin XLR output of the matrix amplifier into two 3-pin XLR connectors.
Miniature Microphone System

The KM 100 is a variable condenser miniature microphone system that consists of several active microphone capsules with different directional characteristics, an output stage, and numerous accessories. There are seven active capsules available: omni diffuse-field equalized, omni free-field equalized, cardioid, wide-angle cardioid, cardioid with bass roll-off, hypercardioid, and figure-8. Through the modular construction of mic capsules and the output stage it is very easy to adapt the system to a wide range of applications. The mic becomes nearly invisible during work with cameras (film, video), on stage, or suspended from the ceiling in a concert hall. An active capsule can also be screwed directly onto the output stage. The result is a compact miniature microphone.

Features

Construction

Microphones are approx. 4” long (except the KM 120 which is 5”) and 22mm in diameter. They consist of the condenser capsule and the output stage. Both parts can be unscrewed from each other. The system offers several condenser capsules with different directional characteristics. Numerous accessories can be mounted between the capsules and the output stage. The capsules attach to cables, capsule extensions, swivel mounts, table stands, goose-necks, stereo mounts, and hangers. This makes it very easy to adapt the system to a wide range of applications.

The KM 100 powering stage and the active microphone capsule may be separated by up to 50m of interconnecting cable. These cables are 3mm in diameter, and therefore very inconspicuous.

Pre-attenuation

The output stage has a -10 dB switch. Attenuation is achieved by reducing the capsule voltage to one third. When the switch is on, the microphone is capable of accepting sound pressure levels up to 150 dB without being overloaded.

Connectors

To diminish the number of connectors within the KM 100 System some accessories were modified. They can now be screwed directly onto the KM 100 output stage without using the KA 100 cable adapter. The new accessories which include the cable adapter, were renamed adding the suffix KA. For example: LC 3 is now LC 3 KA. The separate KA 100 cable, needed for older accessories, will be available also in future. The KM 100 output stage has a 3-pin XLR connector.

Stereo Recordings

By means of the AC 30 adapter cable two active capsules, AK 20 and e.g. AK 40 can be connected as MS stereo pair directly with the MTX 191 (A) matrix amplifier. The XY or MS signal is then available at the 5-pin XLR output connector of the MTX 191 (A), and the recording angle can be electrically remote controlled. The output stages KM 100 are then not required.

Stereo Set

The cardioid and hypercardioid microphones are also available as complete stereo sets, SKM 140 and SKM 150, including all accessories in a single jeweler’s box.

Sound Diffraction Sphere

The SBK 130 sound diffraction sphere slips onto the front of the KM 130/KM 131 pressure microphones. The diaphragm becomes an integral part of the surface of the sphere. This affects the frequency response of the microphones. While sounds coming from the front-half space are emphasized by up to 2.5 dB between 2 kHz and 10 kHz, sounds arriving from the rear-half space are attenuated by a maximum of 2.5 dB in the range above 5 kHz. Since the sound diffraction sphere causes the pressure buildup of the KM 130/KM 131 pressure microphones to begin earlier, the frequency response rises smoothly in the middle and upper range.

This is similar to a typical presure gradient microphone, where the directivity increases with rising frequencies. However, since the KM 130/KM 131 are pressure microphones, they maintain a linear sensitivity down to the lowest frequencies. This changing directivity allows to record at a greater distance from the sound source, and makes the KM 130/KM 131 microphones especially suited as stereo main microphones in A-B configurations.
KM 100 Powering Module
- The KM 100 is 48v phantom-powered and uses transformerless output circuitry. This has several advantages:
  - It features high output capability and extremely low self noise.
  - It provides exceptionally clean sound, free of any coloration.
  - As with traditional transformers, this circuit approach ensures good common mode rejection.
  - The balanced output signal is protected against interference.
- All sensitive components are protected within the capsule. As a result, the quality of the audio signal is never compromised through the use of accessories, for example, when the capsule is detached from the output stage and mounted on a cable or a gooseneck. Even with a long cable between active capsule and output stage, the signal is immune to external interference.

KM 100F Filtered Powering Module
The KM 100F is offered as an alternative to the KM 100. In contrast to the KM 100, which has a flat frequency response, the KM 100F attenuates frequencies below 80 Hz at 6 dB/octave. This eliminates or suppresses interference caused by wind or structure-borne noise. A built-in slide switch allows to raise the cut-off frequency (−3 dB point) from 80 Hz to 120 Hz. An additional slide switch lowers the sensitivity by 10 dB.

AK 20 Figure-8
The AK 20 is a pressure gradient transducer with a figure-8 pattern in a single diaphragm (just 16mm in diameter). All sound field components reach the diaphragm directly. This results in identical frequency response curves and output levels at 0° and 180° sound incidence. Via optional accessories, the AK20 can also be combined with other active capsules or microphones to obtain a MS-Stereo setup.

AK 30 Omnidirectional
The AK 30 is a diffuse-field equalized pressure transducer with a flat frequency response up to 10 kHz (in the free field). In the free sound field this microphone has a boost of approximately 7 dB at 10 kHz.

AK 40 Cardioid
The AK 40 is a pressure gradient transducer with cardioid pattern. The frequency curves are very smooth and match 0° sound incidence. Sound from sources within a pickup angle of ± 135° is reproduced without any coloration.

AK 43 Cardioid Wide Angle
The AK 43 is a pressure gradient transducer with wide-angle cardioid characteristic. Attenuation at 90° is 4dB, at 135° it is 6dB and at 180° it is 11dB. The frequency response curves for sound sources within an angle of ± 90° are parallel up to 12 kHz.

AK 45 Cardioid with Low-Frequency Roll-Off
The AK 45 is a pressure gradient transducer with cardioid pattern similar to the AK 40. It also has a bass roll-off that is useful when low frequencies may cause difficulties. The AK 45 is optimized for a flat low frequency response at a recording distance of 15 cm (“speech cardioid”).

AK 50 Hypercardioid
AK 50 is a pressure gradient transducer with hypercardioid characteristic. Attenuation of sound incidence from the side or rear is about 10 dB, with minimum sensitivity at an angle of 120°.

NT1-A Cardioid

Today’s musicians and recording engineers demand clarity and dynamic range and the NT1-A, a true large-capule condenser mic, with state-of-the-art, transformerless FET circuitry meets these demands in both vocal and instrumental performances. The heart of the NT1-A, the capsule, features a full 1” gold sputtered diaphragm. This precision transducer is mounted in a proprietary internal shock mounting system. The electronic components are mounted on a revolutionary monocoque sub assembly which assures structural integrity. The microphone head is made of two layers of high-grade stainless steel. The outer layer is of an extremely heavy open weave to provide strength, the internal fine layer provides an effective ‘pop’ shield while still being acoustically transparent. Supplied stand mount with 3/8 - 5/8” thread adapter (RM-1) allows for easy mounting and positioning. Also includes a zippered pouch and windshield.

NT-3 Hypercardioid

The baby of the Rode family, the stylish and modern NT3 is a very capable performer with a wide range of applications in studio, stage, location and broadcast environments. Made from the finest components to deliver results demanded by engineers and musicians alike, the NT3 is a true condenser with transformerless output. The internal capsule is shock mounted and housed in a substantial cast-metal body with a satin-nickel finish. It features battery and phantom power and its low noise (under 16dB SPL A-weighted) makes it hard to match. Dynamic range is greater than 123dB with a maximum SPL of 140dB and sensitivity is a healthy -39dB (ref 1V/Pa).

NT1000 Cardioid

With its ultra low-noise transformerless circuitry the NT 1000 brings new standards to the recording industry. When today’s musicians and recording engineers demand clarity and dynamic range, they demand large capsule performance. The NT1000 is superior in both vocal and instrumental performances. Made from high quality components, including internal capsule shock-mounting the NT1000 provides unmatched quality and sound.
NT4 Stereo Microphone

In the past, true stereo recording required the use of ‘matched’ microphones. More than simply using two of the same mic models, matched pairs had to be stringently manufactured so variables such as frequency plots, sensitivity ratings and SPL characteristics would be almost identical. However, even with two matched ‘mono’ microphones, achieving a successful stereo image still depends on how each mic is placed in relation to the other. Matched mic pairs also need a uniform angle between them to achieve the same effect. This all changes with the NT4.

A studio-grade go-anywhere stereo condenser, the NT4 is a totally flexible mic that enables direct connection to most recording devices. It utilizes two 1/2˝ matched capsules in a perfectly aligned -90°, XY arrangement. All you have to do is point and keep an eye on recording level. It requires 48V phantom power, but for flexibility, a 9v battery can also be used. Ideal for location recording for film and video. Includes Røde case with a stand mount, wind shield and custom stereo cables (XLR and minijack).

NT5 Stereo Microphones

Using the same capsule design as the NT4, the NT5 cardioid condenser mic comes as a matched pair in a plastic case complete with clips and foam windshields. The NT5 is a microphone along the lines of the Neumann KM 184 or AKG C451 (but quite shorter). As with the NT4, there are no bass roll-off or pad switches on the microphone. The build quality is good and because the capsule is the same, the sound is similar to that of the NT4.

There is no battery option (requires phantom power), but you do get the extra flexibility of having two separate microphones. For stereo work this means you can vary the angle between them, which will affect the stereo spread and coverage. You can also adjust the spacing of the mics in order to use other stereo techniques, rather than just coincident pair recordings (ORTF for example). Of course, if you don’t need to work in stereo, you have two good mics to use individually.
**True Large Diaphragm Condenser Capsule**

Developed using only the finest components, the Broadcaster is a large capsule condenser microphone that gives a warm vocal sound, wide dynamic range and extended frequency response and has a unique LED ‘ON AIR’ indicator. The mic features a cardioid polar pattern with high 180° rejection, a voice-tailored low-cut filter and ultra low-noise. Designed to provide performance and reliability, it offers a rugged stainless steel body, has an internal shock-mounted capsule to reduce structural borne noise and a fine mesh ‘pop shield’ to eliminate plosives.

**CLASSIC II 1˝ Tube Microphone**

From its custom designed Jensen transformer to the dual pressure gradient transducer this valve microphone is a classic. Machined from solid brass, hand polished, glass bead blasted and coated in satin nickel, this is a microphone with Class A valve circuitry that gives unmatchable warmth, clarity and sensitivity when critical vocal and instrument recording is required.

Weighing in at just over two pounds, the Classic II is a heavy, magnificently crafted instrument. The microphone’s body is machine-tooled from solid brass and encapsulates two grille meshes—a finely woven inner headscreen and a heavier gauge, outer screen. A gold dot indicates the front of the mic.

The Classic II features a 1˝ dual-pressure gradient capsule with an edge-terminated, gold-sputtered diaphragm. Further, the microphone incorporates a low-noise, 6072 twin-triode tube preamplifier that feeds into a custom Jensen output transformer. There are no controls on the microphone, yet the Classic II provides a wealth of options for securing your desired sound.

- With nine polar patterns (a variety of intermediate positions between the three main patterns—cardioid, omni and figure-8), two pad settings (-10 and -20dB) and a two-position highpass filter (-15 or -21dB of roll-off at 20 Hz), the Classic II can easily be tailored to best suit your needs.
- Frequency response is 20Hz to 20kHz, with a sensitivity rating of 13mV/Pa. Maximum SPL handling is 130 dB, noise is less than 22dB and impedance is 250 ohms.
- Overall frequency response is generally flat, but for vocal recording, the cardioid pattern exhibits a mild boost in the mid to upper midrange. In omni mode, there is a 6dB bump at around 10 kHz.
- A double-shielded, oxygen-free multicore 12-pin cable connects the mic to the power supply. Connectors are custom-tooled military-grade, gold-plated to ensure optimum signal quality. Audio output is routed via a standard XLR from power supply.
- Solidly built external power supply can be set for 220-240V operation. A ground lift switch is provided should you encounter a ground loop hum. Pads and highpass filter are remotely switched from the microphone’s power supply.
- Includes an industrial-strength, foam-lined aluminum flight case, dedicated power supply, 30’ multicore cable, stand-mount adapter, and a shockmount suspension.

R11 Hypercardioid Vocal Mic
The R11 is a very affordable dynamic mic designed for use in live performance applications such as public speaking, DJ and Karaoke. Hypercardioid pattern minimizes feedback, transformerless design assures reduced noise and low distortion, and Neodymium magnet provides 6dB of noiseless gain. A handy on/off switch is available as well for on-stage control.

Lightweight and compact, the R11 and R21 can be mounted on any standard mic stand (using the supplied mic clip) or handheld for long periods of time. They are also offered in a cost-effective “three-pack” with foam-lined, impact resistant carrying case for convenience when transporting the microphones from venue to venue.

R21 Cardioid Vocal/Recording Mic
Bring a high level of accuracy and audio performance to both live and recording applications. The R21 is a hand held dynamic microphone equipped with a linear frequency response for superior reproduction, a tight cardioid pattern to reduce feedback, and a special shock-mounted element to minimize handling noise. It is also designed to withstand high sound pressure levels. The R21 features gold-plated XLR pins to assure positive connectivity, and a built-in wind screen to protect against most wind and breathing noise. Road-proof design includes rugged zinc alloy die-cast case, heavy gauge mesh and anti-dent ring to ensure reliable performance in the most demanding environments.

S11/S12 Cardioid and Hypercardioid Microphones
The S11 (cardioid) and S12 (hypercardioid) are designed for use in live performance and public address environments. Dynamic design enables them to tolerate high sound pressure levels (SPLs) such as those generated by drums and amplified instruments, and their unidirectional patterns ensure the delivery of a strong, crisp signal from the audio source directly in front of the microphone capsule. The S11 has a linear frequency response that produces a smooth balanced sound, the S12 has a flat, full-range frequency response for exceptional sound quality. The S12 also incorporates a high energy Neodymium mic element for high output and up to 6dB of additional gain. They are both particularly well-suited for use with Samson wireless systems.

- Lightweight (just 8 ounces) and compact (less than 9” long, including head), they can be mounted on any standard microphone stand (using the supplied mic clip) or handheld for long periods of time
- Rugged zinc-casting, silicon anti-dent ring (protects windscreen) and gold-plated XLR connector ensure reliable performance in the most demanding environments.
- Low impedance 600 ohm output enables strong, full bandwidth signal to be sent over long cable runs.
- Mic clip and carry case included

QMIC

Hypercardioid Vocal Microphone
Fast, highly precise and designed for today’s live sound reinforcement and PA situations, the Qmic has a special midrange “peak” at 2 kHz to reproduce vocals with absolute clarity and definition. Manufactured with extreme care and the highest quality components, the Qmic also features a unique humbucking voice coil to eliminate magnetic field interference and a multi-axis shock-mounted mic element that greatly reduces handling noise. A real standout on stage and in the studio, the Qmic is also particularly well-suited for use with Samson wireless systems.

- Full range frequency response with a midrange “presence” peak at 2 kHz for optimum reproduction of vocals and exceptionally clear, crisp sound.
- Unique triple-plated multi-stage windscreen enables “up-close” usage of the Qmic and greatly reduces pops, sibilance and onstage noise.
- Special shock-mounting allows 360° X-Y axis movement of the mic element in order to greatly reduce handling noise.
- Lightweight aluminum humbucking voice-coil eliminates magnetic field interference providing true hum rejection at the source.
- High energy Neodymium element delivers high output and exceptional sound quality.
- Rugged zinc-casting, silicon anti-dent ring (protects windscreen) and gold-plated XLR connector ensure reliable performance in the most demanding environments.
- Includes foam-lined carrying case and mic-clip

Q1 Condenser Vocal Microphone
The Q1 is a hand held condenser vocal microphone that excels in both live and project studio applications. Equipped with a linear frequency response for superior reproduction, it is also designed to withstand high sound pressure levels. Extremely sensitive, it employs a tight cardioid pattern to reduce feedback. A special shock-mounted element minimizes handling noise and provides additional protection. Ideal for live performance vocals, public speaking, project studio vocal.

- Tight cardioid polar pattern minimizes feedback problems and effectively rejects signals not originating directly in front of the mic capsule.
- Special shock-mounting allows multi axis movement of the mic element to greatly reduce handling noise.
- Accepts 11 to 52v DC phantom power
- Withstands high SPLs lending itself to a wide range of miking situations
- Full range frequency response for optimum reproduction and exceptionally clear sound.
- Rugged zinc-casting and silicon anti-dent ring ensures reliable performance in even the most demanding environments.
- Can be mounted on any standard mic stand (using the included mic clip) or handheld for long periods without inducing fatigue.
- Includes foam-lined carrying case for convenience
- Built-in wind screen protects against wind and breath noise. Optional foam windscreen is available for adverse conditions.

High output, linear response, full-frequency reproduction, low feedback and quiet handling. That’s what all Samson microphones deliver. From the versatility and exceptional audio performance of their Qmic, Q1, Q2 and Q3 vocal and instrumental microphones to the accessibly-priced and rock-solid R and S series mics. In addition, the QE and QV headset mics break new ground with a clear, balanced vocal response that stands out in vocal performance and fitness situations.
Cardioid and Hypercardioid Dynamic Mics

Designed for use in live performance, the compact Q2 (cardioid) is equally effective as a vocal or instrument mic, while the Q3 (hypercardioid) is optimized for drum and amplified instrument miking situations. They incorporate a transformerless design for extended low frequency response without distortion, aluminum humbucking voice coil, and a multi-stage windscreen and filter to reduce pops and sibilance. High energy Neodymium mic element delivers high output with unmatched sound quality. Both include a foam-lined carry case, gold-plated XLR connector and a special Euro-metric adapter. They are also particularly well-suited for use with Samson wireless systems.

- Unique triple-plated multi-stage windscreen enables “up-close” usage and greatly reduces pops, sibilance and onstage noise.
- Switchable 10 dB pad enables use with high sound pressure level (SPL) sources.
- Switchable 12dB per octave high pass filter eliminates unwanted low frequency noise.

Q7

Neodymium Dynamic Cardioid Microphone

Maybe the ultimate all-purpose mic. The Q7 is outstanding for vocals in the studio or on stage. It has a high output, low impedance design, and a shock-mounted Neodymium dynamic mic element providing a cardioid pickup pattern. Includes a carry case and mic clip.

- Outstanding vocal mic for stage and studio
- High output, low impedance design
- Neodymium dynamic mic element
- Cardioid pickup pattern
- Multi-axis shock-mount element
- Includes case and mic clip

QV Headset Microphones

Designed for dancers, aerobics and fitness trainers in high-humidity environments, the Qe headset mic is light, comfortable and features a water-resistant mic element to protect against perspiration. This mic can be individually adjusted for a perfect fit. The Qv headset mic allows drummers, keyboardists and other musicians to perform “hands free” vocals without affecting their playing. It produces a full-range sound with a definition to ensure that every word is heard clearly, even at higher volume levels. Both headsets offer a lightweight, low visibility design for unobtrusive use and use a high-quality electret condenser element for high output and exceptional sound quality.

- Full range (50Hz-18 kHz) frequency response for clear, crisp audio. The Qv is flat to 10kHz, while the Qe utilizes a midrange “presence” peak for optimum reproduction of speech.
- The QV is moisture protected, the QE water resistant, making them the choice for aerobics instruction or use in other high-humidity environments.
- Internal RF suppression makes the QE suitable for use in high-RF areas.

QV Headset Microphones

- Outstoming vocal mic for stage and studio
- High output, low impedance design
- Neodymium dynamic mic element
- Cardioid pickup pattern
- Multi-axis shock-mount element
- Includes case and mic clip

Q2

Hypercardioid (Qv) and bi-directional noise cancellation design (Qe) reduces background noise and feedback.

- Compliant molding reduces mic handling noise, and the booms bend smoothly, hold their shape and are rated to withstand over a thousand 90° bends without degrading.
- The mics are powered via the supplied PM4 phantom power adapter which also transforms the impedance from high to low to compensate for long cable runs.
SAMSON CONDENSER MICS

C01 Large Diaphragm Mic
Great for recording vocals, acoustic instruments and for use as overhead drum mic, the C01 is accurate, detailed and smooth with a warm bass and extended top end. This sturdy microphone has a large 19mm diaphragm that produces a smooth flat frequency response. It features a heavy gauge mesh grill screen, a gold plated XLR connector and an LED indicating 48v phantom power.
- Cardioid pickup pattern
- Smooth, flat frequency response (40Hz - 18kHz)
- Includes a swivel stand mount
- Optional SP01 shock-mount available

C02 Pencil Condenser Mic
A beautifully crafted pencil-style condenser mic, the C02 is designed for use with acoustic instruments, cymbals, percussion, piano and in overhead miking situations. Pencil condensers are particularly useful in miking acoustic guitars. The C02 has a highly-focused cardioid condenser pickup pattern, gold-plated XLR connectors comes as a stereo pair in a rugged carry case. Also includes two shock mount mic clips.
- Cardioid Pickup Pattern
- Gold-plated XLR connectors
- Carry case & shock-mounted mic clips included

C03 Multi-Pattern Condenser Mic
An incredibly flexible and great sounding studio condenser microphone, the C03 has two large (19mm) diaphragm capsules and switchable pickup patterns: Super cardioid, omni and figure-8. Ideal for recording multiple vocals at once, acoustic instruments, room miking and more. It has a switchable high-pass filter, selectable 10dB pad, gold-plated XLR connector and 48v phantom power LED indicator.
- Switchable high-pass filter and 10dB pad
- Gold-plated XLR connectors
- Carry Case & swivel mount included
- Optional SP01 shock-mount available

C05 Handheld Condenser Mic
The C05 offers Samson condenser technology in a comfortable to use hand-held design. It has cardioid pickup pattern, smooth, flat frequency response, a multi-axis shock-mounted element, and gold-plated XLR connectors. Includes a convenient carry case and mic clip.
- Cardioid pickup pattern
- 19mm shock-mounted capsule
- Smooth, flat frequency response
- Multi-axis shock-mounted element
- Gold-plated XLR connectors
- Carry case and mic clip included

SAMSON MICROPHONE ACCESSORIES
LS2 Lightweight Speaker Stand
Perfect for small to medium sized pole-mount PA speakers. Adjustable, up to 6” in height. 1” diameter pole fits virtually all speakers. 55 lbs. max weight. Sold as a pair.

TS100 Lightweight Speaker Stand
For larger PA speakers. Strong lightweight aluminum construction. 1” diameter pole fits virtually all speakers. 110 lb. maximum recommended weight.

BL3 Ultra-light Boom Mic Stand
A lightweight collapsible tripod boom mic stand. Super-strong nylon hardware, mic clip included.

BT4 Telescopic Boom Mic Stand
Heavy duty stand, with adjustable boom. All die-cast and steel construction, mic clip included.

MK5 Boom Mic Stand Kit
Includes an adjustable boom mic stand, 18” Samson XLR mic cable, mic clip and windscreen.

MB1 Mini Boom Stand
Perfect for miking kick drums and speaker cabinets. Heavy duty steel and die-cast construction, mic clip included.

DMC100 Drum Mic Clip Set
Set includes three adjustable rim-clip drum mic clips with cable management

PS01 Microphone Pop Filter
Features universal mic stand mounting bracket and flexible metal goose neck.

WS1 Windscreen 5-pack
Five black foam windscreens

MC18 Mic Cable 3-Pack
High quality 18” XLR mic cables

For Any Inquiries Regarding Your Order, Call Our Customer Service:

Q Kick
Dynamic Drum Mic

An incredibly well-made kick drum mic. Rigid, and featuring a large diaphragm element, the Q Kick sounds better than kick drum mics costing hundreds more. Mic stand swivel mount and carry case included.

- Large diaphragm dynamic element
- Cardioid polar pattern reduces feedback
- Gold-plated XLR connector
- Mic stand swivel mount included
- Carry case included

Q Snare
Dynamic Drum Mic

Designed for high SPL and durability, the Q Snare is the right choice for stage and studio. The capsule has been specially designed to accurately reproduce the frequencies and SPL of snare drums. Rigid rim-mount mic clip with cable management and carry case included.

- High SPL dynamic mic in a rugged casing
- Cardioid polar pattern reduces feedback
- Smooth, flat frequency response
- Voiced particularly for snare drum
- Gold-plated XLR connector
- Rigid rim-mount DM C-100 mic clip with cable management included
- Carry case included

HM40
Horn/Woodwind Condenser Mic

This mini condenser is designed for horns, rich and clear, focused, with the ability to handle serious SPL. High output miniature condenser mic element with a sturdy clip and flexible goose neck. Excellent for live performance and recording, the HM 40 has a P-3 three-pin mini XLR connector for use with Samson wireless systems, and also includes PM 5 phantom power adapter (P-3 to standard XLR) for use with standard mic cables. Rugged road case included.

3KIT
3-piece Dynamic Drum Mic featuring Q Tom

Sold in a three pack, the Q Tom is the perfect complement to Samson's Q Snare. It was designed especially for the tone and SPL of tom-toms. Rigid rim-mount mic clips with cable management and carry case included.

5KIT
5-piece Drum Mic Set

A comprehensive drum mic set up in a sturdy road case. Features one Q Kick mic, one Q Snare, three Q Tom mics and a road case.

7KIT
7-piece Drum Mic Set

Everything you could want for miking drums. A complete set of our dynamic drum mics and a pair of C02 pencil condensers for overheads or close-miking cymbals. Features one Q Kick mic, one Q Snare, three Q Tom mics, two C02 pencil condensers and a road case.
SENNHEISER

EVOLUTION SERIES

The New Standard in Live Performance

Offering a complete range of dynamic microphones covering vocals, instrument and backline, Sennheiser’s revolutionary Evolution Series answers every conceivable performance requirement. Combining over 50 years of microphone design experience with state of the art production and testing techniques, Evolution delivers the very highest possible standards of performance and construction at remarkably affordable prices.

In developing the Evolution series, Sennheiser listened to musicians and professional sound engineers to find out what kind of performance and pricing they were looking for. What they heard was that the cost of equipping a band with a full set of good mics was too high, that getting the right mic for the right job was more or less pot-luck and that there was little assurance as to quality at affordable price levels. Sennheiser’s response was Evolution. A single range of quality microphones for every application, every style and type of voice and every instrument on stage or off.

- Rugged construction and component assembly-designed for the rigors of touring- includes fully die cast zinc castings for all vocal microphones.
- Stuning new capsule design, effected through computer aided acoustic design and laser interferometry techniques.
- Advanced suspension and shock-mount techniques and acoustically engineered grills protect each mic from handling noise and impact, further improving performance.
- High feedback rejection pick-up patterns enable greater signal levels to be delivered before feedback occurs.
- Each capable of extremely high SPL handling (150db+) without distortion.
- Neodymium transducer magnets push output levels even higher, making it possible to balance signals against higher levels of on-stage amplification allowing higher levels of stage monitoring.

E 602 Cardioid Instrument Dynamic Microphone

Optimized for high sound pressure levels (160dB) and extended low frequency response, the E 602 is designed for use with bass drums, bass guitar cabs, tubas and other low frequency instruments. The E602 combines the latest lightweight high performance voice coil construction with a traditional large diaphragm capsule design to deliver very low bass response (down to 20Hz) and fast transient signals. Low frequency extension and mid band attenuation produces an ultra smooth pre-shaped signal enabling the mic to be used without corrective EQing, even on the most problematic bass signal sources. Frequency independent cardioid pick-up pattern ensures very high signal output before feedback and isolation from other on-stage signals – making it ideal for stage or studio use.

Kick-Pack

An off-the-shelf, promotional pack, the Kick-Pack is the ideal microphone kit for drummers. It includes an E602 microphone, weighted bass, kickstand, microphone pouch, M C 21N mic cable

Drum-Packs

Get everything you need to hit the stage, and save money too! Three cost-saving and popular Drum Pack configurations are available, and all come with a carrying case

SET604A: three e604 mics
SET604B: two e604 and one e602 mics
SET604C: three e604 and one e602 mics

www.bhphotovideo.com
**E 604 Cardioid Dynamic Drum Microphone**

The space-saving compact E604 is ideal for low visibility, close miking techniques. Frequency response and cardioid pick-up pattern are optimized for drum sets and other percussion instrument miking—it also produces exceptional results on all forms of brass and woodwind. An integral stand mount screws directly onto mic stands and included clip attaches mic to rim of drum. Very high sound pressure level handling, in excess of 160dB, is combined with a balanced, clear, low distortion signal similar to a high-end studio condenser microphone. Lightweight voice coil provides extended high frequency and rapid transient response. With its tough reinforced glass fiber body, the E604 can take direct hits from drumsticks without flinching and still provide that ATTACK you’ve been looking for.

Quick Mount Drum Clamp for E 604 (MZH504) ........................................ 28.95
Swivel Joint for E 604 (MZJ504) ................................................................. 29.95

**E 608 Clip-On Gooseneck Dynamic Instrument Mic**

The world’s smallest dynamic microphone, with a full size sound quality. Ideal for almost invisible dip miking of woodwind, brass and drums. Newly developed clamp and goose-neck mounting enables the capsule to be positioned close to the signal source for high realism, high level output. Extensive damping and shock mounting isolates the capsule and signal from extraneous vibration, noise and impact. Humbucking coil protects against induced electrical interference. A high strength, reinforced glass-fiber casing protects the capsule from impact damage.

**E 609 Silver Supercardioid Dynamic Microphone**

The e609 Silver is based on the legendary MD 409 microphone. Able to withstand high SPLs without distorting, the e609 Silver's flat-profile capsule facilitates extremely close miking of guitar cabinets and is also suitable for drum miking, particularly toms. The e609 Silver’s super-cardioid design improves isolation in live sound reinforcement and recording applications while its increased output and wider frequency response improves performance. Neodymium magnet with boron keeps mic stable regardless of climate. Falcon ring produces consistent sound over time. Its sound inlet basket, made of refined steel, is distinguished by a unique silver address side.

EVA 815s Cardioid Dynamic Mic
The E815s is a rugged, great-sounding cardioid mic with a noiseless on/off switch, and it comes complete with an XLR-to-1/8” cable and 1/4” adapter. This is the most affordable way to get a mic that is perfect for multi-tracking, for use with digital recorders, and for use with karaoke systems and DJ mixers.

E 825s Cardioid Dynamic Mic
An entry level vocal and general purpose dynamic mic, the E825’s smooth sound, startling clarity and extended high frequency response give vocals a whole new ‘attitude.’ A well-balanced frequency response delivers a warm, clear and transparent signal, while its cardioid pick-up pattern provides excellent feedback and spillage rejection. A hum-compensating cable reduces electrical interference, while a neodynum ferrous magnet with boron keeps the mic stable regardless of the climate. Ideal for general vocal and instrument miking and club PA. Rugged metal construction and internal damping isolates handling noise. Complete with silent on-off switch.

E 835s/E835s Cardioid Dynamic Mics
Quality vocal mic with performance with uniform frequency pick-up pattern that maintains signal quality when moving on and off axis during performance. Gentle presence boost to even tonal response ensures clarity and projection. Minimal proximity effect provides consistently clear bass end performance when singing closer to or further from capsule. Cardioid pick-up pattern provides good signal isolation and feedback rejection, enabling higher sound levels to be obtained. Metal construction and internal shock-mount system minimizes handling noise. Lead vocal stage mic, designed to perform under pressure. Also available with On/Off switch (835-S).

E 845s/E 845s Super-Cardioid Dynamic Mics
High quality, powerful performance, vocal mic. Extended high frequency response and super-cardioid pick-up pattern for higher signal output, cuts through high on-stage sound levels. Smooth warm tonal response and full dynamic range, with presence lift for vocal clarity and projection. Consistent on/off axis and proximity response maintains sound quality with moving, providing greater on-stage freedom. Full metal construction and extensive suspension and shock-mounting minimizes handling noise and signal interference. High output performance microphone, offering power, clarity and projection. Also available with On/Off switch (845-S).

E 855 Super-Cardioid Handheld Dynamic Mic
Top-of-the-range, fully professional vocal mic utilizing the very best in dynamic mic technology to achieve new standards of quality and performance. Searing vocal reproduction is matched with bullet-proof construction. Extended dynamic range and assertive presence are achieved with a super-smooth frequency response, delivering the highest quality signal with maximum vocal projection and the lowest possible distortion. Extended high frequency response, combined with the super-cardioid pick-up pattern, enables the mic to handle the highest vocal levels without feedback. Full metal construction and sophisticated shock-mount suspension shields and protects the capsule in the most rigorous conditions.
SENNHEISER
EVOLUTION HANDHELD MICROPHONES

**E 865**
Condenser Vocal Mic

The E865 represents the first condenser microphone in the acclaimed Evolution Series. A live performance, lead vocal microphone, the E 865 easily cuts through high on-stage levels by virtue of its detailed and natural 40 Hz-20 kHz reproduction and superb transient response. Its smooth super-cardioid polar pattern rejects feedback with low, off-axis coloration. The E 865 withstands sound pressure levels of up to 150 dB, and deftly suppresses pop noise. While it picks up the finest sonic nuances, the E 865 is at the same time rugged, benefiting from high-quality workmanship and a robust all-metal housing. Includes pouch and mic clip.

**3-packs**
Evolution 3-packs include three evolution mics, three M ZQ 800 mic stand clips, and three mic pouches—all for the cost of two microphones!

**MD-421 II Dynamic Microphone**

The MD 421 II continues the tradition of the MD 421 which has been one of Sennheiser's most popular dynamic mics for over 35 years. The large diaphragm, dynamic element handles high sound pressure levels, making it a natural for recording guitars and drums. The MD 421 II’s full-bodied cardioid pattern, and five-position bass control make it an excellent choice for most instruments, as well as group vocals, or radio broadcast announcers. One listen and you’ll know why it’s a classic.

- Glass composite housing and hardened stainless steel basket—rugged and durable
- Five position bass roll-off switch compensates for proximity effect
- Effective feedback rejection
- Easy handling due to pronounced directivity
- Acoustic components are protected from dust and humidity
- Internal bass tubes—accurate low end response
- Handles exceptionally high sound pressure

**MD-431 II Speech and Broadcasting Mic**

Sennheiser’s best dynamic mic for live vocals just got better. The supercardioid MD 431 II has a custom-tailored frequency response to achieve added transparency. A nearly frequency-independent, polar pattern offers incredibly high gain before feedback and provides uncolored off-axis response. Its new rugged housing has a steel-mesh grille, a shock-suspended capsule, and a hum-bucking coil. It features a noiseless, magnetic reed on/off switch which is recessed in its handle, and internal electronics for refining proximity effect.

- Exceptionally good feedback rejection
- Shock mounted capsule—low sensitivity to handling noise
- Excellent for voice recognition
- On/off switch (reed switch) can be locked in the ‘on’ position if required
- Consistent polar pattern and proximity compensating electronics—excellent tonal consistency; integrated pop filter

**MD-441 Versatile Dynamic Mic**

The MD 441 is acknowledged as the most accurate and versatile dynamic mic available. It has a nearly textbook perfect supercardioid pattern, a five-position low frequency contour switch, a two-position high frequency switch, a critically dampened internal shock suspension, and a hum bucking coil. Perfect for vocals and virtually every instrument.

- Excellent feedback rejection
- Spring capsule mounting—low sensitivity to handling noise
- Five position bass roll-off switch—compensates for proximity effect
- Integral pop filter
- Brilliance (treble boost) switch—added speech intelligibility

MD46 Handheld Dynamic ENG/EFP Microphone

Developed for NBC and the 2000 Sydney Olympics, the MD46 is a cardioid interview mic with studio quality. Unlike omni microphones that pick up everything equally, including background noise, the MD46 focuses on the subject, increasing clarity. However, the tendency for a cardioid mic to emphasize plosives makes them undesirable in the field. To eliminate this problem, Sennheiser put a double layer in the sound inlet basket to reduce the tendency for the microphone to emphasize plosives, enabling the MD46 to highlight the desired sound (optional windscreen is still available though, if needed).

- Features include a traditional long handle, wind attenuation and off-axis rejection
- Possesses an extended high-frequency response, warm lows, and a clean midrange.
- With low handling and wind noise, and the ability to eliminate vocal popping, it is the ideal interview tool for ENG work.
- Frequency response of 40Hz-18 kHz allows the MD46 to be used in a pinch as an announcer or guest mic in remotes, auxiliary studios or at interview turrets.

MKH-418S Shotgun Microphone

The MKH 418S is a compact MS stereo shotgun microphone utilizing Sennheiser’s exclusive RF condenser microphone technology. The MKH 418S incorporates a mid capsule based on that of the legendary MKH 416 which is combined with a newly designed figure-of-eight side capsule. Its high constant articulation, excellent feedback rejection and functional versatility make the MKH 418S a superb all-round cost-effective choice for film, television, and multi-media applications.

MKE-300 Camcorder Microphone

The MKE-300 complements the excellent video capabilities of DV camcorders with the superior audio they deserve. The electret condenser element delivers sonic clarity and high output. Ideally suited for mounting on camcorders due to its integrated shoe assembly, the MKE-300 is compact and extremely lightweight (2.1 oz.). Given its super-cardioid polar pattern, the MKE-300 has the ability to pick up only those sounds that correspond to the scene being filmed and rejects disturbing ambient noise. This high directivity also attenuates the camcorder’s autofocus and zoom motors. The mic’s suspension mount assembly and integrated windscreen virtually eliminates handling and wind noise. Includes a mini cable.

SENNHEISER

K6 SERIES

Modular Electret Condenser Microphone System

The K6 Series is a modular condenser microphone system of exceptionally high quality designed to bring uncompromised studio quality sound and ruggedness to the broadcast and field recording markets. Available with a wide variety of interchangeable modules for different powering arrangements, polar patterns, and capsule sizes, the K6 System provides a flexible tool for all recording and sound reinforcement work. At the heart of the K6 series is the K6 power supply. The K6 is the backend of the multimike system and accommodates a balanced, low impedance 3-pin XLR output connector. The modular design of the K6 power supply allows you to quickly convert from any one of six microphone capsules simply by unscrewing the current capsule from the K6 and replacing it with another. Each capsule has a different polar pattern making the K6 series flexible enough for any situation. Choose from omni-directional to highly directional shotgun mics suitable for boom pole and camera mounting as well as a lavalier capsule ideal for on air talent and live theater applications. A K6 Power Module plus a few mic capsules gives you the flexibility that would otherwise require investing in a number of individual mics.

Omni-Directional Lavalier Capsules

MKE2-60
The industry-standard for TV and theatrical production, this sub-miniature omni lavalier is unobtrusive and easy to conceal. Its accurate frequency response reproduces natural, uncolored sound. An extremely thin low mass diaphragm exhibits extraordinary transient response. The stranded, stainless-steel reinforced cable provides maximum tensile strength and low contact (clothing) noise. May also be used as a clip-on instrument mic.

MKE102-60
Similar in size to the MKE2 with several significant differences. The capsule head can easily be detached for use with straight or right angle cables. Highly immune to moisture, it is a natural for theater or outdoor productions. Frequency response is optimized for speech pickup with its 4 to 6 dB rise at 8kHz. Extremely low self-noise makes it ideal for broadcast as well.

MKE104-60
The MKE104 is the same as the MKE102 except it is a cardioid mic, which makes it ideal for applications that require isolation of the source. Use in live musical performances and for reporting when there are several announcers covering a scene with different audio feeds.

K6/K6P Powering Modules

The heart of the system, the K6 Module supplies power to any capsule in the series. It can run for 150 hours on a single AA battery, or can be used with 12 to 48v phantom power (AA battery doesn’t drain while phantom-powering). The K6 features an on/off switch with LED battery status indicator; and a bass roll-off switch which will compensate for proximity effect in close miking, or for wind rumble in field recording. The K6P phantom powering module provides an alternative to the K6 that is 42mm shorter and 15 grams lighter, while offering the same integrated bass roll-off switch. Ideal for fixed installations and applications on camera or on stage where size is a factor and phantom power availability is not a concern.

**MICROPHONES**

**MICROPHONE CAPSULES**

The K6 Series M E capsules exhibit exceptionally high sensitivity, great “reach” characteristics, and very low self-noise. The result is a versatile line, from omnidirectional to long shotgun models, that offers extremely natural sound reproduction for digital recording and other critical applications.

### ME-62 Omni-Directional Capsule

Very broad and smooth frequency response, without proximity effect. The M E62's low handling noise and integrated pop screen make it ideal for interviews and live recording. Great for the recording of ambient sounds. Frequency response: 20Hz-20kHz ±3 dB. **139.95**

### ME-64 Cardioid Capsule

Feedback resistant due to the ME-64's well defined directional polar pattern as well as its extended frequency response, make this microphone capsule ideal for use in sound reinforcement or recording in noisy environments. Frequency response: 50Hz - 20kHz ±2.5 dB. **159.95**

### ME-65 Super Cardioid Capsule

The M E-65 is a super-cardioid hand held microphone especially suited to vocal and speech applications. It has a matte black, anodized, scratch-resistant finish that will look great on camera. The linear directivity across its entire frequency range will ensure excellent feedback rejection. Can handle extremely high sound pressure levels, has high sensitivity, a wide frequency range and integrated pop filter. Frequency response: 40Hz - 20kHz ±2.5 dB. **179.95**

### ME-66 Short Shotgun Capsule

The M E66 offers classic Sennheiser shotgun mic sound, extremely high sensitivity, and very low self-noise, resulting in unprecedented “reach” characteristics for a mic that can be powered by AA batteries. Extremely smooth frequency response provides for neutral, uncolored sound in the low- and mid-range frequencies and a gentle boost in high frequencies, for increased intelligibility. Great for interviews in crowded situations, as a camera microphone for ENG, for unobtrusive theater sound reinforcement and as a podium mic. Frequency response is 50Hz - 20kHz ±2.5 dB. **209.95**

### ME-67 Long Shotgun Capsule

The M E-67 is a long shotgun mic capsule designed primarily for capturing low-level sounds. Its extremely directional design brings distant sound sources into close range, with the extremely tight focus of the on-axis signal. As with the M E66, its frequency response has been optimized for a natural presentation, with good articulation of high frequencies. With a precise combination of high sensitivity and low self-noise, the M E67 is outstanding in difficult acoustic environments. Frequency response: 40Hz - 20kHz ±2.5 dB. **239.95**
RF Condenser Microphones

MKH condenser mics represent the perfect fusion between exceptional sound and precision engineering, and have long been the choice of the most demanding professionals in the broadcast, theatrical, and motion picture industries. They are specifically well-suited for use with digital recording devices, which reveal the sonic limitations of less accurate microphones. Their extremely transparent sound, high sensitivity, and excellent signal-to-noise ratio are perfectly complemented by their exceptionally low inherent self-noise, extremely low distortion, and unusually flat, linear frequency response.

Their lightweight, durable, and weather-resistant construction makes them suitable for outdoor applications. The MKH Series consists of eight microphones with different pickup patterns, and are tonally consistent across the entire range because of their lack of coloration. In every MKH mic, the capsule is part of a tuned circuit in a radio frequency system. This makes all of them highly immune to humidity, and is responsible for their exceptionally low self-noise. In addition, their symmetrical push-pull capsule design incorporates optimum resistive loading, which virtually eliminates intermodulation distortion.

MKH-20 Omni-Directional
Low distortion push-pull element, transformerless RF condenser, flat frequency response, diffuse/near-field response switch (6 dB boost at 10 KHz), switchable 10dB pad to prevent overmodulation. Handles 142dB SPL with a high output level. Ideal for concert, Mid-Side (M-S), acoustic strings, brass and wind instrument recording.

MKH-30 Figure-Eight
The symmetrical transducer design of the MKH-30 produces an unusually wide and smooth frequency response. Particularly suited to soloists and small instrumental groups, it can also serve as an 'S' or side microphone in M/S stereo applications. As a support microphone it is particularly useful in the effective suppression of sounds from adjacent sound sources.

MKH-40 Cardioid
Highly versatile, low distortion push-pull element, transformerless RF condenser, high output level, transparent response, switchable proximity equalization (-4dB at 50Hz) and pre-attenuation of 10dB to prevent overmodulation. Excellent results have been achieved in vocal applications when used with a pop screen. Recommended for most situations, including digital recording, overdubbing vocals, percussion, acoustic guitars, piano, brass and string instruments, mid-side (M-S) stereo, and conventional X-Y stereo.

MKH-50 Super-Cardioid
The super-cardioid MKH-50 offers a higher attenuation of side and rear sounds than the cardioid MKH-40. It is principally designed for use as a soloist's or spot microphone for applications requiring a high degree of side-borne sound muting and feedback rejection while maintaining the integrity of on- and off-axis sound fields.

MKH-60 Super-Cardioid/Lobe
Short interference tube RF condenser, lightweight metal alloy, transformerless, low noise, symmetrical capsule design, smooth off-axis frequency response, switchable low cut filter (-5dB at 100 Hz), high frequency boost (+5dB at 10kHz) and 10dB attenuation. Handles very high SPL (135 dB). Widely used in film, theater and TV productions. Ideal for broadcasting, sports recording and interviews in crowded or noisy environments. Excellent for studio voice-overs.

MKH-70 Super-Cardioid/Lobe
Extremely lightweight, rugged, long shotgun. Low distortion push-pull element, transformerless, low noise, switchable presence (+5dB at 10KHz), low cut filter (-5dB at 50Hz), and 10dB pad. Handles 133dB SPL with excellent sensitivity and high output level. Ideal for video/film studios, theater, sporting events, and nature recordings.

MKH-800 Variable Pattern Condenser Mic
Superior microphone for any recording application, the MKH-800 offers high clarity and the absolute minimum coloration. Frequency response on the high-end extends to 50KHz—far beyond the audible threshold—resulting in superior transient response. In addition to five switchable pick-up patterns (omni, wide cardioid, cardioid, supercardioid and figure-8), it features include a built-in LED for on-axis alignment, switchable treble emphasis, roll-off filter and pre-attenuation pad.

MKH-416P48-U3 Super-Cardioid/Lobe
Transformerless, RF condenser designed as a combination of pressure gradient and interference tube microphones. Very good feedback rejection, low proximity effect, 128dB SPL. Rugged and resistant to changing climate conditions. Ideal for boom, fishpole, and camera mounting as a long-distance microphone for video, film, and studio recording. An excellent ENG mic for reporters or as a podium or lectern microphone.
MKH SERIES ACCESSORIES

**K6 Series Windscreen**
Standard foam windscreen reduces wind and popping noise.
- MZW-64 for M E-62, M E-64, Grey ........................................... 22.95
- MZW-66 for M E-66, Grey .................................................... 36.95
- MZW-67 for M E-67, Grey .................................................... 42.95

**K6 Series Pro Windscreen**
Black velour coated foam windscreen offer even greater protection for reducing wind and popping noise.
- MZW-64PRO for M E-62/64 .................................................. 29.95
- MZW-65PRO for M E-65 ......................................................... 64.95
- MZW-66PRO for M E-66 ......................................................... 64.95
- MZW-67PRO for M E-67 ......................................................... 96.50

**MKH Series Windscreen**
Open cell foam material represents the best compromise between minimal effects on the frequency response and maximum protection against wind and pop noise.
- MZW-41 for MKH-20/40, grey ............................................. 8.95
- MZW-61 for MKH-60, black .................................................... 82.95
- MZW-71 for MKH-70, black .................................................... 129.95
- MZW-415 for MKH-416, grey .............................................. 42.95

**K6 Series Mic Adapters**
- MZQ6 Camera Mount ................................................. 38.95
- MZQ200 Stand Mount ..................................................... 28.50
- MZS6 Shock Mount ........................................................ 36.95
- Elastic Suspension Shock Mount (MZSCAM) With shoe mount for camera use ........................................ 39.95

**MZA14-P48**
Phantom Power Supply
Battery operated, 48v phantom power supply with XLR balanced input/output as well as battery test, -10/-20dB pad and 80/140Hz high pass filter controls ........................................... 383.95

**MZS20-1 Pistol Grip Shock Mount**
MZS20-1 Combination shock mount, pistol grip and stand adapter for M E-66 and M E-67 as well as MKH Series Microphones
- Required for mounting in MZW “blimp” windscreen
- May be boom or stand mounted. Requires MZA-216 adapter (included).
- Includes interchangeable mike clips for MKH-416/ MKH-816, or MKH-20 through MKH-70

**MZS20-1**
- MZW-64: Grey ................................................................. 22.95
- MZW-66: Grey ................................................................. 36.95
- MZW-67: Grey ................................................................. 42.95

**Blimp Windshields**
(Require MZS20-1)
- MZW20-1: Rigid “blimp” windscreen for MKH-20/30/40/50 ........................................... 229.95
- MZW60-1: Rigid “blimp” windscreen for M E66/M KH-416/M KH-60 ........................................... 229.95
- MZW70-1: Rigid “blimp” windscreen for M E-67/M KH-70 ........................................... 269.95

**Long Hair Wind Muffs**
Long hair wind muffs greatly reduce high velocity wind-noise when used with MZW series blimp windshields and MZS-20-1 pistol grip/shock mount.
- MZH20-1: Requires MZW 20-1 “blimp” windscreen (for MKH-20/30/40/50) .............. 159.95
- MZH60-1: Requires MZW 60-1 “blimp” windscreen (for M E66/MKH-416/MKH-60) .............. 149.95
- MZH70-1: Requires MZW70-1 “blimp” windscreen (for M E-66/M E-67 and MKH-70) ....... 169.95

**Adapters and Clips**
- Piggyback Mic Holder (MZD30)
  For any combination of two MKH20, 30, 40 or 50 ........................................... 54.95
- Swivel-Mount Yoke (MZG415-3)
  For MZS shock mounts ....................................................... 48.95
- Double Joint Flexible Stand Adapter (MZQ31)
  Fits M KH20, 30, 40, and 50 ........................................... 69.95

**Shock Mounts**
- Elastic Suspension Shock Mount (MZS40)
  For M KH20, 40, and 50 ........................................... 169.95
- Shock Mount (MZS80)
  For M KH80 and M KH30 ........................................... 188.95

‘PG’ PERFORMANCE GEAR SERIES

Shure® PG48 and PG58 Cardioid Dynamic Speech and Vocal Microphones

High performance dynamic cardioid microphones tuned specifically for vocal applications, the PG48 is designed for spoken word applications, while the rugged PG58 is tuned to accentuate the clarity of lead and back-up vocals. Both feature a tailored frequency response that is smooth and extended. Their cardioid polar pattern picks up the most sound from in front of the microphone and some sound from the sides. Less susceptible to feedback in high volume settings.

- Dynamic cartridge has a simple, rugged coil. Handles extreme volume levels without distortion.
- Cartridge includes a neodymium magnet for high output level
- Internal shock mount for reduced handling noise (PG58 only)
- Durable metal construction
- On/off switch for onstage control
- Steel mesh ball grille with integral “pop” filter reduces explosive breath sounds and wind noise
- Includes 15’ cable, break-resistant mic clip and storage bag

PG57 and PG81 Cardioid Dynamic and Cardioid Instrument Microphones

A versatile microphone for amplified or acoustic instruments, the PG57 is a cardioid dynamic mic with a tailored frequency response that is smooth and extended. Tuned specifically for instrument applications. A sensitive, flat response microphone ideal for acoustic instruments, the PG81 is a cardioid condenser mic with a flat frequency response that is wide and uniform. Provides consistent sensitivity through the frequency range.

- Cardioid polar pattern picks up the most sound from in front of the microphone and some sound from the sides. Less susceptible to feedback in high volume settings.
- Internal shock mount for reduced handling noise
- Durable metal construction
- Dynamic cartridge has a simple, rugged coil. Handles extreme volume levels without distortion. Cartridge includes a neodymium magnet for high output level. (PG57)
- Hardened steel mesh tapered grille that resists wear and abuse (PG57)
- On/off switch for onstage control
- Condenser cartridge has a lightweight, sensitive diaphragm. Precisely and smoothly captures sound nuances. Powered by AA battery or phantom power supply. (PG81)
- They include 15’ cable, break-resistant mic clip and storage bag
PG52 and PG56 Drum Mics

Cardioid dynamic mics with a tailored response, the PG52 is a high-performance microphone tuned to capture low-end punch (kick drum, bass amp) while the PG56 is a compact drum microphone for close miking of snare drums, rack/floor toms and percussion instruments.

- Cardioid polar pattern picks up the most sound from in front of the mics and some sound from the sides. Less susceptible to feedback in high volume settings.
- Tailored frequency response is smooth and extended.
- Dynamic cartridge has a simple, rugged coil. Handles extreme volume levels without distortion.
- Cartridge includes a neodymium magnet for high output level.
- Durable metal construction.
- Integral stand mount.
- Internal shock mount for reduced handling noise.
- Hardened steel mesh tapered grille that resists wear and abuse.
- They include 15’ cable and bag.

When you buy a Shure microphone you are buying uncompromised precision, performance, ruggedness and reliability in “real world” usage. To back it up, Shure has the most stringent quality assurance testing program in the business. Before it can bear the Shure name, a mic must be able to withstand extended exposure to extreme temperatures (-20° to 165°F) and humidity (100% at room temperature), ultraviolet rays, salt spray, alcohol, sand and water. Also, violent vibrations, “drop tests” (repeated drops from six feet) and ten days of repeated cycling between simulated arctic and tropical environments. If the mic doesn’t work after all this, it’s not a Shure. This dedication has made Shure “The Sound of the Professionals Worldwide” for decades. And that’s why you’ll find Shure microphones virtually everywhere—on stages, lecterns, remote broadcast locations and production sets all over the world.

PGDMK4
Drum Mic Kit
An essential drum mic package. The PGDMK4 drum mic kit includes three PG56 snare/tom microphones, one PG52 kick drum mic, three A50D drum mounts, four 15’ XLR-XLR cables and a durable carrying case.

PGDMK6
Drum Mic Kit
A complete drum mic package. The PGDMK6 drum mic kit includes three PG56 snare/tom microphones, one PG52 kick drum microphone, two PG81 instrument mics, three A50D drum mounts, six 15’ XLR-XLR cables and a durable carrying case.

SHURE

SM SERIES PERFORMANCE MICROPHONES

SM48/SM48s Dynamic Cardioid Vocal Microphones

The SM 48 is a unidirectional dynamic microphone designed for professional sound reinforcement, studio recording, and broadcasting applications. It maintains a true cardioid pattern throughout the frequency range, ensuring high gain before feedback and rejection of off-axis sound. Perfect for singers on the way up, the tailored frequency response is ideal for vocals. A presence rise brightens mid-range performance, and a low frequency rolloff controls proximity effect. Includes a shock mounted cartridge, a steel mesh grille, and an integral “pop” filter. The SM 48S adds a lockable On/Off switch.

- Cardioid pickup pattern rejects off-axis sound and provides superior gain before feedback
- Shock-mounted cartridge for exceptional ruggedness and reduced handling noise
- Frequency response tailored for vocals with brightened mid-range. Low-frequency bass rolloff controls proximity effect

SM48 Dynamic Microphone
SM48s Dynamic Microphone with on/off switch

SM57 Dynamic Cardioid Vocal/Instrument Mic

A true classic, the SM-57’s outstanding performance and diversity make it the “workhorse” of stages and studios worldwide. Ideal for musical instrument pickup or for vocals, the SM-57’s carefully contoured frequency response means clean, well-defined instrument reproduction and rich, warm vocal pickup on lecterns or stages. Extremely effective cardioid pickup pattern isolates the main sound source while minimizing background noise. In the studio use it to record drums, guitar, and woodwinds. It is also used on the podium of the U.S. President for over 30 years.

- Contoured frequency response for clean, instrumental reproduction and rich vocal pickup
- Professional-quality reproduction for drum, percussion, and instrument amplifier miking
- Ideal for narration/dialogue, vocal music and rhythm pickups
- Unusually effective cardioid pattern isolates the main sound while minimizing reflections caused by poor studio or location acoustics and background noise
- Shock-mounted cartridge reduces mic handling noise and mic stand rumble
- Extremely durable under the heaviest use
- Frequency response: 40 to 15kHz
- Designed for both field and studio use — hand-held or on a stand. Includes a break-resistant swivel adapter that rotates 180°

SM48-LC Dynamic Mic without a cable
SM48S-LC Dynamic Mic with on/off switch, no cable
SM-58 Dynamic Cardioid Vocal Microphone

The SM 58 is a unidirectional (cardioid) dynamic vocal microphone designed for professional vocal use in live performance, sound reinforcement, and studio recording. Cardioid pickup pattern isolates the main sound source while minimizing unwanted background noise. In addition, it has a highly effective, built-in spherical filter that minimizes wind and breath “pop” noise. The SM 58 has a tailored vocal response for a sound which is a world standard. Rugged construction, a proven shock mount system, and a steel mesh grille ensure that even with rough handling, the SM 58 will perform consistently. Outdoors or indoors, singing or speech – the SM 58 is the overwhelming choice of professionals worldwide.

- Unusually effective cardioid pickup pattern minimizes background noise and undesirable effects of studio and location acoustics. Rear and side rejection uniform to very low frequencies and completely symmetrical about microphone axis
- Shock-mounted cartridge reduces mic handling noise and mic stand rumble
- Designed for both field and studio use — hand-held or on a stand. Includes slip-in swivel adapter
- Self-contained spherical filter controls explosive breath sounds (“pop”) and wind noise in outdoor locations

SM 58
SM 58LC without a cable
SM 58C with a 25´ XLR cable
SM 58S with on-off switch, no cable

SM-86/SM-87A Cardioid/Supercardioid Condenser Vocal Microphones

Ideal for professional use in live performance with stage or personal in-ear monitors, the SM -86 is an extremely rugged microphone designed to withstand the rigors of touring while delivering studio-quality sound. The tailored frequency response of the SM-86 reproduces vocals with clarity. A cardioid pickup pattern isolates the main sound source while minimizing unwanted background noise. The built-in three-point shock mount minimizes handling noise, and a two-stage pop filter reduces wind and breath “pop” noise.

The choice of the world’s top entertainers, the SM87A features a smooth frequency response that is tailored for warm, rich vocal reproduction. Supercardioid polar pattern permits high gain without feedback and rejects unwanted sounds. A three-stage wind/pop filter minimizes breath noise and an excellent internal shock mount minimizes mic stand rumble and handling noise.

SM-86 Features
- Combines the ruggedness of Shure’s SM line with the studio quality audio of a Shure condenser— the first model to join the SM line in over 10 years.
- Cardioid polar pattern and a wide frequency response of 50 Hz to 18 kHz. The mic additionally delivers high gain before feedback and a tailored frequency response for a clear reproduction of vocals.
- Equipped with an integral two-stage windscreens and pop filter
- Built-in, three-point shock mount virtually eliminates stand and handling noise
- Housed in a rugged, silver-colored, enamel-painted enclosure incorporating a steel-mesh grille.
- Requires phantom power for operation

SM-87A Features
- Flat frequency response for greater gain before feedback
- Low-frequency roll-off reduces low-frequency rumble and handling noise and compensates for proximity effect
- Low RF and magnetic hum susceptibility
- Low distortion output and wide dynamic range for a variety of load impedances
- Operates on 11 to 52v DC phantom power
Shure's BETA series includes ten premium microphones—some of which have proven legendary performance. The BETA series' outstanding responsiveness to vocals and instruments, specifically their maximum isolation from other sound sources and minimum off-axis coloration, have made them the most respected and widely used microphones in the world. For example, the Beta 58A is unequivocally the best dynamic mic for demanding live vocal applications while the Beta 57A excels in instrument miking applications. They both employ a super-efficient neodymium magnetic circuit design that provides maximum output voltage for improved S/N ratio. All Beta Series mics offer Shure reliability for years of trouble-free performance.

**Beta 57A • Beta 58A**

**Instrument and Vocal Dynamic Supercardioid Microphones**

Designed for professional sound reinforcement and project studio recording, the high output Beta 57A provides optimal warmth and presence making it excellent for acoustic and electric instruments including drums, guitar amplifiers, brass and woodwinds, as well as for vocals. Grille design lets you take better advantage of proximity effect.

The Beta 58A is a high-output dynamic vocal mic designed for professional sound reinforcement and project studio recording. The Beta 58A has a shaped frequency response that is ideal for close-up vocals. And the superb performance of this mic is not affected by rough handling because of its rugged construction, pneumatic shock mount system, and hardened steel mesh grille. Typical applications include lead vocals, backup vocals and speech.

Both the Beta 57A and Beta 58A maintain a true supercardioid pattern throughout their frequency range. This ensures high gain before feedback, maximum isolation from other sound sources, and minimum off-axis tone coloration. Both also incorporate a Neodymium magnet for high signal-to-noise ratio output, and an advanced electro-pneumatic shock mount design to effectively minimize transmission of handling or stand noise.

Beta 87A • Beta 87C
Supercardioid & Cardioid Condenser Vocal Mics

The choice of performers and audio technicians around the world, the Beta 87A and Beta 87C are premium quality vocal microphones with superb accuracy, detail, and rich vocal production. Used in professional sound reinforcement, broadcasting, and studio recording applications, they combine superb performance with the ruggedness required for touring and field production.

The Beta 87A (supercardioid) and Beta 87C (cardioid) provide maximum isolation while offering high gain before feedback. Both feature a controlled low-frequency roll-off that compensates for proximity effect and prevents the “boomy” sound often associated with close-up use. Ideal for live sound and music production, they maintain performance characteristics even at very high sound pressure levels (SPL). Additional features include improved shock mounting and a hardened, dent-resistant steel mesh grille with a built-in pop filter.

### Beta 87A Only
- Superior gain before feedback
- Low-frequency roll-off compensates for proximity effect
- Advanced cartridge shock-mount system reduces handling noise and absorbs mechanical shocks
- Very low susceptibility to RFI and electromagnetic hum
- Phantom powered (11-52v DC)

### Beta 87C Only
- Built-in three-stage pop filter minimizes breath pop and wind noise
- High S/N ratio of 69dB (Beta 87A) and 72dB (Beta 87C)
- Maximum SPL of 142dB (Beta 87A) and 139dB (Beta 87C)
- Wide dynamic range (117dB) and low distortion characteristics.
- Thick handle for a comfortable feel when hand-held. They include a break-resistant swivel adapter
- Shure ruggedness and reliability

### They Both Feature
- Adjustable headband, detachable boom mount, and flexible wire frame for maximum comfort and optimum mic placement
- Comfortable earpieces made with soft, latex-free “Dynaflex”
- Corrosion resistant and easy-to-clean
- Interchangeable frequency response cap (two types included) can be replaced if ever clogged by sweat or make-up
- Ideal for use in theatre, event production, trade shows, and seminars

### Beta 54
Designed for active professional sound applications, the Beta 54 Headworn Vocal Mic provides incredible sound quality in an impressively light and inconspicuous design. The Beta 54 features an extended frequency response, omnidirectional polar pattern, and optimized sensitivity perfect for close microphone placements.

- Adjustable headband, detachable boom mount, and flexible wire frame for maximum comfort and optimum mic placement
- Comfortable earpieces made with soft, latex-free “Dynaflex”
- Corrosion resistant and easy-to-clean
- Interchangeable frequency response cap (two types included) can be replaced if ever clogged by sweat or make-up
- Ideal for use in theatre, event production, trade shows, and seminars

**SHURE**

**BETA SERIES MICROPHONES**

**Beta 98 Miniature Supercardioid Condenser Mic**

For toms, snares and percussion instruments, no other mic compares to the Beta 98. A versatile, high performance mini-condenser microphone, the Beta 98 excels at professional sound reinforcement or recording. High maximum sound pressure level (SPL) of 160 dB makes it ideal for a variety of acoustic instruments, including drums, percussion, piano, reed, wind, and string instruments. It can also be used for amplified guitars. The Beta 98 has an ultra-uniform supercardioid pickup pattern that provides high gain before feedback and excellent rejection of unwanted noise. It also includes an in-line preamplifier that accepts 48v DC phantom power. Finally, an optional cardioid cartridge is also available, allowing you to easily adapt the mic to different applications.

The A98D drum mount has a specially designed gooseneck that allows the microphone to be positioned freely, yet holds it securely in place once the ideal placement has been found.

The hardware has been redesigned for quicker, more secure, rim-mounting without the need for a drum key. Flexible gooseneck lets you position the mic in practically any configuration, so you get a virtually unlimited choice of sound options. Its unobtrusive design and compact size help the Beta 98D/S reduce stage clutter to an absolute minimum.

The Beta 98 is available in two variations: **Beta 98/S** and **Beta 98 D/S**

- **Beta 98/S**: Includes microphone, 25´ lightweight cable, in-line preamplifier, storage bag and shockmount swivel adapter
- **Beta 98D/S**: Includes microphone, detachable 15´ heavy-duty Triple-Flex cable, in-line preamplifier, storage bag and A98D drum mount

**Optional Accessories**

- RPM108 Cardioid cartridge...........................................$42.95
- A412MWS Metal Locking Windscreen...............................$19.95

**Beta 91 Cardioid Condenser Kick Drum Mic**

A high performance condenser microphone with a tailored frequency response designed specifically for kick drums and other bass instruments, the Beta 91 combines superior “attack” and “punch” for studio quality sound – even at the extremely high sound pressure levels encountered inside a kick drum. Ideal for live concert applications.

- Boundary effect design produces a strong, solid low-end response specifically tailored for heavy bass applications.
- Wide dynamic range for use in high SPL environments – up to 161dB
- Half-cardioid pattern throughout the frequency range insures high gain before feedback and excellent rejection of unwanted sound
- Low profile design eliminates the need for external mounting hardware
- Includes 15’ heavy-duty Triple-Flex cable and case

**Beta 98H/C Mini Condenser Cardioid Mic**

Designed specifically for brass and wind instruments, the Beta 98H/C is a high SPL mini-condenser microphone that’s ideal for live performances. With its integrated gooseneck and clip-on clamp design, you will experience excellent sound quality with extreme flexibility.

- Cardioid pattern allows maximum sound before feedback
- Low-profile design, requires no external mounting hardware
- Gooseneck with clip-on clamp provides secure fit and reliable hold to virtually any wind, brass, or percussion instrument
- Small, low-profile design provides low visibility and minimizes stage clutter.
**Beta 52A & Beta 56A**

**Supercardioid Dynamic Instrument Mics**

The Beta 52A is a high output dynamic mic with a tailored frequency response designed specifically for kick drums and other bass instruments. It provides superb attack and “punch”, and delivers studio quality sound even at extremely high sound pressure levels.

Specifically engineered for drum and instrument applications, the Beta 56A’s compact, pivoting design makes it the ideal choice for close miking of tom-toms and other percussion instruments, as well as guitar amplifiers, brass instruments, and woodwinds.

Designed for professional sound reinforcement and project studio recording, the Beta 52A’s modified supercardioid and the Beta 56A’s extremely uniform supercardioid pickup pattern provides high gain before feedback and excellent rejection of unwanted noise. Both feature a built-in dynamic locking stand adapter with an integral XLR connector to simplify installation and keep them in place even when subjected to sharp blows and strong vibrations. A hardened steel mesh grille protects them from the wear and abuse associated with touring.

### Beta 52A Features

- Frequency response shaped specifically for kick drums and bass instruments
- Built-in dynamic locking stand adapter with integral XLR connector simplifies setup, especially inside a kick drum
- Studio quality performance, even at extremely high sound pressure levels
- Supercardioid pattern for high gain before feedback and superior rejection of unwanted noise
- Hardened steel mesh grille that resists wear and abuse
- Advanced pneumatic shock mount system that minimizes transmission of mechanical noise and vibration
- Neodymium magnet for high signal-to-noise ratio output
- Low sensitivity to varying load impedance

### Beta 56A Features

- Tailored frequency response provides drums, amplified instruments, and horns with studio quality sound
- Built-in stand adapter with dynamic locking system and XLR connector simplifies setup and provides greater flexibility
- Uniform supercardioid pattern for high gain before feedback and superior rejection of off-axis sound
- Compact design reduces stage clutter
- Hardened steel mesh grille resists wear and abuse
- Neodymium magnet for high signal-to-noise ratio output
- Minimally affected by varying load impedance
- Advanced pneumatic shock mount system that minimizes transmission of mechanical noise and vibration

WH20/WH30 Headworn Cardioid Mics

The WH20 (dynamic) and WH30 (condenser) are rugged, lightweight headset mics with high-quality voice pickup. They fit securely for active users, such as aerobics instructors and musicians, with low visibility. Also suitable for any voice communications application where comfort and reliability are required.
- Cardioid pattern provides greater gain-before-feedback and isolation from ambient noise or unwanted sound like air-conditioning
- Carefully shaped frequency response includes a voice-frequency presence peak. Low-frequency rolloff compensates for the proximity effect inherent in cardioid microphones during close-talk operation
- Integrated elastic CROAKIES headband comfortably secures the headset. The headband, wireframe, and gooseneck are adjustable.
- Extra-strong microphone cable resists breakage. Collapsible mic boom for easy storage and transportation. Supplied with foam windscreens and security clips

512 Cardioid Dynamic Headworn Mic

Designed for sports and news announcing, communication systems, and remote broadcasting, the 512 consists of the SM10A mic element mounted on an adjustable lightweight headband with a single earphone. By combining an efficient "open-air" headphone with a close-talking dynamic microphone, the 512 offers convenient hands-free operation, and a lightweight frame to reduce fatigue.
- 50 to 15,000 Hz frequency range
- Cardioid pattern reduces unwanted background noise, permits use in noisy environments
- Mic characteristics are tightly controlled resulting in consistent response and output. Headphone response is tailored to enhance voice intelligibility
- Includes an attached 7’ cable, foam windscreens to reduce explosive “popping” sounds, and a cable clip to secure the cable to clothing

SM10A-CN with cable......119.50 SM12A-CN with cable ..........189.95

Classic Microphones

520DX Harmonica Microphone

The definitive blues harp voice, the 520DX “Green Bullet” is a cardioid, dynamic harmonica microphone with a signature green and chrome die-cast case, contoured to fit perfectly between harmonica and hands. Comes with an attached cable

55SH Series II Vocal and Speech Mic

Featuring a signature chrome-plated die-cast case with a vintage '50s and '60s look and feel, the 55SH Series II is a cardioid dynamic vocal and speech mic with a tailored response (50 Hz to 15 kHz) that is ideal for PA or theater-stage sound systems, as well as for broadcast and recording. Low-impedance balanced output designed for connection to mic inputs rated at 75 to 300 ohms. Cartridge shock mount reduces stand noise. Has an attached, self-tensioning, 5/8”-27 thread swivel mount. Doesn’t come with a cable.

512 Cardioid Dynamic Headworn Mic

**SHURE**

**LIVE PERFORMANCE MICROPHONES**

**SM2**  
*Dynamic Headworn Mic with Dual Receivers*

The SM 2 is a comfortable, self-adjusting headset with dual enclosed ear receivers and an attached broadcast-quality boom-mounted microphone. Designed for convenient hands-free news and sports broadcasting, remote announcing, interviews, and intercom applications. The SM 2 has a close-talking cardioid mic that discriminates against distant sounds in favor of close sounds. This allows use under noisy conditions without loss or masking of the voice signal.

Dual earphones have a frequency response of 100Hz to 8kHz with excellent voice intelligibility for cue, program, sidetone, or intercom signals. High sensitivity and enclosed ear block out room noise and ensure clarity of the incoming signal.

- Smooth, natural microphone voice frequency response
- Supplied windscreen protects against wind noise and explosive breath sounds
- Mic boom pivots through 155° so that the mic can be correctly positioned at the corner of the mouth from the left or right side. A locking thumbscrew keeps the mic from slipping or twisting out of place
- Self-adjusting, free-swiveling cushioned earpieces offer user comfort, lower fatigue during extended periods of use

**SM11**  
*Lavalier Omnidirectional Dynamic Mic*

The Shure Model SM 11 is a miniature dynamic lavalier microphone designed for use in television broadcasting (on camera), for sound reinforcement, in certain radio and motion picture applications, and similar uses where a small, professional-quality microphone is required. The SM 11 has an omnidirectional pickup pattern, and its frequency response is optimized for lavalier use. The microphone is supplied with a tie clasp assembly, tie tack assembly, connector belt clip, and zippered carrying/storage bag. An optional kit for mounting the SM 11 on various musical instruments is available as Shure Model RK279.

- Frequency response optimized for lavalier use. Acoustically matches most stand- or desk-mounted microphones
- Small and lightweight for unobtrusive, virtually unseen operation
- Smooth exterior and recessed grille screen minimize clothing noise
- Rugged aluminum case construction
- Extremely flexible long-life cable
- Two mounting options—tie clasp or tie tack
- Convenient, secure belt clip attaches connector to belt or clothing

**WL50/ WL51**  
*Professional Subminiature Lavalier Mics*

Only 5.8mm in diameter, just .34 grams in weight, the WL50 and the WL51 set a new standard for miniature lavalier microphones. Visually unobtrusive they virtually disappear when in use making them ideal for theater, television broadcast, video/film, and event production. And despite their small size, the microphones’ condenser element provides full, clear and natural reproduction of speech. Available individually, as well as with the Shure UHF, UC, SC and LX Wireless Systems.

The omnidirectional WL50 features an extended frequency response and is available in three colors (black, beige and white) and two sensitivity options; Standard (-45dBV/Pa) and Reduced (-55dBV/Pa). It also includes four frequency response caps: two silver mesh (4dB mild boost) and two gold mesh (10dB high boost). Interchange them as needed to achieve optimal sound and clarity for various microphone placements and mounting configurations.

The cardioid WL51 (available in black and white) features a smooth frequency response and low sensitivity of -49dBV/Pa to provide optimal gain with very low noise output. Perfectly suited for those situations where loud ambient environments limit the use of an omni mic. Includes a watertight protective carrying case.

- Frequency response optimized for lavalier use. Acoustically matches most stand- or desk-mounted microphones
- Small and lightweight for unobtrusive, virtually unseen operation
- Smooth exterior and recessed grille screen minimize clothing noise
- Rugged aluminum case construction
- Extremely flexible long-life cable
- Two mounting options—tie clasp or tie tack
- Convenient, secure belt clip attaches connector to belt or clothing
SM7B Cardioid Dynamic Studio Vocal Mic

Dynamic mic with a smooth, flat, wide-range frequency response, the SM 7 B is ideal for music and speech in pro audio applications including recording studio—instrumental and vocal, location recording, motion picture and television scoring, talk shows, radio announcing and production. Offers excellent shielding against electromagnetic hum from computer monitors, neon lights, and other electrical devices. Yoke mounting with captive stand nut for easy mounting and dismounting offers precise control of mic positioning and greater stability.

- Flat, wide-range frequency response for exceptionally clean and natural reproduction of both music and speech.
- Cardioid pattern uniform with frequency and symmetrical about axis, provides maximum rejection and minimum coloration of off-axis sound.
- Switchable bass rolloff and mid-range emphasis (presence boost) controls with graphic display of response setting.
- Internal "air suspension" shock isolation virtually eliminates mechanical noise transmission.
- Pop filter eliminates need for any add-on protection against explosive breath sounds, even for close-up vocals or narration. However, for high-wind conditions and "problem talkers", it includes A7WS detachable windscreen (also gives a warmer tone for close-talk vocals).
- Swiveling bracket with integrated stand adapter for easy mounting and precise microphone positioning.

VP88 M-S Single-Point Stereo Condenser Microphone

The VP88 is a single-point, stereo condenser microphone for use in professional studio recording, field production, electronic news gathering (ENG), and studio broadcasting applications. It combines two condenser cartridges in a single housing to create a stereo audio image of the sound source. It is unique in its ability to capture the realism of a live event and yet able to withstand the rigors of field production.

The VP88 uses a mid-side (M-S) configuration. One microphone cartridge (Mid) faces forward to capture on-axis sound using a cardioid pickup pattern. The other mic cartridge (Side) is bi-directional, capturing sound from either side. The VP88 contains an internal M-S matrix with three settings for different degrees of stereo image separation. The internal matrix can be bypassed if an external matrix is used or if stereo imaging is done in post-production.

Switches on the top of the microphone control output mode, stereo imaging, low-frequency rolloff settings, and battery on/off.

- Time-coherent, Mid-Side (M-S) design for optimal stereo imaging.
- Built-in stereo matrix for direct control of the stereo spread; direct M-S outputs available.
- Mono compatibility ideal for broadcast applications.
- 40 to 20kHz frequency response.
- Low noise and distortion.
- Wide dynamic range.
- Selectable, low-frequency rolloff (12 dB/octave below 80 Hz) for reduced pickup of ambient noise and stand vibration.
- Internal shock mount for reduced stand vibration and handling noise.
- Built-in "pop" filter provides protection against moderate breath or wind noise.
- Operates on phantom power or a 6V camera battery.
- LED power indicator.
- Supplied with a multi-connector "Y-splitter" cable, foam windscreen, swivel stand adapter, 6-volt battery, and zippered carrying/storage bag.
- Optional accessories include an isolation mount, a 25' microphone extension cable, a phantom power supply, and a 14' microphone stand.

A88SM Isolation Mount: The optional A88SM Shock Mount provides optimum isolation from stand-transmitted shock and vibration, making it ideal for critical studio applications. It also contains a standard mounting foot for use with most ENG video cameras...................158.50

C110 25' Extension Cable (4 conductor, shielded).................................66.95

PS1A Phantom Power Supply ............................................................125.95

S15 14' Microphone Stand ................................................................157.95

For Any Inquiries Regarding Your Order, Call Our Customer Service:

The VP64AL/VP64 is a high-output omnidirectional dynamic microphone designed for professional audio and video production. It combines exceptional performance and comfort with a handsome on-camera appearance. The microphones are well-suited for location interviews, sports broadcasting, and other situations where the 9.5” length is an advantage.

Features:
- The omnidirectional pickup pattern provides uniform pickup on or off axis, eliminating the need for critical mic positioning.
- Tailored frequency response with mid-range presence rise adds crispness and clarity to speech.
- Neodymium magnet for increased output and maximized S/N ratio.
- Internal rubber isolation mount protects the microphone cartridge and minimizes handling noise.
- Water-resistant mesh grille allows use in adverse weather conditions.
- Supplied windscreen further reduces "pop" and wind noise.

Specifications:
- Frequency response: 50 to 20kHz
- Sensitivity: -59dB re 1V at 1kΩ
- Impedance: 150Ω
- Dynamic Range: 105dB
- Weight: 1 lb. 11 oz.

VP64A .................................................... 77.95
VP64AL .................................................. 89.95

SM63 is a highly directional condenser shotgun microphone with a wide dynamic range. It is designed for applications where performance and appearance are critical. Smooth, wide frequency response is tailored for optimum speech intelligibility. Controlled low-frequency roll off reduces pickup of wind and stand noise.

Features:
- Low-frequency roll-off pickup of wind, mechanical vibration, ambient noise, and rumble without affecting voice frequencies.
- Off-axis response is virtually free of comb-filter effects. This is important when it isn't possible to aim the mic precisely or when you want to pick up dialogue or sound from moving sources.
- Operates on 11 to 52v DC phantom supply.
- Rugged and reliable, operates over wide range of temperature and humidity.
- Extremely lightweight, can be suspended on fishpole for long periods of time without operator fatigue.
- Supplied with foam windscreen and strong luggage-grade carrying case.

Specifications:
- Frequency response: 50 to 12kHz
- Sensitivity: -56.5dBV/Pa
- Impedance: 150Ω
- Dynamic Range: 111dB
- Weight: 6.9 oz.

SM89 is a high-performance condenser microphone designed to provide clear, natural sound in any environment. It features a built-in electronic RDC circuit that compensates for low frequencies to provide a natural sound.

Features:
- Patented shock mount system minimizes handling noise and stand vibration.
- Pop filter effectively reduces breath noise.
- Patented electronic RDC circuit compensates for low frequencies to provide a natural sound.

Specifications:
- Frequency response: 80 to 20kHz
- Sensitivity: -53dBV/Pa
- Impedance: 150Ω
- Dynamic Range: 106dB
- Weight: 1 lb. 5 oz.

SM63L, SM63LB are for interviews, sports broadcasts, and other situations where longer microphones are desirable.

Features:
- Exceptionally rugged VERA-FLEX grille.
- On-axis frequency response is virtually immune to strong hum fields such as those produced by studio lighting.
- Off-axis response is virtually free of comb-filter effects.
- Low-frequency roll-off reduces pickup of wind and stand noise.

Specifications:
- Frequency response: 80 to 20kHz
- Sensitivity: -56.5dBV/Pa
- Impedance: 150Ω
- Dynamic Range: 106dB
- Weight: 1 lb. 5 oz.
849 Cardioid Handheld Dynamic Microphone

The 849 is a high-quality electret condenser microphone with a smooth, flat frequency response and cardioid pickup pattern. It provides accurate, uncolored reproduction of the sound source. The 849 is designed for a wide variety of sound reinforcement and recording applications, and is a good choice for use with choirs, amplified sound, or instruments, including strings, brass, woodwinds, and percussion.

- Wide, flat frequency response
- Internal shock mount for reduced stand and handling noise
- Long-life on/off switch for on-stage control
- Low distortion output and wide dynamic range characteristics for a variety of load impedances
- Cardioid pattern is uniform with frequency and symmetrical about axis for maximum rejection of unwanted sound and minimum of-axis coloration
- Can use either phantom power or an internal AA battery

SM94 Unidirectional Condenser Microphone

The SM 94 is a unidirectional condenser mic tailored to the instrument miking needs of professional musicians and sound engineers in live performance and sound recording. Its smooth, flat frequency response is free of either a "presence peak" or a low-frequency rolloff, making it a perfect choice for all types of musical instruments. The SM 94 is equally at home in sound reinforcement systems or in sound studios and motion picture/TV scoring stages. When used with the optional wind-screen, the SM 94 can be used by vocalists and speech-makers who desire a wide, flat response with minimum coloration.

- Powered by AA battery (up to 5,000 hours) or 12 to 48v DC phantom power (also has a built-in battery power backup)
- Supplied with a swivel adapter for use on a mic stand, boom or gooseneck, and a zippered vinyl storage bag.
- Wide, flat response for optimum musical instrument sound reproduction
- Full spectrum sound—no presence peak or low-end rolloff
- Rugged construction for outstanding reliability, usable over wide range of temperature and humidity conditions
- Supplied with a swivel adapter and a zippered vinyl storage bag

SM81 Studio Condenser Microphone

One of the world’s great condenser microphones, the SM 81 provides precise, detailed sound reproduction for high quality studio recording or broadcasting, and is rugged enough for live sound reinforcement. Its wide frequency response, low noise characteristics, and low RF susceptibility have made it a standard for applications involving acoustic instruments, especially guitar, piano, and cymbals. Operates on phantom power and performs over a wide range of temperatures and humidity conditions.

- Flat response curve for accurate reproduction of sound sources
- Low noise and high output clipping level
- Cardioid pattern is uniform with frequency and symmetrical about axis for maximum rejection of unwanted sound and minimum of-axis coloration
- Low distortion over a wide range of load impedances
- Selectable low-frequency response: flat, 6 or 18 dB/octave rolloff
- 0 dB/10 dB lockable attenuator switch
- Phantom powered (12 to 48v DC)
- Supplied with a swivel adapter, attenuator-switch lock, foam windscreen, and case for carrying and storage

SM81-LC with windscreen, without cable

SM94-LC without cable

KSM Studio Instrument Microphones

The KSM 141, KSM 137, and KSM 109 are instrument condenser microphones designed for studio use. As the latest additions to the KSM line of professional studio products, the group is designed to mic instruments including: acoustic guitar, drum overheads, high-hat cymbals, guitar cabinets, pianos, percussion, stringed instruments, and more. Additionally, with a range of features and prices, the trio offers a solution for high-end recording, project, and home studio users alike.

KSM141 Switchable Omnidirectional Cardioid Condenser

As the premier entry within the group, the KSM 141 is a dual-pattern mic offering a selection of either cardioid or omnidirectional polar patterns with the turn of a rotating mechanical switch. Other features include Shure’s Class A transformerless preamp circuitry, an ultra-thin, highly sensitive diaphragm, and a switchable, 3-position low frequency filter to limit unwanted background noise and proximity effect. The mic can reproduce sounds between 20 and 20,000 Hz. Further complementing the feature set is a switchable pad (15 or 25 dB) for managing extremely high SPL sources such as electric guitar cabinets and snare drums. The KSM 141 includes a break-resistant mic clip, carrying case, and Popper Stopper windscreen, and is available in stereo pairs.

- A mechanical polar pattern switch for highly consistent cardioid and true omnidirectional polar patterns. Provides flexibility in a wide variety of recording applications
- Ultra-thin, 2.5 micron, 24 karat gold-layered, low mass Mylar diaphragm for superior transient response
- Class A, discrete, transformerless preamplifier for transparency, extremely fast transient response, no crossover distortion, and minimal harmonic and intermodulation distortion
- Premium electronic components, including gold-plated internal and external connectors
- Subsonic filter eliminates low frequency rumble (less than 17 Hz) caused by mechanical vibration
- Three-position switchable pad (0 dB, 15 dB, and 25 dB) for handling extremely high sound pressure levels (SPLs)
- Three-position switchable low-frequency filter to reduce background noise and counteract proximity effect

KSM137 Cardioid Condenser

A single pattern (cardioid) version of the KSM 141, the KSM 137 performs with the same detailed sonic precision, and excels on acoustic guitar, drum overheads, and hi-hats. Also like the dual-pattern KSM 141, the KSM 137 is available in a stereo pair, sports a champagne finish, and comes with accessories including a break-resistant mic clip, carrying case, and Popper Stopper windscreen. The Shure KSM 137 is an end-address condenser microphone with a cardioid polar pattern. Designed for studio use, yet rugged enough for live applications, the KSM 137 can withstand extremely high sound pressure levels (SPL). Its low self-noise and extended frequency response make it ideal for recording musical instruments.

- Premium electronic components, including gold-plated internal and external connectors
- Subsonic filter eliminates low frequency rumble (less than 17 Hz) caused by mechanical vibration
- Three-position switchable pad (0 dB, 15 dB, and 25 dB) for handling extremely high sound pressure levels (SPLs)
- Three-position switchable low-frequency filter to reduce background noise and counteract proximity effect

KSM109 Cardioid Condenser

Last among the group is the affordable, cardioid KSM 109. A value-engineered cardioid condenser unit, it too offers an extended frequency response (20 Hz - 20,000 Hz) for natural reproduction of sound with smooth high-end delivery and tight low-end. Equipped with a switchable pad (15 dB) to accommodate high SPL sources, as well as circuitry using the same architecture employed by its higher-priced counterparts within the KSM product group, the champagne-finished mic comes with a zippered carrying pouch, microphone clip, and Popper Stopper windscreen. The Shure KSM 109 offers incredible performance for its price. It combines an extended frequency response for natural sound reproduction with a smooth high end and a tight, controlled low end. It’s all the mic you need for studio instrument recording.

KSM27 Studio Condenser Mic

Designed to be the workhorse for project and home recording studio, the KSM 27 is a large-diaphragm, side-address cardioid microphone optimized for vocals, but also capable of handling high-input SPLs to accommodate sound sources such as drums and guitar amplifiers. And although used primarily in the studio, it is rugged enough for live applications as well.

The KSM 27 features a 1-inch ultra-thin Mylar diaphragm, an internal shock mount to keep self-noise low, and utilizes Class A transformerless preamp circuitry to virtually eliminate crossover distortion and bring improved linearity across its entire operating range. Like other KSM microphones, the KSM 27’s durable zinc die-cast housing comes finished in an attractive champagne color. To protect the microphone from damage, a hardened low-carbon steel grille shields its capsule. Accessories provided with each mic include a Velveteen pouch and a rubber-isolated, external locking shock mount.

- **1”, externally biased, ultra-thin, 24k gold-layered, low mass, Mylar diaphragm provides superior transient response**
- **Class A, discrete, transformerless preamplifier circuitry for transparency, extremely fast transient response and no crossover distortion—improved linearity across the entire frequency range**
- **Premium electronic components and gold-plated internal and external connectors**
- **Subsonic filter eliminates rumble from mechanical vibration below 17 Hz**
- **Switchable 15 dB pad for handling extremely high sound pressure levels (SPLs)**
- **Internal shock mount reduces handling and stand noise (keeps self-noise low at 14 dB).**
- **Switchable three-position (flat, –6 dB/octave below 115 Hz, –18 dB/octave below 80 Hz) low-frequency filter lets you adjust the mic’s low-frequency response to reduce unwanted background noise.**
- **Integrated three-stage “pop” protection grille reduces plosives and protects against wind and breath noise**

KSM32 Cardioid Studio Condenser Mic

The KSM 32 has a classic, elegant appearance and even more impressive performance provided by its extended frequency response, low self-noise, high output level, and increased dynamic range. The KSM 32 is also flexible enough to handle a variety of demanding sound sources including vocals, acoustic and wind instruments, ensembles, and overhead miking of drums and percussion. In addition, it has the warmth and sensitivity necessary for superb sound reproduction in professional studio production and live sound recording.

- For studios, the KSM 32/SL has a light champagne finish and includes an aluminum carrying case, shock and swivel mounts and a velvet pouch. For live applications, the KSM 32/CG has a charcoal grey finish and includes a swivel mount and padded zipper bag.
- **Frequency response 20Hz - 20kHz**

The KSM32 and KSM44 both include:

- ShureLock swivel mount
- Protective velveteen pouch
- ShureLock elastic-suspension shock mount
- Locking aluminum carrying case
KSM44 Multi Pattern Studio Condenser Mic

The KSM 44 is a multiple pattern (cardioid, omnidirectional, bi-directional), externally biased, dual large diaphragm condenser microphone with extremely low self-noise (7dB). Developed to meet the needs of studio recording musicians, the warm, rich sound of the KSM 44 delivers exceptional performance, tailored to deliver vivid reproduction of voice for the most critical recordings. The KSM 44 also offers great flexibility in a variety of recording applications, working well on acoustic and amplified instruments, as its capacity for managing high SPLs accommodates loud sound sources such as drums and guitar amplifiers.

- Dual 1-inch, externally biased, ultra-thin 24-karat gold-layered, Mylar diaphragms provide superior transient response
- Class A, discrete, transformerless preamplifier for transparency and extremely fast transient response
- Subsonic filter eliminates rumble from mechanical vibration below 17 Hz.
- Switchable 15 dB pad for handling high SPLs
- 3-position switchable low-frequency filter helps reduce unwanted background noise or counteract proximity effect.
- Integrated three-stage "pop" protection grille reduces plosives and other breath noise; internal shockmount reduces handling/stand noise.

PS-6 Popper Stopper

The Popper Stopper is widely recognized throughout the recording and post-production industry as the leading tool in pop elimination technology.

- 6” diameter highly durable four-layer screen readily softens harsh “P” and “B” consonants
- Fully adjustable 14” gooseneck with “position memory” (stays put until you change it)
- Attaches to virtually any floor or boom stand via a mounting clamp equipped with a non-scratching nylon insert
IN STALLED SOUND—MICROFLEX SERIES

The entire Microflex family of miniature condenser microphones have been designed with performance, consistency and ease of installation in mind. Their cardioid, super-cardioid and omni-directional condenser cartridges are completely interchangeable and fit every Microflex Gooseneck, Overhead, Boundary, and Lavalier model for the ultimate in convenience and uniform sound. Plus, each Microflex model includes all the basic accessories needed for complete installation.

**MX-391/ 392/ 393**

Surface-Mount Mics

The low-profile Microflex Series boundary mics are designed to be unobtrusively placed flat on a stage, table top or wall while offering high quality audio for sound reinforcement, boardrooms, broadcast or recording. Available with interchangeable cardioid, super-cardioid and omni-directional polar patterns in battery power, phantom power or pigtail versions, giving you the flexibility for any application.

- 50Hz to 17kHz frequency response
- Easy to use paint mask for your custom-color installations
- Programmable silent membrane switches with LED indicator can be set for Push to Talk, Push to Mute or Push On/Push Off modes (MX392 and MX393 only)

**MX-183/184/185 Lavalier Microphones**

Three wired lavalier microphones from the Shure Microflex series no larger than a paper clip. Optional interchangeable mic cartridges allows you to tailor the microphones to any audio environment. The mics attach to the supplied power supply with the Shure Tini Q-G connector. When the power supply is removed, the microphones can be used with any Shure wireless transmitters. Well suited for all levels of location video work, recording and live applications.

- Condenser lavalier microphones
- Interchangeable cartridges for omni-directional, cardioid and super-cardioid polar patterns
- Frequency Response 60 - 20 kHz

Gooseneck Microphones

Designed with premium audio quality and ease of installation in mind, these miniature condenser gooseneck microphones feature swappable cardioid, super-cardioid and omni-directional cartridge capability and come complete with all the necessary accessories. A variety of mounting options make these mics suitable for any installation. All models run on phantom power and have a frequency response of 50Hz to 17kHz.

Gooseneck Microphone Models Include:

- **MX412/C** (cardioid) 12” gooseneck, terminates to XLR connector 179.95
- **MX412/S** (super-cardioid version of above) 187.95
- **MX412/O** (omni-directional version of above) 169.95
- **MX418/C** (cardioid) 18” version of above 179.95
- **MX418/S** (super-cardioid version of above) 187.95
- **MX418/O** (omni-directional version of above) 169.95
- **MX412D/C** (cardioid) 12” gooseneck with desktop base, with programmable switch, logic input and output terminals and attached 10’ XLR cable 237.50
- **MX412D/S** (super-cardioid version of above) 243.50
- **MX412D/O** (omni-directional version of above) 229.95
- **MX418D/C** (cardioid) 18” version of above 237.50
- **MX418D/S** (super-cardioid version of above) 243.50
- **MX418D/O** (omni-directional version of above) 229.95
- **MX412SE/C** (cardioid) 12” gooseneck with attached 10’ XLR cable and inline preamplifier, threaded flange mount and shock mount adapter 193.95
- **MX412SE/S** (super-cardioid version of above) 196.50
- **MX412SE/O** (omni-directional version of above) 186.95
- **MX418SE/C** (cardioid) 18” version of above 193.95
- **MX418SE/S** (super-cardioid version of above) 196.50

SWAPPABLE MICROFLEX SERIES CARTRIDGES

- **R183B** Omni-directional 38.95
- **R184B** Super-cardioid 53.95
- **R185B** Cardioid 47.50

MX-202 Hanging Microphones

These phantom power only miniature hanging condenser mics feature the same interchangeable capsule design as the rest of the Microflex series. Available with either plate-mount or stand adapters ideal for use as overheads for live theatrical and musical productions. The flexible 4” gooseneck allows you to unobtrusively aim the mics exactly the way you want them.

Hanging Microphone Models Include:

- **MX202/C** (cardioid) 4” gooseneck with in-line preamplifier and stand adapter, black finish 162.95
- **MX202/S** super-cardioid version of above 169.50
- **MX202/O** omni-directional version of above 154.95
- **MX202W/C, S or O** White versions of above available for same price
- **MX202BP/C** (cardioid) 4” gooseneck with plate-mount preamplifier and 30’ cable, black finish 162.95
- **MX202BP** super-cardioid version of above 169.50
- **MX202BP/O** omni-directional version of above 156.95
- **MX202WP/C, S or O** White versions of above available for same price
EZG Miniature Cardioid Condenser Gooseneck Microphones
These miniature gooseneck condenser microphones are the perfect choice to capture speech and vocals in environments where quality, value and budget are primary considerations. Designed for podium or desk applications, they offer a cardioid polar pattern, and are available in four different models, dependent on height and mounting application. Available in either 12” or 18” lengths, each charcoal gray microphone comes standard with a single flexible gooseneck section for ease in accurate positioning, as well as a matching slip-on foam windscreen. Choose a locking flange mount with an integrated preamp and XLR connector for easy permanent install. Or, choose side-exit mounting with 10´ cables, in-line preamps and threaded mounting flanges - easily adaptable to a standard mic stand.

EZG/12 (12”) and EZG/18 (18”) Mics  
- Cardioid polar pattern  
- Integrated preamplifier with XLR connector  
- Locking flange mount

EZG/12SE (12”) and EZG/18SE (18”) Mics  
- Cardioid polar pattern  
- Attached 10’ side exit cable with in-line preamplifier  
- Threaded mounting flange

EZO Overhead Microphones
The perfect choice to reinforce choirs and performance groups in recording or sound reinforcement in environments where quality, value and budget are primary considerations. The overhead condenser microphones feature a cardioid polar pattern, and are available in charcoal gray or white for unobtrusive placement in most surroundings. Each Easyflex overhead microphone ships with a flexible wire form for accurate and stable positioning when suspension mounting to a ceiling, and ships with 30´ cable with in-line preamplification, and a matching slip-on windscreen.

EZO/G Charcoal Gray and EZO/W White Overhead Microphones  
- Cardioid polar pattern  
- Attached 30´ cable with in-line preamplifier  
- Adjustable wire frame for easy positioning

EZO/B/C Cardioid and EZO/B/O Omnidirectional Boundary Microphones  
- Charcoal gray finish  
- Attached 12´ cable with in-line preamplifier  
- Recessed mounting holes for quick installation

EZB Miniature Cardioid Condenser Boundary Mics
The perfect choice for all types of low profile applications, where quality, value and budget are primary considerations. The boundary condenser microphones feature either a cardioid or omnidirectional polar pattern, and are available with a charcoal gray finish for unobtrusive placement in most surroundings. Each Easyflex boundary microphone ships with an attached 12´ cable with in line preamplifier, and features recessed mounting holes for ease of installation.

EZB/C Cardioid and EZB/O Omnidirectional Boundary Microphones
- Charcoal gray finish  
- Attached 12´ cable with in-line preamplifier  
- Recessed mounting holes for quick installation

www.bhphotovideo.com
The 515BSLX is designed for mounting on a gooseneck or fixed pipe with a 5/8 in.-27 thread. Ideal for use in communications, paging, and talkback systems, the mic is supplied with a slide switch controlling the microphone audio and a relay circuit, permitting hands-free operation. Mic comes with a 16-ft. four-conductor, two conductors shielded, cable. The 515BSLX is wired with the microphone circuit normally open for use in parallel-wired microphone installations.

515BSLX: Attached cable ................................................................. 57.50

515SBGX, 515SBG-18X and 515SBG-18XF
The 515SBGX, 515SBG-18X, and 515SBG-18XF are designed to be mounted on flexible goosenecks or fixed pipes. Use in paging applications, and base station communications, or as talkback or cueing mics in TV, film, and recording studios. Because of their low impedance, these mics retain their level and response characteristics even when long cable lengths are used. Each is equipped with a push-to-talk button and a four-conductor cable (two conductors shielded).

515SBGX: Attached cable .............................................................. Call
515SBG-18X: 18” gooseneck with A13HD mounting flange ........ Call
515SBG-18XF: 18” gooseneck with A12 mounting flange .......... Call

515BSM
The 515BSM is designed for hand-held or fixed use. With a push-to-talk switch and a four-conductor retractable cable (2 shielded conductors) it can be used in public speaking, stage performance, and paging or public address systems. The mic is wired with the microphone circuit normally open for use in parallel microphone installations.

515BSM: Attached cable ................................................................. 89.50

515BSLG24F & 515BSLG27F
The 515BSLG24F and 515BSLG27F are each threaded on a black gooseneck with a black mounting flange. Especially suited for use in communications, paging, and talkback systems, they have a slide switch that sets their audio and relay circuit on or off, while the integral gooseneck permits hands-free operation. The attached four-conductor cable (two conductors shielded) extends 1.2m (4 ft.) from the mounting flange and terminates in a female 4-pin XLR connector.

515BSLG24F: includes a 24-in. black gooseneck and 3-inch black mounting flange. Cable has 4 pin XLR female connector .............. 68.95
515BSLG27F: includes a 27-in. black gooseneck and 3-in. black mounting flange. Cable has 4 pin XLR female connector .............. 68.95

588SDX
The 588SDX is a ball-type, dual-impedance, cardioid dynamic microphone that provides excellent voice reproduction. Its spherical grille is a very effective wind and pop filter which is especially good when used for closeup vocal miking. This microphone is highly suited for speech or music pickup in schools, churches, and meeting rooms. Its unidirectional polar pattern greatly reduces feedback problems, permitting operation closer than usual to loudspeakers without the annoying squeal or howl caused by feedback. The microphone is equipped with a lockable ON/OFF switch and an internal impedance selection socket mounted on the XLR connector for switching between high and low impedance. A slip-in swivel adapter is supplied for stand-mounted use.

588SDX: Attached cable ................................................................. 54.95

515SDX
Suitable for speech pickup in schools, churches, and meeting rooms, the 515SDX has a locking ON/OFF switch and an internal impedance selection socket mounted on the XLR connector for switching between high and low impedance. A slip-in swivel adapter is supplied for stand-mounted use.

503BG Unidirectional Dynamic Microphone

Developed for computer voice recognition applications, the 503BG offers excellent voice fidelity while reducing background noise. Equally well-suited for close-talking applications such as paging and talkback. The 503BG features a low-impedance, moving coil type transducer with an integral humbucking coil and an attached two-conductor shielded cable with a built-in strain relief. It produces a frequency response with an essentially constant output voltage over the voice spectrum when used close to the sound source. The 503BG’s case is aluminum with a black enamel finish. It mounts to a gooseneck, a fixed pipe or a mic stand using a standard 5/8” - 27 thread. Includes #4 Allen (hex-head) wrench.

- Optimized for voice processing and computer voice recognition applications
- Smooth frequency response with excellent fidelity in the voice range
- Cardioid pickup pattern and close-talking operation keep unwanted signals and background noise at low levels
- Constant output over voice spectrum when close talked
- Humbucking coil minimizes undesirable hum effects such as CRT interference
- Low-impedance design permits long cable runs in extreme hum fields
- Small unobtrusive design does not interfere with CRT visibility
- Rugged and reliable for years of consistent operation

545 Unidyne III

The 545SD Unidyne III is a dual-impedance, cardioid dynamic microphone. Shipped connected for low-impedance operation. The 545SD is a favorite for instrument pickup and recording, and can be used on lecterns for public address systems such as those used in legislatures, convention halls, hotels, public auditoriums, stadiums, schools, and churches.

- Selectable dual-impedance operation
- Silent magnetic reed on/off switch with lock option
- Exceptionally uniform cardioid pattern minimizes feedback in PA applications
- Frequency response 50 to 15,000 Hz

545SD-LC: Without cable

561 Omnidirectional Dynamic Mic

A low-impedance dynamic mic, the omnidirectional 561 is designed for use on a stand or flexible gooseneck. Its smooth frequency response is tailored for optimum speech intelligibility, making it ideal for language labs, paging applications, and base station communications. The 561 is also suitable for use as a talk-back or cuing microphone in TV, film, and recording studios.

- Frequency response tailored for speech applications, with bass rolloff and mid-range “presence” rise
- Shock-mounted cartridge for reduced stand and handling noise
- Rugged die-cast aluminum construction
- Lockable stainless steel mesh grille
- Optional gooseneck and mounting flange

562 Noise-Canceling Omnidirectional Dynamic Mic

The 562 is a noise-canceling mic designed for voice applications in fixed-station paging and radio communications. It provides highly intelligible speech communication where high volume background noise is present. The 562 has a smooth response and is ruggedly constructed to withstand a wide range of humidities and temperatures. With its standard 5/8” - 27 thread mount, the 562 attaches directly to boom or a gooseneck with the cable concealed inside. Ideal for language labs, paging applications in noisy environments and base station communications, as well as a talk-back or cuing microphone in TV, film, and recording studios.

- Excellent response for voice reproduction
- Noise-canceling design
- Low impedance
- Rugged construction
- Withstands wide range of temperatures and humidities
- Mounts on gooseneck and lockable with Allen set-screw (Allen wrench supplied)

565 SD

The 565 SD is a dual-impedance, cardioid dynamic microphone with a strong, wire-mesh, spherical front grille that contains a very effective wind and “pop” filter. Shipped connected for low-impedance operation, the mics provide excellent vocal or speech reproduction on lecterns and stages, and are a popular choice for use in public auditoriums, churches, convention halls, and schools.

- Selectable dual-impedance operation
- Silent magnetic reed on/off switch with lock-on option
- Frequency response 50 to 15,000 Hz

565SD-CN: With 20’ XLR cable...........125.95
565SD-LC: Without cable..................107.50
SHURE
PAGING, DISPATCH & TALKBACK MICROPHONES

514B
Omnidirectional Dynamic Handheld Microphone
The 514B is a low impedance, dynamic, hand-held microphone designed for paging and public address systems. It provides clear, natural voice response and high intelligibility. It is equally useful for radio communications, paging and dispatching systems, and its low-impedance connection makes it adaptable to most PA amplifiers.

550L
The 550L is an omnidirectional dynamic base station microphone with a frequency response specially tailored for voice intelligibility. It is equally useful for radio communications, paging and dispatching systems, and its low-impedance connection makes it adaptable to most PA amplifiers.

527 Series
Dynamic Communications Mic
The 527 Series are extremely reliable, high impedance (527A) and low impedance (527B) dynamic handheld microphones with an extended low- and high-frequency response particularly suited to ham radio use, mobile FM transmission, and top-quality paging systems. The mics have a clear, crisp, and natural voice response. They feature professional design, small size and light weight. The modular construction of the 527 Series account for their tremendous ease of field serviceability. The cartridge, switch, and cable are easily replaceable, if necessary. The mics are wired so that the wires will not crimp or break. They fit naturally and comfortably in the hand and are unaffected by heat or humidity. The exclusive ARM O-DUR case resists mechanical shocks and vibration. The “Million-Cycle” leaf-type switch is double-pole, single-throw, designed to withstand severe operating conditions and constant usage.

527A Microphone
200Hz to 5kHz frequency response, high impedance............48.95

527B Microphone
300Hz to 5kHz frequency response, low impedance............54.50

527C Microphone
Built-in transistor amplifier ...............59.50

522
The 522 is a dynamic base station microphone designed for radio communications, paging, and dispatching systems. Cardioid pickup pattern suppresses unwanted background noise (other dispatchers working nearby, ventilating equipment, office machines). It also eliminates or reduces feedback in PA paging applications. Convert to Monitor/Transmit switching with the RK199S Split-Bar Conversion Kit.

450 Series II
A high output dynamic microphone designed for paging and dispatching applications. Extremely rugged, it features an omnidirectional pickup pattern and a frequency response tailored for optimum speech intelligibility. It also includes an impedance selection switch and a locking press-to-talk switch. The press-to-talk switch can be converted to a monitor/transmit switch with the Shure RK199S Split-Bar Conversion Kit.

A53M Isolation Mount
The A53M isolation mount/swivel adapter reduces transmission of mechanical noise and vibration by more than 20dB. Compatible with the 849, SM 81 and SM 94, or any Shure mic with a tapered handle...37.50

A55M Isolation Mount
An isolation mount, the A55M Shock Stopper reduces transmission of mechanical noise and vibration by more than 20dB. Compatible with the SM 57, SM 58, SM 87/87A/87C, Beta 58A and Beta 87A, or any mic with 3/4” and larger handle.........................44.95

A55HM Isolation Mount
Designed for microphones with a tapered handle, the A55HM (Half Mount) Shock Stopper features a patented design that allows microphones to be snapped in and out without removing the cable.........................39.95

A88SM Isolation Mount
Designed for the VP88 or any mic with a handle diameter of 1¾”, the A88SM provides exceptional freedom from mechanically transmitted noise. Through its use of the highly effective Shock Stopper half-mount isolators and secure cable locking design, the A88SM eliminates most noise associated with stands, booms, and cable movement.........................158.50

A89SM Shock Mount
The A89SM reduces mechanical noise transmission by more than 20 dB. Designed for the SM 89 shotgun mic, it also fits any 3/4” diameter microphone. Three integrated thread sizes allow you to attach the mount to stands or booms with 3/8–16, 5/8–27, or 5/16–18 threads. A cable securing mechanism prevents the transmission of mechanical noise through the cable and connector. Locking, pivoting design provides maximum aiming capabilities...............91.95

Quick-Release Shock Mounts for Gooseneck Mics
These accessories allow permanent installation of a quick-release shock mount for use with a wide variety of gooseneck mics.

A400SM
Offering Shock-Stopper construction, the A400SM decouples the mic from the mounting surface and reduces impact or surface noise by up to 20 dB .....24.95

A400XLR
The A400XLR assembly consists of a 3-pin XLR-type (female) connector and insert. Existing A400SM Shock Mounds can be retrofit for quick release performance with the A400XLR Connector/Insert..............22.50

### Foam Windscreens for all Shure Ball Type Microphones

- Black Foam (A58WS-BLK) .................. 6.25
- Blue Foam (A58WS-BLU) .................. 6.25
- Gray Foam (A58WS-GRA) .................. 6.25
- Green Foam (A58WS-GRN) ................. 6.25
- Red Foam (A58WS-RED) .................. 6.25
- Yellow Foam (A58WS-YEL) ................. 6.25

### Gooseneck Windscreens

- For Easyflex Gooseneck Mics (RPM 310) Charcoal Gray, 4 Pieces .................. 6.50
- For Easyflex Overhead Mics (RPM 312) Charcoal Gray, 4 Pieces .................. 6.50
- For Easyflex Overhead Mics (RPM 314) White, 4 Pieces .................. 6.50

### High Performance Ball Foam Windscreen (A99WS) For Microflex Gooseneck Mics .......... 5.95

### Locking Metal Windscreen (A412MWS) For Microflex Gooseneck Mics .................. 19.95

### Windscreen and Clip Packages

- Tan Foam Windscreens and Tie Clips (RK304T) For SM 93 (Contains two of each) .......... 24.95
- Foam Windscreens & Clothing Clip (RK318WS) For all WH 20 headsets. Contains 2 windscreens and 1 clothing clip ............... 5.95
- Locking pop filter grille and windscreen ........................................ 39.95
- Locking gray foam ........................................ 7.50
- Locking metal windscreen ........................................ 12.50
- Locking foam ........................................ 6.95
- Locking black foam ........................................ 8.95

### Stands

- **3” Extension Tube for Desk Stands (A26X)** Adapts Beta 56 to various mounting devices .................................................. 8.95
- **Small Black Desk/Table Stand (A202B)** For MX202 microphones .................. 28.50
- **Accessory Base (A412B)** For Microflex Gooseneck microphones, 10’ attached XLR cable ........................... 59.50
- **Chrome Floor Stand (M5-10C)** A chrome floor stand with gray metallic base, the M5-10C quickly and easily adjusts from 35” to 64” high .................. 39.95
- **Tripod Desk Stand (S40B)** .......... 19.95
- **Baby Boom Arm for MS-10C (BB77)** A 31” chrome-plated, adjustable boom that fits the M5-10C floor stand .............. 29.95
- **S15A Telescoping Mic Floor Stand** The S15A is a rugged and stable, yet portable and lightweight tripod floor stand. Features five telescoping sections, adjustable height between 3.5’ and 14’. Includes a carrying case .......... 157.50
- **S37A Desk Stand** Provides a low profile, stable base for microphones with swivel connector assemblies, or microphones using swivel adapters and shock mounts. Has a non-reflective, textured, gray finish .................. 26.95
- **S39A Vibration-Isolation Stand** Provides excellent shock isolation, preventing floor or table vibrations from reaching a mounted mic. Use the S39A for sportscasting, conference table or front-of-stage installations, or any application where severe vibrations may occur .................. 62.95

- S37A Desk Stand
- S39A Vibration-Isolation Stand
Tie Clips

**Single Mount Tie-Clips (RK183T1)**
For MX183/184/185 (2 pc.) .................... 32.95

**Dual Mount Tie-Clip (RK183T2)**
For MX183, MX184 and MX185 .............. 14.95

**Tie Clasp for SM 11 (RK203TC)** ............ 12.95

**Single Mount Tie Bars (RK240SB)**
For 839, SM 83, SM 84 (4 pc.) ............. 22.95

**Dual Mount Tie Bars (RK241DB)**
For 839, SM 83, SM 84 (4 pc.) ............. 23.95

**Double Tie Clips (RK307DB)**
For SM 93 (2 pc.) .................................. 17.95

**Black Single Bar Tie Clips (RK354SB)**
For SM 93 (2 pc.) .................................. 12.95

**Tan Windscreens & Single Tie Clip (RK304T)**
For WL93T (2 pc.) .................................. 24.95

**Black Swiveling Lapel and Dual Tie Clips (RK304T)**
For WL93T (2 pc.) .................................. 24.95

**Tan Swiveling Lapel and Dual Tie Clips (RK307DB)**
For WL50 (2 pc.) .................................. 24.95

**White Swiveling Lapel and Dual Tie Clips (RK307DB)**
For WL50 (2 pc.) .................................. 24.95

**Black Swiveling Lapel Clips (RK510)**
For M C50B, WL50 and Beta 53 (Contains 5 clips) .................. 27.50

**Tan Swiveling Lapel Clips (RK512)**
For WL50 and Beta 53 (5 clips) ............. 26.50

**White Swiveling Lapel Clips (RK514)**
For WL50 (5 clips) .............................. 27.50

Mounts and Adapters

**Dual Microphone Mount (A26M)**
For 545 Series, SM 57 and Beta 57A ................... 39.95

**ShureLock Black Swivel Mount Adapter (A32M)**
For KSM 27 microphone ........................... 56.95

**Universal Microphone Drum Mount (A56D)**
Mounts a mic onto a drum. A screw on the mount secures the mic, and an adaptive brass washer (European insert) is available to accommodate an even wider range of microphone models. Flexible, sturdy rubber construction. Accommodates 5/8” Swivel Adapters .......... 37.95

**Drum Mount (A98D)**
Mounts the Beta 98/S or SM 98A mics on a drum. The gooseneck adapter allows for optimum mic placement, and can be inserted into the horizontal or vertical slots of the clamp for positioning flexibility. The clamp is designed to fit drum rims measuring from ½” to 2¼” in height, or on cymbal stands measuring from ¾” to 1¼” in diameter ......................... 38.50

**Universal Horn Mount (A98KCS)**
Attaches the Beta 98/S or SM 98A to a horn, wind, or reed instrument in the exact position desired while protecting the instrument and its finish. The cushioned grip is manually tightened and securely clamps the rim of the horn. Non-marking neoprene rubber on the grip prevents marring the bell or its rim. A short 6½” gooseneck attached to the clamp terminates in a shock-mount adapter for the microphone. The gooseneck length can be adjusted to facilitate locating the microphone in precisely the desired position in the bell of a horn. A side screw locks the gooseneck in the chosen position .......... 49.50

**Swivel Adapter (RK282)**
Shock-mounted swivel adapter for SM 98A and Beta 98S microphones ................. 18.50

**A27M Stereo Microphone Adapter**
The A27M is a stereo microphone adapter designed to hold two mics in selectable positions for stereo broadcasting, recording or sound reinforcement. It allows two microphones to share one stand without losing independent positioning flexibility.
- Permits coincident or closely spaced mounting with a wide range of directional angles, and vertical microphone separations of 1¼” (31.8 mm), 2½” (66.7 mm) or 4” (102 mm).
- The A27M consists of two vertically stacked sections that rotate on their centers. Each contains a 5/8”-27 threaded stud and locking ring to accept a variety of microphones. The bottom section contains a 5/8”-27 adapter for mounting on a mic stand. Includes cable clamp for holding mic cables .......... 59.95
A96F
Low-to-Medium Impedance Matching Transformer
Low impedance, female XLR to medium impedance 3.5mm mini-plug output connector with 18” cable. Adapts a balanced, low-impedance microphone to camcorder/recorder input. Also has a DC Bias Filter ..........................................................36.50

A95UF/A95U
Low-to-High-Impedance Mic Transformer
The A95UF and A95U provide 24 dB of voltage gain and may be used in reverse (high- to low-impedance). The A95UF comes with a balanced low impedance 3-pin XLR female input and the A95U comes with a balanced 3-pin XLR male low-impedance connector. An Amphenol MC1M-type output connector with mating 1/4” male phone plug and female phone jack adapt to a variety of high-impedance signals.
A95UF ........................................34.95  A95U ........................................32.50

Problem Solvers

No matter how well you plan ahead, sooner or later you will probably run into an audio-related problem. For example, dealing with incompatible signals of a low impedance microphone and a high impedance mic input of a camcorder or eliminating the low end rumble picked up by a sensitive mic due to handling noise or even automobile traffic. Shure has developed a number of problem solving solutions to help you out in these types of situations and many others.

A15AS Switchable Mic Attenuator
Prevents preamplifier overload when strong signals are applied.
• Provides 15, 20, or 25 dB of microphone attenuation
• Requires use of balanced signals; XLR female in and XLR male out
• Passes phantom power ..........................................................38.50

A15HP High-Pass Filter
Reduces unwanted low end rumble in microphone signals.
• Provides low-end roll-off of 12dB per octave below 100 Hz
• Slender, in-line XLR (F) to XLR (M) configuration
• Requires use of balanced signals .................................38.50

A120S Accessory In-Line Switch
Provides on/off, push-to-talk, cough button, and transmitter relay keying functions for wired mics.
• Convenient handheld size with belt clip
• For hardwired, in-line use with various cable diameters .................................................................24.95

A15PRS Switchable Phase Reverser
Provides instant switch selection of normal or reversed phase of a balanced line without modification of equipment.
• Reverses polarity of pins 2 and 3 of a balanced line
• Slender, in-line XLR (F) to XLR (M) configuration; may be used in reverse
• Requires use of balanced signals ........................................38.50

A15BT Bridging Transformer
Matches balanced or unbalanced devices of different impedances.
• 33 kOhm primary: 600 or 7500 ohm secondary; may be used in reverse
• Slender in-line XLR (F) to XLR (M) configuration 39.95

A15LA Line Adapter
Provides 50 dB attenuation, allowing a balanced line-level source to be connected to a balanced microphone input.
• Slender, in-line XLR (F) to XLR (M) configuration
• Requires use of balanced signals .................................34.95
Lavalier Microphones

Sony's lavalier microphones are manufactured to meet the most demanding professional broadcast and recording requirements. They are designed to deliver the highest level of performance and reliability. There are five primary lavalier mics in the series, offering different sizes and applications. Additionally, they offer three big advantages over other systems.

High Performance

Sony's lavalier microphones are distinguished by their superior performance, as represented by the wide (20Hz–20kHz) frequency response of the top-of-the-line ECM-88. They will more than measure up to your expectations.

Wide Selection

Five models in the series, each finished in black plating. The ECM-88 is an extremely miniature, omni-directional electret-condenser mic designed for quality-critical applications in broadcasting, theater, and field productions. While slightly bigger, the ECM-77B is also incredibly small and light. The uni-directional ECM-66B is designed for close-miking of musical instruments. The popular ECM-55B incorporates a 10.6mm omni-directional capsule for versatility, while the ECM-44B offers high performance at a lower cost. There is also a full line of lavalier accessories available.

Reliability and Convenience

Increased reliability is another important plus for these mics. Careful attention is paid to make the capsule immune to external noise and adverse ambient conditions. The cable is strengthened to achieve a high resistance to damage caused by over flexing.

ECM-44B

Omni-directional Electret Condenser Mic

The ECM-44B makes the exceptional quality of Sony's electret condenser mics available for budget conscious productions, and a variety of sound reinforcement requirements, such as lectures and demonstrations. Measuring 8.5 x 14.5mm, the ECM-44B delivers clean, bright, yet natural reproduction. Complete with in-line battery for 2-way powering (battery or 48v phantom power). Operates on a single AA battery for over 5000 hours. Supplied with urethane windscreen and clip.

ECM-55B

Omni-directional Electret Condenser Mic

The ECM-55B is suitable for applications ranging from news and interviews to stage dramas and instrument pick-up. Frequency response is a wide 30Hz to 18 kHz. Above 2kHz, there is a gentle rise in the response to give a touch of presence to any instrument, while offering crisp, clean voice quality without any masking effect when used as a lapel mic. Directivity is optimized to ensure uniform, dependable output, regardless of the direction of the sound source. The metal mesh windscreen effectively eliminates both wind noise outdoors and pop noise in close-up situations. May well prove to be your most versatile and useful lavalier microphone. Complete with in-line battery for 2-way powering (battery or 48v phantom power). Supplied with metal windscreen and metal holder clips.
ECM-66B Uni-Directional Electret Condenser Mic
A uni-directional miniature microphone developed specifically for recording musical instruments and voice when superb rejection of the ambient sound is desirable. The design of the ECM-66B yields clean, natural reproduction of musical instruments while maintaining excellent isolation from the acoustic environment. Unlike most miniature microphones, this mic has a uni-directional polar pattern, carefully contoured for better control of feedback. The higher voltage supplied to the microphone by the built-in DC-to-DC converter increases the maximum input sound pressure level to an amazing 130dB SPL. This special construction also complements the electret condenser design, resulting in excellent transient response and thus better tonal quality. Complete with in-line battery for 2-way powering (battery or 48v phantom power). Has a battery on/off switch to save power. An LED illuminates to show battery condition when the power is turned on.

ECM-77B Omni-directional Condenser Microphone
At only 1/4” x 1/2”, and a mere 0.04 oz. the ECM-77B is microscopic. Increased mechanical impedance using a metal vaporized, fine ceramic backplate provides the ECM-77B’s exceptional 40Hz to 20 kHz frequency response. And, by design, the ceramic backplate assures resistance to humidity and temperature extremes for increased reliability. Combined with advanced techniques for sealing the capsule and advanced design for the acoustic housing, the ECM-77B delivers sound that is audibly superior and more pleasing than any other lavalier mic. Ideal for TV broadcasting and stage applications where the microphone must be inconspicuous, the ECM-77B enables unobtrusive miking plus also minimizes glare. Even when hidden inside a costume, its frequency response is wide enough to pick up the voice with no perceptible change in quality, while minimizing the pick-up of rustling noise.

ECM-88 Omni-directional Condenser Microphone
The ECM-88 is an extremely miniature, omni-directional electret-condenser microphone designed for quality-critical applications in broadcasting, theater, and field productions. It uses a dual-diaphragm mechanism to achieve high-sensitivity, flat-and-wide frequency response and low noise characteristics, while offering great enhancements over the acclaimed ECM-77B. The diaphragm and back-plates are fixed vertically to the microphone capsule, which effectively reduces the mechanical noise caused by cable vibration and friction. Water-resistant architecture reduces the risk of water or perspiration entering the mic capsule. The mic capsule measures just 5/32 x 5/32 x 11/16” allowing for easy, natural-looking concealment in a stage costume. The ECM-88 includes two types of mic holders (double-pin and tie-clip) and a urethane windscreen. It is supplied with a Sony 4-pin connector (SMC9-4P) for use with the optional DC-78 power-supply or the WRT-8B/822B wireless bodypack transmitters. The optional DC-78 power supply has a 4-pin connector (SMC9-4P) input and XLR output. It can operate via 12- 48v external DC power or up to 5000 hours on a single AA battery.

**C-800G Pack**
**Tube Studio Microphone**

Excellent for vocal recording in studios and film post-production houses, Sony's C-800G studio tube condenser mic is designed for the highest possible sound reproduction quality. It features a high-quality dual large diaphragm for true reproduction of vocal qualities, vacuum tube warm sound quality through a 6AU6 vacuum tube, a unique Peltier-based cooling system to achieve optimum tube operating temperature, and an electronically selectable pick-up pattern (Omnidirectional/Uni) for various recording applications. The package includes a power supply (AC-M C800G) and all necessary accessories.

- Suitable for vocal recording in studios and film post-production houses
- Large diaphragm capsule
- High sensitivity of -33dB/Pa
- Electronically selectable directivity, either omnidirectional or cardioid
- Low noise and low distortion due to built-in cooling system

---

**ECM-670 / ECM-672**
**Shotgun Microphones**

Compact and lightweight, the 9” ECM-670 and 12” ECM-672 are high-performance, electret condenser super-cardioid shotgun-type microphones designed for use on portable video cameras such as Sony’s Betacam and DXC series. Tailor-made for ENG applications, they also offer versatility in applications such as interviews, sound reinforcement and speech. Superb controlled directivity assures rejection of ambient and camera noise, while the supplied windscreen reduces wind noise and provides pop protection during extra close miking.

**ECM-670**
- Low-cut switch provides a low frequency roll-off for optimum voice pick-up reducing pop and wind noises.
- Powered by external power supply (12-48v DC) via an XLR connector.
- Includes windscreen, mic holder, mic spacer and 2 stand adapters.

**ECM-672**
- A 2-position low-cut switch further contributes to the mic’s low noise level and emphasizes desired sound sources by eliminating boombness in the low range.
- Powered by 12-48v DC power supply or via AA battery (up to 3000 hours of operation).
- Includes a windscreen
ECM-999
Stereo Electret Condenser Mic

With a selectable stereo image, AA battery operation, and a built-in low cut switch, the ECM-999 is ideal for a multitude of recording and broadcasting applications. It also features a single-point stereo pickup and an MS design with 3 electret condenser capsules for stereo recording with a single microphone.

- Electret condenser microphone with back-electret condenser capsules permits good sound pick-up.
- Mid/Side system: The sum of signals of the mid microphone unit (uni-directional) and side microphone unit (bi-directional) and the difference between them are used for R and L channels respectively. The Mid/Side system is employed to give excellent sound image and faithful stereo sound reproduction with less “hole in the middle”.
- The directive angle between the left and right channels can be changed progressively from 0° (monaural) to 150° according to the sound source.

ECM-MS957
One-Point Stereo Mic

Incorporating a sensitive electret condenser mic, a rotating mid-capsule and Mid/Side switch, the ECM-MS957 is designed for high-quality instrument recording. Ideal for use with Minidisc and DAT recorders, it also features a wide frequency response, superb dynamic range, and an XLR connector.

- Mid/Side (MS) capsules for natural stereo panorama; the Mid capsule picks up monophonic sound while the Side capsule picks up left/right difference sound; subtracting and adding the two capsule signals yield separate.
- The mid-capsule rotates to adjust the stereo pick-up pattern for the widest range of recording situations.
- Mid/Side (MS) switch selects pickup angle between left and right channel; choose 90° for a single voice or instrument or 120° to pick up many voices and instruments, arranged across the stage
- XLR connector for secure and reliable, low-noise connection
- Supplied accessories include detachable cable, stand, holder, windscreen and carrying case

F-Series Dynamic Microphones

F-710
Low cost, multi-purpose dynamic handheld mic with high sonic quality and high sensitivity. Suitable for voice and instrument pickup, the mic’s Neodymium magnet offers high output. On/off switch.

F-720
Rugged dynamic hand-held cardioid mic with a built-in LC switch. Replaceable capsule. Efficient one-piece shock mount to protect the capsule from external noise and vibration. Integral double windscreen to prevent pop/wind noise. Reasonably priced to suit both professional and institutional applications. Black finish.

F-740/9X
Designed for critical live vocal and instrumental reproduction, the F740/9X features an improved capsule design for enhanced audio performance, as well as a AlNiCo magnet assembly and CCAW (Copper Clad Aluminum Wiring) voice coil for very crisp, clean, transparent sound.
- Low handling noise
- Superb sound quality and high sensitivity
- Extremely durable design

F-780/9X
A perfect choice for critical live vocals or where high-quality, rugged reliability, and resistance to feedback are required. Improved sonic and mechanical characteristics make the F-780/9X a must have for professionals in the music and recording business.
- Rigid structure allows easy movement of capsule for higher sensitivity and reduced mechanical noise
- Urethane coating for extremely low handling noise

Gator Tough - Musician Friendly

Gator Cases was founded to meet the needs of professional and hobby musicians who need to safely protect their gear. All of their cases are designed by musicians to insure that they meet the most demanding needs. Gator Cases offers innovation, quality and price. They use only the highest quality latches and components to insure the best performance. To back up this dedication, all Gator Cases have an unlimited lifetime warranty.

**GM-4**
Padded Bag for 4 Microphones and Cables

The GM-4 is the perfect carrying case featuring 4 form fitted foam microphone drops and a slot for a belt pack. The exterior has a large dual pocket for cables and accessories. The case comes with a comfortable top carrying strap as well as a shoulder strap. Made from 600 Denier Ballistic Nylon, this case is made for heavy usage at an affordable price.

**GM-15**
Professional 15 Drop Microphone Case

The GM-15 is constructed from military grade Polyethylene and features recessed Zinc-plated twist latches, padded handle, and triple-plated Chrome corners. It is designed to take the beatings of a band-on-the-road hitting 70 venues in 18 countries. The interior has 15 microphone drops that are formed with thick foam to insure maximum protection plus a generous area for cables, belt packs or accessories. Lockable and affordable - what a concept!

**GM-6**
Molded Plastic Case with Six Microphone Drops

Gator’s GM-6 microphone case is molded from ABS plastic and is lined with thick die-cut foam to fit six microphones. The durable latches are lockable and triple chrome plated.

**GX-33**
Microphone/Stand Bag

The GX-33 has 3 separate compartments for tripod-type mic stands as well as 5 form-fitted mic drops. Both bags are constructed of 600 Denier Nylon, have 2 webbed handles and a carrying strap.

Microphone and Equipment Stands, Booms, & Accessories

Synonymous with durability and quality, Atlas is the world recognized leader for cast-base and tripod style floor stands, desk, and studio boom stands; boom attachments; loudspeaker/equipment stands; and over 40 adapters and fittings. The unique selection, developed over the past 60 years, offers the professional musician, performer, educator, and lecturer great flexibility in choosing models that satisfy unique application, performance, and budget requirements. Classic styling in mirrored chrome or non-reflective ebony epoxy (perfect for video application) combine with the famous Atlas Sound wear-proof clutches to provide attractive, durable, and reliable service for all types of communication and entertainment applications.

**MS Series Microphone Floor Stands**

Your microphone is a valuable investment, so why trust it to a cheap stand. Manufactured with fine U.S. craftsmanship, Atlas stands are simply built better. Each clutch is made of a wearproof, three piece construction. The bases and housings are high-stability cast metal, and the tubings are finished in ebony or mirrored chrome. With more than 60 years of performance, both on-stage and off-stage, these stands are proven performers. And with 12 models to choose from, Atlas offers the widest selection of floor stands available.

### MS-10C / MS-10CE
**All-Purpose Floor Stands**
The cost-efficient MS-10C (chrome finished tube) and MS-10CE (ebony finished tube) assemblies are the most popular stands in the world for dependable performance in music, entertainment, business, education, and social functions. Stability is provided by the circular cast iron ebony base. **MS-10C**...........28.50 **MS-10CE**........28.50

### MS-12C / MS-12CE
**Professional, Full-Height Stands**
These all purpose stands feature the same wearproof clutch and high-quality craftsmanship as the MS-10 series with the beauty of a lower profile base section. **MS-12C**...........28.50 **MS-12CE**........28.50

### MS-4 / MS-4E / MS-43 / MS-43E
**Fully Adjustable Three-Section Stands**
These versatile stands adjust from 25˝ to 65˝ to meet the needs of seated and standing instrumentalists and performers. Model includes three-section chrome (MS-4/M-43) or ebony tube (MS-4E/M-43E) assembly with two wearproof clutches for optimum vertical height adjustment and high stability. The MS-4 Series has a low-profile cast iron base finished in ebony (diameter of 10˝, weighs 6 lbs), while the MS-43 Series base is 12˝ in diameter and weighs 8 lbs. (also finished in ebony). **MS-4**.............69.95 **MS-4E**.............69.95 **MS-43**.............69.95 **MS-43E**.............69.95

### MS-20 / MS-20E
**Extra-Stable Stands with Oversized Base**
Heavy-duty stands for studio, recording, church and school applications, the MS-20 (chromed finish tube) and MS-20E (ebony finished tube) include an extra-height 1¼˝ diameter tube assembly with wearproof clutch, top adapter, and low contour high-stability cast iron ebony base. **MS-20**..........................59.95 **MS-20E**..........................57.95

### MS-25 / MS-25E
**Studio Stands with Air Suspension System**
The MS-25 (chromed finish tube) and MS-25E (ebony finished tube) are heavy-duty studio recording stands featuring a 1¼˝ diameter tube assembly with integral air suspension system to protect sensitive microphones. Triangular cast base includes sculptured sides, ebony finish, and decorative chrome cover. **MS-25**.............89.95 **MS-125E**........89.95
TL34E Performer Series Tripod Stand
The TL34E features a durable, all-metal housing with a unique double-cam locking device and Glide’n Lock legs for secure positioning and convenient transportation/storage. The wearproof Atlas clutch withstands years of stage and studio handling, while the high-density rubber feet will reduce mechanical noise to the microphone. 2-piece adjustable tubing (34”-63” H) terminates in the standard 5/8”-27 thread pattern. Non-reflective ebony epoxy finish .................. 46.50

TL34-BBE/ TL34-15E/ TL34-21XE
Performer Series Tripod/Boom Combinations
Tripod/boom stands offer maximum ease and portability. Packages include the patented TL34E Performer Series tripod with either a 34” economy boom, or a choice of Performer Series booms: 34” or 25½ - 38½”. Packages are finished in ebony epoxy. The Performer Series booms feature the patented all-metal swivel clamp with Glide’n Position tubing, nylon brake bushings and wool washers. There is also a 3/4 lb. counterweight for balance, and steel T-bar knob for no-fail locking.

TL34-BBE TL34E tripod with 34” BB-77E economy boom ..................... 73.50
TL34-15E TL34E tripod with 34” PB15E Performer Series boom ........... 89.95
TL34-21XE TL34E tripod with 25½-38½” PB21XE Performer Series boom .... 99.95

TE-E Musician Series Tripod Stand
Lightweight, professionally styled stand with the fit and feel of tripod costing much more. Features full-height extension (37 to 65”) to meet versatile miking needs, a three-piece clutch with protective insert & metal clutch barrel for secure and scratch-free positioning, and easy-locking legs that tighten with a single motion of the metal leg attachment “cup” for fast set-up and teardown. Durable tripod legs attach to a metal retainer assembly that includes a thumbscrew/brake system to provide secure positioning and prevent tube marring. Tube assemblies are durable CRS construction terminated in 58”-27 thread pattern. Satin ebony finish.

TE-E Tripod Stand (5-1/2 lbs) ...................... 29.95

TEB-E Tripod/Boom
Features the TE-E stand with the removable BE-E telescopic boom to provide microphone extension from 24 to 39”. The boom includes a molded plastic handle, metal swivel clamp with protective rubber inserts, and an easy-grip knob for vertical alignment. Adjustment for the main and extension boom include a thumbscrew/brake system to provide secure positioning and prevent tube marring. Tube assemblies are manufactured of CRS and terminate in 58”-27 thread pattern. Satin Ebony finish.

TEB-E Tripod Stand/Boom (7 lbs) ................. 49.95

DS-5 / DS-5E General Purpose Stands
These fixed-height stands include traditional, circular cast iron base and choice of chrome or ebony tubing finish. Stands are suitable for application with any standard microphone.

DS-5 Chrome finish .............. 9.95     DS-5E Ebony finish .............. 9.95

DS-2 Vibration Isolating Stand
A low-silhouette stand, the DS-2 features an integral tension mount to reduce conductivity of external mechanical vibrations. High-stability metal base with protective pads includes notched area for convenient placement of cards or pens. Fixed-height tubing is chrome finished. Base is ebony ............. 24.95

DS-7 / DS-7E Adjustable Stands
These versatile stands have a vertical height adjustment from 8” to 13” and include wearproof clutch and ebony finish cast iron base.

DS-7 Chrome finish ............. 16.50     DS-7E Ebony finish ............. 16.50
**STUDIO BOOM STANDS**

**SB-11WE Economical Studio Boom**
An economical studio boom, the SB-11WE is especially suited for small studio/broadcast applications and for stage miking of drums and percussion instruments. Unit features a 60” long, two-piece horizontal boom assembly. Boom includes a Performer Series swivel clamp and an adjustable 2 lb. counterweight for effortless boom arm orientation. Tubing incorporates a 90° angled end for optimum microphone positioning and terminates in the standard 5/8”-27 thread pattern. Stand features an Atlas Sound wearproof clutch for positive locking control. Triangular die-cast base offers extra stability and is equipped with hard rubber swivel casters for effortless and silent mobility. Finish is non-reflective ebony epoxy ...........149.95

**SB-36W Professional Studio Boom S**
A heavy-duty stand for stage and studio applications, the SB-36W includes an integral piston-type air suspension system for effortless height adjustment and microphone protection.
- Equipped with a two-piece horizontal chromed-tube assembly, adjustable 6 lb. boom counterweight, heavy-duty gyromatic swivel, Atlas wearproof clutch, and triangular cast iron base
- Includes silent-motion, ball-bearing swivel casters of hard rubber for friction-free and vibration-absorbing mobility
- Tubing terminates in the standard 5/8” - 27 thread pattern, and supplied with guide clips for microphone cable attachment. Tubing is finished in chrome, base is ebony epoxy with a chrome cover

**SB-36W** Includes wheels for a height span of 49”-73” 199.95

**BOOM ATTACHMENTS**

Performer Series booms are manufactured in the U.S. to the highest quality standards, and they combine exceptional styling with a unique, all-metal swivel clamp for greater flexibility. Clamp features Glide’n Position tubing with nylon brake bushings for smooth horizontal adjustment. Resilient washers are made from compressed virgin wool fiber (in lieu of rubber) to offer quiet and secure positioning even after years of use. Extra-strength, steel T-bar knob assures no-fail locking with simple one-hand adjustment in the vertical plane. All versions include counterweights for increased balance and stability. All clamps are finished in non-reflective ebony epoxy. Tubing is manufactured of CRS and terminates in the standard 5/8”-27 thread pattern.

**PB11X / PB11XE Mini Adjustable Boom**
Compact booms extend from 16¾” to 24⅛” with a single motion—perfect for drum/piano/guitar amp and short distance miking. Units include a threaded end cap and a fixed 3/4 lb. counterweight for stability.

PB11X Chrome...........................................39.50
PB11XE Ebony epoxy................................39.50

**PB15 / PB15E Fixed Length Booms**
All-purpose, high-quality booms are 34” long and include fixed 3/4 lb. counterweights for stability.

PB15 Chrome..................................................32.95
PB15E Ebony epoxy ......................................32.95

**PB21X / PB21XE Extendable-Length Booms**
Booms extend from 25¼” to 38⅛” with a single motion and are suitable for a wide variety of miking applications. Units contain a fixed 3/4 lb. counterweight and threaded end cap.

PB21X Chrome.................................................39.95
PB21XE Ebony epoxy........................................39.95

**BE-E Musician Series Extendable Length Boom**
Versatile, low-cost BE-E boom has adjustable-length positioning for extended microphone range applications. Two-piece boom extends 24-39”. The boom includes a molded plastic handle, metal swivel clamp with protective rubber insert, and an easygrip knob for vertical alignment. Adjustment for the main and extension boom include a thumbscrew/brake system to provide secure positioning and prevent tube marring.

BB-E Satin Ebony (2-1/2 lbs.) .........................24.95

**BB-77 / BB-77E General Purpose Fixed-Length Booms**
Basic, multi-purpose 34” booms, they feature a fixed 3/4 lb. counterweight, thread-on die cast swivel, single-action positive locking, and new easy-grip knob for positioning control. Ideal for application with floor stands or accessory components.

BB77 Chrome finish .....................................19.95
BB77E Ebony epoxy ......................................19.95
ATLAS SOUND
MIC STAND ACCESSORIES

Atlas offers the industry's largest selection of problem-solving microphone adaptors, extensions, fittings and flanges for use with floor, desk, loudspeaker, and studio boom stands.

Gooseneck Flexible Extensions
6, 13, and 19” flexible goosenecks attach to any mic stand or adapter with 5/8"-27 male and female threads. Inside diameter is .338”.
- GN-6 Chrome finish. 6” gooseneck ..........................6.95
- GN-13 Chrome finish. 13” gooseneck .......................6.95
- GN-19 Chrome finish. 19” gooseneck .....................7.95
- GN-19E Ebony finish. 19” gooseneck .....................7.95

LO-2B Clip-Mounting Microphone Accessory
Lock-On accessory, respectively, allow fast connection and disconnection of plastic mic clamp holders and boom attachments with 5/8"-27 threads for safe transportation.
- LO-2B Chrome ....13.50  LO-2BE Ebony ....13.50
- TM-1 Chrome ....14.95  TM-1E Ebony ....14.95
- US-2 Flange-mounting, multi-purpose mic support includes 12 1/4” L boom on a spring-loaded swivel with 180° vertical cable feed-thru. Mounts mics to lecterns, consoles, tables, and desks. Chrome finish .........................49.95

VM-2 Durable shock-mount accessory reduces external mechanical vibration pick-up. Die-cast unit can be left on a stand during transit unlike similar plastic accessories. Fits 5/8"-27 threaded mics and mounts between the top tube of a 5/8"-27 threaded stand and the mic clip. Chrome finish ..........................19.95

BC-1 Multi-Purpose Clamps
Bracket-style surface clamp with 6” high chrome tube attaches to tables, desk, keyboard stands, and countertops for mounting mic and accessory items with standard 5/8” threads ............19.95

CO-1B Connect-on swivel adapter/clamp provides for the addition of a second mic with standard 5/8”-27 threads to any floor or desk stand with 5/8” or 3/4” diameter tubing. Ebony finish ........................................14.95

MAC-1 Multi-use adapter/clamp holds mics, booms, or accessories having 5/8”-27 threads in vertical or horizontal orientation. Versatile unit also clamp mounts to 5/8”, 3/4”, and 1 1/4” diameter tubing or to freestanding instruments, keyboards, and drums. Made of high-strength extruded aluminum. Ebony finish. Weighs 1.5 lbs.................................34.95

CH-1B Cable/Tambourine Hangers and Cable Feed-Thru Adapter
Versatile accessory can hang cabling or a tambourine. Single screw-mounting assembly fits all tube assembly sizes.
- CH-1B Chrome ..................14.95
- CH-1BE Ebony ..................14.95

CLAMP-ON Mic-Eze
Made of nylon with glass, each Mic-Eze model features lockable clamp design, while the clamp opens to 2 inches. They weigh 2 oz. and fit in the palm of your hand. Telescopic arm extends 1/4” or 3”, and their arm swings toward clamp 180°. Clamps mounts in horizontal and/or vertical plane. The M-4 holder is a perfect match as the mic holder.

M-1: Patented mic placement design enables drummers to mic their drum set using their personal choice of mic without the need of mic stands. Simply clamp and lock to rims and stands .......................................................17.95

M-1E3: Modified version of the M-1. A male threaded 3” extension arm is perpendicular to the clamp ...............24.95

M-1E5: Same as above with 5” extension arm ...............24.95

M-3E3: The versatility of this model sets the 3” extension arm vertically with the clamps in either a vertical or horizontal plane. The flexible arm can bend in any direction ..............................................24.95

M-3E5: Same as above with 5” extension arm ...............24.95

M-1A-E3: A 3” male extension arm runs in line with the clamp and can swing and bend in all directions ..................24.95

M-1A-E5: Same as above with 5” extension arm ...........24.95

M-2: Heavy duty mic holder that threads to the base models or any mic stand ......................................................................17.95

M-4: Heavy duty spring action microphone holder that holds any size microphone .........................................................17.95

FE3: Dual perpendicular clamp set with a 3” flexible center that can bend in any direction .........................................34.95

FE5: Same as above with a 5” flexible center ...................34.95

Min-Eze: Dual perpendicular clamp set with a trapeze style center attachment. Very popular for the congo drum ........................................34.95

Mac-Eze: Dual vertical clamp arrangement with a short center attachment .........................................................34.95

PB (Piggy Back): Mounts mics to mics for dual feed and adjusts for phase cancellation. Dual vertical in-line clamp set with a swing type center attachment .............34.95
**ULTIMATE MICROPHONE STANDS**

**MC-05B Round Base**
- Proven clutch design for easy adjustment and reliable locking
- Easy and comfortable adjustments
- Traditional, sturdy, cast-iron base

ULMC05B ................................................ 19.95

**MC-07B Liberty**
Same as MC-05B plus:
- Cut-out design allows six stands in the footprint of one - less than 1 square foot of floor space
- Heavy base is tip resistant

ULMC07B ................................................ 27.95

**MC-77B Freedom**
- Unique one-hand clutch lets you adjust height with a quick squeeze to easily raise or lower the mic
- Cut-out design allows six stands in the footprint of one - less than 1 square foot of floor space
- Heavy base is tip resistant

ULMC77B ................................................ 54.50

**MC-66B One-Hand**
- Unique one-hand clutch lets you adjust height with a quick squeeze to easily raise or lower the mic
- Durable lightweight aluminum construction makes a very portable stand
- Tripod legs fold up and lock for compact transport

ULMC66B ................................................ 72.50

**MMB-962B Mini Mic Boom**
The 9¼” mini boom is the perfect accessory to any Ultimate mic stand.
MMB-962B Standard threads
MMB-962B Metric threads

**MC-11B Low-Level Stand**
Telescoping stand with lightweight and portable glass-fiber reinforced resin base and telescoping boom. Black finish. It’s height is 19” - 46”, it weighs 3 lbs. 7 oz., and has a boom length of 16” - 29”

### STACKING STANDS
The cut-out of the cast iron base allows six MC-07B or MC-77B’s to stack in the footprint of one. Each stand interlocks with the one underneath for convenient transport and storage.

### ONE-HAND CLUTCH
The one-hand clutch on MC-66B and MC-77B make these mic stands one of the most innovative, yet easy stands on the market. Simply squeeze the clutch, releasing the internal friction mechanism, and set your height. Let go of the clutch and the internal lock engages for a secure and reliable adjustment.

Mic Stands

Quality tripod base mic stands allow you to mix and match with the boom of your choice.

Height Adjustment
Proven clutch design for easy adjustment and reliable locking

Heavy Duty Construction
Heavy gauge steel stand is very stable

Durable Finish
Plastic inserts prevent metal-to-metal contact and protect the finish

Folds Easily and Compactly

Sturdy Base
Stands with cast-alloy sockets have stress-absorbing inserts to protect legs, reduce vibration and increase stability.

Mic Stand and Boom Packages

The heavy-duty K&M Mic and Boom packages have a durable finish and feature rubber washers and easy-to-grip knobs that fasten booms securely. The stands with cast-alloy sockets have stress-absorbing inserts to protect legs, reduce vibration and increase stability.

**ProBoom Elite Mic Arms**

Offering the ultimate in ease-of-installation and aesthetics, the ProBoom Elite Series supports most modern studio mics. Mic cables are almost completely hidden in the provided wire channel by a zip top cap, yet are easily installed – with connectors attached. Music wire springs offer maximum holding power and minimum noise. ProBoom Elite Series come in overall extended lengths of 29” or 45”, and are available as a set, or with arm and riser separately.

**Deluxe Series Ultraflex Mic Arm**

The industry-standard spring-counter-weighted Mic Arm is at home in production and control rooms, announcer’s booths, and for voiceover situations. Constructed for years of trouble-free use, it offers a silent operation. It has an overall extended arm reach of 29” and weighs 4 lbs. Supports most microphones without irritating spring changes. Accepts optional heavy-duty springs. (Mount sold separately)

**Deluxe Series Ultraflex Mic Arm With Riser**

This package adds 12” of vertical height to a 14194 Mic Arm by combining it with a 14100 Riser Accessory. Permits placement of studio equipment (up to 10.5” high) in close proximity to the arm, without obstructing movement. Weighs 5 lbs.

---

### Regular Duty Springs

- 12404 .............................................. 2.00 each
- 12404-G Same as above, gold color ...... 10.00

---

Available in either black or beige. Gray and other colors are available upon request.
Rycote’s industry-standard windshield system components are available in multiple sizes to accommodate most of the mono and single-point stereo microphones of leading manufacturers. Each system consists of a Windshield mounted to a Modular (shockmount) Suspension, with the option of adding a Windjammer or a Hi-Wind Cover for additional wind protection.

**Modular Suspensions**
- Lightweight 4-point suspension with a high precision modular frame
- Available in 3 sizes to accommodate a wide range of microphones
- Includes both pistol grip and boom adapter as well as a range of clips and O-rings ensuring a custom fit

**Windshields**
- Up to 25dB exterior wind attenuation without unnecessary high frequency roll-off – an 8 to 10 dB improvement over foam windscreens
- Lightweight and durable – gray plastic netting tube with a special-ly attached screening material
- Twist and turn locking end caps are rattle free and secure
- Unique slide-on / slide-off system for easy removal of mic and suspension

**Windjammers**
- Provides an extra 8 - 10 dB of protection over a standard windshield
- Specially designed materials with virtually no adverse effects on sound level or quality
- Available in sizes to fit all windshields

**Hi-Wind Covers**
- The Hi-Wind cover is a soft, dark gray, custom fitted stretch fleece fabric cover that fits snugly over the Windshield providing an extra 3 - 5 dB of attenuation during windy conditions

RYCOTE

BALL GAGS & STEREO WINDSHIELDS

Rycote has been manufacturing windshield systems for more than thirty years, and, over that period, has built a reputation of being the industry standard. They were honored with an Academy Award for the design and development of their modular system. Rycote designs, develops and manufactures all of their own products, and continues to provide the industry with the most effective microphone windshield and shockmount systems available.

Extended Ball Gags

Extended Ball Gags are windshield systems for remote capsule use of AKG Blue Line, Neumann KM 100 Series and Schoeps CMC and CCM microphones. Available with a 100mm diameter for single capsules and a 140mm diameter for Stereo M/S. Extended Ball Gag Suspensions come standard with a boom adapter.

100mm Mono Extended Ball Gag Components
- Mono Extended Ball Gag
- Mono Extended Ball Gag Suspension
- Mono Extended Ball Gag Suspension M/S Configuration
- Mono Extended Ball Gag Hi-Wind Cover
- Mono Extended Ball Gag Windjammer

140mm Stereo Extended Ball Gag Components
- Stereo Extended Ball Gag
- Stereo Extended Ball Gag Suspension M/S Configuration
- Stereo Extended Ball Gag Hi-Wind Cover
- Stereo Extended Ball Gag Windjammer

Baby Ball Gag windshields offer the wind attenuation properties of a full size windshield but in a much smaller size. Available in three sizes – 20mm for Schoeps CMC Series, 22mm for Neumann KM 100 series and 25mm for Sennheiser MKH 20, MKH 40 and MKH 50. Baby Ball Gag Windjammers are available to provide additional wind protection.

140mm Stereo Windshields are available for a wide range of single point source stereo microphones and M/S stereo arrays. Please specify the make and model you wish to house and we will do the rest.

Stereo Windjammer CALL

Connbox

The Connbox is fitted to the Modular Suspension to isolate the mic from cable-borne noise. The mic tail uses an anti-rattle XLR at the mic and a snap-fit Binder at the Connbox. The output lead is a three pin or five pin XLR.

The Rycote Softie is a 70mm slip-on cover with an integral synthetic fur exterior designed to provide a flexible and extremely effective solution for location audio on the go. Softies are available in a number of sizes and configurations and can be purchased with a shockmount and choice of pistol grip/stand mount or boom adapter. The Softie wind shield by itself, provides a fast and cost effective solution for camera-mounted ENG mics.

- The (70mm diameter) Softie windshield is constructed of an acoustic foam base covered by a specially designed synthetic fur fabric
- Available with or without a separate shockmount with its own bracket that includes a choice of a pistol grip handle or boom adapter
- The combined Softie windshield and shockmount provides wind attenuation comparable to a standard Rycote windshield
- The Softie windshield alone provides a fast, flexible and cost effective solution for camera-mounted ENG microphones
- Available in a range of sizes to fit most popular microphones from 5cm to 32cm and a choice of three hole diameters:
  - Small (SH) for 19/20mm mics
  - Medium (MH) for 21/22mm mics
  - Large (LH) for 24/25mm mics

*Softie also available without mount

### Camera Mounted Softies

Already own a Softie but are faced with adverse wind conditions? The Softie Windjammer fits right over your existing Softie to provide you with extra wind protection. (Please specify length.)

### Short Hair Softies

- Available for the same range of microphones as the standard Camera Mounted Softies
- Constructed of the same acoustic, reticulated foam and snug fitting end cap as the Softies
- Designed to avoid casting unnecessary shadows when working in camera mounted conditions
- Closely cropped dark gray synthetic fur, just 10mm high, offers a lower profile and a more compact design without severely altering the efficiency of the Softie
**Utility Mount**

A universal shockmount that accepts microphones from 6” in length and up to 1.5” in diameter. Rugged, light-weight aluminum extrusion with two universal bands. Use alone for interiors or slide it into a Windshield for outdoor use. Includes Pistol Grip.

**Multi Mount**

A modified Softie Mount with a female 3/8”threaded brass insert suitable for stand and pole mounting. An integral accessory shoe allows for camera hot-shoe mounting.

**Mini Windjammers**

Mini Windjammers are designed to improve the performance of consumer camcorders with on board microphones and are to be positioned over a foam windscreen.

**Lavalier Windjammer**

The Furry is designed to be used on lavaliers worn on the outside of clothing. To ensure a proper fit, it includes an internal removable foam insert that holds many popular sized lavs and provides the air space required to make the Windjammer effective. (Sold in pairs)
VAN DEN BERGH

CARBON FIBER BOOM POLES

VDB has been the foremost manufacturer of carbon fiber boom poles for more than a decade. Building upon the worldwide experience gained during this time, VDB set out to design the world’s finest boom pole. The results speak for themselves.

VDB offers these boom poles with their unique “quick” locking collars or with “classical” one-way locking collars. The choice is yours. Both styles of locking mechanisms features VDBs creak-proof designs, making VDB the pole to own.

- The foremost manufacturer of carbon fiber boom poles for more than a decade
- Individually designed and filament wound carbon fiber tubes
- Able to pass a full size XLR connector through the pole without tools or unsoldering
- Precision machined double concentric locking collars
- Unique six section design for reduced collapsed length
- A special coating of the primary tube reduces handling noise
- Available without cable, straight cabled, or with an internal coil cable

GT-10 Boom Pole

5-Section High Grade Aluminum Boom Pole Designed for Broadcast and ENG

The GT-10 is a strong 5-section aluminum boom pole designed for broadcast and all other users. The pole is robust enough for the ENG market and priced to be attractive to all users. The GT-10 provides the quality of a far more expensive pole.

- Substantial easy to grip locking mechanism with a 1.5” long aluminum collar
- Minimum and Maximum Length: 30” - 9’ 8”
- Weighs only 30 oz
- Industry standard 3/8” threaded tip
- Powder coated soft-feel handle, and anodized tubing
- Poles can be supplied with or without cables - poles without still have the base attachment fitted to allow users to add their own cable without having to remove the connectors on the cable. The coil cable is high quality, with two conductors (26 GA - 19 strand tinned copper) with matte black urethane insulation and is terminated by Neutrik gold pinned connectors

GT10 without mic cable..........................155.00  GT10C with coiled mic cable............ 245.00

LIGHTWAVE AUDIO SYSTEMS

Large, strong aluminum collars allow easy tightening and loosening of pole section
Microphone Fishpoles

Three carbon fiber and four aluminum microphone poles available in various lengths, designed for the location sound and broadcast audio recordist. The carbon poles use ultra lightweight, high modulus carbon fiber tubing that is very thin-walled without compromising their load capacity. The aluminum poles are made from stress-proof, high tempered aluminum alloys with black anodized finish. Telescopic extensions lock into place with a convenient twist-lock system, allowing simple and efficient setting of the required boom length. Complete with unique 1/4˝ - 3/8˝ reversible mounting screw, port hole for microphone cabling at both ends and soft rubber hand grip. Gitzo’s commitment to fine European craftsmanship ensures smooth gliding movement with minimum bow when poles are fully extended.

The BoomMate and Boompole Holder allow you to mount a boom/fish pole onto a standard mic stand, C stand or any stand with a 5/8˝ thread. Ideal for hands-free control of your boom pole in the field or in the studio. The longer and more rugged BoomMate is well suited for longer boom poles where greater balance and control is required. Both the BoomMate and BoomMate require the Matthews or Avenger Grip Head for mounting. Available in black.
For the past 25 years WindTech has manufactured high quality microphone windscreens for the broadcast, live sound and studio markets. Available in as many as 25 brilliant colors, in a wide variety of sizes and shapes to fit most popular microphones.

- Constructed from a specially developed hypo-allergenic, open-cell acoustical foam called SonicFoam using a proprietary non-heat manufacturing process.
- The acoustically transparent SonicFoam reduces wind noise, plosives and breath noise while at the same time permits unobstructed passage of sound without altering the mic’s frequency response.
- Adding a windscreen will also protect your microphone from dust, dampness and physical damage.

**Shotgun Windscreens**

- Prevents unwanted wind, breath and pop noises.
- Made from acoustical hypo-allergenic SonicFoam.
- Washable long lasting and keeps original shape.
- Protects your microphone from dirt moisture and impact damage.

**Ultra Series Windscreens**

Fits most ‘straight’ or small ball end mics.

US-1: Up to 1¼” shaft diameter ........................................29.95
US-2: Up to 7/8” shaft diameter ..............................29.95
US-3: Up to 3/4” shaft diameter ..............................29.95

**20/421 Series Windscreens**

Fits most large diaphragm microphones with an outside diameter up to 2.125” ........................................29.95

**CT30 Series Foam Pop Filter**

Allows you to use an affixed foam “Pop” filter over large studio style mics. Helps reduce diaphragm moisture as well as P-Pop sounds. Fits most large diaphragm mics with an outside diameter up to 2.5” ........................................29.95

**CT80 Series Windscreens**

Fits most large diaphragm microphones with an outside diameter up to 2.5” ........................................29.95
Rapido - Mic Stand Quick Release

A real world, and truly affordable solution to the age old problem of changing microphones from stand to stand.

- Allows you to quickly and easily install and remove mics and clips from a mic stand with a simple twist of the wrist.
- Speed up and simplify the set-up and tear down between and during recording sessions and live gigs.
- Eliminates maintenance issues caused by constant mounting and unmounting of mics and clips from stands – no more broken mic clips or stripped threading.
- Only 1.52” tall and weighs less than 0.5 oz.
- High quality aluminum with a durable anodized black or silver finish.
- Standard 5/8” - 27 thread.
- Tops and bottoms can also be purchased separately, which allows you to install Rapido cost-effectively for all of your mic clips and mic stands – ideal if you often exchange mics with stands.

### Shock-Proof Microphone Holders

- Vibration free microphone shockmount for virtually any application.
- Reduces low frequency rumble, stage vibrations and handling noise.
- Heavy rubber isolation ring 3/4” x 1/2”.
- Snug fit with 35 lbs. of mic holding pressure.
- Threaded brass insert with U.S. standard 5/8”-27 thread.

### Microphone Clips

- MC-4: Extra-large, heavy duty clip for wireless microphones up to 1.75” diameter | 5.95 |
- MC-6: An industry standard slip-in microphone clip. Fits almost all microphones | 3.95 |
- SMC-7: Spring clamp type mic clip. Holds virtually any regular or wireless mic | 4.50 |
- MC-9: High quality mic clip - uses virtually unbreakable ABS plastic | 4.95 |
- MC-11: The same ABS material as MC-9 but for smaller mics from .80” to 1” diameter | 4.95 |

### Clamps

- MA-358: Adapts to any microphone stand to hold up to 3 separate microphones. Female brass insert with 5/8” - 27 thread and male 5/8” - 27 thread | 11.95 |
- MPC-10: “C” type, multi-position clamp, fits 1.25” diameter tube or flat surface. Male 5/8” - 27 thread. The thread rotates 90° in three positions. Soft rubber insert prevents scratching | 13.95 |
- MSA-1: Add-on clamp for a second mic on the same stand. Clamps on to any standard microphone or drum stand. Male 5/8” - 27 thread. New nylon tip | 10.95 |

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
**ST 2**
Double Mic Support

- Two suspension rings allow you to isolate the mic from the mic stand thereby minimizing noise transmitted from the mic stand to the mic up to 15dB
- The distance between the two suspension rings can be adjusted along a 10 cm long hexagonal rod to accommodate microphones of various lengths
- Suitable for any tubular or conical mic shape up to 2˝ diameter

**SPK**
Protector Kit

- SPK is a set of tools consisting of: 1 ST2, 1 SSM-1 and 1 SPF, mounted together
- When combined with two SSM-1’s, as in the SPK kit, the ST2, permits the versatile use of simultaneously forming, for example, a ZEPPELIN support or X/Y for stereo and over all configuration.

**ST4**
Multiple Mic Support

- Same as above with four mic mounting towers that can be adjusted along a 30 cm. long hexagonal, anodized black, aluminum bar
- Ideal for podium mounting – allows you to mount up to four mics on one stand, ensuring the view in front of the speaker is clean and organized

**SMS-5.1**
Surround Capturing Mount

- The SM 5.1 is a revolutionary conception of natural 5:1 surround capturing
- Allows simultaneous mounting of five microphones with independent positioning over a full 360 degrees spectrum and full angular adjustment
- It consists of five hexagonal 20 cm. long arms attached to a disc that allows radial adjustments
- A SSM-1 is mounted on each of the five arms each of which can be vertically adjusted, allowing the placement of any mic

**SSM-1**
Universal Shockmount

- Two suspension rings allow you to isolate the mic from the mic stand thereby minimizing noise transmitted from the mic stand to the mic up to 15dB
- The distance between the two suspension rings can be adjusted along a 10 cm long hexagonal rod to accommodate microphones of various lengths
- Suitable for any tubular or conical mic shape up to 2˝ diameter

**SPF**
Pop Filter

- Attenuates sibilance and plosives using two parallel orthophonic rings, mounted onto a brace and fixed on an articulated arm
- Screens are easily replaceable with model PF A pair of spare screens for the SPF

**WindBoss Windscreens**

The WindBoss series offers a simple and flexible way to improve wind rumble rejection for your condenser mics. They provide the benefits of traditional, hard-shelled windshields without the associated expense and single application restrictions. The universal microphone mounting suspensions allow the WindBoss to be used with virtually any condenser mic. It uses simple silicone rubber o-rings to provide an excellent shockmount. These bands are unaffected by changes in temperature and humidity and they offer an easy and quick way of changing mics without the parts breakage associated with traditional mounts. The design of the WindBoss outer foam “shell” is made of three pieces: a center section and two end caps. These two end caps are easily removed and replaced. The center section and its associated framework are available in three sizes providing wind protection for a multitude of microphones.

- **Small WindBoss**
  - 13 x 4˝ (LxD), weighs 6.4 oz. .................................................. 294.95

- **Medium WindBoss**
  - 16 x 4˝ (LxD), weighs 7.8 oz. .................................................. 309.95

- **Universal Shock Mounts**
  - Designed to provide stable and noise-free handling for a wide variety of microphones, these shock mounts are constructed of lightweight aircraft aluminum and have a non-reflective black anodize finish. The two suspension bands are custom-made and provide a high degree of isolation from handling noise. Used by ENG, film/video and TV sound recordists, change mics simply by pulling one out and pressing in another without fear of damaging the stock suspension assembly. (Optional adapters allow installation inside Rycote Windshields). Available in 3” and 6” sizes, they accept mics up to 1.25” in diameter, while 3/8” x 16 threads allow use with any boompole.

**Dual XLR Adapter for DV Camcorders**

The DXA-4 offers an easy, reliable way to hook up professional audio gear to your DV camcorder — and with it, all the benefits of using balanced audio for superb sound every time. Record from two sources at the same time. Each input is recorded on a separate audio track, making it possible for you to mix both channels during editing. You can even feed a time code signal into one input and audio into the other.

- Two channels let you record two sources on separate tracks for post audio mixing. Both channels have their own mic/line level switch and trim potentiometers for flexibility and complete control
- Securely mounts to underside of camcorder, eliminating cable strain
- Also has a threaded hole for mounting on a tripod plate
- Rugged all metal case is built to last and provides complete shielding from noise. Made with Neutrik XLR connectors and transformers for dependability you can count on

**DXA-6 Audio Adapter with Phantom Power**

All the great features of the DXA-4 adapters with the addition of 48 volt phantom power.

- Two balanced XLR mic/line switchable inputs for stereo recording with independent drift free trim controls that ensure reliable operation
- Switchable dual 48 Volt Phantom Power
- An auxiliary unbalanced 1/8” mini jack input is available on the right channel to accommodate wireless mics
- MONO/STEREO switch allows recording both inputs to a single channel
- Low Noise Transformers for Superb Sound
- Runs on one standard 9 Volt alkaline battery
- LED Battery Power Indicator
- Stereo right angle unbalanced 1/8” mini-plug output connector attached to a 10” cable
- Housed in a rugged aluminum case with a flat black finish
- Measures 5.75 x 3.25 x 1.25” and weighs 12 oz.

**SVU-2 Stereo VU Meter for Camcorders**

- Multi-purpose stereo VU meter for camcorders and other recording devices
- Bright ten-segment display to easily see under virtually any lighting condition
- Calibrated display eliminates guesswork to set ideal recording levels
- Built-in high powered headphone amplifier with volume control
- Mounts to camera tripod socket or can be carried via belt clip
- Operates on one standard 9 volt battery
- LED battery power indicator

Passive Dual XLR Adapter / Mini Mixer

The XLR-Pro is a Dual XLR adapter that lets you feed professional audio to any camcorder, DAT or MiniDisc recorder that provides an audio 1/8˝ input jack. This allows you to use professional mics, tap into PA systems and mixers, and use long run, balanced audio cables – all with complete confidence. Special circuitry ensures that the XLR-Pro will work with any camera.

- Each of the two inputs input offers a choice of XLR and 1/8˝ mic/line switchable inputs with volume controls – Hook up two XLR mics, or an xlr mic plus wireless mic, or any other combination of pro and prosumer mics
- Securely mounts under your camera, for either hand held or tripod operation, or can be easily clipped onto your belt
- Enclosed in a black solid aluminum housing that protects the entire electrical circuit from soundtrack destroying interference
- High performance multi-shielded transformers ensure extremely quiet operation
- State-of-the-art latching Neutrik XLR connectors
- A unique ground switch (not to be confused with a “ground lift” switch) lets you select the quietest ground for any camera
- Voltage blocking circuit permits operation when connecting to plug-in power mic jacks found on some camcorders (Sony VX1000, VX2000, VX700, TRV900 & others)
- 20 - 20k Hz frequency response (±1dB max)
- Measures 5.25 x 2.75 x 1.25˝ and weighs only 13.5 oz.

XLR-JR
Single Channel XLR Adapter
Same as XLR-Pro but with only one XLR input, one 1/8˝ input and one level control.

VU150
Audio Level Meter

The VU150 audio meter helps you maintain proper audio levels being recorded to your video camcorder.

- 1.5˝ wide, 10-segment left and right LED meters measure audio levels between -20dB to +3dB
- The large display is switchable between two modes:
  - Bar mode displays intensity by a continuous line of LEDs
  - Dot mode displays intensity using a single LED at the given intensity level. Dot mode requires less power than bar mode enabling longer battery life
- Works on any camera with a standard 1/8˝ stereo headphone output
- Mounts easily and securely on your camera’s accessory shoe
- Adjustable brightness for full visibility in daylight or turn down to conserve battery indoors
- Left and Right audio calibration adjustments
- Built in headphone output with a volume control adjustable from -40dB to +20dB
- Runs continuously for approximately 100 hours using a 9V alkaline battery
- Low battery indicator
- Measures 3.5 x 2.5 x 1.5˝ and weighs 5.5oz. with battery
- 1-year warranty

IN EKO

Stereo Effects Processor

Ineko is a unique tabletop, stereo effects processor that doesn’t require an engineering degree to operate, or a fat recording contract to afford. A powerful, professional-quality tool designed for music recording, DJ and dance applications, it is exceptionally user-friendly with a very intuitive, self-explanatory interface. No complicated menus or difficult to use functions. Just three simple knobs to control 48 dramatic, user-adjustable effects, including reverbs, filters and delays. So simple, even novices can master it right out of the box. With its metallic gun-gray, industrial design and over-the-top sounds, Ineko redefines effects processing by providing top-quality, user-friendly, real-time effects at an unbeatable price.

AKIRA

Programmable Stereo Multi-Effects Processor

The Akira is a multi-effects processor that is ideal for studio, live performance, and sound reinforcement applications. Affordably priced for entry- and mid-level recording enthusiast and musician, the Akira has sounds that set it apart from anything else on the market. In addition, its X, Y, and Z parameter knobs allow real-time, playable control over program parameters, making Akira much more than a “set-and-forget” rack mount signal processor.

Akira features 24-bit A-D and D-A conversion, stereo analog I/O on balanced TRS 1/4” jacks, and an internal switching power supply that works on 90-230v AC. There’s also MIDI I/O for program changes and continuous controller transmit and receive, for additional real-time control over the effects. Housed in a 19” rack-mount enclosure (1RU) high, Akira has an easy-to-understand interface, making it ideal for its intended audience.

- Designed for music recording, DJ and dance applications, as well as recording and live performance, Ineko gives the user the power to control real-time effects via a simple intuitive user interface.
- The uncomplicated faceplate sports a 6 x 8 LED grid/program display which shows the 48 high-quality reverbs and delays, traditional effects such as chorus, vibrato, flanger, and phasers.
- Also incorporates an arsenal of unique effects, from sub-harmonic synthesizer, fuzz, vibrowobbel, and formant-filter, to frequency-shifter, band-limiter, decimator and vocoder.
- Three large dedicated knobs provide direct real-time control over effects parameters - the three available parameters for each effect are written underneath the effect name on the front panel.
- Effects programs are grouped by category and are easily selected along the matrix using the simple down and across buttons.
- Bypass button to engage or disengage signal effects during use.
- 24-bit converters
- 1/4” stereo inputs and outputs
- Input trim control with a signal present LED indicator

- Two channel, 24-bit A/D-D/A, 28-bit internal processing, 48kHz sample rate
- 100 programs - reverbs, delays, pitch mod, filters, and special effects
- MIDI I/O, balanced 1/4” TRS analog I/O, +4dBu/-10dBV
Motion-Controlled Effects Processor

Connect the airFX to any line-level sound source and speaker system. Then move your hand, or any other body part through the invisible 3D sphere formed by Alesis’ patented Axyz technology. You can move any direction; up or down, right or left, or in or out, to twist any sound in an infinite number of ways. The slightest movement of your hand tweaks the tones of the AirFX and turns your tunes inside out.

Modify the sound of any audio from CDs, LPs, tape, computer - even live instruments and vocals with 50 high-quality, stunning filters and effects from vinyl to vocoder, flanging, and virtually anything and everything in-between.

Incorporated into the airFX and airSynth space-age domes are four infrared sensors that generate a halo of light over the instrument. Known as the Axyz (pronounced ax-is) system, this revolutionary technology gives you three planes of control over internal effects:
- X (left to right), Y (front to back) and Z (up and down). Other effect controllers provide only X/Y coverage.
- High-quality sounds and effects:
  - airFX: 50 filters and effects, including percussive sounds
  - airSynth: 50 synthesized sounds and sound effects, including percussive and legato noises.
- They feature a frequency range of 20Hz-20kHz, 24-bit converters and ship with a 9-volt AC power supply.
- A threaded socket on their base allows you to mount them on a mic stand for ease-of-use in club and studio applications.
- Incorporating the same futuristic design airSynth can be integrated with airFX in a singular system via stereo RCA inputs and outputs without using an external mixer.
- Their simple user interface consists of a single knob, which is used to select, engage, bypass, freeze and release a given sound, and an LED that indicates the current program.

AirSynth produces dramatic synthesized sounds and sound effects when you pass your hand over the invisible 3D sphere above it. Alesis’ patented Axyz technology lets you control up to five sound variables simultaneously by moving your hand left to right, forward and backward, or up and down over the product, making airSynth easy and intuitive to use. The dramatic sound set and unique user interface make airSynth ideal for use in live performances, DJ applications, music postproduction, and on-air broadcast applications.

And while it employs the same technology and simple user interface, unlike the effects processing airFX, the airSynth is a true sound-generating product that features a broad range of sound effects and synthesized noises providing an altogether different and complimentary range of options. The unique airSynth sound-set includes 50 staccato, percussive, legato continuous pads, drum sounds and sounds that emulate things in nature.
ALESIS

ModFX LINE

14 Unique Performance Effect Boxes

The ModFX line is a family of performance effects boxes that includes 14 individual units, each one providing a different set of sound effects and signal processing. Of particular interest to musicians, DJs, and recordists is the extremely versatile modulation section on several of the boxes, providing unprecedented control over the sound of the effects, including the ability to sync modulation to incoming music tempo. Every box in the ModFX line digitally processes analog stereo signals and maintains a uniform, friendly, uncomplicated user interface. Keyboardists, guitarists, and any other studio or live performance artists will find the selection and variety of the ModFX line well suited to a wide variety of musical applications.

Each box—designed with internal 28-bit digital processing—allows you to connect to multiple units within the family via the link ports (in and out) located on either side of each box. These links allow the units to pass digital audio, word clock and power between ModFX line members. Analog I/O is provided via four separate 1/4” unbalanced connectors, and each unit comes with an AC power supply. A fifth 1/4” connector allows an external footswitch to control the Bypass function. Each unit is sized to fit a 1/3 rack space; an optional rack mount adapter is available.

**Fidelity X**
A “communications simulator” that simulates tape, vinyl, radio, megaphone, telephone, and digital. Features include the “Year” parameter that defines the “age” or “vintage”, a ‘Mono’ button that combines the input stereo signal into a mono signal and feeds it through the processor; a ‘Quality’ knob that controls the fidelity; a ‘Drive’ knob that adjusts the amount of distortion; the ‘Tone’ knob which filters the output providing a bass or treble boost; and the ‘Mix’ knob that adjusts the amount of “wet” (affected) signal compared to the “dry” (unaffected) signal.

**Bitrman**
Here’s an extraordinary effects box comprised of compression, distortion, dual phasing and a fourth selected effect that can either be a comb, decimator, bit reducer, frequency modulator, ring modulator, or frequency shift. The four effects can be configured multiple ways by adjusting the ‘Configure’ parameter.

**Vertigo**
This world-class Leslie simulator re-creates the vintage sound of the original and can produce great new variations on the classic sound. Vertigo sports Fast, Slow, and Idle buttons to set the speed of the rotating horn simulation. The ‘Mix’ knob will adjust the amount of “wet” signal compared to the “dry” signal.

**Ampliton**
This unit combines a tremolo with an autotap. The low frequency oscillator (LFO) of both the tremolo and the autotap can be independently set according to your sound desires. The LFO can be set to triangle, square, sample and hold, triggered, and “uncertainty” waveforms. Each LFO can be beat synchronized to the music, and a ‘Beat Tap’ button enables the user to adjust the tempo.

**Phleng**
Here’s a flanger box with an amazing modulation section. All the modulation waveforms can be beat synchronized to the input music. Some of the features include the ‘Type’ switch that describes the type of the flanging effect; the ‘Beat Tap’ switch that enables the user to control the tempo used in the beat synchronizer; the ‘Center’ knob that controls the range of the frequencies affected; the ‘Rate’ knob that controls the speed of the oscillations; and the ‘Depth’ knob, controlling the amount of modulation.

**Nastify**
Like its name implies, this is a distortion effect box with attitude and edge. Six different styles of distortion can be selected: Warmth, Fuzz, Distortion, Thick, Chunk, and Stellar. Knobs control drive, tone, and the amount of output gain.
**Formantz**

Formants are filters that emulate the sounds of speech; Formantz is an advanced filter modeling box that will leave you speechless. The filter can be modulated by either triangle, sample and hold, triggered, "uncertainty", or "pattern" waveforms, and all of the modulation waveforms can be beat synchronized to the input music. The 'Frequency' knob controls the center frequency of the filter; The 'Modify' knob varies the selected 'Type'.

---

**Philtre**

Meet the ModFX line's resonant filter. You can select either Low Pass, High Pass, Band Pass, Low Pass Alias or any combination as filter types. Five different modulation waveforms can be selected, each of which can be beat synchronized. The 'Reset Mod' button will reset the phase of the LFO; the 'Steep' button switches between 4- and 6-pole filters.

---

**Faze**

This is a phasor effect box loaded with features and controls including the 'Type' of phasor that is selected from options including Deep Mono, Dual Mono, Contrary Stereo, Asynchronous Stereo, and Liquid Metal. Five different modulation waveforms can be selected, each of which can be beat synchronized with the aid of the 'Beat Tap' button.

---

**Smashup**

Yes, it's a compressor. The user can select from five different type of compression: Classic, Opto, De-Ess, Pump, and Fat. The 'Threshold' controls the threshold level; The 'Attack' and 'Release' control the attack and release values for the compressor. The 'Output' parameter controls the output gain.

---

**Lymitre**

A remarkable two-band limiter with great controls including the 'Look Ahead' switch, enabling a look-ahead peak limiter; the 'Sizzle' switch that adds post-limiting brightness; and the 'Crossover' knob that enables the user to set the frequency that separates the two bands.

---

**Koruz**

What's a family of performance effect products without a chorus effect box? The chorus effect can be modulated by triangle, hyper-triangle, square, sample and hold, "uncertainty", or triggered LFO shapes. The 'Depth' knob controls the amount of modulation.

---

**Metavox**

This unit is a vocoder where the user can choose four different types of internal synthesizers (Saw, Rectified Saw, Square, And Noise). The synthesizer is modulated by one of five sources (triangle, sample and hold, triggered, "uncertainty", and tracking) that can all be beat synchronized with the aid of the 'Beat Tap' button. There's also a control that allows for setting the frequency of the internal synthesizer. Another great feature of Metavox is that it also allows an external synthesis source to be input and voice-modulated.

---

**Spectron**

This unit adds bass and treble harmonics to a signal. The user can define the frequency and volume of the harmonic generator for the bass and treble synthesizers. Controls can also eliminate the original signal from the output and generate only the synthesized harmonics. The 'Bass Limiter' provides the user with a means to limit the strength of the bass synthesizer.
**MicroVerb 4**

Multi-Effects Processor

An easy-to-use, programmable reverb and effects unit, the MicroVerb4 provides a wide variety of great-sounding, easy-to-use effects for small studios, engineers and performing musicians. The key to MicroVerb 4's power is in its simplicity. It offers 200 programs that include everything from high-quality reverb, delay, chorus and flange to exciting multi-effects and more. To customize your programs, two front panel knobs allow for quick, easy, user-storable edits, or use its MIDI inputs for control over program changes and modulation. You can then save your edited programs in the 100-space user program bank.

**Features**

- 200 programs (100 preset, 100 user-storable) of Reverbs (Hall, Room, Plate), Chorus/Flange, Delay (Mono, Stereo, Ping Pong and Multi-Tap) and Pitch Shift as well as multi-effect and dual mono send algorithms.
- Each Program has two parameters which can be adjusted via the dedicated Edit A and Edit B controls. Depending on the type of Program selected, these might alter Reverb Decay, Chorus Depth, etc.
- The Parameter Chart shows you what effect type is assigned to various groups of Programs - it also shows the function of the Edit A and Edit B controls.

**Front Panel**

- Dedicated input and output level controls
- Mix control adjusts the balance between the dry and wet (effected) signals
- Dual 4-segment LED input level meters
- The multi-purpose LED display typically shows the currently selected Program but will also display the MIDI channel or parameter values
- The rotary Value Encoder is used to select Programs and to change the MIDI channel
- Bank/MIDI Button lets you quickly change between the Factory and User program banks as well as select a MIDI channel

**Inputs and Outputs**

- Left and right unbalanced 1/4” inputs and outputs accommodate four different configurations: Mono In/Out, Mono In/Stereo Out, Stereo In/Out and Dual Mono In/Out
- MIDI In and Out/Thru connectors allow you to perform several MIDI functions including Program Changes, send/receive Sys-Ex data and realtime control of up to two parameters simultaneously
- 1/4” stereo phone jack lets you connect one or two momentary footswitches - a single footswitch functions as an effect bypass. Add a second footswitch via insert cable to use as a control switch for tap tempo, or to control Leslie speed (slow/fast) - if the control footswitch is held down and audio is played into the inputs, these impulses will be used to set the delay time.

**NanoVerb**

Preset Digital Reverb and Effects Processor

The NanoVerb offers 16 of Alesis’ best preset effects algorithms in a compact, easy-to-use and incredibly affordable package. You'll enjoy its lush hall, plate and room reverbs, rich true stereo chorus, flange, delay, rotary speaker emulation and useful multi-effects.

- 18-bit A/D and D/A converters with a 20-bit internal processor ensure the sonic quality that allows you to use it for any effects application from guitar rigs to studio recording.
- Power/input and dual-color signal input Clip LEDs
- Front panel adjust knob allows you to tweak NanoVerb's great-sounding programs until they're just right for your music, while the input/output levels and Mix controls ensure proper effect levels for a wide variety of applications.
- Stereo 1/4” inputs and outputs
- Ultra-compact 1/3 rack-space package
FEATURES

Inputs & Outputs
- Left and right unbalanced 1/4˝ inputs/outputs with 18-bit A/D and D/A converters and 24-bit internal processing for a 20Hz-20kHz bandwidth and 90dB dynamic range, making it ideal for digital recording.

Effects
- 256 programs (128 Preset/128 User-storable) include single stereo, multi-effect and dual mono effects configurations based on 32 different algorithms
- Reverb: Concert Hall, Real Room, Ambience, Plate, Nonlinear
- Delay (1299 ms of total delay memory): Mono Delay, Stereo Delay, Ping Pong Delay, Multi Tap Delay and a BPM Mono Delay which responds to MIDI clock
- Pitch: Stereo Chorus, Quad Chorus, Stereo Flange, Stereo Pitch Shifter
- Special: Auto Pan
- Double: Real Room+Delay, Real Room+Chorus, Real Room+Flange
- Twin Mono: Delay/Delay, Chorus/Chorus, Flange/Flange, Pitch/Pitch, Chorus/Delay, Flange/Delay, Pitch/Delay
- Multi Chain: Delay->Real Room, Chorus->Real Room, Flange->Real Room, Leslie->Room, Real Room->Flange, Chorus->Delay->Room, Flange->Delay->Room
- Display is divided into 5 sections: Program Number, Bank (Preset, User), Program Name (up to 8 characters), Configuration (Stereo or Dual effect), Level Meters (Peak-style inputs meters).

Editing
- Access up to four edit pages per preset – the currently selected page will be indicated in the display by a box around its number
- Each edit page contains up to four parameters accessed via the A, B, C and D buttons. Currently selected parameter can be adjusted by the value knob.

External Control Functions
- MIDI controller routing and an assignable 1/4˝ footswitch input for flexible control on stage
- Up to two effect parameters, pre-configured in each preset, can also be modulated via MIDI – the modulation range for each parameter can be set

Conveniences
- Automatic Input Level Sensing– simply press and hold the Input and Output buttons simultaneously for five seconds or longer and the Auto Input function will automatically optimize the input level
- Once you have accessed Edit mode, if you hold any of the parameter buttons (A, B, C or D) for more than one second, the upper display will provide a detailed description of the selected parameter

PICOVERB
Ultra-affordable Digital Multi-Effects Unit

The PicoVerb is an affordable, high-quality reverb and effects unit designed for the budget-conscious musician or recording enthusiast. The 16 multi-effects presets include chorus, flange, delay, chorus/reverb, rotary speaker simulator, and more. Super-compact, expertly designed and superbly priced.

- Perfect for studio and sound reinforcement applications
- Stereo, 24-bit A/D-D/A, 28-bit internal processing, 48kHz z sample rate
- 16 Presets including Halls, Rooms, Plates, Chorus, Flange, Delay, Leslie
- Unbalanced 1/4˝ analog I/O, -10dBV
- 1/4˝ rack wide
Compressor/Limiter/Expander

The CLX-440 is a full-featured compressor/limiter/expander that combines separate compression and expansion sections for each stereo channel, with “look-ahead” capability, side-chain and “key” functions, continuously-variable soft/hard knee and peak/RMS controls. Two sets of front-panel meters provide confirmation of input, output, compression and expansion activity. Special algorithms provide a broad range of dynamics options—from gentle to aggressive—to meet the requirements of live sound and studio production. CLX-440 also features a side chain I/O that allows you to insert an external EQ such as the PEQ-450, into the dynamic side chain. A special “look-ahead” function allows dynamic processing to start before the signal is present, by delaying the audio path by approximately one millisecond.

- Dual stereo architecture allows processing of 2 mono or 2 stereo signals, up to 4 channels of signal processing
- Sidechain and key inputs and outputs
- Separate compression and expansion sections for each stereo channel
- Continuously-variable soft/hard knee and peak/RMS controls
- Two sets of front-panel meters provide confirmation of input, output, compression and expansion activity

PEQ-450 Dual Stereo Parametric Equalizer

The PEQ-450 is a dual-stereo 5-band, fully parametric equalizer with 20Hz to 20kHz EQ control, +/- 18dB boost/cut controls, continuously-variable Q, high and low shelving, high- and low-pass filters and input/output metering. The PEQ-450 also includes qualities offered in more expensive parametric equalizers such as high quality pots and switches, separate frequency gain and Q controls for each band, plus high-pass and low-pass filters. The unique “chain” mode allows all 10 bands of EQ to be used in tandem to process two stereo signals simultaneously. An internal power supply and balanced 1/4” TRS input and output jacks complement the impressive features of both two-rack products.

- Dual 5-band parametric equalizer with frequency, gain, and Q for each band plus high- and low-pass filters and high and low shelving.
- Up to four channel processing: dual mono, dual stereo or “CHAIN” mode allows 10 bands of EQ to be applied to a stereo signal.
- Two sets of dedicated controls for all EQ functions.
- Front-panel meters indicated input and output activity.
RMS/Peak Dual Channel Compressor/Limiter with Gate

The 3630 is an affordable single rack space dynamics processor that provides two independent full-featured channels of compression, limiting and gating, suitable for any application from subtle gain control to in-your-face punch. The compression section features variable Ratio, Threshold, Attack and Release controls as well as switchable RMS and Peak detection circuitry and Hard and Soft knee compression curves. The two fully independent gates feature variable threshold and rate controls to easily silence ambient noise. You can use the 3630 as an independent dual-channel compressor, with separate controls for each channel or push the Link button to strap the left and right channels together for stereo processing. Also features 1/4” inputs and outputs, precise signal metering and a sidechain insert for keying or ducking effects.

**Features**

- Two discrete channels with identical controls and I/O provide stereo or dual mono operation - you can use each of the two channels independently, or you can strap both channels together, using the Link button, for stereo operation with both channels being controlled by channel A.

** Compression**

- Each channel features a Threshold control variable from -40dBu to +20dBu and a Ratio control variable from 1:1 to ∞:1 (limiting).
- Selectable Peak or RMS response lets you decide whether the sidechain circuit reacts to signal peaks and potential clipping or average signal levels.
- When using the Peak response setting, you are able to adjust the Attack Time from 0.1ms - 200ms and the Release Time from 50ms - 3S - when the RMS response setting is used, attack and release times are program dependent.

**Noise Gate**

- The Threshold control (variable from continuously open to 10dBu) determines the level that a signal needs to exceed before the gate will open.
- The Rate control, variable from 20ms - 2S, determines how long it takes for the gate to fade smoothly from the open to closed setting.
- A pair of LEDs indicate whether the gate is open or closed.

**Output and Metering**

- An Output level control variable ±20dB is available for making up gain that is lost due to compression.
- 12-segment LEDs are provided for gain reduction metering (-1 to -30 dB range).
- 12-segment LED meters are switchable to show either input or output levels (-30 to +6 dB range).

**Rear Panel**

- 1/4” unbalanced inputs and outputs are switchable for +4 dBu or -10dBV operation.
- 1/4” TRS side chain I/O enable you to:
  - Insert EQs for frequency-selective dynamics control such as de-essing or, Key (trigger) dynamics control from an external audio source i.e., using a voice-over track to lower the volume of background music (known as ducking).
  - Rear panel connections include unbalanced 1/4” stereo inputs and outputs as well as a 1/4” TRS sidechain insert that allows you to interface with other devices for ducking and de-essing.

**NanoCompressor**

- A single set of controls provides full-featured dynamics processing of left and right channels simultaneously.
- Front-panel controls include Ratio, Threshold, Attack, Release and Output Level as well as a Bypass button.
- Selectable Peak and RMS compression input detection as well as hard and soft knee compression curves.
- Indicators include a 6-segment switchable input/output meter and 6-segment gain reduction meter.
- Rear panel connections include unbalanced 1/4” stereo inputs and outputs as well as a 1/4” TRS sidechain insert that allows you to interface with other devices for ducking and de-essing.
ALESIS

DEQ-224/DEQ-230

Programmable Dual 1/3-Octave Graphic Digital EQs

Unlike so many EQs on the market today, the DEQ-230 has a friendly, intuitive nature, making it one of the easiest to use, manipulate and control. With a sleek industrial design including over 800 individual LEDs to give a richly detailed view of EQ curves, the DEQ-230 is a clear standout in the world of graphic equalization. Plus its feature set is well suited for professional studio applications, while its very affordable price also makes it attractive to the recording hobbyist or performing musician. The DEQ-224 delivers the same digital performance and quality as the DEQ-230 in a highly compact package. The DEQ-224’s half-rack form factor and powerful EQ capabilities make it ideal for professional and home studios with limited rack space, as well as the perfect addition to any gig bag.

DEQ-230
Taking advantage of its internal digital signal processing and unique user interface, the DEQ-230 has the ability to store and recall 25 preset and 25 user-defined curves, as well as a single bypass button that affects both channels simultaneously. Sized to fit a single rack mount chassis, it includes 1/4” unbalanced analog I/O and an external AC power supply.

DEQ-224
Easy-to-use and understand interface, with 30 preset EQ and 30 user-reordable EQ curves. Two independent channels of EQ: 24-bands, ±12dB resolution. 13-LED resolution of cut/boost per frequency band. Individual Signal and Clip indicators per channel. Analog I/O using 1/4” balanced TRS connectors. Bypass and Channel A-B link controls.

DEQ-230D/DEQ-830

Programmable Dual 1/3-Octave Graphic Digital EQs

Based on the extraordinary technology of the popular DEQ-230, these two programmable rackmount EQs give recording engineers and live sound professionals an expanded feature set, enhanced 24-bit sound quality, and more flexible routing options than any other EQ in their class—at breakthrough prices.

DEQ-830
The DEQ-830 boasts eight independent programmable 1/3-octave graphic equalizers in an amazingly compact 1U rackmount design. Connections include eight balanced 1/4” TRS analog I/O and eight channels of ADAT Optical digital I/O, making it perfect for a range of modern recording applications. It also features 100 user-customizable EQ programs, 50 template “curves” for rapid setup, and +4dBu/-10dBV switchable operation— allowing a high degree of user customization. Add an ultra-intuitive user interface and MIDI I/O, and the DEQ-830 is everything a high-end programmable EQ should be, without the price tag.

DEQ-230D
For those who don’t need eight channels of processing, the DEQ-230D is a dual-channel 1/3-octave programmable EQ with expanded I/O and more features than the acclaimed DEQ230, including two channels of fully balanced 1/4” TRS analog I/O, switchable +4dBu/-10dBV operation, S/PDIF input and MIDI I/O for use in a range of stage and studio applications. Additionally, 30 Preset and 30 User programs and an extremely intuitive user interface provide for fast sonic tweaks and various customized settings
Back in 1998, Antares introduced the ATR-1 and made the unlikely claim of "perfect pitch in a box" a solid reality. It corrected the pitch of vocals or solo instruments, in real time, without distortion or artifacts, while preserving all of the expressive nuance of the original performance. Since then, thousands of ATR-1s have found their way into touring racks, live performance rigs, and recording studios of artists and producers like Cher, Everclear, Al Schmitt and many, many more.

Preserving the great sound quality and ease of use of the ATR-1, the ATR-1a adds a Bass Mode (for correcting the pitch of low bass range instruments) and the innovative Make Scale From MIDI function which allows the ATR-1a to automatically create a custom target scale for any melody.

**FEATURES**

**The Right Note**

A key requirement for effective pitch correction is the ability to accurately specify the right notes to correct to. The ATR-1a gives you a variety of choices to ensure that its output is always what you want. The basic tool for target pitch identification is the Scale:

- The scale is a list of the notes that the input notes are corrected to
- Factory Programs are provided for chromatic and standard diatonic scales as well as the ability to use the Scale screen to program custom scales
- Individual notes can be bypassed. When the input pitch is near a bypassed note, the input is passed through with no correction.
- For more flexibility, the MIDI Note Mode allows you to specify scales in real time via a MIDI keyboard or sequencer – you can even specify the exact melody via MIDI

**Expression and Emotion**

Great performance is a lot more than just hitting the right notes. Depending on the style of music, expressive gestures like scoops, bends, vibrato and more can all contribute to the emotional effect.

- The speed control ensures that the rate of pitch correction (i.e., the speed at which the input pitch is slewed to the target pitch) can be matched to virtually any style of performance.

**Program Mode**

- Call up one of 50 individual Programs to control the correction algorithm
- Each Program consists of a Scale, a Speed setting and Vibrato settings.
- Programs can be accessed remotely via a foot switch or via MIDI
- Use Program Mode when a single scale (or maybe two) is all that's required for a particular correction.
- If you are working in the studio to correct an already recorded track, you might use Program Mode to deal with the track one section at a time, stopping to change Programs between sections.

**Bass Mode**

- In normal mode, pitch is reliably detected down to A0 (55Hz). Turning Bass Mode on lowers the lowest detectable frequency by about one octave to 25Hz (the lowest E string on a bass guitar is approx 41Hz).

**Use in Live Situations**

- Song Mode lets you follow the most complex harmonic song structures by programming the appropriate series of scales and then stepping through them in performance with a footswitch or MIDI control.
- Most performance parameters can be controlled with MIDI continuous controllers. Everything can be controlled via SysEx.
- 20 different songs are provided each of which can be programmed with a series of up to 15 Song Steps. Each Step can contain a Program (with associated scale) or one of a number of navigation controls.
- Each Song also contains its own Speed and Vibrato settings that override those settings in the individual Programs. In this way, an individual Program's scale can be used in any number of songs, each with different Speed and Vibrato settings.

**Front & Rear Panel Controls**

- Easy-to-read 20x2 LCD display
- Six-Segment LED level meters indicate the input signal level in dBs
- Pitch Change Meter indicates the amount of pitch correction being applied to change the input pitch to the target pitch in real time.
- Balanced XLR and 1/4” TRS (bal/unbal) inputs and balanced XLR and unbalanced 1/4” TS outputs
- MIDI In port
- 1/4” TS (tip-sleeve) footswitch input

**How it Works**

Uses proprietary digital signal processing algorithms to continuously detect the pitch of a periodic input signal, compare it to a desired target pitch and, if necessary, instantly (no greater than 4 milliseconds) and seamlessly correct it to that target pitch. And with pristine 20-bit data path, 56-bit internal processing and balanced I/O, the only difference between what goes in and what comes out is the intonation. (Dynamic range is 103dB).
ANTARES

AMM-1

Microphone Modeler

Inside this unassuming but stylish 1U rack is contained the spirit of many of the world's most revered microphones. Based on the award-winning technology that made the Antares Microphone Modeler the most talked-about software plug-in of 2000, the AMM-1 lets almost any reasonable quality microphone sound like any of a wide variety of high-end studio mics. From historical classics to modern exotics to a selection of industry-standard workhorses, simply tell the AMM-1 what microphone you are actually using and what microphone you'd like it to sound like. It's really as simple as that. You can even mix and match the bass and treble characteristics of different microphones or add the warmth of classic tube saturation.

**Features**

- Proprietary DSP-based acoustic modeling allows any reasonable quality microphone to sound like any of a wide variety of high-end studio mics
- Models reproduce the effects of windscreens, low-cut filters, pattern-dependent frequency response and proximity effects.
- Over 100 mic models are already built in, including an extensive collection of digital models of historical classics, modern exotics, and industry-standard workhorses. You can also add new models by downloading from the Antares web site
- Create hybrid mics that combine the bass response of one mic with the treble response of another
- Add a model of classic tube saturation distortion
- Use during mixdown to change the mic on an already recorded track
- Incredibly easy to use — simply select the mic you’re using and the mic you want it to sound like.

Using patented Spectral Shaping Tool technology, Antares created digital models of a wide variety of microphones, from historical classics to modern exotics, as well as a selection of industry-standard workhorses. Simply tell the AMM-1 what microphone you are actually using and what microphone you’d like it to sound like. It’s as simple as that.

With the AMM-1, you can afford to record each track through a model of the specific mic that will best produce that ideal sound you’re looking for. Or use it in live performance to get the sound of mics you’d never consider using on stage. You can even use it during mixdown to effectively change the mic on an already recorded track.

Not only do the models reproduce the sonic characteristics that make each microphone unique, but they also give you control of each mic’s specific options. Does the mic have a low cut filter? If so, it’s in the model. Wind screen on or off? Close or far placement? Each option results in the same sonic effect that it would have with the actual modeled mic. And for that final touch of perfection, you can even add some tasty tube saturation.

**Signal Path**

- Input - For setting the input level of the audio to be processed
- Source Mic - For indicating the mic (and the state of its various parameters) that was actually used to record the audio.
- Modeled Mic - For selecting the mic (and the state of its various parameters) whose sound you would like to model.
- Tube Saturation - For adding a model of analog tube saturation distortion.
- Output - For setting the output level of the processed audio. The use of each of the individual controls is covered below.

**Rear Panel**

- Balanced XLR and 1/4˝ TRS line inputs
- Balanced XLR and unbalanced 1/4˝ TS line outputs
- AES/EBU digital I/O is also provided – the output is always active, regardless of the input source (analog or digital)
- MIDI In connector lets you control the AMM-1 remotely from a MIDI sequencer
- A 1/4˝ TS bypass footswitch input is compatible to two types of footswitches; those that are shorted by default and those that are open by default (the ATR-1a will automatically detect which kind of foot switch you have when the unit is powered up).
The following is the list of most of the mics that are included in the AM M-1 ROM. There are many more in the pipeline which will be added as their modeling is completed.

The heart of any great song is a great vocal sound. The Vocal Producer combines world-renowned Auto-Tune Pitch Correction with award-winning Microphone Modeler technologies and state-of-the-art vocal processing modules to give you everything you need to create stunning vocal tracks in any musical style. Live or in the studio, the AVP-1 lets you instantly select from a large library of sounds. From gorgeously mellow to seriously twisted, they've included factory presets for a wide variety of vocal styles as well as an interface that makes it easy to create your own signature sounds. (And given the power and flexibility of the AVP-1's processing modules, Antares even included a selection of presets for instrumental and percussion tracks.)
Aural Exciter and Optical Big Bottom

Incorporating Aphex’s patented Aural Exciter and Optical Big Bottom, the 204 enhances detail, clarity and imaging, and adds low-end punch with deeper, more powerful bass to dramatically enhance live, recorded, broadcast and webcast sound.

By extending the harmonics of the audio path, the 204 is able to restore the natural brightness, clarity, and presence that is often lost during analog/digital conversions, processing, or playback through ‘less-than-perfect’ audio equipment, bringing sound back to life. This makes the 204 ideal for sound recording and mixing, radio and TV, streaming audio, live sound reinforcement, home theater, nightclubs, discos, theme parks and other fixed installations. The Big Bottom with adjustable tune control provides deeper, more powerful bass performance without adding more power amps or loudspeakers and with little or no increase in peak output. There might be many other “enhancers” on the market, but none can match the effectiveness and musicality of the patented processes in the 204—regardless of price.

- Aural Exciter is scientifically proven to increase intelligibility. It pulls a vocal or an instrument up out of a mix. It punches up an entire mix, even in a noisy or reverberant environment.
- Two independent, low noise channels
- Adjustable Tune, Harmonics and Mix Controls. Tunable harmonics enhances the detail and presence of any instrument, voice or even an entire mix.
- Adjustable Drive, Tune and Mix Controls on Big Bottom
- Switchable -10dBV/+4dBu operating level
- Balanced XLR and 1/4˝ input/output

207 2-Channel Tube Mic/Instrument PreAmp with MicLim

The 207 is an audiophile quality tube mic preamp without the high cost. In fact, it exceeds the performance of preamps costing many times more. The 207 will reveal the subtlety and power of vintage condensers, ribbons, electrets and popular dynamic mics. Even the world’s most respected microphones will sound better. The instrument inputs are also quieter and have more gain than conventional instrument preamps. The MicLim circuitry, previously only available in the flagship 1100 and 1788 mic preamps, makes the 207 virtually crashproof - making it a perfect front end for digital recorders. By combining the best traits of tube and solid state circuitry, the 207 captures a sound that is warmer, fuller and more true to life—whether you are recording, mixing live, broadcasting or webcasting.

MicLim vs. No MicLim

The MicLim is custom designed optical attenuator, located directly on the mic input line that smoothly limits the microphone's output signal according to the MicLim peak detector's control current. Since attenuation comes prior to preamplification, the patented MicLim can increase the Model 207's effective headroom by up to 20dB.

MicLim detects the preamp's output signal and instructs the input attenuator to proportionately reduce the microphone's output level just enough to prevent clipping. MicLim has no effect at all when the preamp's output level is not approaching clipping.
Dual Channel Compressor/Leveler/Limiter

The 320A delivers intelligent compressor action, leveling and peak limiting simultaneously. This intelligent, versatile and highly affordable processor can be used to solve audio level problems and improve audio signals in the broadcast studio, recording studio, tape duplication house, film dubbing studio and in live sound applications. Patented control circuits include analog computers that continuously analyze the input signal and vary the control characteristics to provide for virtually undetectable operation, regardless of the dynamics of the program. Extremely easy to use, you only need to set the Drive level to generate the desired amount of processing, set the Process Balance control between leveling and compression and adjust the output level for unity gain. The 320A is then ready to provide complete dynamic control - smooth, inaudible compression, increased system gain, desired program density and the freedom from constant “gain riding” - fully automatically! Its unique circuit design actually enhances transient qualities, thus making even heavy processing undetectable.

**FEATURES**

- Dual mono or stereo operation.
  - Mono mode offers two completely independent channels of processing to accommodate independent monaural signal feeds.
  - In stereo mode, you can link only the leveling control signals or you can link both the compression and leveling signals.
- "Invisible" compression characteristics assure tighter dynamics and virtually transparent performance
- Intuitive front panel metering system displays input/output or gain reduction levels.
- Intelligent Automated Gain Control (AGC) for consistent program levels
- All potentiometers are detented for accurate resetting of controls.
- Operating reference levels are selectable from -10dBV, +4dBu or +8dBu.
- Leveling Speed (fast/slow) switch is located on the front panel, as is the defeat switch for the peak limiter.
- An RJ-11 connector on the rear panel facilitates remote relay bypass of the unit.
- Instantaneous peak limiting for effective system protection (user defeatable)
- Adaptive control circuits make for fast, simple set-up and no readjustment for varying program dynamics

**Frequency Discriminate Leveler (FDL) Circuit**

Lab tests and exhaustive research led to the discovery that, under conditions of program leveling, the human ear perceives the onset of low frequency (bass & percussion) transients differently from transients at higher frequencies. This perception, as it turns out, is a direct function of the relative attack time of the leveler. Without FDL, there is a much greater chance that low frequency transients can create an audible "bass pull back" effect. In addition to a potential loss of bass and/or low end "punch", mid and high frequency processing can be negatively impacted. To the listener, the effect can be heard as a perceived loss of bass or even "pumping" at the mid and treble frequency ranges.

FDL eliminates this problem by allowing low frequency transients to trigger a slower attack time on the initial transient. High frequency leveling is still controlled within the attack time determined by the onboard computer. For the listener the benefits are:

- No more bass pullback effect
- More bass punch for better music mixes
- Fast leveling can be used in more applications
- Reduced audio distortion in the leveling mode

Dynamic level control is easy to attain. Just sit in front of your mixer, with your fingers on all the faders for all of your tracks. Then, when the signal on each track gets louder, immediately pull down that fader. When the music gets softer, instantaneously turn it up. Like we said, easy! Especially if you only have a 24 or 32 channel mix going...

Okay, maybe NOT so easy - unless you own an Aphex Compellor! Not a compressor or limiter, the Compellor is a gain an incredibly intelligent leveler. It automatically gives you dynamic control over your mix, letting you maintain optimum average levels at all times. Your recordings will sound louder, fatter, fuller and punchier - without sounding squished, squashed, flat or lifeless (the usual compressor artifacts) because the transients still get through, and your mix still has room to breathe.

If you want a more polished, mastered, and overall louder “pro” sound for your recordings, the Compellor is the best answer!
Logic Assisted Expander/Gate

The choice of professionals in recording, broadcast and sound reinforcement, the 622 incorporates proprietary detection circuitry to provide the most reliable, accurate and stable operation of any gate. And with the ability to increase your dynamics along with lowering the noise floor of your gear, comes the highest quality VCA’s to assure that you will never hear a click in your material again! The 622 also offers the highest quality audio path, flexible high “Q” key filters, key headphone outputs on the front panel and remote controlled bypass relays. Whether using it to keep your vocals clean and your bass sounds tight and fat or to control feedback, the 622 is a phenomenal addition to your processing rack!

- Logic Assisted Gate Circuitry combines sophisticated level detection with logic generated control voltage assuring positive, stable and accurate triggering regardless of attack time
- VCA 1001 voltage controlled attenuator assures the highest audio quality, speed and freedom from DC control feed through (no clicks regardless of attack time)
- Switchable parametric key input filters (-24 dB/octave filters with frequency and bandwidth controls)
- Lowest distortion (0.005% typical) and widest frequency response (5Hz-100kHz)
- Front headphone jack to monitor key input without disrupting audio output
- Dedicated downward expander mode allows high resolution of ratio adjustment from 1.2:1 to 10:1.
- Switchable ducking mode with fully adjustable control of trigger threshold, attack time, hold time, release time, expander ratio, and attenuation range
- 119 dB dynamic range—suitable for digital and analog recording applications
- Can be used in all recording and live performance applications
- Simple and accurate metering system
- Servo-balanced input and output circuits
- +4/-10 operation, rear panel selectable
- Hardwire relay bypass: remote controllable
- 5-year limited warranty

661
Tube Compressor/Limiter Expressor / Easyrider with Tubessence

This single channel compressor/limiter incorporates three patented Aphex circuits in one rack space: Tubessence, Easyrider and High Frequency Expander. Use the 661 to control dynamics for mixdowns, protect your sound system’s loudspeakers from transients and distortion or shape the sound of individual instruments and vocals. Compress dynamic levels without fear of reducing frequency response. What ever type of dynamics control you’re looking for, it can be done with the 661.

- Easyrider is an Auto mode that takes the guess work out of compressing individual instruments and vocals especially in live mixes. WDC (Wave Dependent Compressor) circuit automatically adjusts attack and release times according to the complexity of the program material. It’s No-Knee compression curve makes the transition into compression virtually invisible.
- Tubessence provides that “vintage” tube sound without high heat, bulk, short life, fragility and sonic variability. In the manual mode, the 661 provides the full compliment of compressor adjustments, such as ratio, attack and release, for maximum flexibility. Express yourself and get those “punch”, “slap”, “fat”, “pump”, and “squeeze” sounds fast and clean.
- High Frequency Expander (HFX) decompresses high frequencies, with user-adjustable ratio and corner frequency. Add “life” and “air” to your compressed signals without fear of background noise pumping.
- Spectral Phase Refractor (SPR) restores clarity and punch to tracks. Bass frequencies are more defined with more apparent power. Higher frequencies gain detail and presence.
Two-Channel Auto Compressor

The 108 is a two channel auto compressor with Easyrider technology for the best sounding, most transparent compression available. Easyrider thinks for you, continuously monitoring the complexity of the program material and instantly adjusting the compression ratio and time constants accordingly—just set and leave it alone! Think of it as having an extra set of hands while you play. Easy to use, simple to set up, the 108 sounds completely transparent on individual voices, instruments and submixes as well as full program material.

◆ Rotary speed control varies the range of the WDC release time
◆ Dial in the desired amount of compression, up to 20dB available
◆ Gain reduction meter with 10 LED steps
◆ Channels linkable for stereo operation
◆ Switchable -10dBV / +4dBu operation
◆ In addition to the world-class Aphex 1001 Class A VCA, Aphex's Easyrider Technology is a combination of two circuits:
  — Wave Dependent Compressor (WDC), a patented circuit which automatically adjusts compressor time constants according to program complexity:
  — No-Knee compression curve circuitry which automatically adjusts the compression ratio. One of the most annoying aspects of conventional compressors is the audible “pumping” or “breathing” side effects heard when the signal exceeds the threshold and the compression “kicks-in”. No-Knee ensures there is no abrupt transition to a high compression ratio.

109

Two-Channel Tubessence Parametric Equalizer

In a class by itself, the 109 has the flexibility to switch between Mono 4-band (1x4) operation when you need to address complex equalization issues or Dual 2-band (2x2) operation when more general equalization is required. For even more control, a switch is provided for selection of either peak/dip or shelving on all four bands. Each band provides variable boost/cut (±15dB), variable frequency (20Hz - 2kHz or 200Hz - 20kHz) and variable bandwidth (1/5 octave to 2 octaves) control. The 109 can be used for a combination of applications including gentle frequency response shaping and notching of specific frequencies, like 60Hz hum.

The 109 also includes the patented Tubessence circuit which provides true vacuum tube circuitry and sound without transformers, high heat, short life, fragility, and sonic variability. Due to the added “sweetness” of Tubessence, you will never hear an equalizer sound like the 109. Operating the unit in the EQ flat mode allows the signal to pass through the Tubessence vacuum tube stage without any gain change, providing you with a great Tube Processor. This feature proves helpful for digital users who wish to “warm-up” their digital signals.
The Dominator II is a stereo MultiBand peak limiter designed to fit a wide range of applications. Through the use of MultiBand techniques along with proprietary circuits, the audibility of limiting action has been greatly reduced, especially when compared to conventional limiters. This means that greater limiting depth is possible, resulting in higher loudness with maintained audio quality. At virtually any limiting depth, the Dominator II is free of “hole punching”, “dullness”, and most other effects normally associated with limiters. As a peak overshoot protection limiter, the Dominator II is undetectable in line while it absolutely prevents peak levels from exceeding a user settable output level. In addition, the desired limiting effects of greater audio density and increased punch are readily available with the Dominator II.

**Why is The Dominator So Special?**

A significant problem with wideband processing is “spectral gain inter-modulation” which occurs when one part of the spectrum controls the level of another part. A typical situation is a vocalist being “sucked down” every time the kick drum hits. Since most energy is contained in the lower frequencies, they tend to control the level of the entire spectrum. When the lower frequencies are above the limit threshold the higher frequencies are attenuated thus causing the output to be dull.

Multiband processing solves this by splitting the audio into two or more frequency bands and processing each band separately. However, more bands can result in more parameters to control including a method of summing the bands together again. While giving you flexibility, it also requires different settings for almost every different source. The 720 and 722 use program dependent, intelligent circuits to reduce the number of controls. You therefore have flexibility to shape the sound while quickly and easily achieving the goal of consistent, effective limiting.

**The Secret Ingredient: ALT**

A multiband processor splits the audio into separate bands, individually limits each band, and then sums the bands together again. Even though each band’s peak output is predictable, summing the bands together produces an unpredictable peak output.

Using a wideband limiter after summing introduces the drawbacks of wideband limiting. Using a clipper on the summed output can cause too much clipping distortion if the summed output is too high. To avoid this, the limiters’ thresholds are set far below the clipper threshold resulting in a loss of loudness, and a great amount of processing.

The Dominator II produces a predictable peak output while maintaining maximum loudness without audible distortion using the Automatic Limit Threshold (ALT).

The outputs of the three bands are summed and sent to the ALT detector circuit. If the sum exceeds a reference value, the ALT reduces the thresholds of the individual limiters. When the summed output falls below the value the limit thresholds return to their original setting.

**INPUT** - adjusts input level ±15dB. Center detent is unity gain.

**LF XOVER** - switches the crossover point between low and mid bands from 100Hz to 210Hz.

**HF EQ** - adjusts input level to the high frequency band ±5dB. Center detent is “flat” response below limiting.

**HF XOVER** - switches the crossover point between mid and high bands from 1.7kHz to 3.4kHz.

**FINE** - adjusts the PEAK CEILING by 0.2dB in 0-8dB steps.

**COARSE** - switches the PEAK CEILING in 2dB steps from +2 to +24dB (pk).

**POWER** - switches AC mains power on and off. “Off” position engages bypass relays.

**EQ UIPMENT LEASING AVAILABLE**
They Both Feature

- Peak Ceiling Trimmable in 0.2dB steps over a 34dB range
- 3-bands of limiting with switchable crossover frequencies
- Patented Automatic Limit Threshold (ALT) circuitry
- Freedom from pumping
- Freedom from Spectral Gain
- Intermodulation
- Adjustable density (relative crest height)
- Calibrated detented potentiometers
- 104dB dynamic range
- LF and HF EQ provides shaping equalization below peak ceiling
- Relay bypass is remote controllable
- Servo-balanced transformerless inputs and outputs

722

‘Broadcast Dominator’

Step-up Features

- Pre-emphasis is an equalization curve expressed as a time value based on the ratio of a resistor and capacitor. The higher the value, the greater the equalization. It has been employed as a noise reduction technique for broadcast and transmission links. There are primarily two world standards: 50 and 75 microseconds.
- The 722 Dominator II, has separately switchable pre and de-emphasis curves. When pre-emphasis is switched in, either 50 or 75 microseconds, the equalization curve is added after the input stage and before the limiters. When de-emphasis is switched in, the complementary de-emphasis curve is inserted after the final clipper and before the output stage.
- When both pre and de-emphasis are switched in, the frequency response of the output is flat. When the input is below threshold and as the input increases above threshold the output takes the shape of the de-emphasis curve.
- When both pre and de-emphasis are switched out, the 722 works exactly like the 720.

120 - 1 x 4 Servo-Balanced Distribution Amp

If you are in the market for a high-quality, performance driven Distribution Amp, then the Aphex 120 is just what you are looking for! With specifications better than digital recordings (better than 90db and 5Hz - 100kHz specs), the 120 is designed from the ground up to be rock-solid in any situation. So, for any situation that you can throw at it, Aphex’s 120 Distribution Amp offers 4 outputs that perform exceptionally well!

The Model 120 is a high performance audio distribution amplifier with a single high impedance input and four low impedance outputs, all electronically servo-balanced. The 120’s transformerless circuits are designed for wide, flat frequency response free from ringing or overshoot, making it ideal for distribution of SMPTE time code as well as audio. Each output has its own amplifier and level control for maximum versatility and isolation. The sturdy steel chassis may be used stand-alone or rackmounted, singly or in pairs.

Maximum gain without distortion. Whether working in analog or digital, its what we all strive for. The easiest and best sounding way to get it? The incredible Dominator II multi-band limiter.

Aphex’s goal with the Dominator was first and foremost incredible SOUND QUALITY. Other manufacturers fool around with their digital this and that, look ahead schemes, and other voodoo tricks to attempt to attain what Aphex has been providing all along - effective level control— with undeniably transparent, punchy audio quality.

Not settling for just stopping peaks, the Dominator uses controlled, instantaneous musical clipping to control peaks, while still letting you increase the average level of your mix. This adds punch and power, but establishes a multi-band brickwall limit. In short, the Dominator lets you push your levels to their absolute maximum, with NO DISTORTION or negative artifacts. Your mix is simply as loud as it can be, with no worries about overloading!

The Dominator is also ideal for establishing optimum input levels to your digital gear with no chance of peaks overshooting or causing harsh digital clipping. Putting one in front of your digital recorder is the best thing you can do for your recordings! And, are you using “in-ear” monitors on stage? The Dominator is the only limiter to consider for protecting your hearing, nothing else comes close - just ask virtually ever touring pro out there.

124 - Bi-directional Audio Level Matching Interface

So it’s time to mix and match your studio gear’s inputs and outputs... but everything is starting to sound awful!!??!

A CD player there, an ADAT recorder there... Throw in a few keyboards and a mixer. Throw in trying to match levels with Pro Tools and you’ve just created yourself a nightmare! Why? Simple... Start mixing different line levels (-10dBV for your keyboards and +4 for your ADAT or Mixer) and you’re mixing levels are going to be all over the place. One line is going to be really hot while another is barely audible. But don’t forget the noise or loss of dynamics that you are going to have with your gear when you start trying to match levels! That’s where the Aphex 124a comes into the picture! The Aphex Audio Level Interface is designed to allow use of -10dBV consumer hi-fi equipment with +4 or +8dBm professional and industrial audio systems. It provides an extremely clean, reliable two-way buffer so both systems can operate at maximum performance levels, matching impedances and operating levels. We are not exaggerating when we tell you that the Aphex 124 is going to make your recording life so much easier!
With the 1100 your microphones come alive with unprecedented focus, clarity, space and detail. Recorded voices demand attention because they are uncannily present, powerful, and appealing. Most tracks will need much less technical fixup to stand on their own. Offering the lowest noise possible, 24-bit 96kHz digital outputs and Aphex's exclusive MicLim protection circuit, the dual channel 1100 is designed for digital or analog recording, broadcast and production. The breadth of features, superlative specifications and warm sound of tube processing make it the mic preamp of choice for state of the art audio production. Breakthrough technology allows the 1100 to deliver an EIN of -135dB. The MicLim circuit adds an additional 20dB of head-room, making it virtually impossible to overload the preamp. Since the A/D converter is scaled to clip at the same point as the mic preamp, the digital conversion will be at the highest possible resolution without overload. Aphex's patented tube circuitry provides the open, present, real and warm sound.

Each channel has a tunable low cut filter (30-195 Hz), tunable gain from 21 to 65 dB and multi-turn output trim. Both channels have individual switches for 20dB pad, polarity, test tone, phantom power on/off, mute, MicLim, Clock Source (Internal at 44.1, 48 or 96kHz and External). The back panel includes (for each channel) includes XLR In/Out, 1/4˝ balanced out, AES/EBU out (XLR), Word Clock In/Out (BNC), remote mute control jack.

**MicLim Commands Enormous Headroom**

Wide dynamic range means more than low noise. It also means generous headroom to handle extremely loud sounds. Normal mic preamps can't be protected from clipping, because any compression or limiting device comes after the fact. Unexpected loud sounds will jam the preamp into clipping, forcing you to ride gain or suffer distortion. Aphex's exclusive MicLim peak limiter works on the mic's own output signal, before any amplification takes place. It automatically and transparently limits the peaks before they can get clipped! MicLim is based upon custom engineered optocoupler technology so it is sonically pleasing while in action. Typically 16dB of useful limiting is available, effectively adding that much more to the already huge dynamic range of the 1100.

**Class A Circuitry**

All discrete Class A PNP first stage and the patented Reflected Plate Amplifier (RPA) tube circuitry in the second stage and in the output stage. These circuits provide the 1100 with unique sonic characteristics while maintaining low noise and high common mode rejection.

**What's Thermionics?**

The art and practice of using and developing electron tubes (which are also known as “valves” or “vacuum tubes”) is frequently referred to as “Thermionics” in scientific and engineering literature. Inside of electron tubes, thermionic emission is obtained by heating the cathode to incandescence by the use of a filament. This causes electrons to escape from the cathode’s surface. The cathodic emission is ultimately gathered by the tube’s plate circuit and converted into an output signal. The plate current is controlled by a comparatively smaller input signal applied to an intervening electrode grid, yielding signal amplification. Any device utilizing this tube circuit technique may therefore be called a “Thermionic Amplifier”.

**Superior Dynamic Range**

Besides the rich, involving sonics of the 1100, imagine what its incomparable dynamic range can bring? -135dBu EIN (Equivalent Input Noise) commands awesome quietude. Most professional mic preamps have an EIN of -124dB or so. Some may even reach as low as -127dBu under optimum conditions. With an unprecedented low of -135dBu at 65dB of gain — the only source of noise will be the mic itself. The increase of the perception of size and depth during recording can be awesome.

**LoCaF Low Cut Filter**

LoCaF (Low Cancellation Filter) allows up to 20dB of low frequency cut without using any headroom or triggering MicLim. This sweepable second order low cut process is realized through a servo cancellation method that is nodally meshed at the intersection of the first and second stages. Tunable in 11 steps from 30 to 195 Hz, LoCaF gives you complete freedom from rumble and wind blast overload, even in extreme conditions.
The 96KHz/24-Bit A/D Converter

The 1100 incorporates a full spec A-D converter to offer full-featured AES/EBU digital audio output. Clock synchronization options allow locking to standard “word clock” and to AES/EBU clock received via back panel BNC input. The internal clock may be set at 44.1, 48 or 96kHz sample rates. When set for external clock reference, the BNC input jack directly links to the BNC output for easy daisy-chaining of multiple 1100s. All digital audio settings are controlled and displayed on the front panel.

700 Hz Tone

How often have you wished you could get a calibrated tone from your mic preamp to set the console match gain or the record level? The 1100 provides a selectable test tone at exactly 20dB below the digital and analog clipping points. This tone transfers to both the analog line output and the digital audio output whenever activated.

Line Output Calibrate & Level Normalization

With the 1100 you don’t have to compromise noise or headroom to get a level match to your system input. Using the test tone, simply use the Line Output Calibrate precision adjustment on the front panel in conjunction with the back panel +4dBu/-10dBV Normal Level switch to get a perfect signal level on your recorder or mixer meters. You’ll be guaranteed 20dB of headroom and the lowest possible noise.

Soft Switch Mute

Wouldn’t it be nice to have a convenient way to soft mute the microphone? The 1100 includes a clickless, thumpless, mute feature that can be operated from the front panel or from a remotely located switch. A back panel phone jack allows you to attach any kind of switch to mute the channel from any desired location.

Slow Ramping Phantom

Thumps are greatly reduced by the slow changing 48-volt phantom power source of the 1100. Not only does this protect your ears and monitors, but it protects delicate microphones from the shock of a sudden power inrush. You will normally hear the mic fade in quietly rather than loud thumps and flutters when phantom is turned on.

The 1788 is an 8-channel remote controlled mic preamp designed for production, broadcast, theater, recording and live sound. For live sound, not only does the 1788 place high quality preamps on stage near the microphones, but it allows a preamplified signal to be split for monitors, recording, and other feeds without a loss of quality due to loading of the microphone. The result is simply higher quality audio wherever the signal is needed. When used with the optional 1788R Remote Controller, up to sixteen 1788s (128 channels) can be remotely operated at the mix position with the actual 1788s located as close as possible to the microphones. The benefits are:

- The ability to run long cables without degrading the signal or audio quality
- The 1788’s MicLim limiter circuit allows the signal to run at as high a level as possible without the fear of clipping at the consoles, amplifiers, signal processing or analog and digital recorders.
- Multiple splits can be made from any input without loading the microphone or causing any audio degradation.
- The 1788 can be controlled by either MIDI, RS-232 or RS-422. The control protocol is MIDI so that anything producing MIDI can act as the controller, such as a light controller board, a show control system, a sequencer, a DAW, a MIDI controller, a keyboard or a computer using 1788 control software.
- The 1788 has an RS-422 output which can be used to daisy chain units. Of course, all mic preamp functions can be controlled on the units as well. Up to 16 units (128 channels) can be controlled by one control line.
- The control software has a screen which displays all parameters and metering of one unit at a time and up to 16 units may be called up. All channel status information and metering are displayed in real time. A channel can be selected and settings modified. Scenes can be saved, modified and recalled in the control software.
- When using the optional 1788-1 digital module, digital audio can be simultaneously routed using three digital formats, AES/EBU, ADAT optical, and TDIF.
- Using the 1788R Remote Control minimizes the amount of hardware at the mix position.
- Since there is no splitter, there is no need for cumbersome power supplies for condenser mics - the 1788 also provides phantom power.
- You will no longer have the expense of buying and transporting heavy splitter boxes.
**ART TUBE MIC PREAMPS**

**Tube MP Series**
ART's Tube MP series is a range of compact, professional tube preamps that provide sound quality and features that far surpass the "on-board" preamps found in today's low-cost mixers and multi-track recorders. Their TEC award nominated hybrid design utilizes the latest solid state and tube technology, based around a hand-selected 12AX7a tube, allowing them to add warmth and fatness to a signal while maintaining exceptionally low-noise and high quality. And though their primary application is microphone pre-amplification, they are also exceptional direct boxes, capable of impedance matching, amplifying and improving the sound of any instrument plugged into it—making them a must-have in any audio toolkit. Whether you're working with four-tracks or twenty four, tape or disk, analog or digital, a Tube MP will yield professional results at a fraction of the cost of comparable equipment.

---

**Tube MP**
There's no better way to get that smooth, warm sound than with the world's #1 mic pre, the Tube MP. The one that started it all, the Tube MP provides superior preamplification for microphones, instruments and line level sources, and uses a 12AX7A tube for over 60dB of gain to warm even the most frigid signal.

**Pre Amp**
- Variable input and output gain controls
- +20dB Gain/Norm Switch
- Switchable +48V phantom power
- Phase Reverse/Norm Switch - reverses the polarity of the output signal
- Power/Peak LED - Green when power is on, red if 6dB below hard clipping

**Superior Circuitry**
- Transformerless design throughout ensures exceptional signal integrity and extremely low noise
- XLR mic input utilizes a hybrid multiple paired transistor/opamp design providing extremely low noise and excellent CMRR

**Inputs/Outputs**
- Active balanced XLR mic input and high impedance 1/4˝ instrument input made it excellent as a tube DI for guitar, bass or keyboard as well
- Active balanced XLR and unbalanced 1/4˝ outputs

---

**TUBE MP Studio**
The Tube MP Studio steps up from the Tube MP OPL with the inclusion of an output level VU meter, enabling you to keep the signal consistent with desired levels. The meter also reflects the impact of the OPL circuitry on the signal. For example, if the signal is "in the red" on the meter, the meter will reflect the attenuation of the signal when the OPL is activated, and the signal is brought out of the "red".

---

**TUBE MP OPL**
The Tube M P OPL offers all the features and functionality as the Tube M P plus it adds ART's "OPL" Output Protection Limiter, which precisely and accurately, controls and maintains the output peak signal. The OPL circuitry is crucial in protecting the next link in a signal chain - such as a hard-disk recording system or a sound card.

---

**TUBE MP Studio V3**
Tube M P Studio V3 takes things to a new level with Art's exclusive V3 (Variable Valve Voicing) technology. Using presets created and fine-tuned by some of the industry's top studio and live-sound engineers, V3 provides optimized reference points to begin the recording process. V3 allows you to select between a multitude of preamp settings designed for guitars (electric and acoustic), keyboards, bass guitars, drums, vocals and more. V3 gives you incredible presets for every instrument you record, so all your recordings will sound professional. You can also tweak the presets to hone your perfect tone.
TPS/ DPS
2-Channel Tube Mic Preamp Systems

The Tube Preamp System (TPS) is basically a two-channel, rack mountable version of the Tube MP Studio V3. Like its single-channel counterpart, the Tube Preamp System (TPS) features twin high performance discrete preamplifiers coupled with ART’s proprietary Variable Valve Voicing (V3) 12AX7A gain stage. OPL (Output Protection Limiter) is available to control overshoots and normalize levels before overloading or digital clipping occurs to the next link of the signal path. It can accept +20dB peaks while maintaining over 120dB dynamic range and incredibly low distortion. And unique to its class, the TPS provides level monitoring via two analog meters. High-Z instruments or balanced microphone signals are input through front and rear panel jacks.

The DI/O Preamp System (DPS) has all the features of the TPS plus adds digital outputs. A versatile insert loop on each channel provides access for additional signal processing or direct access to ART’s high quality A/D converter. Separate gain controls on analog and digital outputs allow you to optimize the unit for simultaneous applications. Digital outputs include S/PDIF, TOSLINK or ADAT (front panel selectable). The A/D is front panel adjustable from 44.1 to 96kHz or syncs to ADAT or external word clock (32kHz to 100kHz).

PRO MPA/ DIGITAL MPA
Professional Two-Channel Tube Mic Preamps

Multi-purpose tools for audio engineering and recording, the PRO and Digital MPAs are ART’s top-of-the-line mic preamp. Developed with studio and live sound engineers using the best components available, they deliver “the sound” while ensuring a lifetime of quiet, reliable performance. Backed by five-year warranty.

They both feature:
- Variable input impedance for flexible mic voicing (150 to 3000 ohms)
- Selectable tube plate voltage
- Large VU meters and Peak-Hold LED meters
- Metering is switchable between output level and tube warmth
- 1/4” input has a high impedance which makes the PRO MPA perfect for DI or line level applications.
- Each channel features independent input and output level controls and a variable high pass filter.

Digital MPA Step-up features:
- A/D insert jacks, 44.1/48/88.2/96/176.4/192 kHz internal sample rates
- Rotary encoder for quick selection sample rate and output format
- Separate analog and digital level controls; fast and accurate digital level LED meters
- ADAT optical I/O; sync to incoming ADAT data rate
- Selectable optical (S/PDIF or ADAT) and AES/EBU output
- Two word clock jacks allowing loop through
- Attractively styled with a light gold front panel and matching knobs
Professional Two-Channel Tube Compressor with Vactrol

The rack-mountable (2RU) PRO VLA (Vactrol-based Leveling Amplifier) is a powerful tool for audio engineering and recording. It features two independent channels of analog leveling/compression designed to work seamlessly with any recording, sound-reinforcement, or electronic instrument setup. ART’s PRO VLA circuitry utilizes the latest and most advanced analog and tube technology. Using a transformerless design throughout, the PRO VLA maintains exceptional signal integrity and extremely low noise. Its VCA-less design utilizes optical electronics (Vactrol) coupled with a 12AX7 vacuum tube gain stage for superior musical performance.

The PRO VLA is a soft knee leveling amplifier by design. Although it is capable of providing a thoroughly “squashed” signal, it excels in areas where transparent, expressively musical dynamics control is desired. In addition to making signal levels more manageable, it is common practice to apply compression or limiting to a signal to make it louder or more “in-your-face”. By utilizing opto-electronics, the PRO VLA allows you to add more compression without sounding like you’re squashing the daylights out of the signal.

Unlike typical compressors which use VCA’s to control level detection, the PRO VLA is very musical. The nature of its operation is much like the way your eye adjusts to light. Just as your eye transparently adjusts to changes in light, the PRO VLA adjusts to changes in signal level.

Developed in partnership with studio and live sound engineers, the PRO VLA possesses a “sound” that is not available from any other compressor — at any price! Designed and constructed with the absolute best components, assuring a lifetime of quiet, reliable performance.

FX-1 Digital Effects Processor

Housed in a compact, all-steel chassis are 60 stunning digital signal processing effects. Choose from clean, lush reverbs including halls, chambers, plates, gated, reverse and true stereo rooms and plates. Add powerful delays, thick chorus, shimmering flange, vintage tremolo and panning effects, pitch shifting, precise combination multi-effects and you have the easiest to use, best sounding, compact processor on the market.

TUBE PAC Tube Mic Preamp/Optical Compressor

The TUBE PAC combines the world’s most popular tube mic/line preamp (Tube MP) and an optical tube compressor into a single convenient table-top design. Easily placed in the studio or on the stage, the Tube Pac offers immediate access to all the controls, features, and metering. The mic/line preamp stage provides over 70dB of gain, +48v phantom power, phase reversal, and is capable of warming up any instrument or microphone. The tube compressor is a VCA-less, optical design—similar to that of the “classic” tube compressors. Its ultra-musical sound is ideal for voice and instrument applications. Threshold, compression/limiting ratios, adjustable release times, bypass, gain reduction metering, and output gain controls are provided.
TUBE CHANNEL  Tube Mic Preamp/Optical Compressor/EQ

A rackmount version of the TUBE PAC, the TUBE CHANNEL also adds a 4-band, tube-based parametric EQ and analog VU meter.

- Award-winning, tube-based preamp features over 60dB of gain, +48v phantom power, and a 20dB pad.
- The optical compressor features compression and limiting settings, selectable release times, adjustable threshold, and output level controls. Gain reduction is displayed via a four-segment LED array.
- The 4-band parametric EQ section provides selectable high and low shelving filters with two mid-bands which sweep from 20Hz to 20kHz. The mid-bands overlap from 200Hz to 2kHz for the ultimate in flexibility.

- Insert points are available between each of the three processing sections. These inserts provide direct outputs from the preamp and the compressor for signal routing flexibility. Additionally, these inserts allow each processing section to be isolated for independent usage or to change the order of the processing sections (e.g., you can place the EQ before the compressor).

PRO CHANNEL  Professional Tube Mic Preamp/Optical Compressor/EQ

Redefining the term “channel strip” the PRO CHANNEL combines three independent world-class modules: tube mic preamp, switchable optical/variable mu compressor, and tube EQ to create the world’s best-sounding and most affordable professional recording channel.

In addition to the compressor module, the PRO CHANNEL features a Variable Mu circuit. Users can select between ART’s award-winning optical/tube compressor or the coveted Variable Mu circuit (a design made popular by the sound of the old broadcast limiters - now costing thousands of dollars). The Variable Mu circuit is fast, fat and a bit aggressive, and has joined the Pro VLA in becoming a legend among compressors. The 4-band parametric equalizer has selectable Q for the two sweepable mid-bands. As with all design elements of the Pro Channel, these Q options were fine-tuned by some of the industry’s top studio and live-sound engineers.

- Three hand-selected vacuum tubes
- Warm, smooth, and silky sound quality
- Selectable VU metering (mic pre out, compressor out, or main out)
- Tube character and gain reduction LED arrays
- Balanced XLR and unbalanced 1/4” inputs and outputs
- Precision detented potentiometers
- Insert points between preamp and compressor, and compressor and EQ
- Five-Year Warranty
ART

**441/451/455**

**Dual 15-Band/Single and Dual 31-Band Graphic EQs**

ART’s high performance 441 (Dual Channel 15 band 2/3 octave), 451 (Single Channel 31 band 1/3 octave) and 455 (Dual 31-Band 1/3 octave) graphic EQs feature constant Q circuitry, 20mm oil-damped precision detent sliders with a selectable boost/cut range of ±6 or ±12dB, multiple inputs/outputs, adjustable high pass and low pass filters, 4-segment LED level metering with clip level indicators, variable input level controls, internal power supply with selectable line voltage, and ground lift switch. They also offer automatic relay bypass of audio, an essential function if power is lost. They are ideal for any audio application where precision frequency tailoring, reliable performance, rugged design and extremely silent processing is of the utmost priority.

- The high pass filter rolls off lower frequencies to decrease rumble or low frequency hum from a signal. Its range is adjustable from 10Hz to 250Hz. Frequencies below this setting are rolled off, while frequencies above are unaffected.
- The low pass filter rolls off higher frequencies to reduce hiss or sibilance from a signal. Its range is adjustable from 3kHz to 40kHz.

**442/452**

**Long Throw, Dual 15-Band and Single 31-Band Graphic EQs**

Same as the 441 and 451, the 442 and 452 step-up with 60mm long throw sliders & 10-segment LED meters for output.

ART’s EQs are used in a variety of applications such as live sound, recording studios, instrument racks as well as any conventional fixed installation environment. Use them wherever precise modification of the frequency contour of a sound is needed. The graphic EQ is a powerful tool for solving a number of audio problems and creating interesting sound textures.

Patch the EQ between your mixing console and power amps to allow you to alter the overall mix to better match your environment. Use them between your monitor mixer and monitor power amps to aid in the removal of feedback inducing frequencies. Patch into a channel insert to EQ one channel or track individually. Run your instrument directly into the EQ to enhance its sound before reaching a power amplifier or instrument amplifier. Patch them into the effects loop of an instrument amplifier or between a preamp and power amp to have precise control over the complete sound.

ART’s EQs are used in a variety of applications such as live sound, recording studios, instrument racks as well as any conventional fixed installation environment. Use them wherever precise modification of the frequency contour of a sound is needed. The graphic EQ is a powerful tool for solving a number of audio problems and creating interesting sound textures.

Run your instrument directly into the EQ to enhance its sound before reaching a power amplifier or instrument amplifier. Patch them into the effects loop of an instrument amplifier or between a preamp and power amp to have precise control over the complete sound.
Dual 15-Band/Single and Dual 31-Band Graphic EQs with Feedback Detection

Stepping up from the 442 and 452, the HQ-15 (Dual Channel 15-Band EQ), HQ-31 (Single Channel 31-Band EQ) and HQ-231 (Dual-Channel 31-Band) are equipped with ART’s proprietary FDC (Feedback Detection Circuitry) to help you keep live sound under control. Different from other systems in that it is extremely fast and accurate, FDC utilizes a set of LED indicators that show which of the many EQ bands has the greatest energy. And while FDC illuminates the band with the greatest energy with the brightest LED, it doesn’t fully discriminate between bands and will not get “stuck” on one band when there is no signal.

The LED indicators can immediately show which band corresponds to the feedback frequency, allowing sound engineers to reduce gain in that band to quickly kill the feedback while having minimal impact on the sound of the live program material. The FDC also acts as a simple spectrum viewer while the concert proceeds showing where the “hot” areas are. During system setup and sound check, FDC may be used to help identify room and sound system resonances. By increasing the gain until feedback, it is easy to identify those frequencies that are likely to be problems. Reducing the gain in these bands helps tune the sound system, and, remove problem areas before the show begins. It also helps increase the gain margin before feedback.

Pure Class A, Vacuum Tube Discrete Preamp, Opto-Compressor and 4-Band EQ

The VT-737sp is a high-quality recording channel that combines a Class A vacuum tube preamplifier, vacuum tube opto-compressor and discrete parametric equalizer — all of the essential elements needed to provide a musical direct recording path to the input of your audio recorder or DAW. Only the best active and passive components available are used in the VT-737sp including 4 military-grade vacuum triode tubes integrated into a minimal signal path with 100% discrete, high-bias pure Class A audio amplifiers. Twenty-two sealed silver relays are employed providing hard-wire bypass and multiple routing options for total creative control and minimum signal degradation. Balanced XLR inputs are available for both mic and line-level signals as well as an XLR output with a balanced DC coupled output amplifier. A high impedance 1/4˝ instrument input jack is also provided on the front panel allowing direct connection of a guitar or bass.

FEATURES

Vacuum Tube Design
- Combination of a tube preamp, opto-compressor, sweep equalizer, output level and VU metering in a 2U space nineteen inch welded steel chassis
- Allows you to amplify, control, and shape a signal from its source and deliver the signal directly to the input of your audio recorder or DAW completely bypassing the mixing console and its sonic limitations
- 4 dual triode vacuum tubes (Sovtek 6922), high-voltage discrete Class A with a 10 Hz to 120kHz frequency response ±0.5dB
- Twenty-two sealed silver relays employed for signal routing and (hard-wire) bypass switches, provide the most direct signal path and allow signal to pass through the unit when power is turned off
- An LCD display shows the number of hours that the tubes have been operating
- 150W toroidal shielded power transformer
- Switchable AC power supply 100-240V
- To ensure that there is no strain on the electronic components when the unit is activated, a “soft-start” feature slowly brings the unit to life when the unit is powered on

Mic Preamp
- The Mic Preamp stage employs a high voltage vacuum tube design that can be used for all types of dynamic and condenser mics, Hi-Z instruments such as guitars and basses, and for line level devices such as keyboards, mixers, recorders or DAWs
- Three different devices can be connected simultaneously and easily selected with the input mode switch on the front panel
  - A high performance XLR balanced mic input transformer with switchable +48v phantom power
  - A high impedance (one meg ohm) unbalanced 1/4˝ jack located on the front panel allows an instrument such as a guitar or bass to be connected directly to the tube preamp
  - Discrete high-level Class A balanced line input
- A High gain switch, available to all inputs, boosts overall preamp gain and can be used to increase weak input signals or to achieve a wide range of distortion effects ranging from loose tube overdrive to tight discrete distortion
- A passive variable high pass filter and phase (polarity) reverse are available for all inputs and are, hardwire relay bypass switchable

Opto-Compressor
- The compressor uses a minimum signal path design and features twin Class A vacuum tube triodes for gain matching. The passive optical attenuator, used for gain reduction, serves as a simple yet musical level controller
- Continuously variable threshold level, ratio, attack, and release controls provide a variety of useful dynamic effects, from soft compression to hard-knee limiting
- To provide maximum flexibility, the compressor can be positioned either before or after (Pre/Post) the equalizer
- For even greater sonic possibilities, the two sweepable mid-EQ bands can be side chained to the compressor allowing a broad range of spectral control including de-essing
- A hardwire relay bypass switch engages the compressor into the signal path
- Stereo linking (tracking) between two VT737SPs is possible via an unbalanced 1/4˝ link jack on the rear panel
4-Band Passive-Active EQ

- The four-band parametric equalizer section features a 100% discrete high voltage class A design with both variable-active and switched-passive filter topologies.
- The high and low mid frequency bands each feature active peak/dip filters each with a boost and cut of ±16 dB as well as a Q switch which allows you to select the appropriate bandwidth (Medium or Wide).
  - The low-mid frequency is variable between 35 to 450 Hz.
  - The high-mid frequency is variable from 220Hz to 2.8 kHz.
- The low frequency passive shelving EQ is selectable between 15, 30, 60 and 150 Hz with a boost and cut of ±24dB.
- The high frequency passive shelving EQ is selectable between 10, 15, 20 and 32 kHz with a boost and cut of ±20dB.
- As previously mentioned, the High and Low Mid band EQs can be assigned to the compressor's side chain circuit. When this is the case, the low and high EQ's are still available for tonal adjustment.

Metering

- The high quality analog VU METER is switch selectable to indicate line output level or gain reduction for the compressor (0 VU = +4dB).
- The VU meter's needle is also speed sensitive for measuring gain reduction which helps in setting the ATTACK and RELEASE of the compressor.
- A recessed screwdriver adjustment is provided for calibrating the VU meter to 0dB when set to read the compressor's gain reduction.

Output Section

- The final output stage utilizes yet another dual triode vacuum tube driving a 100% Class A, high-current balanced and DC coupled low noise output amplifier.
- A continuously variable trim pot lets you control the output level (-40dB to +10dB with center detent at 0dB).

Output Section

- The four-band parametric equalizer section features a 100% discrete high voltage class A design with both variable-active and switched-passive filter topologies.
- The high and low mid frequency bands each feature active peak/dip filters each with a boost and cut of ±16 dB as well as a Q switch which allows you to select the appropriate bandwidth (Medium or Wide).
  - The low-mid frequency is variable between 35 to 450 Hz.
  - The high-mid frequency is variable from 220Hz to 2.8 kHz.
- The low frequency passive shelving EQ is selectable between 15, 30, 60 and 150 Hz with a boost and cut of ±24dB.
- The high frequency passive shelving EQ is selectable between 10, 15, 20 and 32 kHz with a boost and cut of ±20dB.
- As previously mentioned, the High and Low Mid band EQs can be assigned to the compressor's side chain circuit. When this is the case, the low and high EQ's are still available for tonal adjustment.

Metering

- The high quality analog VU METER is switch selectable to indicate line output level or gain reduction for the compressor (0 VU = +4dB).
- The VU meter's needle is also speed sensitive for measuring gain reduction which helps in setting the ATTACK and RELEASE of the compressor.
- A recessed screwdriver adjustment is provided for calibrating the VU meter to 0dB when set to read the compressor's gain reduction.

Output Section

- The final output stage utilizes yet another dual triode vacuum tube driving a 100% Class A, high-current balanced and DC coupled low noise output amplifier.
- A continuously variable trim pot lets you control the output level (-40dB to +10dB with center detent at 0dB).
VT-747sp

Class A, Vacuum Tube-Discrete Twin Signal Path
Opto-Compressor / 6-Band Program Equalizer

The VT-747sp is a pure Class A, stereo opto-compressor and program equalizer that delivers unmatched routing flexibility and creative control for input signal conditioning, stereo mix bus and mastering applications. The VT-747sp’s TSP (Tube Signal Path) design gives you a choice of warm tube processing with three hand selected vacuum tubes in the signal path or you can bypass the tubes and switch to classic Class A discrete transistor sound. The passive six band graphic equalizer offers gentle tone shaping combined with the two-band parametric EQ, assignable to the sidechain in the compressor section, provide complete spectral and musical control. Like all Avalon products, the VT-747sp is hand built in the USA using only the finest active and passive electronic components available. A “no compromise” approach in every stage of design and production ensures that the VT-747sp will give many years of dependable high-quality service.

Overview
- Combines a stereo tube/discrete Class A optical compressor and a musical six-band program equalizer with separate output level and gain reduction metering and an internal regulated power supply — all in a 2U space nineteen inch welded steel chassis with rugged stainless steel metric hardware
- Ideal for high performance DAWs, input signal conditioning, stereo buss processing, stereo keyboard tracking as well as mastering applications
- Features a “no compromise” high voltage, high current, minimum signal path design with 22 sealed silver relays for all signal routing and hard-wire bypass functions
- TSP - Twin Signal Path
- The TSP (Tube Signal Path) gives you the choice of either tube tone (utilizing three high-voltage dual triode tubes), or the classic, Class A discrete transistor sound (utilizing discrete transistor amplifiers) in the primary opto buffers and output stages
- Input Stage
- The input stage provides +36dB of headroom before overload
- A continuously variable trim knob controls the input level of the signal source. A wide range of sounds and colors can be achieved simply by varying the input level — In tube mode, the harder you drive the input, the more tube tone, can be sent into the compressor. In discrete mode (TSP disengaged) driving the transistors harder will achieve a more classic discrete transistor sound
- Opto-Compressor
- Compression is achieved by twin optical attenuators that act as passive level controllers. The opto-compressor design was chosen because it provides the most musical compression control
- The compressor section is immediately followed by a Class A amplifier with a variable gain control that provides up to +10dB of gain make-up
- Full dynamic control from soft compression to hard-knee limiting can be achieved with variable threshold, compression ratio, attack and release controls as well as a hard-wire bypass
- Spectral Control
- Parametric Low and High frequency (LF and HF) spectral contour controls can be routed into the on-board side-chain path on the compressor for enhanced frequency dependent compression, such as de-essing. Variable frequency and threshold level controls are provided independently for the Low and High frequency
- A +10dB Gain switch can be used to (overdrive) the input signal, or in a more utilitarian fashion, for matching low level sources such as keyboards and synthesizers
- An SC LISTEN switch allows you to monitor the signal going into the Side Chain before it is effected by the compressor
6-Band Graphic Equalizer
- Extremely smooth and musical — The six frequency bands and corresponding Q settings have each been carefully chosen to provide the most natural harmonic balance and lowest phase change while offering simple and effective tone control
- The EQ's passive filter was designed to allow you to subtly shape and color the sound source while still keeping the signal musically balanced
- 100% discrete, Class A high voltage transistors are employed to ensure optimum sonic performance
- The EQ section is controlled by six faders with center detents and can be hard-wire bypassed
- The EQ can be routed pre or post the compressor providing greater creative flexibility and sonic capabilities

Inputs & Outputs
- Fully balanced inputs and outputs with XLR connectors are driven by DC coupled, Class A discrete amplifiers that provide +36dB input headroom

Metering
- A high quality analog VU meter indicates accurate gain reduction
- A fast-acting blue LED illuminates when peak gain reduction begins to occur
- Twin LED meters provide a 60dB range with fast L-R output status of all levels

Avalon systems utilize 100% discrete, high-bias pure Class A audio amplifiers. These pure Class A amplifiers are incorporated into minimal signal path designs which include sealed silver relays, balanced DC coupled high-current "outside-world" drivers, fully discrete linear DC regulators, low noise toroidal power transformers and selected high quality active and passive components. This powerful combination of design features gives increased musical headroom and greater dynamic transient capability for a truly transparent audio passage. Avalon microphone preamplifiers have been in use around the world since 1986. All preamplifiers share the combined technologies of low ratio transformer balanced inputs coupled with high-voltage cascade FET twin bipolar discrete Class A amplifiers.

- Pure Class A Discrete Amplifiers - no op amps
- Bipolar symmetrical design - mirror image components
- Conductive plastic potentiometers
- 100% discrete, Pure Class A signal amplifiers, practical user features and rugged hardware designed to deliver true high performance audio for many years
**Mono & Dual Mono Pure Class A Preamplifiers**

The AD2022 and M5 are world-class discrete Class A preamplifiers designed to realize the full potential of all microphones as well as electric instruments. Both preamps feature advanced high-performance transformers that deliver smooth detailed highs, delicate liquid midrange and extended low frequency control. They are the perfect front-ends for analog tape and digital audio workstations (DAW’s). The AD2022 represents Avalon’s fourth generation of fully discrete, symmetrical Pure Class A microphone preamplifiers with dual matched channels and several additional features, including selectable microphone source loading for optimized cable/mic matching, ±3dB fine output trim controls, ultra high operating headroom +36dB as well as balanced and unbalanced outputs.

### Symmetrical Pure Class A Design
- 100% discrete, high-voltage, symmetrical Pure Class A signal amplifiers are utilized for each channel — The first amplifier operates in a cascaded-cascode FET configuration while the second stage amplifier is fully bipolar. The twin amplifiers share the total available gain requirement. This shared architecture increases the high level headroom capability, improves transient response and doubles the internal bandwidth of the ultra-high performance pure Class A signal amplifiers.
- The most advanced high-performance mic transformer available — Split low-ratio primary windings are carefully combined within a custom mu-metal core for extended smooth frequency response and very low distortion.

### Input Stage
- Input gain is variable from +20dB to +64dB in 4dB steps
- A switchable passive high pass filter, (6dB/oct, variable from 30Hz to 185Hz)

### Microphone Input
- -20dB resistive pre transformer input attenuator (pad), +48v regulated phantom power (50mA capability) and a Polarity reverse switch are available on the microphone input.
- To ensure minimal signal invasion, sealed silver relays are used for all signal routing including the input signal selector, high pass filter, polarity reverse, +48V power and the 20dB pad.

### Inputs
- XLR mic inputs are electronically balanced with a maximum input level of +36dB (with -20dB pad)
- 1/4” Hi-Z instrument DI is provided with a maximum input level of +18dB at 100kΩ.

### Metering
- Large, high-quality, illuminated analog VU meters provide accurate signal readings.
- Bi-color LED’s offers peak indication - green at 0dBu and red at +20dBu.

### Output Section
- High-current DC coupled, Class A discrete amplifiers are provided for the outputs of both the M5 and AD2022.
  - The M5 features an XLR unbalanced output with +30dB capability into 600Ω.
  - The AD2022 features an XLR balanced output with +36dB capability into all known loads.
- The AD2022 also features a ±3dB variable fine output gain adjustment that can be used for gain riding during tracking.

### Power Supply
- The external B2T toroidal AC power supply is switchable for 100V to 240V, 50-60Hz operation, 150 watts maximum.

---

**Input Source Load Selector (AD2022 Only)**
- A 5-position rotary switch, on each of the channels, enable you to change the preamplifier’s input impedance between five different input impedance values: (D1), 50, 150, 600 and 1.5kΩ (MIC).
- This transformer balanced input load selector is provided as a “creative tone shaper” that can enhance the sonic signature of your microphones and cables — As you lower the input impedance you place a load on the microphone and cable the effect of which can create subtle to dramatic changes in frequency and distortion characteristics as well as filtering effects due to cable capacitance.

### RM-1
Converts a single U5 or M5 to a standard 19” rack system. Includes two steel rack ears and eight stainless steel screws .......... 69.95

### RM-2
Joins two U5 or M5’s together in an standard 19” rack. The RM-2 contains two stainless steel rack ears, two T-bars, and ten stainless steel screws .......... 99.95

### VP-1
1U 19” vent/spacer panel, ideal for cooling large racks......................... 79.95

### B2-T
External AC power supply 100V-240V selectable................................. 99.95

### PC-1
Four pin, low voltage power supply cable for AD2000 series 8’ length ...... 69.95

### JT-1
High performance Jensen (JT-11-BM) output transformer option (M5 only) ............... 69.95

### BK-1
Special 130V option power supply plug-in card for B&K microphones (M5 only) ............ 149.95

### ST-4
Spare tube kit for VT-737SP and VT-747SP. Includes 4 matched military 6922 tubes ...... 79.95
AVALON
AD2044

Dual Mono-Stereo, Pure Class A Opto-Compressor

The AD2044 combines Avalon’s legendary 100% discrete, pure class A signal amplifier design with custom designed high speed current monitored optical control elements. These “invisible” opto elements enable the AD2044 to deliver totally transparent, low noise gain reduction within the minimalist signal path design. Variable attack and release controls plus side chain access, provide unlimited creative control from soft compression to hard limiting. The perfect solution for two buss music-program compression, mono bass, instrument and mastering applications.

FEATURES

Sonic Excellence

- Combines advanced electronics with unequalled sonic excellence — The advanced true symmetry design offers high-voltage, large headroom, extended bandwidth and very low noise
- State-of-the-art, balanced 100% discrete, Pure Class A signal amplifiers offer the serious music professional unlimited sonic character and a natural harmonic detail that enhances the program material and becomes one with the music itself
- Low noise Pure Class A optical-compressor designed to optimize absolute signal integrity and musical performance
- Practical “real-world” user features and rugged hardware designed to deliver true high performance audio for many years
- The perfect solution for two buss music-program compression, mono bass and instruments and mastering applications

Linear Optical Compression

- Custom manufactured, high speed linear opto elements are used to create a non invasive passive attenuator system that ensures transparent gain reduction
- A unique external control loop and current monitored optical driver is incorporated that provides smooth control plus the benefits of traditional vintage LDR (Light Dependent Resistor) compression

Compression Controls

- Dual mono or stereo operation via Stereo Link switch
- Fully variable threshold, ratio, attack and release controls
- Hard-wire relay bypass for compressor in-out

Inputs & Outputs

- XLR-balanced inputs and outputs
- XLR-balanced sidechain input for spectral dynamics control
- Fast acting blue peak compression LEDs
- Large professional VU meters

Opto-Compressor Controls

- Threshold: Variable -24dB to +20dB
- Ratio: Variable 1:1 to 20:1
- Attack: Variable 0.5mS to 150mS
- Release: Variable 80mS to 5 seconds for 12dB release
- Bypass: Hard-wire relay bypass for compressor in-out
- Link Switch: Large illuminated push switch for stereo L-R linking
- Make Up Gain: Variable 20dB range (+10dB), center detent 0dB
- Side-Chain (In): Engages side-chain input

Switchable VU Metering

- Gain Reduction Meter: Illuminated gain reduction meter 0dB to -20dB range
- Output Meter: Professional moving coil type -20dB to +3dB (0VU=+4dB)

XLR Balanced Inputs and Outputs

- Maximum Input Level: +30dB balanced
- Maximum Output Level: +32dB balanced 600 ohms, DC coupled
- Side-Chain Input: XLR balanced
- Power Supply: B2T External AC supply, 150w toroidal transformer, 4 pin cable 90v isolated, 100-240v selectable 50/60Hz, 150w max

System performance

Noise 20kHz Unweighted: -94dB (compressor in)
Distortion THD, IMD: 0.5% (typical 0.05% at +6dB 1kHz
Frequency Response: -3dB 1Hz to 450kHz (input band limited)

www.bhphotovideo.com
Dual Mono, Pure Class A Parametric Music Equalizer

The Avalon AD2055 is a dual mono, four-band parametric equalizer combines 100% discrete, pure class A signal amplifiers with state-of-the-art passive and active filter topologies to give the serious music professional unlimited sonic character and a natural harmonic detail that is sure to enhance any program material. The AD2055’s unique circuitry will breathe life into musical performances offering very high resolution transient detail at the operational extremes with very low noise at all settings. Avalon’s true symmetry design offers high-voltage and high headroom (+32dB output) with an extended bandwidth from 1Hz all the way up to 500 kHz.

Features

- Extremely musical and easy to use dual four band equalizer
- State-of-the-art, balanced 100% discrete, Pure Class A amplifiers
- High resolution transient detail
- Ultra low noise (-94dB) design optimized to provide absolute signal integrity and musical performance at all settings.
- High headroom +30dB
- Fully balanced DC inputs and outputs using XLR connectors
- Auto bias DC servo loop control eliminates the need for all interstage capacitor coupling
- Conductive plastic potentiometers for low noise
- All signal routing with sealed silver relays
- Perfect for stereo buss music-program equalization, special instrument EQ and FX applications as well as ultra high performance mastering studio applications
- External 150W torroidal BT-2 power supply provides clean, hum-free power (100-240v selectable 50/60Hz.)

System Performance

Noise 20kHz Unweighted -94dB (EQ in)
Distortion THD, IMD 0.5% (typical 0.05% at +6dB 1kHz)
Frequency Response -3dB 1Hz to 450kHz (input band limited)

Transparent Passive-Active Filter Design

- Passive high and low bands plus two fully parametric mid bands deliver truly musical performance with high speed transient detail at the operational extremes
- The passive high and low bands are powerful and full-bodied with up to ±32dB of boost/cut for the low band and ±26dB of boost/cut for the high band and 10 frequency selector switches chosen for their sweet sound and musical performance
- Full bandwidth twin mid bands provide variable frequency selection (X10 frequency multipliers for very wide range), variable Q (width) and amplitude control

Mono Instrument DI & Preamplifier

The U5 is a high-voltage DI-preamp that combines a unique passive tone selector with a variable gain preamp and filter. The variable gain Class A preamplifier is designed to optimize low level pick up signals with absolute signal integrity. The high input impedance accepts a wide variety of signal levels and instruments from acoustic guitars to high-output active bass guitars and keyboards. A high level speaker input is also provided for capturing the live sound from an instrument amplifier.

FEATURES

- State-of-the-art, 1/4" high impedance (3,000,000 Ω) input stage ensures zero load effect on sensitive pickups and keyboards
- A 1/4" high level (400 watt) speaker input on the rear panel, is provided for capturing the live sound of an instruments amplifier
- A variable gain Class A preamplifier can boost low level pickup signals to +30dB
- The active-to-thru switch selects either the instrument input directly or sends the boosted equalized signal to the amplifier via the front panel jack

Deep and Controlled Bass

Avalon U5 DI-preamps have been in use around the world since 1995. They have found their way into the world's leading musicians rigs and recording sessions and been featured on thousands of the best selling (and sounding) albums and live performances.

Six Position Tone Selector

This rotary switch lets you choose from 6 passive filters optimized for use with a variety of acoustic and electric instruments.

- Acoustic and string instruments, electric bass and keyboards
- Acoustic bass guitar
- Acoustics, strings, electric & bass guitar and keyboards
- Acoustic and electric guitar
- Electric and bass guitar

System Performance

Noise 20kHz Unweighted -100dB minimum gain position
Distortion THD, IMD 0.1% at +10dB
Frequency Response 5Hz to 100kHz (±0.5dB)
Frequency Response (-3dB) 1Hz to 500kHz (input band limited)
Rack mount kit (1) RM-1 Single U5 19” rack mount kit (holds one half rack unit)
Rack mount kit (2) RM-2 Dual U5 19” rack mount kit (holds two half rack units)

Outputs

- A headphone monitor amp with a 1/4” output connector is included for personal listening
- Twin DC coupled Class A output amplifiers drive both low level microphone preamp inputs and high level +4dB inputs for direct to tape recording or processing
- A rear panel ground isolation switch eliminates any possible earth loop or AC buzz problems with complete safety
BEHRINGER

MIC2200 ULTRAGAIN PRO

2-Channel Tube Mic Preamp/Line Driver/DI Box

The MIC2200 is the ideal extension to your console, MIDI setup or hard disk recording system. Integrated EQs give you extra sound-shaping power, while its built-in tube adds warmth and transparency to your signal. Also features direct injection and level conversion functionality.

- Mic input stages are based on high quality, discrete conjugate transistor pair circuitry
- Ultra-wide bandwidth from 2Hz to 200 kHz
- Built-in high-quality vacuum tube for outstanding, ultra-musical tube sound, warms up your music without unwanted noise
- Two parametric EQs with user adjustable center frequency, bandwidth and level
- Independent line driver to convert -10 dBV into +4 dBu pro level
- Completely versatile DI-Box due to servo-balanced inputs and outputs
- Tunable and switchable 12dB high-pass filter
- ‘Soft Mute’ 48v phantom power avoids power-on “thumps”; Phase Reverse switch
- 12-segment LED metering for output level
- Servo-balanced gold-plated XLR and 1/4˝ TRS inputs and outputs

T1953 TUBE ULTRAGAIN 2-Channel Tube Mic/Line Preamp

The T1953 has everything you need in a high-quality preamp; discrete input stages, input gain adjustment, phantom power, sweepable high-pass filter and a phase inversion switch. Plus you can add exactly the amount of tube warmth you want—without adding noise or sacrificing audio quality.

- Mic input stages are based on high quality, discrete conjugate transistor pair circuitry.
  Gain is adjustable from +10 to +60 dB
- Ultra Tube circuitry warms music without unwanted noise; “Warmth” control lets you add the amount of tube sound you want.
- High pass filter can be swept from 15Hz to 350Hz to eliminate floor rumble from mics and to tighten up tape tracks in line mode
- High quality detented potentiometers and switches with authentic vintage style knobs; stylish “retro” design with polished front panel
- Ultra-wide bandwidth from 18Hz to 30kHz
- Back-lit, analog VU and “warmth” meters; accurate metering for output level
- Servo-balanced gold-plated XLR and 1/4˝ TRS inputs and outputs
- ‘Soft Mute’ 48v phantom power; phase reverse

VX2496 ULTRA-VOICE PRO Mic Preamp and Voice Processor

The VX2496 is a channel strip designed to meet all your vocal processing needs. With a mic preamp, compressor, expander/gate, EQ, de-esser and tube emulation in a single rack space, it’s not only the perfect tool for direct-to-disk recording, but also for demanding live situations. It also offers AES/EBU output with selectable 44.1/48/88.2 and 96kHz sampling rates or external clocking.

- Discrete ultra low-noise mic/line input stage with soft mute 48v phantom power
- Authentic tube emulation circuitry for typical tube and tape saturation sounds
- RMS expander for smooth noise reduction
- Opto compressor for inaudible level control and creative sound processing
- Integrated dynamic enhancer replaces high frequencies lost through compression
- EQ specially designed for voice enhancement
- Opto de-esser for removal of excessive sibilance from your vocal track
- Accurate LED metering; precision potentiometers; illuminated switches
- Servo-balanced, gold-plated XLR and 1/4˝ TRS inputs and outputs
Behringer’s Pro-XL Series feature several innovative circuit designs that place it at the forefront of dynamics processing technology—at home in the studio or live. The MDX1600, MDX2600 and MDX4600 feature Behringer’s revolutionary IKA (Interactive Knee Adaptation) circuit that successfully combines the “hard knee” compressor circuit with the “soft knee” characteristic. They implement the IGC (Interactive Gain Control) peak limiter that cleverly combines a dipper and program limiter. You’ll find the IRC (Interactive Ratio Control) expander that automatically changes its ratio settings with the program material for ultra-musical and inaudible noise suppression. A switchable low contour filter prevents “pumping”, while Behringer’s IDE (Interactive Dynamic Enhancer) specifically makes up for the compression-induced loss of treble energy—assuring brilliant, lively audio even with heavy compression.

- Low contour filter prevents “pumping” due to low frequency dominated compression
- Stereo couple function with independent output level settings
- Low-noise amplifiers and state-of-the-art THAT VCAs guarantee best audio possible
- High-quality detented ALPS potentiometers and illuminated switches
- Servo-balanced, gold-plated 1/4” and XLR inputs and outputs (switchable for +4 dBu or -10 dBV operation)
- Separate 12-segment (8-segment on the MDX4600) LED meters for input/output levels and gain reduction.
- Interactive Dynamic Enhancer (adjustable on the MDX1600)
- Automatic or manually adjustable attack and release times (MDX1600/2600 only)
- Switchable side chain input with side chain monitor function (MDX1600/2600 only)
- The MDX1600 has a de-esser while the MDX2600 has a switchable VAD (Voice Adaptive) de-esser that differentiates between male and female voices.
- The MDX2600 incorporates ATS (Authentic Tube Simulation) to simulate tube circuitry for extra warmth and transparency.

The T1952 features an IKA compressor/limiter with switchable Auto function for automatic attack and release time adjustment, IRC expander/gate and IGC program/peak limiter, selectable compression modes, switchable side chain input, stereo link, selectable operating level – and adds 12AX7 tubes and Ultra Tube circuitry, allowing you to sweeten and personalize your sound by adding the desired amount of harmonics.

- The desired effect of warm, silky enhancement is usually generated near the level of saturation of the tube circuit. That’s when the additional harmonics are generated that give tubes their distinctive sound or personality. Behringer’s Ultra Tube circuitry overcomes the level of dependencies traditionally associated with tube circuitry while eliminating virtually all hiss, noise and hum.
- “Warmth” control smoothly blends the additional harmonics into the signal without having to maintain a specific amplitude as you normally would with traditional vacuum tubes. This allows the desired sound to be achieved without running the risks of overheating or breakdown that occur when tubes are driven at maximum levels. Dial in as much tube sound as you want.
- Highly accurate metering for input/output level and gain reduction
**DSP9024 ULTRA-DYNE**

Digital 2-Channel Tube Compressor/Limiter/Gate/Peak Limiter

The ultimate 6-way Multiband Dynamics Processor for analog and digital mastering and sound reinforcement systems, the DSP9024 has more functions than you can imagine. Sound spectrum split into six separate frequency bands. Edit effect parameters with each band or globally. Parameter settings can be stored, copied, etc. Smooth compressor, super-clean gate, incredibly transparent Noise Reduction system and rich Multiband Exciter. Tube emulation and an integrated delay for "look-ahead" parameter adjustment. Finally, interactive signal analysis and unique automatic functions enable you to get results fast, whether you need multiband compression, loudness maximization, de-essing or selective gating. Add digital inputs/outputs with the optional AES/EBU interface.

- 24-bit A-D/D-A converters for ultra-high dynamic range and resolution of detail with selectable sampling rate of 44.1 or 48 kHz
- Sophisticated tube emulation with selectable tube types (12AX7 or EL34)
- 6-band compressor/limiter with gate and peak Limiter for "inaudible" compression.
- 6-band Noise Gate with IRC for ultra musical performance.
- Ultramizer adjusts output level and signal density for maximum perceived loudness
- "Look Ahead" automatic parameter adjustment via internal 600-msec. delay
- 3-band Harmonics Exciter with user-definable balance
- Full MIDI parameter and snapshot control allow for real time editing
- Level peak meter with peak hold and selectable levels (+4 dBu, -10 dBV, Dig Max)
- 100 settings can be stored under any alphabetic name giving you instant sound results for numerous standard applications
- Extremely flexible Stereo Link, Band Link & Clone functions
- Large high-resolution LCD graphic display
- Relay-controlled hard-bypass with an auto-bypass function during power failure
- "Virtuoso" function for super-easy, program dependent and self learning program setup
- Gold-plated XLR and 1/4” RF-suppressed, servo-balanced inputs and outputs
- Optional 24-bit AES/EBU interface for digital inputs/outputs at 32, 44.1 and 48 kHz
PEQ2200 ULTRA-Q PRO 5-Band Parametric EQ

The PEQ2200 is an effective musical frequency correction and sound-shaping tool with center frequency, bandwidth and amplitude adjustment for each filter. Its state-variable, constant-Q filters and parallel filter configuration ensure musical operation, while overlapping frequency bands allow up to 30 dB of level correction.

- For gentle contouring and audio sweetening as well as for room equalization
- Constant-Q principle ensures absolutely stable filter characteristics
- Sweepable High and Low Cut filters remove unwanted frequencies
- Bands are switchable in/out and fully adjustable from narrow notch filter (0.03 octave) to broadband EQ (2 octaves)
- A wide overlap between frequency bands allows for extreme cut or boost
- Cut-in delay to avoid switch-on “thumps”
- Relay-controlled Hard-Bypass with an auto-bypass function during power failure
- 12-segment LED input/output metering
- Servo-balanced, gold-plated XLR and 1/4” TRS input and output

UTR Gate
Slow noise gates can rob your audio’s brilliance by gating signals during the attack phase. UTR (Ultra Transient Response) circuitry with ultra-fast signal detectors prevents this from happening. Attack time is very short: <10 µsec. (XR4400) and <3 µsec. (XR2000). Clicks or pops at the gating point (regardless of attack speed) are eliminated by the low leakage of the control signal to the VCA’s audio signal path.

IRC Expander
IRC (Interactive Ratio Control) expander virtually eliminates all switching noises. Even at ratio values above 1:8, they sound musical without side effects.

XR2000
- Integrated high-pass and low-pass filters for frequency-selective gating
- External side chain input with “key listen” function
- Attack, hold, release and ratio controls
- Maximum attenuation 100 dB
- “Traffic light” display for threshold working point
- Precise gain reduction display with 8 LEDs
- Servo-balanced XLR and 1/4” TRS inputs and outputs
- Relay-controlled hard bypass switch with auto bypass function in the case of power failures (safety relay)

XR4400
- Four separate expander/gate circuits
- IRC expander/UTR gate circuitries
- Extremely short attack time (<10 µsec.)
- Parametric side chain filter with monitor function
- Maximum attenuation 80 dB
- Independent hold and release controls for flexible envelope shaping
- FlexLink system for flexible master/slave configurations
- Servo-balanced XLR and 1/4” TRS I/O
- “Traffic light” display for threshold working point and gain reduction display

2- and 4-Channel Expander/Gates
The XR2000 was designed to fulfill the highest demands and offers maximum signal control. Voice-over applications, creative envelope shaping, noise suppression in quiet passages... No problem, especially with the transparent user interface and “traffic light” LED displays.

The XR4400 gives you four frequency-selective UTR expanders/noise gates in a single rack space without compromising on functionality. The side chains’ parametric filters allow you to fine-tune control signals so that the gate reacts only when you want it to. Separate hold and release controls and the unique FlexLink system offer additional flexibility.
Dual Channel 4-Band Parametric Tube EQ
The T1951Q is a dual-channel, 4-band version of the PEQ2200 with state-variable, constant-Q filters, four fully parametric stereo bands with center frequency, bandwidth and amplitude controls, plus the option to use the low- and high-frequency bands as shelving filters. In addition, you get 12AX7 tubes and Ultra Tube circuitry, enabling you to selectively add tube warmth to your EQ'd signal.

GEQ3102 ULTRA-GRAPH PRO
Dual-Channel 31-Band Graphic EQ
The GEQ3102 puts a powerful graphic EQ tool in your hands, with two channels of 31 standard 1/3-octave center frequencies plus sweepable high- and low-pass filters for “pre-graphic” trimming. The dual 12-segment LED chains can display either input or output level, and each EQ section can be bypassed for quick comparisons.

DSP8024 ULTRA-CURVE PRO
Digital Dual Channel 31-Band Graphic/Parametric EQ
The DSP8024 features a 31-band graphic EQ with a real-time analyzer and an Auto-Q function for automatic room measurement and correction plus three bands of parametric equalization. Additional features include a peak limiter, an adjustable delay of up to 2.5 seconds (selectable in milliseconds, meter and feet), a noise gate and Behringer’s renowned Feedback Destroyer. You can also add digital inputs/outputs with the optional AES/EBU interface (AES8024).
BEHRINGER

DSP1400P ULTRAMIZER PRO

Digital 2-Band Loudness Maximizer/Program Enhancer

The digital 2-band concept of the ULTRAMIZER PRO allows separate, program-adaptive compression and limiting for low and high frequencies, ensuring ultimate punch and loudness. Its surround processor and 2-band enhancer give your mixes that extra gloss, while the noise reduction system keeps things clean. Full MIDI capability allows real-time parameter control and program selection.

- Doubles the loudness of recordings or reinforcement systems without any distortion
- Maximizes signal energy with absolutely "inaudible" and transparent compression
- Variable band-split compression eliminates gain modulation effects like 'bass pumping'
- Leveler provides constant average output while maintaining instantaneous dynamics
- Denoiser and Exciter for noise-free and ultra transparent sound
- 3-D stereo sound processor provides spatial enhancement and improved stereo imaging
- 8-segment LED level and gain reduction meters for optimum performance
- Multiband brickwall limiter
- 50 user preset memories
- Servo-balanced, gold-plated XLR and TRS inputs and outputs

T1954 TUBE ULTRAFLEX
2-Channel Tube Multiband Sound Enhancement System

The T1954 features a flexibly adjustable enhancer/exciter circuit for high-frequency processing, a bass processor with a special LC coil/cap filter for extra low-end punch and definition, and a surround processor for stereo image improvement. 12AX7 tubes and Ultra Tube circuitry let you add the silky brilliance and warmth of tubes to your audio.

- LC coil/cap filter produces authentical vintage "soft" and "tight" bass sounds
- High-quality detented potentiometers and switches with authentic vintage style knobs
- Huge back-lit analog VU meters and "Retro" design

EDISON EX1 Stereo 3-D Processor with Correlation Meter

The EDISON EX1 is an unbelievably powerful psycho-acoustic processor, which allows you to completely manipulate all spatial parameters of the stereo image - such as width and depth - in a way never before possible. You can widen or narrow the stereo spread, bring instruments to the front or move them to the background, and make corrections to the stereo image - even on a finished master. All with five easy-to-use knobs. Whether PA, studio, Hi-Fi or audio for video: everything sounds more natural and transparent.

The integrated correlation meter guarantees fool-proof control of mono compatibility. Frequency cancellation and undesirable phase deviations in the mono and stereo content of your audio material are immediately visible.
2-Channel Subharmonic Synthesizer

The ULTRABASS PRO generates musically consequential subharmonics that can be set to one or two octaves below the lowest frequencies present in the original signal. Based on waveform analysis, the generated tones harmonize perfectly with the original sound, giving you big, fat low end, while the integrated limiter effectively protects your system from overloading.

- Adds unbelievable bass power to sound system, perfect for discos, clubs, theatres, sport and aerobic studios and your HiFi system
- Digital synthesis based on waveform analysis generates ultra-low frequencies for driving subwoofers
- Waveform Processor musically restores low frequencies lost in the recording process
- Releases untapped sonic resources and adds power to instruments, vocals and mixed program material
- Dynamic Punch control adds breathtaking kick bass to your program material
- Switchable x-over splits off dangerous low frequencies from your club system
- Built-in Limiter
- Bass Mode control allows you to fade over from “ultra-low” to “punchy” bass sounds
- Separate subwoofer output
- Output level and gain reduction LEDs
- Servo-balanced gold-plated XLR and 1/4” TRS inputs and outputs
- Adds unbelievable bass power to sound system, perfect for discos, clubs, theatres, sport and aerobic studios and your HiFi system
- Digital synthesis based on waveform analysis generates ultra-low frequencies for driving subwoofers
- Waveform Processor musically restores low frequencies lost in the recording process
- Releases untapped sonic resources and adds power to instruments, vocals and mixed program material
- Dynamic Punch control adds breathtaking kick bass to your program material
- Switchable x-over splits off dangerous low frequencies from your club system
- Built-in Limiter
- Bass Mode control allows you to fade over from “ultra-low” to “punchy” bass sounds
- Separate subwoofer output
- Output level and gain reduction LEDs
- Servo-balanced gold-plated XLR and 1/4” TRS inputs and outputs

EX2200 DUALFEX PRO • EX3200 ULTRAFEX PRO

2-Channel Multiband Spatial Sound Enhancement Processors

Geared for use in smaller setups or clubs, video or Hi-Fi systems, the EX2200 and EX3200 are among the most popular psychoacoustics devices in the world. Features include a “Natural Sonic” processor that guarantees aural improvement and high-end transparency, and the integrated bass processor that works wonders for your audio’s low end. In addition, their adjustable surround processor allows flexible widening of the stereo spatial effect.

The EX3200 adds a Noise Reduction system, hard bypass and XLR connectors.

- Gives your music that extra sparkle and makes your instruments or mixes stand out
- Releases untapped resources and details instruments, vocals and mixed program material
- Multiband concept for bass power and high frequency transparency
- “Natural Sonic” processor for ultra-musical sound improvement
- VSP (Variable Sound Processing) circuit for simultaneous Enhancer and Exciter process
- “Dual Mode” ultra-bass enhancer produces “soft” and “tight” bass sounds
- Surround processor provides real spatial enhancement and improved stereo imaging
- High-quality detent potentiometers and illuminated switches
- Servo-balanced 1/4” TRS and RCA inputs

EX3200 Step-up Features

- Shift function allows you to control the frequency range of added bass punch
- Built-in Noise Reduction system with LED
- Solo facility for effect loop application
- Relay controlled Hard Bypass with an auto bypass function during power failure
- Servo-balanced gold-plated XLR and 1/4” TRS inputs and outputs
BEHRINGER

MULTI-EFFECTS PROCESSORS

Modulizer Pro (DSP1224P)

The DSP1224P puts tons of trendy stuff at your fingertips, like 8-voice chorus, spatial flanger, ring modulator and resonator. There are also LFO- and MIDI controllable moduleable filters with resonance, developed using physical modeling with analog filters as archetype as well as amp and speaker simulations, a 3D processor and much more.

- True stereo processing for open-sounding enhancement of the sound sources
- XLR and 1/4˝ TRS servo balanced inputs and outputs
- 100 user preset memories to store programs for instant recall
- Accurate eight-segment LED level meters simplifies settings
- Real-time parameter control and program selection via MIDI
- Cutting edge effects such as 3D Processor, Stereo Imager, Lo-Fi, Super Bass, Ring Modulator, Voice Canceler etc.
- 24 breathtaking effects such as Ultra Phaser, Jetstream Flanger, Auto Filter, Ultra Compressor, Guitar Combo, Speaker Emulation Resonator and more
- Hundreds of effect variations plus two individual parameters and separate low and high EQ section

VIRTUAL ROOMS

Have you ever heard an orchestra perform in a concert hall? The sound is all-enveloping, richly textured. However, did you know that the sound you hear in a concert hall or room is 90% reflected? Come into Behringer’s “virtual rooms”.

Some digital reverbs only give you a crude approximation of real acoustic reverb. Behringer’s reverb algorithms are infinitely more complex and detailed. The have accurately analyzed the acoustic properties and taken physical measurements of real rooms, concert halls and theaters. Precise mathematical models are used to calculate the reverb algorithms. The accuracy of hundreds of parameters used in the physical modeling of real buildings which also includes the important determination “early reflections” ensure rich, dense and natural sounding reverberation. When you place an instrument inside one of Behringer’s “virtual room” you don’t get a muddy sound. You end up with realism, vibrancy, separation and a clarity you never thought possible from a digital device.

Virtualizer Pro (DSP2024P)

The DSP2024 Virtualizer Pro features 71 effect algorithms, giving you powerful modulation, amp simulation, distortion and special effects as well as effective dynamic and psychoacoustics processing and equalization on top of Behringer’s renowned wave-adaptive Virtual Room reverb algorithms. There are also 7 adjustable parameters plus high and low EQ per effect, 11 serial or parallel effect combinations, true stereo processing in stereo image with most algorithms and an improved user interface.

DSP2024 STEP-UP FEATURES

- Over 70 algorithms and special effects including Virtual Room reverb algorithms. Also includes dynamic and psychoacoustics processing algorithms, distortions, amp and tube simulations, sampler, vocoder and much more.
- 11 effect combinations using modulation effects like chorus, flanger, pitch or tremolo combined with reverb or delay algorithms.
- 7 parameters per preset plus separate high and low EQ section.
**DSP1124P Feedback Destroyer Pro**

2-Channel Digital Feedback Suppressor/Parametric EQ

Powered by a 24-bit high-speed DSP, the DSP1124P locates feedback frequencies immediately and sets extremely narrow notch filters to “destroy” them, leaving the remainder of the signal virtually untouched. With its various modes you can master just about any live sound situation or use it as a creative sound-shaping tool with 24 bands of fully parametric equalization.

- Automatically and “intelligently” finds and destroys up to 12 frequencies per channel
- “Set-and-forget” default setting enables immediate Feedback Destroyer performance
- Single-Shot mode automatically searches and destroys feedback and locks the filter until manually reset
- Auto mode continuously monitors the mix, resetting programmed filters automatically
- Select single-shot, auto or manual modes for each filter
- Manual mode allows individual settings of up to 2 x 12 fully parametric filters with frequency, bandwidth and gain
- 24-bit A/D and D/A converters
- Two software engines allow independent or coupled functions on left and right channels
- Accurate eight-segment LED meters
- Full MIDI capability
- Servo-balanced XLR and 1/4” TRS I/O

---

**DSP110 Shark**

Digital 24-Bit Multifunction Signal Processor

An all-round problem-solver, the DSP110 combines mic/line preamp (60 dB gain control, +48v phantom power) with a variety of signal processing options, including Feedback Destroyer, variable delay line for speaker time-alignment (up to 2.5 seconds of delay, adjustable in msec, meters or feet), ultra-musical compressor with adjustable density and speed parameters, and an extremely fast automatic noise gate with learn function and optional manual setting. Add 24-bit A/D and D/A converters, servo-balanced XLR and 1/4” inputs/outputs, mic/line level conversion, external power supply for maximum signal integrity and headroom, and you can use the DSP110 in just about any application.

- Status LEDs for all 12 filters
- 4-digit multi-function display
- 19” rack-mounting kit included with purchase of 5 DSP110s
- 6-segment clip level meter
- Subsonic filter with adjustable cut-off frequency

---

**SNR2000**

Multiband Denoiser

2-Channel Single-Ended Noise Reduction System

With true multiband detection in the side chain, IRC noise gates and TAC filter circuitry, the SNR2000 ensures smooth and effective noise reduction with minimal loss of audio integrity.

- Multiband frequency analysis and processing
- TAC (Transient Attack Control) dynamic filter circuitry responds to extremely fast attack signals
- Auto Filter for quick setup
- IRC (Interactive Ratio Control) downward expander “musically” removes any noise in pauses
- Noise reduction of up to 80dB
- Adjustable cut off frequency and release times meters
- Dual mono or stereo couple function
- Servo-balanced XLR and 1/4” inputs and outputs
- Relay controlled Hard Bypass
- Cut-in delay to avoid switch-on thumps
- Illuminated switches, 41 detent potentiometers
Troubled by feedback despite your best and knowledgeable efforts? Wondering how to tame that unruly, time-consuming studio wiring? Crossovers not cutting it anymore? Tired of accessories big on promises and short on performance? For each of these problems and more, Behringer has an answer.

Any performance can be plagued by feedback without warning. Fortunately, Behringer has the tools required to stop the problem instantly. In the world of professional audio, every second counts. Any time spent in a rat’s nest of cabling, for example, figuring out how to get things hooked up and running, is definitely time better spent doing something else. Enter the Ultrapatch Pro patchbay and Ultralink Pro splitter/mixer.

### SRC2496 Ultramatch Pro

A/D and D/A, Sample Rate and Format Converter

If you frequently have to deal with various interfaces, digital standards and so on, you’ve probably discovered that compatibility doesn’t always mean that your gear will harmonize perfectly. The SRC2496 Ultramatch Pro enables you to transfer digital audio signals between devices with different sample rates, formats or interfaces, disable SCM S for 1:1 digital copies and remove dropouts or jitter from digital media. Simultaneously operable outputs offer splitter functionality, and the 24-bit/96-kHz compatible SRC2496 offers A/D and D/A conversion as well.

- Format conversion between AES/EBU and S/PDIF (coaxial or optical)
- Converts 30 to 100 kHz sample rates into 32/44.1/48/88.2 or 96 kHz with selectable 16, 20- or 24-bit output resolution.
- Parallel A/D and D/A conversion at identical sample rate.
- Removes jitter and corrects incorrect sample rates.
- Universal sample rate synchronization via wordclock or digital input.
- Allows direct manipulation of emphasis and copy-protection bits.
- XLR, RCA and optical outputs are simultaneously operational, while inputs are separately selectable.

### DI100 Ultra-DI

Ultra-Rugged Single-Channel DI Box

The DI100 puts an end to hum and impedance problems, and ensures that any imaginable sound source (electric guitar, bass or keyboards etc.) will reach your mixing console balanced and noise-free. You can even plug your guitar amp’s speaker output into the DI100—it will deal with ratings of up to 3,000 watts and give you a perfect signal at the other end. In addition, OT-1 output transformers ensure clean, powerful output with ultra-flat frequency response.

- Input-buffering amp ensures clean, pure and powerful sound, even with extremely long cables.
- Switchable high cut filter (8 kHz) for guitar applications.
- Phase reverse switch.
- Ground Lift switch eliminates typical ground loop problems.
- Gold-plated XLR and 1/4˝ TRS connectors for input and link output.

### SRC2496 Ultramatch Pro

A/D and D/A, Sample Rate and Format Converter

If you frequently have to deal with various interfaces, digital standards and so on, you’ve probably discovered that compatibility doesn’t always mean that your gear will harmonize perfectly. The SRC2496 Ultramatch Pro enables you to transfer digital audio signals between devices with different sample rates, formats or interfaces, disable SCM S for 1:1 digital copies and remove dropouts or jitter from digital media. Simultaneously operable outputs offer splitter functionality, and the 24-bit/96-kHz compatible SRC2496 offers A/D and D/A conversion as well.

- Universal sample rate synchronization via wordclock or digital input.
- Allows direct manipulation of emphasis and copy-protection bits.
- XLR, RCA and optical outputs are simultaneously operational, while inputs are separately selectable.
- Removes jitter and corrects incorrect sample rates.

### DI4000 Ultra-DI Pro

Active 4-Channel DI Box

Ideal for stage and studio applications, the multi-purpose DI4000 gives you four first-class DI (Direct Inject) channels in one rack space. Capable of handling almost any kind of signal, the DI4000 is equipped with two inputs (XLR and 1/4˝ TRS), a balanced output (XLR) and a 1/4˝ link output per channel, up to 40 dB of switchable input attenuation and up to 20 dB of gain. In addition, OT-1 output transformers ensure clean, powerful output with ultra-flat frequency response.

- Allows direct connection to speaker outputs rated at more than 3000 watts.
- Converts unbalanced line inputs to balanced outputs.
- +20 dB gain switch for pre-amplification of low level signals.
- Switchable high cut filter (8 kHz) for guitar applications.

- Internal battery gets de-coupled when you use phantom power.
- Gold-plated XLR and 1/4˝ TRS connectors for input and link output.
CX2310 Super-X Pro
2-Way Stereo/3-Way Mono Frequency Crossover with Subwoofer Out

The CX2310 offers absolute precision, state-of-the-art circuitry, professional components, ultra low-noise op amps, fully balanced in and outputs and intuitive operation. In addition to full-fledged 2-way stereo/3-way mono operation, the CX2310 features a separately adjustable subwoofer output, giving you an extra low-frequency band.

- World-class performance 24 dB per octave Linkwitz-Riley filters
- Absolute flat summed amplitude response, zero phase difference
- Separate subwoofer section with independent frequency control
- Individual output level controls for all bands; individual output mutes for easy band adjustment
- Individual phase reverse switches for instant phase correction
- Switchable 25 Hz subsonic filter on each input for low-frequency driver protection
- Servo-balanced, gold-plated XLR inputs and outputs
- Precision Alps potentiometers for accuracy and repeatability
- Illuminated switches for operation in dark stage environments
- Shielded toroidal mains transformer for minimal noise

CX3400 Super-X Pro
3-Way Stereo/4-Way Mono Frequency Crossover with Limiters

The CX3400 is an active frequency crossover enabling 2 or 3-way stereo or even 4-way mono operation. Each band features two 24-dB Linkwitz-Riley filters, as well as individual IGC limiters, while the integrated delay enables flexible time alignment. Polarity switches for each output allow quick and easy runtime compensation for various driver and horn types.

- Any channel can be selected either as mixer or splitter
- Use as 8-In/2-Out Line Mixer; as 2-In/8-Out Line Splitter; or as 6-In/6-Out Line Driver or DI-box
- Convert -10 dBV into +4 dBu or vice versa
- Extremely high headroom - offering more dynamic range
- Ultra-wide bandwidth from 2 Hz to 200 kHz for “open” sound
- 6 mono inputs/outputs; 2 main inputs/outputs with 6 input level controls, 6 balance/pan controls, a main input/output control
- Main Link switch allows routing of the main input to the Main Output to link several units
- 4 /8-segment LED metering for each individual gain section
- Servo-balanced gold-plated XLR and 1/4˝ TRS inputs and outputs

Same features as the CX2310 PLUS—
- Individual limiter on each output for loudspeaker protection
- "Low Sum" function provides low-level mono output for subwoofer operation
- Adjustable time delay for phase alignment between drivers
- Switchable equalization for constant directivity horns

PX2000 Ultrapatch Pro
48-Point Switchable Patchbay with 4 Modes

The PX2000 offers the reliability and flexibility you need to connect your entire studio in a clear, orderly fashion. With its four modes, easily selectable via topside switches, the patchbay’s 24 jack pairs can operate in parallel, half normalized, normalized or open mode. High-grade components include metal housing, metal-ring jacks and fiberglass boards.

MX882 Ultralink Pro
8-Channel Splitter/Mixer, Level Conditioner/Converter

This compact signal distribution wizard has helped countless musicians and engineers solve diverse problems, whether as a splitter, line mixer or level conditioner. Regardless of your application, the MX882 keeps your signal paths short and clean. And its multiple matching amplifiers allow you to convert home-recording level to professional level and vice versa. Use as effects mixer, for PA monitoring, live sound systems, theaters, conference rooms, hotels, churches, etc.

- World-class performance 24 dB per octave Linkwitz-Riley filters
- Absolute flat summed amplitude response, zero phase difference
- Separate subwoofer section with independent frequency control
- Individual output level controls for all bands; individual output mutes for easy band adjustment
- Individual phase reverse switches for instant phase correction
- Switchable 25 Hz subsonic filter on each input for low-frequency driver protection
- Servo-balanced, gold-plated XLR inputs and outputs
- Precision Alps potentiometers for accuracy and repeatability
- Illuminated switches for operation in dark stage environments
- Shielded toroidal mains transformer for minimal noise
266XL Dual Channel Compressor/Gate

The 266XL brings affordable, high-quality compression and gating with intuitive operation so you can easily smooth uneven levels, add sustain to guitars, squash drums or tighten up mixes. Auto Attack and Release emulates the classic dbx compressors by continuously adjusting the attack and release times to optimally match the program material. Manual controls are also available, allowing you to tailor the attack and release response specifically for individual tracks, mixed program material, special effects or system protection.

- Stereo or dual mono gating, compression
- Expander/Gate Circuit with variable release time and +15dBu maximum threshold.
- Advanced gate circuitry uses an automatic timing algorithm to produce ultra-smooth release characteristics—even with complex signals, such as voice or reverb decays
- Compressor/Limiter circuit with variable threshold and ratio controls as well as auto (program-dependent) or manual Attack and Release control.
- Selectable OverEasy/Hard Knee compression curves, depending if you’re looking for “heavy” almost-special-effects compression or soft, smooth gain leveling.
- Sidechain Inserts enables an outboard processor to control compression or gating.
- RMS Level Detection senses the power in the program in a musical manner, for much better results than peak or average detection.
- 8-segment LED display for gain reduction (up to 30dB).
- In Stereo Couple mode, Channel 1’s controls become the master, and Channel 2 follows precisely to ensure a rock solid stereo image, even with high amounts of compression
- Signal does not pass thru any of the parameter controls. Instead a DC voltage controls all functions, eliminating any possibility of potentiometer noise developing over time.
- Electronically-balanced XLR and 1/4” TRS inputs and impedance-balanced XLR and 1/4” TRS outputs

166XL Dual Channel Compressor/Gate

The 166XL steps up from the 266XL by adding two channels of PeakStop limiting to provide studios, sound reinforcement companies, musicians, or anyone who needs quality processing quickly and easily—with complete control of signal dynamics. Most compressor/gates provide less than musical compression, coupled with gating that swallows transients—or closes early, cutting off decay and reverb tails. The superb engineering in the 166XL ensures that both its compression and gating provide versatility and excellent sonic performance in situations where other compressor/gates typically produce undesirable processing artifacts.

- Stereo or Dual Mono operation of gating, compression and PeakStop limiting.
- PeakStop Limiting provides control of maximum peak levels at the channel’s output regardless of any other control.
- PeakStop comes after the compression, gating and other circuitry including the output gain, so it sets an absolute limit for peak excursions before they reach the output.
- A Sidechain enable switch on each channel lets you activate or de-activate the Sidechain inserts without repatching.
- A Contour button in the Sidechain Path prevents sustained low frequency program material from dominating the compressed signal. This allows faster attack times which preserve transients and allows higher compression ratios with less artifacts.
- Hardwire System Bypass Buttons on both channels allow the audio to pass even if the unit loses power — also useful for A-Bing the processed and unprocessed signals.
- 10-segment LED display for gain reduction (up to 30dB)
- Electronically-balanced XLR and 1/4” TRS inputs and outputs
160A Compressor/Limiter

The latest generation of the legendary dbx 160 family of compressor/limiters, the 160A offers the same classic sound, easy set-up and no compromise metering plus it has an improved signal path and stronger chassis design. Digital-ready and road tough, the 160A features switchable OverEasy and Hard Knee compression, extremely wide threshold ranges, and controls for ratio and output gain. It also includes true RMS level detection, providing the most natural-sounding dynamics processing available—from subtle compression to “brick wall” peak limiting. And with its unique “INFINITY +” inverse compression mode, the 160A actually decreases the audio output level below unity gain when the input exceeds threshold. Two 160As can be coupled to process a stereo mix without shifting the left/right image.

- Choose low ratios and OverEasy compression to transparently smooth out fluctuating vocal and instrumental levels. Or use the 160A’s Hard Knee compression and high ratios (up to and beyond infinity:1 and over 60dB gain reduction) for bombproof protection against overload distortion in digital recording, PA systems and broadcast signals.
- 12-segment LED display for gain reduction up to 40dB
- 19-segment LED display for high resolution monitoring of true RMS input/output levels
- Input/output meter calibration allows the 160A to be used in a variety of situations where the 0 reference is not consistent
- Electronically balanced/unbalanced input and output stages are fully compatible with +4/-10dB. The output stage is an outstanding line driver for long cable runs.
- “INFINITY +” inverse-compression mode decreases the output level below unity gain when the input exceeds threshold — ideal for correcting overbearing vocal choruses or controlling runaway house mix levels.
- Detector input allows special applications including frequency conscious compression in which an external equalizer is used.
- Input Ground Lift Switch eliminates any ground loop hum problems that may arise.

Hard Knee vs OverEasy Compression:

When the compressor is set for Hard knee, the compression ratio applies only to signals above the threshold level. If the compressor is set for Soft knee (OverEasy), the compression ratio gradually increases from 1:1 to the current selected ratio over a range through the threshold area which allows the transition from uncompressed to compressed to be more gradual. This greatly reduces compression artifacts and allowing faster attack times and higher compression ratios while still maintaining the natural characteristics of the signal. Hard knee compression, on the other hand, is ideal for “brick wall” limiting because it stops any transients from slipping through without affecting lower level signals.

**COMPRESSORS/ GATES**

**1066 Dual Channel Compressor/Limiter/Gate**

Designed to provide simple, flexible operation for recording, broadcast or live sound reinforcement applications, the 1066 steps up from the 166XL with several important features. At the heart of the 1066 is dbx's V2 VCA (voltage-controlled amplifier). The V2 offers superb dynamic range characteristics while maintaining very low distortion and almost immeasurable noise. This combined with it's world-class design, enables the 1066 to perform like compressors selling for hundreds of dollars more. The 1066 also improves on the 166XL's limiter, with a PeakStopPlus limiter. In addition to simply preventing unwanted transients from blowing your speakers or causing digital clipping while minimizing the distortion common to many other “hard” limiters, PeakStopPlus offers a two-stage limiting process for more transparent control. The 1066 also adds a Side Chain Monitor button (SC Mon) that makes setting up and adjusting the Side chain much easier by allowing you to listen to the audio source inserted into the Side Chain. Last, selectable input and output metering helps determine that everything is matched up level-wise, maximizing signal-to-noise ratio.

**Same Features As the 166XL Plus—**

- RF-filtered, gold-plated electronically-balanced/ unbalanced inputs and outputs
- V2 VCA boasts superb dynamic range characteristics while maintaining very low distortion and immeasurable noise.
- 12-segment LED for gain reduction (up to 30dB)
- Side Chain Monitor (SC) function makes setting up and monitoring the Side Chain much easier
- Precision metering of input/output levels (between -24 and +18 dBu) with switchable 8-segment LED meters

## PeakStopPlus Level Control

Applies fail-safe limiting using a unique two-stage process to control the output signal.

**Stage 1 – Instantaneous Transient Clamp**

This is a soft logarithmic clamp function that ensures that the signal doesn't exceed the threshold set by the PeakStopPlus level control by more than 2 dB (typically) and will not introduce harsh artifacts.

**Stage 2 – Intelligent Predictive Limiting**

This is a unique program limiter which monitors the input signal and intelligently predicts the amount of gain reduction needed to keep the output below the ceiling set by the Instantaneous Transient Clamp.

1046 Quad Channel Compressor/Limiter

Equally at home in recording studios and live sound reinforcement venues, the 1046 provides 4 channels of pristine sound and smooth classic dbx OverEasy or hard knee compression for a variety of applications from multitrack recorders to PA systems. Stereo coupling is independently selectable for channels 1 and 2 and channels 3 and 4 letting you configure the 1046 for 4 mono channels, two stereo pairs, or two mono and one stereo pair of processing. Additionally PeakStopPlus is available to protect your system from the oppressive peaks that can take out valuable drivers in your sound reinforcement rig or studio monitors. So whether you need to control the level, placement in the mix, or overall characteristics of 4 independent signals or control the gain leveling on a couple of stereo pairs, the dbx 1046 is for you.

The 1046 offers the same features and specifications as the 1066 except that it has no manual Attack & Release and no Side Chain functions.

1074 Quad Gate

The 1074 Quad Gate offers four dedicated and independent channels of user selectable Noise gating in any combination including: dual stereo, or two mono and one stereo. Each of the 1074’s four channels offers gating, threshold, depth and release controls, gold plated XLR Inputs and outputs as well as a 1/4” key input that allows you to trigger the gates using an external audio source. And like 1046 and 1066, the 1074 is based on the legendary dbx V2 VCA. An internal variable filter allows frequency-selective control of each gate. The 1074 is ideal for a wide range of applications including gating dry and percussive sounds or sounds that have longer decay times such as cymbals and pianos, gating hum or buzz from live instruments or recorded tracks, or eliminating headphone leakage into microphones.

376 Tube Channel Strip with 24-Bit/96kHz Digital Output

The 376 combines the warmth and tone of a vacuum tube mic preamp with a 3-band EQ, compressor and de-esser along with analog and digital outputs to provide a versatile yet affordable “Front End” for any recording rig. The 376’s AES/EBU and S/PDIF digital outputs feature selectable sampling rates up to 96kHz, and 24-bit selectable dithering and noise shaping. dbx’s Type IV conversion system ensures that all of the analog warmth and detail is captured to digital tape or disk.

**Insert**
- An unbalanced 1/4” TRS insert (effects loop) permits connecting the 376 to an external processor. Insertion point is located after the tube section but before the signal processing section. The tip of the 1/4” TRS connector provides a SEND (100Ω) while the ring is used as a RETURN (20kΩ)

**Analog Outputs**
- Electronically-balanced/unbalanced XLR (Pin 2 Hot) and 1/4” TRS analog outputs with level control range of ±20dB.

**Mic Preamps**
- Drive control sets the amount of gain at the input of the tube stage and provides a broad range of sonic possibilities from subtle tube warmth to harmonically rich overdrive.
- Gain is variable from +30 to +60 dB for the mic input and ±15 dB for the line input.
- Mic preamp channels have access to selectable 48 volt Phantom Power, 20 dB Pad and Phase (polarity) reverse switches.
- A switchable 12dB/octave Low Cut Filter @ 75Hz is available for any input source — mic, line or instrument.

**Built-in Digital Output (376/386)**

**Type IV Conversion System**
- dbx’s Type IV Conversion System lets you transfer the depth and complexity tube processing directly to the digital domain via AES/EBU or coaxial S/PDIF digital outputs without the need for an external A/D converter.
- Proprietary analog and digital processing techniques capture a much wider dynamic range than an A/D converter could, preserving the maximum amount of information from the analog signal.

**Selectible Dither and Noise-Shaping Algorithms**
- Dither is random noise added to the audio signal to eliminate the harmonic distortion created by truncation (word length reduction). Three types of dither are available: TPDF, SNR2, or none
- TSE (tape saturation emulation) prevents digital distortion by remapping audio signals approaching 0dBFS to a built-in soft clipping and limiting algorithm that emulates the effect of tape saturation.

**Sync In and Out Connectors**
- Internally terminated 75Ω BNC connectors are provided for word clock input and output allowing the processors to be used in a master or slave configuration
- dbx custom VCXO clock chips specifically designed for low-jitter performance
- World Clock signals of 96, 88.2, 48 or 44.1 kHz are supported

**Compressor**
- OverEasy or Hard Knee compression
- Threshold range control is variable from -40 dBu to +20 dBu. (Compression ratio is variable from 1:1 to infinity).
- Program-dependent Attack and Release
- Selectable Slow switch can enable a slower attack/release time— 15 ms for the Attack Time for 15 dB of gain reduction and 8 dB/sec for the Release Time

**De-Esser**
- A wideband variable gain reduction (compression) circuit and a selectable frequency control with a range of 800 Hz to 10 kHz High Pass are designed to suppress sibilance (hissing S or SH sounds) without affecting the desired frequency characteristics of the program material.
- Program-dependent release time is typically 12 dB/octave, 1 ms/dB

**3-Band Equalizer**
- 3-band EQ with high (12kHz) and low (80Hz) frequency shelving filters and sweepable mid-band (100Hz to 8kHz).
- Each band has a ±15dB boost/cut range

**Metering**
- LED metering is provided at each processing stage
- 4-segment input drive signal meter
- EQ Clip LED indicates that the EQ’s signal is clipping
- Three stage compressor threshold meter
- 8-segment Gain Reduction meter displays the amount of signal being attenuated
- Two Stage De-Esser threshold meter
- Meter Select Switch toggles between the digital or analog output signal displayed in the 8-segment LightPipe meter— analog levels are scaled to dBu while digital levels are scaled to dBFS (Full scale)
386 Dual Channel Tube Mic-Preamp w/Digital Output

The Silver Series 386 is a stripped-down dual channel processor with the same tube mic pre and Type IV conversion system as the 376. The 386 will accept mic, line and Hi-Z instrument inputs and its dual channel capabilities make it an ideal solution for dual mono or stereo tracking of vocals, instruments — miked or direct, as well as stereo keyboards and samples. The hand-selected 12AX7 tube lets you add just the right amount of tube warmth or even overdrive to any signal.

### 376 and 386

#### Inputs
- Rear Panel: Electronically-bal/unbalanced XLR Mic and 1/4" TRS line
- Front Panel: High impedance 1/4" TS unbalanced instrument

#### Vacuum Tube Mic Preamp
- Input Control Range: +30 to +60 dB (mic) & -15 to +15 dB Line
- Analog Outputs: Electronically-bal/unbalanced XLR and 1/4" TRS
- Output Level Control Range: -20 dB to +20 dB (Analog or Digital)
- Digital Outputs: Coaxial S/PDIF (75Ω), XLR AES/EBU (110Ω)
- Supported Sample Rates: 96, 88.2, 48, or 44.1 kHz
- Supported Word Lengths: 24-, 20- and 16-bit
- Word Clock Sync I/O: 75Ω BNC (internally terminated)
- Supported W/C Signals: 96, 88.2, 48, or 44.1 kHz

#### 376 Only

#### 3-Band EQ
- Low Frequency: 80Hz Shelving w/ 15dB boost & cut
- High Frequency: 12kHz Shelving w/ 15dB boost & cut
- Mid Frequency: Sweepable from 100Hz to 8kHz, ±15dB boost/cut
- Mid Freq. Bandwidth: Fixed 1.5 octave

#### Compressor
- Threshold Control Range: Variable -40 dBu to +20 dBu
- Ratio Control Range: Variable 1:1 to ∞:1
- Program-Dependent Attack and Release Times:
  - Attack Time: Typically 5 ms for 15 dB of gain reduction
  - Attack Time (Slow): Typically 15 ms for 15 dB of gain reduction
  - Release Time: Typically 50 dB/sec
  - Release Time (Slow): Typically 8 dB/sec
  - De-Esser with variable gain reduction (compression) circuit
  - High Pass Filter Range: 800 Hz to 10 kHz
  - Program-dependent Release: Typically 12 dB/oct approx. 1 ms/db

### System Performance

- Equivalent Input Noise: Typically -120 dBu with a 150Ω source load, 20Hz to 20kHz
- Analog Frequency Response: <10Hz to 75kHz
- THD+N: 0.35% typical at +4dBu out, 1kHz, 40 dB gain
- Balanced Mic/Line CMRR: >40dB, Typically 55dB
- Interchannel Crosstalk (386 only): Typically -80dB, 20Hz to 20kHz

### Mini-Pre Single Channel Vacuum Tube Mic Preamp

The newest member of the Silver Series, the Mini-Pre incorporates the classic dbx tube microphone preamp sound in an easy to use, compact, affordable package. A single channel preamp, the Mini-Pre features the same hand-selected 12AX7 vacuum tube to add warmth and tone to any microphone signal, selectable 48v phantom power, 20 dB Pad and Phase reverse switch, and peak LED.

- XLR microphone input
- 1/4" TS line input
- Balanced 1/4" TRS and XLR outputs
- Selectable +48 volt phantom power
- 20 dB Pad
- Phase reverse switch
- 60 dB gain and -infinity to +10dB of output level
- Peak LED
160SL Stereo Compressor with AutoVelocity Dynamics

Equipped with patented AutoVelocity technology, switchable Over Easy/hard kneel compression, variable attack and release controls, Side Chain capability, and switchable PeakStop/PeakStopPlus limiting, the dbx 160SL is the standard by which all compressors are measured. With AutoVelocity it is now easier than ever to dial up the exact attack and release. But the heart of the 160SL is its dual proprietary V8 VCA modules. This state-of-the-art implementation of dbx's original Blackmer decilinear VCA boasts an unheard-of 127dB dynamic range and ultra-low distortion. Encased in a specially designed aluminum-zinc housing for shielding and thermal characteristics, the V8 maintains its superior performance even in harsh environments.

The 160SL and 786 take full advantage of the most technologically superior components available today. Premium active electronics, precision 0.1% and 1% metal film resistors, great sounding temperature stable polypropylene capacitors, high-reliability board-to-board connectors with gold-palladium-nickel contacts, Jensen transformers, gold-plated Neutrik XLRs, rare earth magnet relays with gold contacts in a hermetically sealed nitrogen environment, military grade glass epoxy circuit boards, to mention a few, contribute to the most technologically advanced compressor and preamp in the world.

786 Precision Mic Preamp

Features such as +48V phantom power, 20 dB pad, and phase invert functions, the 786 also includes a switchable "super low Z" setting which optimizes the pre-amp performance for microphones with very low source impedance. An 11-position coarse gain switch sets the gain between +10 and +60 dB, while the fine gain control varies between -3 and +3 dB. Levels may be monitored on peak-program VU meters with adjustable reference levels.

The signal path consists of a transformer-coupled, discrete-design premium input stage utilizing the proprietary dbx M 8 mic preamp module. The minimum signal path design routes the amplified signal directly to a patented high output drive circuit. Each stage throughout the mic pre is small-signal square wave compensated to assure precise phase alignment at all audio frequencies. The 786 also features a patented EQ circuit called "Spectrum" with frequency cut and boost up to 40kHz. A unique variable high-frequency equalization circuit employed in the mic pre-amp, Spectrum enhances the high frequency spectral content of the signal while maintaining phase integrity. The “Detail” control varies the amount of high frequency shelving boost at the frequency determined by the Spectrum control. The combination of the Spectrum and Detail controls allow pristine high frequency equalization adjustments without the added “hash” of traditional high-frequency EQ topologies.
The Blue Series Difference

±24V Power Supply Rails:
Most solid-state professional audio equipment has ±15 volt power supply rails. This is fine for most applications, but it isn’t good enough for the Blue Series. They use ±24 volt power supply rails that allow higher headroom, which translates to greater dynamic range.

Triple Shielded Power Supply:
The Blue Series power supply was designed to overcome hum related problems typically found in power supplies. dbx started with a low-noise toroidal style transformer with a hum shield around it, then they added a second mu-metal can that encloses the entire transformer, and then mounted that in a separate steel power supply chassis. The result - no radiated hum into the rest of the circuitry.

Burr Brown Op Amps:
dbx uses the Burr-Brown (makers of the best and most expensive op-amps in the world) OPA2604 FET based op amp throughout the audio path. The OPA2604 boasts a distortion spec of 0.0003% THD at 1kHz. A FET based op amp has a more linear transfer function -- it generates less odd order harmonics than a bipolar designed op amp. This is one reason why the Blue Series sound is so transparent.

Patented High Drive and Low Distortion Output Circuitry:
This stage has patented circuitry to reduce the distortions introduced by an output transformer. This beefy output stage is capable of driving thousands of feet of cable to +30 dBu. Conventional 5532 op amp style output stages are good, but they don’t come close to the performance of the Blue Series output stage.

Jensen Audio Output Transformers:
Output isolation transformers are essential for eliminating grounding problems in audio systems. Both the 160SL and the 786 have custom oversized Jensen output transformers along with patented circuitry that essentially nulls out the distortions caused by the transformer. What this means is that you get all the benefits of an audio transformer but not the problems of a transformer.

Jensen Audio Input Transformer:
The 786 uses the Jensen JT-16 mic input transformer. It has frequency response of 0.45 Hz to 220 kHz (-3dB down). It is encased in a 30dB magnetic shield to eliminate pickup of any hum. Couple this with a common-mode rejection ratio of 117dB at 60 Hz, and you have the best mic input transformer available.

dbx V8 VCA:
The heart of any compressor is the gain element. dbx took the original Blackmer-designed deci-linear VCA and made state-of-the-art improvements to come up with the V8 VCA. This VCA module boosts an unheard of 127dB dynamic range and ultra low 0.007% THD. Encased in a specially designed, aluminum-zinc housing (for it’s shielding and thermal characteristics), the V8 maintains superior performance even in harsh environments.

Precision Potentiometers:
Grab and twist one of the pots on a dbx Blue Series product. You will immediately notice the nice damped response of these controls. We exclusively use expensive precision Alps potentiometers throughout on these products. These parts are extremely reliable and accurate.

Precision 0.1% and 1% Resistors:
To obtain the performance we desired in the Blue Series products, it was mandatory to use precision parts throughout the design. We specifically use all 0.1% and 1% precision metal-film resistors. This ensures that the response from unit to unit is always the same.

704X Optional 96kHz Digital Output for 786, 160SL and Quantum II

The 704X is the first 96kHz digital output system that offers a 48-bit internal signal processing path, and up to 24-bit digital output in either AES/EBU or S/PDIF formats. The 704X brings super high-end digital conversion to the top-of-the-line Blue Series processors. Combined with the Blue Series means the 786 now has the ability to offer the industry’s most pristine signal path in both analog and digital, while the 160SL is now the most comprehensive analog compression system with digital output now available. The 704X uses the patented TYPE IV Conversion System to convert your analog signals to digital in a way that preserves the analog warmth, yet gives the clarity and precision offered by the digital domain. Think about it, the warmth and smoothness of your analog signal, coupled with a digital system that offers the best performance in headroom management through custom dither algorithms and noise floor shaping. It really is the best of both worlds.

- 44.1/48/88.2 or 96kHz sample rate
- Dither outputs to 16, 20, or 24 bits using TPDF or SNR 2 algorithms
- 48 bit internal signal path for increased headroom and low level resolution
- Sync input/output using dbx’s proprietary clock chips for extremely low jitter sync
- Two user selectable noise shape algorithms for lower perceived noise floor
- AES/EBU (gold-plated XLR) or S/PDIF
The DDP combines the precision, flexibility and extended parameter control of digital, with the warmth and musicality of analog, to offer superb gating, compression, limiting, de-essing and EQ. The DDP features a choice of true stereo or dual mono operation with ultra-wide range 24 bit A/D and D/A converters that utilize dbx’s TYPE IV Conversion System featuring TSE (Tape Saturation Emulation). The LCD display uses a hybrid display technology that combines exceptional graphics, high resolution metering as well as character and icon based displays to show you all the information you need to know. Active effects in an entire setup are intelligently displayed in the form of a graphical curve making it a snap to set up even the most challenging of systems. 50 great factory preset setups are provided to help you get started while the DDP’s operating system offers you the ability to refine and save presets to your liking then name and save them as your own presets for later recall. Digital input/output is also available as an option, giving you the ability to go all-digital. Full MIDI SysEx automation functionality makes the DDP one of the most versatile processors on the market today.

**FEATURES**

### Processing Modules

- All of the classic dbx sounds are provided in gating, compression, limiting, de-essing, and sidechain EQ with precision control over every parameter
- Stereo Coupled (True RMS Power Summing) or dual mono operation
- Gate controls – threshold, ratio, attack, hold, release as well as a variable Transient Capture Mode
- Transient Capture Mode (TCM) controls the delay of an incoming audio signal up to 3ms. allowing the very beginnings of fast transient signals to be captured. This results in a smoother sounding signal which requires less aggressive processing in the compressor, limiter, and de-esser functions
- Delay time is variable from 0µs to 3ms in 1000th/sec increments
- Compresion controls – threshold, ratio, gain, OverEasy with VariKnee, auto and manual attack, hold, and release modes
- OverEasy with VariKnee algorithm – lets you choose 1 of 10 knee slopes from soft to hard knee. With softer compression knees the compression ratio is gradually increased until the threshold is reached. This makes the transition between uncompresed and compressed signals as seamless as possible
- Limiting controls – threshold, attack and release
- De-esser controls – variable High Pass Filter and de-ess amount
- Sidechain / Inline EQ controls – 3-Band EQ with variable frequency and Q controls, ±12dB boost and cut, and Side Chain Monitor
- Data Wheel – changes selected parameters, programs and modules
- Function Buttons – These backlit buttons activate programs, modules, utilities, and parameters
- 8-step analog input and output metering
- Hi-res graph shows composite output vs. input plot of audio signal

### Type IV Conversion

- Ultra wide dynamic range 24-Bit A/D and D/A converters with TSE Tape Saturation Emulation
- TSE (Tape Saturation Emulation) is a process of giving a digital signal an analog-type sound or color, making it more pleasing to the ear. TSE lets you drive the input past the zero mark without risking digital overs. Instead, you get a pleasant saturation modeled after the sound of analog tape being saturated with signal.

### Analog Inputs & Outputs

- XLR and 1/4˝ balanced ins and outs

### Optional Digital I/O Card

- Provides 24-bit digital input and output capabilities in either AES/EBU or S/PDIF formats
- Supports 44.1 and 48 kHz sampling frequencies

### MIDI In and Out/Thru

- Provides full MIDI functionality and automation via CC and SysEx
- Out/Thru jack allows you to use the DDP at any point in the MIDI chain

---

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
**Hierarchy**

- The DDP's hierarchy works on a "building-block" philosophy. Every program number consists of a processing "setup" which is built from a chain of processing elements. Chained elements consist of any or all of the following processors: expander/gate, compressor, limiter, parametric EQ, sidechain parametric EQ, and/or de-esser and each has a full complement of parameters that can be precisely manipulated via the Function buttons and the Data Wheel. Chain elements can be used in different combinations to produce a desired effect. Setups can be named and saved to the user library area.

- Several preset mono and linked setups are provided. Processing setups are linked together using True RMS Power Summing for superior stereo operation, or two separate setups may be used in dual mono mode.

---

**LCD Display**

- The big and clear LCD screen combines just the right combination of size and luminance and provides a full compliment of metering and processing information, as well as navigational hints that allow you to see what you are doing in a hurry, even under less than ideal lighting.

- Digital input and output meters measure internal digital processing levels and show both peak and average levels.

---

**24-bit A-D System Performance**

- **Dynamic Range**: 107 dB typical, unweighted, 22 kHz bandwidth
- **THD + Noise**: 0.002% typical at +4 dBu, 1 kHz, input gain at 0 dB
- **Frequency Response**: 20 Hz to 20 kHz, +0/-0.5 dB
- **Interchannel Crosstalk**: < -85 dB at 1 kHz, input gain at 0 dB
- **Common Mode Rejection**: >40 dB, typically >55 dB at 1 kHz

---

**24-bit D-A System Performance**

- **Dynamic Range**: 102 dB typical, unweighted, 22 kHz bandwidth
- **THD + Noise**: 0.002% typical at +4 dBu, 1 kHz, output gain at 0 dB
- **Frequency Response**: 20 Hz to 20 kHz, +0/-0.5 dB
- **Interchannel Crosstalk**: < -85 dB at 1 kHz, output gain at 0 dB

QUANTUM II

Digital Multi-Band Processor

The Quantum II is a digital mastering tool that offers a 4-band compressor, limiter, expander and gate, 5-band parametric EQ, de-esser, sampling rates up to 96kHz with a true 48-bit digital signal path, and the superior dbx dynamics processing. Insert the Quantum II into the master outputs of any console or workstation and turn out a professional master every time. The 4-way crossover splits the signal into 4-bands, and each band may be individually gated, compressed, and limited. dbx’s patented TYPE IV Conversion System with the help of TSE (Tape Saturation Emulation) allows you to retain the original warmth and body of the analog signal while giving it the punch and depth needed in today’s digital world of music production and mastering. You can also dither your signal down to 24, 20, or 16 bits, using dbx’s custom dither algorithms. For more versatility use full MIDI/SysEx control, and int/ext sync capability. An intuitive user interface puts all the mastering processes you need right at your fingertips. The 5-band parametric EQ offers unprecedented control, with variable Q, adaptable or constant Q, and Lo and Hi shelving.

Performance

- Dual Mono or True Stereo Operation with True RMS Power Summing
- 96 kHz, 24 bit A/D, D/A with a 48 bit internal signal path for increased head room and low level resolution

Dynamics Control

- Multiband (4 Band) and Stereo or dual mono (Broadband) Gating, Compression and Limiting
- Control of each of the bands can be done via all band (adjustments are made to all four bands as a group) or individually
- MS (Middle-Side) Compressor

5-Band Parametric EQ

- Each of the five EQ bands can be switched On/Off, and can be positioned pre or post dynamics for maximum versatility.
- All five bands have a sweepable frequency range of 20Hz to 20kHz with ±12dB boost/cut in .5 dB steps
- Bands 1 and 5 are Hi and Low shelves with a 3 to 12 dB/oct slope; bands 2-4 are fully parametric with variable Q (.25 to 16)
- Choice of constant or adaptive Q response
  - Constant Q operates similar to an analog graphic EQ where the Q (bell) is constant regardless of cut or boost.
  - Adaptive Q operates similar to the EQ that is found on a mixing console where the width of the band is constant regardless of the cut or boost.
- MS (Middle-Side) EQ is available within all stereo linked setups

4-Band Crossover

- Three crossover points using phase compensated, Butterworth 1st and 3rd order filters, are used to create 4 bands. Tuning them allows you to select which frequencies will be processed with one of the multiband dynamics processors.

5-Band Parametric EQ

- Each of the five EQ bands can be switched On/Off, and can be positioned pre or post dynamics for maximum versatility.
- All five bands have a sweepable frequency range of 20Hz to 20kHz with ±12dB boost/cut in .5 dB steps
- Bands 1 and 5 are Hi and Low shelves with a 3 to 12 dB/oct slope; bands 2-4 are fully parametric with variable Q (.25 to 16)
- Choice of constant or adaptive Q response
  - Constant Q operates similar to an analog graphic EQ where the Q (bell) is constant regardless of cut or boost.
  - Adaptive Q operates similar to the EQ that is found on a mixing console where the width of the band is constant regardless of the cut or boost.
- MS (Middle-Side) EQ is available within all stereo linked setups

Multiband Chain with De-Esser

- The De-Esser is only available for Stereo Broadband or Dual Mono modes
- Choice of High Pass (HP) or Band Pass (BP) filter modes
- Width – sets the Q of the BP Filter
- Meter Ballistics
- TYPE IV Conversion System with TSE (Tape Saturation Emulation)
- AES/EBU (XLR) or S/PDIF (Coaxial) input/output
- Sample rate conversion (full up/down)
- Final output can be dithered to 8, 16, 20, or 24-bit word lengths using SNR2, HPTPDF, or TPDF dither algorithms
- Dither signal can be routed to both the digital and analog outputs or to the digital output only. This allows the full 24-bit signal to be output to the D-A converters
- Two different digital noise shape algorithms (S1, S2) are also available
- Sync input/output uses dbx proprietary clock chips for extremely low jitter sync

Ask the Wizard...

The easiest way to program the QUANTUM II is using the Wizard. In Wizard mode you select the task you need to perform, such as mastering, mixing or tracking, and the Wizard will automatically choose the correct chain type for the task. After selecting a task, you then choose music type, then select the type of EQ, gating, compression, and limiting you are looking for. Once all of the questions have been answered, the Wizard will automatically load a custom setup tailored to your application.

If you are working in a stereo setup, you can optimize output gain by first pushing the EDIT ALL/BAND button and allowing the loudest part of the program material to be recognized. Pressing the button again once the peak has passed, will allow the Wizard to optimize the output level so that the highest peak is set to 0 dBFS.
**Normalizer/Stereo Adjust**

Normalizer is a gain optimizing algorithm located at the end of the signal chain that ensures that the signal being output to tape, disk, etc. is as “hot” as possible without going over 0dBFS.

- ±12 dB level control lets you adjust the final volume sent to the output.
- Ceiling control allows the maximum output level to be set between -3.0 to 0.0 dBFS.
- Stereo adjust - lets you change the width of the stereo mix.

> ±100% balance control adjusts the panning of your signal from left to right.

**Ambience Effect**

- Ambience Effect uses a combination of gain and compression to enhance low level information such as reverb tails or acoustic guitar finger picking.
- Amount 1.0:1 to 5:1 sets the amount of ambience.
- Width 10 to 30 dB controls the portion of the signal that ambience is applied to.

**Digital I/O**

- TYPE IV Conversion System with TSE Tape Saturation Emulation.
- AES/EBU (XLR) or S/PDIF (Coaxial) input/output.
- Sample rate conversion (full up/down).
- Final output word length can be dithered to 8, 16, 20, or 24-bit word lengths using SNR2, HPTPDF, or TPDF dither algorithms.
- Dither signal can be routed to both the digital and analog outputs or to the digital output only. This allows the full 24-bit signal to be output to the D-A converters.
- Two different digital noise shape algorithms (S1, S2) are also available.
- Sync input/output uses dbx proprietary clock chips for extremely low jitter sync.

**Additional Features**

- PC GUI control via the RS232 port.
- Software updateable via Internet and MIDI and RS 232.

ProVocal

Digital Vocal Strip with Digital Output

Think of it as the being the best sound man you’ve ever had. The ProVocal takes all of the laborious guesswork out of selecting tools for providing great vocal tracking. Offering unmatched versatility at an unparalleled value, the ProVocal is an all-inclusive toolbox perfect for applications including live, studio and karaoke. The ProVocal features a superb microphone preamp coupled with state-of-the-art microphone and mic-pre amp modeling for a wide variety of sonic characteristics. From there you go into classic dbx dynamic processing such as gating, compression, de-esser, and limiter, then on to chorus, flanger, delay and reverb. Other features include a 24-bit S/PDIF output with selectable 44.1 or 48k sample rate and MIDI control.

◆ Painlessly helps vocalists create warm and rich vocal tones in the digital domain with crystal clear digital effects, while providing dynamics processing powers that can all be controlled via the smart front panel.
◆ Takes models of some the most sought after mics and mic-preamps in the industry, and makes them available at your finger tips.
◆ Front panel instrument input
◆ Selectable mic/line switch
◆ 20dB pad, 48-volt phantom power
◆ Output versatility includes XLR and 1/4” analog inputs and outputs and 24-bit S/PDIF digital outputs, making it a truly flexible work horse for any vocal application.

286A Microphone Processor

Forget about the hassle and cost of patching together multiple processors for use on one track. Now you can have all the tools you’ll need in one box, with the shortest signal path to help keep your music sounding clean. The 286A’s mic preamp and five processors can be used independently or in any combination.

The 286A’s sonically pristine mic preamp features wide-ranging input gain control, switchable 48v phantom power and an 80Hz high-pass filter. Use the patented OverEasy Compressor to transparently smooth out uneven acoustic tracks or deliver that classic “in your face” rock vocal. Take out vocal sibilance and high frequency distortion in cymbals with the frequency tunable De-Esser. Fine-tune the Enhancer’s HF Detail control to add sparkle and crispness to tracks. LF Detail control adds fullness and depth to vocals and bass instruments while simultaneously cleaning up muddy low midrange frequencies. And, the Expander/Gate’s separate threshold and ratio controls allow you to subtly reduce headphone leakage or radically gate noisy guitar amps.

◆ A host of metering and status LEDs visually guide you to achieving the right sound.
◆ The floating balanced XLR mic input accepts balanced or unbalanced inputs.
◆ An additional 1/4” TRS phone jack can accept balanced/ unbalanced line signals to process live electronic instruments or pre-recorded tracks at mixdown.
◆ An insert jack between the mic pre and signal processing sections can be used to “loop out” to external processors or to mix the signal out to an external destination.
Subharmonic Synthesizer with Modeled Waveform Synthesis

The disco boom of the 70's was fueled by the throbbing bass beat of dbx Subharmonic Synthesizers in discos around the world. During the 80's, patented dbx Subharmonic Synthesis was the secret weapon used by mobile DJ's and film and sound professionals to produce an impact unavailable from any other device—unique because the dbx process actually produces a new, Waveform Modeled bass note, exactly an octave below the bass in the original audio. For 2003, the 120A Subharmonic Synthesizer has been specially optimized by dbx engineers for the needs of audio professionals. Two separate bands of bass synthesis provide the best combination of smoothness and control, while the independent Low Frequency Boost circuit gets the most out of high-performance low frequency speaker systems.

- Patented subharmonic synthesis process builds the synthesized waveform using the waveshape of the original bass material. Unlike other systems, the dbx process produces smooth, musical low frequencies that don’t interfere with the mid and high-band, even when maximum synthesis and boost are applied. The result is a low-end punch that you really feel—even at levels that won’t destroy equipment or damage hearing.
- 1/4” (balanced) and RCA inputs, along with main 1/4” outputs which can be full range (including synthesis) or high frequency only, plus separate subwoofer output with its own level control.
- Individual control for two ranges of subharmonic frequencies
- Front panel LEDs that show crossover status and synthesis activity
- Patented circuitry ensures that mid and high frequencies are not affected
- Built-in crossover with choice of 80Hz or 120Hz crossover point
- Enhance bass audio material for use in a variety of applications including:
  - Nightclub and dance mixing
  - DJ mixing
  - Theater and film sound
  - Music recording
  - Live performance
  - Broadcasting
  - Aerobics

223/234 • 223XL/234XL
Stereo 2-Way/Mono 3-Way and 2/3/4-Way Crossovers

Extremely well built and great looking, the 223 and 234 feature switches on the rear panel for stereo 2-way or mono 3-way (mono 4-way on the 234) operation, LF mono sum (for a subwoofer feed) and a range of individual channel crossover frequencies. The XLR versions (223XL and 234XL) feature TRS differentially-balanced XLR inputs and outputs in place of the standard 1/4”. Perfect for permanent installations and touring PA systems.

- Mode switch for stereo 2-way or mono 3-way operation (223)
- Mode switches for mono 4-way or stereo 2-way/3-way operation (234)
- x10 range switch on both channels
- LEDs indicate when “x10” switches on the back panel are activated and whether the unit is in stereo or mono mode.
- Linkwitz-Riley 24dB per octave filters
- Recessed 40Hz low cut (H PF) switches on each channel are available to remove unwanted low frequencies.
- Both the low and high outputs on each channel have a gain control ranging from infinity to +6dB to allow muting of individual outputs and for level matching. Phase reverse switch on all outputs
- Controls exude great precision, and the feel is a solid “click”.
- Internal 120/240V power supply eliminates the need for annoying wall-warts.
- TRS differentially balanced 1/4” inputs and outputs are bolted to the chassis, so even if someone stomps on a plugged in cable, it won’t tear up the circuit board inside.
12 SERIES EQUALIZERS

Dual Channel 15-Band and 31-Band Graphic Equalizers

The 1215 and 1231 equalizers are designed to meet the needs of the most demanding sound reinforcement environments, while offering simple and straightforward controls. Both units offer dual channel operation. The 1215 provides 15 2/3 octave bands with ISO frequency centers, while the 1231 provides 31 1/3 octave bands with ISO frequency centers. Both feature 45 mm faders, selectable ±6dB or ±15dB boost/cut ranges, ±12 dB input gain range, and switchable 40Hz/18 dB per octave low-cut filters. Precision engineered to provide years of maintenance-free operation in any application, they utilize only the best possible components. RF Filtered, electronically-balanced XLR, barrier strip, and 1/4˝ TRS inputs and outputs provide ease of installation, while magnetically isolated transformers and chassis/signal ground lift capabilities ensure quiet performance.

The Last Word in Affordable, High Quality EQs

With the dbx 12 Series the goal was simple; build the best bang-for-the-buck, no nonsense equalizers on the market. Price/performance champions, the 1215 and 1231 are designed for down-to-earth sound shapers who don't need a feature-laden 20 Series EQ, but who absolutely demands a pristine signal path and consistent performance in an equalizer.

Features:

- Selectable ±6dB or ±15dB boost/cut range for precise gain adjustments
- Electronically balanced/unbalanced inputs
- Servo balanced/unbalanced outputs
- RF filtered inputs and outputs
- XLR, Barrier Strip, and 1/4˝ TRS connectors
- ±12dB input gain range
- 18dB/octave 40Hz Bessel low-cut filter
- Chassis/signal ground lift capability
- Internal power supply transformer
- Power-off hardware relay bypass with 2-second power-up delay
There are three EQs available in the 20 Series; the 2031 single channel 31 band 1/3 octave, the 2215 dual channel 15 band 2/3 octave, and the 2231 dual channel 31 band 1/3 octave. Each of these offers the same precision engineering, top shelf components, I/O and features plus, they add two powerful tools that let you use your system with confidence — dbx's proprietary Type III Noise Reduction which is capable of increasing signal-to-noise ratios by up to 20dB, as well as the patented PeakPlus limiter which provides fail-safe system protection for your sound system. A four stage LED ladder gives you a great visual indication as to what the limiter and signal levels are doing. Offering great value and an unequalled feature set, dbx's 20 Series equalizers have become crucial links in the sound systems of countless professionals all over the world.

**Type III Noise Reduction**
- Each channel features individually switchable, transparent noise reduction circuitry, capable of restoring up to 20dB S/N ratio
- A virtually instantaneous encoding and decoding algorithm allows radical EQing without substantially affecting noise performance

**PeakPlus Limiter**
- The PeakPlus Limiter circuitry available on each channel utilizes a variable 0dBu (off) to +24dBu threshold control to provide fail safe system protection

**Metering**
- Four segment LED bargraph provides metering for BOTH Gain Reduction and Output Level
- Status LEDs offer visual feedback for all settings on the front panel
The Eclipse unit provides the power, performance and signature Eventide audio effects in a single rack space unit, the company’s first in that configuration. The folks at Eventide were not looking to build a “junior” Harmonizer product. In fact, even though it’s just half the size of the legendary H 3000 series Harmonizers, Eclipse has five times the processing power, and twice as many features. Eclipse features a dual-engine architecture, that can be configured in series, parallel, stereo or dual mono. Setup and operation is intuitive, with an enhanced user interface and a powerful search facility for rapid program/preset selection by category or application. The audio performance of the Eventide Eclipse Har monizer unit surpasses just about anything in its class, with 24-bit digital conversion, 96kHz sampling and a signal to noise ratio exceeding 104dB. Digital S/PDIF and AES/EBU I/O, analog balanced and unbalanced I/O and ADAT lightpipe are all supported. Eclipse’s heavy-gauge, all metal faceplate, solid, positive-action controls and sharp, bright display further demonstrates the “fully professional” claim for the product. Eventide’s famous “knob” and full numeric keypad are included, as well as customizable “hot keys” for maximum flexibility and ease of operation. Eclipse answers the call for many musicians and working professionals seeking Eventide-quality pitch change, reverb and special effects programs in a compact box that is affordable and uncompromising.

**FEATURES**

- Up to five times the processing power, yet half the size of the legendary H 3000 series Ultra-Harmonizer brand effects processor.
- Dual-engine architecture (two configurable effects blocks), configurable in series, parallel, stereo or dual mono.
- 24-bit resolution for superb fidelity at up to 96kHz sampling and a signal to noise ratio better than 104dB.
- The famous Eventide “knob”, full numeric keypad and customizable “hot keys” for frequently used parameters provide maximum flexibility and ease of use.
- A global tempo feature synchronizes LFOs, delay times, and other time-sensitive parameters to the music being processed.
- A full complement of LFOs, envelope followers, and ADSRs can be patched to any parameter.

**500 Programs**

- 400 factory and 100 user programs with a full complement of Eventide’s signature pitch change, reverb, and special effects presets are provided all with all with uncompromising quality.
- An additional 500 programs can be stored on a compact flash memory card.
- Besides viewing programs by program number, they are flagged so they can be sorted by application (Guitar, Vocals) and effect type (Pitch, Reverb, Delay).

**Algorithms**

- Presets are made up of 1 or 2 algorithms.
- Each algorithm is a block of signal processing elements, such as mixers, shifters, compressors, etc, that can be a powerful and sometimes complex effect in itself.

**I/O Connectors**

- Dual (left/right) balanced XLR, unbalanced 1/4” combi inputs
- Dual (left/right) balanced XLR and unbalanced 1/4” outputs
- AES/EBU (XLR) and coaxial S/PDIF digital I/O plus an optical interface that can be switched between ADAT and S/PDIF.
- Word Clock I/O (BNC)
- The MIDI Out and Thru connectors plus a 7-pin MIDI In port for use with pedal boards or standard 5-pin devices.
- A 9 pin RS232 serial connector allows you to transfer information to and from your computer.
- Two Stereo 1/4” multi-function foot pedal / foot switches inputs can be used for adjusting parameters.
Plugzilla is a unique two rack space effects processor capable of running nearly any Windows-based VST plug-in. Since its preview at the Audio Engineering Society’s 113th annual convention, Plugzilla’s launch has been widely anticipated throughout the industry. Plugzilla employs two independent fully routable machines capable of running 32 channels of reverb, and the ability to simultaneously power as many as eight plug-ins. Plugzilla’s brings a new level of versatility, power, and portability to the rapidly expanding world of plug-ins. Plugzilla adds a new dimension to front of house mixing, live stage rigs, recording studios and mastering rooms. It can store thousands of plug-ins and presets in its internal Flash memory and features USB and Compact Flash connections for efficient plug-in transfers. In addition, 32 midi channels plus four footswitch inputs and two sets of eight “hot knobs” and “hot switches” that can easily be assigned and routed to plug-ins add incredible flexibility to the product. Plugzilla is designed by Manfold Labs, a new company comprised of some of the pro audio industry’s leading effect processor designers.

**World’s First Standalone Plugin Player**
- Starting with Steinberg’s VST 2.0 standard, and adding a quick, intuitive user interface, stellar audio performance, and wrapping it in a sexy, quiet 2RU package, Plugzilla will forever change your idea of VST plug-ins, rack mounted effects processors, and synthesizers.
- Fully compliant with Steinberg’s VST 2.0 specification
- Runs virtually any Windows-based VST plug-in* - including VSTi instruments.
- Two independent, fully routable machines
- Runs up to eight plug-ins simultaneously
- Store thousands of plug-ins and presets in internal Flash memory
- High performance processing - capable of running 16 channels of reverb.
- Eight snapshot memories allow quick comparisons and creative flow
  (*depends mostly on copy protection scheme)

**Quick, Simple and Easy-to-Use Interface**
- Two sets of eight “Hot Knobs” and “Hot Switches” can easily be assigned and routed to plug-ins providing incredible flexibility for accessing realtime control and automation functions.
- Dual bright fluorescent information displays
- Compact FLASH slot and a USB port are available for additional plug-in storage.
- More than 200 plug-ins are loaded when shipped.

**Inputs and Outputs**
- Dual stereo/four channel 96kHz/24 bit balanced XLR analog inputs and outputs
- Input to output latency at 48kHz sample rate is less than 4 msec.
- Coaxial S/PDIF Digital inputs and outputs
- Two MIDI In and Out ports provide 32 MIDI channels
- Two footswitch inputs with full routing and assignment to plug-ins.
- Universal power supply (90 - 240VAC / 50-60Hz)

Bring your VST plug-ins to the live gig, recording studio and mastering session. Add DSP to your computer-based Digital Workstation.
FOCUSRITE

PLATINUM OCTOPRE

8-Channel Mic Preamp

With eight pristine channels, class A Focusrite processing, eight compressor/limiters and almost all the interface options known to man, the OctoPre makes high quality, multi-channel recording easy. The perfect partner for any digital audio workstation, it is equally suited as an instant recording solution, or as an additional set of mic preamps for any analog, digital or hard disk recorders. Each channel features a revolutionary compressor/limiter circuit, providing a warm-sounding compressor, which morphs into a brick wall limiter to avoid those critical overs, ensuring total control over all eight channels. The first two ‘Super channels’ also feature phase reverse, as well as TRS inputs on the front for quick and easy, DI-free plug-in. Finally, the high quality digital converter options cover almost every interfacing eventuality. Up to sixteen digital outputs can run simultaneously with any mix of analog outputs, and all the settings are adjustable, directly from the front. With this entire package fitting into a single 1U chassis, OctoPre sets the standard for multi-channel recording solutions.

FEATURES

Dynamics Control

- OctoPre features eight independent compressor/limiters, whose revolutionary circuit design allows dynamics to be handled via a single control. Starting with a brick-wall limiter the rotary control then allows you to add increasing amounts of compression.

- Two independent side-chain control circuits are used for each channel of dynamics, one for limiting and one for compression. The limiter and compressor side-chains each generate two separate control signals, one fast and one slow, that are then fed to the gain change elements in the audio path.

- The gain control elements consist of a pair of custom Optos, which follow a crossover network that splits the audio into two bands, “high” and “low”. The fast side-chain drives the high frequency opto, while the slow side-chain drives the low frequency opto. This ensures less distortion when the limiter is reacting to very fast transients. By splitting the response, only the high frequency section of the waveform is drastically affected, reducing distortion, and therefore non-related harmonics, providing a far more musical effect.

- In addition, both the side-chains operate as feedback systems. Thus, the amount of compression and limiting is calculated using the level after the split opto stage. The advantage of this feedback system is that the limiter senses the level after compression has been applied and therefore the limiter only works when it absolutely has to.

- The dynamics control also introduces an additional make-up gain, balancing the level change caused by compression. This auto make-up gain ensures the output level to the A/D remains constant while further compression is applied. Consequently, any input levels already set will not require any further adjustment during dynamics set-up. Only one dial, but all the control, providing the quickest route to a warm, controlled, yet entirely musical signal.

Class A Pre Amp

- Mic preamps are the same as those in the award-winning, VoiceMaster PRO. The custom preamp ensures low noise and distortion, delivering clarity and warmth without unwanted artifacts.

- Also found in this section are phantom power, a Line level switch and a High Pass filter, enabling OctoPre to handle a multitude of audio sources simultaneously, with style and grace.

Super Channels

- The first two channels also feature high quality instrument inputs and phase reverse, both available direct from the front, avoiding the need for a separate two channel DI box.

- Both channels allow all three sources to be patched simultaneously, with inputs selectable directly from the front panel allowing the unit to be permanently racked and patched to your own specifications.

Outputs

- Eight line level balanced (+4 dBu) analog inputs and outputs are provided as standard via 25-pin connectors. These connectors are routed to 8 XLRs via a breakout cable (sold separately). In addition to the analog outputs, there are two optional digital outputs available:

  - Two high-quality, 24-bit A/D converters handle rates up to 96kHz, but can dither down to 20 or 16 bit. Frequency settings and bit rates can be altered with an ADC lock LED to show when word clock is synchronized. An external wordclock input is also provided (BNC).

- ADAT outputs only - 8 channels of ADAT lightpipe

- AES/EBU or S/PDIF outputs plus 8 channels of ADAT all on one board. The AES/EBU or S/PDIF outputs can run simultaneously with ADAT outputs, giving you 16 channels of digital output.
Stereo Dynamics, EQ and Image Processor

The MixMaster is an analog stereo audio processor designed primarily for project studio mastering. However, with so many useful features in one box, anyone involved in the business of making music will quickly find it indispensable at other stages of the recording process too. This piece of outboard genius refines the final balance and dynamic energy of the mix, introducing stereo enhancement while restoring essential elements which may have become overwhelmed in the mixing process. Simple yet effective processing sections cover every aspect of the mix, giving you the quickest route to that seemingly ‘out of reach’ sound that makes a hit record. Within minutes you can give your mix punch, width and sheen with the signature transparency and sonic integrity that made Focusrite famous.

**Stereo Dynamics, EQ and Image Processor**

- **High Quality A/D Converter**
  - A 16/24-bit and 128x over-sampled digital interface enhancement with a sampling rate of up to 96kHz is built-in.

- **Stereo Expander**
  - Essentially a soft noise gate, the stereo expander decreases unwanted background noise without sounding harsh or brutal. With only two controls (threshold and release) and an LED monitoring display, controlling the noise floor becomes a breeze.

- **Stereo Spectral Compressor**
  - The Stereo Spectral Compressor is a multi-band compressor with three bands of compression, Low, Mid and High, each being visually displayed – vital when you need to smooth out different frequency bands and have true control over the mix.

- **Stereo EQ**
  - The Stereo EQ on the MixMaster is tri-band, with stepped frequency shelving high (HF) and low (LF) bands, and a parametric mid band. A serious Focusrite EQ with the ability to add musicality and subtlety to your mix.
  - The “tilt” feature allows gentle emphasis or de-emphasis at either end of the audio spectrum and is a vital mastering function. The MixMaster EQ is a very powerful tool that can gently enhance the tonal quality of the mix, according to the user’s objective.

- **Analog Spatial Enhancer**
  - For widening your stereo image. A slight adjustment of the image controller allows you to create an ambient, spacious mix that extends beyond the normal stereo extremities, breathing new life into your projects. A tweak in the opposite direction produces a narrowed, focussed image.
  - Many width enhancers can cause phase coherence problems for centrally-panned mix elements, but the MixMaster’s additional direct inputs allow critical central elements (like lead vocals or a kick drum) to be added to the mix after stereo enhancement. This allows you to enjoy the benefit of wide, airy mixes, but retain critical tight focus on, say, the lead vocal.

- **Output Control**
  - The output section gives fine control of stereo balance and trim is available before the A/D converter or analog outputs. For output protection, switch in the stereo frequency adaptive limiter, with its own LED meter, to stop those critical digital ‘overs’.

Stereo Analog Preset Compressor

A stereo compressor with 16 preset compression settings set among a host of Class A analog circuitry, the Penta offers that sought-after professional sound at the touch of a button. The presets, configured by a prestigious group of music industry professionals, can be freely adjusted, enabling users to tailor compression to their individual needs.

Packed with analog processing power including a Focusrite Class A mic pre, TubeTran technology and spacial enhancer, the Penta offers a huge number of recording benefits within a matter of seconds while still exhibiting the Focusrite signature sound. Use as a front end when tracking quality signals, as a mix-down processor, or as a final mastering processor. Every dynamics processor you’ll ever need, squeezed into one 2U rack-mountable unit, the Penta will be the best investment you ever made.

### Preset Stereo Compressor

The Penta offers you instant compression settings, as formulated by the Focusrite design team. Immediately available are 16 presets specifically designed to give you perfect compression at the touch of a button. But to make sure they don’t limit your potential, these presets are entirely editable, giving you a quick, yet effective route to perfect compression.

<table>
<thead>
<tr>
<th>Preset</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kick</td>
<td>Creates a full and deep effect. Use the attack to control the amount of punch desired for your track.</td>
</tr>
<tr>
<td>Snare</td>
<td>Set up for perfect control of stick (attack) and ringing overtones (release).</td>
</tr>
<tr>
<td>Ambient</td>
<td>Use with live drums or instruments and lift out natural room effects or get the best from digital reverbs.</td>
</tr>
<tr>
<td>Loop</td>
<td>Tight and fast compression, especially suited to sampled loops and electronic sounds.</td>
</tr>
<tr>
<td>Bass Guitar</td>
<td>Plug straight into the front panel and call up deep and rounded sounds or punchy slap.</td>
</tr>
<tr>
<td>Synth</td>
<td>Bass Fat sounding especially when used with the warmth control to give a true vintage valve sound.</td>
</tr>
<tr>
<td>Percussion</td>
<td>Acoustic or sampled drums.</td>
</tr>
<tr>
<td>Acoustic picked</td>
<td>High threshold and ratio give a controlled yet highly dynamic response.</td>
</tr>
<tr>
<td>Acoustic strum</td>
<td>Clean and crisp with a touch of warmth. Gives a clear but warm and naturally compressed effect.</td>
</tr>
<tr>
<td>Electric Guitar</td>
<td>Clean or distorted, plugged straight in or mic’d up, the opto compressor is perfect for guitar.</td>
</tr>
<tr>
<td>Piano</td>
<td>Achieve clarity and low distortion. Wide dynamic range and long sustaining mid range make the piano the most difficult of instruments to compress well, ...until now.</td>
</tr>
<tr>
<td>Keyboards</td>
<td>Great for pads, this compressed and warm setting is especially suited for use with the image control to maximize stereo width.</td>

FOCUSRITE

PLATINUM Compounder

Discrete Transistor Mic Pre

- The Penta offers the same Platinum mic pre featured in the award-winning VoiceMaster, ToneFactory, and the industry transforming Control/24 from Focusrite. The Penta ensures professional performance within the audible frequency range and beyond, producing cleaner recordings and delivering clarity without coloration.

Direct Input

- The Penta features a direct input on the front panel for quick and easy plug-in. Use the Penta as a front end for getting all your instruments down to track in seconds.
- Use the Penta as a mono compressor when recording a vocal or instrument, AND as a stereo compressor when mixing down. (When necessary, the Penta may also be used as a stereo compressor when recording, if it is inserted across two channels of a mixing console, or when compressing e.g. a stereo keyboard signal.)

TubeTran Technology

- Focusrite’s Exclusive TubeTran Technology gives you controllable tube style warmth. This unique effect is achieved using a dedicated discrete mosfet circuit, specifically designed to create this indistinguishable audio illusion. Instead of limiting your studio to one sound, now you can choose - less tube, more tube, no tube, you decide.

Analog Spatial Enhancer

- The Penta features an image width enhancer for altering the apparent image width of a stereo source. With the Image Width control you can widen the stereo image of your mix to create an ambient, spacious mix that extends beyond the normal stereo extremities, breathing new life into your projects. A tweak in the other direction produces a narrow, focused image.

Output

- Featured in the final section is a comprehensive visual meter to help you ensure optimum levels at all times. The Penta also uses the same optional high quality A/D converter as the VoiceMaster and TrakMaster, making digital interfacing a breeze.

The Compounder is a high performance stereo dynamics processor designed for the quality conscious professional and project studio owner. This highly featured unit is an essential tool for any style of music. The combination of high quality compression with the powerful Bass Expander, make this unit a must have for any dance music engineer or musician.

Gate/Expander, Compressor, Limiter

- The unique opto circuit featured in the Gate/Expander section ensures quiet operation with no pops or clicks. You have accurate control over gating and the expander switch ensures professional noise reduction on difficult audio tracks such as vocals.
- Compounder’s compressor features Class A amplification and a VCA circuit design derived from the legendary Red 3, resulting in superb sound and very low distortion.
- Soft and Hard Knee compression curves and a wide ratio control that takes you beyond infinity, means you have substantial control over compression.

With the unique Bass Expander section you can make kick drums and bass riffs far more powerful and effective. The expander circuit generates extra bass harmonics to fatten up any low frequency signal.

- A matched pair of high quality Optos offers improved performance over VCA limiter designs which tend to add high levels of distortion, even when they are not limiting. The Limiter features a Class A low distortion design and accurate threshold control to ensure quality precision limiting. The limiter enables you to prevent overload when recording to an A/D.

True Stereo Linking

The link feature enables the Compounder to act as a true stereo compressor, enabling complete stereo control of every parameter. When switched to stereo the left channel becomes the master section and controls both left and right compressor and limiter sections simultaneously. You can also choose to operate the unit as a dual mono device allowing you to process two separate channels independently.

An end to the search for that elusive perfect vocal—VoiceMaster PRO represents a new generation of Channel strip design. The award-winning Class A Pre-amp is capable of capturing every nuance from any source, while latency-free monitoring ensures direct and delay-free mix control. Tools such as the Voice optimized EQ, ‘Vintage Harmonics’ and ‘Tube Sound’ allow you to get creative with a touch of class, putting your own stamp on every recording. Combined with the 24-bit, 96kHz A/D option, the VoiceMaster PRO is the perfect interface between your mic and DAW or other recording media.
FOCUSRITE
PLATINUM TRAK MASTER

Never before has there been a more affordable tracking device, which still manages to encompass the design philosophy and integrity that have ensured that Focusrite be held in such high esteem over so many years. The Trak Master boasts the same high quality mic pre and compression circuits as the Platinum Penta, with performance specifications never before seen in this price range, setting a new standard for project studio signal processing. A high quality mic pre, intuitive compression, a 3-band flexible EQ, and ‘tube sound’ control come together to ensure you have all you require to get a quality signal tracked. You even have the option to fit a Focusrite A/D card taking you directly from the Trak Master into your digital workstation, while retaining the Focusrite signature sound of ‘clarity without coloration’, as you flow from analog to digital.

**FEATURES**

**Discrete Pre Amp**
Audiophile quality Class A transistor mic pre design features the wide bandwidth design philosophy featured in original Focusrites from years past. This design ensures low noise and distortion, delivering clarity without coloration, giving the signature transparency for which Focusrite have become famous. This section also features phantom power and a high pass filter, enabling it to handle any microphone with grace, while removing proximity effect and wind noise.

**Direct Inputs**
Features both a mic input and an instrument input on the front panel for quick and easy plug-in, without the use of a separate DI box. Use the Trak Master as a front end to your system and enjoy quality vocal and instrument recordings, tracked in seconds.

**Tube Sound**
Focusrite patented ‘Tube Sound’ technology gives you controllable tube style warmth. This unique effect is achieved using a custom, dedicated discrete MOSFET circuit, specifically designed to emulate tube harmonics. Instead of limiting your studio to one sound, now you can choose - more tube, less tube, no tube.

**Output Level**
Comprehensive output metering and control ensures that levels accurately matches the following processor’s requirements.

**Optical Compressor**
Comprised of servo-controlled optical attenuators that deliver better results than equivalent VCA designs, the optical compressor gives more punch and fatter sounding compression. A single control for more or less compression is complemented by a 6 LED meter for clear visual indication of gain reduction. ‘Tight’ and ‘Punch’ switches allow easy selection of compression settings, and extra control over the dynamic range. Compression can be applied either Pre or Post EQ allowing more control over extreme dynamic effects and EQ.

**3-Band EQ**
Intuitive, versatile and extremely easy to use, the EQ section boasts two modes of operation to guide you to the best sounding EQ curves. The bass control features specifically selected frequency ranges and filter configurations, stretching down to 25Hz with earth shattering results. Equally as versatile, the treble turnover frequency can be switched between 10K and 3.3K enabling you to add shine to any sound. At the flick of a switch the EQ can be optimized for either vocals or instruments.

**Optional A/D Converter**
For Penta, VoiceMaster PRO and Trak Master
The optional high quality, 24-bit/96kHz and 128x over-sampled A-D converter card handles sampling rates of up to 96kHz with an S/PDIF output. Available for the Platinum Penta, VoiceMaster PRO and Trak Master, the board is easily retrofitted without soldering etc. Just a few screws to undo and one clip to connect.

## RED 2 Dual-Channel EQ

The Red 2 brings two full channels of the classic Focusrite EQ to any mixing and mastering system requiring world-class equalization. Both channels feature transformer balanced inputs and outputs, ensuring excellent electrical isolation and sonic clarity and buffering between EQ bands. The Red 2 features EQ circuits identical to those found on the classic ISA 215 dual channel mic-pre/EQ processor. A frequency response from 5 Hz to 200 kHz ensures linear audio response resulting in the classic Focusrite smooth, high-end with no phase problems. The high and low shelving bands employ switched capacitor circuits rather than conventional variable resistor capacitor circuits, resulting in a filter curve shape that provides smooth and predictable results.

- Transformer-balanced inputs and outputs provide superb isolation while contributing to the warm sonic signature of the Focusrite EQ. (Any run their signal paths through the Red 2 to obtain this warmth whether or not they are applying EQ).

- Derived from the classic ISA 110, the Red 2 offers switched-frequency high and low-pass filters, switched frequency shelving bands for low and high frequencies, and two fully parametric mid bands with frequency sweep and Q controls.

- The shelving high and low bands offer up to 18dB cut and boost from 3.3 -18kHz and 33 - 460Hz respectively, with a constant filter curve shape — unaltered by frequency selection — for smooth, predictable results.

- The two fully-parametric, mid bands have considerable overlap in available frequency selection. The low-mid band is switchable from 40-400Hz or (x3)120Hz - 1.2kHz.

- The high mid band is switchable from 600Hz-6kHz or (x3) 1.8kHz-18kHz. The bandwidth (Q) is continuously variable from 0.3 to 1, allowing a broad or very fine “peaking” or “dipping” curve to be obtained with up to 18db of gain or attenuation.

- The high and low-pass filters provide 12db per octave attenuation and are switchable in steps between 36 - 330Hz and 5.6 - 2200 Hz.

### Specifications

- **Input Gain:** ±12dBu continuously variable
- **Input Impedance:** 10kHz ±15%, 20 - 20kHz
- **Balance:** ±60dB
- **Frequency Response:** 5Hz to 200kHz
- **Noise:** Better than -98dB 1kHz +4dBu
- **Output:** +26dBm with 600Ω output load

Quad and Dual Mic Preamps

High resolution digital audio workstations such as Pro Tools offer very accurate and detailed audio quality. When recording at increased resolutions, it is important to use high-end mic/line preamplification to ensure that the most precise signal possible is being fed into your audio interface. The Focusrite Red 1 and Red 8 respectively provide four or two perfectly matched channels of perhaps the most sought after mic preamplification in the audio industry. Using the same circuit topology as found in the ISA 215 mic preamps, the ultra-high quality Red 1 and Red 8 provide a transparent link between the microphone and the recording destination. Their transformer-based inputs and outputs provide superb isolation and ultra-wide bandwidth. Used with high quality ribbon, valve and condenser mics, the Red 1 and Red 8 obtain outstanding results with any sound source, but especially voice, piano and string instruments. With their distinctive deep burgundy, anodated aluminum chassis and solid design, the Red 1 or Red 8 are at home in any critical audio recording application when the ultimate sonic integrity is in demand.

FEATURES

◆ With two or four mic pre-amps in a single unit, the Red 8 or Red 1 is ideal for those looking for improved audio performance, as a compact ‘way in’ to digital recording systems, or for location multi-mic recordings.

◆ Each channel offers custom-wound Focusrite input transformers, switchable phantom power, phase reverse, and easily-read illuminated VU meter, and a handy scribble disc for denoting channels.

◆ Mic gain is switched in 6dB steps over a 66dB range, for accurate, precise channel matching and recall.

◆ Benefits of the unique Focusrite mic amp topology include superb common-mode rejection, a good overload margin and, with its shared gain structure, (20dB from transformer and up to 40dB from the amplifier) a very low noise floor with the signature wide bandwidth (10Hz to 200KHz).

◆ High performance levels are maintained with a very wide range of impedance across the inputs.

◆ Output stages with their custom transformers can drive long cable runs – several kilometers – without significant loss of quality. Makes them ideal for remote recordings.

◆ The Red 8, with a perfectly matched pair of mic amps, offers identical channel controls to the Red 1, and is especially suited to demanding mono or stereo recording work, such as location classical recording with digital recording media.

What makes the Red Range so special?

• The Red Range is handmade, crafted to the highest standard. Red processors are made in England using machine-tooled, half-inch thick bordeaux red anodized aluminum.

• All potentiometers are made from conductive plastic which gives more sensitivity and no mechanical resistance (easy to make very small adjustments).

• The chassis features recessed section grooves and styling motifs, porthole windows, printed silver control text, and firm-response illuminated switches.

• They feature sealed relays (gold-plated silver in an inert gas), situated in the middle of the circuits in which they switch. The precious metals mean that all contacts are low resistance, and the gas prevents any kind of corrosion of the surface of the contacts, meaning the most perfect audio switching device ever designed— utterly passive, zero distortion caused and no FET’s required.
FOCUSRITE

RED 3

Dual-Channel Compressor/Limiter

Employing an unusual and original single-VCA design, the Red 3 provides two perfectly matched channels of exceptional quality and truly independent compression and limiting. Incorporating a TEC award-winning Class A VCA design results in a short signal path and extremely low noise, allowing the Red 3 to achieve truly transparent compression/limiting.

True stereo compression is provided from a single set of controls, ensuring perfect phase coherence between both channels when working with stereo audio signals. A frequency response of 5 Hz to 200 kHz provides excellent linear audio performance. With its distinctive deep burgundy, anodized aluminum chassis and solid design, the Red 3 is at home in any critical audio recording application when the ultimate sonic integrity is in demand.

FEATURES

- The Red 3’s VCA is a proprietary Focusrite design, fully discrete and balanced, offering superb low noise and distortion, and excellent common-mode rejection.
- In order to separate compression and limiting, the side-chain electronics contain three VCAs in series to generate compression and limiting control voltages which drive the main VCA. The result is true compression followed by limiting, rather than the more common characteristic of compression that turns into limiting.
- The side-chain electronics are Class A, ensuring superb transient response. Both compression and limiting therefore, offer true peak response, not averaging RMS response. The use of such a high quality audio VCA as the only element between input and output means a very short signal path, and an ability to retain a natural, unobtrusive sound even when significant compression is being applied.
- Each channel has clear and identical controls, for compressor ratio, threshold, make-up gain, attack and release, and limiter threshold.
- A program-dependent auto-release mode is available, and the VU meters can be switched to show levels in two ranges, or gain change. In stereo mode the lower set takes control of both channels.

BLUE 230 Broadcast Dual-Channel Compressor/Limiter

The Focusrite Blue 230 is a special version of the Red 3, optimized for broadcast applications. It features the same award-winning signal path, but with switched control of critical parameters for improved recall.

- Key to the broadcasting facility is the ability to recall/set precise settings. A higher level of control markings across the front panel provide the user with preferred level of information, while both Threshold and Ratio potentiometers are stepped for precision control and optimum restatability.
- MU metal cans around all transformers reduce all electromagnetic radiation
- Another key requirement for broadcast is electronic isolation. The Blue 230 features transformers at both the input and output stage, ensuring total isolation and an absolute minimum level of ground-related hum.
- Machine tooled in half-inch thick, deep blue anodized aluminum, which is scratch-resistant and can be marked and unmarked forever.
- Chassis features recessed section grooves and styling motifs, porthole windows and firm-response illuminated switches.
- Relays are gold-plated silver in an inert gas, which means that the contact is low resistance, and the gas prevents any corrosion of the surface of the contacts – the most perfect audio switching device ever designed – utterly passive with zero distortion.
Mic Preamp and Channel Strip

The Red 7 combines a single channel of classic Focusrite microphone preamplification (the same superb mic preamp as the ones on the Red 1 and Red 8) with a full dynamics section, optimized for vocals. In addition to the mic preamp, the Red 7 features a single channel compressor from the Red 3 and adds a de-esser/exciter. So now you can get the warmth of classic Focusrite mic preamps and the transparent, smooth characteristics of their compressors in one affordable package. With its superb signal path, outstanding ease of use, and integrated all-in-one design, the Red 7 is a powerful tool for voice recording in all situations from music studios to post-production.

- Features the classic Focusrite transformer-based inputs and outputs for outstanding isolation and superb sonic performance.
- The Red 7 employs the same superb mic pre-amp as the Red 1 and 8, with a dual-range mic gain pot that allows precise control across the full range of the device. Phantom power and phase reverse are also provided.
- The Line input is electronically balanced, with continuously variable gain. A high quality output fader offers +6dB gain to infinite attenuation, essential for direct recordings, or for accurate level matching after EQ and dynamics.

- The overall design is taken straight from the Red 3, and on that unit, is characterized by low noise and distortion even with heavy processing. Relatively heavy compression can be applied while retaining a transparent natural sound. Ratio, gain make-up, threshold, attack and release are all continuously variable, and a program dependent auto-release mode can be switched in. A swept high-pass filter allows effective treatment of problems such as rumble, bass lift and proximity effect.
- Illuminated push-button switches for compressor in/out, de-esser/exciter in/out and high-pass filter in/out.
- The de-esser/exciter stage can be switched to provide frequency-selective compression (de-essing) or excitation. The amount and center frequency of the processor are continuously variable, and as all the unit’s dynamics still use the Focusrite single-VCA technique, unwanted coloration of the sound is kept to an absolute minimum.
- A clear VU meter shows level after the pre-amp gain control, or display compressor gain change.

</table>
The ISA 220 Session Pack provides all the audio precision tools required to infuse your session with Focusrite's renowned sonic performance. It features many of the original circuits of the flagship ISA 430 Producer Pack, and also includes some new facilities of its own. It also features the same digital output option as the ISA 430, providing you with a high quality digital route direct from the ISA 220 into your digital recording system.

With a topology based on the flagship ISA 430, the ISA 220 is designed for professionals in music and post. A channel strip style processor, the 2RU high ISA 220 includes a transformer-coupled mic/line/instrument preamp, 4-band EQ with filters, compressor, optical de-esser and frequency adaptive limiter.

**Input Stage**
- Input stage features a precise VU meter, switchable to allow monitoring of either input level or compressor gain reduction
- Above the VU meter is a 32 LED digital meter for monitoring both the 'internal' input and the rear panel 'external' input (the latter routes directly to the second channel of the optional A/D card).
- A global bypass switch next to the digital meter allows for instant A/B comparisons
- Mic, line and instrument inputs are all transformer-based, the cornerstone of the Focusrite signature sound, clear yet warm, with incredibly low noise figures and a THD below 0.001% on the mic input!
- Switching between these input options is available on the front panel with LED's indicating the active input.
- The Mic Pre is the classic Focusrite transformer-based design with illuminated switches for phantom power and phase reverse, all available on the front panel.
- From the front panel you also have control over the digital output option and in/out selection for each of the processors. An instrument jack is also provided on the front panel for quick 'plug and play' access.

**De-esser**
- Same De-esser as the ISA 430, based on a low distortion optical technology design, letting you transparently remove excessive sibilance from a vocal performance.

**EQ Section**
- The EQ featured on the ISA 220 is similar to the ISA 430 and ISA 110, with the exception of the Shelving EQ's having four frequency selections rather than six. Whether fattening-up bass, fore grounding or trimming middle, or adding airy top, this EQ can handle anything with grace and ease.

**Compressor**
- Next to the compressor section (the same compressor as the ISA 430) is a 'Compressor Pre EQ' switch. This allows you to place the compressor either pre or post-EQ.
- Alongside the auto release is the Blend control, a unique function in the ISA 220 that allows smoother compression at more extreme settings. When switched in, 'Blend' lets you mix the un compressed signal with the compressed, thus retaining the power of the dynamics from the original source.

**Output**
- The output section of the ISA 220 features the same frequency adaptive limiter as the ISA 430, a design which uses three separate stages of optical-based circuits, each of which has different limiting properties to give true distortion-free limiting.
- Fast limiters tend to have problems dealing with complex signals that contain sustained low and mid frequency information and thus "chop holes" in the audio when HF transients trigger the limiting. To overcome this, the ISA 220's frequency adaptive limiter has three frequency bands with different attack times as follows: LF slow, M F quick and HF ultra-quick, the latter designed to catch fast transients. An upper threshold is fixed at +20dBu to prevent overload of the internal (or an external) A/D converter. Finally, a variable control adjusts the module output level between -60dB and +6dB ensuring optimum output levels.

**Optional ISA 220 A/D Card**
An optional 24-bit/ 96 kHz digital output (AES/EBU, S/PDIF and TOSLINK) offers 44.1 - 96 kHz operation, 16, 20 and 24 bit resolution selection and can lock to external Word Clock, including Pro Tools Super Clock. It can be used as a high-quality mono/stereo tracking converter or at mix down as a stereo converter for final mastering.
Super Channel Strip

Stepping up from the ISA 220, the ISA 430 adds proprietary Focusrite discrete Class A VCA Gate and Expander designs, plus a host of very thorough routing and monitoring options. The discrete insert send and return may be placed before EQ or Dynamics, between the two or after both. Each band of the EQ, including the filters, can be routed to the sidechain of the compressor or gate for accurate drum gating or frequency selective compression. The classic, large analog VU meter can be switched to display input, insert return or gain-reduction level. “Listen” mode allows monitoring of the sidechains of the Compressor, Gate and De-esser so that accurate frequency adjustment can be made when tailoring the various dynamic effects. Another very unique feature of the Producer Pack’s routing capability is “split mode”. The ISA 430 can be run as a single channel “Producer Pack” or split, to act as two independent processors running discrete audio paths.

The Gate section uses the Focusrite Class A VCA as the control element to remove the effect of unwanted interference and high levels of wide-band system noise build-up. The Gate acts as a straight-forward on/off control, switching off the audio path when the signal level drops below the threshold set, killing noise in the quiet passages of a performance.

Switching this section to expand mode causes the Gate to function as an Expander, which gives a more gentle gating effect; instead of cutting any signal below the threshold, an expander proportionately decreases it. This will give a more natural sound when reducing noise from non-percussive sources (especially vocals). The adjacent LED meter indicates in dB the amount of gain reduction caused by the Gate/Expander. As with the compressor, this section offers both the ‘Listen’ and ‘Ext key’ features.

‘Hysteresis’ increases the level difference between the gate switching on and off, and prevents the gate oscillating (‘chattering’) with particular combinations of input signal and threshold settings. This function is particularly useful when gating a signal with a very long decay time and large amounts of level modulation (for example a Grand Piano).

Insert, Pre EQ and Split Dynamics Switches

The ISA 430’s real benefit as a “do-all” processor for demanding engineers are the insert, pre EQ and split dynamics switches for controlling the position of the sections within the signal flow.

Insert Position

The Insert Send and Return can be positioned in three places within the signal flow for maximum versatility.

Pre—Insert is after the input trim, but before EQ or Dynamics
Mid—After EQ but before Dynamics
Post—After EQ and Dynamics but before the main output

Dynamics Pre EQ

Normally the EQ section precedes compression. Pressing Pre EQ reverses the position of the EQ and Dynamics sections, placing Dynamics first and EQ afterwards. This function gives greater flexibility in the order of the processing blocks and the relative position of the insert point when combined with the Pre, Mid and Post selector, allowing EQ changes to be independent of compressor section

Single/Split Mode Selection

The ISA 430 can be run as a single channel “Producer Pack”, or split to act as two independent processors running discrete audio paths. Split mode allows the Insert Return and Insert Send to act as independent inputs and outputs to the dynamics section only, creating two devices in one, with separate EQ and Dynamics channels—perfect for mix down problem solving.

FOCUSRITE
ISA 428: PRE PACK

4-Channel Mic Preamp

The ISA 428 Pre Pack features four Rupert Neve-designed, transformer-based microphone preamps with selectable impedance, direct instrument and line inputs, and an optional 8-channel 192 kHz analog-digital converter. An all-new Soft Limiter circuit precedes the A-D, providing the perfect path into any DAW, digital console or stand-alone hard disk recorder.

The ISA 428 also functions as the perfect input expander for mixing consoles, featuring the four mic pres, four instrument inputs, and 8 line inputs. Any combination of 8 of these inputs can be routed discretely to the optional 8-channel A-D converter. Equally suited for traditional stand-alone preamp roles in broadcast, post-production, live sound and installations.

Features

Four Classic Neve-Designed Mic Preamps

- Incorporates four of the original Rupert Neve-designed transformer-based preamps found in the classic ISA110’s. The benefits of this pre-amp topology include superb common-mode rejection, an excellent overload margin, and, courtesy of the shared gain structure (20dB from the hand-wound transformer and up to 40dB from the amp), an extremely low noise floor and super-wide bandwidth. This pre-amp design is the cornerstone of Focusrite’s signature ‘warm-yet-transparent’ sound and is a standard point of reference for many of the industry’s most discerning audio professionals.

- Four front panel instrument inputs—no separate DI box required.

Switchable Impedance

- The input stage also provides enhanced control and creativity, by allowing you to switch between four carefully selected input impedance settings—the original ISA110 setting plus three more impedance settings, to either perfectly match the preamp with any microphone (and so maximize level,) or to use different settings creatively to interactively shape the sound of your chosen classic mic.

- Switchable insert points are also featured on every channel, allowing routing, (between pre amp and output,) to additional external processing if desired.

- Full output metering for all 8 channels is provided by 6-segment LEDs on the ISA428’s front panel, while input levels can be tracked using ‘moving coil’ peak reading VU-style meters, designed to catch even the fastest and most elusive of transients.

- Two ISA428’s can be used with a single A-D converter utilizing the four extra line input channels on the rear of the unit containing the optional A-D converter. This allows expansion from a 4-pre system to an 8-pre system – hence the name ”Four t(w)o Eight!”

Custom Global Soft Limiting

- Protecting the A-D circuit is Focusrite’s “Soft Limiter,” a custom optical design, which both protects the A-D converter by preventing ‘digital overload’, and also eliminates the unpleasant distortion that standard limiter circuits often generate. Alternatively, it provides worry-free, musical A/D conversion, handling even the hottest analog signals with style and grace.

- Rather than simply protecting the A/D in a brick-wall fashion, the Soft Limiter tailors the last 6dB dynamic range of the A/D converter to cater for the last 12dB of analog headroom. This ensures the A/D converter never overloads at any point during the analog performance. Unlike conventional limiters, it provides an absolute limit without destroying the audio integrity of the source signal.

Optional 8-channel 192kHz A-D Converter

- Embodying cutting-edge conversion technology, encompassed within pristine Focusrite circuitry, the optional A-D converter provides eight channels of the highest quality conversion at sampling rates of 44.1, 48, 96 and 192 kHz. (Running at 96kHz provides 16 simultaneous digital outputs alongside the four main analog outputs.) Digital output formats include 8 channel single/dual wire AES/EBU, S/PDIF and ADAT lightpipe, all available on a single card.

Stereo Tube Compressor

The Radius 3 Fat Man provides instant access to 15 high quality, stereo tube compression presets, making it easy to add fat, professional sounding tube compression when tracking, mixing or playing live. Created in consultation with leading audio engineers, including Pink Floyd’s Andy Jackson, the programs ensure a polished, professional sound to your mix. The pre-sets include optimum compression settings for vocals, keyboards, bass, acoustic and electric guitars, snare, kick and whole drum kits and pop, rock and dance mixes, making the Fat Man a very user-friendly tube compressor. For those who wish to create their own compression settings, a manual mode provides fully adjustable control over threshold, ratio, knee, attack and release settings. Input / output gains and gain make-up controls remain adjustable in both preset and manual modes to allow gain balancing for different systems. A bypass switch is provided to compare compressed and direct signals and a vintage-style VU meter can be switched to meter output level or the amount of gain reduction. In addition to line inputs and outputs, the Fat Man also features front panel instrument inputs for the direct injection of guitars, basses and keyboards.

- Balanced 1/4” analog I/O, unbalanced compatible
- -10 / +4dBu switchable
- 1/4” jack instrument inputs
- 15 preset settings and a manual mode
- Compressor with adjustable threshold, ratio, attack, release and knee
- Adjustable input and output gain
- Gain make up
- Compressor bypass
- VU metering of output level or gain reduction
- Optional 19” rack-mount kit holds 2 units

RADIUS 5 FAT MAN 2
Tube Preamp and Compressor

The Fat Man 2 is an affordable, high quality tube preamp and compressor, offering an ideal way of adding tube warmth and punch to recordings and live performances. It can also be used as an instrument preamp, a vocal processor or as a ‘warm’ front end for a digital recording system. The Fat Man 2 has 15 high quality presets, including five vocal compression settings, with other presets for guitars, keyboards, basses and drums. A fully manual mode controls individual compression parameters, including the threshold, compression ratio, knee, attack and release settings. Input and output gains are adjustable in both manual and preset modes, while a gain make-up control enables quick and simple balancing of the original and the processed signals.

The first stage of the Fat Man 2’s dual-stage 12AX7A triode tube is housed in the preamp, with the second stage in the compressor section. The tube preamp accepts mic, line and instrument inputs. A source switch selects either the mic or line input and also adjusts the sensitivity for the instrument input between high and low. Phantom power is switchable and there is a 90Hz high-pass filter to remove unwanted rumble or hum.
Stereo Optical Compressors

The JOEMEEK SC2 and SC2.2 are two channel stereo photo-optical “effects” compressors designed, not to perform protective functions like modern VCA compressor/limiters, but to be used as artistic tools that produce the psychoacoustic effect of power and dynamics while at the same time, retaining sparkle and adding warmth to your audio tracks. Due to the very nature of photo compression along with the use of modern servo control techniques and electronically-balanced operation, the SC2 and SC2.2 are virtually free from noise and distortion. Both units are easy to setup and operate with variable input and make-up gain, attack and release controls as well as JoeMeek’s unique interactive Compression Drive and Slope (ratio) controls. The SC2.2 also features a 'Dark Mode' switch that allows you to choose between the classic JoeMeek sound and a modern ‘bright’ punch mode that allows more precise level control. Both units offer the distinctive JOEMEEK sound (and bright green faceplate) that cannot be duplicated by any of today's digital technology. The SC2 is considered the “Classic” JoeMeek compressor which delivers uncompromising audio quality sought after by top producers, engineers and musicians throughout the world. The SC2.2 uses the same cell compressor design as the SC2 but is made more affordable by only offering XLR outputs (as opposed to XLR and 1/4” TRS) and uses a smaller chassis.

**Features**

- Recreates the warmth and power of the 60's style analog tape and compressor combination without the side effects — Photo-electrical compression is achieved using modern servo-control techniques that ensure the accuracy and speed of response of the light source
- No distortion producing voltage controlled amplifiers (VCAs) are used. Although the compression is non-linear, the effect is true volume compression with no "limit" action
- Before the left and right channels are introduced to the compression circuit, they are converted to 'sum and difference' mode. This ensures that the centre image stays perfectly in the centre even under heavy compression. The sum and difference coded signal is compressed, and then converted back into 'left/right' format
- Since the two compressor channels are linked as a stereo pair, a single control is provided for each parameter that controls both the left and right channels
- Separate rotary controls are provided for adjusting input gain (approx 20dB max) and output (make-up) gain (+26dB max)
- The rotary Release control is adjustable between 1.5 and 10 ms
- The rotary Attack control is adjustable between 1.5 and 10 ms

**Controls**

- The rotary Release control adjusts the recovery time of the compression. The wide range gives the option of high speed “pumping” down to very slow gain riding
- An In/Out 'hard wired' bypass switch allows instant comparison between the original uncompressed, and the compressed signals
- Since the two compressor channels are linked as a stereo pair, a single control is provided for each parameter that controls both the left and right channels
- Separate rotary controls are provided for adjusting input gain (approx 20dB max) and output (make-up) gain (+26dB max)
- The rotary Attack control is adjustable between 1.5 and 10 ms

**Interactive Compression Control**

Instead of the standard “threshold” and ‘ratio’ controls, found on conventional compressors, JoeMeek compressors use interactive Compression and Slope controls that work together in a musical, non-linear (non-predictive) manner.

- The rotary Compression control adds drive (gain) to the optical system. It not only controls the ‘Threshold’ level, it helps define the ‘knee’ characteristic of the compressor causing the ratio to increase along with program content and amplitude. In simple terms, winding up the compression control increases the amount of compression
- The 4 position rotary Slope switch is similar to a ratio control but is not linear as it reacts with the Compression control — At the lowest rate (1), the maximum compression ratio is about 2:1 with a maximum possible compression of about 6dB. At the highest rate (4), the compression ratio usable maximum is about 8:1
Anyone who has tried to record a human voice in the simplest possible way has found that the dynamics of real world speech and music are impossible to handle with a ‘linear’ recorder: Even if the signals do not overload, the final result is a recording that seems to be thin, quiet and too wide in dynamic range.

Early analogue tape recorders had a built-in answer to the problem, Slightly overloading the record channel produced (predominantly) 2nd order harmonic distortion and some volume compression. This made recordings sound ‘warm’ and reduced the problems of dynamics. Unfortunately (?), modern recording mediums don’t react that way; they produce an accurate reflection of the input with all its built in problems.

Most thinking engineers know of these problems and correct with the use of equalisers (to change the psychoacoustic distance from the microphone), limiters (to reduce dynamic range at the louder end) and enhancers (to sparkle it up). And then find that it is extremely difficult and time consuming to get a warm and cozy sound**.

Joe Meek, in common with all engineers, experimented with the limited facilities of the time (1960 - 1965) and came up with a way of enhancing the ‘tape bend’ effect with compression. The compressor he used was primitive in the extreme, but coupled with the compression distortion provided by the valve tape machines he had, the result was voice and music sounds that were unique and sold records by the million.

I had to make some significant improvements in the way the early compressors worked to make the JOEMEEK acceptable to today’s engineers, but now that they are in general use in top studios all over the world, the consensus is that the sound is right, and really does recreate the warmth and power of the old equipment without the side effects.

** The classic way is to use a U47 or similar large diaphragm capacitor microphone which in itself ‘distorts’ the sound with complex high frequency phasing across the diaphragm and some 2nd order distortion from the amplifier tube. There are probably hundreds of types of compressor/limiters on sale in the world, all struggling for a place in the market with extra knobs and facilities and all missing the fundamental point;- that a compressor is there to produce a psychoacoustic effect of power and dynamics. not to perform any protective function electronically; it’s a creative tool.

The JOEMEEK recreates the dynamics of the old analogue tape and compressor combination. And yes; it is entirely possible that one day this algorithm could be written for a digital processor — but would it be as easy to use?
The VC-1QCS “Studio Channel” offers six separate pieces of equipment all in one 2U 19” package: a CurrentSense Microphone Preamp, a JOEM EK “photo-optical” Compressor, Instrument Pre-Amp, a JOEM EK Enhancer / De-esser and a full channel of the 3-band JOEM EK Meequalizer “EQ”. Other features include balanced XLR and 1/4” TRS line-level outputs, comprehensive input and gain reduction metering as well as LED status indicators for each processing stage. In addition, an optional (VC1QD) card, that plugs right into the rear of the VC1QCS, provides a 24 bit 96K digital SPDIF output so you can connect the Studio Channel directly to your DAW.

**CurrentSense Preamp Design**
- Optimizes microphone performance by automatically loading the correct impedance to required by the microphone
- A floating balanced input easily accepts microphone levels from -70dB up to more than 0dB and provides (microphone) input headroom of more than 30dB
- Other benefits include a more even and extended frequency response as well, any mic can be used regardless of impedance requirements and cable resistance/quality is no longer relevant
- Individual switches with LED indicators are provided for mic/line selection, phantom power, a hi-pass filter, and phase reverse
  - The 12dB per octave (3dB down at 75Hz) High Pass Filter removes extreme rumble frequencies
  - A Phase Reverse switch allows you to reverse the signal polarity

**Compressor**
- The Compression control adds gain to the compression sidechain thereby increasing the compression effect
- A five position Slope control sets the ratio from gentle compression to pumping effects
- The Attack control sets the time that the compressor takes to act
- The Release control sets the amount of time it takes gain to return to normal after compression

**Enhancer / De-Esser**
- The enhancer uses a drive and resonance control that, when used judiciously, allow you to add a unique sparkle and brightness to sounds that seem otherwise “flat”. The effect is particularly well suited for vocals, guitars and acoustic instruments
- The enhancer works by picking off the higher frequency part of the sound, compressing and dynamically altering it, filtering off the original sound and remixing the resulting harmonics back with the signal.
- De-essing is made possible by turning the enhancer pot counter-clockwise

**The EQ**
- One complete channel from the 3-band VC5 "Meequalizer" delivers a musical sound, unlike any software plug-in or analog project studio mixer EQ
- The Treble control is a shelving filter with a boost/cut of approx ±18dB at a fixed frequency of 8kHz
- The Mid band is a sweepable EQ filter with a boost/cut of approx ±16dB and a frequency control variable from 600Hz to 3.5KHz sweep variable. The Q (bandwidth) value of the mid frequencies varies (increases) with frequency.
- The Bass control is a shelving filter with a boost/cut of approx ±18dB at a fixed frequency of 100Hz
- An In/out switch (bypass) with indicator is provided

**Metering**
- A large illuminated VU meter is switchable between reading audio input, and gain reduction (compression)

**Gain Make-Up**
- A high quality make-up gain amplifier with a level control, located post-VU meter, allows you to compensate for gain changes due to compression or EQ

**Inputs & Outputs**
- The Studio Channel is optimized for the three main types of inputs found in recording studios —
  - XLR microphone inputs are available on the front and rear of the unit
  - A balanced 1/4” TRS line input is provided on the rear
  - An unbalanced ‘instrument’ input is also provided on the front panel
- A 1/4” TRS and an XLR connector provide high level electronically balanced line outputs
- A 1/4” TRS insert point allows you to add an external processor into the signal chain

**24-bit / 96kHz Digital Output**
- The user-installable VC1QD digital option card allows you to add a 24-bit S/PDIF or AES/EBU output with a 115 dB dynamic range
- One switch allows you to select 44.1, 48 kHz sample rates while a x2 switch doubles the sample rates to 88.2 or 96kHz
Hand made in England, the VC6Qcs is a single rack space channel strip designed to give you the best possible performance from any audio source whether tracking from a microphone or direct instrument input or during final mixdown. It combines the warmth and character of three legendary JOEMEEK components - the CurrentSense impedance matching mic preamp, JOEMEEK photo optical compression, and 3-band Meequalizer. Individual bypass switches for the compressor and MeeQ help you to lower the noise of recordings. The Dual 1/4” Superbal outputs provide separate recording and monitor outputs - ideal for latency-free computer based recording.

5-Stage Preamp
- Transformerless input stage and a low-noise input amplifier delivers high headroom
- 5-stage amplifier design, controlled by a single volume control, gives (microphone) input headroom of more than 30dB; the input is floating balanced and will easily accept mic levels from -80dB up to more than 0dB (100dB with the pad engaged)
- Current Sense mic preamp design significantly improves the performance of dynamic microphones
- Input Gain control provides headroom greater than 60dB line (30dB mic)
- Switchable +48v phantom, 20db pad and phase reverse as well as a peak LED

JOEMEEK Compressor
- Legendary photo optical compressor provides classic warmth and punch
- Controls are provided for ‘compression’, threshold, fully variable slope (ratio)
- Compression ratio varies from 1.5 to 1 up to 7 to 1 depending on musical content and the setting of the ‘slope’ control
- Attack is variable from 0.5 to 5 ms. and the release from 250ms to 5 seconds
- A 5-segment gain reduction LED meter and In/Out switch with blue status LED

3-Band Meequalizer
- Meequalizer provides the smooth tones of vintage EQs - ideal for tracking or mixdown
- LF and HF shelf, plus parametric mid sweep each with ±15db boost/cut
- In/Out bypass switch and status indicator

Output Stage
- 9-segment LED smooth tracking LED input meter to helps you control signal levels
- Dual 1/4” TRS ‘Superbal’ outputs will also accept unbalanced outputs without any gain loss - one output can be used for recording while the other is available for monitoring

Additional Features
- Pre-compressor/EQ insert point allows you to add additional effects or processing in the signal chain
- Front panel 1/4” instrument input
- XLR mic and 1/4” line inputs on the rear panel
- Extended 10Hz to 25KHz frequency response (+0, -0.5dB) delivers clearly defined bass
Instrument Head

The FATHEAD VC8 is a single channel front end for musicians and vocalists that combines JOEM EK’s acclaimed CurrentSense preamp design, opto-compressor and Meequalizer with a unique opto-distortion designed specifically for use with amplified instruments such as guitar and bass. Inputs are provided for a microphone or direct insertion of an instrument. Two “Superbal” outputs as well as a DI output with a gain control allows you to use the Fathead with a guitar amp, mixer and recorder (simultaneously if need be). The included Fathead Controller allows you to bypass the EQ, distortion and compressor as well as mute the outputs.

**FEATURES**

- 1/4” instrument input on the front panel as well as 1/4” line, XLR mic inputs on the rear panel.

**CurrentSense Instrument/Mic Preamplifier**

- The latest generation CurrentSense preamplifier circuit gives ultimate flexibility and quality whether using line, mic, or instrument sources - equally at home as an on stage head unit, or in the studio as a preamplifier for a mic or instrument
- Switchable +48V Phantom, 20dB pad and Phase reverse

**Opto-Distortion**

- Provides vintage analog distortion ranging from valve warmth through to relentless screaming fuzz
- Unique Optical Distortion feature, with in/out and optical drive
- In/Out bypass switch

**Classic JoeMeek Optical Compressor**

- 5 position preset switch with settings ranging from ‘Warm Meek’ for subtle warmth, to ‘Super Joe’ for absolutely massive crunching compression
- Bypass control
- 4-segment LED gain reduction meter
- Threshold control
- Automatic gain compensation
- Signal sensitive ratio

**3-Band ‘Meequalizer’**

- LF and Mid sweep, and high shelf controls optimized for instruments
- Highly interactive, overlapping LF and Mid sweep controls allow phasing and other classic effects, while always maintaining musicality – even at extreme settings

**Output Stage**

- A 5 segment input LED meter shows the level of the signal before the output gain control
- Output gain knob controls the level of the main and optional digital outputs
- A silent operating Mute function, operated from the front panel and the foot switch, aids in instrument changes, and silent studio operation by cutting all sound from the main outputs, and DI output, while allowing audio to be passed the tuner output
- A 1/4” tuner output jack
- An 1/4” TRS insert jack allows you to add external effects processors

**Outputs**

- Dual floating balanced 1/4” TRS main amplifier outputs
- 1/4” DI output with pre/post switch and independent gain control
- Optional 24bit/96kHz digital output via theVC1QD module
- Ground lift switch
- Includes the Fathead Controller Footswitch with EQ, distortion, compressor and mute controls

**VC1QD - 24-bit / 96kHz Digital Output Option**

- User installable 24bit Coaxial S/PDIF output switchable between 44.1/48, 88.2/96kHz sample rates
- Compatible with the VC1Qcs, TwinQcs and Fathead preamplifiers
- 115dB dynamic range
MC2 Stereo MicroMeek Compressor

The MicroMeek M C2 is a professional quality stereo compressor that gives you the full sound of the JOEM EK photo optical compression circuit in an affordable package designed for the project studio. With only a few simple controls, the M C2 will allow you to add vintage warmth, sparkle and power to vocal tracks, instruments, subgroups – even entire mixes.

- Unparalleled build, design and sound quality gives project studios, and musicians access to the true sound of real photo optical compression at an affordable price
- Auto-variable slope (ratio) control allows a wide range of compression and limiting sounds to be achieved with effective ratios from 1.5:1 up to 14:1
- Variable input and output gain controls as well as variable attack, release controls
- DIC (Dynamic Image Control) utilizes M & S sum and difference encoding and decoding to achieve perfect stereo imaging and balance across it’s stereo optical compressor
- TTT (Transparent to Transients) optical circuit design allows transients through unharmed. This allows more aggressive compression without dulling the sound
- 9-segment LED gain meter and 5-segment LED compression metering
- Dual ‘superbal’ input and output stages provide and optimized signal path that minimizes common mode interference
- Although designed as a stereo compressor, the M C2 can also be used as a single channel mono compressor
- ¼” TRS inputs and outputs accept both balanced and unbalanced signals

MQ3 MicroMeek with Current Sense Mic Preamp

The M Q3 Pro Channel is a 1U half-rack channel strip that packs the sonic punch and features of its big brothers including the “Current Sense” microphone pre amplifier, the JOEM EK compressor, the stunningly musical JOEM EK M eequalizer “EQ” and gain make-up output volume control. Don’t be fooled by its small box — the M Q3 offers almost identical sounds and quality as JOEM EK’s more expensive preamps, with the ability to add warmth and thickness into the pure and clinical sounds of modern digital equipment, but at a fraction of the price. The Pro Channel truly delivers world class sound at an amazing price, and is a must for the user whose quality requirement is greater than their budget.

Mic Pre
- Current Sense auto-impedance matching mic preamp with a variable input level from -70dB to 0dB and switchable phantom power

The Compressor
- The compressor channel provides the same sonic capabilities as the VC1Qcs but is a little easier to use — a single rotary pot is used to control that compression amount as well as (auto ratio) compression ratio which varies from 1.5 to 1 up to 7 to 1 depending on musical content
- Attack and release controls are also available

The EQ
- The same 3-band VC5 “M eequalizer” channel as the VC1Qcs except for the Mid band which has a fixed frequency of 1.8kHz

Inputs
- XLR balanced microphone input, as well as a ¼” TS jack suitable for any line or instrument level audio signal
- A ¼” mix input (pre compressor) mixes with the normal mic or line inputs. It can be used to add a second signal post EQ and pre compression
- A ¼” TRS insert point located after the mic amp and pre compressor allows you to add an external processor

Outputs
- Dual balanced low impedance ¼” TRS line level outputs, connected in parallel, can be used simultaneously as a recording output while the other is used for monitoring/PA.

Metering
- A five stage LED meter indicates power on and output levels from -12dB to +8dB
- A red overload LED (post EQ) indicates that a signal is within 6dB of overload

Additional Features
- External power supply
- 1RU 1/2 rack aluminum case
24-Bit Dual Channel Processor

The MPX 110 is a true stereo dual-channel processor with 24-bit internal processing and S/PDIF digital output. Utilizing Lexicon’s proprietary Lexichip, the MPX-110 offers 240 factory presets, 16 user-definable presets, plus Lexicon classic true stereo reverb programs such as Ambience, Plate, Chamber and Inverse as well as Tremolo, Rotary, Chorus, Flange, Pitch, Detune, Delay and Echo. Dual channel processing allows control of completely independent effects on the left and right channels. Powerful and affordable, the MPX-110 offers the critically acclaimed Lexicon sound to a wide range of users from performing and recording musicians to professional studios and desktop developers.

**FEATURES**

**General**
- Proprietary Lexichip engine provides independent dual channel effects including true stereo reverb programs such as Ambience, Plate, Chamber and Inverse as well as Tremolo, Rotary, Chorus, Flange, Pitch, Detune and 5.7 seconds of Delay and Echo
- 24-bit A-to-D and D-to-A conversion as well as 24-bit internal processing
- 20Hz – 20kHz ±1dB frequency response
- 19” rackmountable (1RU high)

**Presets**
- 240 factory presets and 16 user-definable presets are easily accessible using the Program and Variation Knobs— the Program knob selects among Single, Dual, and User programs while the Variation knob selects one of 16 variations for the selected program
- The 240 carefully-crafted presets feature legendary Lexicon reverb, as well as dual programs that combine two independent effects in four routing configurations
- Dual Programs – Combine two independent effects in four routing configurations:
  - Dual-channel processing allows you to combine Delay and Reverb algorithms, or either algorithm with a Flange, Pitch, or Chorus algorithm
  - Dual programs are available in four routing configurations:
    - Dual Stereo (Parallel), Cascade, Mono Split, and Dual Mono

**Easy Front Panel Operation**
- Dedicated Input, wet/dry M ix and Output level controls
- The Adjust knob controls the most critical parameters for each preset – for some presets, the Adjust knob is patched to multiple parameters to provide simultaneous control of related effects
- The Effects Lvl/Bal knob allows you to control the effect level of Single programs or the balance of effects in Dual programs
- Dual, 2-stage LED headroom indicators

**MIDI Control**
- Full MIDI control is provided via a powerful editing tool called Learn Mode that allows patching of five front panel controls to a MIDI Continuous Controller value
- You can use MIDI CC or Program Change messages to manipulate the Adjust, Effects Lvl/Bal, and M ix knobs, as well as the Bypass and Tap buttons as well as use Program Change messages to load programs
- Non-learnable MIDI patches can also be recognized providing access to audio parameters that are not available from the front panel
- Controls can be automated and recorded into a sequencer allowing complete preset automation

**Inputs and Outputs**
- Left (mono) and Right unbalanced 1/4” analog inputs accept direct instrument input
- Left and Right unbalanced 1/4” analog outputs – the left output can be used as a mono out while the Right output can be used to feed a pair of stereo headphones
- The coaxial S/PDIF output has a 44.1kHz sample rate – it is always active so it can be used simultaneously with the analog outs and can be set to wet or dry for use as a high-quality stand-alone A-D converter
- A 1/4” T.R.S. footswitch connector is provided for remote bypass and tap operation
MPX-200
24-Bit Dual Channel Processor

The MPX-200 combines the best of the MPX 110 with an expanded set of control capabilities to provide deeper editing possibilities. The MPX-200 features the same independent 24-bit dual channel processing, 240 presets, Tap Tempo and MIDI Learn functions as the MPX-110, but also offers a digital compressor algorithm that is available in all 240 programs, including the dual programs. This allows you to have two effects plus a compressor running simultaneously. It also includes 64 User locations for storing variations of presets, coaxial S/PDIF digital I/O, three stage input level metering, and a universal power supply. The combination of Lexicon reverb and effects, ease of use, and flexible routing capabilities, makes the MPX-200 ideal for a broad range of users including project studios, desktop audio/sound designers, performing musicians and professional recording studios.

**SAME FEATURES AS THE MPX110 PLUS—**

**General**
- 240 carefully crafted factory programs plus a bigger User bank with 64 locations to store individual variations of these programs
- Coaxial S/PDIF digital inputs and outputs

**Front Panel**
- Front panel controls include input level, program load, program edit, compressor, multi-function adjust, bypass, tempo tap.
- The Adjust knob not only allows instant manipulation of the critical parameters of each preset, it is also used for selecting, editing, and cueing programs as well.
- Up to eight adjustable parameters are available in each program
- Adjustable parameters for each program include Mix, Adjust, EQ and Level/Balance

**Digital Compressor**
- Independent control over Ratio, Threshold, Attack and Release are provided
- The compressor can be used to subtly reduce volume changes and to increase the volume of low level signals — at more extreme settings the compressor acts as a limiter that prevent the volume from exceeding a certain level
- The compressor is available in any program and is situated in front of any other effects in the wet component signal path — it has no effect on the dry signal coming out of the Mix control or the Bypass signal when Bypass Mode is set to dry.

**Conveniences**
- Assignable bypass mode allows push button or footswitch selection of dry or muted audio output
- Cue Program Mode allows you to jump from one program to another — simply set the adjust knob to the desired program and hit load at the appropriate time—ideal for live performance or mixing in the studio
- Built in power supply, switchable between 120/240 volts AC, 50 - 60Hz.

**Display**
- Easy to read LED displays indicate current Effects and Routing, Edit Parameters, program Load, MIDI, Store and tempo Tap
- 3-stage headroom indicators are provided for the left and right channels
- A 4-stage compressor gain reduction indicator is also provided

---

Lexicon introduced the first digital audio processor in 1971 and followed with the first commercially successful digital reverberation unit for professional audio studios in 1979. Presently, the “Lexicon sound” is heard on more than 80% of the world’s most successful music albums and theatrical soundtracks.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

**LEXICON**

**MPX-550**

**24-Bit Dual Channel Processor**

The MPX-550 offers the same true stereo, dual channel processing found in the MPX-110 and MPX-200 plus adds a host of professional features including balanced analog I/O, sixteen adjustable parameters per preset and four realtime control knobs not to mention the unmistakable Lexicon sound - all at an affordable price. The unit’s deeper editing capabilities are aided visually by a 150 x 32 backlit LCD display with adjustable contrast. The MPX-550 also features an additional bank of 25 presets dedicated to compression effects. For users craving that authentic Lexicon sound along with the need to have detailed control over a sound’s color and shape, the MPX-550 delivers.

**SAME FEATURES AS THE MPX200 PLUS—**

**General**
- 255 presets and 64 user presets including a bank named Compressor which features dedicated presets for compressor—only as and combination compressor/reverb presets with parallel (dual stereo) routing
- 24-bit 44.1kHz and 48kHz operation

**Enhanced Digital Compressor**
- Dedicated stereo compressor acts on both L and R channels simultaneously and uses the sum of the two channels as its trigger
- Use as a single-channel compressor with side-chain trigger by feeding one channel a level that is at least 6 dB hotter than the other, thus making that channel’s signal dominate the compressor’s performance
- Gain reduction is indicated by a descending bar between the two input level meters
- The Compressor/Reverb presets are constructed to give the user both a reverb component and a zero-delay “dry” component, with the compressor acting on both

**Enhanced Tap Tempo**
- The Tap button responds to consecutive presses instead of every other press - this allows end users to more accurately tap in tempos for delay, echo, etc...

**Graphics Display**
- 150 x 32 backlit LCD display gives you program and system status at a glance, or easy access to the edit pages in each program

**Easy Front Panel Operation**
- The Program Select knob allows you to scroll through stored programs, and jump between banks for fast and easy selection
- Each program has up to 16 adjustable parameters, organized into “edit pages” consisting of as many as four parameters each - the Edit button cycles through all available pages for the current program
- Four dedicated edit knobs corresponding to displayed parameters make editing easy

**Conveniences**
- Auto-switching power supply, 90-250v AC, 50/60Hz
- Switchable Locked Mode is available to load only specialized User programs—ideal for live sound and fixed installations

**Inputs And Outputs**
- Balanced XLR and 1/4” analog inputs/outputs as well as coaxial S/PDIF digital I/O

**MPX-R1**

**MIDI Remote Controller for the MPX-550 and MPX-1**

With the MPX-550 or MPX-1 in the effects loop of your stage rig and an MPX-R1 on the floor, you’re ready to take your favorite studio effects on the road. A single cable provides power and two-way communication with the processors.

- Dedicated stomp-box style buttons and LEDs give you complete access to the entire arsenal of MX-550/M PX-1 effects
- Programmable expression pedal with toe switch

- MIDI program select and control
- Dedicated footswitches for TAP tempo and A/B switching
- All-metal chassis, pedal and switches

**EQUIPMENT LEASING AVAILABLE**
Multi-Effects Processor

The MPX-1 represents the benchmark of high-quality audio effects, interactive control, intuitive operation and affordability. The MPX-1 combines Lexicon’s proprietary LexiChip dedicated to uncompromised stereo reverb algorithms, with a second 32-bit DSP that provides up to 4 of additional effects - each with a true stereo audio path. A large library of factory programs, based on 56 algorithms, provide a versatile array of sounds designed for a wide variety of performance, sound design and production applications. The MPX-1 also features in-depth editing of every parameter and complete flexibility of routing and effect order in every program allowing you to take your sound as far as you want to go quickly and creatively.

FEATURES

**General**
- 200 preset programs designed for a wide variety of audio sources and applications plus 50 user-definable presets.
- A built-in DataBase function makes it easy to find the program that best suits your needs - and because the database is completely user-definable, you can reorganize all 250 programs any way you want.

**Two Separate DSP Processors**
- Combines Lexicon’s proprietary LexiChip dedicated to delivering uncompromised Lexicon stereo reverb or ambience with a separate, fast-math DSP processor that provides up to 4 additional stereo effects.

**Instant Access**
- Six effect types, based around 56 effects algorithms, are accessible via back-lit buttons on the front panel including 32-bit parametric EQ, Pitch, Chorus, EQ, Modulation, Delay (including looping and ducking) and world-class reverb effects.
- Up to 5 independent stereo effects are available simultaneously and are routable in any configuration, with individual mix and gain for each effect.
- Effects can be placed in any order by dragging and dropping them on a visual map.
- Dedicated Mix and Patch buttons give you instant access to mix and level settings of any or all effects, and the patch system.

**Interactive Front Panel**
- A numeric display makes program and patch numbers highly visible while an alphanumeric display shows program, parameter and routing values.
- Bypass button lets you toggle master bypass
- An A/B glide button lets you morph between effects or parameter variations.

**Tempo Control**
- A Tempo LED flashes at the current tempo in any program that utilizes delay times or modulation rates – a Tap button lets you change tempo on-the-fly.
- Tempo parameters will synchronize to incoming MIDI clock and MIDI clock can also be transmit based on Tap tempo.

**Editing**
- “Soft row” mode offers direct access to the most useful parameters of any program - so you can fine-tune any preset without having to enter a separate Edit mode.
- When you want to completely restructure a program, or create a new one from scratch, the Edit mode lets you dive as deeply as you want into an extensive array of effect and program parameters.

**Built-in MIDI Arpeggiator**
- MIDI arpeggiator processes held notes received from an external sound module to the MIDI in and transmits them as arpeggios through MIDI out. There are two presets, as well as a full range of parameters for building an arpeggio from scratch.

**Patch System**
- The Patch System provides more than 150 internal and standard MIDI controllers that can be assigned to modulate any effect parameter – up to 5 patches are available per program.
- Internal controllers include: two LFOs, two ADRs, two Envelope Followers, Random Generator, Arpeggiator, A/B Glide (morph), Tempo and Sample and Hold Generator.
- MIDI Learn feature lets the MPX 1 recognize a MIDI control as a patch source.

**Audio Connections**
- Balanced XLR and 1/4” TRS analog inputs and outputs
- -10dB to +4dB switchable levels
- 24-bit coaxial S/PDIF digital I/O

**Footswitch/Footpedal**
- A 1/4” TRS input connector will accept three simultaneous footswitches
- Another 1/4” TRS connector is provided for a footpedal

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

The PCM 81 is Lexicon’s top of the line, single rack space Digital Effects Processor. It has everything that top recording studios require in a multi-effects processor and more. Lexicon’s unique Dual-DSP Platform enables the PCM 81 to create the most flexible effects combined with superb reverberation based on the legendary Lexicon 224, PCM 60 and PCM 70 processors. The PCM 81 exhibits extraordinary sonic clarity with 24-bit internal processing, 24-bit A-to-D and D-to-A converters, balanced XLR and 1/4” inputs and outputs as well as 24-bit AES/EBU and S/PDIF digital I/O. An enormous selection of sounds are 300 factory presets are on-hand based on 17 algorithms that combine an uncompromising stereo reverb or ambience effect with a multi-voice effect. Two modes of editing gives you a choice of quickly grabbing a program's most pertinent parameters or diving way down deep where you can build your own presets from the ground up. Dynamic Patching makes it possible to route any of 150 sources to any parameter delivering a truly unique set of capabilities, from realtime and tempo-based modulating of sounds, to producing unusual and ethereal spaces, to altering the attack and decay characteristics of the sounds.

**FEATURES**

- **Presets**
  - A library of 300 carefully crafted factory presets (plus 50 user-definable presets) range from lush and beautiful to completely over the top and cover a wide variety of applications from performance, recording and remixing, to effects designed specifically for sound design, Foley and video post.
  - Each preset gives you instant access to Pitch, Reverb, Ambience, sophisticated Modulators, over 21 seconds of Delay time as well as Dynamic Spatialization effects for 2-channel or surround applications.
  - There are a total of 17 algorithms separated into three general classes: 4-Voice, 6-Voice and Pitch – each includes an uncompromised stereo reverb effect, along with several voices of additional stereo effects.
  - 4-Voice algorithms combine a specific type of reverberation with a 4-voice, general purpose stereo effect “toolbox”, as well as additional post-processing for the reverb.
  - 6-Voice algorithms combine a specific type of reverb with a specialized 6-voice stereo effect.
  - Pitch algorithms offer a unique type of pitch shifting, combined with an uncompromised Lexicon reverb.

- **Pitch Correct**
  - Pitch Correct provides a simple yet powerful set of tools for correcting off-pitch melody tracks within a range of up to three octaves (up or down). The Pitch Detect display shows the pitch of the input source in real time in chromatic note and +/- cents. The Correction parameter can be patched to a switch or the ADJUST knob, or even to a MIDI keyboard.

- **3-D Dynamic Spatialization**
  - These effects utilize two independent spatial processors that allow you to place effects virtually anywhere between, or even beyond, your loudspeakers.
  - By dynamically controlling spatial effects, you can create different spaces that change along with the music – For example, when playing sustained chords through Steered Rear, the PCM 81 automatically steers the reverb around you (into full rear in surround sound) when the input audio decays past the threshold.

- **The Interface**
  - The large, 2-line fluorescent display is easy to see from any angle whether the surroundings are bright or dark.
  - The ubiquitous Lexicon Adjust knob is on-hand for controlling a program’s most critical parameters.
  - A special Info mode allows you to press and hold any button to find out what its function is, or to get status information such as the name of the running effect, current tempo rate, etc.

- **Pro and Go Edit Modes**
  - In Go mode, up to 10 of the most useful parameters within an effect are grouped for instant access via the front panel Edit button – Each preset has a selected set of Go mode parameters which let you make value changes to the effect without losing the original identity of the sound.
  - Pro mode gives you access to the full parameter editing matrix (as many as 100) for the algorithm of any loaded effect. In this mode, you can access a complete set of Modulation and Patching parameters, create your own ADJUST knob patch and assign your own Go mode parameters.
**Dynamic Patching Matrix**

- Dynamic Patching allows you to map data from any of 143 possible control sources to any effect parameter (destination)
- Up to 10 patches can be created per effect, each with as many as 8 pivot points allowing very complex and mind-altering modulation paths
- You can patch multiple parameters to a single controller, or patch multiple sources to a single destination
- There are three types of Sources available:
  - Internal controllers include Tempo (both internal Tap and external MIDI clock), LFO (Sine, Cosine, Square, Triangle, Pulse, Sawtooth), Time Switches, Latch, AR Generator, and Left & Right Envelope Followers
  - MIDI Modulators such as Pitch Bend, Velocity and After Touch
  - Or any of 126 MIDI Controllers as well as external sources such as footswitches and footpedals

**Tempo Control**

- The Tap tempo control offers the ability to create independent rhythmic values per parameter within the same program based on note values or absolute time.
- Tempo can also be ‘dialed-in’ so you can set the tempo in exact beats per minute.
- You can generate MIDI clock from your tap, as well as receive MIDI tempo from an external sequencer or drum machine.
- Tempo control LFO speeds and Time Switch controls. Thus all of your modulations can be synchronized with your music.

**Conveniences**

- The PCM CIA card slot accepts RAM cards that can be used to store as many as 2350 of your own programs on a 1 Meg card.
- The Compare button allows you to compare the active version of the current effect with the most recently stored version.
- The Bypass switch can be used to mute the audio output or bypass an effect depending on the setting of each program’s bypass parameter.
- Standard 3-pin IEC power connector with 100-240V, 50-60Hz automatic switching power supply to correct voltage range.

**Inputs & Outputs**

- Balanced XLR-1/4” combo connector inputs and separate balanced XLR and 1/4” outputs
- Full AES/EBU (XLR) and coaxial S/PDIF digital I/O - the AES/EBU and S/PDIF outputs can be used simultaneously
- Analog and digital inputs can be mixed together

**Effects**

- Fans of classic Lexicon sounds will appreciate updated versions of effects from the legendary PCM 70, like Tiled Room and Concert Hall.
- A wide variety of phone and microphone presets for Sound Design, Surround delays for film, Orchestral Reverbs, Complex EQ, Special FX and Cyber FX
- Presets set up for delays that automatically lock to incoming MIDI clock
- Presets optimized for Keyboards, Guitar, Drums, Vocals and Orchestral instruments.

**Conveniences**

- Pitch Shifting algorithms include doubling, quadruple-tracking, chorus, as well as pitch correction
- Pitch Correct provides a simple yet powerful set of tools for correcting out of tune melody tracks within a range of up to three octaves (up or down). The Pitch Detect display shows the pitch of the input source in real time in chromatic note and cents. The Correction parameter can be patched to a switch or the ADJUST knob, or even to a MIDI keyboard.

**Optional PCMCIA FX Cards**

- 287 PROCESORS

**Dual FX Algorithm Card**

- 25 additional algorithms and 250 additional presets.
- Built-in Submixer for completely separate control of inputs, outputs, and routing of reverbs and effects. Allows seamless, continuous and dynamic transition between Serial and Parallel effects routing (controllable by the Adjust knob, footpedal or MIDI)
- Processed Reverb - extensive tailoring of the effects with presets designed for several applications: Drums, Vocals, Guitars, and other music related needs.
- Analog Sound Modeling Presets: two-track tape echo & rolloff, tape flanging, room mic placement and other “Classic Effects”.

**Music FX Preset Card**

- 100 powerful Presets for a wide variety of musical applications designed by David Rosenthal (keyboardist for Billy Joel’s River of Dreams Tour).
- Includes delays that automatically lock to incoming MIDI clock, presets optimized for keyboards, guitar, drums vocals and orchestral instruments as well as performance and stage applications utilizing MIDI and Dynamic controllers for expressiveness.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
The PCM 91 Digital Reverberator offers Lexicon's highest quality reverbs in a compact, affordable package with a powerful interface that allows easy access to the plethora of powerful programming capabilities. It combines the same user-interface, editing, dynamic patching and I/O capabilities of the PCM 81 with a unique dual-processor architecture that features two of Lexicon's proprietary reverb DSP ICs, the Lexichip, designed to deliver exceptional reverb quality along with unprecedented flexibility and control. The PCM 91 offers 450 reverberation programs, each of which has been designed specifically with real-world music production, live performance, sound design and video post-production applications in mind. All of the features of the critically acclaimed PCM 90 are included, plus onboard Dual Reverb algorithms and presets with dynamic spatialization effects for 2-channel or surround sound applications. Unique to the PCM 91 is the implementation of four custom controllers that act as four additional Adjust knobs capable of accessing a programs most critical parameters. The onboard Keyword search allows you to find appropriate programs by application.

**Reverb Realism**
- Built-in library of 450 factory presets and 100 User preset locations containing Lexicon's highest quality reverb effects that simulate realistic halls, rooms and plates, and let you create completely natural, or other-worldly spaces
- Create incredibly realistic small spaces for music or film work - from the ambience of a phone booth to a very small drum room

**15 Algorithms**
- 5 stereo algorithms to create different types of reverb effects and 10 Dual Reverb algorithms which offer superb dual reverb and cascade configured stereo effects.
- Single algorithm include an uncompromised stereo reverb effect with selected "tools" for ambience, post-processing, compression/expansion, as well as modulation and patching parameters which are common to each algorithm
- Dual algorithms contain two independent reverb blocks, as well as the full set of modulation and patch features in the single effects

**Four Custom Controllers**
- These controllers are placed on the Soft Row and are a combination of one or more parameters patched together, each with their own individual scaling values. It's like having four additional Adjust Knob controls on the Soft Row.

**Intelligent Interface**
- The KeyWord Search function allows you to find a group of programs designed for a given application - for example if you choose the Live PA KeyWord, the PCM 91 will automatically locate all the presets that have been optimized for that application. There are 50 keywords in all, including four user-definable groups of effects.
- The History Of Effects Loaded feature allows you to review the last ten effects loaded – useful for when you want to return to an effect you were using earlier, but can't remember its name or location.
- If you want to know more about the function of a particular button (without actually executing any action) press and hold the button down and message with an explanation will appear on the display.

**Same As The PCM81**
- The Adjust knob allows realtime control of a presets most important parameters without ever going into the Edit mode.
- Pro and Go editing modes offer you the choice between easy access to a programs most important parameters or full access to all of a programs parameters and build an effect from its basic algorithm up
- Dynamic Patching provides an expressive means of modulating sounds as well as the ability to alter the attack and decay characteristics of the sound.
- Tap Tempo with independent rhythmic variations or dial in tempos in BPM.
- Dynamic Spatialization with two independent spatial processors that allow you to place effects virtually anywhere between your loudspeakers - or even beyond them.
- PCMCIA Card Slot for user-edited preset and system set up storage.
- Balanced XLR-1/4" combo connector inputs and balanced XLR and 1/4" outs.
- Full AES/EBU (XLR) and coaxial S/PDIF digital I/O
- 1/4" footswitch and foot controller inputs
Guitar Effects Processor

The MPX G2 is a hybrid Guitar Effects Processor that combines the highest quality 32-bit digital effects with analog distortion and overdrive as well as dedicated analog tone controls and an analog Speaker Simulator. The MPX G2 will work with any amp, allowing the guitarist to place authentic effects anywhere in the signal chain, without altering the amp’s basic tone. For direct recording or PA applications, the MPX G2 can be used without an amplifier as a stand-alone programmable analog preamp with effects. Two separate signal paths allow effects such as compression, wah and analog overdrive to be placed in front of the amp, while other effects like delay, chorus and reverb can be placed in the amp’s effects loop. The MPX G2’s effects include several authentic recreations of vintage stomp boxes such as Tube Screamer, Mu-tron III, Cry Baby, Dyna Comp and Space Echo, to name a few, and studio effects like JamMan, Intelligent Pitch Shifting, Tap Delay, Chorus, Flange, Rotary Speaker, Parametric EQ and Lexicon Reverb and Ambience. Lexicon’s optional MPX R1 MIDI Remote Control pedal board provides enhanced hands-off control of all the MPX G2 features, and creates a powerful, versatile system with two programmable relays to switch up to four amplifier channels and control up to seven effects at once.

**FEATURES**

- Two separate audio paths let you place effects in front of your amp or in the amp’s effects loop.
- Use without an amp as a stand-alone preamp with effects.
- All of the hardware of a custom guitar rig is built-in: a loop switcher with analog relay bypass, an effects router, analog and digital noise gates, chromatic tuner and an analog speaker simulator.
- Dynamic Gain, Lexicon’s analog distortion technology, provides screaming overdrive and warm distortion tones which can be used as an analog stomp box in front of your amp, or as a standalone preamp for direct recording or live performance.
- Effects can be synchronized with the music by assigning tempo control to modulation rates, delay times or any effect parameter. Tempos can be tapped with the Tap button (or an assigned controller) or dialed in. MIDI clock can be generated from your tempo, or you can receive MIDI clock from an external sequencer or drum machine.

**Inputs and Outputs**

- 1/4˝ guitar inputs are available on both the front and rear panels.
- 1/4˝ and XLR left and right outputs
- 1/4˝ effects send and 1/4˝ left and right effects returns.
- 1/4˝ stereo headphone output

**Effects**

- There are 76 effects organized into seven types. Any active effect can be accessed or bypassed just by pressing the front panel button.
- Effects can be placed in any order, simply by “dragging and dropping” them on a simple visual map.
- Gain and amp effects include Tone controls, Overdrive, Screamer and Distortion effects, along with a fully featured, programmable analog guitar preamp.
- Effect 1 and 2 contain Pitch Shift, Detune and Tremolo effects, Panners, Phasers, Compressors, and an assortment of wah and volume controls including recreations of classics like the Uni-Vibe, Dyna-Comp, Phase 90, Vox and Cry Baby wah.
- Chorus effects include classic chorus and flanger effects along with rotary speakers, and spatial panning effects.
- Delay effects include delay, echo, and ducking effects as well as a JamMan style looper with 20-second full-bandwidth delays.
- Reverb effects include a full complement of Lexicon’s classic true stereo reverberation and ambience effects. Dedicated processing resources are allocated to the reverb effects to ensure that you are always able to load an uncompromised reverb into any program, regardless of what other effects are loaded.

**Patches**

- The large 300 preset library is organized with a database that allows you to quickly search for programs based on their styles like Rock or Blues, by the type of effects such as OverDrive, or to find only programs suitable for stand alone operation.

**Editing**

- A front panel Soft Row button takes you directly to the most useful parameters of each program.
- Front panel System and Edit buttons give you access to all of the controls you need to completely reconfigure your system or to create completely new programs.
- The A/B glide function allows you to glide from one program to another with a single button push.

**Patching System**

- The MPX G2 patch system provides an assortment of controllers that can be assigned to any effect parameter (up to five per program). These controllers include LFOs, A/B Glide and Tempo.
- MIDI In, Out and Thru connectors allow you to control of A/B and Tap tempo, MIDI clock, as well as all effect parameters.
- Connecting an MPX R1 gives you stomp box control of all of the MPX G2 effects.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
The M 80 provides eight channels of discrete Class A microphone/instrument preamplification with low noise, balanced input transformers along with several unique features. An ultra low impedance mix bus is available for assigning and panning any of the 8 channels to a pair of stereo outputs. A high gain headphone output for monitoring the main bus. Another unique feature is the vintage warmth control provided on each channel that emulates the effect of analog tape saturation and vacuum tubes. Each channel is equipped with balanced XLR / 1/4˝ TRS mic/line inputs via Neutrik combo connectors and XLR balanced outputs. Separate 1/4˝ TRS send and return jacks are also on hand for inserting outboard dynamics processors.

**Each Channel Features**
- A discrete Class A input buffer followed by a twin servo gain stage provides ultra low noise and wide gain control allowing you to boost signal without increasing unwanted background noise
- Gain control provides 60dB of gain — the amplifier has inherent gain of 12dB thus delivering a total possible gain of 72dB
- +28 dBu of headroom provides a very wide dynamic range and excellent transient response
- Switchable 48v phantom power, phase (polarity) reverse, 20dB pad and a 6dB/oct low-cut filter at 80Hz
- Phantom power is supplied at a constant rate whether on one or all eight channels, ensuring condenser mics will be free of distortion associated with insufficient power
- Full Scale 7-segment LED metering (-36 dBu to +18dBu) plus a clip indicator

**Inputs and Outputs**
- XLR / 1/4˝ TRS Neutrik combo connectors accept inputs signals from mics or instruments
- XLR-balanced direct outputs will feed directly into the inputs of digital workstations as well as tape and disk-based multitrack recorders

**Vintage Warmth Control**
- The IDSS knob on each channel lets you add “warmth”, much like a vacuum tube or analog tape saturation, to the audio source by boosting the even harmonic series of the input signal

**Stereo Mix Bus (8X2 Mixer)**
- A stereo mix bus allows you to combine the input signals of each channel for monitoring or live remote/straight to 2 track recording
- Each channel features a L/R Mix Bus assign switch and a pan knob for placing each signal within the stereo spectrum
- A high output stereo headphone output with level control on the front panel enables you to monitor the mix bus in loud or ambient environments such as concert halls, clubs or in control rooms monitoring at high volume levels
- XLR mix outputs connectors accommodate both balanced and unbalanced signals
- The output level control has a range of -72dBu to +10dBu

**Inputs and Outputs**
- Servo balanced send/return jacks for inserting your favorite outboard gear

**Additional Features**
- An Auxiliary Input lets you daisy chain several M - 80s together allowing them to share the last stereo output in the chain
- Housed in a 2RU, steel chassis with a high quality blue anodized front panel
- An external power supply ensure a noise free preamp environment.

Eight Channel Mic Preamps with 24-Bit Digital Output

The DigiMAX LT and the DigiMAX each combine eight channels of the same pristine, discrete Class A dual servo mic preamps as the M-80, M P-20 and VX P along with eight channels of 24-bit ADAT Lightpipe digital outputs, to deliver the ideal front-end solutions for DAW's or for adding mic pre's to digital mixers and sound cards. The DigiMAX LT features balanced XLR, 1/4” mic/line inputs with inserts on every channel while the DigiMAX provides eight XLR balanced mic inputs with direct 1/4” TRS analog outputs as well as Hi-Z instrument inputs on channels one and two that allow direct connection of an electric guitar or bass. The DigiMAX also features an EQ Enhance and a transparent dual domain limiter on each channel as well as a choice of four stereo pairs of coaxial S/PDIF or AES/EBU outputs via a 9-pin d-sub connector. Both units are housed in rugged 1RU chassis with a sturdy front panel milled from 1/4” solid aluminum and blue anodized aluminum knobs.

- **They Both Feature**
  - **8 Dual Servo Mic Preamps**
    - Each channel contains a Class A discrete input buffer followed by a dual servo gain stage to provide ultra low noise, wide gain control and the ability to boost signal without increasing unwanted noise
    - Switchable phantom power and a 20dB pad are provided for each channel
  - **Inputs**
    - The DigiMAX LT features eight balanced mic/line inputs using Neutrik XLR / 1/4” TRS combo connectors
    - The DigiMAX features eight XLR-balanced mic inputs and Hi-Z 1/4” instrument inputs on channels 1 and 2
  - **8-Channel 24-bit ADAT Lightpipe Outputs**
    - A front panel switch lets you choose sample rates of 32, 44.1 and 48 kHz
    - An external clock switch, also on the front panel, works in conjunction with the Word Clock I/O, ensuring proper synchronization, and allowing either unit to slave to incoming timecode or be the master clock source within a digital system
  - **Power Supplies**
    - Linear internal power supply (DigiMAX LT); External, 1/3 rack space power supply (DigiMAX)

### DigiMAX LT Only
- 1/4” TRS insert points, provided on each channel, allow you to access external dynamics processors and EQs. Or, you can use the insert as an analog output by using a 1/4” TS connector

### DigiMAX Only
- A dual domain limiter, on each channel, detects RMS and peak levels to achieve instantaneous transparent limiting — the RMS stage acts like a high ratio compressor while the peak stage is used to prevent the input of the A/D converter from clipping
- A dual concentric rotary control on each channel adjusts the channel's gain (inner) as well as the threshold parameter of the dual domain limiter (outer)
- A phase (polarity) reverse switch is also provided on channels 1 and 2
- An EQ enhancement switch on each channel cuts 3dB of signal between 250Hz and 5kHz has a smoothing effect on mid-range heavy signals providing a flatter response characteristic
- 1/4” TRS analog outputs on each channel duplicate the signals sent to the digital outs allowing you to monitor channels with an analog mixer and avoid the latency issues often encountered with digital workstations
- A 9 pin connector is internally configurable to provide 4 stereo pairs of either AES/EBU or S/PDIF digital outputs

---

**System Performance**
- Headroom +22dB
- Analog Dynamic Range >120dB
- Noise Floor -94dB
- THD + Noise (unweighted) <0.009%
- Frequency Response 20Hz to 50kHz
- Power Supply Rejection >98dB

| 1/4 Instrument | Channels 1 & 2 |
| Polarity Reverse | Ch 1 & 2 only |
| EQ Enhance Switch | -3dB (250 Hz to 5kHz) |
| AES/EBU (XLR) Outputs | 4 stereo pairs |

**S/PDIF (RCA) Outputs**

- Requires DM006 optional breakout cable
- **AES/EBU (XLR) Outputs**
  - 4 stereo pairs**

---

**Power Supplies**

- Linear internal power supply (DigiMAX LT); External, 1/3 rack space power supply (DigiMAX)
The VXP is a class A channel strip/voice processor featuring a single channel of the M 80/M P20’s discrete class A microphone preamplifier with IDSS control, plus a preset compressor, expander, tunable de-esser, four-band semi parametric equalizer and separate brick wall peak limiter.

**Smart Compressor**

- 16 pre-set compression curves offer varying degrees of compression ranging from light to heavy, designed especially for processing voice
- Easy-to-use preset parameters derived from pro audio engineers provide a wide variety of “studio tested and proven” settings uniquely suited for virtually any singing style or vocal application

**Expander**

- The downward expander uses a dual concentric control with an adjustable threshold and ratio to provide seamless noise reduction ridding the signal of unwanted background noise

**De-Esser**

- A variable de-esser control with a range of 800Hz to 8kHz removes unwanted sibilance while allowing the signal to remain completely natural
- The threshold control makes setting the de-esser extremely precise and fine-tuning a simple process

**4 Band Semi-Parametric EQ**

- Fixed low and high shelving bands as well as sweepable low and high mid controls to provide total tonal control of the audio
- Each of the four bands feature a boost/cut range of ±12dB
- The low frequency control is fixed at 100 Hz while the high frequency is tuned to 12kHz with a shelving contour that accentuates the naturalness vocal signals.
- The low mid-range band is sweepable from 90Hz to 700Hz and the high mid-range is sweepable from 450 to 5.8kHz
- A switchable Q function for each of the mid band frequencies is selectable from .5 (wide) or by a factor of 2 (narrow)
- An 80Hz filter is also provided for eliminating low frequency noise

**Master Section**

- The peak limit circuit is a sonically transparent brick wall limiter with an adjustable threshold control to the point at which the output signal is not allowed to cross — ideal for recording to digital devices where signal overload is unacceptable
- An output level control, variable from -70 dB to +10 dB, allows gain make-up due to compression or decreasing the output signal after boosting frequencies in the EQ

**Optional Digital Output Card**

- Provides AES/EBU and S/PDIF outputs as well as an auxiliary 1/4” TRS analog line input that allows two VXP’s to share both sides of the A to D converter from one digital output card
- Selectable 96, 48 and 44.1 kHz sample rates
- Superior Crystal Semiconductor A to D conversion
- Psycho-acoustic dithering is provided to improve BIT resolution characteristics

**System Performance**

- **Dynamic Range**: >115dB
- **Noise Floor**: -97.2dB@12dB gain
- **THD + Noise**: <0.003% (0% IDSS)
- **Freq. Response**: 10Hz to 50kHz

Stereo Microphone Preamp with Mix Bus

The MP20 is essentially a single rack space, two channel version of the M-80 with the same crystal clear microphone / instrument preamplification capabilities, stereo mix bus and IDSS “vintage warmth” control.

- Identical technical Specifications as the M 80
- 1/4˝ high Z instrument input on the front panel
- XLR balanced input/output connectors as well as separate send and return jacks for inserting dynamics processors

BlueTube - Stereo Tube Mic/Instrument Preamp

The BlueTube is an affordable dual channel tube mic preamp that utilizes a true hybrid design that combines a 12AX7 tube stage with the same ultra low noise dual servo gain stage as its big brothers. The Blue Tube brings world class quality to a price that fits any budget.

- Front panel mic/instrument inputs use the Neutrik Combo connector, which lets you use either 1/4” TRS or XLR connectors within the same female input
- Input gain is variable from 0 to 40dB
- A Drive potentiometer controls the amount of signal routed to the 12AX7 vacuum tube from 0 to 30dB — Higher levels of tube saturation give the signal greater warmth and a richer sound
- Switchable phase (polarity) reverse and a 20dB pad are provided for each channel

DigiTube - Single Channel Tube Mic/Instrument Preamp

The DigiTUBE combines a single preamp channel of the BlueTube with a three band sweepable EQ and 24bit digital output. The mic preamp features 70dB of gain with 22dB of headroom. The three band EQ which is fully sweepable with overlapping bands for maximum tone shaping. A 24Bit Digital output via S/PDIF makes the Digitube the perfect front end for soundcards and digital recorders. The DigiTUBE offers XLR analog output and TRS Insert point for patching in a compressor or other outboard effect unit.

- Tube preamp with 70dB of Gain and 22dB of Headroom
- Fully sweepable 3 Band EQ with bypass switch
- Insert point after Mic Pre for patching a comp/limiter or other outboard device

- 24Bit Digital Output via S/PDIF
- Word clock input and output via BNC Connectors
- Rackmountable via optional BM RA Rack Adaptor

At the heart of each channel is the much respected THAT 4301S VCA which offers unsurpassed dynamic range with extremely low distortion characteristics and virtually no noise.

Eight Compressors/Limiters
- Each channel offers broad control over threshold, ratio, attack and release for each processor
- You can select between auto or manual attack and release curves and hard or soft knee compression types

Eight Dynamic Noise Gates
- A separate dynamic noise gate on each channel is provided with control over attack, threshold and release as well as a gate range switch
- The gate range switch allows you to select either 15dB or 60dB of level reduction. When the range switch is set at 15 dB, there will only be a slight change in the signal as it crosses the threshold which is useful in creating a more natural sounding blend or mix when gating many instruments at once

Channel Linking
- A link switch on each channel, allows you to link channels together in a subgroup to be controlled by a master processor (the channel furthest to the left in the subgroup)

Separate Bypass and Gain for Every Channel
- Each Channel has a Bypass for auditioning a signal 'before and after' processing with the compressor, limiter, or the Gate
- A Gain control is provided to make up any loss in signal level resulting from the amount of compression being applied

Compressor Sidechain
- The 1/4˝ TRS sidechain insert on each channel provides a send and return circuit that interrupts the signal that the compressor is using to determine the amount of gain reduction to apply
- An EQ inserted into the sidechain using 1/4˝ TRS connector, accommodates frequency selective processing that allows you to, among other things, use the compressor as a de-esser or for controlling the bass frequencies while leaving the higher frequencies unprocessed
- An audio control signal of a narrator or vocalist can be input to the sidechain. In this application, the audio that's passing through the compressor will automatically 'duck' when the narrator speaks or vocalist sings
- When multiple channels are Linked together, the Send of the Sidechain jack of the Master channel contains a mix of all the channels in the link — this allows you to control all of the linked channels with one sidechain insert

Gate Sidechain/Keying
- A separate 1/4˝ TRS Gate sidechain/Keying jack on each channel allows you to use an external sound to trigger the gate. An EQ or filter inserted at the gate key enables frequency-selective gating such as the lower frequency of a kick drum

Inputs and Outputs
- Each channel features 1/4˝ TRS inputs and outputs that will accept either balanced or unbalanced signals
- Each channel also features a switch on the rear panel for selecting the internal operating level between +4dBu to –10dBV

Additional Features
- Housed in a two RU, all-steel chassis
- Switchable power transformer for domestic and international use
Dual Channel Compressor, Limiter and Gate

The ACP22 is an award winning dual channel version of the esteemed ACP88 and like its big brother is the most comprehensive stereo compressor/gate in its price range today. The ACP22 offers a full array of inputs and outputs including balanced XLR, unbalanced 1/4” as well as independent send and return Sidechains for the compressor and gate of each channel. Unique to the ACP22 over its big brother, is a switchable Lo Pass filter which blocks high frequency content such as cymbals from triggering the gate.

FEATURES

- Balanced XLR and 1/4” unbalanced inputs and outputs
- The Lo Pass Sidechain filter is designed to make the noise gate less sensitive to high frequency instruments — extremely useful for gating drums as the filter will stop cymbals from opening up the tom or bass drum gates
- The filter is set for -6dB at 2.5kHz rolling off the high frequencies at -12dB/oct
- Stereo Channel Linking allows both processors to follow the setting of channel one which becomes the master
- 8-Segment LED meters can be switched to display either input or output levels

Smart Compressor / Limiter With Presets

The Blue Max is a stereo dynamics processor with 15 presets designed to offer you time-tested, compression and limiting settings used by experienced professional engineers. This dynamics processor was built with state of the art components to deliver crystal clear compression that will add punch and presence and can increase the apparent loudness of solo instruments or entire mixes. 1/4” inputs and outputs accommodate both stereo and mono operation. A high gain mono input is also provided allowing the BlueMax to be used as a preamp for Hi-Z instruments.

### FEATURES

- **15 Presets and Manual Override**
  - Any one of the 15 presets are accessed using a sixteen position rotary encoder which digitally switches the attack, release, ratio and threshold settings of simultaneously for each preset.
  - The 15 studio proven settings include:
    3 vocal presets, 8 instrument settings, 2 classic stereo settings, 2 special effects “squeeze guitar” and “pump”
  - Manual mode is also provided to give you full control over compression parameters, including: Input and Output gain, Attack/release times and ratio from 1:1 to 20:1 — In manual mode the threshold is fixed at -10dB

- **Inputs and Outputs**
  - 1/4” unbalanced inputs and outputs

- **Sidechain**
  - Sidechain insert allows the unit to be used for special processing applications such as de-essing and ducking

- **Metering**
  - Full LED metering for input and output levels are available as well as separate meters for gain reduction

- **Additional Features**
  - Internal operating levels are switchable from +4dBu to -10dBV
  - Internal power supply is internally switchable from 120 and 240 volt operation

Digital Stereo Graphic Equalizer Plus Dynamics Processing

The DEQ624 is a 24-bit digital two channel/stereo 31 band graphic equalizer with a number of features that extends its capabilities way beyond those of a standard graphic EQ including variable high and low pass filters, brick wall limiting and expansion (noise reduction) for each channel. Another feature, unique to the DEQ624 is a proprietary Adaptive Hum Cancellation algorithm that allows you to virtually eliminate 60-cycle ground hum at the flick of a switch. Although the DEQ624 is a digital processing unit, under digital control it has a familiar analog feel with 20mm digital encoding faders, knobs and switches — no menus or sub-menus to scroll through that will slow you down on the gig.

The rear panel of the DEQ624 provides balanced XLR and 1/4” TRS inputs and outputs as well as barrier strip terminals for permanent installation.

### Inputs and Outputs

- XLR and 1/4” TRS balanced inputs and outputs are provided as well as barrier strip terminals for permanent installations.

### Metering

- Each channel offers a 20-segment LED meter for output gain as well as 10-segment LED for gain reduction metering.

### Additional Features

- Internal power supply
- Custom molded extruded aluminum and steel chassis

### Preset Management

- A preset switch lets you toggle through four user-defined setups that include a "snapshot" of the settings of the front panel controls.
- A security lock-out feature, allows you to defeat the front panel controls of the unit which can be restored with user-created three-switch code combination.

### Graphic EQ

- 24-Bit digital signal processing provides accurate processing of analog signals.
- Each channel of the graphic EQ section is comprised of 31 digital EQ encoders (faders) centered in 1/3 octave increments from 20 Hz to 20 kHz.
- A range switch for each channel lets you choose one of three boost/cut ranges for the digital encoders – ±6dB, ±12dB or +12/-24dB. The selected range is easily identified by LED's located at the left side of the EQ section.
- Separate high and low pass filters are provided for each channel:
  - The low pass filter is variable from 10 kHz to 20 kHz.
  - The high pass filter is variable from 10 Hz to 410 Hz.
- To help minimize overall system noise, both channels have separate expanders with variable ratio and threshold controls.

Quad Series Dynamics Processors

Presonus’ Quad Series dynamics processors consist of the CL44 Four Channel Professional Compressor/Limiter and the GTX44 Four Channel Frequency Dependent Gate/Expander. Both units combine a digitally controlled, high quality analog signal path with the added flexibility of digital sidechain processing which provides vintage compressor emulations, ducking and spectral processing. The GTX44 features high and low pass filters, variable attack, release and hold parameters and key listen control. The CL44 has a variable Hi Pass Filter with an independent limiter and full featured compressor. Both units also feature stereo linking of adjacent channels as well as sidechain inserts, balanced XLR inputs and outputs and a single unbalanced 1/4” TRS I/O connector for each channel.

Inputs and Outputs
- Balanced XLR inputs and outputs
- Unbalanced inputs and outputs are also available via a single 1/4” TRS jack – A ‘flip’ button reverses the ‘tip’ and the ‘ring’ on the 1/4” jack to match the wiring of your mixer
- 1/4” TRS compressor sidechain insert with +4/-10dBv selector

Additional Features
- Adjacent channels are stereo linkable
- Internal Power Supply
- Backlit function buttons
- All steel chassis, one rack space

CL44 Features
- Fully adjustable attack, release, ratio, threshold control
- Variable High Pass Filter Allows you to pinpoint the frequency range in which the compressor operates
- Independent peak stop limiter
- Program dependent attack and release is also available using the Auto function that monitors audio over three separate time constants
- Compressor (upward expander) circuit raises an audio signal when it falls below a desired threshold – when used in conjunction with the compressor provides Automatic Gain Control
- Special ‘optical’ mode emulates the optical transfer curve found in vintage compressors
- 10 segment LED gain reduction meter

CL44 Panel Controls:
- Low Cut Filter: 20Hz-8kHz
- Threshold: +15dBu to -40dBu
- Ratio: 1:1 to 20:1
- Gain: -20dB to +20dB
- Compressor: 0% to 100%
- Attack: 0ms to 500ms
- Release: 0.05 to 3s
- Limit: -10dBu to 24dBu
- Optical Mode Switch
- Link 1-2 and 3-4 Switch
- Auto Switch
- Bypass Switch
- Gain Reduction Meters: LED -0.5dB to -24dB

GTX44 Features
- Variable threshold, ratio, attack, release hold and range controls can be applied to achieve noise-gating or downward expansion
- Adjustable High and Low Pass filters allow you to control the specific frequency range over which the gate will open – a sidechain monitor listen button lets you hear what frequency range the gate is operating within
- Duck mode allows for external input of microphone signal via Gate Key Input

Zero-Crossing Circuit
- Zero-Crossing function provides truly ‘clickless’ operation and chattering on gate settings that use quick attack-times

GTX44 Panel Controls:
- Low Cut Filter: 20Hz-8kHz
- Hi Cut Filter: 250Hz-20kHz
- Threshold: +15dBu to -40dBu
- Ratio: 1:1 to Gate
- Range: 0dB to -80dB
- Attack: 0ms to 500ms
- Hold: 0.01s to 1s
- Release: 0.05 to 25s
- Sidechain Monitor Switch
- Link 1-2 and 3-4 Switch
- Duck Switch
- Bypass Switch
- Performance
- Gain Reduction Meters: LED -3dB to -30dB

Partial rear view of GTX44
ACOUSTI-Q

**Tube Blender/Preamp**

The ACOUSTI-Q is an affordable tube-based preamp/blender for acoustic instruments featuring Presonus' award-winning dual-servo gain stage design. The ACOUSTI-Q is the perfect solution for acoustic musicians helping to bring their personal style and sound to new heights! The ACOUSTI-Q gives you the choice to use a single (piezo pick-up) or dual (piezo pick-up and mini-internal condenser microphones) source. With two sources, you can blend the signals to achieve the perfect mix. Guitars, woodwinds, basses, brass instruments virtually any acoustic instrument can benefit from the warm tube sound of the ACOUSTI-Q. The ACOUSTI-Q employs two dual-servo microphone preamplifiers with separate gain controls for input, a phase switch, a 12-volt phantom power supply to accommodate miniature, internal condenser microphones, a variable notch filter and sweepable mid-band EQ, as well as low and high shelving EQ controls. The master output section gives you the ability to set two separate volumes, one for normal volume, and the other, a boost, for solo playing.

- The front panel instrument input is designed to handle 1/4˝ TRS inputs from instruments equipped with both mini-condenser microphones and piezo pick-ups or 1/4˝ TS from instruments equipped with pick-ups only
- A dual concentric volume control allows you to blend the incoming signals of two inputs
- A 12AX7 vacuum tube, after the master output, harmonically enhances the final signal
- +12VDC Phantom power is available to the Ring of the 1/4˝ TRS input for use by mini-condenser microphones installed in some acoustic instruments
- A phase (polarity) reverse switch compensates for different connector hook-ups and can also be used to achieve an intentional 'out-of-phase' sound
- A tunable Notch Filter variable from 92 - 494 Hz ±12dB is available via a dual concentric knob for isolating and controlling lower frequencies that may be prone to feedback

**Rear Panel Connections**

- Balanced XLR main output
- A 1/4˝ TRS Effects Loop jack allows you to insert outboard effects (compressors, delay units, or reverbs). The Effects Loop can also be used as an additional output when used with a 1/4˝ TS cable
- An unbalanced 1/4˝ jack, operating at -20dB is provided as a signal source for Tuners and guitar amplifier inputs.
- A 1/4˝ footswitch input is also provided for muting the main output as well as facilitating the previously mentioned instantaneous boost or cut capabilities

**Two Preamps**

- A 3-band EQ is provided via a pair of dual concentric potentiometers
  - The dual mid-range control features a sweepable frequency range from 250Hz to 5kHz and a boost and cut of ±12dB
  - A brilliance control is provided with a fixed shelving frequency of 8kHz and a boost and cut of ±12dB
  - A bass control is also provided with a fixed shelving frequency of 100Hz and a boost and cut range of ±12dB
- The Master section also uses a dual concentric knob to control
  - The inner knob controls the Main output level from ~80dB to +20dB
  - The outer knob, labeled Cut/Boost footswitch, sets the amount, ±12db, that the output signal will be raised or lowered when used with an optional footswitch
  - A Mute switch defeats the Main output while allowing the signal to remain present at the -20dB AMP/TUNER output
- A 16 segment LED meter, with a range of 42dBu to +24dBu (clip), is provided for monitoring the unit's Main output level

**Footswitch**

- For standard pickups
- For mini condenser mics

**Notch Filter**

- 92 - 494 Hz (±12dB)
The AP13 is a dedicated preamp/processor specifically designed to blend the signals from acoustic instruments with two pickups. A single 1/4” TRS jack on the front panel, will accept both a very high input impedance piezo pickup and a microphone pickup simultaneously. Each of the two pickup signal paths feature powerful mixing and processing capabilities optimized for preserving the timbre of acoustic instruments while minimizing feedback, including individual Pan and Level controls, a variable Low Cut Filter and 7-band Graphic Equalizer. The AP13’s wide ranging I/O capabilities include a stereo effects loop and Insert for each channel, balanced 1/4” line-level and stereo XLR mic-level outputs, a stereo headphone output with level control as well as dedicated 1/4” piezo pickup and tuner output connectors.

**Outputs**
- Two pair of simultaneous, high-current cross-coupled balanced (mono switchable) stereo line drivers are provided
- The stereo 1/4” TRS line-level outputs are provided for driving amplifiers
- XLR mic-level outputs accommodate direct console patching
- A powerful stereo headphone amp with level control and Master Mute switch allow private auditioning and practice
- A 1/4” piezo output with a dedicated level control is available as an auxiliary output
- Separate 1/4” tuner output

**Flexible Outboard Processing**
- Individual send A/B controls adjust the amount of signal sent to 1/4” TS send jacks while a single stereo return control adjusts the signal entering the 1/4” TS return jacks
- The insert loops for channels A and B are accessed via 1/4” TRS jacks

**Each Channel Features**
- Bump-proof input trim controls feature slotted openings to allow quick adjustment using picks, fingernails or coins
- Red overload indicators for each type of pickup make gain set-up easy
- An invert switch solves the annoying problem of out-of-phase pickups
- 12dB/oct Low Cut Filters, variable from 15 to 250 Hz help eliminate unwanted bass frequencies
- The 7-band graphic EQs give you separate timbre control over each pickup with ±12dB boost/cut and a 2 octave bandwidth per band
- Pan and level controls allow you to mix both pickups into one perfectly blended stereo signal
- The Low Cut filter, 7-band graphic EQ, pan, level, send and return Level controls are all logically arranged along the front panel using smooth-acting oil-damped sliders to provide ease-of-use and graphical feedback

**System Performance**
- Frequency Response: 15-40 kHz, +0/- 3 dB
- Signal-to-Noise Ratio: +4 dBu, 20 kHz BW: 81 dB
- THD + Noise: (+4 dBu, 20-20 kHz): 0.03
- Equivalent Input Noise (EIN) 60dB gain: 120dB Inst Mic In to Send
- 115dB Inst PZO In to Send
DMS 22 2-Channel Microphone Preamplifier

The DMS 22 is a dual channel studio-grade mic preamp with 3-bands of equalization and a stereo mixer. Perfect for studio recording in direct-to-tape or hard disk applications with audio quality surpasses that found in most professional mixing consoles. The two balanced XLR microphone inputs features switchable 48V phantom power, polarity invert switch, and variable input gain. Balanced 1/4” TRS line outputs with level control is provided for each channel. Each channel also features a defeatable pan control sent to a separate stereo pair of XLR mix outputs, allowing a stereo mix of the two microphones when hard left/right is not appropriate. The 3-band EQ (High and Low shelving plus a fully parametric Mid-band) on each channel offers a broad palette of tonal control. A selectable Low Frequency Filter is available on each output channel to remove mic bumps and rumble that might interfere with a recording. The DMS 22 goes beyond the concept of a dual mic preamp in two ways—the built-in Mixer section, and the comprehensive Equalizer circuitry. This built-in mixer for the two channels eliminates the need for an external console when a portable setup is desired.

**Stereo Mixer and Outputs**
- Independent (defeatable) pan controls for each channel allow you send a stereo mix of the two mic channels into a pair of XLR mix outputs, adjustable by a stereo output level control — this can be useful when recording direct-to-tape or disk
- Balanced, line-level 1/4” TRS outputs with Level controls are provided for each channel
- The direct outputs and stereo mixer outputs are available simultaneously

**3-Band Equalizer**
- Each channel features low and high shelving bands and a parametric mid band, each with a boost/cut range of +12/-15 dB
- Patented Accelerated-Slope tone controls with steep phase-corrected slopes eliminate most of the traditional interaction between shelving and midband controls
- The low and high bands provide switch selectable shelving frequencies
  - Low – 50 Hz and 100 Hz
  - High – 7 kHz and 12 kHz
- Parametric bandpass Mid band
  - Sweepable frequency, variable from 95 to 4k Hz
  - 3-position Q control switchable to 0.33 / 1.0 / 2.0 oct bandwidths
- An EQ engage switch serves as a bypass control of the EQ section
- A selectable 15/50/100 Hz low frequency filter is provided on each channel
VP 12
Voice Processor

The VP 12 is a mic or line level voice processor incorporating a studio-grade microphone stage, low and hi cut filters, de-esser, gate/compressor, and two channels of parametric equalization.

- XLR Input with switchable 48V phantom power and input gain control
- Balanced screw terminal and 1/4˝ TRS line level inputs
- The line level input is designed to easily accept the output of wireless mic systems
- A front panel switch selects whether the mic, line, or the sum of both inputs will be processed
- The sum feature allows the line input to function as an aux input for additional outboard mic preamps
- Variable Low and Hi-Cut Filters tailor the overall frequency range to the specific application.
- A de-esser features variable frequency and threshold controls to help remove sibilance

Gate and Compressor Controls
- The gate features a variable threshold control and a 3-position ratio control that insures a smooth transition from active output to off without pumping artifacts
- The compressor features variable threshold and ratio controls
- Seven-segment gain reduction meter lets you know just how much the compressor is compressing

Two band Parametric EQ
- Each band has a multiplier switch that covers a frequency range of 10 to 20 kHz with +12 dB of Boost and -15 dB of Cut as well as a variable wide to narrow bandwidth control
- Because the filters are in series, setting the filters to the same frequency can double the amount of available boost or cut

Outputs
- Dual concentric front panel level controls for both the main and aux outputs
- Fully balanced XLR and screw terminal main outputs switchable to either line or mic level as well as fully balanced XLR and screw terminal aux outputs – main and aux outputs can both be used at the same time
- Independent six-segment LED meters for the main and aux outputs are accurately calibrated in peak dBU

Additional Features
- Independent bypass switches are provided for each processing section
- Each section of processing can be re-patched in any order via screw terminal jumpers on the rear of the unit

- All Rane products are certified to meet all local and federal agency regulations. Specific agency listings are available on applicable data sheets.
MS 1b Microphone Preamplifier

The Rane M S 1b is a compact microphone preamplifier designed for direct recording or for adding a microphone channel to line-level mixers. Go from either a dynamic, condenser or electret microphone to a line-level input with a minimum of noise, distortion, cost and hassle. The M S 1b utilizes one of the finest ultra low noise amplifier designs available. Featuring a true differential input with high common-mode rejection, use of the M S 1b guarantees performance usually found only in mixing consoles costing thousands of times as much.

- Can mount close to the mic to provide a local volume control, with a stronger signal that minimizes RFI and hum
- True high current cross-coupled XLR balanced output line driver designed to emulate a transformer output
- U.L. listed, C.S.A. certified, and CE certified

PS 1 High Fidelity Phono Preamplifier

The PS 1 Phono Stage is a complete professional RIAA phono graphic stereo preamplifier designed for studio and remote turntable applications as well as permanent archival installations such as libraries, schools and museums. The PS 1’s features include balanced screw terminal outputs capable of driving extremely long lines, the correct loading capacitors for all popular phono cartridges, and properly designed rumble filters that remove infrasonic signals without interfering with the audio signals. Ideal for expanding existing systems or for mixers which have no available phono inputs.

- Converts RIAA (phono) to line level with 0.1 dB RIAA accuracy
- Selectable cartridge loading capacitors
- 18 dB/oct rumble filter @ 15 Hz
- Cross-coupled high-current line drivers with balanced screw terminal & unbalanced RCA outputs
- Pristine audio path using audio grade components
- Linear tech and analog devices IC’S
- UL/CSA/CE remote power supply
DC 22 2-Channel Dynamic Controller

The DC 22 is an easy to use, dual channel, dynamic controller that combines high quality VCA compression and gating with downward expansion. The Compressor section features a variable threshold ratio control capable of subtle dynamics control to peak limiting. The Expander/Gate musically attenuates signals below the set threshold level. This in contrast to a Gate only which shuts off any signals below the threshold. The link switch allows the DC22 to be used for true stereo or independent dual channel processing. Compatible with balanced and unbalanced equipment. Designed for the working musician or DJ, The DC 22 provides reduced complexity without compromise in audio quality or dependability.

FEATURES

- Dual channel compressor/gate using high quality log RMS (averaging) detectors and VCA's
- A link switch allows the DC22 to be used as a true stereo processor with channel 1 controlling both channels

Inputs & Outputs

- Both XLR balanced and 1/4" TRS balanced/unbalanced inputs are provided
- An input gain switch, on the rear panel, allows you to connect professional (+4dBu) and consumer (-10dBv) equipment to the 1/4" TRS inputs
- XLR balanced and unbalanced 1/4" TS outputs connectors are also provided

Expander/Gate

- The adjustable gate is a downward expander (a compressor working in reverse) with a variable threshold control and fixed ratio of 2:1. When the signal drops below the set threshold, the gate threshold indicator lights and the output level is reduced by 2 dB for every 1 dB the input signal level drops

Compressor

- The compressor features variable threshold and a ratio controls
- The ratio control is variable from 1:1 up to ∞:1 to allow the compressor to be used for limiting applications including system protection and digital recording
- The ±15dB output level controls provide make-up gain lost due to compression

EQUIPMENT LEASING AVAILABLE
DC 24 2-Channel Dynamic Controller with Built-in Crossover

The DC 24 is a two-channel dynamics processor with independent expander/gate and compressor functions as well as dedicated limiter circuits that provide overall system protection on top of the other dynamics controls. Unique to the DC 24 is its built-in 24 dB/octave Linkwitz-Riley crossover which allows the unit to operate as a two-way speaker dividing network or for multiband dynamics control of a single audio source. Both balanced XLR and balanced/unbalanced 1/4” TRS inputs and outputs are provided as well as a 1/4” TRS side-chain insert on each channel.

### Same Features As The DC22 Plus—

- **Crossover**
  - 24 dB/octave Linkwitz-Riley crossover with two operating modes —
    - Low-High crossover mode (1 In/2 Out) allows the DC24 to be used as a two-way speaker dividing network along with a fully featured expander/gate, compressor and limiter on each output
    - Bandsplit Combine mode (1 In/1 Out) Provides multi-band dynamics processing by dividing a single channel of audio into two separate frequency ranges that can independently processed and then recombined into one channel

- **Inputs and Outputs**
  - RF filtered, active balanced XLR and bal/unbal 1/4” TRS inputs and outputs
  - -10 dBV / +4 dBu gain switch
  - 1/4” TRS side-chain inserts, on each channel, allow spectral dynamics and ducking control from external sources

- **Additional Features**
  - Passive hard-wire bypass switches ensure total bypass of the unit’s active circuitry in the event of power failure
  - All steel construction
  - UL/CSA remote power supply (120 VAC)

---

The following is taken from “Squeeze Me, Stretch Me: The DC 24 Users Guide” to expound the virtues of the DC-24’s split-band dynamics processing capabilities.

The DC 24 has two great advantages over other compressors – the crossover and the dual channels. It gives you complete control of the signal and processing of it. This is something that wasn’t available before in a single unit. One stereo or two mono comp/limiters and one crossover would be required to do what the DC 24 does in a single rack space.

Use it on bass guitar, piano, drums, vocals — anywhere you’ve used a compressor/limiter before. The DC 24 gives you more control and a less tortured sound. In fact, split-band processing works so well that a DC 24 sounds good compressing an entire mix (two required for stereo in split-band mode).

Of special interest are instruments which have large level differences in their different tonal ranges. String pops on a bass are one, but flute is another. The higher tones require more breath and are much louder than the lower. Another good application would be a drum mix or submix. A split-band compressor does a better job of smoothing the performance out.
PE 15 5-Band Parametric Equalizer

The PE 15 is a single channel parametric equalizer with five filter sections. Each of the five bands features independent control over the center frequency, bandwidth, as well as boost and cut. In addition, bands one and five can be switched to allow peaking or shelving characteristics. Special attention to the design of the state-variable filters allows any control to be operated in any order without affecting the others. Ideal for any sound shaping application from razor sharp notch filtering to broad-band program contouring.

**5-Band EQ Section**
- Five overlapping filters cover a center frequency range of four octaves
- Bandwidth for each band is variable from .03 to 1.5 octaves
- The boost/cut range of each band is variable from +15 dB to -20 dB
- Bands one and five are switchable to allow peak or shelving characteristics
- Individual bypass switches and LED indicators allow separate auditioning of each band

**Output Section**
- An overall Master Control Level covers a range of completely off to +20 dB
- A “hard-wire” bypass switch defeats all effects in the unit, ensuring that, in the event of a power failure, audio will continue to pass through the unit
- A system overload LED indicates a level of 18dBu or higher

**Low & High Cut Filters**
- A steep 18 dB/octave Low Cut Filter at 15 Hz, and a 12 dB/octave High Cut Filter at 33 kHz allow bandlimiting without using any of the five parametric bands

**Inputs and Outputs**
- RF filtered, active balanced/ unbalanced XLR and 1/4” TRS inputs
- Active balanced XLR and 1/4” TRS outputs

**Additional Features**
- UL/CSA/CE and 100/120/230 VAC remote power supplies
- All steel construction

**PE 17  5-Band Parametric Equalizer**

The PE 17 is a 5-band parametric equalizer/notch filter with advanced features and performance capabilities over the PE 15's already well thought out design. Some of these enhancements include separate in and out gain controls, 100% overlapping bands for all 5 EQ sections as well as improved dynamic range and noise performance. Special design techniques and components used in the design of the PE 17 guarantee residual noise levels below digital recording equipment. This makes the PE 17 ideally suited for any critical digital audio studio, sound reinforcement and broadcast applications.

### FEATURES

#### 5-Band EQ Section
- All five parametric bands are identical and offer 100% overlap with a frequency sweep range of 10 Hz to 20 kHz. This provides the unit with the flexibility to allow:
  - All bands to work together within a specific frequency range with summing of boost and cut
  - For each band to cover five separate parts of the audio spectrum or
  - Anywhere in between
- Each filter has a boost/cut range of +12 dB to -15 dB as well as continuously variable bandwidth control from as narrow as 1/30 of an octave to as wide as two octaves

#### Low and High Cut Filters
- Variable 12 dB/octave Low and High Cut band limiting Filters offer great flexibility for tailoring a sound systems overall frequency response to its exact application
  - The Low Cut Filter has a range of 10 Hz to 250 Hz
  - The High Cut Filter has a range of 3 kHz to 40 kHz

### Inputs and Outputs
- Balanced XLR and 1/4˝ TRS ins and outs
  - The input stage uses 0.1% matched resistors, to provide superior common-mode rejection of unwanted signals
  - The output stage uses “cross-coupled” high current line drivers which accommodate extremely long cable runs
- A 1/4˝ TRS patch I/O jack allows you to patch the unit into a console's insert points using a single 1/4˝ TRS cable

### Additional Features
- Separate ±12 dB input and output gain slide controls —
  - The In control is calibrated top-to-bottom ±12 dB, while the Out is calibrated just opposite. This allows you to move both sliders together, ensuring that you always maintain unity gain through the EQ section, while varying the gain/attenuation occurring at the unit's input or output
- A system overload LED illuminates when signals come within 3-4dB of clipping

GE 215/GE 130

Dual Channel 2/3 Octave and Single Channel 1/3 Octave Graphic Equalizers

The 2RU GE 215 dual 15-band and GE130 single 30-band graphic equalizers each feature Rane's innovative constant-Q (constant bandwidth) design which guarantees that the bandwidth of each filter is narrow enough to prevent unwanted interaction between filters, yet wide enough to produce exactly the type of correction curve required to control even the most unusual acoustical environment. Each active filter band features a boost/cut range of +12/-15dB on rugged 45 mm filter slider controls. Additional front panel controls and indicators, include an overall input level control, overload LED indicators as well as fail-safe hardware bypass switches for each channel. The rear of the unit provides both active balanced XLR as well as Euroblock screw terminal inputs and outputs.

EQ Section

- Dual channel, 15-band and single channel 30-band graphic EQs — frequency bands located on standard ISO center frequencies
- Constant-Q filter design minimizes interactions between adjacent bands
- +12/-15 dB boost/cut range
- 45 mm filter slider controls with grounded center detents and dust dams

Inputs and Outputs

- Fully active balanced XLR and Euroblock terminal inputs and outputs

Additional Features

- Input level control and overload indicators for each channel
- Built-in infrasonic and ultrasonic filters eliminate low-end rumble and RFI
- Hard-wire bypass switches are provided for each channel allowing direct comparison between the equalized and non-equalized signal – these switches require no power to operate, and provide automatic bypass in case of power failure.
- Output relays provide a brief turn-on delay, eliminating power-up thumps
- 2 RU high and only 5” deep
- UL/CSA/CE and 100/120/230 VAC remote power supplies
- Constructed from cold-rolled steel

Constant-Q Graphic EQ Design

Constant-Q graphic equalizers arose from the sound professional’s need for greater control with less interaction than previously possible with proportional-Q equalizers. Truth in slider position became a requirement. The curve traced out by the slider positions on constant-Q designs indeed represents the actual changes to the frequency response. On constant-Q designs they do not. Use a constant-Q graphic the same way as a proportional-Q graphic. Desired results are achieved quicker, with far less after-adjustment to the adjacent sliders thus, eliminating a phenomena Rane calls “equalizing the equalizer.”
Single and Dual Channel 1/3-Octave Graphic Equalizers

The GE 30 single-channel and GE 60 dual channel, 1/3 octave graphic equalizers represent Rane’s top of the line EQs recommended for studios and broadcast as well as the most demanding live sound reinforcement applications. They take the already professional capabilities and robustness of the GE 215 and 130 to the next level with added flexibility and advanced features. Both units feature long throw, 60 mm high resolution slide controls on each filter band, sweepable high and low band-limiting filters as well as switch-selectable active balanced or transformer balanced XLR and screw terminal outputs that will ensure that any stubborn system ground problems can be eliminated. Another important feature is the use of Interpolating Constant-Q filters, which allow you to equally boost or cut two adjacent frequency bands and achieve a frequency peaks (or dips) that are in between the center frequencies of the filters. The GE 30 also adds the ability to choose between of boost/cut or cut only operating modes.

Sweepable Band-Limiting Low Cut and High Cut Filters
- 12dB/oct sweepable filters from 10-250 Hz on the low end and from 3.1-40 kHz on the high end – restricting these signals can greatly improve system intelligibility

Additional Features
- Overload and signal present LEDs
- Steel security panel included

### EQ Section
- 60 mm long throw, high resolution slide controls on each filter band with grounded center detents
- Dual operating modes (GE 30 only) — boost/cut and cut-only (switchable on the rear panel) allows your EQ choice to be made at the job site, instead of having to anticipate the requirements beforehand

### Inputs and Outputs
- RF balanced XLR and screw terminal inputs and outputs
- The GE 60 also provides balanced 1/4” TRS inputs and outputs
- A push button, on the rear panel, allows you to select active balanced or transformer coupled balanced outputs
- Signal ground and chassis ground terminals are also provided to ensure complete interconnect flexibility

RANE

ME 15B/ ME 30B/ ME 60

microGraphic Equalizers

The Rane ME Series microGraphic Equalizers exist for people requiring the best equalizer value possible in the smallest space allowable. They offer the same high quality constant-Q performance as their long throw relatives, the GE’s. No compromises or trade-offs exist in selecting the microGraphics — Only the slider throw is different. All circuitry, components and specifications are essentially identical. The microGraphic series consists of three models — the ME 15B dual channel, 15-band 2/3-octave and the ME 30B, single channel 30-band 1/3-octave are housed in single space rack mount enclosures and feature a range switch that allows you to choose between ±12dB and ±6dB boot/cut. The ME 60 is a dual channel 30-band 1/3-octave model housed in a two space rack mount chassis that inherits the Interpolating Constant-Q design of its big brothers the GE 30 and the GE 60.

They All Feature

- Constant-Q design minimizes interactions between adjacent bands eliminating the need to “equalize the equalizer”
- Compact 20 mm sliders with dust dams detented and positively grounded at 0 dB
- The boost/cut range is switchable between ±6dB and ±12dB — The ±6 dB mode offers the highest slider resolution while the ±12 dB mode provides a wider range of control over system audio (ME 15B & 30B only)

ME 60 Adds

- The same Interpolating Constant-Q design as the GE 30 and GE 60
- Sweepable High and Low Cut band limiting Filters
- Unbalanced RCA inputs and outputs

Stereo Graphic Equalizers

The SEQ 30S and SEQ 30L are professional 30-band stereo graphic equalizers that use a single set of sliders to control the left and right channels simultaneously offering the ultimate in ease of use and stereo accuracy. Both units have exactly the same features and specs except that the SEQ 30S is a single space rack unit with 20 mm short-throw sliders, and the SEQ 30L is a dual space rack unit and employs 45mm long-throw sliders. Basic features include ±12dB boost/cut, input level controls, signal present and overload metering as well as XLR and 1/4” inputs and outputs.

30-band 1/3 octave Stereo Equalizers

- SEQ 30S uses short space-saving 20 mm sliders while the SEQ 30L uses long and more precise 45 mm sliders — all other features are identical
- A single set of faders controls the left and right channels simultaneously, maintaining true stereo tracking
- Fills the void for true stereo applications while delivering precise equalization down to a fraction of a dB
- A ±12dB input level control is provided along with a bypass switch, enabling easy gain comparisons between equalized and unequalized signal

Inputs and Outputs

- Balanced XLR inputs and outputs are provided as well as balanced 1/4” TRS inputs and unbalanced 1/4” TS outputs
- The XLR and 1/4” TS outputs can be used simultaneously to drive two sources such as an amplifier and a recorder

Additional Features

- Both units use low noise toroid output transformers that provides a wide 115 dB dynamic range
- ±4 dBu and overload indicators detect both input and post-EQ levels
- Internal power supply

Active Crossovers

The Rane AC 22 and AC 22B are both active crossovers configurable for stereo 2-way or mono 3-way operation using state-variable 4th-order Linkwitz-Riley filter alignments designed to minimize phase difficulties in the critical crossover regions. The model AC 22 utilizes 1/4” TRS connectors with balanced/unbalanced inputs and unbalanced outputs while the AC 22B uses XLR connectors with active balanced inputs and outputs. They both feature, variable input and output level controls, band mute switches as well as user-adjustable time delay circuits to ensure proper mechanical phase alignment of adjacent drivers.

**They Both feature**

- Two independent active crossover channels configurable as stereo 2-way or mono 3-way
- State-variable 4th-order Linkwitz-Riley filter alignments with 24 dB per octave slopes are employed to minimize phase difficulties in the critical crossover region
- Crossover frequencies are selected using a continuously variable control with 41 detents that provide mechanical reference of crossover settings

**Automatic 2-Way/3-Way Configuration**

- Both units are smart enough to know whether you want to run a 2-way stereo, or a single channel 3-way system by the way the plugs are inserted and how your system is to be configured — plugging a signal into the channel 1 input and nothing into the channel 2 input tells the unit that you are running a single channel system in mono 3-way mode, and therefore sets the unit up to be a single channel device

**Time Delay (Correction) Circuits**

- To ensure the mechanical and electrical phase alignment of adjacent drivers will be acoustically correct, adjustable time delay circuits are provided on the low (and mid when used in 3-way mode) outputs of each channel to compensate for any physical misalignment of the drivers
- The low delay circuit can be internally “transplanted” to the high output when necessary

**Stereo 2-Way mode**

- A mono sub mode switch on the rear panel, allows you to disconnect the channel 2 low output jack and sum it with the channel 1 low output jack

**Band Limiting Filters**

- Built-in 18 dB/octave low cut filters at 20 Hz virtually eliminates infrasonic rumble while provided overall system protection

**Inputs and Outputs**

- Both units features two inputs, to allow stereo operation and four outputs configured as dual low and high outputs in 2-way stereo mode or low, mid and high in 3-way mode
- The model AC 22 utilizes 1/4” TRS connectors with balanced/unbalanced inputs and unbalanced outputs
- The AC 22B uses XLR connectors with active balanced inputs and outputs

**Additional Features**

- An internal CD horn equalization modification is possible allowing a constant directivity horn to cover the same area as a long throw horn. This modification should be made by an experienced technician

Active Crossovers

The Rane AC 23 and AC 23B active crossovers with identical features and specs as the AC 22 and AC 22B but with the ability to be configured for stereo 2- or 3-way, or mono 4- or 5-way operation. The AC23, like the AC 22 is available with 1/4˝ TRS balanced/unbalanced inputs and 1/4˝ TS unbalanced outputs while the AC 23B is provided with XLR connectors with active balanced inputs and outputs.

Linkwitz-Riley Alignment

Simply put, a Linkwitz-Riley alignment is two cascaded 2nd-order Butterworth filters exhibiting identical phase characteristics on their Low pass and High pass Outputs. This guarantees in-phase outputs at all frequencies, mandatory for proper acoustic summing of common signals from adjacent drivers in the crossover region. An added benefit of this topology is steep 24 dB per octave rolloff slopes. A slope of this magnitude guarantees drivers designed to produce a specific range of frequencies, and no more, will not be driven past their limits, thereby minimizing distortion and driver fatigue.

Choosing the Right Configuration: Mono, Two-Channel Mono or Stereo?

Very few systems indeed will utilize a two channel crossover for the purpose of true stereo imaging. Discrete stereo channels which are run from the mixing board are usually used for panning effects and/or for separate equalization of left and right speaker stacks. Different sides of the room often require significantly different equalization due to varying room acoustics, dimensions, positioning of speaker stacks near walls, curtains and the like. Even though you may not plan to use stereo equalization or panning effects, it is recommended that your system utilize discrete crossover channels for each stack of speakers to ensure flexibility and control for consistent, optimum sound quality. For example, if you plan to run a multi-stack system mono three-way, use the AC 23 rather than the AC 22 for separate control over each set of speakers—especially since phase alignment may differ with each stack requiring separate time delay adjustments. Even with only a single system equalizer, the AC 23 can deliver the extra independent control which can make a difference in sound throughout the listening area. If all drivers are built into a single cabinet, or you are running bi-amped monitors, then the AC 22 is the one for you.
Stereo 2-Way and Stereo 3-Way Crossovers

The SAC 22 and SAC 23 employ the same state-variable 4th-order Linkwitz-Riley filters with steep 24 dB per octave rolloff slopes, as the AC22 and AC23 ensuring identical phase characteristics on its low pass and high pass outputs. The SAC 22 utilizes a single 31-position precision DC control voltage potentiometer to simultaneously select the low and high frequency points while the SAC 23 uses two 31-position controls divided between low/mid and mid/high crossover regions. This crossover circuit design provides a smart and easy way to biamp or triamp your audio system while at the same time ensuring consistent accuracy from channel-to-channel and unit-to-unit that provides a distinct advantage over continuously variable designs using ganged potentiometers which can yield large variations in channel-to-channel matching. Both units also feature active balanced XLR inputs and outputs.

They Both Feature
- 31-position detented stereo crossover controls provide the simplest way to biamp (SAC 22) or triamp (SAC 23) your system
- Same 4th order Linkwitz-Riley crossover design as the AC22/23
- An input level control allows decreasing the overall sensitivity of the entire sound system, including the mono subwoofer if one is used
- Separate low, high and mono subwoofer output level controls allow compensation for sensitivity variations in amplifiers and drivers

Inputs and Outputs
- Separate balanced XLR connectors are provided for the left and right inputs as well as the stereo low and high outputs. Additional left and right XLRs are provided for the mid outputs of the SAC 23

Subwoofer Output
- The mono subwoofer output, with a switchable 100 Hz Low Pass Filter, provides a separate mono sum of the left and right low outputs
- The subwoofer output may be used along with the left and right low outputs

- Ultrasonic: 40 kHz, 18 dB/Oct, Bessel

Indicators
- Green Signal Present LED: +4 dBu
- Red Over Load LED: 3 dB Before Clipping

Inputs & Outputs
- XLR Inputs: RF Filtered, Active Balanced
- XLR Outputs: Active Balanced
The Rane RA 30 Realtime Analyzer is a single rack space unit providing 30 bands of realtime frequency/amplitude information in a 5-LED per band format. The RA 30 serves three functions: Realtime Analyzer with Pink Noise generator, SPL Meter and Stereo VU Meter with Peak Hold.

**RTA (Real Time Analyzer) Mode**
- RTA Mode allows you to visually judge the character of the signal being generated by the built-in Pink Noise generator (or any sound) using the included measurement microphone. You are then able to adjust an external 1/3-octave equalizer for the optimum response of a sound system based on the readings presented by the LED display.
- RTA Mode divides broadband signals applied to either the mic or line inputs into 1/3-octave increments using IEC 61260 Class 2 filters. The outputs of the filters are displayed on the front panel to visually indicate the amplitude of each band, in user-selectable 1, 3 or 6 dB per LED scales.
- A Normalize button sets the 0 dB reference to the maximum band level.

**SPL (Sound Pressure Level) Meter Mode**
- Accurately displays SPL readings from a minimum of 51 dBA to a maximum of 120 dBA.
- In SPL Meter Mode, the display is read horizontally and calibrated to a 1 dB resolution using the included calibration mic which auto ranges for maximized operation.
- A- or C-weighting filters are user selectable.

**Stereo VU Meter Mode**
- Stereo VU mode is automatically enabled when the Line input source is selected.
- Levels are displayed as two horizontal rows of yellow LEDs with a 1.5 dB resolution: The top row corresponds to the Left Input, and the bottom row corresponds to the Right Input. Levels above +3 dB on the VU scale switch to the red LED rows.
- The VU can be calibrated to accommodate +4 dBu or -10 dBV signals.
- An instantaneous Peak Hold function with a 2-second hold time is also provided using a single LED display for each channel.
- Peak Hold is enabled or disabled by pressing the NORM button.
- If the held peak value is greater than +12 dB on the VU scale, the +12 dB LED’s stay illuminated. In this case, the Input gain can be decreased until the peak value is not “stuck” at +12 dB. For a calibrated peak measurement, the input gain can be set to minimum, which sets the 0 dB mark on the VU scale to +16 dBu.

**Remote Panel**
- Pink Noise Output jack with a recessed Pink Noise Level adjustment.
- Aux Mic Input (XLR)
- Stereo Line Inputs (1/4” balanced, can operate in mono by using the left input only).

**Mic 2 Condenser Microphone**
A professional quality back-electret condenser microphone with an omnidirectional pickup pattern. This microphone is supplied with each RA 30, and connects to the front panel Mic Input jack only. The tapered aluminum mic housing fits most mic stand clips (one is included), and comes complete with a 25 foot (7.6 meter) cable to facilitate distant placement of the mic from the analyzer. These factory tested mics are flat to within 1 dB from 20 Hz to 16 kHz. An Aux Mic Input is provided on the rear panel, facilitating the use of other microphones.
**SAMSON**

**S•com / S•com PLUS**

**Stereo Compressor / Limiters**

The S•com is a dual-channel, single rack space stereo compressor designed to control signal levels in a variety of applications. It's logical design and layout make it simple to understand and easy to use. Sonic integrity offers clean, distortion free audio, and a predictable, usable range of control from undetectable to clearly identifiable. Each channel combines an Expander/Gate, a Compressor/Limiter and a fully adjustable Enhancer. This unique circuit reduces noise, increases loudness and recovers high frequencies that might otherwise be compromised when audio is heavily compressed. The Spectra switch adds a mid-band boost to the detector circuit to help smooth out harsh vocals.

The S•com PLUS has basically the same features, but also offers a variable de-esser to improve audio quality by removing “S” from vocals and sibilance from overly bright sources such as cymbals. Both include a three-year extended warranty.

**FEATURES**

**Expander/Gate**
- The Expander/Gate features a variable Threshold control and switchable (fast/slow) Release time.
- Twin (open and closed) LEDs provide visual confirmation of the gate's operation

**Compressor / Limiter**
- Compressor/Limiter controls include variable threshold, ratio, attack, release and output level.
- Switchable AEG (Auto Envelope Generator) function continuously analyzes the audio input, and automatically adjusts the attack and release times based on the changing level.
- EFR (Enhanced Frequency Recovery) circuit helps restore high frequency content that can be lost when high gain reduction is applied.
- The SKD (Smart Knee Detector) automatically chooses between hard or soft knee compression curve—based on the program material. A hard knee curve activates the compression circuit only when the audio signal exceeds the threshold vs. a soft knee curve which gradually increases the compression ratio until the threshold is met.

**Metering**
- 12-segment LED meter is provided for Gain Reduction levels
- Another 12-segment LED meter can be switched to display input or output levels

**Inputs and Outputs**
- Servo balanced inputs and outputs on XLR and 1/4˝ connectors with switchable +4 and -10 operating levels.
- 1/4˝ key inputs and outputs

**Additional Features**
- A Key input switch, allows you to use an external audio source to control processing. For example, the signal from a kick drum trigger the amount of compression applied to a bass or you can use an EQ to specify which frequencies should be used to control dynamics.
- A link switch allows true stereo operation with channel one controlling the processing of both channels.

**S•COM Only**
- A Key Listen feature allows you to audition the Key input signal.
- An Enhancer level control allows you to adjust the amount of Enhanced Frequency Recovery being applied to the signal.
- In lieu of a dedicated de-esser, a switchable Spectra circuit allows you to add a mid-band boost to the detector circuit to tame sibilant vocals

**S•COM PLUS Only**
- A switchable de-esser circuit with variable level control, helps you tame harsh and sibilant vocals. A five segment LED meter shows you the amount of high frequency gain reduction being applied to the signal.
- A dedicated Peak Limiter ensures that output levels do not exceed the desired threshold level. Ideal for speaker protection in your PA rig and for recording and mixdown, especially to digital devices. An LED lets you know when the threshold level has been exceeded and the Limiter circuit is activated.
Four Channel Dynamics Processors

Compact and versatile, the single-rack space S•Com 4 and S•Gate 4 each four channels of high quality dynamics processing at an affordable price. The S•Com 4 features an Expander/Gate and Compressor/Limiter on each channel while the S•Gate 4 features an Expander/Gate/Ducker on each channel. Both units feature balanced XLR and 1/4˝ inputs and outputs and have a link function that allows you to configure each unit to work as dual stereo processors.

**S•Com 4**
- 4 Channel Compressor/Limiter, Expander/Gate with Enhancer
- Individual Threshold and Ratio controls on each channel
- SKD (Smart Knee Detector) circuit automatically switches from soft to hard knee based on the level of input signal applied
- EFR (Enhanced Frequency Recovery) circuit helps restore high frequency content that can be lost when high gain reduction is applied.
- Expander/Gate circuit with variable Trigger control and switchable Fast/Slow Release
- 5-Segment LED meters provided for input/output levels and Gain Reduction on each channel

**S•Gate 4**
- Four channel Expander/Gate/Ducker
- Each of the gate channels has variable Threshold, Attack, Release, and Range controls
- Variable High and Low Pass Filters, on each channel, allow frequency selective triggering
- Ducker feature allows you to automatically attenuate (as opposed to gate) the signal of a channel or stereo pair.
- Ducking can also be triggered by an external audio source using the 1/4˝ Key Input. A Key Listen switch lets you monitor the key input signal.
- 8-segment LED meter lets you monitor the amount of Gain Reduction on each channel

Both Feature
- Linkable in two stereo pairs. This allows the settings on channels 1 and 3 to control the processing of channels 2 and 4.
- Advanced circuit design utilizing low noise operational amps and high quality VCA's
- Servo balanced inputs/outputs on XLR and 1/4˝ connectors with switchable +4/ -10 operating levels.
- Three-year extended warranty

**S•Patch PLUS**

48-Point Patch Bay

Fully balanced and extremely durable, the S•Patch PLUS is a 48-point patch bay that makes all your connections easy. Offers normal, half-normal and Through Mode operation via the 3-way front panel mode switch. Balanced 1/4˝ TRS connectors. 19˝ rackmountable chassis.
SAMSON

S•vox

Stereo Voice Channel/Input Mixer

The S•Vox is a sophisticated stereo voice channel including a four input mixer with digital outputs. An ideal front-end device for hard disk recorders, the S•Vox features two high quality microphone preamps with 3-band EQ, an optical compressor and convenient insert points. Also available on the mic channels are line inputs specially matched for guitar and bass guitar outputs. The S•Vox also features two independent line inputs, which are ideal for keyboards or for a sub-mix input. The extensive master section offers control room monitoring, as well as analog and S/PDIF digital outputs.

**FEATURES**

**Channels 1 and 2**
- Channels 1 & 2 feature high-quality microphone preamps with switchable 48v phantom power and Phase Reversal switch is also provided for advanced two channel miking techniques.
- A 3-band EQ with sweepable mids and an In/Out switch that provides clean and silent toggling between equalized and non-equalized modes.
- Channels 1 and 2 also feature an optical compressor with variable threshold which provides wide-ranging high quality control of signal dynamics.
- EFR (Enhanced Frequency Recovery) circuit helps restore high frequency content lost when high gain reduction is applied.
- Convenient insert points are also provided
- Two 5-segment LED meters show accurate information of input or output signals so all signal changes can be monitored.

**Channels 3 & 4**
- Channels 3 and four provide line inputs, with volume and pan controls, that can be used for keyboards and other processors or they can be used to return a stereo sub mix.

**Inputs and Outputs**
- XLR mic, 1/4” line combo connector inputs are provided on the front panel for channels one and two
- S/PDIF inputs and outputs allow you to connect the S•Vox digitally to your DAW
- 1/4” TRS balanced mixer outputs are also provided on the rear panel for analog recording
- Analog control room/headphone outputs can also be used to monitor the signal before or after it enters the DAW

S•ZONE Stereo Multi-zone Mixer

The perfect solution for multi-zone audio installations, the S•Zone is a 4-channel / 4-zone stereo mixer featuring two mic/stereo line inputs with ducking, two stereo CD/line inputs, on-board speaker and headphone monitoring. It also offers Euroblock output connectors and remote volume control. Great for controlling and monitoring audio in restaurants, bars, clubs, houses of worship and office or boardroom situations.

- 4 channel stereo zone splitter/mixer
- 4 balanced stereo zone outputs
- Unique front panel monitor section with selectable zone monitor switch, headphone output and built-in super-speaker
- 2 Stereo CD/Line inputs with backlight zone assignment switches
- 2 Mic/Stereo Line inputs with backlight zone assignment switches
- Phantom power available on mic inputs
- Independent, adjustable Zone ducking on microphone inputs 1 and 2
- Independent 2-band equalizer on each zone output
- All stereo inputs and outputs switchable to mono
- 6 segment LED output VU meters for each zone
- Euroblock screw-terminal input and output connectors
- Remote VCA volume control capability for each zone output
- Internal voltage-selectable power supply
- Standard EIA single rack space chassis
**S• Curve 215 / S• Curve 131 / S• Curve 231**

Designed and built for professionals, S•Curve EQs feature easy to read LED displays and the extra features professionals need. S•Curve EQs are also exceptionally quiet, in fact up to 15dB lower than comparable EQs.

Three models available, the S•Curve 215 is a great, multi-purpose EQ packed with features and easy-to-read lighted display. The S•Curve 131 is for pros looking for a full 31-band EQ, while the S•Curve 231 is a totally comprehensive, feature-rich dual 31-band EQ for the most demanding applications. They all feature Constant Q circuitry, balanced XLR and 1/4˝ TRS inputs and outputs, LED faders and LED bar VU meters, boost/cut and cut only modes, and a bypass switch.

**S•Curve 215**  
Dual 15 Band Graphic EQ  
- 2/3 octave 15 band stereo graphic equalizer  
- High pass filter  
- Single rack space chassis with aluminum extrusion face plate

**S•Curve 131**  
Dual 15 Band Graphic EQ  
- 1/3 octave 31 band graphic equalizer  
- Variable Low cut filter  
- Single rack space chassis with aluminum extrusion face plate

**S•Curve 231**  
Dual 31 Band Graphic EQ  
- 1/3 octave 31 band stereo graphic equalizer  
- Switchable ±6dB or ±12dB filters  
- Variable Low and High cut filters  
- Double rack space chassis with aluminum extrusion face plate  
- Subwoofer output

**S•3-WAY Stereo/Mono Crossover**

The S•3-way is a versatile 2-way, 3-way and 4-way crossover with a difference. First, it's a perfect 2-way or 3-way stereo crossover. But its mode is also switchable for use as a 4-way mono crossover. Both feature 2ms of delay for time alignment, Mute and Phases switches for each output and XLR balanced outputs.

- Full-featured, Stereo 3-way, Mono 4-way electronic crossover
- The input gain features ±12dB range with LED metering and Peak indicators.
- The first crossover point is sweepable in three ranges from 35Hz to 800Hz, from 350Hz to 8kHz with the 10X-Multiplier switch engaged, or from 16Hz to 400Hz in 4 way low-mode.
- The second crossover point is sweepable from 175Hz to 4kHz or from 350Hz to 8kHz depending on the setting of the mode switch.
- A Delay section with up to 2ms of delay to time align low frequency outputs for improved phase response of any PA system
- Low, Mid and High Frequency outputs with ±6dB of gain control.

- Each output incorporates a Mute switch for monitoring the individual frequency bands and a phase switch to invert the polarity of the output.
- High-quality 41-position detent pots and backlit switches
- The global section features a variable threshold Limiter, a CD function (for constant directivity horns) and High Pass Filter.
C•Class is audio gear designed to work seamlessly with your digital setup— but it works outside your computer. Each C•Class component is optimized for today’s digital studio. When combined, C•Class components become an integrated suite of studio tools and effects. The “C” stands for compact. C•Class products bring the feel of analog equipment back to what has become a digital world. C•Class System integration features include ins and outs that are optimized for each other, new interlocking C•Class bumper-legs and cohesive industrial design.

Five processors in the C•Class series, the C•Valve is a tube preamp that adds the warmth of analog tubes to digital recordings; the C•Com 16 is a compact, full-featured compressor for the desktop; the C•Com Opti adds the magic of optical compression to recordings; the C•Control provides a control room matrix previously available only on consoles costing thousands; and the C-Que 8 is the perfect compact headphone amp.

**C•Valve:**
C•Valve is a tube mic/instrument preamp that will give you pure signal and silky sound up-front, where it counts. It features variable gain and variable tube process saturation for adding harmonics that give warmth to vocals and instruments. Regardless of which mic you use, it will maintain detail and transparency. 48-volt phantom power, phase and peak limiter round out the control set. A large analog VU output meter and a 6-segment LED input meter makes it easy to adjust the gain. Use its insert points along with a C•Class compressor for a direct path to a gorgeous front end sound. The C•Valve provides a digital output as well.

**C•COM 16:**
A Stereo Compressor/Limiter with 16 presets, the C•Com 16 gives you the fastest way to achieve useable dynamic control and the cleanest path for your audio. There are fifteen presets for the most standard situations and a manual mode for more critical adjustments when required. The C•Com 16's controls include variable threshold, ratio, attack, decay, release and output level. An enhancer provides the added character that is lost on heavy compression. Key output/input for outboard triggering or external filtering of the key signal. A 6-segment LED gain reduction meter and a 6-segment LED input/output meter provides visual monitoring of the circuit’s affect.

**C•COM Opti:** Optical compressors are sought after for the distinctive musicality they give to vocals, guitars and other instruments. A perfect complement to the computer’s hygienically clean makeup, the C•Com Opti’s adjustable threshold, ratio, attack, release and output controls are calibrated to generate a distinctive soft, rich character while providing magnificent control over dynamics. An enhancer provides the added character that is lost on heavy compression. Key output/input for outboard triggering or external filtering of the key signal. Large analog VU meter for output level or gain reduction.

**C•Control:**
The C•Control is a control room matrix selector and a unique solution for studios with multiple monitors, headphone mixes and tape or digital sources. Provides easy, heretofore impossible to achieve, instant monitor mixes or dubs. Select from three pairs of speakers with dim and mute. Use the Talkback mic to give instructions to the musicians in the headphone mix. And push-to-talk for slates to tape or disk. Includes a headphone amp with level control for private listening. The C•Control provides three sets of stereo ins and outs with dubbing capability to three discrete outputs.

**C•QUE 8:**
Further enhancing your control in the studio is the C•Que 8, a 4-Channel Headphone Amplifier with eight outputs. Independent volume on each channel makes this a truly versatile headphone amplifier. A 6-segment LED indicator shows the output for each channel. There’s a Main volume for overall level adjustment. An effective EQ shape circuit offers tone control of each channel and listeners can manage their own personalized mixes. Link outputs allow more than one C•Que 8 to be used when needed.
The S•Class Mini processors offer advanced signal processing in incredibly durable, portable enclosures. Very affordable, the S•Class Minis are perfect for home, on the road, or as a quick fix to a house sound system.

Eight processors in the series, they include the S•Direct DI box, S•Monitor for personal monitoring on stage or in the studio, S•Mix miniature 5-channel mixer, S•Amp four channel headphone amplifier, S•Convert for interfacing and level matching consumer and professional audio equipment, S•Combine a 2 to 1 mic combiner, and S•Split a 1-in 3-out mic splitter. Last, the S•Phantom is a 2-channel 48v phantom power supply with two balanced XLR mic inputs and two balanced XLR mic outputs and an AC adapter included.

**S•Combine**
2 to 1 mic combiner, this tiny box has two balanced-XLR mic inputs, one balanced-XLR mic output and includes an AC adapter.

**S•Monitor**
Elegant solution for personal monitoring on stage or in the studio
- XLR microphone input
- XLR microphone Thru, mic output to send to main mixer
- 1/4˝ stereo mix input
- Mic and mix volume control
- 2 headphone outputs
- 1/4˝ mix Thru for daisy chaining additional units
- Includes 12v AC adapter

**S•Direct**
- Rugged and sturdy - ideal for stage and studio.
- Switchable input level handles instrument and speaker levels.
- 48v phantom power or 9v operation with auto battery shut off
- Switchable ground lift switch
- Gold-plated balanced XLR output
- 1/4˝ link output for stereo using 2 boxes

**S•Mix**
- Miniature 5-channel mixer
- XLR balanced mic input with volume control
- Stereo 1/4-inch and RCA inputs with volume control
- RCA + 1/4-inch stereo outputs
- Includes 12v AC adapter

**S•Amp**
Four channel headphone amp ideal for home recording
- +4 / -10 audio level converters
- +4 XLR/ -10 RCA inputs with level control
- +4 XLR/ -10 RCA outputs
- Includes 12v AC adapter

**S•Phantom**
The S•Phantom is a 2-channel 48-volt phantom power supply with two balanced XLR mic inputs, two balanced XLR mic outputs and includes an AC adapter.

**S•Convert**
A “bump-box”, S•Convert is a problem solver for interfacing and level matching consumer and professional audio equipment
- +4 / -10 audio level converters
- 48v phantom power or 9v operation with auto battery shut off
- Transformer isolated output for clean signal. AC adapter included.
The 421M is a sophisticated audio gain controller—it makes quiet sounds louder and loud sounds quieter, just like a skilled audio engineer. Set the desired, “target” output level and the 421M gently boosts signals that drop below your target, and smoothly pulls back those that rise above it. Operation is automatic, precise, and completely transparent - no pumping or breathing.

The 421M is designed for installed sound systems, recording studios, broadcast facilities or any audio application where clarity and intelligibility are important. Since everybody speaks at different levels and works at varying distances from the microphone, intelligibility can vary from person to person or moment to moment. The 421M puts everyone on the same level. It is equally well suited to processing program material (for stereo applications two 421M’s may be linked). Program levels from soundtracks, CD jukeboxes, or broadcast audio go up and down unpredictably. The 421M gently and unobtrusively raises the low level audio and compresses the high level audio without side effects. It’s flexible input configuration will handle just about any audio source, from studio microphones to telephone-based paging systems.

How It Works

The 421M’s Automatic Gain Control (AGC) section incorporates a smooth-acting leveling amp working with a make-up gain stage coupled to the ratio control. Increasing the ratio makes your program denser, but output level stays constant no matter what happens at the input. This means you could talk two feet from a mic and have the same volume output that you had at 6” (and vice versa).

To deal with program noise, the 421M has a full-featured downward expander section that effectively quiets the output when input signal is absent. A separate “brick wall” peak limiter provides speaker and overload prevention. Last but not least, switchable speech curve filters are incorporated to optimize the 421M for voice range performance.

The 421M is set apart by it’s “smart” circuitry. Other AGC designs confuse noise and feedback with the program signal, boosting noise or cutting off soft-spoken phrases. Not on the 421M. Proprietary Auto Release Monitor circuit instantly distinguishes between “real” signals (music/speech), noise and feedback.

Metering system makes it easy to setup and operate. Parallel LED displays show input compared to output so it is obvious if the 421M is adding gain or subtracting. Because you can hear and see the net results of the leveling action there is no more guess work.

Stereo AGC-Leveler

Audio comes in all shapes and sizes. There's loud audio. There's quiet audio. There's pretty audio. There's ugly audio. There's music. There's speech. There are CD's mastered at drastically different levels. There are movie soundtracks where the effects are too loud and the dialog so soft you can't understand the words. Have you ever been on an airplane trying to watch the movie and found yourself repeatedly turning the volume up and down, up and down. Well, if you need to free yourself from unpredictable audio program levels then you need the 422 Stereo AGC/Leveler. With simple and intuitive controls, the 422 converts “all over the map” signal levels into smooth, intelligible, constant level audio. Unlike a compressor/limiter which only does half a job— it pushes down from the top, preventing overload and distortion in subsequent stages, but does nothing from the bottom (the low level signals that contribute so much to the intelligibility of speech and the enjoyment of music) — the 422 Stereo AGC-Leveler does it all. It makes the loud sounds quieter and the quiet sounds louder. And it does it with finesse. The 422 works without the side effects of compressors and limiters— no noise, pumping, and modulation.

FEATURES

Easy To Use, There Are Basically Only Four Controls

The 422 is a remarkably sophisticated volume controller that is amazingly easy to use:

- The first and most important is the target level control. This sets the volume where you want it. The 422’s input over output parallel VU meters simultaneously show you the unmodified input signal on top and the result of your target level setting just below it.

- The detector control increases the sensitivity of the AGC. As you turn it counterclockwise the 422 gently reaches down for the lower volume audio and brings it up.

- Set the target level and detector, then use the ratio control to increase or decrease the amount of leveling. At high ratios the program density increase results in a more “present” or “up front” sound. At low ratios the 422 performs subtle, yet effective, automatic gain riding.

- Last, adjust the peak limit control to create an absolute ceiling level. This is very handy for protecting amps and speakers in discos where DJ’s often succumb to a disease known as “volume creep” as the night wears on.

◆ Remote bypass port

Why Not Just Use A Compressor/Limiter?

When it comes to maintaining constant output levels, a compressor/limiter can only do half the job, at best. Sure, when things get too loud the comp/limiter kicks in, but what about when things get too soft? A comp/limiter is a top down device – pushes down from the top, preventing overload and distortion in subsequent stages. But what about the bottom up part of the deal? What about the low level signals that contribute so much to the intelligibility of speech and the enjoyment of music?

The 422 brings the volume to where you want it and keeps it there. It can be used in virtually any type of sound system for processing just about any kind of audio. Insert the 422 at a convenient patch point where you have line level audio. There are no annoying -10, +4dBu level matching switches – just give the 422 a basic line (not mic level) signal and you’re ready to go.

The 528E is a complete, self-contained voice processor with six separate functions: mic preamp, de-essing, compression/limiting, downward expansion, parametric EQ, and voice symmetry alignment. All six processors may be used simultaneously. Although the 528E is called a “Voice Processor”, it is perfectly suitable for any signal, vocal or not. Each function features a full complement of controls in an easy-to-use layout. Separate LED meters monitor mic gain and dynamics gain reduction functions thus facilitating quick and accurate adjustment of controls.

Works with any mic (or line input), enhancing vocal intelligibility, increases perceived loudness and “presence”. Great for voices as well as instruments and effects. Ideal for broadcast mics, voice-overs and music recording, and sound reinforcement for PA/Paging systems.

**Mic Preamp**
Variable gain up to 60dB and 48v phantom power. Switchable 15dB pad prevents distortion when close miking. Mic and line inputs are balanced-transformerless XLR and equipped with filters to prevent RFI.

**Voice Symmetry**
Corrects for excessive positive or negative signal peaks of the human voice. A simple in/out switch controls voice symmetry.

**De-esser**
Program controlled high-cut filter, 12 dB per octave senses and regulates selectable high frequencies to reduce or eliminate annoying sibilance and “lip smacking”. Controls are frequency and range (800 Hz to 8000 Hz).

**Compressor and Expander**
The compressor/limiter maintains uniform levels while the downward expander eliminates “pumping”, “breathing”, and noise build up. And because it’s program controlled, the 528E’s dynamic range processor responds quickly to transients, and gently to smaller level changes. Controls are expand and compress threshold (-30 to 0 dBu) and compression/limiter ratio (1:1 to 10:1).

**3-Band EQ**
3-band— 16 to 500 Hz (Low), 160 to 6300 Hz (Mid) 680 Hz to 22 kHz (High) parametric EQ has a variable bandwidth from .3 octave to 4 octaves, 15 dB boost/cut, and overlapping frequency ranges. “Leap frog” topology minimizes the number of amps in the signal path while ensuring that each band interacts with its neighbor in a desirable and musical fashion.

**Metering**
- Type: Multi-segment LED bar graph
- Output Level: -20 to +3 VU (0 VU = +4 dBu), VU calibrated, peak responding
- Gain Reduction: separate displays for de-esser, downward expander, compressor
- 0 to 20 dB per display.

A digital version of the 528E, the 628 rolls a premium quality mic preamp, 20-bit A/D and D/A converters, de-esser, expander/gate, compressor and parametric EQ into a single rack space unit. Perfect for any voice and many other instruments or sounds the 628 combines proven digital signal processing and an easy to use analog-like interface with the power of 8 finely-tuned factory and 119 user-programmable presets. An optional RC-1 remote controller allows selection of the first eleven presets, plus a bypass function, eliminating frantic dashes to the equipment rack.
Mic Preamp
The 628's first stage is a proprietary transformerless mic preamp incorporating filters to destroy radio frequency interference. A switchable 15 dB pad prevents overloading by hot condenser mics. A front panel LED indicates when phantom power is on. If you’re into high end tube preamps then you can select line level input from the 628's front panel and bypass the 628's preamp.

De-esser
Tuning the 628's de-esser to the offending frequency minimizes overly bright sibilance without resorting to brute force equalization to solve the problem. The Threshold control lets you precisely apply this frequency selective gain reduction. LED metering displays the degree of de-esser action.

Expander/Gate
Independent Ratio and Release controls allow tuning of the expander/gate to fit any studio noise or performer isolation requirements. An LED meter shows the amount of downward expansion or gating taking place. Most compressors use a “one size fits all” approach to compression; the design of the 628 reflects the realization that voice and mixed music require different design philosophies. While the control complement is simple (threshold, ratio and release), each has been highly optimized for voice work. The result is a compressor that can tightly control gain (from hard compression to gentle level control) with no side effects.

3-Band Parametric EQ
Three overlapping bands of digital parametric equalization round out the processing power of the 628. The EQ can notch out interference, boost low frequency energy, cut mid-range grunge and brighten a muddy, dull voice simultaneously. The 628’s parametric approach to equalization allows cuts and boosts exactly where needed to make every voice sound outstanding. Three 7-segment LEDS display all parameter values and preset numbers. An output level meter continuously monitors output. Selectable digital sample rates of 48, 44.1 and 32kHz. Balanced and unbalanced analog output as well as AES/EBU and S/PDIF digital outputs are provided.
The Gold Channel is a two channel digitally enhanced mic preamp/processor that uses premium 24-bit A-D converters, a high resolution 24-bit 96kHz signal path and a full range of powerful refinement tools to capture the highest quality audio to any analog or digital recorder. Features include an expander/gate, Softlimiter, compressor/limiter, EQ and other specialized tools, all accessible through an easy to use channel strip interface with high resolution metering. Standard Mic/Line inputs are provided as well as AES/EBU, Toslink, S/PDIF and ADAT digital I/Os. 200 User Preset memory locations allow you to customize settings and store them for instant recall – a real time saver when working with specific musicians over several sessions. In addition to delivering a pristine preamplification, the Gold Channel can also be inserted into a console or DAW where it can be used to process recorded material in 96kHz resolution.

**Auto Gain**
- Plug in a mic, select Auto Gain and press Enter. Let the musician or vocalist perform and press Enter when finished. Auto Gain has now set the optimal gain level.

**Channel Overview**
- Functions for each channel are on the front panel with a user friendly display:
  - Input Gain knob
  - Input Select – Mic, Line, Digital
  - Switchable +48V phantom, Phase Invert, Mute, Soft Clipper and Meter select
  - PAD – 0dB, 20dB, 40dB
  - Lo-Cut – 60Hz, 80Hz, 120Hz
- Separate bypass buttons are also provided for each processing block
- 14 segment LED meter is switchable between showing input and output right after the digital Master Output. Two 4 segment LED meters show gain reduction for the Expander and Compressor/Limiter

**Inputs and Outputs**
- Wordclock input (RCA)
- External control input
- Dual balanced XLR Mic/Line inputs and Line outputs with 24 bit A/D-D/A converters as well as AES/EBU, S/PDIF, Toslink and ADAT digital I/Os – simultaneous multiple digital outputs is supported and can be dithered between 8 and 22 bits

**Total and Partial Recall**
- 100 factory, 200 user presets – you can also store up to 999 presets on a PCMCIA card
- Recall an entire preset or perform a Partial recall which enables you to load specific parts of a preset into the currently preset
- Instantly recall customized settings that match a specific instrument or vocalist

**Four Processing Blocks**
A variety of full featured dynamics, EQ and other specialized algorithms can be placed freely within any of four processing blocks available per channel. When using the 96kHz option, you can either use 1 channel and gain access to 3 blocks or use both channels with 1 block available per channel
- Use either an over-easy Noise-Gate or a more comprehensive Expander with additional parameters
- Two types of EQ each with proprietary SoftSat limiter technology on each band:
  - Advanced EQ – 5-band Parametric with a 20Hz-20kHz frequency range, ±18dB boost/cut range, variable bandwidths.
  - Easy EQ – emulates vintage analog EQs with -12 db/oct Hi and Lo cut filters, ±18dB Hi and Lo shelving fixed-frequency bands and a ±18dB Mid band with 5 frequencies

**Total and Partial Recall**
- Two Compressor algorithms – The Soft Compressor provides smooth and transparent dynamic control while the Vintage Compressor emulates the warm musical sound of classic analog compressors
- The Tools block provides a choice of specialized algorithms including a De-esser, Dynamic EQ (a De-esser with additional frequency range and control), Digital Radiance Generator (emulates tube saturation) and R.I.A.A. equalization which lets you connect a turntable to the mic-inputs.
The Finalizer Express is an affordable studio mastering processor that provides a fast and efficient way of optimizing the overall perceived level of your mixes with the tools that will deliver the finishing touches of clarity, warmth and punch that your music deserves. The Finalizer Express is based around a Multiband Dynamics algorithm, inherited from the TC Finalizer 96K, and an LED matrix that enables you to choose between 25 different settings organized by Compression Rate and Compression Style ranging from smooth and subtle to aggressive and hard compression. Three Spectral Balance controls let you change the level relationship between low, mid and high, making it possible to independently control the level of the three compression bands. Post-processor fades can be performed within the digital domain using the fade knob or by using the optional TC Master Fader, and even controlled via MIDI. All I/O and internal processing is done at true 24-bit – 16 and 20 bit dither is also provided for delivering your material to a 16, 20 or even 24 bit digital media.
The Finalizer 96K takes the all-in-one stereo mastering processor concept to its highest level with true 24-bit / 96kHz processing and absolute control over every parameter over its advanced feature set including independent multi-band expansion, compression and limiting with definable crossover points, two insert effects blocks that allows you to choose from a wide range of appropriate shaping and enhancing tools. The Wizard function immediately calculates an optimal setting for your by asking you four simple questions concerning the source material and the type of processing you require. A group of analysis tools provide a visual reference and comparison between source material and the processed signal. The Finalizer 96K truly delivers unprecedented levels of clarity, warmth and punch to your mix putting the world of professional mastering within reach of every studio.

**FEATURES**

- Balanced XLR analog inputs and outputs and true 24 bit resolution A-to-D and D-to-A converters
- 100MHz processor makes it possible to process the entire signal using a 96kHz sample rate and achieve a maximum frequency response of 48kHz
- Sample Rate Converter translates AES/EBU, S/PDIF and Tos Input to the Finalizer's internal or external rate.
- The ADAT Lightpipe interface enables you to freely choose 2 ADAT channels and direct them to other channels on the ADAT enabling you to bounce tracks while processing the sound with the Finalizer

**Analysis Tools**

- A wide range of extremely useful analyzer functions are available providing visual feedback of source material and processed signals including: Phase Correlation Meter, Level Flow Meter, Peak Hold Meter, Digital I/O Status as well as a Calibration Tone Generator
- The Digital Status Tool recognizes incoming status bits from an external device (DAT, CD) and lets you decide how the status bits such as SCM S settings are handled and for converting S/PDIF to AES/EBU or vice versa

**Normalizer**

- The Normalizer block lets you optimize the signal's gain ensuring maximum utilization of headroom and benefit from the dynamics and effects blocks that follow
- A logical graphic display makes the adjustment a breeze
- You can choose between hard or soft limiting to avoid clipping

**Expander/Compressor/Limiter**

- These tools allow you to optimize the dynamics of your mix independently in three frequency bands
- The Expander, Compressor and Limiter each feature variable Threshold, Attack and Release controls for each of the three bands
- Ratio is also variable for the Expander and Compressor but is fixed at ∞:1 for the Limiter. Each of the three Limiter bands can be individually bypassed
- Look Ahead Delay is individually adjustable for each of the dynamics processors - from off to 1ms to 10ms - this gives each processor more time to react to the present signal
- A Range control allows you to set the maximum amount of gain reduction in the Expander as opposed to cutting off signals below the threshold
- The adjustable Crest parameter determines whether the Compressor should react to peaks or RMS (average) or anywhere in between

**Crossover**

- The Compressor, Limiter and Expander share three user-definable frequency bands allowing you to treat the low, mid and high frequency ranges independently without the 'pumping' or 'breathing' associated with conventional full bandwidth compressors
Up- and Down Sampling

- Input sample rates of 44.1, 48, 88.2 and 96kHz are accepted and can be up/down sampled to 44.1, 48, 88.2 and 96kHz.
- When working with old or already finished material, you have the ability to up sample to 96kHz re-master the material.
- Up/down sample option also makes you well prepared for the DVD-Audio or super-CD audio format.

TPDF Dithering

- Signals can be dithered from 8-22 bits.
- Three types of dither are available: Uncorrelated Dither (for low level stereo signals), Correlated Dither (the most unobtrusive for mono signals), Inverse Dither (for unfocused low level signals).

Recall

- Recall page features a selected list of 30 presets in ROM suitable for any type of source material including: Commercials, Jazz, Techno, Classical, Rock, Live and more. An available RAM bank holds 128 user-definable presets.

Insert Blocks

Two insert blocks located after the input section offer many useful effects including:

- Stereo Adjust allows you to increase the stereo width of a signal or collapse the image towards mono. You can also move the center balance from left to right.
- Digital Radiance Generator (DRG) uses a drive control that adds analog-like second harmonic distortion to the signal - this process can provide a desirable warmth to digitally processed material. A curve control alters the character of the harmonics to better suit the specific source material.
- Dynamic EQ is a compressor that works within a specific frequency range. It's similar to a de-esser but with more parameters (threshold, ratio, attack and release) and a broader frequency range with a choice of a bell curve or a shelving filter.

Wizard

With the Wizard function you are asked four basic questions about your source material and the type of processing you require and the Wizard will immediately calculates an optimized setting for your material. The more experienced user can use the optimized Wizard presets as a starting point and tweak the signal path extensively with more than 90 parameters to choose from.
The M300 is a 24-bit effects processor with a dual engine structure that provides separate Multi-effect and Reverb effect engines that can be used independently or combined in a number of configurations. The no-nonsense user interface features dedicated, easy to use controls that provide immediate access to effects parameters without the need to scroll through layers of menus. High quality 24-bit A-D/D-A converters with balanced 1/4" TRS connectors, 24-bit coaxial digital I/O and 24-bit internal processing ensures pristine sound quality with a dynamic range of 100dB or more. Other features include tap tempo, 355 presets, MIDI I/O and more. Incorporating TC’s legendary reverb and effects capabilities at an unprecedented price, the M300 is ideal for any PA, live or studio requiring high quality effects with immediate results.

### FEATURES

#### General
- Dual engine structure – a Multi-effect Engine with 15 different delay, modulation and dynamics effects and a Reverb Engine also with 15 effects
- Serial and dual mono routing allows the two independent effects engines to be used simultaneously
- High quality 24-bit A-D/D-A converters and 24-bit internal processing
- A total of 355 Presets are available — 256 factory presets comprised of combinations of 16 Multieffects and 16 Reverb effects and 99 user-defined presets

#### Input Section
- An input level control lets you set the optimum level for the analog or digital inputs
- A dedicated mix control sets the ratio between the dry and wet signals. In Dual Send/Return Routing, Mix controls the overall wet/dry mix of both effects sections. In Serial Routing, the Mix control works only on the selected effect engine
- The Bypass switch operates as a Mute function for each effect with Dual Send/Return routing and simply passes the dry signal unprocessed to the Output in Serial mode
- Effects Balance control allows you to set the ratio between the two effects engines

#### The Multi-effect Engine
- The EFFECT selector control lets you select between one of 15 effects and Off
  - Dynamic Delay
  - Studio Delay
  - Tape Delay
  - Delay
  - Ping Pong
  - SlapBack
  - Vintage Phaser
  - Phaser
- Two multifunction knobs control different parameters depending on the selected effects algorithm — For delay effects, the knobs control a Timing multiplier and feedback. For modulation effects the knobs control amount and depth and for dynamics effects the knobs control drive amount and ratio (or frequency with the de-esser)
- -12dB, -6dB, -3dB Gain Reduction LEDs indicate the applied Gain reduction in the Compressor and De-Esser algorithms
- The tempo of Delay-based effects are set by tapping the Tap key to set a global tempo and then rotating the Timing knob (operates as a multiplier) to control the note value of the delay. The range of the timing knob is 0.5 to 2 (1 = a quarter note
- Up to 5 seconds of delay is possible

#### The Reverb Engine
- 15 True Stereo Reverb algorithms deliver the best from TC in an extremely user friendly fashion:
  - Concert Hall
  - TC Classic Hall
  - Living Room
  - Vocal Studio
  - Club
  - Vocal Room
  - Plate I
  - Vocal Hall
  - Plate II
  - Drum Box
  - Spring
  - Drum Room
  - “Live” Reverb
  - Ambience
  - Off
- Dedicated PreDelay, Decay and Color parameter controls help you achieve your desired sound in seconds

#### Rear Panel
- 1/4" TRS analog inputs and outputs as well as auto-switching (44.1 & 48 kHz) digital coaxial S/PDIF I/O
- The 1/4" TRS Pedal Input gives you the ability to Bypass and Tap the global tempo via momentary switches
- MIDI In/Out recognizes MIDI Clock Tempo Sync and transmits/receives program change, CC data for realtime parameter control and SysEx data
- Internal switchable 100-240v power supply
Multi-tap Rhythm Delay

Based on the history of TC’s classic 2290 Delay, the D-Two offers a very musically oriented Rhythm Tap feature which can easily be applied to live sound and recording applications - as well as post production, broadcast, installed sound and a variety of other situations where a creative and intuitive delay can be used. Featuring up to 10 seconds of delay, the D-Two provides six direct-access add-on features, including Spatial, Ping Pong, Reverse, Dynamic Delay, Chorus and Filter. 50 ROM presets and 128 user RAM preset locations are available. The D-Two's hardware compliment consists of full resolution 24-bit A/D and D/A converters. 1/4” analog I/O connectors are provided for fast and simple connectivity, additionally a S/PDIF digital I/O is included for an all-digital, 24-bit signal path supporting both 44.1K and 48K sample rates.

FEATURES

True 24-Bit
- State-of-the-art hardware with true 24 bit resolution A-to-D and D-to-A converters and true 24 bit RAM memory ensure the best possible audio quality
- Left and Right balanced analog 1/4” TRS inputs and outputs are provided as well as coaxial S/PDIF digital I/O – the digital output can be dithered from 16 to 24-bit
- Sample rates of 44.1 and 48kHz are supported

Three Delay Modes
- Traditional mode is a standard delay setup with feedback control
- In Straight mode, repeats are caused by a number of taps that are not fed back into the delay line providing you with ultimate control over the exact number of repeats
- Rhythm mode allows you to tap a specific rhythm using the Rhythm/Tap key or quantized according to a specific tempo and subdivision – after the last tap, the signal can be fed back into the delay line, generating a complete rhythm sequence
- The delays and rhythm patterns can be up to 10 seconds each
- There are 50 factory presets and 100 user-definable presets

Six Unique Add-On Effects
- Access to all parameters of the six add-on effects is available on the front panel – double click the key of the effect you wish to work with, and to instantly access the effects parameters
- TC’s world acclaimed Chorus is provided using pitch-modulated delay
- Hi and Low cut filters with a frequency range of 19.95Hz to 20kHz can be applied to the delayed signal or to the incoming source signal allowing you to get a warmer and more natural sound or create delays that are less obtrusive on a mixes
- Spatial effect allows you to add more width to the sound of your material by offsetting the left channel up to ±200ms or by reversing the phase on any channel or both
- Reverse Delay effect processes the signal, and adds a backward delay
- Dynamic Delay allows the delay output level to be dynamically controlled by the input level - this leaves the source material undisturbed while played and delicately accompanied by the Delay between phrases
- The Ping Pong effect syncs panning to the delay time - three styles are available: L-R, L-C-R and right and Dynamic which will fit the number of Delay repeats with the number of panning positions

User Interface
- The intuitive user interface is aided by the detailed Multi Spectral LCD Display which gives you a complete overview of what is going on in the processor including Preset numbers, Input level and Dynamic (gain reduction) meters, Delay time, Tempo and Sub-Division and more.

MIDI
- MIDI clock is supported for tempo sync - incoming MIDI clock can be subdivided
- MIDI continuous controller capabilities allow you to control parameters externally in realtime or via a sequencer – all effects parameters can be changed via an external MIDI device through Sys-Ex

Conveniences
- Autoswitching internal power supply will power-up anywhere in the world
- The 1/4” pedal input can recognize two pedals simultaneously: The Ring pedal is fixed to Tap tempo while the Tip pedal can be set to Bypass, Tap tempo or Rhythm tap

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
The M-One XL is a 24-bit multi-effects processor with a dual engine design that provides you with high quality TC Reverbs along with a wide variety of other dynamics, pitch, modulation and delay algorithms. Flexible routing capabilities allows you to access the effects engines in a number of combined and independent configurations. The LCD display gives you a complete overview of input levels, selected input, clock source, routings and current algorithms. The dedicated Tap key and MIDI clock compatibility ensure that tempo-based effects including delay and modulation effects such as tremolo, will groove with the music. Positive-locking balanced XLR inputs and outputs with 24-bit A-D and D-A converters as well as coaxial S/PDIF digital I/O provide just the right connectivity for any live sound or recording studio application.

**Dual Engine Effects**
- 200 Factory presets are provided covering almost any imaginable application – 100 presets can also be stored on the User bank
- Dual Engine structure allows you to run two high quality effects, derived from 25 algorithms – run two of the best sounding reverbs or other quality effects simultaneously without compromising sound
- A wide range of high quality reverbs algorithms from classic Halls and Rooms to grainy snare reverbs such as Live and Plate each create sound reflections in various environments allowing you to easily add different levels of depth and color to your source material
- Other high quality effects algorithms include Compressor and Limiter, Delays, Chorus, Parametric Equalizers, Flanger, Gate, Expander, De-esser, Tremolo and Phaser

**Tap Tempo**
- TAP key lets you Tap in the global tempo for time-based effects like delay and chorus.
- Tempo is displayed in BPM or milliseconds
- The tap key also lets you enter the Tap menu where you can set up the subdivision of the tapped tempo

**User Interface**
- Dedicated controls are provided for controlling input level, wet/dry mix and effect balanced between both effect engines
- Easy Parameter Level helps control important parameters and create cool effects
- Each algorithm has its own Edit button – up/down cursor keys and a large control wheel as well as dedicated enter/exit buttons allows you to intuitively navigate through each of the effects comprehensive range of sound shaping possibilities
- For maximum flexibility, separate bypass keys, each with its own assignable Bypass Mode, are provided for each effect engine – 0% Mix – passes the input directly to the output
- FX Input – shuts off the Engine Input in order to let the effect “ring out”, while allowing the dry signal to pass through
- FX Output – shuts off the engine output killing the FX instantaneously while allowing the dry signal to pass through

**Routing Flexibility**
- A dedicated Routing key gives you the flexibility of choosing from 6 different routing configurations for the two effects engines
- The Routing Lock function allows you to stick with a single routing configuration when switching presets
- The Dual Send/Return setups the system up as two independent (mono in, stereo out) effects processors – The left input is sent to engine 1 and the right input is sent to engine 2. The four internal FX Outputs are then summed to the stereo outputs
- Parallel routing sums the left/right inputs, and both engines are fed with the exact same signal but not into each other – ideal for adding two effects to the same source
- Serial routing sends the input signal through engine 1 then engine 2 – ideal for combining two effects
- The Parallel/Serial option uses separate inputs on the two engines while an internal send control lets you decide how much of Engine 1 is fed into Engine 2
- Stereo Linked Routing allows true stereo processing with synchronized parameter settings for both engines (engine 1 is the master) - The left I/O feeds engine 1 while the right I/O feeds engine 2
- Dual Mono routing offers two totally independent engines with mono in/mono out of each Engine
Multi-Spectral LCD Display

- Peak meters show the input level of the left and right channels within a range of 0 to -40 dB. Overload LEDs indicate whether the input level is too hot or if there is an internal DSP overflow.
- The Analog/Digital LED indicates the currently selected input source.
- The Sample Rate indicator shows the clock source and the incoming master clock.
- The Routing indicator shows the current algorithms in each of the effect engines.
- Two Dynamic meters show the amount of gain reduction when an engine is using any Dynamic algorithms.
- The preset number and the preset type (Factory or User) are also displayed.
- The "Edited" icon is lit as soon as the recalled preset has been modified.
- The MIDI IN icon shows any incoming MIDI activity.

MIDI Section

- All effect parameters can be accessed via standard MIDI controllers allowing real-time control and automation with virtually any sequencer or other MIDI devices.
- You can also use MIDI to dump & save the entire user bank to a MIDI sequencer.
- The TAP Tempo function of the can be locked to the incoming MIDI clock.

Additional Features

- A 1/4" pedal input accepts a momentary switch for controlling bypass or tap.
- Internal auto-switching power supply - 100 to 240 VAC, 50 to 60 Hz.
- 1 year parts and labor warranty.

Effects Algorithms

- Hall
- Room
- Small Room
- Plates 1&2
- Spring
- Live
- Ambience
- Delay One Tap
- Delay Two Tap
- PingPong Delay
- Chorus Classic & 4-voice
- Flange Classic & 4-voice
- Pitch: Detune & Pitch Shift
- Parametric EQ
- Compressor/Limiter
- Gate/Expander
- De-esser
- Tremolo
- Phaser Vintage & Smooth

Also Available: The Original M•ONE

The original M•ONE is still available and may be a viable option for users with unbalanced equipment and for guitarists. It has the same features as the M•ONE XL less the XLR connectors (the M•ONE has 1/4" I/O) as well as the specific algorithms that have been optimized for live applications. Other features of the M•ONE XL that are not available with the M•ONE include Ping-Pong Delay, additional reverb size tunability, MIDI mapping and Tremolo Pitch.

TC 2290 Dynamic Digital Delay

Acclaimed as the industry standard Digital Delay, the TC 2290 can be found in recording studios, PA rigs and guitarists' FX racks the world over. The TC 2290 combines unique operational features and superior sound quality, allowing you a greater degree of musical creativity in the use of effects.

- 1/4” and XLR inputs and outputs.
- Programmable Chorus, Ducking, Gating & Panning.
- 4 seconds memory (8 seconds in Double Sample / Double Delay time Mode).
- 20Hz - 20kHz bandwidth and a 100dB dynamic range.
- The most functions are accessible from the front panel including a numeric keypad for data entry. "Learn" button for easy entry of delay time and tap tempo control.
- Feedback control with phase invert as well as Low Pass (8, 4, 2 kHz) and Hi Pass (100, 200, 400 Hz) filters.

Dynamic Control

- The input signal dynamically controls 3 independent LFOs providing unique chorus, flanger, ducking, gating and pan effects.
- The Dynamic Function enables you to suppress the effects when you are playing and let the effects reappear when you stop playing or the opposite.

Modulation

- Individual control is provided for Delay, Pan and Dynamics - waveforms include Sine, Random, Envelope, & Auto Trig.

MIDI

- MIDI enables the TC 2290 to operate as a "main brain” of an FX rack. External FX units or foot pedals can be incorporated into the chain of five programmable effects loops which can be stored within the patch memories.
TC ELECTRONIC

M3000

24-Bit Studio Reverb Processor

The M 3000 is a single rack space, dual engine effects processor that features an advanced set of reverb algorithms along with a full compliment of other TC-quality signal processing algorithms including delays, pitch, modulation, dynamics, EQ and more. At the heart of the M 3000 is the VSS3 (Virtual Space Simulator) reverb algorithms—representing years of research in reverberation technologies in pursuit of optimal realism, smoothness and clarity of both real and imagined spaces. A fast and intuitive user interface provides easy recall and editing of 100s of factory presets which can be stored in RAM or PCMCIA card. The back panel features gold plated connectors and includes AES/EBU, S/PDIF, Toslink, ADAT-optical, MIDI and balanced XLR analog I/Os as well as a pedal input. Multiple simultaneous digital outputs can be used with all of the digital connectors. Additional features include LCD display, LED metering, and output dithering.

**FEATURES**

**Dual Engine**
- Dual Engine processing fuses TC’s proprietary DARC chip technology with a powerful Motorola 80 Mips DSP chip to deliver the intensive processing power necessary to calculate the huge number of sonic details made available within the VSS 3 algorithms.
- The Dual Engine structure allows any combination of full-blown algorithms to be run on each engine simultaneously – the two engines can be linked providing true stereo processing.
- Choose from 6 different routing setups including serial, parallel and dual input, dual mono, stereo linked as well as Preset Glide which allows you to crossfade between two effects.

**VSS 3 Virtual Space Simulator**
- Provides the highest degree of smoothness and clarity to the reverb tail with the ability to keep the signal 100% free of sound deteriorating modulation – modulation is still available as an option.
- A large number of directional taps (between 40 and 100) are employed, creating accurate early reflections that aid in simulating the sonics of actual rooms.
- Gentle signal processing ensures that the signal is always 100% correct pitch, even with extensive effects processing.

**More Algorithms**
- Apart from the VSS3 and VSS3 Gate Reverb algorithms, you can choose between C.O.R.E. Reverb (based on TC’s M 5000 processor), REV-3 Reverb, Delay, Pitch, EQ, Chorus, Flanger, Tremolo, Phaser, Expander/Gate, Compressor and De-Esser.
- 600 high-grade factory presets – 500 single engine presets plus 100 presets that combine engines 1 and 2, cover most any application imaginable.
- An internal RAM bank allows you to store 250 single and 50 combined presets.
- The PCMCIA card slot on the front panel can be used to store an additional 250 single and 50 combined presets.

**Presets**
- Tap Tempo key not only lets you match the Delay Time to the rhythm of a track, you can also use tap tempo to set the parameter for Reverb Decay, Chorus Speed, Flanger Speed, Phaser Speed or Tremolo Speed.

**Tap Tempo**
- Tap Tempo allows you to change the tempo of the track, as well as set the parameter for Reverb Decay, Chorus Speed, Flanger Speed, or Tremolo Speed.

**Dynamic Morphing**
- Dynamic Morphing allows you to morph from the preset on one engine to the preset on the other – controls are provided for the threshold level and the transition speed.

**Editing**
- Each of the two Engines has its own Edit key giving you the option of editing presets and changing any parameter to create the exact ambience or effect you want.
- Every parameter is on one scrolling page with the most used parameters at the top – No “nested” menus with their hard to find parameters.
- VSS3 and VSS3 Gate reverb algorithms can be edited in either Easy Mode or Expert Mode.
  - In Easy Mode the Hi Color and Lo Color tools let you edit the complex spectral balance of the reverb in a second.
  - In Expert mode you have access to a wide number of well-arranged parameters.

**Wizard**
- Wizard function is a fast and intuitive way to get the sound needed for your work. Simply select the application, source and size you are looking for and the M 3000 suggests a number of presets matching your request.
Studio Effects Processor

The FireworX is a radical sounding, extremely flexible multi-effects processor designed to challenge your imagination. A wide variety of internal effects, based on over 35 different algorithms can be inserted on an easy to use 8x8 routing grid, and controlled in realtime via a powerful yet intuitive modulation matrix. An advanced digital signal processor along with TC’s proprietary DARC 3 chip technology allows the FireworX to run multiple effects simultaneously. A dynamic processing power allocation structure ensures that you always get the advantage of the full power of the FireworX allowing you to keep adding algorithms to the signal chain until all the processing power is used. Hundreds of factory and user presets plus a PCM CIA card slot for additional storage. Balanced analog inputs and outputs using 24-bit converters as well as a full compliment of digital I/O and word clock is provided as is MIDI In/Out/Thru and a 1/4” external control input.

**FEATURES**

**Effects**
- 200 Factory Presets and room for up to 200 User Presets (depending on the size of the presets) – up to 999 additional presets can be stored on an optional PCM CIA card
- A word search filter allows you to scroll through presets that contain a specific algorithm such as Reverb

**Effects Routing**
- 8x8 position routing grid lets you place any of the over 35 algorithms anywhere on the grid where they will be automatically “wired” together - Left/Right can be set up separately for Input/Output in each block

**Modifier Matrix**
- A total of nine external and eleven internal Modifiers can be tied to numerous parameters - up to twenty connections can be made simultaneously
- External Modifiers can be controlled via MIDI controllers, Velocity, Pitch bend, Aftertouch, Note-onkey etc
- Internal Modifiers include 2 envelope followers, 2 ADSR generators, 2 LFO’s, a Pitch detector as well as a Free Form modifier that uses a sequencer that lets you design your own modulation waveform to create a rhythmic sequence

**User Interface**
- The twelve effect block keys on the front panel are used for bypassing or muting the active effect blocks
- Navigation is made simple via Left/Right arrow keys, parameter and value wheels as well as Enter and Exit buttons
- The Alpha Modulation wheel provides realtime control of a number of parameters in the current preset simultaneously
- All pertinent info is clearly laid out on the 56 x 128 dot backlit LCD display
- Left/Right LED input level and gain reduction meters are also provided

**Inputs and Outputs**
- Balanced XLR analog inputs and outputs with 24-bit A-to-D and D-to-A converters as well as AES/EBU, S/PDIF, Toslink and ADAT digital I/O
- Wordclock input (RCA)
- External control input
- Analog or digital I/Os can be used as an insert loop making it possible to connect an external device

**Algorithms**

- **Dynamic** - Expander/Gate, Soft Compressor, Hard Comp/Limiter
- **Vocoder** - Vocoder, Ring Mod. Internal, Ring Mod. External
- **Formant** - Formant
- **Pitch** - Single Voice, Dual Voice
- **Filters** - Resonance, Bandpass, Phaser, Resonator, Resochord
- **Distort** - Drive, Cruncher
- **Synth** - Curve Generator, Chaos generator, Noise Generator
- **Reverb** - Simple, Advanced
- **Chorus/Flanger** - Classic Chorus, Advanced Chorus, Classic Flanger, Advanced Flanger
- **EQ** - Fixed EQ, Modifiable EQ
- **Delay** - Stereo, Dual, Dual three-tap, One-tap, Six-tap, Reverse
- **Panner** - Simple Tremolo, Advanced Tremolo, Simple Panner, Surround Panner, Stereo Enhancer

**Tempo Control**
- All tempo based parameters can be connected to the global tempo
- The global tempo can be tapped, dialed in, or MIDI clock based
- Each parameter can be set from 16 bars through 1/1 to 1/32 straight, dotted or triplet subdivisions of the global tempo
Vocal Intonation Processor

The Intonator is a high resolution pitch correction processor aimed at reducing the often tedious task of doing vocal re-takes. Intuitive user interface gives you a choice between manual and automatic pitch correction with complete control over scale, correction amount and additional parameters that allow you to preserve the artist’s unique vibrato and initial intonation while providing correction of targeted notes. Besides offering comprehensive pitch correction, the Intonator offers a variety of valuable vocal-specific processing tools including a De-esser and a special Adaptive LoCut filter (ALC) that automatically adjusts in relation to the current pitch. There is also TC’s world-renowned DARC 3-chip technology, 96kHz processing and premium 24-bit A-D and D-A converters for an ultra-transparent signal path worthy of your most precious vocal tracks. To ensure compatibility with any audio system, the Intonator is equipped with XLR-balanced inputs and outputs as well as a full range of digital I/O and a word clock input.

**Features**

- **Transparency**
  - Proprietary DARC 3 chip technology incorporates 96kHz internal processing and true 24 bit resolution that provides an ultra-transparent signal path
  - Balanced XLR inputs and outputs – analog input and output gain controls allow you to take full use of the dynamic range available by the premium 24-bit converters
  - Fully integrated AES/EBU, S/PDIF, Tos-link and ADAT digital I/Os with TPDF output dithering (8, 12, 16, 20, 22 or 24 bit)
  - 96kHz, 88.2kHz, 48kHz and 44.1kHz compatible on both digital and analog I/O’s

- **Pitch Correction**
  - Use the “Do-not-process-anything-but-this-note” function to correct only a single note or type in your personal scale
  - The Window knob determines how close to the target note, ±200 cent, the source should be in order to be corrected (100 cent is 1 semitone)
  - The Attack knob controls how fast the pitch is corrected to the “correct” note
  - The Amount knob sets the amount of correction added to the signal
  - The Note Hold key is used to hold the current corrected pitch

- **Display and Keyboard**
  - The Display shows you the current Root note and Scale. While processing you can see both the incoming signal and the amount of correction added to the source, creating a visual confirmation of the process taking place
  - The one octave keyboard on the front panel gives you instant access to changing the Root note of the current scale or the notes allowed to be corrected – it also indicates the incoming note, making it possible to recognize the note about to be processed

- **Audio-To-MIDI**
  - You can monitor and edit vocals externally by tracking the incoming pitch history to a MIDI sequencer, making the necessary corrections and play back the pitch corrections via MIDI back to the Intonator
  - You can also use a MIDI keyboard for real-time manual pitch correction simply by hitting the notes to be processed

- **De-Esser**
  - The De-esser uses a relative threshold technique allowing the De-esser to adapt to the incoming signal and maintain the same threshold to the average level regardless of the input signal

- **LoCut Filter**
  - The LoCut filter can be used either in a conventional (fixed) mode or an adaptive mode where the LoCut is controlled via pitch – ensuring a perfect LoCut that never removes too much low end

- **Two Signal Setups**
  - In Normal mode, the ADIOS (Analog Dual I/O’s) configuration lets you to make simultaneous recordings of processed and unprocessed vocals, making comparisons a breeze
  - In Dual mode you have the option of pitch-correcting the signal in one channel while using the dynamics, De-esser and LoCut, on the signal in the other channel

- **Manual Pitch**
  - The Manual Pitch control allows you to add pitch correction by hand
  - The wheel can also be remote controlled by keyboard modulation wheel or even automated when locked to a sequencer
The Stereo Incarnation of System 6000

The Reverb 4000 delivers the massive System 6000 Reverb Palette to you in a single rack space true stereo processor. Reverb 4000 is powerful enough to be your main reverb delivering the depth, localization, spaciousness and character demanded by world class recording facilities. It utilizes the latest hardware technology and software based upon 30 man-years of development. Its broad palette spans from new state-of-the-art Reverbs to world-renowned classics, and includes the best stereo reverbs and presets from System 6000 and M5000. A full complement of I/O protocols is supported including balanced XLR analog I/O, AES/EBU, S/PDIF and ADAT digital I/O. This ensures that the Reverb 4000 will integrate seamlessly into any production environment — from computer based DAWs to large-format mixing consoles. The extremely easy to use instant access interface provides instant access to key parameters, plus you are given the option of connecting the Reverb 4000 to your computer via USB where allowing you to access using the intuitive ICON software editor for Mac/PC.

**Features**

- 44.1 to 96kHz sample rates and processing
- 24 bit A-to-D and D-to-A converters as well as 44.1 to 96kHz Sample Rates
- One engine, massive SRAM, no compromise design.
- VSS-4 allows you to create realistic stereo spaces from two discrete sources.
- Digital and analog wide dynamic range topology
- Over 150 preset and user programs

**The Ultimate Reverb Palette**

- True Stereo Reverbs taken from the renowned System 6000
- New pristine Stereo Reverb
- Favorite presets and algorithms from the M5000
- Realistic Environments from a closet to a canyon
- VSS-4, Source based Reverb providing Rooms with Character
- Classic Reverbs providing Polished Sustain
- Vintage Reverb emulations including EMT 250 plate.

**Instant Access User Interface**

- The front panel provides instant access to key parameters - locating presets from System 6000, M5000 and vintage devices is a breeze with the dedicated Search function. Switch between Character, Glossy and Vintage Reverb effects with just a single touch of a button.
- 56 x 128 dot backlit graphic LCD display.
- PCMCIA card slot supports up to 2 MB SRAM for storing additional programs.

**Inputs and Outputs**

- Balanced XLR analog inputs and outputs
- AES/EBU, S/PDIF, TOS-Link and ADAT digital I/Os.
- The MIDI In, Out and Thru connectors are provided for controlling any parameter from a sequencer or from a remote midi controller.
- Word Clock input (RCA) ensures accurate sample rate synchronization.

**ICON Software Editor**

- The included ICON software editor for Mac/PC provides easy access to the Reverb 4000 functions with a complete overview for detailed editing purposes.
- The USB connector on the rear of the Reverb 4000 connects directly to the ISB port of your Mac or PC for accessing the ICON software.
- Ideal for live sound applications as well as integrating with computer-based DAWs.
THE QUINTET

Affordable, Pro-Quality Vocal Harmony and Reverb for Stage and Studio

The Quintet is an affordable, professional quality vocal harmony and reverb processor for both live and recorded vocal applications. It combines TC Helicon’s renowned harmony algorithms and TC Electronic’s famous Reverb technology along with a high quality microphone preamp. The Quintet is also fast and easy to use — editing and control of all harmony and effect parameters either from the front panel or via MIDI. Using the Quintet live is like bringing four professional backup singers to your gig. The studio quality mic preamp and 24 bit A-to-D conversion alone justifies the Quintet’s place in your rack. Add to that the ability to create high quality, solo-able harmony vocals and you see what makes the Quintet an indispensable tool for your studio.

FEATURES

◆ HybridShift harmony generation delivers a smooth, natural sound.
◆ Four harmony voices plus lead voice double-tracking with control over timing and Pitch Humanization of harmony voices.
◆ Five distinct harmony Modes:
  Scale (Scalic) Mode harmonies use key and scale information to create musically correct, diatonic harmonies.
  Chordal Mode harmonies take your chord information, that you input in realtime via MIDI, to create intelligent, diatonic harmonies based on your voice.
  Shift Mode takes the pitch of the lead voice and creates harmonies a set number of semitones away, based on that pitch.
  Thicken Mode presets do not produce harmony voices, instead they produce voices in unison with the input voice. The unison voices have pitch and time humanization applied to them to make them sound as if sung by another person.
  In MIDI Notes Mode you provide specific MIDI note information to determine the pitch of the harmony voices.
◆ Selectable equal temperament or just tuning for harmonies.

User Interface

◆ Fast and easy to use with straight forward and simple editing with control of all harmony and effect parameters either from the front panel or via MIDI.
◆ 50 Presets are provided as a starting point. Each preset can be modified to suit your needs and overwritten.
◆ A/B program switching allows bulletproof program changes during live performance.

TC Electronic Reverb

◆ The reverb section adds depth and space for blending harmonies. A variety of high quality acoustic reverb simulations are provided including Living Room, Chamber, Club, Classic Hall, Concert Hall, Large Cathedral, Vocal Studio, Vocal Room, Vocal Hall, Ambience, Live Reverb, Plate1, Plate2, and Spring.

Inputs and Outputs

◆ High-quality balanced XLR mic preamp with variable gain and a 20dB pad.
◆ Mono 1/4” TRS balanced/unbalanced line level input.
◆ 24-bit processing with 44.1/48 khz
◆ 24-bit Coaxial S/PDIF digital output
◆ MIDI In, Out and Thru connectors allow you to use MIDI CC to ‘echo’ the front-panel controls.
◆ 1/4” footswitch input compatible with the TC Helicon Switch-3 footswitch controller.

Switch-3 Footswitch

◆ Three-button footswitch is the standard footswitch for controlling the Quintet, VoicePrism, VoicePrismPlus, VoiceOne and VoiceWorks.
◆ Provides remote control of such features as, Bypass, Harmony Mute, Preset Up, Preset Down and more...
◆ Durable all-metal construction, making it durable and portable. It also includes the connector cable.
Vocal Formant Pitch Processor

The VoicePrism Plus is an entire vocal channel that provides the ability to go directly from a phantom powered mic into a high quality mic preamp where it can access a variety of fully editable onboard vocal processors including: compression and gating; dual fully parametric EQ; four harmony channels with individually adjustable gender and humanizing parameters), a 5th lead-doubling voice; and 2 independent post-effects blocks with a choice of chorus/flange, delay and reverb. The included VoiceCraft card provides a number of unique voice modeling algorithms that allow realtime resynthesis and reshaping of the human voice including the ability to add breath, growl, rasp, head and chest resonance, inflection or vibrato.

FEATURES

- Contains a complete complement of tools designed to expand what is possible to achieve with the most beautiful of all instruments, the human voice.
- The VoicePrism has a full range of lead and backing channel vocal processing under preset control.
- 24-bit A-to-D and D-to-A converters

Processing Stages

- The Front End features a high quality mic preamp with switchable phantom power that provides direct access to a variety of onboard dynamics, harmony and effects processors.
- The Pre Effects section provides compression and Gating and a dual fully parametric EQ that can be assigned to the lead channel, the harmony channel or both.
- The Harmony Channel provides up to four-voice harmony formant corrected pitch shifters to create very natural harmony voices from your vocals. Each voice also features independent humanizing parameters including: Gender, Vibrato, Timing, Randomizing and Scooping.
- The Lead Channel has a thickening algorithm to create double tracking effects.
- Using the two Post Effects blocks you can apply to your Lead and Harmony voices including Chorus, Flange, Delay and Reverb with Pre-delay to create interesting and unusual spatial effects.

Intuitive Interface

- 128 fully editable effects and harmony preset libraries are easily accessible via an intelligent browser with context sensitive help menus, as well as the ability to audition sampled human voices for preset previewing.
- Dedicated edit buttons allow you to jump directly to multi-page edit menus – Vocals, Effects, Comp/EQ, Mix, Step.
- The 128 x 84 LCD Display shows preset information as well as menus where you can view your editable features.
- Four multifunction softknobs, underneath the LCD display, can be pushed and turned to quickly navigate through parameters and modify their settings.
- The Data Wheel provides additional navigation and editing control.
- A numeric preset number display and 10-segment LED level meters are provided for additional operating status.

Inputs and Outputs

- Balanced 1/4” TRS line inputs and outputs.
- A balanced 1/4” TRS balanced auxiliary input allows you to integrate additional audio material into the final effects blocks and mix them there with the vocals.
- Input sensitivity for the line and aux ins are switchable for +4dBu or -10dBV operation.
- Coaxial S/PDIF digital output at 44.1kHz
- 1/4” headphone output with level control on the front panel.
- Can be configured to use a 1 or 3 button footswitch. You can set the number of buttons and assign button functions in the FOOTSWITCH menu, accessed by pushing the UTILITY button.
- MIDI In, Out and Thru allows realtime parameter control via MIDI CC.

VoiceCraft Card

- The optional VoiceCraft card, included with the VoicePrism Plus, adds human voice modelling DSP algorithms that provide realtime resynthesis and reshaping of the human voice including the ability to add breath, growl, rasp, head and chest resonance, inflection or vibrato.

The Card also adds AES/EBU and S/PDIF I/O.
VoiceOne

**Voice Pitch Shifting, Correcting And Modeling Tool**

The VoiceOne is a powerful production tool that offers a unique range of voice-specific pitch shifting and VoiceModeling algorithms designed to open up a whole new world of possibilities for enhancing, harmonizing, transposing, correcting and otherwise transforming vocal performances. Using VoiceOne's next generation VoiceModeling algorithms you can sculpt a vocal to have unique elasticity, breathiness, growl, rasp and resonant characteristics. Ideal applications for VoiceOne include: adding strength, resonance and overall character to weak vocal performances; adding breathiness and more head-tone to a darker voice; re-pitch or pitch-correct an existing vocal while maintaining the natural formants; re-phrase an existing vocal to change the timing and feel of a vocal line; create convincing harmony and doubling; create new and original vocal effects. Vocal modeling effects can be manipulated in real-time allowing you to enhance particular notes or phrases and create lush and vibrant background vocals from a single solo performance. 24-bit processing and A-to-D, D-to-A converters as well as XLR balanced analog and S/PDIF digital I/O ensure that the integrity of the source material will be maintained throughout the signal path.

**FEATURES**

- Combines superior voice shifting and correction (±2 octaves) with award-winning, second generation VoiceModeling technology to provide an amazingly creative tool for processing vocals.
- The vocal-trained (voice-specific) **Pitch Recognition** algorithm employs a highly stable pitch detector that provides extremely accurate handling of vowels, hard consonants and sibilants thus ensuring that shifted vocals stay natural.
- **Intelligent harmonization algorithms** - harmonies can be controlled via MIDI, internal scale, or you can custom write your own scales.
- **Hybrid Pitch shifting algorithm** combines standard 'instrument' pitch shifting (suitable for small intervals) with formant-corrected pitch shifting which is more apt at preserving the voice characteristics over large intervals. Combining the two provides unlimited flexibility and control for achieving both natural and supernatural sounds.
- The enhanced pitch recognition is also a key component to VoiceOne's superior Pitch Correction providing fewer errors and artifacts and faster results when fixing intonation problems. Using the adjustable pitch correction/re-pitching window (0-600/infinite cents), and the hybrid shifter, you can correct and even re-pitch vocal lines keeping them natural sounding or extreme - even over wide intervals.
- **Next Generation VoiceModeling**
  - Next-generation advanced VoiceModeling allows you to enhance or even transform vocals using a variety of algorithms
  - The **Flextime Inflection** algorithm seamlessly stretches and shrinks the pitch and time of a vocal line (up to 500ms) allowing it to breathe. Ideal for doubling and harmonies as well as providing you with control for radically altering phrases.
  - The independently adjustable **Breath** and **Growl** algorithms provide a wide range of natural to extreme sounds.
  - The **Real Vibrato** algorithm features controls and styles based on real singers from all styles of music
  - The **Spectral** algorithm is a Voice Optimized Equalizer that allows you to intelligently dial up a high-boost curve for a vocal without boosting hard consonants and sibilants.
  - The **Resonance** algorithm allows you to create, remove or enhance chest tones and head tones, as well as set the apparent length of the vocal tract.
- Custom Main LCD display giving feedback on key data with a flexible and simple to use parameter editing interface
- 100 Factory/50 User presets
- Balanced XLR inputs and outputs with 24 bit A-to-D and D-to-A converters with 24 bit internal processing driven by a powerful 100 million instruction per second DSP engine.
- S/PDIF digital I/O is also included for a pure all digital, 24-bit signal path supporting both 44.1K and 48K rates.
- MIDI In/Out/Thru provides pitch to MIDI conversion as well as extensive MIDI control of effect parameters echoing most front panel functions
- The 1/4” footswitch connector supports momentary single or three-button external footswitches for remote control of select parameters
Harmony, Pitch Correction and Effects Processor

The VoiceWorks combines multi-voice harmonies, fat automatic double-tracking and transparent pitch correction, along with superb TC Electronic effects — all in a one rack space unit. VoiceWorks utilize TC Helicon’s state-of-the-art humanizing and HybridShift functions that give you complete control over the sound and allow you to create natural sounding harmonies that sound authentic even when soloed. VoiceWorks also employs TC Helicon’s latest innovation the HarmonyHold function which lets you sustain back-up harmonies while you sing over them. The critically acclaimed TC Electronic Compression, EQ, Tap-Tempo Delay and Reverbs allows you to add that finishing touch to your processed vocals. Audio can be input to the VoiceWorks via the studio-quality mic pre-amp, balanced/unbalanced line input or the coaxial 24-bit S/PDIF digital input. The processed signal can be output via either the coaxial S/PDIF digital output or the balanced/unbalanced 1/4” line outputs. Full MIDI implementation allows you to control virtually every parameter of the VoiceWorks remotely including the ability to automate parameters from your favorite sequencing application. Designed for live and recording situations — anywhere superior vocal processing is required.

![VoiceWorks Processor](image)

- HybridShift harmony generation for smooth, natural sound
- Four independent harmony voices accessible from four distinct harmony Modes: Scalic, Chordal, Shift and MIDI Notes.
- 2 Lead-voice Thickening Voices - one voice above and one voice below
- Humanization of harmony voices utilizing: FlexTime, Vibrato, Inflection, Pitch randomization and Portamento
- Selectable Equal-tempered and Just tuning for harmonies
- HarmonyHold lets you freeze harmonies while continuing to sing over them.
- Fully adjustable gender and voicing per voice

**Preset**
- 100 presets are provided as a starting point. These presets can be easily customized and overwritten.
- Song Mode for live performance allows you to save internal “sequences” of up to 50 songs with 30 user presets per song.

**Effects**
- The flexible TC Electronic 3-band EQ provides frequency adjustable high and low shelving bands as well as a fully parametric band with Q frequency and Gain controls. EQ can be applied to the Lead, Harmony or both the Harmony and Lead channels.
- The TC Electronic Dynamics section allows you to apply compression and gating to the Harmony, Lead or both the Harmony and Lead. The compressor has a variable threshold with a range of 0 to -60 dB and a ratio variable from 1.1:1 to 64:1. The compressor also features an auto makeup gain circuit. The gate has a variable threshold with a range of -70dB to 0dB.
- The TC Electronic effects section provides a variety of Reverb and Tap-tempo Delay processing. Individual aux sends for each effect allow you to control the amount of each effect for the Harmony and Lead channels independently.

**Mic Input**
- High quality mic preamp with 48V phantom power, variable gain and a 20 dB pad.

**Inputs and Outputs**
- 24-bit A-to-D and D-to-A converters
- Balanced XLR mic input and a 1/4” TRS balanced/unbalanced line level input.
- Balanced left and right 1/4” TRS outputs
- Coaxial S/PDIF digital I/O
- MIDI In, Out and Thru provides access to MIDI CC control over all parameters
- The 1/4˝ Footswitch input is compatible with both single and 3-button footswitches (including TC Helicon’s Switch-3) and provides remote control of Bypass, Harmony Mute, Preset Up/Down and more.

**Additional Features**
- Easy to read and comprehensive 16 character by 2 line backlit LCD display
- 5-segment LED level meter as well as independent input and output clip LEDs.
4-Channel Tube Mic Preamp

In addition to offering four top quality tube mic preamps in a single 2U package, the 5001 also features a discrete mic preamp stage, 30dB pad, instrument DI inputs, improved metering and optional 24-bit digital output. The combination of sound and facilities is guaranteed to bring out the best in any microphone. Separate input and output level controls allow the tube stages to be driven harder if necessary for increased warmth, while still allowing the overall output level to be regulated - absolutely essential if recording direct to tape. The output fader permits anything from complete attenuation through to +15dB of extra output gain - making it ideal for driving today’s high level digital recorders.

- Continuously variable input and output gain controls
- 48V phantom power, phase reverse switch
- 30dB mic pad; 90Hz low cut filter
- Drive & Signal level LEDs assist with gain setting
- Instrument DI inputs
- Balanced XLR mic input
- Balanced XLR line output (+4dB) duplicated on unbalanced jack connector (-10dB)
- Optional four channel 24-bit digital output

5013 2-Channel Tube Parametric EQ

Offering the finest combination of performance and affordability, there is simply no EQ in this price range to touch it. And now the 5013 features a peaking/shelving option on both LF and HF bands plus a ‘Fat’ contour switch on both channels. Like all TL Audio equipment, the interfacing options couldn't be more flexible - separate input and output level controls allow easy level matching with any other equipment, and a choice of balanced and unbalanced line inputs/outputs plus instrument DI inputs means you can get yourself up and running in seconds.

- Continuously variable input and output gain controls (-20dB to +20dB)
- Four bands of fully parametric EQ per channel: LF: 30Hz to 1kHz, LM: 100Hz to 3kHz, HM: 1kHz to 12kHz, HF: 3kHz to 20kHz
- EQ bypass switch on both channels
- Each band offers 15dB of cut or boost and variable Q (bandwidth) between 0.5 and 5
- Shelving mode available on LF and HF bands (by pulling out Q control)
- ‘Fat’ contour switch provides a gentle LF/HF lift combined with a mid cut, for extra warmth
- Front panel instrument input
- Drive and Peak LEDs
- Balanced XLR line inputs/outputs duplicated on unbalanced jack connectors
- Optional stereo 24-bit digital output

5021 2-Channel Tube Compressor

The 5021 provides first class audio quality, lots of flexibility and a price tag so modest, you’ll think it was a mistake. Features include hard and soft knee modes, four attack and release times, an improved optical gate design and an optional digital output. It also uses TL Audio’s own special transconductance amplifier design that avoids the use of VCAs - ensuring maximum audio transparency.
5021

- Each channel provides continuously variable control of: Input Gain, Threshold, Ratio, Gain Make-Up and Output Gain
- Four attack times: from 'Fast' (0.5mS) to 'Slow' (40mS)
- Four release times: from 'Fast' (40mS) to 'Slow' (4S)
- Hard/soft knee compression modes
- Automatic 'Hold' facility reduces LF distortion
- Optical gate with variable control of threshold (from -10dB to 'off')
- 'Bypass' and 'Stereo link' modes
- Switchable VU meters provide indication of output level or gain reduction
- Drive and Peak LEDs
- Front panel instrument inputs
- Balanced XLR line inputs/outputs duplicated on unbalanced jack connectors
- Sidechain insert points
- Optional 24 bit stereo digital output

5050 Tube Mic Preamp and Compressor

- The Preamp stage provides variable input gain, +48v phantom power, 30dB mic pad and 90Hz low cut filter
- Compressor section provides control of Threshold, Ratio, Gain Make-Up and Bypass
- Automatic "Hold" facility reduces LF compressor distortion
- Attack time switchable between 'Fast' (0.5mS) and 'Slow' (20mS)
- Release time switchable between 'Fast' (40mS) and 'Slow' (25)
- Hard/soft knee compression modes
- Output fader permits complete attenuation through to +15dB of extra output gain
- Two 8-segment LED meters provide indication of output level & gain reduction
- Front panel instrument DI input
- Balanced XLR mic input
- Balanced 1/4" line input/output
- Optional 24-bit digital output

5051 Tube Channel Strip

The single channel voice processor format is a great way to get the most out of any sound source. The 5051 provides the perfect front end for any system by offering a combined preamp, compressor, EQ and noise gate in one easy-to-use package, plus an optional digital output. The 5051 compressor section is identical to that of the 5021 and includes hard/soft knee modes, and the four band EQ section is modelled after the legendary TL Audio EQ-1 — yielding superb results instantly, with an improved optical gate for removing unwanted source noise.

- Preamp stage: input gain, +48v phantom power, 30dB mic pad and 90Hz low cut filter
- Compressor section: control of Threshold, Ratio, Gain Make-Up and Output Gain
- Hard/soft knee compression modes
- Four switchable Attack times: 0.5mS to 40mS
- Four switchable Release times: 40mS to 4S
- Optical gate with variable control of Threshold (from -10dB to 'off')
- Instrument input; Balanced XLR mic input
- LF EQ band gives ±12dB shelving at 60Hz, 120Hz, 250Hz or 500Hz (12dB/octave)
- LM EQ band gives ±12dB peaking at 250Hz, 500Hz, 1kHz or 2.2kHz (Q=0.5)
- HM EQ band gives ±12dB peaking at 1.5kHz, 2.2kHz, 3.6kHz or 5kHz (Q=0.5)
- HF EQ band gives ±12dB shelving at 2.2kHz, 5kHz, 8kHz or 12kHz (12dB/octave)
- Switchable VU metering of input/output level or gain reduction; Drive and Peak LEDs
- 'EQ Pre' switch allows the EQ section to be placed ahead of the compressor section.
- 'Link' switch for stereo operation (two 5051s)
- Balanced XLR line input/output duplicated on unbalanced jack connectors
- Sidechain insert point
- Optional 24 bit digital output
TL AUDIO

5052

Dual Tube Channel Strip

The 5052 provides everything you would expect from a high quality ‘channel strip’ product, and then doubles it - making it the ideal system front end and the perfect stereo mixdown and mastering device. While most channel strip products provide a single mono channel made up of preamp, dynamics and EQ stages, the 5052 provides two channels of each with independent stereo linking of the compressor, EQ and limiter sections. Recording a stereo source to hard disc through the 5052 is simplicity itself, yet when it comes to mixdown the 5052 come into its own by offering full stereo linked EQ and dynamics, allowing unparalleled processing of the stereo mix buss signal while recording to 2-track.

Each channel of the 5052 boasts a tube preamp stage, a tube compressor, a four-band tube EQ section and a peak optical output limiter, with the following features:

- Preamp stage accepts mic, line and instrument inputs with variable input gain, 90Hz filter, 30dB pad and phase reverse.
- Compressor section offers variable threshold, ratio, attack, release and gain make-up controls, with hard and soft knee modes.
- Tube EQ section features swept LF and HF bands switchable between peaking and shelving modes, and two fully parametric mids. The EQ can be switched ‘pre’ or ‘post’ compressor, and can also be switched into the compressor sidechain for frequency conscious compression.
- Optical output limiter provides transparent brick wall limiting of the output signal, and provides a variable threshold control.
- VU metering is provided for input/output levels, and the gain reduction of the compressor and limiter stages can be separately monitored. A ‘+10dB’ setting attenuates the meter reading to allow high input/output levels to be accurately tracked.
- The compressor, EQ and limiter stages can be individually stereo linked (channel A becomes the master, channel B the slave).
- Has an output level control, and a ‘system bypass’ switch allows A-B comparison of the original and processed signals.
- Full connectivity is built in, with balanced mic & line ins/outs (duplicated on unbalanced connectors), balanced inserts, compressor sidechain inserts and front panel instrument inputs.
- Optional DO-2 digital card provides 24-bit A-D conversion of the unit’s main outputs, with switchable 44.1/48kHz sample rate and a word clock input.

VP-1 Tube Channel Strip

For those requiring an even higher quality channel strip, the VP-1 combines features from the TL Audio’s classic PA-1 pentode preamp, C-1 compressor and EQ-2 parametric EQ. The VP-1 also contains an expander/gate, a de-esser and an optical peak limiter. The expander/gate, de-esser, compressor and EQ sections are all bypassable for easy A/B comparison. An optional 24-bit/96kHz digital output is also available.

Preamp stage accepts mic, instrument and line level signals. The mic input is transformer balanced and offers a choice of tube or class A signal paths. Switchable phantom power, phase reverse, 30dB pad and variable high pass filter are provided. Input gain is variable in 10dB steps with a 15dB trim control, and Drive and Peak LEDs indicate the level of tube drive and clipping respectively.

Expander/Gate offers precise and responsive VCA control of signal dynamics, and features fully variable adjustment of threshold, attack and release. A four segment bar graph meter indicates the degree of gain reduction.

De-esser employs high quality VCAs to allow effective but natural reduction of sibilance. De-esser depth, frequency and bandwidth are all fully variable. There is a bypass switch and status LED. Four segment bar graph meter indicates the amount of de-esser gain reduction.

Super-smooth compressor stage comes with both tube and optical compression circuits, and offers control of threshold, ratio, attack, release and gain make-up. Both hard and soft knee characteristics are provided, and a switchable ‘Hold’ circuit reduces LF distortion.

Sweetness and warmth comes via the 4-band tube EQ section, which utilizes four frequency LF/HF shelving as per the original EQ-1 equalizer, with two fully parametric mids identical to the EQ-2. The EQ can be switched ‘pre’ or ‘post’ the compressor stage.
TRUE SYSTEMS

PRECISION 8

8-Channel Precision Mic Preamp with M-S Decoding

With the emphasis shifting to digital audio platforms and modular configurations, software “plug-ins” are replacing many outboard signal processors. Other than the microphone itself, the mic preamp is the most significant analog device remaining in the signal chain. Designed to provide the detailed, transparent sonic performance necessary for the highest quality direct tracking and live sound applications, Precision 8, with its sonically pure design, simple-to-use features, and unparalleled cost/performance value, is the ultimate solution for state-of-the-art digital recording studios and project studios.

Use as a complete input system for MDM’s, HDR’s, and DAW’s, Precision 8 is also ideal for location recording due to its 8-channel single rack unit format, smooth continuous gain controls, useful level metering, and easy interconnect. The integral M-S decoder provides creative spatial image control that is particularly useful in attaining an exciting stereo image with minimum effort and microphone repositioning.

FEATURES

- Eight highly transparent solid state mic preamps in a 1 unit rack configuration
- Challenges the recognized leaders in sonic accuracy and performance
- Two sonically accurate discrete FET instrument inputs (DIs) are available for recording or live sound applications in which realistic, unaffected sound quality is desired.
- Built-in M-S (Mid-Side) decoding for creative spatial image control
- Smooth continuous gain controls
- 5-segment peak-hold level metering with selectable peak reference allows rapid optimization of program levels between the Precision 8 and devices to which it is interfaced.
- Easy interface to MDM’s, HDR’s, DAW’s, or consoles
- Dual DB25/TRS outputs for flexible interconnection
- Elegant, sturdy physical design
- Exceptional cost per channel value

P2ANALOG 2-Channel Microphone Preamp

A 2-channel microphone preamp designed to provide detailed, transparent sonic performance for the most critical direct tracking and sound reinforcement applications, the P2ANALOG features selectable M-S decoder, active DIs with impedance modification capability, dual gain range selection, selectable high-pass filters, and relay-switched signal routing. It also offers a Stereo Phase Correlation display that assists in optimizing microphone placement for stereo recording.

Modeled after the Precision 8, the P2ANALOG’s unique combination of functions make it a complete input system for standalone or PC-based recording systems. Hybrid, totally balanced, dual servo, high-voltage design provides top-notch transient response, headroom, imaging and noise performance. In addition to the acclaimed mic inputs, two instrument direct inputs (DIs) offer incredible articulation and control for electric bass, detail and smoothness for stringed instruments and punchy, clean sound with keyboards.
WAVES

L2 - Ultramaximizer

24-bit / 96kHz Hardware Limiter/Converter

The L2 Ultramaximizer is a 2U 19" rackmountable limiter and converter that combines refined look-ahead brick wall peak limiter algorithms and IDR (Increased Digital Resolution) dithering technology from the award-winning L1 software with 24-bit A-to-D and D-to-A converters, 48-bit internal processing and support for sample rates up to 96kHz. The L2's balanced XLR and RCA analog inputs and outputs, AES/EBU and S/PDIF digital I/O and a dedicated Word Clock input makes it compatible with a wide variety of audio applications, from tracking and mixing to mastering and concert sound. The L2's limiting capability can significantly increase the average signal level of typical audio signals without introducing audible side effects but is equally capable of extreme limiting, intentional pumping, and vintage dynamic processing effects. Additionally, L2's Increased Digital Resolution word length reduction system uses ninth-order noise shaping which can increase the perceived sound by as much as 18dB when dithering down from high resolution formats.

FEATURES

- Peak Limiter with 48-bit internal processing significantly increases the average signal level of typical audio signals without introducing audible side effects.
- Supports 44.1, 48 kHz, and x2 88.2 and 96 kHz sample rates at 24, 22, 20, 18 or 16 bit resolution.
- Linked stereo and dual mono operation.

- The use of look ahead technology allows the L2 to anticipate peaks before they happen, thereby minimizing the possibility of artifacts and can be used with absolute confidence in situations where brick wall limiting is critical.
- Dedicated front panel rotary controls accompanied by numeric displays include:
  - Threshold with a range of -30.0 to 0.0dB in 0.1dB steps.
  - Output Ceiling with a range of -30.0 to 0.0dB, in 0.1dB steps.

L2 Limiter

- Variable Release Time (ARC control bypassed) with a range of 0.01 to 1000ms (logarithmic)
- ARC (Auto Release Control) dynamically controls release times to fit the human ear's expectations. This allows a greater amount of limiting and level maximizing without distracting artifacts.
- Dedicated bargraph meters for input, output and attenuation with infinite peak hold and peak reset buttons are also provided.

Inputs and Outputs

- 24-bit balanced XLR & unbalanced RCA analog inputs and outputs
- AES/EBU (XLR) and coaxial S/PDIF digital inputs and outputs
- Digital sync to AES/EBU, S/PDIF or from the dedicated Word Clock input (BNC)

Applications

- For mastering applications, the combined effort of the L2's Ultramaximizer and IDR processing enhances the perceived sound quality by as much as 24dB.
- The limiter eliminates the danger of clipping when recording hotter signals - ideal for tracking and mixing as well as live sound or broadcasting.
- Requantize 24-bit input signals to 16-bit or 20-bit signal suitable for a wide array of today's recording equipment, such as DAT, 20-bit MO, CDR, etc.
- Additional applications include:
  - A-to-D and D-to-A mastering;
  - Digital recording 16 bit dithered / 24bit
  - Analog limiter insert;
  - Digital limiter insert;
  - A-to-D and D-to-A conversion

Technical Specifications:

Analog to Digital:
- Frequency Response: 20 to 20k Hz (+/- 0.01 dB)
- Noise: -112 dBFS (18.3 bits)
- THD: 3rd Harmonic -130dBFS, (@1kHz, -10dBFS)
- IDR Requantize, Dither and Noise Shaping System
- 24-bit data can be re-quantized to 22, 20, 18, and 16-bits.
- There are two types of Dither available:
  - Type 1 provides no nonlinear distortion;
  - Type 2 exhibits lower dither (hiss) level;
- Dither can also be switched off.
- Noise shaping options include: Moderate; Normal; Ultra; and off.

Analog to Analog:
- Frequency Response: 20 to 20kHz (+/- 0.01 dB)
- Crosstalk: 99.5 dB (with full scale 1kHz source)
- THD: 3rd Harmonic -130dBFS, (@1kHz, -10dBFS)
- 24-bit @ 45.2 kHz
- 44.1kHz Freq. Response: 20 to 20kHz (+/- 0.01 dB)
- 3 dB @ 21.2 kHz

- Linked stereo and dual mono operation.

- The use of look ahead technology allows the L2 to anticipate peaks before they happen, thereby minimizing the possibility of artifacts and can be used with absolute confidence in situations where brick wall limiting is critical.
- Dedicated front panel rotary controls accompanied by numeric displays include:
  - Threshold with a range of -30.0 to 0.0dB in 0.1dB steps.
  - Output Ceiling with a range of -30.0 to 0.0dB, in 0.1dB steps.

IDR Requantize, Dither and Noise Shaping System

- IDR (Increased Digital Resolution) is Waves' proprietary word length-reduction (quantization), dither and noise shaping technology which preserves and even increases the resolution of digital signals. For example, 16 and 20-bit masters can have the perceived resolution of 20 and 24-bit signals, respectively.
- 24-bit data can be re-quantized to 22, 20, 18, and 16-bits.
- There are two types of Dither available:
  - Type 1 provides no nonlinear distortion;
  - Type 2 exhibits lower dither (hiss) level;
- Dither can also be switched off.
- Noise shaping options include: Moderate; Normal; Ultra; and off.
MaxxBass At Work

In the example below, MaxxBass is allowing the listener, using a multimedia speaker system, to perceive a 70 Hz tone even though the speaker is physically not capable of reproducing this frequency. The bass signal is analyzed by MaxxBass, which creates a carefully calculated series of harmonics of these low frequencies. The dynamics and the loudness of the original bass are duplicated in these harmonics to create the most natural-sounding enhancement of the original bass. High frequencies are merely passed to the output and added back to the signal.
Digital Reverberation Unit with 99 Programs

The Yamaha REV100 is an affordable, true stereo effects processor that offers a selection of 99 editable reverb programs in a single rack space. It offers remarkably smooth, natural reverb sound as well as a range of other outstanding studio-quality effects including Stereo Reverb, Gated Reverb, Reverb plus Flanger, and Delays. The REV100 is designed to be super-simple to use — each of the 99 programs offers control of three parameters, including decay, delay time, and balance of wet and dry signal to allow you to build your own custom programs. The REV100 features dual 1/4˝ inputs and outputs and 16 bit A-to-D and D-to-A conversion at 44.1kHz. The REV100’s MIDI In connector allows you to change effects programs using MIDI Program Change commands.

**FEATURES**

- Dedicated input level and wet/dry Mix controls.
- Peak LEDs make it easy to set the optimum input level.
- 99 high quality editable presets including true stereo reverb.
- The three most critical parameters for all effect programs can be adjustable via dedicated rotary panel controls.
- Edited effects can be easily registered in memory via the stored button.
- Unbalanced 1/4˝ stereo (left and right) inputs and outputs.

**Effect Categories**

- **Reverb Programs 1 - 20** - Includes essential reverb effects such as realistic hall, room, and plate reverb simulations.
- **Stereo Reverb Programs 21 - 40** - True stereo reverb effects that let you add ambiance to stereo signals without sacrificing the stereo image.
- **Gate Reverb Programs 41 - 50** - A range of “gated” reverb effects that add warmth and ambiance while maintaining a tight sound.
- **Delay Programs 51 - 60** - A selection of mono and stereo delay programs including straightforward one-shot repeats and complex bounce effects.
- **Delay/Reverb Programs 61 - 70** - Combinations of delay and reverb that can add a little more life to your sound than delay or reverb alone.
- **Reverb/Modulation Programs 71 - 99** - Reverb combined with a range of modulation effects including flange, symphonic, chorus, and tremolo.

**99 Editable Presets - Exceptionally Easy Programming**

The REV100 is basically a no-fuss signal processor - just select one of its 99 top-quality preset effects and you’re ready to go. When you need something specially tailored to the occasion, however, the REV100 makes editing extra easy. The three most critical parameters for all effect programs are adjustable via rotary panel controls. No button-tapping to find or change settings - just rotate the appropriate controls until the sound is right. With reverb programs, for example, the panel controls give you direct access to the initial delay, reverb time, and high-frequency damping parameters - all you really need for full control. Input level and dry/wet balance controls are also provided. And when you create a sound you want to keep, just press the STORE button to register it in the REV100 memory. Of course, you can recall the original Yamaha presets whenever you like - either all at once or individually. Each of the parameter controls also has an LED that lights when the control setting matches the preset parameter value. The presets include reverb, delay, and modulation effects, plus a range of combinations so if you need reverb and flanging, for example, it’s right at your fingertips.

**Advanced MIDI Features**

- You can select effect programs via MIDI rather than the panel controls. You can also use MIDI control change commands to actually change effect parameters.

Digital Reverberator

The REV500 is an affordable, high-quality, and easy-to-use digital reverb processor, well suited for home and project studio recording or live sound reinforcement applications. The REV500’s true stereo processing capabilities delivers natural and spacious stereo reverb, as well as combinations of reverb with a variety of other effects. The 20-bit A-to-D and D-to-A converters and 32-bit internal processing ensure superb sound quality with a wide frequency response. The REV500 comes complete with 100 preset programs that exploit the potential of the high-performance DSP, plus there’s room for 100 customized user programs. The REV500 is also flexible and simple to use. Both 1/4˝ phone and XLR input and output connectors are provided with the option of +4 dB input and output levels. Four rotary controls allow quick and easy editing of the basic program parameters. And MIDI In and Out terminals allow remote program selection, remote data storage, as well as realtime control and automation of program parameters.

FEATURES

True Stereo Processing
- 20-bit (64x oversampling) A-to-D and 20-bit (8x oversampling) D-to-A converters with a sampling rate of 44.1 kHz and the same 32-bit internal Digital Signal Processing (DSP) as the PROR3 provides superb sonic performance.
- True stereo reverb processing, with independent left and right channels.

Organized Program Libraries
- 100 Preset programs and 100 User programs are available divided into four easy to find categories of 25 presets each:
  - Hall - Small, Medium and Large Halls, Churches, Concert Halls, Reverbs w/ Chorus and Flange, Gated Reverbs, Slapback and more.
  - Room - Small, Medium and Large Rooms, Bathroom, Garage, Bright, Ambience, Tunnels, Opera, Cathedral, Live, Live Gate, Wood and more.
  - Plate - Basic, LA Plate, Percussion, Long, Short, Vocal, Delayed Spring, Live, Cave, Fat, Thin, Light, Gated Plate, Plates w/ Symphonic, Chorus and Flange.
  - Special - Variations of Flanging, Chorus, Dynamic Filters, Tremolo and Echo with Reverb.

Intuitive User Interface
- An input level control accompanied by two four-segment LED level meters with clip indicators simplify level setting for optimal performance.
- A large custom multi-purpose LCD display provides information about the currently selected program and basic parameters being edited, as well as other messages related to utility functions.
- Dedicated rotary controls provide realtime control of the four most critical reverb parameters – Pre Delay, Reverb Time, Hi Ratio and Early Reflection Level.
- Internal editing parameters, specific to each effect algorithm, are easily accessed via the front panel Utility button and the four rotary controls.

Inputs and Outputs
- Left and Right balanced XLR and 1/4˝ inputs and outputs allow simple hookup to pro or semipro gear.
- Input and output levels for each channel are independently switchable between -10dB and +4dB.

MIDI
- The four basic parameter controls plus the output volume can be controlled in real-time via MIDI Control Changes.
- Program selection via MIDI is also supported as is MIDI Bulk Dump for user program backup.
- An optional footswitch with a 1/4˝ connector can be used to mute the reverb effect or advance through reverb programs.

Conveniences
- An Audition button to triggers a built-in snare and rim shot sample allowing you to instantly hear the effect of programs and edits directly from the front panel.

The Yamaha ProR3 Digital Reverberator is a true stereo effects processor. It utilizes Yamaha's third-generation 32-bit digital signal processors (DSP) and high-performance 20-bit linear A-to-D and D-to-A converters to provide rich, high-resolution reverbs, with breathtakingly dynamic impact. The high-quality analog input and output circuitry achieves a wide dynamic range of 110 dB, providing clean and natural-sounding reverb right down to the final tail. The ProR3 is divided into two processing stages. The first stage features a choice of 10 primary effects including reverb, early reflection, room simulation, and combinations of reverb with echo, chorus, flanging, pitch change, and auto pan. The secondary stage features a chain of additional processors for fine-tuning the primary effect. These include dynamic filter, compressor, EQ, gate, level, and balance stages. A pre-effect EQ is also provided for shaping the input signal. The ProR3 ships with 90 preset programs with room for an additional 90 user programs for storing customized settings. Both balanced XLR and 1/4" inputs and outputs are provided for connection to a variety of equipment. The ProR3 is an ideal choice as main or secondary reverb for any professional application.

**FEATURES**

- Third generation 32-bit DSP power has been coupled with 20-bit linear A-to-D and D-to-A converters to deliver unprecedented density, superior resolution and astonishing impact with a noiseless decay and a dynamic range of 110 dB.

**Effects Stages**

- Programs consist of two main stages: the primary effect and the secondary effects.
- Primary effects can be selected from one of the ten types divided into single effects and compound (multi) effect types, depending on the program that you select.

**Digital Pre-and Post-Reverb EQ**

- 3-band sweepable pre-verb EQ controls with ±15 dB boost/cut are available right on the front panel for fast, easy access.
- The programmable post-reverb EQ stage offers even greater control and versatility – 3 sweepable bands with a much broader frequency range, ±15 dB boost/cut and variable Q (bandwidth) parameters. The low and high bands can be each switched for shelving or peaking response.

**90 Presets and 90 User Memory Locations**

- 90 factory presets are provided covering a wide range of applications - presets can be fine-tuned or completely re-programmed to create totally new effects. Edited effects can be stored in any of 90 user memory locations and instantly recalled.

**Inputs and Outputs**

- Electronically-balanced XLR and 1/4" input and output connectors – -10 dB/+4 dB level selectors on both the ins and outs provide level-matching flexibility.

**Dynamic Filter**

- Versatile dynamic filter features low-pass, high-pass and band-pass modes with programmable center frequency, resonance, sensitivity, decay and shift direction.

**Built-In Dynamics**

- The noise gate not only provides a simple threshold control, it also features a programmable trigger delay (0.1 to 100 ms), as well as adjustable hold and release times. Level detection can be carried out at the gate itself or at the pre-reverb signal – the gate can also be triggered via MIDI.
- A precision compressor is provided with variable threshold, output level, ratio, attack and release time parameters as well as selectable knee (soft, normal or hard).
User Interface

- The large 24-character x 2-line backlit LCD displays multiple related parameters at once for easy programming and operation including the name of the selected program and the program parameter values
- A dual concentric knob allows you to adjust the input level independently for the left and right channels
- Two 8-segment LED meters indicate accurate, pre-A-to-D input levels, from -36 dB to Clip, for each channel
- A two-digit seven-segment display indicates the currently selected program number – two LEDs indicate whether programs are loaded from Preset or User locations
- The Parameter keys provide direct access to the current effects’ parameters, the post-EQ and Gate processors, level/balance parameters and MIDI controller assignments. Each time a key is pressed, it will cycle through the parameter pages
- The Data keys (INC) (DEC) allow you to modify the value of the selected parameter while the Cursor keys are used for navigating to parameters displayed in the LCD
- The Numeric keypad is used to directly input the a program number for recall, or direct input of parameter values
- The Main key accesses an effects most common parameters (Rev Time, Pre Delay and Hi and Lo Ratio), while the Fine Key accesses a program’s more detailed parameters like density and liveness etc...
- The Compare function allows instant A/B comparison between the original and an edited sound
- The Infinite key, when pressed, will dramatically lengthen the RevTime parameter producing the effect of a “freeze-frame” or “stop-motion” sound
- MIDI In/Out/Thru connectors support program change and program dump - up to 2 different effect parameters can also be controlled via MIDI in real time - if MIDI data is being received from an external device connected to the MIDI In connector the MIDI indicator will light
- There are four user-selectable input modes – Stereo, LR/Mix, R-Mono, L-Mono

Signal Flow of the ProR3’s Primary and Secondary Effects Stages

Reverb Types

- Reverb parameters are based on 2-stage reverb processing designed to achieve extremely smooth, natural reverb and allows true stereo reverb if required. There are a total of 9 reverb algorithms available including: Small Hall, Large Hall, Vocal plate, Perc. Plate, Spring, Echo Room, Strings, Snare and Reverb Flange.
- Early Reflections parameters include 6 preset early reflection types and 4 “user” types that can be created with customized individual reflection levels and pan positions.
- Room Simulator parameters are essentially basic reverb programs, configured with a range of parameters which allow you to control the dimensions and characteristics of a simulated room.

Compound Effects

- All compound effects are available in three patches configurations: series effect to reverb, series reverb to effect and parallel effect with reverb.
- Echo + Reverb parameters are one of the most commonly combinations used in recording and live sound applications.
- Early Reflections + Reverb Parameters are ideal for producing exceptionally natural-sounding ambience effects
- Chorus + Reverb; Symphonic + Reverb; Flange + Reverb Parameters combine outstanding reverbs with chorus, symphonic and flange type modulation, making it easy to add a subtle touch of animation to the reverb sound or produce wild effects
- Pitch Change + Reverb Parameters — Pitch change capability can be extremely useful for creating artificial harmonies, or adding a subtle extra touch of high or low end to the basic sound. The pitch change portion of this program allows two pitch variations to be created in addition to the original sound. The series patches allow the reverb sound to be pitch-changed, while the parallel patch allows the original sound to be pitch-changed independently from the reverb effect.
- Pan (Auto-Pan) + Reverb Parameters form a useful combination for many applications

Compact 3-channel Mixer

The KS-T2000 is a compact 3-channel mixer that is small and light enough to go anywhere. This product is made and guaranteed by Kamesan and is ideal for all audio applications in professional broadcast and film work. Camcorders are shrinking but that doesn’t mean audio requirements are getting any less demanding. Despite being one-third smaller and about one pound lighter than any comparable mixer, the Kamesan KS-T 2000 offers all the flexibility you’ll need to engineer precise location sound. True ‘Pack and Go’ design. At first sight, a 3-in / 2-out configuration does not appear to be a very comprehensive mixer specification. But on location, ease-of-use and adaptability count as the most valued features. You need to interface with varied signal levels, provide multiple feeds, and cope with awkward working conditions. Attention to smallest design details in the KS-T2000 has resulted in a mixer that can be relied on to excel in every situation.

**FEATURES**

**Accommodating Inputs**
- 3 switchable XLR-balanced mic/line inputs with 48v and A-B (12V) phantom powering.
- A variable input sensitivity control adjusts the input amplifier gain to optimize its amplification for any level, from a hot condenser to a low output ribbon mic.
- Inputs will match a wide variation in line signal levels. This means that the normal physical position of the main channel faders can be ‘trimmed’ to be at 2/3 rotation - providing adequate rotation range to ‘ride’ actual variations in signal levels.
- Switchable 160Hz high pass filters eliminate most low-frequency noise problems.
- Separate left / right output switches route the signal to the main faders and outputs.

**Versatile Outputs**
- To achieve such a compact size, a single meter is provided though the mixer has full stereo capability.
- The transformer-balanced XLR outputs can drive at a professional line level (+4dBm) or can be switched down to a low mic signal level (-60dBm).
- Two RCA connectors for connection to a consumer camcorder's mic input.
- Low channel crosstalk and output isolation allow the mixer to be configured for multiple feeds as the situation demands.
- 1kHz tone oscillator provides a useful calibration signal.

**Versatile Monitoring**
- Both headphone output and metering can be switched to left or right outputs, or to a mono mix of both. When used for multi-mono applications, one of the main outputs can be designated as a separate live feed and monitored independently.

**Exceptional Ease Of Use**
- The side panel reveals just how convenient operation is. Only the three main and monitor faders have tall knobs. It is virtually impossible to ‘knock’ any of the other controls inadvertently during operation.
- Even the main faders have been located on the side of the mixer allowing the operator to set and forget - a useful feature when inexperienced operators use the mixer.
- Wide knob spacing means that the channel fader provides for an easy grip under all conditions.
- An all-weather case allows the mixer to be slung around the neck or shoulder and operated beneath a transparent cover under all conditions.
- The KS-T 2000 runs five hours on four AA batteries. Higher voltages can provide higher output levels.
- Alternatively, the KS-T 2000 will accept and regulate any external DC supply in the range of 10 to 15-volts.

**KS-107 Lip Checker**

A unique product, the KS-107 helps to track and eliminate broadcast signal time differences between audio and image signals and also multiple audio signals. At the receiving site, audio is easily captured via a microphone or direct line connection. Video bursts are detected directly from a monitor screen using an exclusive image probe, which is manually pointed at the flashing image on the monitor. The calculated delay is displayed on the unit’s large LCD to an accuracy of within one millisecond, allowing the operator to make necessary adjustments.
4-Channel Compact Mixer

The KS-342 is a no compromise high-performance mixer that adapts to your needs—since no two location projects are ever the same, and often, they have demands beyond the traditional sound mixing techniques. Ideal for all audio application in professional broadcast and film work.

**FEATURES**

**Input Facilities**
- Selectable mic/line inputs providing 12- or 48-volt phantom power as required.
- Level trim at both sensitivities means the main channel faders can be set at optimum rotation for normal working.
- Massive 30dB pre-fader headroom plus continuously variable hi-pass filtering ensures no signals ever get out of hand.
- Channels can be ganged for true stereo operation and switched to the left or right mix busses.

**Outputs**
- Thumb-knob master level controls prevent accidental adjustment and the signal passes through switchable compressors before the final output stages.
- Fast attack, compound release circuitry provides a comfortable safety margin for distortion free operation.
- Independent as well as ganged settings ensure maximum flexibility for stereo and dual-monos setups. This design philosophy is carried through to the isolated outputs, which are not a luxury but a necessity in many situations. With a choice of levels (left/right independent), symmetry and connectors, four isolated two-channel feeds are provided.

**Comprehensive Monitoring**
- Backlit, jam-proof, level meters offer a clear visual indication of the main output signal.
- The headphone circuit can be switched to monitor any combination of the outputs in mono or stereo.
- Additionally, an indispensable PFL function, which appears on the right meter as well as at the headphone output, is included.
- Smaller and lighter than any comparably featured mixer, the front and side panels are uncluttered and easy to use.
- The most-important channel faders feature latex knobs for all-temperature comfort and are easily gripped, even in gloves. Kamesan’s trademark bar-grip knobs are used for all presets and never obstruct easy operation.
- Runs 8 hours on N-P-1 battery in a quick-change compartment, which also accepts a battery pack using 8 AA batteries. Plus up to 16v DC can be applied to the mixer power circuit, which also provides an auxiliary regulated output for powering receivers, etc.

**Small and Light and Expandable**
- The nature of location recording is that there will always be situations that require more channels or more processing. The KS-342 features a multi-way link socket that can be used to cascade a stereo input from another mixer without sacrificing channels.
- Secondly, a discrete connector and sturdy locks attach and integrate a range of specialized modules that expand capabilities instantly. Currently two variations are available: the KS-6001, a four channel sub mixer with identical features, and the KS-6002, a block of four parametric equalizers and compressors.

Portable 4-Channel Audio Mixer

The AlphaMix contains all of the features required by today's most demanding ENG recordist. Do you regularly do two camera shoots, work with demanding producers or have complicated IFB feeds? No problem. The AlphaMix features four switchable mic/line inputs, 12T or 48v phantom power, low noise pre-amplifiers with continuously variable gain trims, active low cut filters, balanced line level outputs per input channel, pre-fader-listens and simple three LED meters per input channel.

The AlphaMix uses NP-1 style batteries and is equipped with selectable low battery monitoring. In addition, it is equipped with four Hirose 4-pin power output connectors that allow it to power up to four wireless receivers. And unlike other external battery distribution boxes, each of the power outputs is individually filtered for quiet wireless operation. The AlphaMix was also designed from day one to feed and monitor audio returns from two cameras. Outputs include special, custom made, dual isolated output transformers that are the largest in the industry. Finally, the AlphaMix is the only mixer to offer two-camera support, and it utilizes a custom-made peak reading LCD meter that emulates most of today's cameras. For further convenience, it is equipped with a boom pole mounted remote control that can be used to control the gain of the first input channel, thus allowing you to boom with both hands.

- Four line or mic level switchable inputs
- 12T and 48v phantom powering
- Active 12dB/octave low cut filters.
- Retractable gain trims on each pre-amp
- Retractable pan pots
- Individual balanced outputs per input channel
- Individual 3 LED meters per input channel
- Pre-fade listens per input channel
- Boom pole mounted remote control slide fader allows booming with two hands
- Custom made (properly sized) dual isolated output transformers
- Two Hirose 10 pin connectors for dual camera support, line/mic level switchable
- Two 3.5mm stereo auxiliary outputs, line or microphone level switchable
- Two XLR balanced outputs
- Output limiters, switchable separate or ganged
- Additional output that provides balanced mono feed
- Built in 4-way power distribution for wireless receivers
- Built in slate microphone
- Built in reference tone oscillator
- Built in battery monitoring, switchable calibration for all NP-1 battery types
- Switchable headphone monitoring left, stereo, right, mono, M S as well as tape returns from 2 cameras.
- Aircraft aluminum housing with epoxy powder coat finish.
- Lexan overlays with wear-proof subsurface silk-screening.
- Includes Porta Brace case and strap

MJR 2-Channel Mixer

Perfect for use with today's small DV camcorders, DAT and Minidisc recorders, the PSC MJR Mixer offers the features of full size mixer in a small, portable format. The MJR Mixer contains two high quality mic preamps, each with switchable line or mic inputs, high pass filters, channel assignment pan switches, and 48v phantom power. It also offers a slate microphone, reference tone oscillator, headphone amplifier with tape/direct switch, sunlight readable LED meters and a multi-pin connector for use with PSC's BetaSnake cables. All of this housed in a rugged aircraft aluminum case barely 4.75 x 6” and weighing less than 1.5 lbs. In addition, the entire mixer can be mounted to the bottom of a small video camera via the supplied 1/4-20 thumb screw. And the whole mixer/camera combination can be mounted to any standard tripod as well via 1/4-20 threaded attachment point. Runs on a single 9-volt battery for more than five hours.
3-Channel ENG Audio Mixer

A cost effective, flexible portable mixer that combines rugged construction, high quality componentry, and ease of use ergonomics in a compact package, the M3 is perfect for ENG and EFP applications, digital and desktop recording and editing. The M3 features 3 high-quality, transformer-balanced XLR inputs and 2 L/R stereo paired XLR outputs capable of both mic and line level operation. Output limiters eliminate transient peaking caused by signal overload. The dual limiters can either be used independently or “gang” them together for applying the limiter to stereo signals. The M3 is powered via AA batteries offers 48-volt phantom power, and has a dual multi-pin connector for a single interface between the M3 and Betacam cameras. A convenient on board slate microphone is standard and a supplied boom pole remote control allows engineers the freedom of adjusting record levels while handling the boom pole.

- Three high quality transformer-balanced XLR inputs (with switchable “T”, Dynamic or 48v phantom powering) and outputs for pristine audio with low noise. All inputs and outputs are mic/line switchable and have a 3-way input pad: Dynamic 0dB Pad, Condenser -15dB Pad, Line Level -50dB Pad.
- Additional outputs include two 10-pin Hirose connectors for use with Beta snake cables (mic or line switchable) for conveniently connecting to two cameras, and two Auxiliary outputs for transcription or RF feeds (mic or line switchable). The 10-pin connector provides audio signal flow as well as tape return signal flow for monitoring.
- Ganging input and output connectors allow you to use two M 3 mixers tied together.
- Channels 3 and 4 can be linked for stereo recording using 2 mics in either M-S or X-Y configurations. The “Gang” switch links inputs 3 and 4 and both input levels are then controlled by Pot 4.
- “Separate” and “Ganged” switches allow independent or linked operation of both limiters.
- The LCD Peak meters emulate the peak reading attributes found in many Betacam. This ensures the meters accuracy no matter how the mixer and camera are connected.
- Low cut filters eliminate low frequency noise and rumble.
- The momentary “Slate” button activates a built in slate microphone for recording notes and information related to editing.
- Headphone monitoring selections include: Left to both ears, Stereo, Right to both ears, Mono, Pre Fade Listen of channels 1,2 and 3 and M S Stereo as well as Tape returns from two Betacam.
- A handy boom-pole remote control attaches to any boom pole. This allows sound engineers to adjust recording level without reaching for the mixer.

M6

6-Channel Portable Mixer for Location Sound Recording

The M6 Mixer was designed for extreme field operating conditions (utilizes rotary pot faders because of their immunity to dirty and dusty conditions). In addition, it offers provisions for direct mounting of a DAT or DVD recorder. This allows for a simple and convenient means of recording in the field whether you are working on a sound stage, in an insert car, or at some other remote location. The M 6 M ixer offers six inputs each with switchable mic powering, line or mic inputs, phase reversal, 2-way EQ, pan pot and two aux sends. Its output section contains two large, easy to read LCD peak meters, slate microphone, private line to boom operators, full duplex boom communication, recorder remote rolls, reference oscillator, four selectable headphone feeds, two main outputs, two aux outputs, and a selectable video assist output.
Digital Portable Field Mixer

Effective audio quality is now more important than ever for ENG and EFP applications, because even with high-quality video, lackluster audio performance will result in a mediocre production. The DMX-P01 is Sony's answer to these high-quality audio requirements. Not only does it offer outstanding audio quality, it is also one of the most user-friendly mixers in the ENG and EFP markets. With full 24-bit processing and 48kHz or 96kHz sampling rate, the DMX-P01 provides sound quality comparable to high-end production mixers. Its front panel is engineered to allow fast, easy, and accurate setting adjustments - essential when working in the field. It also includes other useful features, such as panel-lock and parameter-lock functions, selectable meter scales, camera-audio return-level check, memory function, digital cascade capability, and digital outputs. All of this functionality and versatility is packaged into one sleek, compact, and lightweight body that can be used effortlessly in field productions.

**Excellent Sound Quality**
- In order to provide outstanding sound quality, the DMX-P01 offers full digital-audio processing. Its 24-bit A/D and D/A converters provide a high level of linearity for analog inputs and outputs. Internally, the unit utilizes 32-bit digital processing for maximum throughput. In addition, the DMX-P01 has a sampling rate that is selectable from either 48kHz or 96kHz.

**Digital Limiters/Compressors**
- By using digital limiters and compressors, the DMX-P01 can provide extremely high-quality sound in one small package. Limiters are available at the input, and both limiters and compressors are available at the output for maximum flexibility.

**Full Parameter Controls**
- The DMX-P01's front panel puts all of its controls at your fingertips with an organized and logical layout. The DMX-P01 processes audio digitally, so parameters that are used less frequently are stored internally and accessed only when needed. Using the front-panel controls and easy-to-read backlight LCD allows full control of every parameter without the need to remove the unit from its audio-organizer case.

**Panel-Lock**
- One major concern for engineers in the field is the accidental bumping of controls, which can change the sound settings. The DMX-P01 safeguards against this with its panel-lock feature, which can be set to secure all of the control settings, or selected individual control settings.
- In addition, a Parameter-Lock feature also avoids inadvertent parameter changes.

**Flexible Meter Scales**
- Being digital, meter calibrations can be easily changed from one type to another without the need to replace the entire meter. Six easy-to-change meter scale sheets are supplied: VU, PPM 1 (BBC-type), PPM 2 (DIN-type), PPM 3, PPM 4 (IEC-type2) and dBFS. Simply insert the desired scale sheet and select the right meter type. The DMX-P01 will display the audio level according to the scale selected.

**Camera-Audio Return Check**
- The DMX-P01 enables users to visually verify that the mixer's audio level matches the level recorded to the camcorder tape. This is done using the camera return-level mode, available in the setup menu.

**Digital Output**
- The DMX-P01 is equipped with a digital output, which can be used to send audio to digital equipment such as DAT recorders. AES/EBU and S/PDIF coaxial interfaces are available.

**Memory Function**
- Easily store and recall parameters from the setup menu. There are two memory functions:
  - Power-On Memory Recall - When the DMX-P01 is powered on, the system can recall parameters in three ways: default factory settings, the last settings used, or with the parameters of one specific scene memory.
  - Scene Memory Recall - This allows users to recall up to ten different user-defined parameter settings or the factory default settings. Invaluable in situations where a single unit is required to serve multiple users or multiple shooting scenarios.

**Digital Cascade**
- When additional inputs are required, DMX-P01 mixers can be cascaded using a digital connection between mixers. Best of all, sound quality isn’t degraded, as it would be when cascading analog mixers.
SONY
DMX-P01

Inputs
- Four XLR-balanced mic/line inputs
- +48 V power for each mic input
- Digital cascade input with phono connector
- Microphone/line gain-level control
- Level control knobs with stereo-link facility
- Selectable sampling rate (48 kHz or 96 kHz) for A/D converters

Outputs
- 2 balanced outputs on XLR-type balanced connectors
- Digital AES/EBU output (stereo) on XLR-type balanced connector
- Coaxial output connector for mix-bus output (for cascade) or S/PDIF digital output (selectable)
- Stereo tape output on unbalanced 3.5 mm TRS jack
- Switchable output mode: stereo or monaural
- Selectable output-level control for L/R master outputs and camera send
- Selectable sampling rate (48 kHz or 96 kHz) for D/A converters

Panning
- Variable pan controls

Low Cut Filters
- Adjustable (50 to 200 Hz) cut-off frequencies for 2 user settings (A/B)
- Quick parameter-recall switch with OFF/A/B positions

Limiters/Compressors
- Digital limiters on both inputs and outputs
- Digital compressors on outputs
- Precise parameter control on threshold and ratio value, attack and release time
- Link function (ON/OFF switchable)
- LED indicators for output limiter/compressor operation

Link/M-S Operation
- Links input levels, LCFs, and PAN controls for channels 1/2 and 3/4
- Links output levels and limiter/compressor settings for master left/right outputs
- Decodes M-S microphone inputs, and links the input levels of channels 1/2 and 3/4
- Phase reverse on channels 2 and 4 (M-S decode)

LCD Panel
- Various level-meter displays: VU, PPM 1 (BBC-type), PPM 2 (DIN-type), PPM 3 (NORDIC-type), PPM 4 (IEC-type), dBFS
- Displays setup menus and allows various parameter settings
- Three quick-recall memory settings for immediate mixer setup
- Ten user-scene memory settings (each including level meter, LCF, limiter/compressor, and link status)
- Six scale sheets supplied for different level-meter calibrations
- Back light
- Heated LCD for low-temperature conditions

Monitoring
- 2 outputs: 1/4˝ phone jack and 3.5-mm mini jack
- Six monitoring modes: left output, right output, stereo output, left/right-mixed monaural, M/S decode and camera return
- Level-control knob

Oscillator/Talkback
- Oscillator: 1-kHz pilot-tone signal into all outputs
- Talkback: slate into all outputs
- Momentary and alternative modes for both oscillator and talkback

Camera-Audio
Send/Return-Level Control
- Stereo return from a camcorder via 12-pin Tajimi balanced connector
- Precise level control on LED with auto-evaluation function for return level
- Monitoring capability with headphones

Power
- External DC 10 to 15v input with 4-pin XLR connector
- External DC 12 V input with jack connector
- DC 12 V output on 4-pin Hirose connector
- 8 internal AA-size (LR6) alkaline batteries for 5 hours of continuous operation
Portable 3-Channel Stereo Mixer

The standard by which portable mixers are measured, the FP-33 is used all over the world for remote audio recording, ENG/EFP applications and location film production. Built upon the benchmark FP32 and FP32A field mixers, the FP33 is light enough, small enough and rugged enough to take anywhere. It features three XLR-balanced mic/line inputs and two outputs, center detented pan pot for each input channel, oscillator, two headphone jacks, 48v/12v phantom and 12v T (A-B) power, tape out jack, and a monitor input for the headphone circuit. Exceptional low noise design and wide dynamic range make the FP-33 ideal for use with digital transmission links or digital video/audio media, including DAT and recordable CD.

**Features**

**Inputs**
- Three XLR-balanced inputs; switchable to low-impedance mic or line level.
- Phantom or A-B (T) power for condenser mics is available at each mic input.
- Built-in tone oscillator for level checks or line tests.
- Slate microphone with automatic gain control (AGC) for take identification or for emergency use. Slate tone for identifying take locations during editing.
- Stereo monitor input allows headphone monitoring of external sources without interruption of mixer functions.
- Link switch couples mixer inputs 2 and 3 into stereo pair.

**Outputs**
- Left and right XLR-balanced outputs are mic/line switchable.
- Left and right tape outputs are available to feed tape recorder inputs or other unbalanced aux-level inputs.
- 1/4” and 3.5 mm headphone jacks are driven by a stereo headphone power amp with separate level control.

**Controls and Indicators**
- Center detented pop-up pan pots on each input. Color-coded, soft touch rubberized knobs with tactile position indicators.
- Active, feedback-type input gain controls permit direct input of high-level sources without input attenuators.
- Dual clutched Master gain control for individually adjusting left and right levels at line/mic and tape outputs, as well as tone oscillator and slate mic levels.
- 150Hz (6dB/octave) Lo-cut filters at each input reduces extraneous low-frequency interference.
- Built-in limiter with adjustable threshold prevents output clipping of mixer or input overload of amp or tape deck.
- LED indication of input level, peak output level, limiter action, and battery.
- Illuminated VU meters for left/right channels. Preset for 0 VU = +4 dB, adjustable for other levels.
- Headphone monitoring mode switch and headphone MS matrix.

**Performance**
- Wide, flat response with extremely low distortion and up to +1dBm output level for studio-quality performance.
- Small and lightweight, the FP-33 offers sealed input potentiometers and a steel chassis, making it extremely rugged and durable as well.
- Mix bus jack for connecting additional FP33 or FP32A mixers.
- Internal DIP switches provide over 4,000 different set-ups.

**Power**
- Powered by two standard 9v batteries (up to 8-hours under normal conditions) that can also supply 48v or 12v phantom power to condenser microphones.
- Can also be externally powered from any 11 to 30v DC source such as battery belt pack or car battery.
- A third 9v battery can be used for condenser mics that require A-B power.

**Applications Include:**
- Remote audio recording
- Electronic field production (EFP)
- Electronic news gathering (ENG)
- Film production

**FP-33 with carrying case, shoulder strap and mix bus cable.................................1199.95**
Portable Automatic 4-Channel Mic Mixer with IntelliMix

A portable automatic mixer, the FP-410 is equipped with Shure's patented "IntelliMix" to deliver flawless automatic microphone mixing. The remarkable operating concept behind the FP-410, "IntelliMix" combines three unique functions: Noise-Adaptive Threshold, MaxBus and Last Mic Lock-On, to provide greater gain before feedback, reduce pickup of ambient noise and eliminate comb filtering effects. Ideal for video production, broadcast, conference recording and field production, the FP-410 is also useful for convention facilities, hotels and sound installations.

**Noise-Adaptive Threshold:**
Distinguishes between constant background noise (such as air-conditioning) and rapidly changing sound (such as speech). This function continuously adjusts the activation threshold so only speech levels that are louder than background noise will activate an FP-410 channel.

**MaxBus:**
Eliminates the poor audio quality that results when a speaker is picked up by more than one microphone. It does this by controlling the number of microphones that may be activated for a single sound source. With MaxBus, one talker will activate only one FP-410 channel, even if multiple microphones are "hearing" that talker.

**Last Mic Lock-On:**
Maintains a seamless audio mix by keeping the most recently activated microphone open until a newly activated mic takes its place. Without this function, a long pause in conversation might cause all mics to turn off and sound as if the audio signal has been lost. With Last Mic Lock-On, background ambience is always present.

---

Four XLR-balanced inputs and two XLR-balanced outputs. Each can be individually set for microphone or line-level signals.

Any high quality, low-impedance, balanced mic (dynamic or condenser) can be used, including wireless and shotguns

Additional FP-410 mixers can be interconnected. Linked systems can contain over 25 mixers and 100 microphones.

Front-panel channel gain and master controls operate as in conventional mixers.

Selectable hold time keeps microphones on during short pauses in speech.

Automatic gain adjusts as additional microphones are activated.

Wide, flat frequency response and low distortion up to +18 dB output.

LED indication of mic channel mix levels, output level and limiter action.

Automatic muting prevents annoying thumps and loudspeaker damage when the FP-410 is turned on and off.

Separate monitor input and tape output (aux-level) jacks.

Front panel headphone monitor jacks with level control.

48-volt phantom powering for condenser microphones.

Operates on AC or two 9-volt batteries.

Includes optional bumpers (feet) for use on horizontal surfaces; a short cable for linking two FP-410’s; and a rack mount kit for installation in a 19” rack.

---

“IntelliMix”—How it Works

Multiple miking situations— with a number of talkers participating— have always presented problems for the audio technician. If too few mics are used, the coverage of each talker may vary, with one talker (nearest the mic) being louder and clearer than the next. Talkers farthest from the mics will sound “echoey” and reverberant, as very little of the direct sound from their mouths reaches the microphones. If too many mics are used, there’s more background noise and reverberation pickup, as well as less gain before feedback if a sound reinforcement (PA) system is used.

It’s somewhat like having multiple video cameras all focused on the same subject. If the camera signals are combined, the result is a blurred image. When multiple microphones are open for a single talker, the result is a blurred audio signal. But it’s often not practical for someone to turn mics on when they are needed and off when they are not. The answer is the FP-410.

The FP-410 automatically attenuates any microphone not being used, greatly reducing excess reverberation and feedback problems.

When a new talker starts, the FP-410 immediately selects and silently activates the most appropriate microphone. "IntelliMix" electronic processing enables the FP-410 to provide clear, natural voice pickup. The FP-410 significantly reduces the problems of "boomy" or "muddy" sound, insufficient sound level (because of feedback or "howling"), and operator errors. In fact, errors are virtually eliminated because the FP-410 doesn’t need an operator or technician for continual adjustment— once set up, it is completely self-sufficient.

The FP-410 has numerous applications in video production and audio recording, broadcasting, and sound reinforcement. In any speech pickup application with multiple microphones, the FP-410 dramatically improves audio quality. Switching from manual to automatic operation allows an individual’s voice to rise above background noise and reverberation to become clearer and more intelligible.
**SHURE**

**FP-24**

**Portable 2-Channel Stereo Preamp and Mixer**

The FP-24 is a studio-quality, two-channel, portable stereo microphone mixer, designed for active use in demanding broadcast environments. Features including assignable L-C-R inputs, built-in slate microphone, 1kHz tone oscillator, and headphone monitoring render this mixer extremely adaptable in application. The remarkable audio performance and comprehensive attributes of the FP-24 make it an appropriate choice for studio or field production engineers. Due to its compact and rugged mechanical and electrical construction, the FP-24 excels in no-compromise settings such as radio, television and film production.

- Two transformer-balanced microphone inputs with left, center, and right position mixing capabilities
- Unique 7-segment peak output meters, with three selectable levels of LED brightness—readable even in direct sunlight
- High current balanced output drivers provide signal integrity over long cable runs
- Headphone preamplifier enables monitoring of program audio or external tape return
- "Uncippable" input peak limiters with adjustable threshold (each input)
- Selectable 15v and 48v phantom power
- Switchable low-cut filters with 80 and 160 Hz corner frequencies, 6dB per octave
- Powered with two AA alkaline batteries for 11-12 hours) or 4-14v DC power (PS20)
- The FP-24 has the ability to link with the Shure FP33 mixer using the optional A33LK cable kit to create a highly portable, flexible, and cost-effective 5 x 2 audio production system. (The A33LK kit can also be used with the Shure FP23 to create a 4 X 2 setup.)

---

**M367**

**Portable 6-Channel Mic/Line Mixer**

An industry standard, the M 367 is a six-input mono mic/line mixer/remote preamplifier specifically designed for professional applications. A complete and compact console, the M 367’s excellent performance, versatility and features make it ideal for studio, remote, video deposition and sound reinforcement applications as well as an add-on mixer for expanding existing facilities. Built to meet the requirements of the most demanding field production applications.

- Six switchable XLR-balanced mic or line level inputs with individual gain controls and low-frequency roll-off switches
- Two XLR-balanced outputs; one selectable mic/line output and one dedicated line output
- Metal XLR connectors on both inputs and outputs, detachable AC cable
- Feedback-type input gain controls for maximum clipping levels and dynamic range
- Built-in switchable peak limiter cuts output overload distortion and adapts to power supply voltage
- LED indicator shows limiter operation or overload with limiter defeated
- Externally adjustable limiter threshold (-4 to +18dB)
- Wide, flat frequency response (20Hz to 20kHz) and extremely low distortion up to +16dBm line level output
- VU meter is calibrated for +4 and +8dB with range switch; Meter is also illuminated during AC operation
- Phantom power for condenser mic operation
- Front-panel headphone level control and monitor jack; can drive almost any stereo or mono headphones
- Headphone output level is high enough to be used as an auxiliary unbalanced line feed to drive a tape recorder or power amplifier
- Automatic muting prevents speaker damage during power on/off
- Highly stable, low-distortion tone oscillator provides for line test and level checks
- Rear panel Mix Bus jack facilitates stacking multiple M 367’s for additional input capability without losing any inputs. Two M 367’s connected, provides two independent master gain controls and two isolated line amplifiers with eight individually controlled inputs
- Selectable 120 or 240v AC operation as well as portable DC capability (three 9v batteries required)

M367 .......................................................... $524.50
Portable 4-Channel Stereo Mic Mixer

The FP-42 is a four-input, two-output, compact self-contained stereo mixer with all the features and ruggedness that have made Shure mixers the industry standard. Perfect for mixdown in video editing suites, it integrates all the operating features and reliability of a professional studio mixer in a single unit that is small and light enough for location use.

- Four XLR-balanced inputs, each mic/line switchable with low-cut filters and cueing options
- Left and right XLR-balanced outputs with mic/line and mono/stereo switches
- Active feedback-type input gain controls for high level signals without input attenuators
- Pull-pot cueing on all inputs provides channel previewing
- Built-in tone oscillator permits level checking and line testing
- Parallel stereo headphone jacks (1/4” and mini) with level control
- Adjustable threshold limiter with left and right channel peak indicators
- VU meters with range switch and battery check function
- Left and right channel master level controls and ganged headphone level control
- Powered by three 9v batteries or via internally selectable 120 or 240v AC power

Alesis' MultiMix series is a line of powerful, portable, affordable mixers designed for a wide range of operating environments and applications. Available in 4 different tabletop mixers, plus a powerful rack mixer, all feature the high quality and high performance that Alesis is known for. Each mixer features 99 on-board 24-bit Alesis digital effects, for incredible control and creativity, as well as an intuitive interface design with superior feel. And each mixer has been designed from the inside out to provide the level of performance users expect from Alesis, at incredible prices.

**MultiMix 6FX**
A super compact analog mixer for performing or recording applications, with digital effects. An incredible value (under $100), the MultiMix 6FX includes 2 mic/line inputs, 2 stereo line inputs, a 3-band EQ on each channel, plus 99 high quality 24-bit Alesis digital effects.

**MultiMix 8FX**
A highly compact analog mixer, designed for live applications such as piano bar, single musician, duets, etc., or for simple recording applications such as live to 2-track, etc. Delivering powerful mixing capabilities at a very low price, the MultiMix 8FX includes 99 high quality 24-bit Alesis digital effects, and is small enough to fit in a "gig bag." Featuring 8-input, 2-buss analog mixing with 4 mic preamps with switchable 75Hz high-pass filters, 2 stereo line channels, a 3 band EQ on each channel, and more.

**MultiMix 12FX**
A portable analog mixer that can handle a wide range of PA and recording applications, such as live performances for small bands, ensembles, and general PA, or recording applications such as live to 2-track, simple multi-track, etc. The low cost, yet powerful MultiMix 12FX includes a 12-input, 4-buss analog mixer featuring 4 mic preamps with switchable 75Hz high-pass filters, 60mm linear faders on each channel, 4 stereo line channels, a 3-band EQ on each channel, 99 high quality 24-bit Alesis digital effects, and much more.

**MultiMix 12FX D**
The MultiMix 12FXD is the same as the MultiMix 12FX plus it adds a 44.1kHz digital S/PDIF digital output—making it ideal for those seeking a low-cost, yet powerful mixing solution with digital output.

**MultiMix 12R**
The world's most affordable 12-input, 2-buss analog rack mixer featuring 8 mic preamps with 2 stereo line channels, all in a compact, 3-U rack mount configuration. The MultiMix 12R has 2-band, fixed frequency EQ on each channel, 1 pre-fader aux send and 1 post-fader aux send per channel, and 60mm linear potentiometers (faders) for master level of each channel. The master section features an external stereo aux return level, stereo LED bar graph meters, stereo master L/R buss 60mm fader, and a separate phones/monitor level control.

- 12-channel analog mixer in compact 3U rackmount design
- 8 XLR mic inputs with phantom power
- 2 aux sends (pre-and post-fader) for monitor returns and effects
- Insert points on 8 channels, plus 2 channels of stereo line inputs
- 2-band shelving EQ at 80Hz and 12 kHz
- 60mm linear faders on each channel

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
**8/2 Tube Mixer**

The M-3 is an 8-channel compact tube mixer, ideal for all tracking and mixing applications. Each channel features discrete tube mic preamps, a 4-band EQ with swept mids, 2 aux sends and a post-fader direct output for multitrack recording. The master section has tube stages in the main mix bus, together with 2 aux returns, monitoring, metering and an optional 24-bit/96kHz stereo digital output. When linking multiple M-3 mixers, the stereo, PFL and aux busses are also linked, providing an unlimited number of channels.

- Balanced XLR mic and 1/4" jack line inputs
- Balanced XLR L/R mix outputs
- Optional AES, SPDIF and TOSLINK optical digital outputs
- Sovtek ECC83/12AX7A tubes
- Phantom power, 90Hz filter, phase reverse and mic/line switch
- 100mm faders with pan, mute and solo
- Drive and Peak LEDs
- Balanced internal signal busses
- Stereo main fader with VU metering
- Unbalanced 1/4" jack inserts
- Word Clock input
- Switchable level direct outputs
- Link facility via 15-way D-type connectors
- Headphone output
- External linear PSU
- 200v DC stabilized supply
- 19" rack-mountable or table-top use

---

**SM PRO AUDIO DI4v/ DI8**

**4- and 8-Channel DI/Line Mixers**

Multi-function direct injection boxes and stereo line mixers in one single unit rackmount chassis, the half-rack SM DI4v and full-rack SM DI8 feature 4 and 8 channels of unbalanced to balanced converters with 10dB pad and earth lift selector provided per channel. They are suitable for many applications right out of the box but it is the addition of a built in line mixer (volume and pan control for each channel and master volume), that makes them unique problem solvers. If you are a keyboard player, electronic drummer, PA/Studio owner, pro musician or a hobby player, the SM DI4v or SM DI8 will find a place in your rack. Imagine running your 4 keyboard or modules on stage directly onto them and being able to send off balanced signal to the front of house rig while providing your own dedicated monitoring mix...all on a single rackmount direct injection box/line mixer! SM DI4v includes a headphone amplifier so you can monitor your own signal, the SM DI8 includes a LINK function so that multiple units can be linked to a single stereo output. So if you have more than 8-16-24.... inputs of unbalanced signal they can all be routed and monitored through the one output pair!

- 4- and 8-channel DI Box
- 4- and 8-channel Mixer
- Each input has a balanced output
- Earth lift per channel
- 10dB pad per channel
- Volume control per channel
- Pan control per channel
- Master Volume control
- Stereo Line Out
- Headphone Amp (SM DI4v)
- Stereo Link Input (SM DI8)
- 110v-240v external power supply
Ultra Low-Noise Eurorack Mixers

By continuously responding to the suggestions of their customers, Behringer has developed a range of mixers that offer more bang for the buck without compromising on audio quality. Built to exacting standards, they are rugged and reliable, and offer the flexibility and sonic integrity demanded by the most discerning end users. Ultra-low noise circuitry and transparent audio, balanced mic/line inputs, invisible mic preamps, solid steel chassis, sealed potentiometers make the UB Series Euroracks ready for broadcast production as well as MIDI rigs, home/project studios, video editing suites, and live sound reinforcement. And with ten mixers in the line, there is sure one to meet your requirements.

With the UB Series, Behringer takes mixing to the next level. From the miniscule UB502 to the largest UB2442FX-PRO, all mixers combine the same high-quality components and innovative features with affordable pricing. They all feature premium IMPs ("Invisible" Mic Preamps) and ULN (Ultra Low-Noise) circuitry design, and with a feature set of impact-resistant pots and first-rate faders from ALPS, and low-tolerance components, the UB Series provide uncompromising quality under their sleek and sturdy roadproof skin. In addition, the PRO models feature an internal autorange (80-240v) switch-mode power supply and all FX PRO models feature award-winning 24-bit digital and 24-bit/46kHz internal processing Virtualizer technology with 99 breathtaking stereo effects.

The state-of-the-art, studio-grade IMPs provide 130 dB dynamic range for 24-bit, 192 kHz sampling rate inputs, ultra-wide 60dB gain range and +30dBu line input capacity for crystal-clear audio and ample headroom. With their extreme bandwidth and amazingly neutral, noise- and distortion-free circuitry, the mic preamps deliver crystal-clear audio for awesome sound without any coloration. ULN low impedance circuitry design coupled with high-quality 4580 op amps provides maximum headroom, minimal noise and stunningly transparent audio.

They all feature:

**Invisible Mic Preamp (IMP)**
- Five years in the making, the Invisible Mic Preamp (IMP) is a superior mic preamp that delivers crystal-clear audio with incredible reproduction of the slightest nuances. It matches or exceeds the performance of outboard mic preamps. You get extreme bandwidth of 5Hz to 100kHz coupled to unusually neutral, noise- and distortion-free circuitry.

**Ultra Low-Noise (ULN)**
- ULN stands for the Ultra low-noise design of their circuitry. It is based on extremely low-impedance components that keep thermal inherent noise and crosstalk at an absolute minimum. The result: your console is considerably less noisy and crosstalk between neighboring channels is virtually non-existent.

**Switch-Mode Power Supply (SMPS)**
- All PRO series mixers (UB1204-PRO and up) use a state-of-the-art, over-sized, switch-mode power supply with lots of headroom. The advantage, compared to conventional circuits, is that a switch-mode power supply automatically adapts to AC voltages between 100 and 240 volts. Furthermore, due to its much greater efficiency, it consumes much less energy than a conventional supply unit.
- Even more important is the fact that conventional transformers always induce 50Hz hum (check it out on other mixers when you turn up all volume controls). Behringer’s switch-mode supply operates at very high frequency and therefore keeps the mixer “dead” quiet.

**High-Quality Construction**
- High quality ALPS sealed rotary controls and faders keep out dust and moisture to ensure long lasting, reliable performance. Steel chassis and horizontally mounted fiberglass circuit boards are used for their ruggedness, whether on the road or bouncing from studio to studio.
- Digital recordings done at 16-bit depths break up the dynamic range between the loudest and quietest portions of a signal into 65,536 steps. Behringer uses 24-bit resolution (dividing the signals’ dynamic range into 16,777,216 steps) allowing for far more accurate rendering of the quieter parts of the audio.
- Audio signals change constantly, so a digital device must capture these changes as faithfully as possible. The higher the sampling rate, the better. UB Series mixers use a sampling rate of 46kHz (46,000 times per second). Since the sampling rate should be twice that frequency, 46kHz is more than adequate for capturing all signals in the audible range—the human ear can not hear sounds whose frequency is higher than 20kHz.
5-, 8, 10- and 12-Input 2-Bus Mixers

It may be small, but the UB502 features the same state-of-the-art Invisible Mic Preamp (IMP) and the same Ultra low-noise (ULN) design for highest possible headroom as its larger brethren. Its one mono channel plus 2 stereo channels with a 2-band EQ on the mono channel make it ideal for use with fixed audio installations as well as keyboards, samplers and computer application. Hobby musicians and video makers will also find lots of use for this ultra-compact mixer. A shade larger than the UB502, the UB802 features 2 mic preamps, 6 balanced high-headroom line inputs, 1 post fader FX send per channel for external FX devices and 1 stereo aux return for FX applications or as separate stereo input. There is also an extremely musical 3-band EQ on all channels. The UB802 is well-suited for use with fixed audio and video installations as well as keyboards, samplers and computer application.

The 10-input UB1002 features two mic preamps), while the 12-input 1202 is equipped with four. Both feature an effective, extremely musical 3-band EQ plus switchable low-cut filter on all mono channels. There is 1 post fader FX send per channel for external FX devices, main mix outputs plus separate control room, headphones and stereo tape outputs. Tape inputs are assignable to main mix or control room/phones outputs. These are extremely versatile mixers with possibilities ranging from connecting a DAT recorder and monitor speakers to running permanent video and audio installations.

### FEATURES

- One (UB502), two (UB802, UB1002) or four (UB1202) XLR-balanced discrete inputs featuring studio-grade “Invisible Mic Preamps” with:
  - 130dB dynamic range for 24-bit, 192kHz sampling rate inputs
  - Ultra-wide 60dB gain range
  - Lowest distortion 0.0007% (20Hz -20kHz)
  - A bandwidth ranging from below 10Hz to over 20kHz for crystal-clear reproduction of even the finest nuances
- Ultra-low noise ULN design, highest possible headroom, ultra-transparent audio
- Effective, extremely-musical 3-band EQ (2-band on the UB502) and peak LED on mono channel
- 5 (UB502), 6 (UB802) balanced high-headroom 1/4” line inputs
- Main mix outputs plus separate headphones and stereo tape outputs
- Tape inputs assignable to main mix or phones outputs
- External power supply for noise-free audio and superior transient response

### UB 802 Step-up Features:

- Switchable +48v phantom power for condenser mics
- 1 post fader FX send per channel for external FX devices
- 1 stereo aux return for FX applications or as separate stereo input
- Main mix outputs plus separate control room, headphones and stereo tape outputs
- Tape inputs assignable to main mix or control room/phones outputs

### UB1002/UB1202 Step-up Features:

- 10 (UB1002) or 12 (UB1202) balanced high-headroom 1/4” line inputs with +4/-10 level selection on all stereo channels
- 3-band EQ plus switchable low-cut filter on all mono channels
- FX to control room function helps to monitor effects signal via headphones and control room outputs
- Long-wearing 60mm logarithmic-taper ALPS master fader and sealed rotary controls
BEHRINGER

UB1204-PRO • UB1204FX-PRO

12-Input 2/2-Bus Mic/Line Mixers
These are mixers whose small size belies their incredible versatility and audio performance. You get 8 balanced high-headroom line inputs, 4 Invisible Mic Preamps, 2 aux sends per channel (1 pre fader for monitoring applications and 1 post fader for external FX devices). There are 2 subgroups with separate outputs for added routing flexibility and 2 multi-functional stereo aux returns with flexible routing round off the list of high-quality features. The UB1204FX-PRO has all the same features plus a 24-bit digital stereo FX processor with 99 great-sounding VIRTUALIZER presets including reverb, delay, chorus, compressor, tube distortion, vinylizer and more, plus a 1kHz test tone generator. There are also solo and PFL functions on all channels as well as a pre/post fader switchable aux send for monitoring/FX applications.

STEP-UP FEATURES (FROM THE UB1202):
- Only 8 balanced high-headroom 1/4˝ line inputs (not 12) with +4/-10 level selection on all stereo channels
- 2 aux sends per channel: 1 pre fader for monitoring applications, 1 post fader for external FX devices
- Peak LEDs and mute/alt 3-4 function on all channels routes signal to subgroup instead of main outs

UB1622FX-PRO
16-Input 2/2-Bus Mic/Line Mixer and 24-bit Multi-FX Processor
You get all the important elements right here in a 19” form-factor. This compact mixer offers 12 balanced high-headroom line inputs, 4 Invisible Mic Preamps, 2 aux sends per channel (1 pre/post fader switchable for monitoring/FX applications and 1 post fader for internal FX or as external send). You also get an extremely musical 3-band EQ with semi-parametric mid-band plus switchable low-cut filter on all mono channels. The integrated 24-bit digital stereo FX processor offers 99 great-sounding VIRTUALIZER presets as well as a 1kHz test tone generator. There are 2 subgroups with separate outputs for added routing flexibility and 2 multi-functional stereo aux returns with flexible routing.

STEP-UP FEATURES (FROM THE UB1204 FX-PRO):
- Inserts on each mono channel for flexible connection of outboard equipment
- 3-band EQ with semi-parametric mid-band plus switchable low-cut filter on all mono channels
- 12 balanced high-headroom 1/4˝ line inputs with +4/-10 level selection on stereo channels
- Peak LEDs, mute, main mix and subgroup routing switches
- Main mix outputs with jack and gold-plated XLR connectors, separate control room, headphones and stereo tape outputs

www.bhphotovideo.com
18-Input 3/2-Bus Mic/Line Mixer and 24-bit Multi-FX Processor

If you are looking for a capable compact mixer with a breathtaking 3D XPQ stereo surround effect and a 9-band stereo graphic EQ, this is your machine. Of course, you also get 14 balanced high-headroom line inputs, 6 “Invisible” Mic Preamps, and 3 aux sends per channel and extremely musical 3-band EQs with semi-parametric mid bands plus switchable low-cut filters on all mono channels. There are 2 subgroups with separate outputs for added routing flexibility and 2 multi-functional stereo aux returns with flexible routing are also there for your convenience. You will also find the integrated 24-bit digital stereo FX processor with 99 great-sounding VIRTUALIZER presets.

**STEP-UP FEATURES (FROM THE UB1622 FX-PRO):**

- 6-XLR-balanced discrete inputs featuring studio-grade “Invisible Mic Preamps”
- 14 balanced high headroom 1/4˝ line inputs with +4/-10 level selection on stereo channels
- 9-band stereo graphic EQ allows precise frequency correction of monitor or main mixes
- Breathtaking XPQ 3D stereo surround effect widens the stereo image and adds life and transparency to your sound—an easy way to put a unique final polish on your music and turn your performance into an incomparable experience.
- 3 aux sends per channel (Pre(fader for monitoring, Pre/post fader switchable for monitoring/FX applications, Post fader for internal FX or as external send).
- Balanced TRS and gold-plated XLR main mix outputs, separate control room, headphones and stereo tape outputs

UB2222FX-PRO

22-Input 2/2-Bus Mic/Line Mixer and 24-bit Multi-FX Processor

The second-largest mixer in the UB Series, the UB2222FX-PRO has 16 balanced high-headroom line inputs, 8 Invisible Mic Preamps, 3 aux sends per channel, 3-band EQs with semi-parametric mid bands plus switchable low-cut filters on all mono channels, and integrated 24-bit digital stereo FX processor with 99 great-sounding VIRTUALIZER presets. There are 2 subgroups with separate outputs for added routing flexibility as well as 3 multi-functional stereo aux returns with flexible routing.

**STEP-UP FEATURES (FROM THE UB1832 FX-PRO):**

- 8-XLR-balanced discrete inputs featuring studio-grade “Invisible Mic Preamps”
- 16 balanced high headroom 1/4˝ line inputs with +4/-10 level selection on stereo channels
- 3 multi-functional stereo aux returns with flexible routing
## BEHRINGER

### UB2442FX-PRO

#### 24-Input 4-Bus Mic/Line Mixer and 24-bit Multi-FX Processor

This is the big cajun of the whole UB Series. You get all the features you’d expect in an ultra high-quality compact mixer: 16 balanced high-headroom line inputs with dedicated gain controls on stereo channels 13-16, 10 studio-grade IMP “Invisible” Mic Preamps, and an effective, extremely musical 3-band EQ with semi-parametric mid band plus switchable low-cut filter on all mono channels. There is also an integrated 24-bit digital stereo FX processor with 99 great-sounding VIRTUALIZER presets.

### STEP-UP FEATURES (FROM THE UB2222 FX-PRO):

- **10-XLR-balanced discrete inputs featuring studio-grade “Invisible Mic Preamps”**
- **16 balanced high-headroom 1/4” line inputs with dedicated gain controls on stereo channels 13-16**
- **2 headphone outputs**
- **Channel inserts and direct outputs on each mono channel plus main mix inserts for flexible connection of outboard equipment**
- **4 aux sends per channel: 2 pre/post fader switchable for monitoring/FX applications; 2 post fader (for internal FX or as external send)**
- **4 subgroups with separate outputs for added routing flexibility**
- **4 multi-functional stereo aux returns with flexible routing**
- **BNC connector for standard gooseneck lamps**

* 1/4” TRS connector  ** with footswitch connector
FEATURES

- 32 full-fledged channels and 12 high-end ultra low-noise "Invisible" Mic Preamps with phantom power deliver crystal-clear audio with incredible reproduction of the slightest sound nuances and ample headroom.
- 16 busses, 8 aux sends and internal input/output patchbay for comprehensive routing options
- Ultra high-resolution 24-bit AKM A/D and CRYSTAL D/A converters provide optimum audio quality bound to please even the most discerning user.
- High-power floating point DSP technology (32-/40-bit) ensures virtually unlimited internal dynamic range
- Fully featured dynamic and snapshot automation
- 4-band fully parametric EQ, compressor, gate, sweepable high-pass filter and phase inverter on all 32 channels — with additional delay function on the first 16 channels — provide effective dynamic processing.
- Four (simultaneously operable) ground-breaking effects processors, accessible from all 32 channels, provide first-class algorithms, such as chorus, delay flanger, LFO filter, phaser, pitch shifter, reverb, tremolo, and many more.
- 17 precise, low-noise 100mm motorized ALPS faders
- Additional compressor/limiter (switchable pre/post) and EQ for stereo main mix
- Freely configurable built-in level meters on all channels and channel controls with LED rings facilitate editing of any of nine selectable parameters per channel.
- Four freely assignable analog outputs on balanced 1/4” TRS and MIDI plus RS232 connectors round out the I/O options by allowing interfacing with a wide variety of external devices.
- Extensive MIDI implementation capability enables program and control changes, MIDI sysex and MMC.
- Six master controllers with comfortable push-and-turn functionality
- Analog feel, intuitive user interface
- Large, easy-to-read LCD display with adjustable contrast
- Synchronization via SMPTE, MTC or internal clock
- Dither, word length and noise shaping adjustable for digital main outputs
- PCM CIA slot for saving/loading various libraries and other settings
- Routing of complex signal configurations is accomplished by an internal input/output patchbay.
- Two extension slots for installation of optionally available digital interfaces for virtually unlimited connectivity:
  - ADT1616 16-channel ADAT interface
  - TDF1616 16-channel TDIF interface
  - AES808 8-channel AES/EBU interface
1202-VLZ PRO • 1402-VLZ PRO

12 x 2 and 14 x 2 Compact Mixers

Providing maximum performance in minimum sizes, the 1202-VLZ Pro and 1402-VLZ Pro are the mixers of choice for tens of thousands of musicians and sound engineers who need equipment to serve “double duty” in studios and on the road. With 12 or 14 balanced input channels divided between 4 (1202) or 6 (1402) mono mic/line inputs and 4 stereo line input channels, these mixers excel in the field or in the studio. Video suites doing dialog recording, voice over or sound effects and project studios will find the range of bussing flexibility a blessing. For live gigging, the rugged steel chassis will stand up to the abuse of the road and the 2 aux sends are perfect for monitor and or effects sends.

**FEATURES**

**Input Channels**
- 4 mono balanced XLR mic/1/4˝ line inputs with inserts, trim and rotary level controls.
- 4 balanced 1/4˝ stereo line inputs with rotary level controls.
- 2 Aux sends per channel can be used as effects sends or for creating monitor mixes and offer 15dB of extra gain above Unity gain
- Each input has 3 bands of EQ at 80Hz, 2.5kHz and 12kHz with a ±15dB boost/cut.
- Inputs have a -18dB/oct. 75Hz Lo Cut filter that eliminates stage rumble, wind noise, P-pops and other low frequency noise
- The Mute/Alt 3-4 buttons located on each input channel serve two functions: muting the input channel from the main mix, and signal routing, where they act as your gateway to an extra stereo bus
- Constant-loudness pan pots on each input channel keep sound at a consistent volume when panning between left, center and right positions
- PFL Stereo in-place Solo on each channel

**Aux Inputs**
- 2 balanced 1/4˝ stereo returns with EFX to Monitor switch
- Aux 1 master control with Monitor/Post assign switch
- Stereo RCA 2 track tape return

**Outputs**
- Main stereo outputs are XLR-balanced switchable from +4dBu to mic level
- 1/4˝ balanced alternate outputs (alt 3/4) are assignable from mute buttons on input channels
- 2 balanced 1/4˝ auxiliary sends
- 1/4˝ TRS balanced stereo control room outputs
- Stereo RCA (2 track) tape outputs
- Multi-input source matrix with level control lets you route any combination of Main Mix, Tape In, and Alt 3-4 to the Control Room/Phones bus. Routings can be used for submixes, monitoring or tracking and can be subsequently routed to the main mix

**Additional Features**
- Gain knobs have Unity gain detents, when input levels are properly set, the highest headroom and lowest noise floor is at unity gain
- 12 segment LED’s give accurate level status of main outputs or soloed channels
- 48-volt phantom power for condenser mics
- Built-in power supply—no wall wart!
- Rude Solo Light LED bluntly advises that a channel is soloed
- Tape input level control and Tape To Main Mix switch
- 3-year parts and labor warranty.
- Optional RM1202VLZ rackmount ears

**1402-VLZ PRO Step-up Features**
- 6 mono balanced XLR mic/1/4˝ line inputs instead of 4
- Switchable AFL/PFL Solo
- Optional RM1402VLZ rackmount ears
- 60mm long-wearing log-taper faders ensure a consistent, smooth accurate response through the length of the fader travel

The 1202 and 1402-VLZ PRO are the standard for small-to-medium video post production suites. They’re the most popular mixers for home project studios. They’re in touring racks of performers. They record location sound for major Hollywood movies. They’re on duty at major-league football games, recording the crunch of bodies and the sportscasters’ breathless play-by-play. They are also used as live field mixers by the news departments of every major network.
Mackie revolutionized the compact mixer market by applying features and audio quality previously reserved for high-end, large format mixers. From the smallest to the largest of their models, Mackie puts their best effort into every phase of board design. For example, XDR (Extended Dynamic Range) mic preamps offer over 130dB of headroom, exceeding the performance of outboard preamps costing $1000 to $2000 per channel. Project studios, video suites, multimedia authors, live venues, broadcast facilities and houses of worship seeking uncompromising sonic quality and maximum flexibility will find what they are looking for in Mackie’s VLZ PRO mixer line.

**Mackie Mixer Technology**

- **Very Low Impedance**
  - Very low impedance is achieved by scaling down resistor values by a factor of three or four, resulting in a corresponding reduction in thermal noise.

- **XDR Mic Preamps**
  - 130dB dynamic range and extremely flat frequency response allows the XDR mic preamps to handle inputs from 192kHz workstations without added coloration.
  - DC pulse transformer reject RFI without attenuating frequencies of 15kHz and above.
  - Ultra-high-speed, large-geometry input diodes protect the XDR mic preamps from hot-patching and direct short circuits in cables carrying phantom power.

- **EQ**
  - Positioned at 12kHz, the Hi Shelving EQ adds sheen and presence to instruments and vocals, enhancing the textures of sounds without contributing to aural fatigue.
  - Positioned at 80Hz, the Low Shelving EQ emphasizes the fundamental lows of kick drums, and other bass instruments while allowing you to fatten up male vocals and instruments like guitars.
  - Mid-range frequency is placed at 2.5kHz (1202/1402-VLZ PRO), harmonics of vocals and instruments are enhanced without becoming strident or fatiguing.
  - Sweepable Mid-Band EQ (1604/1642-VLZ PRO) from 100Hz to 8kHz for specific EQ treatment of a broad range of frequencies.

- **Mix Amp Headroom**
  - Negative gain mix amplifier architecture sets standard mixing levels at -6dB. This offers a greater amount of headroom, allowing up to 4 times as many hot signals to be summed at the main mix bus without clipping.

- **Impact Resistance**
  - Knobs ride just thousandths of an inch from the metal surface of a mixer chassis.
  - Brutal knob impact is absorbed by broad pressure on a tough circuit board.
  - Ultra-tight lip seal design provides a continuously-sealed barrier against dust and liquid.
  - A braced, horizontal circuit board and shock-absorbing structure eliminates force transferred to the circuit board.

---

**1642-VLZ PRO 16 x 4 x 2 Compact Mixer**

Bridging the gap between the 1604-VLZ Pro (next page) and the smaller 1402-VLZ Pro, the 1642-VLZ Pro gives you 4-bus mixing flexibility, ten XDR mic preamps and four stereo line-level channels—fewer mic preamps and more line-level inputs at your fingertips. Yet it also has live-sound features like EFX to monitor, AFL/PFL solo, pre-fader aux sends, and built like a tank construction. The ideal mixer if you record with lots of keyboards, samplers and drum machines. Perfect for home and project studios as well as video post-production applications.

**All The Features of the 1402 VLZ Pro PLUS—**

- **Input Channels**
  - 16 input channels total—channels 1-8 are mono and channels 9 - 16 are stereo.
  - Each channel features input trim, 4 aux sends (aux 1 & 2 assignable pre/post), -20dB pad, 75Hz HPF, Solo (PFL and Solo-In-Place), mute, pan, bus 1/2, 3/4 and L/R assignment buttons and overload LEDs.
  - Channels 1 - 8 feature balanced XLR mic/ 1/4” line with inserts, direct outputs and 3 band EQ.
  - 2 stereo balanced XLR mic/ 1/4” line inputs, 2 balanced stereo 1/4” line inputs.
  - 4-band active EQ on stereo channels.

- **Outputs**
  - Four 1/4” balanced subgroup outputs have 60mm faders, switchable L/R assignment to the main mix bus.
  - Two 1/4” stereo headphone outputs.
  - Four 1/4” balanced aux sends. Aux send 1-2 master section with level controls and solo.
  - 1/4” balanced mono output with level control.

- **Additional Features**
  - Four 1/4” balanced stereo aux returns with level controls and solo.
  - Switchable AFL/PFL Solo with level control.
  - Optional rack ears are allow mounting in a standard 19” rack.
MACKIE
1604-VLZ PRO

16 x 4 Compact Mixer

The highest headroom and lowest noise of any mixer in its class, the 1604’s flexible 4-bus architecture is ready for just about any project recording studio or live venue. Post production and broadcast facilities will also appreciate the myriad routing possibilities. VLZ design ensures quiet mixes with all 16 channels open during mix down, while the XDR mic preamps reveal all of the subtleties and nuances of your favorite condenser mic. Mackie’s rototop design and supplied rackmount hardware allows you to configure the mixer 5 ways by allowing you to rotate the input and output jacks to the top, back or front of the mixer with or without rackmounting. With unprecedented sonic performance, bandwidth, dynamic range and versatility, the 1604-VLZ meets the demands of the most sophisticated digital audio workstations — while remaining totally affordable.

Input Channels

- 16 mono balanced XLR mic/ 1/4˝ line inputs with inserts, input trim, 6 aux sends/4 per channel (aux 1 & 2 assignable pre/post), -20dB pad, Solo (PFL and Solo-In-Place), mute, pan, bus 1/2, 3/4 and L/R assignment buttons and overload LEDs
- Each input channel features 3-band active EQ with sweepable midrange (12kHz high shelving, mid eq sweep between 100Hz - 8kHz, 80Hz low shelving eq ±15dB) and 75Hz HPF
- Input channels 1-8 feature 1/4˝ balanced direct outputs

Outputs

- 1/4˝ balanced main outputs with inserts
- 6 balanced 1/4˝ auxiliary send
- Single 1/4˝ headphone output with level control

Additional Features

- 5 physical configurations via rotating I/O pod
- Rack mount kit included

DFX-6 / DFX-12

Compact Live Sound Mixers with EFX

Combining Mackie's sound quality with an extensive feature set, the DFX-6 and DFX-12 are designed specifically for solo or small performing groups that don't have the luxury of a front-of-house sound technician. All knobs are color-coded and can be easily identified at a glance. Channel faders are white. Effects and M onitor Sends are red. Master level faders are blue. The jack field is on the top surface so connections are immediate and every channel has a level set and overload LED that can be easily seen on a dark stage. Both include a combination of mic/line and stereo line inputs, silky smooth 60mm faders, and Mackie's proprietary 32-bit EMAC custom digital effects processor with 16 effects. Each also offers low-noise, low-distortion, studio-grade mic preamps wrapped in a box rugged enough to withstand years of on-the-road wear and tear.

- Low noise, high headroom mic preamps with switchable phantom power
- 5-band stereo graphic equalizer with 12dB boost/cut, Bypass and Aux/M ain Assign
- 2-band channel strip shelving EQ at 80Hz and 12kHz
- 75Hz Low Cut filters and inserts on mono mic/line channels
- 32-bit Digital EFX Processor with 16 effects
- Input trim controls with LED level set indicators
- Separate Aux Send and Effects Send for each channel
- 2 stereo Aux Returns
- Master Aux 1, Aux 2/EFX and CD/Tape Return faders
- Effects to Monitor feature with separate rotary level control
- Tape/CD inputs and Tape outputs
- Vocal Eliminator switch for "Karaoke" use
- Break switch for playing music between sets
- Headphone output with level control
- Bal./unbal. XLR and 1/4˝ main stereo outputs
12-, 16- and 20-Channel Audio Mixers with Digital Effects

Available in 12 (CFX-12), 16 (CFX-16) and 20-channel (CFX-20) configurations, the CFX mixers incorporate digital effects and a 9-band graphic EQ to offer all-in-one compact mixing solutions. Sounding clean and realistic, the effects processor rivals many outboard processors, while the graphic EQ on the output section is of “audiophile-quality” which means low noise, free of phase distortion. The mixers also feature low noise and high headroom as well as balanced I/Os and multiple busing options. For live performance, a unique break switch can mute the entire mixer (except for the two-track return input) as well as the effects and graphic EQ sections.

**Input Channels**
- Level-setting LED for each channel.
- Low-noise, high-headroom mic preamps with 50dB of gain; 48v phantom power
- +30dB of line level gain and a full 15dB of attenuation to “pad” hot signals.
- Two Aux Sends with balanced 1/4˝ outs, switchable to pre-fader for monitor use and post-fader for use as effects sends
- One external and one internal EFX Send.
- Pan, Mute, PFL solo on each channel
- Pre-Fader Solo switch allows channel monitoring via headphones
- 3-band EQ (12kHz shelving HF, ultra-wide 100Hz to 8kHz bandwidth sweepable peaking Mi)range EQ and 80Hz LF).
- Inserts and 100Hz 18 db/octave low-cut filters on all mic/line channels
- 4-band EQ on stereo line channels

**Subgroup**
- Four Subgroup buses with 1/4˝ balanced direct outputs and L/R assign “collect” channel signals assigned to them so you can submix vocals, drums and other audio signals for monitoring or tracking.

**Effects**
- 32-bit digital FX with 9 reverbs, 4 delays, phaser, chorus, flange; 2 parameter controls and an EFX wide spatial expander and bypass switch

**Master Section**
- Studio-quality, 9-band stereo graphic EQ
- Tape/CD inputs with level control assignable to Main Mix via Break switch
- RCA tape/CD inputs and tape outputs.
- Two stereo effects returns with balanced 1/4˝ inputs

**Outputs**
- Balanced/unbalanced 1/4˝ TRS and balanced XLR outputs for mains with inserts.
- Headphone jack w/level control.
- XLR balanced subwoofer output from built-in 18dB/oct. 75Hz crossover!
- Extra 1/4˝ balanced utility stereo outputs with level control (post-Main Fader).

**Conveniences**
- Break Switch mutes all channels and routes Tape input to the mains while you’re on break so you don’t have to worry about feedback during breaks
- Long-wearing 60mm logarithmic taper faders give you smooth, linear control throughout the fader’s entire travel.
- Rude Solo Light alerts of any current soloed channels

**Input Channels**
- Level-setting LED for each channel.
- Low-noise, high-headroom mic preamps with 50dB of gain; 48v phantom power
- +30dB of line level gain and a full 15dB of attenuation to “pad” hot signals.
- Two Aux Sends with balanced 1/4˝ outs, switchable to pre-fader for monitor use and post-fader for use as effects sends
- One external and one internal EFX Send.
- Pan, Mute, PFL solo on each channel
- Pre-Fader Solo switch allows channel monitoring via headphones
- 3-band EQ (12kHz shelving HF, ultra-wide 100Hz to 8kHz bandwidth sweepable peaking Mi)range EQ and 80Hz LF).
- Inserts and 100Hz 18 db/octave low-cut filters on all mic/line channels
- 4-band EQ on stereo line channels

**Subgroup**
- Four Subgroup buses with 1/4˝ balanced direct outputs and L/R assign “collect” channel signals assigned to them so you can submix vocals, drums and other audio signals for monitoring or tracking.

**Effects**
- 32-bit digital FX with 9 reverbs, 4 delays, phaser, chorus, flange; 2 parameter controls and an EFX wide spatial expander and bypass switch

**Master Section**
- Studio-quality, 9-band stereo graphic EQ
- Tape/CD inputs with level control assignable to Main Mix via Break switch
- RCA tape/CD inputs and tape outputs.
- Two stereo effects returns with balanced 1/4˝ inputs

**Outputs**
- Balanced/unbalanced 1/4˝ TRS and balanced XLR outputs for mains with inserts.
- Headphone jack w/level control.
- XLR balanced subwoofer output from built-in 18dB/oct. 75Hz crossover!
- Extra 1/4˝ balanced utility stereo outputs with level control (post-Main Fader).

**Conveniences**
- Break Switch mutes all channels and routes Tape input to the mains while you’re on break so you don’t have to worry about feedback during breaks
- Long-wearing 60mm logarithmic taper faders give you smooth, linear control throughout the fader’s entire travel.
- Rude Solo Light alerts of any current soloed channels
MACKIE

24•4-VLZ PRO/32•4-VLZ PRO

24- and 32-Channel Sound Reinforcement Consoles

First introduced almost five years ago (but updated many times since), Mackie's SR24•4 and SR32•4 have totally redefined the 24-and 32-input/4-bus mixer. Feature-packed, extremely affordable, American-made mixing consoles, complete with awesome sonic performance, they incorporate the very latest in manufacturing technology plus Mackie's own proven horizontal, multichannel front circuit board design. They are also designed to stand up to the rigors of day-in and day-out live sound reinforcement, yet still have the required dependability and pristine audio quality for professional studio applications as well.

The SR24•4 and SR32•4 provide superior mixing and recording. They feature major headroom, thanks to Mackie's VLZ circuitry. Main and submix amplifiers use distinctive negative-gain mix architecture to double the mix headroom of conventional designs. Ultra-quiet high-headroom mic preamps on 20 (SR24•4) or 28 (SR32•4) mono channels mean great-sounding vocals or instruments. Low-cut filter (on mono channels) centered at 75Hz allows you to cut out mic thumps and wind noise. Four buses make live mixing a breeze by letting you control the overall level of those channels with one fader. Six aux sends per channel offer the flexibility to handle multiple chores at once. Two aux sends are switchable to pre- or post-fader so you can have 4 pre-fader aux sends, or 4 post-fader aux sends. They also feature a sweepable midrange EQ (on mono channels) with midrange centering anywhere from 100 Hz to 8 kHz.

**FEATURES**

- They combine premium XDR mic preamps with 60dB gain range, 130dB dynamic range for hot 24-bit digital signals, massive +22dB input handling capacity, 192kHz z bandwidth and 0.0007% THD with the best RFI resistance of any compact SR mixer in the galaxy thanks to advanced DC-pulse transformers.
- 20 (SR24) and 28 (SR32) XDR mic preamps are impedance-independent, so the frequency response remains constant whether the mic preamp is presented with an extremely high- or low-impedance load. Additionally each channel has its own switchable low-cut filter (18dB/octave at 75Hz), allowing you to cut out mic thumps and wind noise that can enter your mix and rob you of amp power.
- They have 20 (SR24) and 28 (SR32) mono mic/line input channels, with XLR mic inputs and 1/4” TRS line inputs, and 2 stereo line input channels with 1/4” TRS inputs.
- Each channel strip has an input trim, 6 aux sends (2 prefader, 2 post-fader and 2 switchable pre or post), 3-band EQ with sweepable mid-range (4-band EQ on the stereo channels), pan control, and mute, solo and bus assign switches. A 60mm fader provides output gain for each channel.
- The mono channel EQs provide a range of ±15dB at the following frequencies: 12kHz shelving high-frequency EQ, 100Hz to 8kHz shelving peaking mid-frequency EQ, and 80Hz shelving low-frequency EQ.
- Stereo channels (21-24) provide ±15dB of boost and cut at the following frequencies: 12kHz shelving high-frequency EQ, 3 kHz peaking high-mid frequency EQ, 800Hz peaking low-mid frequency EQ, and 80Hz shelving low-frequency EQ.
- You can mix any combination of channel strips down to a single submix bus—or any combination of the four submix buses. Channels can be assigned to buses 1-2, 3-4, and Main Mix L/R, and the 4 sub can be assigned to Left and Right Main Mix, or fed directly to a multitrack recorder. This is incredibly helpful, not only in a live situation, but in the studio as well. Furthermore, each bus is "double-bused" providing 8 outputs that can be connected to an 8-track recorder without repatching anything.
- Each sub out (1-4) and main out (L/R) has a TRS insert jack. Furthermore, Mackie's unique "AIR" EQ circuit is included on each of the four subgroups. This peaking EQ circuit, centered at 16kHz, enhances guitars, vocals, percussion, whatever, giving a gentle "lift" to the extreme high end. The result is extra detail and fidelity in the high end.
Outputs include XLR and 1/4” TRS line outputs for the left and right mains, 1/4” TRS line outputs for subs 1-4, and an XLR mono main output. The mono main out has its own level control so a mono mix can sent to another zone and adjusted accordingly.

The Phones/Control Room switch and level control are connected to stereo headphone outputs and left and right Control Room output, allowing the stereo Tape Return, Left/Right Main Mix, and Solo to be monitored.

A stereo playback device can be monitored via the Tape Return inputs. Tape Return to Phones/C-R routes the tape playback signal into the monitor system and meters, and the Tape Return knob adjusts the level of playback, which can be monitored via headphones.

Tape return signals can also be assigned directly to the Main Mix. This not only routes Tape Returns to Main L/R outputs but also disables all other inputs to the mains. You can play a tape or CD between sets without losing a channel and submaster settings. They also have RCA-style tape outs for output to conventional stereo recording devices.

Each of the six aux sends has its own individual master send control, driving 1/4” TRS output jacks. Six stereo aux returns are provided, with 1/4” TRS input jacks. Two aux returns can be folded back into Aux Sends 1 and 2 via their own volume controls to add effects in stage monitors.

An XLR input is provided for a talkback mic, which can be assigned to the Main Mix (for making announcements over the mains) or Aux 1-2. The talkback mic has a level control in the talkback section.

Like all Mackie mixers, the SR24•4 and SR 32•4 are designed for rugged 24-hour-a-day use. With their multiple input/output configurations, true 4-bus architecture, 6 aux send and extensive routing capabilities, they can be used in a variety of live sound and recording applications. Their sturdy steel construction houses rugged, double-sided SMT-plated fiberglass circuit boards, and 60mm faders with ultra-tight lip seals for keeping out dust and other contaminants. Impact-resistant knobs are mounted so they “ride” just above the steel chassis.

**16/24/32•8**

8-Bus Recording/PA Mixers

Designed to eliminate the last barrier between you and audio creativity – Mackie's 8-Bus mixers have recorded more platinum albums and major motion picture soundtracks than any other mixer in their class – in fact, they set the standard for affordable 8-bus consoles.

Excellent for project studios and digital multitrack recording, when combined with digital multitrack or hard disk recording systems, they feature low-noise/high-headroom mic preamps on every channel, as well as channel inserts and direct outs.

In the channel strip you'll find Mackie's truly musical EQ – with Hi and Lo shelving EQ, parametric Hi-Mid, and sweepable Low-Mid EQ – as well as a Low Cut Filter, which allows you to eliminate mic thumps and room rumble from your mix, and use your EQ for music and vocals.

With Mix B, “in-line monitoring” is a breeze. Six aux sends and six aux returns allow you to use all the effects you want. And the 8-Bus's complete talkback and phones level controls make communicating with the talent a snap.

And besides being built like tanks, the 24•8 and 32•8 can grow along with your budget and input requirements. Both can be expanded in increments of 24 channels with the 24E Channel Expander Console. You can also add meter bridges, stands, and even a “sidecar” for patchbays.

16•8 / 24•8 / 32•8 8•BUS MIXERS

Channel Strip
◆ In-line FLIP reverses tape and mic/line inputs between channel strip and Mix-B/Monitor section
◆ Each channel strip has 6 mono auxiliary sends with several routing options:
  • Auxes 1 & 2 have two independent level controls that share a common Pre/Post switch.
  • Aux 3-4/5-6 are accessible from two level controls: A ‘shift’ button changes Auxes 3 4 to 5-6. A ‘source’ switch selects signal source of Aux 3-4/5-6 from channel strip or channel’s Mix B/Monitor send so you can build and effects mixer (pre or post-Mix-B level) to assign to phones during tracking.
◆ True parametric, 3-control Hi Mid EQ with ±15dB boost/cut: Ultra-wide 500Hz to 18kHz frequency sweep range; bandwidth can be adjusted from a very wide 3-octave width to a very narrow 1/12-octave width.
◆ Low Mid EQ with ultra-wide 45Hz to 3kHz sweep, ±15dB boost/cut
◆ ±15dB shelving Hi (12kHz) and low (80Hz) EQ
◆ Multi-purpose 18dB/oct. low cut filter cleans up “mix mud”; cuts PA rumble, creates a “neo-peaking” bass control when used with LO shelving boosts
◆ Independent Mix-B (Monitor) section—think of it as a discrete “channel strip within a channel strip”—with its own pan, level, EQ and source capabilities. During mixdown, use as extra pre-fader stereo Aux send or double your inputs.
◆ Mix-B Split EQ assigns Hi and LO EQ to Mix-B

Master I/O Section
◆ Main and submaster inserts allow you to insert a compressor or EQ into main L/R or any of the 8-Bus submaster circuits.
◆ Aux Returns are unbalanced stereo with a L&R input for each return channel. If you only have one return signal, plugging it into the Mono/L jack will cause it to be connected to both the left and right return inputs and end up centered in your stereo image.
◆ Control Room output, Main Mix output, Mix-B output and Studio output
◆ 2-Tk Input and External Inputs offer you the ability to listen to two stereo sources directly, without patching through input channels.

Mix-B Source selects from flip switch or channel strip (pre-fader) for in-line monitoring while recording or gives an extra stereo aux bus.
◆ Constant power, buffered panpot for rock-solid panning
◆ +22dB Overload LED (monitors three critical points in the signal chain, and displays the one that’s highest at any given time) and Hyperactive -20dB Signal Present LED (can also tell you at a glance what vocal or instrument is on what channel)
◆ Selectable Solo with Channel Metering allows soloing in full stereo perspective: displays soloed channel operating level on master L/R meters so input trims can be adjusted for optimum levels.

Rear Panel
◆ Three tape output jacks per bus (total of 24). Balanced outputs, switchable from +4/-10.
◆ +4dBu balanced Tape Returns, switchable to -10dBV in banks of 8 returns
◆ “Triple busing” allows you to feed a 24-track deck without having to constantly repatch. When you send a signal to Submaster 1 output, for instance, it will appear as Submaster Outputs 1, 9, and 17. If you have a 16- or 24-track deck, simply patch these outputs to the corresponding multitrack inputs. Now the tracks on your multitrack that are in Record mode will accept the signal, while the tracks in Safe mode won’t.

For any inquiries regarding your order, call our customer service:

PHOTO • VIDEO • PRO AUDIO

Top of the Channel Strip (not shown)
◆ DC phantom power for condenser microphones is applied to channel strips in groups of eight. It has a “ramping” function that gradually increases from 0 to 48v power when you turn it on preventing thumps and pops.
◆ Two BNC sockets for 12v gooseneck lamps
◆ Balanced mic inputs lead to the VLZ mic preamps. Mackie’s VLZ (Very Low Impedance) design provides terrific dynamic range with an EIN of -129 dB and 10Hz to 300 kHz bandwidth.
◆ Balanced/unbalanced 1/4˝ jacks with 40dB range handle everything from hot digital inputs to older keyboards with low output voltages.
◆ 1/4˝ 4dB direct out jack (connected to the output of the channel, post-EQ/post-fader/post-mute switch)
◆ Channel Insert allows you to insert external serial processing equipment (e.g. compressor, gate) into the main signal path of the input.
Master Section

- Six Stereo Aux Returns. All have 20dB gain, Solo, and can be used in stereo and mono. Aux return 1 & 2 are pannable and bussable. 3 & 4 are assignable to the phones for ‘wet’ monitoring.
- 6 Aux Sends with Solo and Solo LED
- Talkback assigns to all submasters, main mix, Aux 1, Aux 2 or Phones 1&2
- Solo level adjust and ultra-rude LED
- Monitor section with separate control room and studio levels, source selection between L/R mix, Mix-B, tape and external. Can be switched to mono.
- Two separate headphone sections can be used totally independent of each other. Each features source selection between control room and any combination of Aux 3/4, Aux 5/6, Mix-B or external source. Solo allows control room to hear what musicians are hearing in their headphones.
- Mix-B/Monitor section can be used as an independent stereo out for PA monitor mix, 2-track recording, video/broadcast feed or assigned to L/R mix.
- -40 to +10 bar graph LED displays for each sub-master and Solo/Main (with main L/R +22dB Clip LEDs)
- Expansion consoles let you add channels in banks of 24 to either the 24•8or 32•8. Expanders have their own internal mix amps so the main board only “sees” one extra channel per expansion console.
- Trick Bus Solo switches send odd-numbered buses to the left speaker and even-numbered buses to the right speaker—unless you’ve pressed the respective Mono L/R button. When a bus has been mono-ed, Solo sends the bus to both speakers
- L Mix/R Mix and Mono L&R buttons assign buses to main L/R stereo bus
- Built-in Talkback Mic with level control lets you scream engineering commands to any combination of Aux Send 1, Aux Send 2, Tape/Submasters (L/R Mix and the eight submasters) and Phones/Studio. When Talkback is engaged, control room outputs are padded by 20dB to avoid feedback.

8•Bus Series Accessories

Meter Bridges
Matching meter bridges (M B•16, M B•24, M B•32) are available for each mixer. Each provides 12-segment LED ladder for each input channel, and lighted VU meters for master Left/Right output. Like the mixers’ integral meter sections, the LEDs in the bridges are with Lexan to resist dust and humidity. On each meter bridge, input buttons allow you to globally switch between Tape Return input and Channel Strip post-fader output. Each meter attaches in minutes and can be tilted as desired (up to 90°). They also tilt down fully flat to save you inches of road case depth—and from having to buy another case just for the meter bridge.

The Stand
Any 8•Bus (including the 24•E Expander) can be floor-mounted via the optional The Stand. Made of rugged steel with ultra-tough, 2-part polyurethane coating, The Stand assembles in minutes.

24•E Expander Console (for 24•8, 32•8 only)
The 24•E is essentially another 24-channel 8•Bus mixer—but without a master output section. You get 24 complete input channel strips and 24 more tape returns. The 24•E connects to the 24•8 or 32•8 via a multi-pin connector. Additional 24•E’s can be daisy-chained to create 48, 56, 72, 80 or 96 more input channels. The 24•E’s outputs are pre-mixed in the expander to reduce line and thermal noise and to maintain maximum sonic quality at the main console. The connecting cables are long enough so that you can place one or Expanders on each side of your main 8•Bus mixer.
Compact 4-Channel Audio Mixer

An incredibly compact 4-input stereo mic/line mixer with exceptional sound and a host of features, the Mixpad 4 also offers AC/DC capability, making it ideal for use in ENG and field recording applications as well as in the studio. Exceptionally professional from its high headroom design (+27dB) to its durable extruded aluminum chassis, the Mixpad 4 also shines as a sub-mixer in live and recording settings.

Features include 3-band EQ and pan/balance and level controls on each channel, a front-panel stereo headphone jack, two balanced mic/line inputs (XLR and 1/4˝ connectors), 1/4˝ stereo line input, CD/tape input, 48-volt phantom power, an Aux send and a stereo Aux return (with level control which can be used as 2 mono aux returns), as well as a main level control and power and peak LEDs.

- Two balanced (XLR and 1/4˝) mic/line and one stereo input (4 channels total)
- Trim controls on mic input channels
- 48v phantom powered mic inputs
- Independent 3-band EQ for each channel, with ±15 dB of cut/boost for low (80 Hz) and high (12 kHz) frequencies, and ±12 dB of cut/boost for mid (2.5 kHz) frequency
- Independent CD/tape input; signal is routed via channel EQ
- Constant-level pan controls (mono channels) and balance controls (stereo channel)
- One Aux send (pre-fader)
- One stereo effects return with front panel level control
- Peak overload LEDs on left and right main outputs for monitoring
- High slew rate allows it to react quickly to transients and to maintain crisp sound.
- Balanced stereo output with 1/4˝ jacks for connection to amps and other gear
- Front-panel headphone output
- An inline power supply maintains the mixer's low profile while eliminating hum.
- Battery operated, the mixer can run for 12 hours on three 9V batteries (the front-panel Power LED also indicates battery strength).
- Includes a carrying strap for easy portability.

MPL-1602

Rackmount 16x2 Line Mixer

The MPL-1602 provides a 16 x 2 stereo mic/line mixer in an easily installed 2RU high package. Equipped with 2-band EQ and balance and level controls on each channel, the MPL-1602 is ideal for recording, keyboard setups, broadcasting, live concert and contracting applications. It also features 2 main left/right faders, a stereo headphone jack with dedicated level control, 16 electronically-balanced 1/4˝ line inputs, 2 XLR mic inputs with trim controls, 2 pre-fade Aux sends and 2 stereo Aux returns, along with 6 channel insert and 2 main bus insert patch points.

A highly practical audio tool for all kinds of professionals, the MPL-1602 is a great way to add more inputs with mixing capability to keyboard setups, small live sound systems, Techno bands and multimedia situations.

- 8 balanced stereo line input channels
- 2 XLR-balanced mic inputs with trim controls on rear panel
- Level and balance controls on each channel
- 2-band equalization on all channels
- 2 aux sends on each channel
- 2 stereo aux returns (which have independent level and balance controls allowing for use as 4 mono Aux returns)
- 2 balanced main L/R bus outs
- Front-panel stereo headphone output with dedicated level control
- 6 channel inserts and 2 main bus inserts for increased flexibility
9-and 12-Channel Compact Audio Mixers

Featuring a high headroom design for matchless audio performance, the deceptively sized Mixpad 9 is small but professional in every respect. Like the Mixpad 4 it offers superior low-noise and low distortion specifications along with an exceptionally low group delay over the full bandwidth for a transparent, open sound. An ideal choice for smaller live sound situations such as clubs, acoustic setups, keyboard rigs and lounge acts, project recording and more.

Remarkably compact 9- and 12-channel mixers, the Mixpad 9 and 12 offer professional audio performance and a wide range of user-intensive features for virtually any type of application. They boast superior low noise and low distortion specifications. Include wide-range gain trim controls for both mic and line inputs, provide very transparent, open sound, and they have a very high slew rate—usually found on larger, more expensive mixers. They offer phantom power on all mic inputs for use with condenser mics and an in-line power supply eliminates magnetically-induced hum.

Fully professional, the Mixpad 12’s complete feature set and high-quality audio performance allows it to function very effectively in the studio, sound reinforcement, field recording, audio for video and film applications and more. Almost identical except for their inputs, both feature 2-band EQ and pan/balance and level controls on each channel, a front-panel stereo headphone jack, 3 electronically balanced mic/line inputs (XLR and 1/4˝ connectors), three 1/4˝ stereo line inputs, a CD/tape input, 48-volt phantom power, 2 Aux sends and 2 stereo Aux returns (which have independent level controls and so can be used as 4 mono Aux returns), as well as a main level control and power and peak LEDs.

- In the MIXPAD 12, a total of twelve input channels (including three stereo channels); in the MIXPAD 9, a total of nine input channels (including three stereo channels);
- Mono channels provide electronically balanced inputs that can be used for mic or line-level input, while stereo channels are ideal for line-level sources such as outboard signal processors; CD players; tape or cassette recorders; stereo drum machines; and keyboards and MIDI tone modules.
- An electronically balanced main stereo output for connection to a power amplifier or tape recorder.
- Dedicated Tape/CD input
- Two auxiliary sends and two stereo auxiliary returns (which can be used as four monophonic returns). Aux send 1 is pre-fader (but post-equalizer), making it ideal for use as a headphone or monitor cue mix, while Aux send 2 is post-fader and post-equalizer.
- Independent 2-band EQ for each channel, with 1±5 dB of cut/boost for low (100 Hz) and high (10 kHz) frequencies.
- Constant level pan controls for placing each mono channel in the left-right stereo spectrum, as well as balance controls that let you blend the relative levels of stereo inputs.
- Mic input trims are continuously adjustable from +4 to -50 dB, making it possible to use them with a wide variety of microphones.
- Provide 48 volts of phantom power to all mic inputs
- Peak LEDs for the left and right main outputs, showing you when signal is overloading or near overloading.
- Center detents for all pan, balance, and EQ controls, making it easy to access them in low-light situations like live performance.
- Convenient front-panel Power switch, Power LED and dedicated headphone jack.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
Samson's MDR (Maximum Dynamic Range) mixer series of mixers offer transparent sound, low noise and high quality mic preamps at very affordable prices. Each mixer features low impedance circuit design, 60mm faders, combi XLR connectors, phantom power, steel construction and all but the MDR 6 have built in 24-bit DSP. Samson's exclusive Hard Disc Record Mode (MDR 6 and MDR 8 only) eliminates delay between instrument and monitor mix when recording to hard disc.

**MDR 6 6-Input Stereo Mixer**

The compact MDR 6 is a six-input stereo mic/line tabletop mixer in a portable and rugged package. Perfect for a small studio, the MDR 6 features 60mm faders, 3-band EQ, Aux send and pan or balance on each channel. There are four high quality mic preamps, an Effects return, dual 5-segment LEDs and a headphone out and mono out both with level controls. The left and right mix out also feature 60mm faders.

- 60mm faders on each channel and mains
- 3-band EQ on each channel
- Four XLR inputs with mic preamps
- Mono out with level control
- Dual 5-segment LEDs
- Aux send with effects return
- Hard Disc record mode for recording with a PC
- Headphone out with level control
- In-line power supply

**MDR 8 8-Input Stereo Mixer**

The MDR 8 is an eight input stereo mixer with 24-bit DSP featuring 60mm faders, 3-band EQ, two Aux sends and pan or balance on each channel. Included are six high quality mic preamps, two Effects returns Dual 6-segment LEDs, a headphone out and mono out both with level controls. The left and right mix out also feature 60mm faders.

**Step-up features from the MDR 6—**

- Six XLR inputs with mic preamps
- 2 Aux send with 2 effects return
- 24-bit DSP effects (lush Hall, Room and Vocal reverbs, Chorus and Delay)
- Dual 6-segment LEDs

**MDR 10 10-Input Stereo Mixer**

The 10-input MDR 10 packs professional features into a compact package. All 10 channels feature a high quality mic preamp, 60mm faders, a pan control and a 1/4" and XLR input (with mic preamp). Channels 1-6 offer a gain control, 3-band EQ with sweepable mids, a low-cut filter, two Aux sends (1 switchable pre/post, 1 to the DSP), Solo and Mute switches and smooth 60mm faders. Channels 7-10 feature 2-band EQ, 1 Aux send (switchable to Aux 1 or 2), Solo and Mute switches and 60mm faders. The outputs and bus 3 and 4 are on 60mm faders and the master section features selectable DSP, headphone out with level control, effects returns, mono out, phantom power and more.

**Step-up features from the MDR 8—**

- 10-channel stereo mixer with 2+2 bussing
- 10 XLR inputs with mic preamps
- 3-band EQ with sweepable mids and a low cut filter on channels 1-6
- Dual 12-segment LEDs
- I2-track in and out connectors with send to mix switch
16x4 Stereo Mixer

The flagship of the series, the MDR 16, is a true 4-buss mixer. All 16 channels feature a high quality mic preamp, gain control, Solo, Bus 1-2, Bus 3-4 switches and 60mm faders. Channels 1-8 offer 3-band EQ with sweepable mids, a low cut filter, two Aux sends (1 switchable pre/post, 1 to the DSP) and channel inserts. Channels 9-16 have 2-band EQ and a switchable Aux send. The four 60mm bus faders can be routed to the left/right fader. The master section features 24-bit DSP, 9-band stereo EQ, dual 12-segment metering, Solo, PFL, 2-track out, headphone and mono out with level controls and more.

Step-up features from the MDR 10—
- 16 XLR inputs with mic preamps
- 60mm faders on channels, busses and mains
- 3-band EQ with sweepable mids and a low cut filter on channels 1-8

MPL-1204

Rackmount 12x4 Mic/Line Mixer

“MPL” stands for “Mic/Program/Line” and the name describes the broad range of signals which can be handled by this powerful mixer. In fact, the compact design of the MPL-1204 belies its extraordinary versatility. A great all-around audio tool, the 4RU high MPL-1204 is designed for use in live and monitor mixing, keyboard setups, recording and fixed installations, conference rooms, distributed sound and as an extra mixer to expand home recording setups. A true 4-bus, the versatile MPL-1204 features 12 input channels with mic and line trim pots, 3-band EQ, two Aux sends (1 pre, 1 post) plus solo and bussing switches. There are independent faders for each bus, and stereo Main and Control Room volume controls provide complete flexibility in monitoring and routing.

- Twelve independent channels with balanced XLR and 1/4” mic and line inputs; also has a stereo CD/Tape input with dual RCA jacks.
- 48V phantom power for all 12 mic inputs
- Constant level Pan controls for each channel that allow you to precisely place each input signal in the left-right plane.
- Independent 3-band EQ for each channel, with 15dB of cut/boost for low (100 Hz) and high (10 kHz) frequencies, and 12 dB of cut/boost for mid (1 kHz) frequencies.
- Channel inserts for all twelve channels, enable use of outboard signal processors such as EQs, compressors or noise gates.
- Center detents for all Pan and EQ controls make it easy to use in low-light situations.
- Flexible front panel metering system with 10-segment level meter lets you view at a glance the levels of the main Left/Right output, as well as main power, phantom power, and PFL or AFL status.
- Four bus outputs and an electronically balanced main stereo output, with dedicated front panel control. Any channel input can be routed to either of the two bus pairs (1/2 or 3/4), and any of the buses can be routed to the Left/Right mix output with the touch of a button. This flexible design allows you to easily mute selected channels and/or to create submixes within your main mix.
- Independent XLR-balanced Main stereo outputs as well as balanced stereo Control Room outputs with dedicated level control.
- Bus inserts allow external signals to be submixed into any or all of the four buses and also enables linking of multiple mixers.
- Two auxiliary sends on each channel. Aux send 1 is pre-fader, Aux send 2 is post-fader.
- Two stereo auxiliary returns (route to any of the buses), with front panel level controls
- Selectable Pre Fade Listen (PFL) or After Fade Listen (AFL) soloing for each channel. Both are non-mix-destructive in that they do not affect the signal being output either by the Main, Bus, or Control Room outputs.
- Front-panel headphone output with volume control for monitoring of soloed channels.
- Mounts in any 19” rack (4RU), making it easy to integrate into existing systems.
FOLIO NOTEPAD

Compact Audio Mixer

The ultra-compact and very affordable Folio Notepad is packed with enough features to handle a surprisingly wide range of mixing tasks. Less than 10˝ wide, it can handle up to 10 inputs, configured to give you the maximum choice of source signals, from condenser mics to turntables. Its high-quality components and advanced design ensure CD-quality sound, while its ergonomic layout makes it very easy to use. Features include separate mix and monitoring outputs, custom-built pots for precision control and carefully-tailored responses, and an external power supply that guarantees hum-free mixes with high RF rejection. Custom controls give you smooth, even response, while high quality pre-amps let you connect mic or line signals without noise or overload. Ideal for video editing, desktop recording, houses of worship, small live venues, DJ’s and more.

- 10 inputs
- 4 mic inputs and 2 stereo inputs
- High quality mic preamp inputs
- 2-band EQ on all 4 mono channels
- Post-fade aux send on every input
- Stereo effect return
- Switchable +48V phantom power
- 2-track tape return
- Stereo inputs with switchable RIAA pre-amps for turntables
- Separate mix and monitor outputs
- Headphone output
- Custom designed rotary controls for consistent, accurate response

FOLIO FX16

16 Mic/Line Input Mixer w/Lexicon Effects

Spirit FX16 is a flexible 4-bus mixer capable of producing Digital sound quality for live and recording applications. It features a specially designed 16 program Lexicon Effects Section with dual effect capability (including Chorus and Reverb, Chorus and Delay, and Reverb and Delay) and fully editable and storable programs and parameters. The console itself includes 16 mic/line inputs and 26 inputs to mix in total (including FX returns and tape return to mix). In addition to the mix outs, two sub-buses allow groups of instruments to be sent to multitrack, to additional speakers, or sub-grouped to mix. FX16’s 16 Direct Outs are individually fader pre-post switchable so they are equally useful for recording in the studio or at a gig. In keeping with the multipurpose nature of FX16, both Solo In Place and PFL solo are available, for studio monitoring and channel gain set-up applications respectively.

- All FX16’s 16 mic/line inputs are equipped with UltraMic preamp which provides a full 60dB of gain range and +22dBu of headroom, meaning that the FX16 input stage can handle virtually any mic or line device.
- In the EQ section, a “truly British 3-band EQ” with swept mid benefits from custom designed pots which give greater control across carefully chosen frequencies.
- There are 4 Auxiliary Sends, including a dedicated Lexicon effects send, 1 pre-fade send and 2 pre/post-fader selectable send which are equally useful as extra foldback send in monitor-heavy live applications, or as effects sends in studio mixdown situations.
- In addition, there are four Stereo returns, a separate Mono Sum Output and 2 Subgroup Outputs.
- 100mm faders are used throughout, giving you accurate control during complex mixes, and all pots have been custom designed to give even and consistent response around their entire sweep.
- All of these features in a rugged, compact frame which can be optionally rack-mounted into a 10U space via FX16’s rotating connector pod which allows leads to be connected conveniently behind the rack.
6-, 8- and 12-Input Mixers

Looking for a simple, easy to use mixer that delivers an exceptional audio performance? The Spirit E Series is here. For recording, live, install or broadcast use there's a Spirit E Series mixer for you.

The emphasis with the Spirit E Series is an easy to understand control surface undeterred by unnecessary facilities. Surface mount technology is used throughout, using close-tolerance components for high accuracy and repeatable settings for EQ and gain controls. The mic amp features high-resolution adjustment over a wide gain range of 55dB, and provides a stunning +22dB headroom through the console. The E Series is available in 4 standard models: 6, 8 and 12 mono inputs (each model featuring two stereo inputs) and the unique ES. The ES caters for set-ups with multiple stereo sources that require simultaneous connection, such as keyboards, samplers and computers, and has 10 full-function stereo inputs as well as four mono inputs (for microphones and other mono sources). Two of these stereo inputs are equipped with RIAA - equalized inputs on RCA Phono connectors so that record turntables can be plugged straight into the mixer for DJ music production.

The ES is ideal for touring keyboard players as a submixer.
YAMAHA

MG SERIES

Analog Mixers

Yamaha's analog MG mixer series cover multiple applications, including PA, project studio, classroom, house of worship, personal monitoring and sub-mixing uses. The MG-series features six models ranging in size from the small MG10/2 10-channel/2-bus unit right up to the very flexible M G32/14FX 32-channel/14-bus type with an impressive selection of built-in effects. There have been no compromises. The mixers are built for great sound, total control, and superior reliability. In fact, they undergo the same rigorous quality and reliability tests as Yamaha's world-class PM-series mixing consoles. Yet, they take full advantage of the latest Yamaha technology and manufacturing techniques to offer more value than you'll find anywhere else. In short, they offer extraordinary performance and mixing power at remarkable prices. If you need a high-performance analog mixer for music production or sound reinforcement, the Yamaha MG Series is the first — and last — place you should look.

MG10/2 Mixing Console

If you simply need to mix a few sources to stereo, but still want the finest, audio quality available, the MG10/2 is an outstanding choice. Compact and easy to use — the MG10/2 can even be mounted on a mic stand (with optional adapter) for totally flexible positioning and easy access. Ideal for demo and music production in your personal studio, for band rehearsal or small sound reinforcement applications.

10 Input Channels

- Channels 1 - 2 provide a choice of XLR mic or 1/4˝ TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 3 - 6 can be configured as two 1/4˝ TRS stereo line inputs or as two mono microphone inputs.
- Channels 7 - 10 are configured as two stereo channels with a choice of 1/4˝ TRS or RCA inputs.
- The mic preamps use high-performance head amplifiers and switchable phantom power allowing you to bring out the best of both dynamic or condenser microphones.

Aux Sends and Returns

- Two 1/4˝ TRS post-fader aux sends are available for creating a monitor mix or accessing an external effects processor.
- 1/4˝ TRS stereo aux returns with level control provide the means bringing an external effects unit back into the mix.

3-band Channel EQ & HPF

- Designed for smooth, “musical” response, a 3-band EQ is provided on all input channels. Mono mic input channels also feature a switchable highpass filter for cutting unwanted low-frequencies.

Mains Section

- 1/4˝ TRS balanced main outputs with master level control
- 1/4˝ TRS balanced control room and 1/4˝ headphone outputs with level control are also provided.
- Left and right RCA record outputs as well as 2 track inputs with level control.
- 12-segment LED output meters

Optional Mic Stand Mount

- Mounts on a mic stand with the optional BM S-10A Mic Stand Adaptor, so the mixer is always within easy reach.
Extensive Creative Control in the Studio or on Stage

The mid-range M-G models go beyond the basics to give you extensive control for a wide range of applications - with the no-compromise Yamaha sonic quality that makes the M-G mixers the finest in their class. Whether music is a hobby or profession, these mixers will deliver total satisfaction. If you don't need effects, or already have an arsenal of outboard favorites, the M-G12/4 or M-G16/4 may offer all the capacity and capabilities you need. But if the idea of having some of the finest effects available built right into the console appeals to you, then consider the effect enabled M-G16/6FX.

Step-up Features from the MG10/2

**MG12/4 - 12 Input Channels**
- Channels 1 - 4 provide a choice of XLR mic or 1/4” TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 5 - 8 can be configured as two 1/4” TRS stereo line inputs or as two mono microphone inputs.
- Channels 9 - 12 are configured as two stereo channels with a choice of 1/4” TRS or RCA inputs.
- Faders are provided for the input channels, stereo group and main stereo bus.
- Separate level controls are provided for each channel’s two Aux Sends. Additionally, Aux one can be switched Pre or Post fader.
- Master Send controls for controlling output levels independently for Aux 1/2
- The main stereo outputs feature both XLR and 1/4” TRS output connectors.
- Supplied with rackmount adapters, use them on a desktop or mounted in a rack.

**MG16/4 - 16 Input Channels**
- Channels 1 - 8 provide a choice of XLR mic or 1/4” TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 9 - 12 can be configured as two 1/4” TRS stereo line inputs or as two mono microphone inputs.
- Channels 13 - 16 are configured as two stereo channels with a choice of 1/4” TRS or RCA inputs.

**Stereo Group Buss**
- A stereo group bus with 1/4” TRS outputs adds a convenient way of channel grouping - ideal for creating a discrete signal path for tracking or creating a monitor mix.

**Internal Digital Effects**
- A stereo group bus with 1/4” TRS outputs adds a convenient way of channel grouping - ideal for creating a discrete signal path for tracking or creating a monitor mix.

**Illuminated Switches**
- Each input channel features illuminated switches for ON (Stereo buss assign), PFL (Pre-Fader Listen), and phantom power providing visual confirmation of settings.

**16 Input Channels**
- Channels 1 - 8 provide a choice of XLR mic or 1/4” TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 9 - 12 can be configured as two 1/4” TRS stereo line inputs or as two mono microphone inputs.
- Channels 13 - 16 are configured as two stereo channels with a choice of 1/4” TRS or RCA inputs.

**6-band Stereo Graphic EQ**
- A 6-band stereo graphic equalizer with ±12dB boost/cut per band is available for flexible overall response shaping control.

**Seven Buses (Stereo and Three Group Pairs)**
- Two pairs of stereo group buses are provided for convenient channel grouping, in addition to the main stereo bus.

**Enhanced Channel EQ**
- The mono input channels feature 3-band EQ with a sweepable mid band as well as a High Pass Filter for cutting out unwanted low frequencies on the mic inputs.
- Stereo input channels feature four fixed frequency bands (High, High-Mid, Low-Mid and Low).
Serious Capacity for Sound Reinforcement and Installations

If your application is live sound reinforcement you’ll want all the channel capacity you can get - just in case. Vocal mics, instrument mics, stereo keyboards, direct-injection feeds, drum mics, and the rest can add up very quickly.

With 24 and 32 input channels, respectively, the MG24/14FX and MG32/14FX are ready to handle all but the most ambitious sound-reinforcement setups. And with dual SPX digital effect systems on-board you won’t need racks of outboard gear to get the sound you need. There’s also a comprehensive range of group and auxiliary busses to make even complex mixes easy.

**MG24/14FX - 24 Input Channels**
- Channels 1 - 16 provide a choice of XLR mic or 1/4” TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 17 - 20 are configured as two 1/4” TRS stereo line inputs.
- Channels 21 - 24 are configured as two stereo channels with a choice of 1/4” TRS or RCA inputs.

**MG32/14FX - 32 Input Channels**
- Channels 1 - 24 provide a choice of XLR mic or 1/4” TRS line inputs with insert I/O for adding external compressors or EQ.
- Channels 25 - 28 are configured as two 1/4” TRS stereo line inputs.
- Channels 29 - 32 are configured as two stereo channels with a choice of 1/4” TRS or RCA inputs.

**Mic Preamps**
- All 16 (MG24/14FX) and 24 (MG32/14FX) mic preamps are of exemplary quality featuring low-noise, high-precision head amplifiers with phantom power switchable in 8-channel groups.

**14 Buses For Flexible Signal Routing**
- In addition to lots of input channels, live sound reinforcement applications usually demand a number of additional mixes - usually in the form of group sub-mixes and aux sends for external signal processing and monitor mixes.
- Four stereo group bus pairs for convenient channel grouping.
- Six auxiliary busses (four configurable for pre- or post-fader operation and two set up as effect sends).
- Two internal effect busses feed the dual high-performance built-in SPX processors.

**Dual SPX Digital Effects**
- Not one, but two high-performance digital signal processing stages, fed by separate effect buses, are provided using the very latest Yamaha DSP technology. Each stage provides a selection of 16 professional-quality SPX digital effects, including reverb, delay, pitch change, chorus, phasing, vocal doubling, distortion, and more.
- Parameter controls that can be adjusted to tailor the effects to your sonic requirement are also provided and Tap delay allows you to create tempo-synchronized delays.

**3-band EQ with Sweepable Mid and HPF**
- 3-band EQ with sweepable midband provided on all input channels provide exceptionally smooth, intuitive response, helping you create cleaner, tighter mixes.
- All mono mic input channels also feature a switchable high-pass filter that can be used to cut out unwanted low-frequency noise.

**Talkback Input**
- Communication capability is important for efficient setup as well as for keeping a show running smoothly. Both the MG24/14FX and MG32/14FX feature a talkback system that allows the FOH engineer to communicate with the monitor engineer, performers, or other staff to keep the team operating at optimum efficiency.

**Sweepable LPF for Mono Out**
- The XLR balanced mono output, aided by the built-in sweepable low-pass filter, provides an ideal way to tune and drive a sub-woofer system.
- An XLR input on the top of the console is provided to accommodate a talkback mic
- Balanced XLR Stereo and Mono Outputs

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
The Mackie Digital 8 Bus or D8B is a 24-bit 56 input, 72 channel digital mixing console designed for professional music, sound-for-picture, and installed live applications. The most advanced digital console in its class—the D8B utilizes a separate CPU for controlling limitless dynamic and snapshot automation capabilities and an open architecture that allows software upgrades as well as signal processing plug-in expansion. The pentium-based 32-bit CPU handles over 3 billion instructions per second enabling you to run digital functions such as EQ, gating and compression on forty-eight simultaneous channels. And thanks to the Mackie Real Time OS the system doesn’t get bogged down by another operating system such as the Mac OS or Windows. The addition of an SVGA monitor, keyboard and mouse make working the D8B a dream. Whether you are working with analog tape, a digital multitrack or DAW, optional multi channel I/O cards are available to ensure that the D8B will integrate seamlessly into your system. A dedicated DSP processor provides two stereo effects and up to three additional DSP cards can be installed for even greater signal processing power. The D8B’s smart ergonomic design, digital patchbay and surround sound mixing capabilities as well as the studio grade 24-bit converters and Apogee UV22 16-bit CD encoding system far exceed the flexibility and sonic integrity of anything else on the market.

**FEATURES**

- 56 inputs, 72 channels
- Full big-console automation of all parameters including digital effects—recall and edit any mix anytime
- 48 channels of audio with gating, compression and parametric EQ available on all channels simultaneously. 48-channel overview screen
- 12 balanced XLR-mic inputs with switchable phantom power. 1/4˝ TRS line inputs with high quality mic preamps and 1/4˝ TRS inserts. There is an additional twelve 1/4˝ TRS balanced/unbalanced line inputs
- Channels 25 to 48 are accessed from three card slots that accept any combination of optional 8 channel I/O cards
- 12 Aux sends, AES/EBU and S/PDIF digital I/O, 8-channel sub/surround outputs (25-pin D-sub connector), 2 stereo monitor outputs, balanced XLR and 1/4˝ master outs and 3x 1/4˝ balanced 2-track returns.
- Built-in meter bridge and Talkback mic
- Speaker select and level controls let you choose between two sets of monitors (eg, near and far-field) as well as two independent, automatable Phones/Cue Mix sections.
- Insert and patch point feature on channels - source either plug-ins, 8 aux sends, 8 buses or 72 channels (pre-DSP only)
- Multifunction display provides tape position in SMPTE/MIDI and lets you mark multiple in and out points.
- Dynamic and snapshot automation
- Event automation track, graphic time line and Event list style automation editing
- MIDI Machine Control
- Assignable MIDI commands on transport and on the D8B master control section
- 999 levels of undo
- Up to 999 samples of time offset (delay) for each channel pre-DSP (dynamics/EQ)
- Inserts can be run across Mains and Busses
- Open architecture compatible with 3rd party plug-ins. Up to 16 simultaneous plug-ins on the first 48 channels, pre or post DSP, pre-fader via up to 4 UFX cards
- Cross patching allows channels from various banks to be substituted with those from other banks
- Enhanced dynamics with input keying and EQ filter, soft-knee compression toggle, linear and exponential option
- Advanced Mix Editor with view sizing arrows, auto-punch, auto-loop SMPTE time code boxes, Loop-in/out, Punch-in/out and Locate markers in the time bars
- Drag and drop file management between File windows and desktop
- Auto Punch can be toggled from the console via MMC.
- 5.1, 6.1 and 7.1 surround-sound capabilities in an adjustable 3-D floating window.
**Channel STRIP**

- Built-in meter bridge displays the selected channel’s input level, including level display for tracking, mixing, effect returns, and sub-bussing.
- Trim Level (channels 1-24 only) with Quick and Easy Level Setting.
- Mic/Line Switch (channels 1-12).
- Record Ready switch lets you remotely arm up to 24 tracks of your digital multi-track or hard disk recorder (on recorders that support 
  MM C) without turning away from the console.
- Assign button lets you quickly route channels to buses or any of the 24 tape outputs with the punch of a button or a click of the mouse.
- Write button displays the automation state of the channel strip.
- Previous/Next scroll buttons to quickly find and adjust effects parameters of all twelve auxiliary sends and 4-band EQ, compressor with limiting, and gate with expansion mode parameters for 48 channels.
- Provides four V-Pots and Previous/Next scroll buttons to quickly find and adjust effects parameters of all twelve auxiliary sends and 4-band EQ, compressor with limiting, and gate with expansion mode parameters for 48 channels.
- The Compressor and Gate parameters can be viewed graphically in the expanded dynamics view windows.
- The Dynamic Key provides a selection of four EQ types (Parametric, Shelf, High Pass or Low Pass) that can be applied to the Key input.
- A bright vacuum fluorescent display above the FAT Channel gives you visible read-outs of changing DSP settings. (In addition to the optional SVGA monitor.) Although you can tweak the D8B’s settings with its analog-style knobs, you may prefer the on-screen control panels for intricate adjustments. To quickly check channels for phase inversion, you can flip the phase of individual channels from the VFD.

**Fat Channel - For Hands-on Processing**

Perhaps one of the favorite features of the D8B is the legendary Fat Channel. And now it has a new look and many new features that will greatly augment your audio arsenal. Larger views, adjustable dynamics EQ key types, Gate expansion, and external MIDI gate trigger are just a few of the new Fat Channel components that will make your mixing tasks easier and more effective.

**Master Section**

- Lurking behind the Digital 8•Bus 100mm motorized faders are four banks of channels, each available at the touch of a dedicated button. Channels 1-24 are for tracking, Channels 25 to 48 are for tape returns, and 8 virtual group masters. When you switch banks, all faders will “snap” to their relative position in the selected fader bank. The SVGA display changes, too, reflecting the selected bank and all controller positions.
- Choose between near-field or main speaker outputs to monitor your mixes. This section can receive source signal from your stereo mastering returns via three sets of analog two-track inputs and/or the stereo AES/EBU or S/PDIF input. Plus, a built-in ‘Talkback’ mic with 'Dim' button allow communication with studio talent through the Phones/Cue mixes or Studio outputs.
- Each provides an amplified headphone output of either the Control Room mix or either of the ‘Cue Mixes’ (Aux 9/10, 11/12).
- A unique Copy Mix to Cue function allows you to set up your headphone mixes using the D8B faders, and then copying their relative positions to the Cue Mixes.

**External CPU**

The D8B includes a separate, external CPU with Pentium processor, complete with 32 M of RAM, large capacity hard disk, 3.5” floppy drive (use to load additional software or save sessions), and SVGA video card, keyboard and mouse connections for connecting an optional SVGA monitor (for display of many console functions including fader banks, DSP and effects, surround sound, software library, and file management), keyboard and mouse. On the back is an Ethernet connector. Use it to cascade two D8B’s solo control logic, mutes, transports, etc… or connect one or more Digital 8•Bus’s to Mac’s or PC’s via a LAN for transfer of session files and EQ/Effects libraries.
MACKIE

D8B (DIGITAL 8 • BUS)

Locator/Transport/Jog
◆ Once you start using it, you’ll discover that you don’t have to take your eyes off of the console nearly as much. You can run the transport of any tape or hard-disk based recorder that can slave to MIDI Machine Controlled. You can create song start and stop or loop continuously between two points. And you can dial in any location point in a session right from the console.
◆ You can also arm up to 24 tape machine tracks directly from the Record Ready button on each D8B channel strip. The time code counter window and location point reader above the transport section reflect the tape position in SMPTE (hrs/mins/secs/frames) or MIDI (bars/beatsticks), and let you mark multiple location points.

Easy Surround Sound
The future of music is multichannel and the D8B makes it easy. To move a channel from front to back or side to side, just pull up the Surround window and use the mouse to “grab” the sound source and move it around in the Pan window. You can select two different positions for a sound and then “morph” it from one spot to another over a specified length of time. There is also a mind-boggling Surround Screen that shows the front-back/left-right position of up to 72 different channels—all in one view.
◆ Surround Sound mixing environment with depth of center control, surround LFE gain control for each channel, sound-corrected buss and track assignment.
◆ Surround front-to-rear pan control via control surfaces or MIDI
◆ Pan Depth of Center for keeping sound effects and/or music out of the center speaker during LCRS, 5.1/6.1/7.1 sessions.
◆ The Surround Sound window includes nine faders (eight surround and a master) for adjusting the analog output levels at the Bus 1-8 outputs. This doesn’t affect the digital surround output signals at the Alt 1-8 outputs. This allows you to make adjustments in your monitoring levels without affecting the signal being recorded. Once the levels are set, you can lock the monitor level settings by clicking the Menu button and choosing Lock Monitor Levels.

Open Card Cage Architecture
The D8B can be configured for almost any recording application. It offers analog I/O, digital I/O, word clock I/O and effect processing cards as add-on options. And it doesn’t take a degree in electrical engineering to add a card. In fact, you don’t even need a screwdriver to install a card.

HUI Mode
The D8B software includes a HUI mode, which allows the D8B to operate as a HUI (Human User Interface) control surface with DAW software applications that support the Mackie HUI. Turn on HUI mode by clicking Options in the top menu bar and selecting HUI Mode. This creates a fifth fader bank in addition to MIC/LINE, TAPE IN, EFFECTS, and MASTERS, which can be accessed by pressing SHIFT+MASTERS on the control surface or clicking the HUI button above the Master fader on-screen. HUI mode uses the MIDI IN/OUT ports connected to a MIDI interface to control specific functions in the DAW, including fader and transport control.

Optional 8-Channel I/O Cards

AIO•8 Analog I/O Card:
8 balanced line level (+4dBu) outputs and returns for connecting the D8B to analog equipment.

DIO•8 Digital I/O Card:
Made by Apogee, this card gives you 8 channels of 24-bit digital tape outputs and digital tape returns in both ADAT lightpipe and Tascam T/DIF formats. The DIO•8's provide direct dubbing capabilities from ADAT optical to T/DIF format, and vice versa.

OPT•8 Low-Cost Digital I/O Card:
The low-cost OPT•8 I/O card provides 8 channels of ADAT lightpipe for under $100!

PDI•8: 24-bit AES/EBU Digital I/O Card:
Ideal for digital audio workstations and supports real time sample rate conversion on input as well as Apogee’s UV22 16-bit CD encoding on output.

Apogee Word Clock I/O
If you need to sync your D8B to an external clock reference, the optional Apogee Word Clock I/O card provides a BNC clock input for slaving the D8B. Extremely low-jitter, cost-effective clocking card with vari-speed and pull-up/down capabilities.
Mackie MFX and UFX Cards and Digital 8•Bus Plug-ins

The D8B’s open architecture lets you take advantage of some of the world’s most creative software companies. These plug-ins are made possible by the D8B’s advanced operating system and optional MFX and UFX cards. The D8B has four card slots in the rear labeled “Digital Effects Cards.” The D8B comes with one MFX card comes installed. That leaves three slots to fill up. You can mix and match MFX and UFX cards depending on the plug-ins you want to use. The D8B is the only digital consoles that supports such a wide variety of plug-ins from the world’s best processor and effects companies and there’s more to come.

MFX Card

The MFX card is the host for Mackie Effects reverbs, choruses, echos etc... The IVL Vocal Studio Demo is included. Adding a second MFX card unlocks the official Vocal Studio plug-in. (One MFX card comes with your D8B.) MFX cards can be mixed with UFX cards, up to a total of four. Removing the MFX card will disable the Mackie Effects, and Vocal Studio.

UFX Card

The UFX Card is the host for Acuma, Antares, Drawmer, and Massenburg plug-ins. Mackie Mono Delay and T.C Electronic’s TC FX II (provides reverbs from the renowned M2000) are bundled free with a UFX card. UFX and MFX cards can be mixed (up to a total of four cards).

- UFX cards are 4-in/4-out, which means each card can simultaneously support either: Four mono effects, or two mono and one stereo effect, or two stereo effects.
- Up to four UFX cards can be installed in the D8B. This allows you to run up to 16 channels of mono or 8 channels of stereo plug-in effects simultaneously.

Antares

AUTO-TUNE

Pitch Correction for Voice or Solo Instrument

The worldwide standard in professional pitch correction, Auto-Tune corrects intonation problems in vocals or solo instruments, in real time, without distortion or artifacts, while preserving all of the expressive nuance of the original performance. In fact, Auto-Tune offers audio quality so pristine that the only difference between what goes in and what comes out is the intonation.

The precision by which Auto-Tune detects pitch is extraordinary. At a frequency of 400 Hz and a sample rate of 44100, the Auto-Tune DSP algorithm computes the pitch to an accuracy of .0001 samples per cycle, or .0004 Hz. At this resolution, the very question “What is pitch?” becomes relevant. That is, as the pitch of typical performances continuously change, the amount of variation in pitch, even over the time of a few cycles, changes greatly in comparison to the accuracy by which Auto-Tune computes pitch.

Drawmer

ADX100

Frequency-Conscious Gating, Compression, Limiting and Expansion

Acknowledged as master of the analog dynamics processor, Drawmer now offers its expertise to the Mackie Digital 8•Bus.

- Left and Right input levels. -15.75dB to +16dB in 0.25dB increments.
- Input VU meters. -42dB to 0dB.
- Faders for quick parameter control. All thresholds and levels are in linear dBs, but other controls are scaled to a user friendly law which minimizes ‘fine tuning’ and allows a wide range of operation.
- You can instantly recall two preferred settings.
- Noise Gate is a switch designed for percussive signals, such as drums where it can shape the envelope to create a crisp, well defined signal.
- Gate/Duck switch. When Duck is selected, the operation is reversed, so that when the signal is above threshold, the output is attenuated. Below Threshold, the signal passes un-attenuated.
ACUMA LABS PLUG-INS for the D8B

A division of Mackie, Acuma Labs Ltd. develops real-time embedded systems for professional audio applications, specializing in digital signal processors, micro processors, digital audio effects, analog and digital software, real-time operating systems, interfaces, and hardware design. Seven plug-ins altogether, all of their parameters are automated through the D8B’s automation engine and can be stored or recalled as a preset.

DSR-1 Three-band Frequency-Controlled “DeEsser” Dynamic Processor

The DSR-1 is a highly accurate, frequency controlled, three-band dynamic processor that enables you to quickly isolate and correct unwanted sibilance found in vocal recordings of singers and speakers. The DSR-1 reduces annoying sibilance and popping sounds that are often found in recordings without loosing the crisp top-end clarity. Don’t let the simple chicken head controls and the funky retro-look fool you; the DSR-1 is a highly professional tool that is ideal for editing vocals, instruments, and other sources. The DSR-1 is an invaluable D8B plug-in that can save otherwise great recordings by eliminating troublesome “Ess” frequencies.

The DSR-1 employs frequency controlled compression to reduce problematic “Ess” that often occurs in recordings of singers and speakers. Using the Frequency and Width controls to zero in on specific problem areas, an internal keying device known as Listen allows you to solo or (Listen) to the isolated sibilant frequency that you want to compress. The DSR-1 can also help to reduce shrill, high-pitched sounds that may accompany bass guitars, wind instruments, or other acoustic instruments. With a series of useful presets designed for male and female vocals, spoken word and other instruments, the DSR-1 promises to make even the toughest job easy to correct.

FINAL MIX
Real-time Stereo Mastering Processor

Now master your sessions within the D8B, printing directly to hard disk without having to rely on expensive mastering houses or outboard gear. Final Mix will dramatically elevate the quality of your mixes and help you create your own professional masters.

- 6-band predynamics parametric EQ, 3-band dynamics processor,
- 6-band post-dynamics parametric EQ
- Graphical (user definable) dynamics band contours
- Adjustable crossover points and slopes for multi-band dynamics
- Node based adjustment of EQ bands and dynamics bands
- Soft Clip feature provides peak overload protection
- Noise gate with threshold adjustment
- DC removal filter automatically removes DC offset noise
- Dynamics bands linking - simplifies use in stereo configurations
- Fully automated; Global enable button
- On/Off for the dynamics section and each EQ
- Separate dynamics and EQ reset buttons
- Plug-in patch load and save
- Memories A and B - compare settings quickly and easily
- Input, output and gain reduction metering

RTA-31
Real Time 31-Band EQ and Spectral Analysis

RTA-31 is both a Graphic EQ and a Spectrum Analyzer that enables you to easily modify the frequency response of any given signal within the D8B or from external live and studio acoustic environments. Quickly view your sound using the on-board spectrum analyzer to zero in on the troublesome highs and lows of even the most difficult rooms. The amazing ‘ToEQ’ feature lets you immediately identify troublesome frequencies using the Frequency Analyzer while the 31-Band Graph automatically compensates for the highs and lows of your signal.

- Use your mouse as an on-screen paint brush to quickly perform various EQ editing functions.
- Use the 1/3 Octave Spectrum Analyzer (20-20K) in live and studio applications to identify the nature of an acoustic environment.
- Selectable dB reference level (0dB to -60dB) allows you to focus in on the most important range of your signal.
- Factory presets feature useful EQ and Analyzer setups
- Selectable graph types, choose from Bar, Peak Hold, Point, Peak Difference, and Peak Bar for viewing preference.
- Control graph response time to identify quick transients.
- Immediately freeze the analyzer screen to view detailed information.
**TIME PAK**  
**Easy-to-Use Time Modulation**  
An easy-to-use time modulation offering all of the classic time effects including Chorus, Flange, Auto Pan, Tremolo, combined with radically new and Xtreme settings.  
- Use graphic editing sliders to adjust Level, Regen, Pan and Time Modulation, and 4th order High and Low pass filtering.  
- Utilizing stereo input and output paths, Time Pak's and Filter Machine's large intuitive display field lets you easily drag and drop any of the 16 nodes (Time Pack) or 16 filters (Filter Machine) to simultaneously adjust Time (Time Pack) or Frequency (Filter Machine) and Output Pan.  
- Link left and right nodes (Time Pack) or left and right filters (Filter Machine) together into stereo pairs or fine tune the parameters further using 2 separate LFO blocks that incorporate preset waveforms and envelope followers with adjustable rate, depth, and phase (and volume on the Filter Machine).  
- Dial in the beat of the music by selecting the BPM, or tapping the tempo in real time, and quantize the LFO rates to the nearest interval selecting from note, whole note, triplet, etc. All of the filter rates snap to the correct interval with just a click of your mouse.

**FILTER MACHINE**  
**Intuitive, Powerful, Sweeping Filter Effects**  
Acuma's classic, analog styled 4-pole filtering plug-in is an easy and intuitive way to achieve powerful, sweeping filter effects.  
- Select from the graphic editing sliders to adjust Pan Modulation, Frequency Modulation, and 4th order High and Low pass filtering.

**MDW2x2**  
**2x2 High-Resolution Parametric EQ**  
Headed by George Massenburg, the preeminent designer, MDW (Massenburg DesignWorks) brings you the 2x2 High-Resolution Equalizer which features oversampling and double precision processing for unprecedented clarity and accuracy. Configure the MDW2x2 as two mono 5-band or one stereo 5-band parametric EQ.

**DELAY FACTOR**  
**16 Tap Stereo Delay with Modulation**  
Setting up a stereo, ping-pong, or multi-tap delay has never been easier! Delay Factor has a large, intuitive display field which allows you to drag and drop any of the 16 delay taps, simultaneously editing both the delay time and the output panning. Fine tuning the delay to match the beat of the song is even easier; just dial in the BPM or tap in the tempo, and select the interval you want to quantize to - note, whole note, triplet, etc. All taps will simultaneously ‘snap’ to the correct interval. Adjusting all the other parameters is easy too. All values for a single tap are automatically displayed on easy to adjust sliders when you click on the tap in the display field. Set the level, regeneration, regeneration panning, or the tap’s filter. Each tap has a 4th order high and low pass filter.

**SATURATED FAT**  
**Mono Distortion & Cabinet Modeling with 7-Band EQ**  
As its name implies, Saturated Fat is a mono plug-in that employs a proprietary technology to achieve warm, natural-sounding tube distortion and cabinet modeling. Choose from over 40 preset distortion types to create your “perfect sound” or select from the array of factory presets to find a setting that suits any style of music. And don't stop with guitars — Saturated Fat is great on drum tracks too! Combine the Cabinet Modeler, selecting from a list of small, medium, large, acoustic and bass amps, with the Drive Level and the on-board 7-Band EQ to build custom distortions that can be saved and recalled as User Presets. No more (loud) amplifier setups to contend with, just plug any instrument into the D8B and start playing! Saturated Fat’s distinctive distortion types and amplifier models will give you killer sounds instantly.
Sony DMX-R100 Digital Audio Mixer

A professional mixer inheriting the control philosophy of the world-famous Sony OXF-R3 Console, the DMX-R100 is a compact, 48-channel mixer with a comprehensive feature set that includes 25 motorized faders, a sophisticated control panel with touch-screen control, a fully integrated package of automation, a digital routing matrix and machine control. The DMX-R100 delivers excellent sonic performance via its state-of-the-art processing technology, offering 24-bit quality and the ability to operate at both standard and double sample rates (44.1, 48, 88.2 and 96 kHz). With its stunning sound performance, operability and flexibility, the DMX-R100 is ideal for producers, artists and engineers in applications ranging from music studios to post production and audio pre-mastering.

Control Panel Ergonomics
◆ Although the DMX-R100 is a highly cost-effective mixer, it has a fully professional control surface with dedicated control knobs and switches for each individual parameter – emulating the best of traditional console ergonomics. A considerable amount of space is allocated to individual controls for fast, accurate, adjustment and they are laid out in a logical manner that reflects the way that they are used.

High Quality Sound Processing
◆ The DMX-R100 is designed to deliver the benefits of higher resolution audio signals – greater dynamic range and higher bandwidth. All appropriate inputs and outputs are 24-bit and both standard and double sampling rates are supported.
◆ The DMX-R100 also processes the full 24 bits of its digital AES/EBU I/Os without any truncation. Internal processing uses precise floating-point calculations to maintain the console’s excellent sound quality.

Channels, Returns and Buses
◆ The DMX-R100 provides 48 input channels and 8 Aux Returns, making a total of 56 channels available for stereo or surround sound mixdown. These channels can be routed to the 8 MTR buses, 8 Aux Send buses, Master L/R Buses or Solo/PFL Buses. As well as EQ and dynamics processing for all 48 input channels, the PGM, Aux Send and MTR outputs also have EQ and dynamics.

Sophisticated Channel Faders
◆ 25 touch-sensitive motorized faders (24 channel and one PGM fader). The 24 channel faders can be switched in three layers; two layers for the 48 input channels and one layer for master control, including MTR masters, Aux Send masters and Return inputs. The faders are designed to give the operator a very professional ‘feel’. Their 10-bit resolution provides precise level adjustment, as well as smooth and accurate replay of automation moves. The DMX-R100 uses touch-sensitive faders because they allow for excellent operator control of automation and level.

Color SVGA Touchscreen
◆ The 800 x 600 color SVGA LCD touch screen provides high-quality graphics pages accessed via an intuitive menu structure. These graphics pages include channel processing, input/output routing, automation and mixer setup, and others. For example, the Channel pages give simultaneous view and control of any one of the 48 channels. Another page, ‘AUDIO OVERVIEW’ gives a clear view of all 48 channels on two pages so that the operator knows instantly how the mixer is set up. The knobs, buttons, switches and LEDs are displayed on the touch screen with their size and position corresponding to the size and positions of the real controls on the control panel section. This links the visual information provided on the touch screen with the physical controls.
◆ In addition to numeric indications, large and clear graphic representations of the EQ and Dynamics curves are displayed on the touch screen. Additionally, the graphic/touch screen combination lets you ‘zoom in’ on specific control panel areas.
**Channel Strip**
The 24 fader strips of the DM X-R100 combine the familiarity of traditional console design with additional features derived from the OXF-R3 console. By default, each fader controls the channel gain, but Select to Fader buttons allow them to control 10 additional level adjustments in the channel path, including the eight Aux Sends, I/P Trim and MTR Sends. Similarly, the Pan rotary control defaults to stereo mix pan but can be switched to provide the same 10 level control functions as Select to Fader. As different signal paths are selected, the faders automatically move to the correct position and a ring of LEDs around each Pan control indicates its current value. This arrangement of two level controls per fader strip provides a simple method of offsetting various channel levels – one of the most common adjustments made during any audio production.

**Flexible Internal Routing Matrix**
The DM X-R100's is its internal audio routing matrix. This provides comprehensive crosspoint switching for virtually every input and output, and avoids the need for a costly external patch bay. The input section of the matrix allows any input signal to be routed to any channel. The same input signal can also be routed to multiple channels. Similarly, the output section allows bus signals to be assigned to any output including those on the four I/O slots and also allows the same signal to be assigned to multiple outputs.

The routing matrix is controlled by two touch-screen pages, one for input signal assignment and one for output signal assignment. Both pages have two levels of access. The first level provides free assignment of inputs and outputs on an individual basis. The second level supports logical groupings of inputs and outputs. For example, the block of signals from one of the optional input boards can be assigned to a group of channels. Similarly, logical groups of mixer buses, Aux Sends for example, can be assigned to a range of mixer outputs. Using this second level to work with these logical groups enables the matrix to be quickly set up. Input and output matrix crosspoint assignments are stored in snapshots. This means that a DM X-R100 can very quickly be reset to different projects by recalling snapshots that include these settings.

**Channel Link Control**
Link control of parameters such as Trim, Delay, EQ/Filter, Dynamics, Channel Cut, Channel Fader, MTR Fader, and solo mode. In normal mixing, adjacent odd and even channels can be linked in stereo pairs, and in the case of surround mixing, operators can choose to link groups from the following combinations: 1-6, 7-12, 13-18, 19-24 channels, L/C/R, LS/RS and so on. In addition, a 'mask' function permits selective exclusion of parameters from the link operation available separately for stereo and surround channels. Surround link groups such as L/C/R, LS/RS and Sub can be selectively linked for surround mixing.

**Copy and Zero Reset Function**
Copy function allows channel settings of a source channel to be copied to any number of destination channels. The 'mask' function permits selective exclusion of parameters from the copy operation, and moreover, the DM X-R100 supports copying of channel fader mixes to MTR fader/Aux Send faders as well as MTR fader mixes to Aux send faders. This is extremely helpful when creating cue/foldback mixes. Additionally, a zero reset function selectively resets all level controls, faders, and knobs to their default values. EQ curves can also be set flat, and dynamics setting are set to their default values.

**Advanced Snapshot and Dynamic Automation**
The DM X-R100 includes 99 snapshots per title, making it possible to memorize and recall the state and values of virtually all mixer functions, including input matrix routing, Delay, Phase, Trim, Input Mode, Filter, EQ, Dynamics, Pan Assign, Cut, Fader and Aux.

The DM X-R100 also offers a 'library', which is intended for storing repeatedly used EQ and Dynamics settings. Up to 99 can be stored in the library per title for later recall and assignment to any individual channel. In addition, there is comprehensive dynamic automation of Faders, Cuts, Pans, EQ and Filters, Dynamics, and Aux sends. Dynamic automation can be synchronized to both SMPTE and MTC (MIDI time code), and the TC Link function allows snapshots or EQ/Dynamics settings stored in the library to be recalled to programmable time code cues.

A time code offset function is also available to offset the time code relative to that fed from an external source. As dynamic automation is such an important feature, touch-sensitive motorized faders are used. This typical high-end approach greatly simplifies writing and modifying the automation data. The DM X-R100 can be switched between two dynamic automation files (A and B) and automation moves can be written in Absolute or Trim modes. In both modes, the automation moves can be rehearsed before overwriting the previous mix in memory. These high-performance automation features make the DM X-R100 very suitable for complex music and audio post mixing that requires extensive auditioning and scene changes.

**Inputs/Outputs**
Equipped with 24 analog inputs as well as 8 Aux returns (4 mono analog and 4 mono digital) and 2-track inputs (digital/analog). Analog inputs 1-12 have XLR (for mic inputs and include 48V phantom power) and 1/4˝ TRS connectors (for line level signals). Inputs 13-24 feature neutrik combo connectors (XLR or a 1/4˝ TRS). Outputs include stereo program (analog and AES/EBU), Aux Send (8 analog, 2 AES/EBU), control room monitor (6 analog) and studio monitor (2 analog).
Optional Expansion Boards
For input/output expansion, the DMX-R100 has four option board slots. There are eight optional input/output boards, seven of which allow the user to flexibly expand input/outputs in groups of eight. The eighth optional board, the DM BK-R109 MADI board, allows the addition of 48 inputs/48 outputs via a single board slot. By installing the MADI board in one slot* and the appropriate boards in the three remaining slots, an incredible 72 inputs/outputs become available through the option board slots. As detailed in the chart, the DMX-R100 also interfaces to most popular audio recorders using the appropriate input/output board.

* The DM BK-R109 can only be installed in 'slot-4' of the DMX-R100.

Surround Sound Processing
Surround sound is increasingly required for areas such as DVD, film pre-mixing, audio postproduction, etc. As standard, 5.1 surround sound. Furthermore, unique to the DMX-R100, high rate (96 kHz/88.2 kHz) processing is available in 5.1 surround. When high rate processing is selected, the buses and inputs of the DMX-R100 software are reconfigured as follows:

<table>
<thead>
<tr>
<th>Model Number/Description</th>
<th>Number of Channels</th>
<th>Connector Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>DM BK-R101 (Analog Line-In)</td>
<td>8 inputs</td>
<td>XLR</td>
</tr>
<tr>
<td>DM BK-R102 (Analog Line-Out)</td>
<td>8 outputs</td>
<td>XLR</td>
</tr>
<tr>
<td>DM BK-R103 (AES/EBU I/O)</td>
<td>8 mono I/O</td>
<td>XLR</td>
</tr>
<tr>
<td>DM BK-R104 (Sampling Rate Converter DI)</td>
<td>8 mono ins (x2)</td>
<td>XLR &amp; Optical</td>
</tr>
<tr>
<td>DM BK-R105 (Analog Insertion)</td>
<td>8 send/return</td>
<td>1/4” TRS</td>
</tr>
<tr>
<td>DM BK-R106 (ADAT Optical I/O)</td>
<td>8 I/O</td>
<td>Optical x2</td>
</tr>
<tr>
<td>DM BK-R107 (TDIF I/O)</td>
<td>8 I/O</td>
<td>D-Sub 25-pin</td>
</tr>
<tr>
<td>DM BK-R109 (MADI)</td>
<td>48 I/O</td>
<td>BNC / Optical</td>
</tr>
</tbody>
</table>

Surround panning is accomplished via the Pan Assign page on the touch screen - by simply tracing the desired panning pattern with a fingertip on the smooth surface of the screen. Alternatively, a PC mouse connected on the back panel of the mixer can be used.

The DMX-R100 has six outputs for the control room monitor, so surround sound monitoring is achieved without sacrificing other outputs and without the need for external monitor switching.

SIU-100 System Interface
The optional SIU-100 is designed for greater system flexibility in applications such as broadcast & post production, and the need for expanded I/O in recording and PA scenarios. Used stand-alone or as an expansion for the DMX-R100, the 5U rackmount SIU-100 accommodates up to eight DMX-R100 style expansion boards, offering a variety of analog and digital inputs and outputs, and high quality microphone preamps. The SIU-100 interfaces with the DMX-R100 or DAW via the MADI interface, allowing you to position the two units up to 300 meters apart. The Ethernet control capability, gives you the freedom to install the SIU-100 as desired, while also keeping settings at your fingertips.

Additional Features
- No cooling fans are used in the DMX-R100 so it does not generate any acoustic noise.
- Equipped with separate word and video reference input connectors, as well as its own internal reference generator. It also provides multiple machine control with its two 9-pin and MIDI ports. This means that the DMX-R100 can be integrated into any multimedia facility without the need for external synchronization equipment.
- Two DMX-R100’s can be cascaded (connected) using the optional DM BK-R109 MADI boards, creating a 96-channel mixer. Since 48 faders become available, this reduces the need for resorting to paging channel faders. Cascade connection at double sample (96kHz/88.2 kHz) rate is also supported.
- The PGM/MTR/AUX buses each have an internal switch to select the bus linkage status (Linked or not) between the master mixer and sub mixer on an individual basis. The AFL bus and solo logic of the master mixer are shared between the master and sub mixer, emulating the operation of a single 96-channel mixer.
- Channel Scribble function allows the entry of names for individual input sources, which then appear on the touch screen next to the channel number. A maximum of seven characters can be entered for each input, and the scribble is displayed in the Channel, EQ and Dynamics GUI screens.
Sampling Digital Reverberator

The DRE-S777 is a digital reverb device that bridges the gap between “artificial” (synthesizer technology) and “real” to provide a new set of creative tools based on natural-sounding reverberation. This provides audio professionals a totally new approach to sound processing. The DRE-S777 is a technologically advanced digital effects processor that recreates the natural reverberation of concert halls, theaters and sound stages with unparalleled depth, presence and richness. It achieves this breathtaking naturalism by using highly advanced processing that allows audio signals to be combined with sampled data taken from actual acoustic environments. Sony engineers have painstakingly collected sample data from some of the world’s most highly regarded concert halls, studios and other acoustic environments, and also from classic analog plate reverb units. The DRE-S777 is supplied with a standard set of sample data, with additional libraries of samples also available.

FEATURES

- Supplied sample CD-ROM contains seven standard presets including data from two different types of concert hall, a recording studio and two churches, plus data from two types of plate reverberator. The DRE-S777 provides for adjustment of parameters such as reverb time, effect/dry balance, EQ and pre-delay. The optional DASK sample discs contain a range of acoustic environments from Europe, America and Japan.
- Nine user caches for quick reverb-program recall.
- The DRE-S777 is capable of a ‘self sampling’ function, enabling it to capture any acoustic environment. This function requires the optional DASK-704 software module as well as a microphone and speaker system.
- MIDI control
- In addition to stereo reverb modes, it supports multi-channel reverberation. Therefore it is highly suitable for a wide range of multi-channel production tasks, including audio-for-video, and for TV and film post-production applications.
- With the optional DABK-S703 Expansion DSP Board, the DRE-S777 provides a mono input, four-channel output reverb mode. Larger surround sound arrays, for example, 5.1 channel sound, can be provided by using two or more DRE-S777s. The optional DASK software includes reverberation data actually sampled using a five-position mic array, allowing five-channel surround sound effects to be created.
- Reverb mode:
  - Mono in Stereo out (standard)
  - Stereo in Stereo out (with DABK-S703)
  - Mono in 4-channel out (with DABK-S703)
  - Two Mono split in 4-channel out (with DABK-S703)
  - Mono in stereo out at 2Fs (with DABK-S703)
- Direct/Rev: Direct+Reverb/Reverb
- Variable reverb time (0.3-5.5 s max.)
- Sony DSP convolutes an amazing 256,000 sampling points resulting in reverberation that accurately recreates all of the detail of the early reflections and the complexity of the reverberant tails—not only a reverb effect processor, but an ambience emulator!
- Optional DABK-S703 Board upgrades the DRE-S777 for 96kHz sampling, making it compatible with DVD video and audio.
- Optional DABK-S701 (A/D) and the DABK-702 (D/A) converter boards further extend the versatility of the DRE-S777.
- Mixer functions (peak hold, bypass, mixture of dry/wet, muting)
- Four-band parametric EQ
- Factory-presets provided in Memory Stick, as well as set-up data for 92 user-presets
- Operates via jog dial and 4 function keys

Real-World Reverb

To achieve exceptionally natural sounding reverb, it has been necessary to capture the unique “sound” of many different environments: concert halls, churches, studios and so on. The gathering of this data was no mere mechanical process. Rather, it was a series of individual recording projects, each requiring a host of creative decisions familiar to audio professionals. Each project required loudspeakers to radiate the test signals and a microphone array to capture the reverb signature. For each of the locations, multiple samples were recorded using different combinations of loudspeaker and microphone positions. These samples were then combined in the DRE-S777 to provide an extensive range of stereo and surround reverb modes. Sony hardware engineers worked closely with experienced recording engineers to choose microphone types, their directivity and location. Each acoustic space was sampled across a wide range of conditions, and the data supplied on a CD-ROM for use with the DRE-S777.
The Tascam DM-24 is an affordable 32-channel digital mixer that combines 24-bit audio quality, with highly flexible routing capabilities, two powerful onboard effects processors, comprehensive snapshot and dynamic automation as well as dynamics processing and parametric EQ for every channel. The plethora of onboard analog and digital I/O including: 16 mic/line inputs; three 8-channel TDIF I/Os; and 8-channel ADAT optical I/O; along with the wide range of onboard synchronization and machine control capabilities, makes the DM-24 the ideal companion for professional multitrack recording systems such as Tascam’s MX-2424 24 track hard disk recorder. The DM-24’s 24-bit A-to-D and D-to-A converters and custom 32-bit floating point processor ensures true 24-bit performance throughout the digital signal path.

**Features**

**Console Overview**
- 32-channel, 8 bus digital mixing console with 6 aux sends at 44.1 or 48 kHz sample rates (16x8x2 at 88.2 or 96 kHz)
- 16 XLR mic, 1/4” TRS line inputs with inserts and switchable phantom power.
- 24 channels of TDIF I/O, 8 channels of ADAT optical I/O – ideal for any multitrack recording system including Tascam’s MX-2424 hard disk recording system.
- Any input can be assigned to any output
- 32-bit internal processing resolution and 24-bit A-to-D, D-to-A converters.
- Each of the 32 input channels is equipped with 4-band fully-parametric EQ, six Aux Sends (assignable pre or post fader) and configurable dynamics section.
- Channels 1-16 also feature a high quality Gate/Expander.

**Control Surface**
- Sixteen long-throw motorized faders, arranged in three switchable layers, control up to 32 mono inputs, eight bus s and six aux sends.
- Each of the 32 inputs can be linked as a stereo pair plus their are eight fader groups and eight mute groups available.
- Grouping layers provide further flexibility in grouping arrangements.

**Two Fully-Editable Internal Effects Processors**
- Processor One gives you the choice of using the TC Works reverb, with over 100 presets, or the Antares Mic and Speaker modeler that emulates the distinctive characteristics of a wide variety of classic and modern microphones, using any standard microphone.
- Processor Two is dedicated to Tascam effects including - Chorus, Delay, Pitch Shifting, Phaser, Flanger, Compressor, Guitar compressor, Exciter, De-esser, Gate and Distortion (with amp simulators).
- Effects can be accessed from the Aux sends 1-6 and returned to any of the 32 channels.
- Effects can also be inserted directly on busses 1-8, the stereo buss or onto one of the 32 channels.
- Effect 1 and 2 can also be run in series (chained) allowing you to run a delay into a reverb, for instance.

**Aux Sends**
- 6 aux sends, configurable Pre or Post, are provided for each channel and can be freely assigned to the two internal effects processors as well as the 4 assignable sends on balanced TRS jacks, and in pairs to the 2 channel AES/EBU and S/PDIF digital outputs for use with external effects.

**Monitoring**
- Full control room and studio monitoring facilities are provided, along with an integral talkback microphone and master bargraph meters.
- All popular surround formats are supported including 2+2, 3+2 and 5.1.

**Internal Automation - No Computer Required**
- The built-in automation system allows full real time control of almost all mix parameters without the need for connection to an external sequencer.
- Up to eight banks of automation mix files, each containing up to 8000 events, can be stored internally. Up to four banks or 32,000 events can be used per mix.
- Automation is triggered by external MTC, SMPTE time code or from the internal MTC generator.
- You can store and recall 95 user snapshots of the current mixer settings.
**Input and Master Sections**

A. Sixteen XLR mic and 1/4˝ TRS line inputs with variable gain and 1/4˝ TRS inserts for each channel (phantom power for the mic inputs are switchable in groups of four).

B. Master Section:
- 1/4˝ TRS Control Room outputs and Studio Monitor outputs plus two headphone outputs
- 2 Track Input on RCA Connectors
- XLR Main stereo outputs with 1/4˝ TRS insert
- Four 1/4˝ TRS Sends and 1/4˝ TRS Returns can be configured as inserts for tape returns.

**Control Surface**

C. Each of the sixteen channel strips features a long-throw motorized fader, as well as backlit Record Enable, Channel Select and Mute/Solo buttons and an overload/status LED. The channel strips are arranged in three switchable layers, allowing them to control each of the 32 mono inputs, 8 buss sends and 6 aux sends.

D. Control Room Section:
- Solo and headphone volume controls.
- A volume control, dim switch and mute switch are provided for the control room outputs.
- Three programmable source select switches allow you to designate the desired monitor source.
- 2 x 12-segment LED meters
- The Jog/Data wheel can be used for changing parameter values as well as transport control.
- Built-in talkback mic with level control.

E. The backlit 320 x 240 LCD displays routing assignments, EQ curves, effects parameters, automation data, external control status, synchronization and more. 4 multifunction rotary “POD” controls, located directly underneath the display, provide control over effects, EQ, dynamics, and surrounding parameters and more. The POD controls also transmit MIDI controller data.

F. Four Ring Encoders give instant visual feedback of key EQ, pan and aux send settings.

G. The Transport Section can control a wide variety of external devices using the onboard RS-422, DTRS remote, MMC and GPI ports as well as ADAT Sync by using the optional IF-AD-DM card. Functions include: Play, Record, Stop, FF,REW transport controls; numeric keypad for manual and direct locate; auto punch keys; repeat, memo; edit keys and track arming keys.

H. The dedicated motorized long-throw Master fader is provided for controlling the stereo out buss.

I. Three TDIF I/O interfaces provide 24 channels of buss outs and returns for use with TDIF compatible DAWs and DTRS machines.

J. Eight channels of ADAT Optical I/O provide lightpipe compatible buss outs and returns.

K. Two stereo AES/EBU and two stereo S/PDIF interfaces.

L. Two option slots accommodate additional 8-channel analog and digital interface modules or a cascade module for connecting two DM-24s.

M. Word Sync In and Out/Thru ports (BNC)

N. MIDI In, Out and Thru/MTC Out

O. SMPTE Time Code input (RCA)

P. 15-pin D-sub DTRS compatible Remote output

Q. RS-422 (for Sony 9-pin) 9-pin female D-sub connector

R. GPI 9-pin female D-sub connector allows remote machine start

S. 25-pin D-sub connector for use with the optional MU-24/DM Meter Bridge.
**EQ AND DYNAMICS ON ALL 32 INPUT CHANNELS**

### 4 Band Parametric EQ

- **High Filter**: On/Off switchable
  - Type: Hi-shelving, Peak, LPF
  - Frequency: 31Hz to 19kHz
  - Q: 0.27 to 8.65
  - Boost/Cut: ±18dB, 0.5dB resolution

- **Hi Mid Filter**: On/Off switchable
  - Type: Peak, Notch
  - Frequency: 31Hz to 19kHz
  - Q: 0.27 to 8.65
  - Boost/Cut: ±18dB, 0.5dB resolution

- **Lo Mid Filter**: On/Off switchable
  - Type: Peak, Notch
  - Frequency: 31Hz to 19kHz
  - Q: 0.27 to 8.65
  - Boost/Cut: ±18dB, 0.5dB resolution

- **Low Filter**: On/Off switchable
  - Type: Low-shelving, Peak, HPF
  - Frequency: 31Hz to 19kHz
  - Q: 0.27 to 8.65
  - Boost/Cut: ±18dB, 0.5dB resolution

All filters are fitted with “gain flat” switches.

### Dynamics

- **Gate**:
  - Threshold: -80dB to 0dB in 1dB steps
  - Range: 60dB to 0dB in 1dB steps
  - Hysteresis: 0dB to 24dB in 1dB steps
  - Attack time: 0ms to 125ms in 1ms steps
  - Holding time: 0ms to 990ms in 100 steps
  - Decay time: 50ms to 5.0s

- **Expander**:
  - Threshold: -48dB to 0dB, in 1dB steps.
  - Ratio Values: 1:1, 1:2, 1:4, 1:8, 1:16, 1:32, 1:64
  - Attack: 0ms to 125ms in 1ms steps
  - Release: 5ms to 5.0 seconds

- **Compression**:
  - Threshold: -48dB to 0dB in 1dB steps.
  - Ratio: 1:1 to ∞:1
  - Attack time: 0ms to 125ms in 1ms steps
  - Release time: 5ms to 5.0s in 100 steps
  - Auto (gain) make-up: switchable
  - Output gain: -20dB to +20dB in 1 dB steps

### Libraries

- The DM-24 allows you to store customized settings in libraries. Most of the libraries included a number of locations reserved for read-only presets containing useful points of reference.
- The Library undo/redo function allows a recently recalled library setting to be compared with a previously-loaded setting.

### Signal Flow Examples

#### Library Presets
- Total: 128
- Read-only: 128
- Snapshots: 128
- EQ: 128
- Effect 1 (P1): 128
- Effect 2 (P2): 128
- User effect library: 128
- Compressor: 128
- Gate/Expander: 128
- Automation: 7

The snapshot library screen includes a picture of the faders, together with pan/balance settings and mute settings.

#### Tracking
- Channels 1-16 can be accessed from the 16 mic/line inputs and then assigned to 16 direct outs while channels 17-32 can provide 16 tape returns for monitoring.
- Aux sends 1-6 can be used to create 6 mono or 3 stereo cue mixes.

#### Overdubbing
- TDIF returns 1-16 can be assigned to channels 17-32 while channels 1-16 are used for four mic/line inputs, two internal effects returns, and the returns from the third return group. This gives you the ability to record a vocal track dry, yet monitor the vocal with reverb in the cue mix.

#### 48 Channel Mixdown
- The first 24 of the 32 input channels can be accessed by the three TDIF returns.
- The additional 8 input channels are accessed by the two internal effects, a digital stereo pair, and an external send/return.
- The mic/line inputs can also be used, by their direct assignment to Aux 1-2. This means that up to 16 channels of live MIDI sequenced instruments can be added to the 32 input channels.
Synchronization and Machine Control

- The DM-24 can be easily configured as a remote controller for a wide variety of devices using the DTRS remote, P2 and MMC protocols. Multiple devices can even be controlled simultaneously.
- MIDI In, Out and Thru/MTC Out allows you to send MMC, Lock to incoming MTC, Update firmware via Standard MIDI File, offload and upload library and automation data as well as Send/Receive MIDI program changes and MIDI controller data.
- Built-in Mackie HUI emulation provides MIDI-based control surface support for a variety of DAW applications including ProTools, Logic, DP, Cubase and Nuendo.

Cascading Two DM-24s

- Two DM-24s can be cascaded together to act as one large console. This requires the IF-CS/DM cascade option card in each mixer.
- Cascading allows the two mixers to share busses 1-8, aux sends 1-6, the solo buss and the stereo buss. Connections to the control room and stereo outputs would be made on the cascade master.
- An AES/EBU option card added to the cascade master can be used for sending the 5.1 mix digitally to your stem recorder while an analog option card could be added to the cascade slave to send the 5.1 mix to the surround monitoring system.
- Cascading two DM-24s provides:
  - 64 channels with 32 mic pres
  - 48 channels of TDIF I/O
  - 16 channels of ADAT lightpipe I/O
  - 4 AES/EBU 2 channel digital I/O
  - 4 S/PDIF 2 channel digital I/O
  - 8 Assignable sends and returns
  - 4 Internal effects processors (2 in each)
  - 33 Touch sensitive, motorized faders
  - The ability to run a 24 track, 24-bit, 96kHz, 5.1 mixing environment.

IF-AN/DM

- Eight channels of AES/EBU I/O on D-25 connectors. Adding two of these cards will give you a total of 20 channels of AES/EBU I/O (four channels come standard on the DM-24.) The IFAE/DM AES/EBU card supports 4 channels of DUAL LINE or HI SPEED I/O

IF-TD/DM

- Eight channel TDIF card. The IF-TD/DM is not available for input. It is designed to be used to send the 6 buss outputs to a TDIF stem recorder like a DTRS machine.

IF-AD/DM

- Eight channels of ADAT optical I/O with ADAT Sync. Adding two of these cards will allow you to mix 24 tracks of ADAT. The IF-AD/DM does NOT support 96kHz.

IF-CS/DM

For cascading two DM-24 digital mixers. To cascade two DM-24s, you must put one cascade card in “SLOT 1” of each DM-24. A cascade cable is included.

MU-24/DM

The optional MU-24/DM Meter Bridge provides channel and master metering facilities through LED bargraph displays which are switchable in “layers”.

YAMAHA 01V96

32-Channel 24-bit / 96kHz Digital Mixing Console

The 01V96 is a cutting edge digital mixing console designed to bring you the same performance and reliability of Yamaha’s most advanced digital consoles, in a smaller, more affordable format that’s ideal for the home or smaller professional production studio. It featuring 40 simultaneous mixing channels (when fully expanded) with full resolution 24-bit/96 kHz audio, a range of stereo effects with 32-bit internal processing and full automation. Right out of the box, the 01V96 provides 24 analog inputs and an 8 channel ADAT optical I/O interface. For further expansion, a single I/O slot will accept Mini-YGDAI digital and analog I/O cards, including third party cards, providing up to 16 inputs and outputs at 48 kHz (8 at 96kHz). The comprehensive control surface allows analog-style hands-on operation along with the added flexibility of providing extensive support for digital audio workstations including ProTools, Nuendo and other popular computer-based recording software.

FEATURES

◆ 36 simultaneous inputs, 8 busses and 8 auxes, at 24 bit, 96kHz operation
◆ Supports 44.1 kHz, 48 kHz, 88.2 kHz, or 96 kHz sample rates
◆ 24-bit A-to-D and D-to-A converters

24 Analog and Digital Inputs
◆ 16 analog channel inputs:
  - Channels 1 - 12 will accept balanced XLR microphone signals via high-performance head amplifiers, as well as (bal/unbal) line-level signals via 1/4˝ TRS connectors. 48-volt phantom power (switchable in 4-channel groups), trim controls and pad switches are also provided as well as unbalanced 1/4˝ TRS inserts that will allow you to insert external processing gear into these channels (pre-A-to-D).
  - Channels 13 - 16 feature 1/4˝ TRS (bal/unbal) line inputs with trim controls, that can be configured as four individual inputs or two stereo pairs.

◆ Eight digital channel inputs (and outputs) are provided via a built-in ADAT optical interface.

Expandable To 40 Inputs
◆ When you need more I/O or need to configure a system based around a specific protocol, additional I/O can be added via a range of user-installable 8 and 16 channel Mini-YGDAI expansion cards that can simply be plugged into the expansion slot to provide in a variety of formats including ADAT, AES/EBU, TDIF or analog.

All Input Channels Feature
◆ Independent compressor/limiter and gating/ducking processors on each channel provide complete dynamics control.

◆ Each channel also features 4-band fully parametric EQ. Each band is fully sweepable from 20 Hz to 20 kHz, with bandwidth variable from 0.1 to 10 and a ±18dB boost/cut range.

◆ The channel delays have a maximum delay of 452 milliseconds (96 kHz mode). Even the stereo bus, eight mix buses, and eight aux buses have individual compression and EQ!

17 Physical 100mm Motorized Faders
◆ There are sixteen channel strips each of which features a precision 100mm motorized fader, channel ON/OFF (mute) key, a SOLO key, and a SEL key. The SEL key allows you to assign the channel to the console’s Selected Channel section where you have access to detailed controls for panning, EQ and dynamics.

◆ The 16 channel strips can be instantly switched via four Layer-switching keys to control:
  - Input channels 1 - 16
  - Input channels 17 - 32
  - The Master Layer which controls auxiliary sends 1 - 8 and buses 1 - 8
  - The Remote Layer can be used to control your DAW software including ProTools, Nuendo and more

◆ Fader Mode keys allow the motor-driven faders to be instantly switched and updated between fader and auxiliary level control.

◆ The seventeenth motorized fader is reserved for the Master Stereo bus which also features On/Off and Sel keys.
20-bus Configuration

- A wide range of freely configurable signal-routing options are provided to adapt to a variety of tracking, mixing, and live sound applications:
  - Main stereo program bus
  - Eight individual mixing buses
  - Two solo buses
  - Eight auxiliary buses

Digital Patching System

- A fast, flexible and easy-to-use digital patching system allows you to assign all of the available inputs, outputs, effects, and channel inserts to any of the console’s channels or outputs.
- A direct out function allows the signal from any input channel to be routed directly to any digital or analog output.
- The eight auxiliary buses can also be patched to anywhere in the system.
- The Patch Library allows you to store and instantly recall entire patch setups – ideal for configuring templates for different applications i.e. tracking, mixing, mastering etc.

24-bit Fully Editable Internal Effects

- You can use two stereo effects simultaneously at the 88.2 and 96 kHz sample rates, and up to four stereo effects at 44.1 and 48 kHz.
- Effects can be assigned to an auxiliary bus for send and return operation, or to an insert into any input channel as required.

Digital Mixing System

- An effect libraries with 44 factory and 76 user presets is provided covering a whole host of effects types, including reverbs, delays, modulation-based effects, combination effects, and multichannel effects designed especially for use with surround sound.

Digital Mixing System

- A number of Data Libraries, each containing an extensive selection of presets, are provided for effects, compression, gating, EQ, I/O patching, and channel setups.
- Presets can be selected and used unmodified, or edited to suit specific requirements. Modified setups can be renamed and saved to the libraries and instantly recalled when needed.

**STUDIO MANAGER SOFTWARE (MAC/PC)**
**SUPPLIED WITH BOTH THE 01V96 AND 02R96**

Studio Manager gives you complete access to all parameters for either on-line or off-line control, and the program’s visual interface makes it easy to relate on-screen controls to the corresponding console functions. It can also be used to manage an extensive archive of mix data. The Studio Manager includes the following main display pages:

**Console Window**  
Almost a complete virtual mixer, this display shows the primary channel parameters “in-line” as they would appear on an analog console.

**Patch Editor Window**  
When you add several Mini-YGDAI expansion cards to create your system’s I/O configurations, input and output patching can become an issue. The Patch Editor makes patch assignments easy with a matrix type visual interface.

**Selected Channel Window**  
Similar to the SELECTED CHANNEL section on the console, this display includes all parameters for the currently selected channel: level, buss assignments, sends, gate, compressor, delay, etc.

**Surround Editor Window**  
When the console is being used in surround mode the Surround Editor display can facilitate surround positioning of individual tracks.

**Surround Panning**  
Surround is becoming an important part of modern sound production. The 01V96 features 6.1, 5.1 and 3-1 surround panning modes so you can create surround mixes without having to sacrifice features or performance in other areas.

**Navigation**  
- The high-resolution 320 x 240 dot LCD panel provides easy visual access to all of the consoles functions and parameters.
- Many of the parameters, such as EQ curves and compression parameters, are displayed graphically so you can see what’s happening at a glance.
- Display Access keys determine which type of data will be shown on the LCD panel – a total of 12 selectable categories. This approach minimizes the need to scroll through on-screen lists when you need access to a particular type of data.
- The Selected Channel controls include the hands-on panning and EQ controls for the currently selected channel. Analog-style buttons and knobs provide direct and easy access to the parameters.

- Eight User Defined Keys can be assigned to control any functions you choose. For example, you can use them to recall input patch setups, to arm MTR tracks for recording, or to handle locator functions.
- When the REMOTE layer is selected, the USER DEFINED KEYS are automatically assigned to Pro Tools control functions by default.
- Large cursor, INC/DEC, and enter keys are complemented by a data entry wheel that lets you spin in values quickly and easily.
- The data entry wheel can also be used as a shuttle/scrub dial for a recorder or DAW.

**Selected Channel Window**  
When the console is being used in surround mode the Surround Editor display can facilitate surround positioning of individual tracks.
## 01V96 • 02R96 EXPANSION BOARDS

**Connection with 96-kHz Recorders and Workstations**

Although the 01V96 handles 96 kHz audio as standard, most of the currently available digital recorders and workstations can handle 96 kHz audio only in double channel mode (using two tracks to make one). In this configuration the 01V96 uses one channel per (96-kHz) track, but twice the number of I/O connections must be used. MY8-AT/TD/AE cards work in double channel mode to handle 16 channels of 44.1/48-kHz audio or up to 8 channels of 96 kHz audio in double channel mode. With the latest equipment that handles 96-kHz audio as standard (in double speed mode like the 01V96) you can make standard connections using the MY8-AE96 card. The MY8-AE96 card can work either in double speed or double channel mode.

02R96

24-bit/96kHz Digital Mixing Console

The 02R96 Digital Mixing Console is the long-awaited, and fully revised, successor to the revolutionary 02R — the industries first truly professional, affordable digital console. In fact, the 02R96 packs more than five times the processing power into the same footprint size as the original 02R. This power allows the 02R96 to provide 56 channels of full resolution 24-bit/96 kHz audio, full automation of virtually all console parameters with quarter-frame accuracy, surround monitoring, as well as comprehensive range of 96kHz compatible stereo effects with 32-bit internal processing. Out of the gate, the 02R96 provides 24 analog inputs including 16 mic preamps using the same high quality head amplifiers as Yamaha's top-of-the-line DM 2000 digital mixing console. Thirty Two channels of I/O can be added via four I/O slots that accept a new range of 24-bit/96kHz-capable Mini-YGDAI digital and analog I/O cards. This allows you to configure the 02R96's I/O to suit your specific production environment.

FEATURES

Sonic Spec

- Transparent, full resolution 24-bit/96 kHz audio, with true 24-bit, 128-times oversampling 96kHz A-to-D and D-to-A converters, 32-bit internal processing and 58-bit accumulators.
- 20 Hz–40 kHz (0.5, –1.5 dB) frequency response at 96 kHz sampling rate.
- 105 dB typical dynamic range (A-to-D Input to Stereo Out).

I/O Architecture

- Up to 56 simultaneous input channels each with direct outputs
- 24 balanced analog inputs including sixteen XLR mic, 1/4˝ TRS line inputs featuring high-performance head amplifiers derived from Yamaha's top-of-the line DM 2000, plus eight 1/4˝ TRS line inputs.
- An additional 32 inputs (and outputs) can be derived from four rear panel 24-bit 96kHz compatible mini-YGDAI expansion card slots. These slots accept a wide variety of analog and digital (ADAT optical, TDIF and AES/EBU) plug-in cards that will allow you to create an input/output configuration to perfectly suit your system's needs.
- Each input channel has access to 8 aux sends; independent compression and gating / ducking processors; 4-band parameter EQ and up to 453ms of channel delay.
- 8 freely assignable 1/4˝ TRS Omni outputs.

Superlative Analog Head Amplifiers & Converters

The head amplifiers are derived from the acclaimed DM 2000 - some of the finest analog mic preamps available in any console, anywhere. The on-board 24-bit/96-kHz converters ensure that you get an excellent digital representation of the warm, transparent output from these remarkable mic preamps.

Digital Patching

- All available inputs, outputs, effects, and channel inserts can be assigned to any of the console's channels or outputs via the easy-to-use digital patching system.
- Each of the 56 input channels can be routed to their direct outputs; subgrouped to the eight bus outputs; and to the main stereo outputs – simultaneously if need be.
- The eight aux busses can be patched to anywhere in the system, and patch setups may be stored in the patch library for instant recall at any time.
- Input and output ports can be named for easy identification and patches can be stored in the I/O Patch libraries.

EQ

- 4-band parametric EQ is provided on all Input and Output Channels with a choice of a “type I” EQ algorithm or a newly developed “type II” EQ algorithm.

Dynamics

- Independent compression and gating / ducking processors are provided for all 56 Input Channels. Additionally, compression is provided for each output.
**- Control Surface-**

A. Variable gain, signal present and peak LEDs are provided for all of the analog inputs plus independent switchable 26dB pad and phantom power on the first 16 analog inputs as well as on/off switches for the inserts I/O.

B. The 320 x 240 fluorescent backlit LCD display is enhanced by twelve Display Access keys that allow you to instantly switch the display to specific editing, utility and metering functions such as Automix, Channel Groups and Pairs, I/O Patching, MIDI and Remote setups and more.

C. Each of the 24 channel strips feature:
- A touch-sensitive 100 mm motorized fader; a rotary encoder for controlling Pan, Aux Send levels, or user assigned parameters; a channel On/Off key and Solo key; and an Auto key to turn mix automation on or off for that channel.
- A SEL key allows you to assign a channel strip to be represented on the LCD display and allows you to control the dynamics, EQ, buss assignment and panning for that channel via the dedicated Selected Channel controls.

D. Editing the four internal effects processors is made easy with the parameter up/down selection keys and four rotary encoders. Four keys, located above the encoders switch between menu tabs to reveal additional editing pages.

E. Up to 16 functions from a list of over 150 can be assigned to the User Defined Keys. Setups can be stored in any of the four available banks. Example functions include track arming, scene recall and muting surround monitor outputs.

F. A large Parameter wheel is provided for editing parameter values and scrolling through Scene and library lists. Shuttle and Scrub mode buttons allow you to convert the Parameter wheel to be used for machine control of your DAW or MMC controlled device.

G. Standard transport buttons (Stop, Play, Rec, FF and Rew) as well as as well as 8 locate keys are provided for controlling your DAW via MMC commands.

H. Four Layer switching keys let you access all 56 inputs, the 8 AUX sends and 8 busses as well as a Remote Layer for controlling your DAW via the 24 channel strips.

I. A numeric display right next to the Store, Recall, and Up/Down keys shows the current scene number - 01 through 99. Additional scene memories can be managed via a computer running the supplied Studio Manager software.

J. The monitor section features source select keys as well as independent Control Room, Studio, Headphone and Surround level controls. A talkback mic with level control, on/off and Dim switches is also provided.

K. The joystick can be used for surround panning, normal panning as well as parameter control for the 5.1 Reverb effect.

L. Detailed control of dynamics, EQ, buss assignment, panning and surround positioning is available via the Selected Channel controls.

---

**The Optional MB02R96 Meter Bridge Features:**

- Twelve 12-segment level meters that can be used to display pre-EQ, pre-fader, or post-fader input channel signal levels.
- An additional eight meters displays the levels for the console’s eight busses.
- A 32-segment stereo meter is also provided for the main stereo program.
**Machine Control**

- Both Sony 9-pin (P2) and MMC protocols are supported for external machine control. Control can be switched between MTR and master target machines.
- You can control the transport and locate functions of up to eight external recorders that support MMC (MIDI Machine Control). Machines that support MMC can be controlled by connecting them to the 02R96's MIDI, SERIAL, USB, or with the optional mLAN I/O Card installed in expansion Slot #1.

**Automix Functions**

- Allows dynamic automation of virtually all mix parameters, including Levels, Mutes, Pan, Surround Pan, Aux Sends, Aux Send Mutes, EQ, effects, and Plug-Ins.
- Events are recorded in real time and can be edited either offline, with high resolution 1/4 frame accuracy, or by re-recording with punch in/out.
- The smooth and quiet touch-sensitive, 100mm motorized faders make writing and updating automation fast and intuitive.
- You can specify which parameters will be recorded, and punch channels in and out of recording on-the-fly.
- User Defined Remote Layer operations, and scene and library recall operations can also be automated, combining snapshot and dynamic mix automation.
- Automix can be synchronized to an external timecode source or to the internal timecode generator.
- Up to 16 Automixes can be stored in the Automix library. They can also be stored to an external MIDI device, such as a MIDI data filer, by using MIDI Bulk Dump.

**Rear Panel**

- A. Sixteen balanced XLR mic and 1/4” TRS line inputs with 1/4” TRS inserts (+4dB unbalanced).
- B. Channels 17 - 24 feature balanced 1/4” TRS line level inputs.
- C. Analog Master I/O Section
  - XLR stereo outputs (+4dB balanced)
  - Left and right 1/4” balanced TRS control room monitor outputs (+4dB balanced)
  - Dedicated left and right 1/4” TRS studio monitor outputs (+4dB balanced)
  - 1/4” TRS studio (-4dB balanced) and RCA (-10dBv unbalanced) 2-track inputs.
  - RCA stereo outputs (-10dBv unbalanced)
- D. Eight freely assignable balanced 1/4” TRS Omni outputs can be independently accessed from the Bus Outs, Aux Sends, the Stereo Out, Insert Outs, Direct Outs, or Surround Monitor Channels.
- E. AES/EBU digital I/O (XLR) and two coaxial digital I/Os.
- F. A balanced XLR SMPTE timecode input and a dedicated MTC (MIDI Time Code) input are provided for synchronizing the Automix functions with an external device.
- G. A USB “To Host” port and 8-pin mini serial DIN “To Host” port allow MIDI communication (including MTC) between the 02R96 and your host computer. The “To Host” ports are ideal for integrating the included Studio Manager Software.
- H. MIDI IN, OUT, and THRU ports can be used to send/receive program changes for scene recall, control changes and parameter changes for real-time parameter control; Bulk Dump for data storage, MIDI Clock, MTC, and MMC.
- I. Word Clock In and Out is provided by 75Ω BNC connectors – termination can be switched on and off.
- J. The 64-pin Cascade In and Out ports can be used to cascade up to four 02R96s to create a multiple-unit mixing system with up to 224 input channels.
- K. Four mini-YGDAI slots support up to 32 additional 24-bit/96kHz-capable inputs and outputs (64 I/Os at 44.1/48kHz) via optional analog and digital I/O cards including AES/EBU, ADAT lightpipe, TDIF, and mLAN.
- L. A 25-pin D-sub GPI connector allows external equipment to be triggered from specified faders or User Define Keys.
Four Multi-Effects Processors

- Effects types include reverbs, delays, modulation-based effects, combination effects, and multichannel effects designed especially for use with surround sound.
- Effects processors 2-4 feature assignable stereo inputs and outputs while processor 1 features eight assignable inputs and outputs for use with surround effects.
- An Effects library is provided with 52 preset and 76 user memories.
- Effects processor inputs can be fed from the Aux Sends, Input and Output Channel Insert Outs, or the outputs of another effects processor.
- Effects processor outputs can be patched to the Input Channels, Input and Output Channel Insert Ins, or the inputs of another effects processor allowing you to chain processors together in series.
- Joystick control of early reflections and reverb with the Reverb 5.1 effect.
- User defined plug-ins for external effects control via MIDI, with Learn function.

### MULTI-EFFECTS LIBRARY FOR 01V96 • 02R96

#### Reverbs

Remote Control

◆ Control and manage your 02R96 from your Mac or PC using the bundled Studio Manager software.

Integrated DAW Control

◆ Mixing and processing parameters, as well as transport control and editing functions of leading digital audio workstations and computer-based recording systems can be controlled directly from the 02R96 control surface. Extensive support is provided for Digidesign ProTools, Steinberg’s Nuendo, as well as Emagic’s Logic Audio.

A Complete Surround Solution

◆ Everything you need for 5.1 surround processing, panning and monitoring is provided without the need for any external equipment or the need to reassign channels for surround use.

◆ Multi-channel surround pan/position displays allow you to see where multiple channels sit in the surround mix at a glance.

◆ The joystick provided for surround panning in the console’s SELECTED CHANNEL control section has high 128 x 128 step resolution providing exceptionally smooth control.

◆ A divergence parameter can be used to adjust the hard/phantom center ratio for each channel.

◆ The monitor processing section includes individual bus (speaker) muting, attenuation and delay, overall level control for all monitor outputs, stem mix monitoring via independent source selection capability for each expansion slot, bass management for subwoofer delivery, and independent delays for precision speaker tuning.

Expandable Data Libraries

Setting up EQ, compression, and other parameters for a mix from scratch can be a daunting task, so Yamaha has provided an extensive selection of presets in a range of “libraries” that can simply be selected and used unmodified, or edited to suit specific requirements. Libraries are provided for effects, compression, gating, EQ, I/O patching, and more. Of course, your own setups can be added to the libraries for instant recall whenever they are needed.

◆ An extensive selection of presets in a range of “libraries” may be selected and used unmodified—or edited to suit specific requirements. Libraries are provided for effects, compression, gating, EQ, I/O patching, and more; user setups can be added to the libraries for instant recall.

Four Band Fully Parametric EQ

Boost/Cut: ±18.0 dB in 0.1 dB steps
Frequency Range: 21.1 Hz to 20.0 kHz (120 steps per 1/12 octave)
Q (Low Band): HPF, 10.0 to 0.10 (41 steps), L.SHELF
Q (Low-Mid Band): 10.0 to 0.10 (41 steps)
Q (High-Mid Band): 10.0 to 0.10 (41 steps)
Q (High Band): LPF, 10.0 to 0.10 (41 steps), H.SHELF

Dynamics

◆ Independent compression and gating processors are available on all input channels; compression is also provided on all output channels.

◆ The Selected Channel Dynamics [GATE/COMP] button allows you to switch the dedicated dynamics section to control the Compression or Gating.

◆ Variable Threshold, Ratio, Attack, Release, and Gain controls are provided for the Compressor.

◆ Variable Threshold, Range, Attack, Decay, and Hold controls are provided for the Gate.
mLAN is the enabling technology for creating an intelligent, managed local area music network (LAN) using Firewire. mLAN not only carries multi channel digital audio and MIDI over IEEE1394 Firewire, it includes the connection management so you can easily manage your entire network.

One of the reasons for the complexity and inflexibility of many of today's music production systems and studios is the sheer number of connections involved. All the MIDI and audio signals are routed separately, and each MIDI cable can handle up to 16 channels of data. Audio usually requires a separate cable — whether analog or digital — for each channel of audio for both input and output. Yamaha's innovative mLAN networking system neatly overcomes all these problems by allowing many channels of digital audio and MIDI music data to be transferred bi-directionally via a single Firewire cable. Extremely powerful music systems can be quickly and easily configured using mLAN-compatible musical instruments, computer components and interface devices. You don't need to worry about the order you connect the devices in, and mLAN ports are "hot pluggable" so you can unplug and plug in devices without having to power-down or reset the system.

Although computer control can be an advantage in mLAN networks, mLAN allows music and audio devices to be networked without a computer. This allows you to configure an mLAN system for live performances systems.

The other problem that exists in today's market is proprietary formats. Some of these proprietary systems use a Firewire connector, but you can only connect equipment from that particular maker to your system. With mLAN, you can hook up an Apogee converter with a Presonus mic pre and a Yamaha synth in one intelligent, well-managed networking system. Because it uses a standard 1394 connection, you can even run video and other data on the same Firewire cable without affecting your mLAN network.

Second, mLAN doesn't require a computer. You can setup your mLAN system at home using a computer and then take the gear to a live gig and hook it together. mLAN will remember the pre-configured setup and re-establish the network and all it's connections.

Third, mLAN handles word clock arbitration so you can run different devices at different sampling frequencies on the same network. Anyone whose tried to setup a digital audio studio knows how important word clock is for a successful studio setup.

mLAN was developed by Yamaha, but we realized that for mLAN to be successful, it needed broad participation from other manufacturers. It is available to other manufacturers as a royalty free (no-cost) license. Currently there are over 40 manufacturers who have signed on as mLAN licensees and 8 manufacturers have developed first generation products. Those with current mLAN products include Apogee, Korg, Kurzweil, Otari, Presonus, Swissonic, Terratec and Yamaha.

TC-D5 PRO II

Portable Stereo Cassette Recorder

A compact recorder designed for rigorous field use, the TC-D5 PROII provides stable, high performance stereo recording with complete lightweight portability. Measuring 9 5/8 x 11 5/16 x 6 5/8” and under 4 lbs. with batteries, the TC-D5 PROII lets you slip onto the scene easily and come back with high quality stereo sound. Features include record-level limiter, large VU meters and XLR-balanced inputs for direct connection with professional microphones.

Basics
◆ Stereo low impedance XLR mic inputs
◆ Stereo RCA line outputs
◆ Dolby B noise reduction
◆ Built-in speaker and stereo 1/4” headphone jack let you check your recordings immediately.
◆ Record-level limiter eliminates clipping, while a microphone attenuator suppresses excess input signal levels by 20dB to prevent distortion.
◆ Runs for 5-1/2 hours with two “D” size alkaline batteries. Also connects to a car battery via a car battery cord.

Specifications
Frequency Response (CrO2): 40Hz–15kHz
Winding Time: 150 sec. with C60 cassette
Headphones: Stereo phone jack x 1
Speaker: 5cm (2”) diameter, 200mW
Power Requirements: Two “D” size batteries or DC-12v car battery with DCC-127A cord
Dimensions (W x H x D): 9 5/8” x 11 5/16” x 6 5/8”
Weight: 3 lb. 12 oz. with batteries

With carrying case and shoulder strap...00.00

MARANTZ

PMD-101/ 201/ 221/ 222/ 430

Portable Professional Cassette Recorders

The world standard for field recording, the PMD line is also the value leader. They all feature RCA line input/outputs, 1/4” headphone jack, built-in speaker, pause control, audible cue and review, tape counter, full auto shut-off and low battery indicator. Used professionally by journalists, law enforcement agencies, aural historians and musicians.

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
• Record limiter and Automatic Level Control (ALC) are great in news gathering. Connect a mic, press record, and get the story while the recorder takes care of levels.
• They run up to 7 1/2 hours on three ‘D’ cell batteries, or up to 5 1/2 hours with the optional RB430 rechargeable battery.
• Built-in electret condenser microphone is a great back-up in a pinch.
• Modular telephone jack lets you record phone interviews and gives you the ability to play back over a telephone line as well.
• Microphone attenuation is adjustable in three settings from 0 to -20dB.
• 3-position ANC (Ambient Noise Control) switch, (flat, low-cut, or low-and-high-cut.

◆ All except the PM D-430 have 1/2 speed playback/record capability. With 1/2 speed playback, musicians can slow down complicated passages for analysis. And when played back at 1/2 speed, the pitch is lowered by exactly one octave, so the notes are still musically correct — great for figuring out complicated solos or picking patterns.
◆ At 1/2 speed, a three hour meeting can be recorded on a single tape. Built-in speaker makes transcription convenient.
◆ 1/2 speed recording is great for churches, because 90 minutes can be recorded on a single side—no interrupting your recording to flip the tape over. Line inputs make it easy to use and connect to your existing sound system.

Optional Accessories

CLC221 Vinyl Carrying Case: Cutouts and flaps allow complete operation while in the case, and provides protection against scratches and dents. Fits all except the PM D-430.

WPC221 Weather Resistant Case: Fits all PM D recorders. Cutouts and flaps allow for complete operation while in the case.

RB430 Nicad Rechargeable Battery: Provides 3 hours of playback or 2.5 hours of recording on a 8 hour charge. Can be recharged in the unit.

CA221 Car Adapter: Plugs into a standard automotive cigarette lighter, and powers any of the PM D portable cassette recorders.

High-Speed Net MD Walkman Recorder

The MZ-NE410 is a high-speed Net MD Walkman Recorder that lets you record your MP3s or CDs at up to 32x normal speed and playback ATRAC3 Audio, M3, WMA, and WAV files. Enjoy up to 56 hours continuous playback on one AA battery (LP4 Mode), and record up to 5 hours of music on one 80 minute disc. Skip-Free G-Protection Technology enables a smooth listening experience, and the "Easy Skip" Group/Folder Function allows for easy navigation between multiple file folders. Finally, take advantage of the supplied music management software including SonicStage Software and the Net MD Simple Burner Application.

FEATURES

Recording
- MDLP (MiniDisc Long Play) lets you record 2X (LP2) or 4X (LP4) longer on a standard 80-minute MiniDisc for up to 320 minutes of music.
- Records from various sources as well as multiple Internet audio formats (MP3, WMA, WAV files) for flexible transfer.
- Select from three recording modes: standard mode gives the richest sound quality or two different long play modes for the most effective use of space on a single MD.

Net MD Technology
- Breaks the speed limit with a direct USB connection that transfers 80 minutes of music from PC to MD in less than three minutes.
- Bundled SonicStage Software enables you to rip, import and transfer your digital music files (MP3s or CDs) to the Net MD recorder at up to 32x speed from your PC. The title/track information is automatically transferred to the Net MD Recorder.
- Bundled Net MD Simple Burner application enables you to dub your CD tracks directly to your CD-Rom drive. This gives you all the music you want without storing music on your hard drive.
- Compatible with RealOne Player—a music management system which lets you download, create playlists and transfer music to your Net MD recorder.

Playback
- Playback modes include: Normal and Repeat (1-track, All-tracks) and Shuffle.
- Digital sound presets let you recall the sound quality settings you like for listening to different discs.
- Skip-Free G-Protection for perfect playback without skipping, even while running or jogging. Provides shock recovery up to 10-times faster than conventional systems.

Conveniences
- Fits a jacket pocket for entertainment on the go. Includes MDR-027LP headphones.
- Optional digital cables are available to connect to CD/DAT or home systems.
- LCD displays remaining battery power and time left on the disc.
- Easy pop-up eject mechanism makes it fast and easy to insert or remove MiniDiscs.
- Automatic End Search Recording Function informs you how much unrecorded time remains on a disc and begins additional recording from that point.

High Performance
- MiniDiscs are re-recordable, scratch-resistant, low-cost high-capacity media.
- Up to 56 hours playback (16 hours recording) on a single AA battery.
- Internal battery compartment holds one "AA" type battery.
- "Easy Skip" Group/Folder Function allows for easy navigation between multiple file folders transferred from playlist.

Download music files from the Internet or rip your CDs. Net MD technology lets you perform high speed transfer from your PC to MD, providing up to 32x speed transfer directly to the recorder. The supplied SonicStage software makes it a simple task to manage your music and create custom playlists. The SonicStage software also allows you to choose your recording level quality among standard LP2 or LP4 Mode, which allows you to store over five hours of music on one 80 minute disc. Best yet, you can transfer Multiple Audio Codecs to your Net MD recorder. They also play back ATRAC3 and support MP3/WMA/WAV files.
MZ-N510CK
The all-blue MZ-N510CK is the same as the MZ-NE410 with the added convenience of an editing remote control, and a Bookmark function. It also comes supplied with a car kit to connect the player to an in-car audio system, as well as an AC adapter.

MZ-NF610
The all-blue MZ-NF610 doesn’t include a car kit, but adds a AM/FM/TV Weather Band tuner and a NH-7WM AA rechargeable battery. A car kit (CPA-9C) is available as an option.

MZ-NF810CK
The all-silver MZ-NF810CK steps up with an external mic jack, supplied car kit and a battery charging stand. The stand lets you access the MZ-NF810CK while simultaneously charging the battery by simply placing the recorder in the stand.

It is also equipped with a 6-band Graphic EQ (4 presets/2 custom) gives you more flexibility in choosing which sound setting best suits the music. The four presets are Heavy, Pop, Jazz and Walkman Unique. You can also create different listening environments by digitally adjusting sound resonation. The four presets are Studio, Live, Club and Arena.

SIMPLE BURNER INTERFACE
The bundled Sony NetMD Simple Burner/Quick Rip CD dubbing application gives you all the music you want without storing or managing music on your hard drive.

Sony’s NetMD Simple Burner provides an easy to use CD dubbing application that makes dubs at accelerated speed. It gives you the freedom to dub straight from CDs to a NetMD recorder. Easy to use, simply insert the CD and double click the NetMD Simple Burner icon on the desktop. This opens the dubbing application with the CD tracks displayed on the left. All that’s left to do is select the tracks to be transferred to the NetMD recorder, select recording mode (LP2, LP4) hit the record button, and the selected tracks are transferred to the recorder.

With the Simple Burner, Quick Rip CD dubbing application, transferring music from CD to MD is faster and easier than ever.

MZ-N10
64x Net MD Walkman Recorder
The pinnacle of the Net MD Walkman line, the MZ-N10 packs a wealth of features into a compact silver magnesium body that weighs just 3oz. Besides recording MP3s and CDs from your PC at up to 64x speed, the MZ-N10 also makes creating custom music mixes even easier with a backlit LCD editing remote and a three-line dot matrix display right on the unit that enables you to view nine characters per line for easy song searches and edits. Sony’s Jog Dial navigator scrolls through the list vertically to search for songs and groups. By simply rotating the dial with one finger the pushing it, the desired point is accessed. The MZ-N10 is supplied with a matching USB Cradle for direct connection to the SonicStage jukebox software.

Same features as MZ-NF810CK (no car kit) PLUS—

- USB Cradle connects the MZ-N10 directly to the PC while at the same time recharging the internal battery.
- 3-line dot matrix display features track number, MDLP recording mode, elapsed time, song title, artist name, play mode, depending on the mode chosen.
- Backlit LCD remote with editing functions provides direct access to the recorder’s functions and is easy to see, even in low light.
MDP-500 ‘PortaDisc’

Professional Portable MiniDisc Recorder

An advanced portable professional MiniDisc recorder, the MDP-500 ‘PortaDisc’ is designed and engineered without compromise to handle the most demanding field recording applications. Built on a rigid steel chassis and based around a rugged, professional MiniDisc drive, the MDP-500 combines advanced sound quality with a full complement of professional features, comprehensive connectivity and flexible powering options. Ideal for journalists, broadcasters and sound recordists in radio, TV, film and music recording applications, the MDP-500 offers XLR balanced mic inputs with switchable phantom power, digital I/O and even a USB interface which allows realtime recording of audio into a laptop or desktop computer for later editing.

FEATURES

High Quality

- Advanced V.4.5 ATRAC recording algorithm combines with high performance mic preamps, precision DACs and onboard limiters and bass roll-off to deliver recordings of exceptional quality.
- For maximum reliability, the PORTADISC uses a dependable, professional MiniDisc drive - not a low-cost consumer device.
- 40-second memory buffer ensures consistent, glitch-free recording on the move.
- Pre-buffer continuously records 6 seconds of audio before the Record switch is pressed to ensure that you never miss a take.
- Comprehensive range of connectivity includes balanced XLR Mic/Line inputs, unbalanced RCA/phono line outputs, and both coaxial and optical S/PDIF digital I/Os.

High Performance

- Auto Start feature with variable threshold makes the PORTADISC ideal for use in noise monitoring applications.
- Recording from digital sources is easy with a built-in sample rate converter accepting 32 and 48kHz signals and auto sync recording with CD and DAT IDs converted automatically to MiniDisc tracks.
- In addition to disc and track naming, basic editing lets you go directly to a particular point in a track, combine two tracks together to make one, divide one track into two, move and erase tracks.
- The recorder is housed in a tough 1.2mm steel chassis with transport keys and function buttons protected by a durable rubber molding.
- Tracks can be numbered manually during recording with the Mark button, or automatically with the threshold level variable from 30dB to 60dB in 10dB increments. Tracks can be accessed directly using the AMS Forward and Back keys.
- In the event of a microphone or cable failure, the Portadisc even includes an onboard microphone for back-up.
- Headphone monitoring is available in Stereo, Mono-L, Mono-R and Both modes, with an additional, mono internal speaker provided for non-critical monitoring.

USB Interface

- Unique to the PORTADISC is a USB interface enabling the transfer of files to and from a PC. This allows suitably equipped journalists and sound recordists to record and edit finished programs and news pieces in the field and transfer them via email or write them to CD.

Ease of Use

- Using a simple, intuitive menu you can configure and store up to 5 User Set-Ups selecting input sources, mic limiting/bass roll-off, phantom power, headphone monitoring formats, time/date display formats, auto track increment, threshold levels, etc.
- The main LCD display is large and clear with switchable illumination and can be viewed from a wide range of angles. 19 segment metering is provided with switchable peak hold and a margin indicator accurate in 1dB steps to -60dB.
- Record level controls are lockable, the phone level control retracts, and a Keyhold facility prohibits accidental mis-operation during recording.
- Handles perfectly in the field. Transport keys, record level controls and all major functions are ideally located for quick, easy access and menu structures are straightforward and logical.

Mic inputs feature switchable attenuation, (0dB, -15dB, -30dB, Bass Roll-off (Off, 75Hz, 150Hz), Limiter (On, Off, Ganged, AGC) and 48V phantom power.
Professional Portable MiniDisc Recorder

Offering the same basic features as their legendary portable cassette recorders while providing the benefits of a sophisticated digital recorder, the PM D-650 is ideal for interviews, music, multimedia, broadcast video and film production. It includes two XLR-balanced mic/line inputs, a built-in mic, and a monitor speaker. It supports 74 minutes of stereo and 148 minutes of mono record and playback, and has a host of practical features that make quick work of any high pressured production environment. For example, when recording from one mic/line source onto two tracks, the PM D-650 incorporates a dual mono mode that sets the level of the 2nd track 15dB lower than the first, to make sure that a backup track is available in the event of a problem or digital overload.

**FEATURES**

**Versatile Recording**
- Editing capabilities including divide, combine, move, erase allows tracks to be trimmed and combined in order to create custom sound files.
- Time/Date stamp marks every track recorded on the PMD650 providing a reliable reference for archiving.
- Pre-Record Audio Cache (up to 2 seconds) provides protection for late starts.
- Either one or two mic/line sources can be recorded for 148 minutes onto 1 (LP) or 74 minutes on 2 (SP) tracks.
- Three record level controls: manual, manual with limiter, and automatic.
- Programmable Level Sync Recording (LSR) automates recording and saves disc space by only recording when there is sound present. LSR parameters include sound threshold level (-10dB to -60dB), time below threshold level (2-10 seconds), and automatic or manual track increment.
- One touch recording with separate Rec-Pause button.

**High Performance**
- Two position noise cancel filter
- 40 second (20 sec. 2-track) audio buffer for shock resistance
- 48v phantom power
- Variable mic attenuator (0, -15, -30dB)
- The PMD650 secures all recordings by writing a backup of the Table of Contents (TOC) at the beginning of the track (Pre-UTOC). Even if a recording is interrupted by a power failure, all recorded information can be retrieved.

**Conveniences**
- Built-in microphone and speaker
- Backlit LCD display
- A-B loop playback, Repeat Playback (all or one track)
- 3-way power: AC adapter, 8 AA batteries, or optional RB-1100 Nicad battery. Has a Low-Battery Alarm
- Control of SCMS (on or off)

**Inputs/Outputs**

Full complement of professional inputs and outputs allow total integration with professional broadcast studio and field equipment.
- Stereo XLR mic/line inputs
- Stereo RCA analog line outputs
- S/PDIF coaxial digital input with sample rate converter and XLR digital output (AES/EBU)
- Remote control (RC-5) input
- Headphone jack with level control

DENON
DN-F20R

Portable IC Recorder
Weighing just over two pounds and offering a full list of professional broadcast features, the compact DN-F20R is ideal for ENG applications. A portable IC recorder that uses IC memory cards as the recording medium, the DN-F20R does away with cumbersome mechanisms and enhancing reliability. Two card slots provide recording flexibility. Recordings on the DN-F20R are created as sound files in MPEG format which can be easily ported to a PC for editing and manipulation.

FEATURES

◆ Use of an IC memory card as the recording medium does away with moving parts and ensures high reliability. Has 2 slots for CompactFlash cards.
◆ The IC memory card complies with the CompactFlash Type 1 standard and supports large memory capacity of 256MB. The card can be read and written to by a PC equipped with a USB CompactFlash adapter or an ATA adapter for a laptop.
◆ Inputs include two XLR mic jacks and two RCA line inputs, as well as a parallel remote mini-jack input for external control. Outputs include two RCA line outs and a 1/4˝ headphone jack with adjustable levels.
◆ Audio may be recorded in a choice of MPEG2 Layer2, MPEG1 Layer 2 or Linear PCM (WAVE file) formats, in either stereo or mono modes.
◆ Sound quality is also user-selectable (in recording bit rates of 16 to 768 kbps per channel) to suit the application, enabling efficient use of the cards, compression and high sound quality.
◆ Concentric rotary controls are provided to adjust the DN-F20R’s recording levels. Level metering can be monitored on the unit’s backlit LCD display, which also shows recording settings, file names and other various information at a glance.
◆ Offers switches for a low-cut filter, limiter and attenuator.
◆ To prevent accidental turn-on or misuse while recording, a ‘key hold’ switch can be activated to lock out the operating buttons.
◆ Compact, easy-to-carry A5 size even with XLR terminals.
◆ Can be powered by 6 AA batteries or using the included AC adapter.
◆ Third-party hardware and software such as Digigrams’s MPEG board and Xtrack editing software can be used to edit sound data waveforms in their compressed form after they have been recorded by a DN-F20R.

SanDisk CompactFlash Cards for Denon and Marantz Recorders
Capture more music and voice recordings with SanDisk flash memory cards, then quickly transfer your data to your computer with an ImageMate drive or CompactFlash adapter. About the size of a matchbook and weighing half an ounce, the cards were designed based on the popular PC Card (PCMCIA) standard and are fully compatible with the Denon DN-F20R and Marantz PM D-680/690 portable recorders.

◆ Highest transfer rates for fast copy and download—up to 1.2 MB per second.
◆ High storage capacity
◆ Operating shock rating of 2,000Gs, equivalent to a 10’ drop to the floor
◆ Unfazed by drastic weather conditions ranging from blistering heat to arctic cold
◆ Non-volatile solid-state; no moving parts maximizes battery power. Data isn't lost when power is turned off

Portable PC Card Recorders
Compact and portable, the PMD 680 (mono) and PMD 690 (stereo) are next generation digital recorders that bridge the gap between real-time audio recording and computers — while keeping the size and functionality of Marantz's renowned portable cassette and MiniDisc recorders. The PMD 680 or PMD 690 record high-quality digital audio files to a CF (Compact Flash) compatible card or IBM Microdrive, where they can be immediately transferred to a computer for archiving, editing, or uploading to the Internet. Designed as a field acquisition tools, the PMD 680 and PMD 690 can record audio as compressed M P2 digital audio files stored as raw M P2 (.mp2) or the Broadcast Wave standard (.bwf), as well as uncompressed using 16-bit/48kHz Pulse Code Modulation (PCM) saved in the true wave (.wav) file format.

Features
- Their Type III PC Card slot is compatible with both compact flash (using an adapter) and ATA-size PC Cards. The slot also accepts cost-effective IBM MicroDrives.
- Highly reliable, flash memory PC Cards contain no moving parts and are impervious to temperature extremes and shock which might damage recordings.
- Compressed MP2 digital audio can be stored as raw MP2 (.mp2) or Broadcast Wave (.bwf). files. Uncompressed recording (PCM) can be saved in Wave (.wav) format.
- They offer three ways to control the recording level: Manual, manual with limiter, and automatic (ALC) record level control
- Built-in Time and Date generator marks each recording
- Band or high-pass ANC (Ambient Noise Cancel) filter lets the recorders filter out unwanted background noise.
- Pre-recording memory buffer records 2 seconds of audio before the record button is pressed. This prevents missed or delayed starts of a recording.
- A silent skip mode (1 to 5 seconds) can be activated based on parameters set in the menu. Sound levels for silent skip can be set from -50 dB to -10 dB in 5 dB steps.
- Remote input for pausing and un-pausing during recording or playback
- They can be powered three ways: via the supplied AC adapter, rechargeable Ni-Cad battery pack (optional) 8 AA batteries.
- Inputs and outputs include XLR and 1\(^\text{/}^\text{4}\) inch mic inputs, RCA line output and coaxial RCA digital output (S/PDIF). They also feature a headphone output, built-in microphone and built-in speaker.
- Each recorder includes an AC adapter, battery holder, and carrying strap.

Non-Destructive EDL System
- They use an on-the-fly system for marking tracks during recording. EDL marking and playback allows either a custom playback sequence to be programmed or the audio between two specific points in the card to be repeatedly played back.
- During recording EDL marks are placed on the card at the beginning of each new track; when REC/MARK button is pressed; or when the Auto Mark function is active. When Auto Mark is active, an EDL mark is placed every time a recording is paused, manually or by the Silent Skip system.
- The maximum number of EDL marks per card is 255. EDL marks can be edited by changing the mark types, erasing specific marks, or erasing all the marks.

PDM-680 Only
- Monaural audio recording and playback
- Has XLR and 1\(^\text{/}^\text{4}\) inch mic input with -15/-30 dB attenuator, and RCA line input.
- Telephone jack for recording and playing back phone conversations. This jack also passes through live recording signals to a telephone line.

PDM-690 Only
- Stereo audio recording and playback
- Two XLR mic line inputs with -15/-30 dB attenuator. +48v phantom power is available for use with condenser mics.

Two Different Recording Formats
The MP2 (MPEG1 layer2) file format that is supported by the PMD 680/690 is a worldwide standard for compressed digital audio storage and transmission. Many playback and editing systems are available commercially and through the Internet.

PCM (Pulse Code Modulation) is the most widely used format for coding uncompressed digital audio. The PCM system is used on CD players, DAT recorders, and on computer editing programs that support Wave (.wav) files. Recording in the PCM format will provide the most universally accepted storage format but comes with the limitation that it uses a lot of memory very quickly.
Courier is a compact (3 lb.) battery-powered digital audio recorder designed for in-the-field or on location applications. Using industry-standard PCMCIA cards to store only high quality digital audio, the Courier can be used while moving or running. The cards can be changed quickly, and are capable of storing up to 18 hours of audio. Two inputs are available for either a single stereo source, or two mono sources, which can be at mic or line level. Each input has a level control, which can be used separately or ganged together - the record level control is recessed so that it can't easily be knocked. Phantom power and a high pass filter, together with a limiter, can be switched in.

When recording in the field you often only get one chance, so it is imperative that you can rely on your recorder. Courier has a confidence monitor - it is able to replay material recorded to disk while still recording. Once you are recording, the ‘Autolock’ function is activated which disables all other controls, except record levels, so you can’t accidentally stop your recording. Courier also features on-board audio editing which allows full edit and audition of clips before sending back to the studio using a number of flexible methods. These include built in ISDN support, software for transfer via standard telephone line or over a digital telephone network via mobile phone or audio playback. Courier is powered via standard camcorder batteries. There is an audible warning when the battery is running low and the battery can even be changed without interrupting the recording process. Includes a carrying case, nicad battery, and universal AC adapter.

**FEATURES**

**Control At Your Fingertips**
- Controls are designed for ease of use. Large, readily identifiable keys are used with added benefits such as ‘feel in the dark’ operation and accidental switch-off prevention.
- A confidence monitor confirms that your recording is safe and a backlit LCD display gives you vital information on the recording levels, battery and disk time remaining.
- A software controlled limiter can be switched in together with a high pass filter for use in noisy surroundings and there are “over level” LEDs for an instant visual check on recording levels. These let you concentrate on your job not your recorder.

**Live Audio**
- Provide your listeners with all the excitement of live commentary. Connect the CO-TBU telephone balance unit and you’re ready to broadcast down a telephone line, either by using the mic/line inputs or by playing pre-recorded cuts.

**USB Connection**
- USB connection allows fast downloads to the PC to be made. The USB port works in addition to the RS232 serial port and the optional ISDN connection.

**Record in ‘Style’**
- Courier’s superior versatility lets you define ‘Record Styles’ to make your report perfectly compatible with the majority of editing and broadcast playout systems. Simply define parameters such as sample rate, file format, compression used and whether mono or stereo, then give your recording style a name such as ‘Radio’ or ‘CD’.
- Up to 20 personalized Record Styles can be configured. Once you’ve selected your chosen style and finished recording, plug the PCMCIA disk or flashcard straight into your editing or playout system for instant editing or playback. No need for audio dubbing - what could be simpler?

**Editing and Transmission**
- Courier has sophisticated non-destructive accurate editing capabilities. By using the jog shuttle wheel, and watching the waveform on the graphical display, you can place multiple marks, and perform complex editing simply. A playlist can be compiled by taking pieces from any number of cuts, which can be saved in a number of different formats.
- Once you’ve finished recording, simply connect Courier to a modem and sit back and relax as it sends data down the phone line. Or you can send your report over a digital phone network.

**Portable Power**
- The internal rechargeable battery gives over 1 minute of hot-swap time so you can change the main battery. An optional cigarette lighter adapter recharges batteries on your way to the next assignment. Includes a worldwide AC adapter.
ZAXCOM AUDIO

DEVA II

Portable 4-Channel Hard Disk Recorder/Player/Mixer

Deva II is a portable 4-track, 24-bit uncompressed hard disk recorder, digital mixer and timecode generator/reader that stands alone as the most reliable way to record in the field. Used for countless feature films and TV shows, you can use it as a replacement for all your current audio field recorders, bringing 48kHz studio-quality recording capabilities into the realm of location production. Pre-Record function records up to 10 seconds of 4 channel audio from just before the record key is pressed. That means no more missed cues and plenty of pre-roll time for post!

And with an input dynamic range of 110dB, Deva II provides the highest quality field recording available today.

FEATURES

- Using the optional 40GB removable IDE hard drive provides a maximum record length of 68 hours (mono), 34 hours (stereo), or 17 hours (4 channel). The 125 G-force rated disk is immune to dust and humidity changes, and operates over a wide range of temperatures. An optional 4GB drive with 8 hour record capability is available as well.
- Zaxcom’s Mobile Audio Recording Format (MARF) is designed for the specific requirements of multi-channel disk recording, providing the ultimate in data integrity. So robust is MARF’s design, Deva II can flawlessly recover audio from a disk that may have had its directory re-initialized.
- Sophisticated error-checking circuitry provides a fool-proof means to flawless recordings. During recording, Deva II performs a constant Read/Verify routine. If an uncorrectable error should occur, audible (to the headphones only) and visual warnings are generated. It is virtually impossible to unknowingly produce a bad recording.
- Unlike mechanical movements whose calibration and response may change with temperature, metering, Deva II’s LCD display is always calibrated.
- Zaxcom’s exclusive NeverClip technology provides precise input level detection, making it extremely difficult to overload the A-D converter. NeverClip provides smooth, automatic gain manipulation, assuring virtually distortion-free recordings.
- Deva II incorporates a state-of-the-art digital mixer. Any of the 4 inputs may be mixed to any of the 4 disk channels. Similarly, any of the 4 inputs may be mixed to any of the 4 line outputs – a mix that may be completely different from the disk mix! And unlike analog field mixers, Deva II’s pots are immune from the “scratch noise” syndrome.
- Besides the front panel controls, Deva II’s Sony BWV75 emulation permits frame-accurate control via an edit system, telecine, or synchronizer. Deva II also provides a time code chase facility that has a lock time of under one second.
- Full-function internal timecode reader/generator supports 24, 25, 29.97 (NDF and DF), and 30 (NDF and DF) frame rates. The generator can even automatically tag consecutive recordings with ascending User Bits. Nothing is more flexible and efficient at helping you locate the “buy take.”
- No matter what the monitoring requirements, Deva II’s 4 channels of “line level” analog and AES/EBU outputs, along with a user-configured stereo headphone connection, means you always hear what you want.
- Accepts a wide range of microphones, offering phantom power, when required.
- High-quality 20-bit A/D and D/A converters on both the mic and line inputs ensure wide dynamic range, while the 24-bit interface guarantees transparent transfers from digital sources.
- A standard Deva II gives you 48, 48.048 and 47.952 kHz operation as standard. If required, 44.1 is available as an option.
- 4 channels of 20-bit A/D converters and 24 bit record depth provide 16 times the resolution of DAT in a package that is inherently more reliable and flexible.
- Deva II remembers up to 100 cue points per disk for instant access to “buy takes” or pre-produced playback audio.
- Deva II will output files to DVD drives in up to 6 file formats. Sound Designer 2 and Broadcast Wave are both fully supported. External disks can be recorded in the background so at the end of the recording day there is no transfer time.
- Deva II’s internal software allows for replay of audio data even when the disk directory has been erased. It also means that Deva II’s software is crash proof. Even if power is lost while recording, Deva II will seamlessly playback audio to the time of the loss.
- What happens to if Deva II is accidentally dropped while recording? Probably nothing! A unique mechanical shock-sensing circuit automatically shifts recording to a 24MB RAM buffer. Once Deva II senses that conditions are favorable, the buffer is automatically transferred to disk.
- Powered via NP1-type camera battery for over three hours of continuous operation. Deva II may also be powered via a separate 12v supply – even a car battery.
8 Track Location Sound Recorder

With 8 tracks of pristine 24-bit/96kHz recording, flexible on-board mixing and comprehensive timecode facilities, the PDR-2000 PortaDrive sets the standard for location sound recording. The PDR-2000 records audio onto a compact, robust, shock resistant removable 2.5” hard drive in industry-standard BWF or SDII formats. This allows full compatibility with Mac and PC-based digital audio workstations, connecting via an optional drive docking station. A comprehensively equipped 6 into 2 digital mixer is built-in, enabling the simultaneous recording of a stereo mix alongside 6 discrete inputs. Microphone inputs are of the highest quality with 6 high-gain, ultra-low noise balanced XLR Mic/Line inputs with individual phantom powering, ‘gangable’ limiters, attenuation, high pass filter, delay and phase reverse. The 2-channel return input and both the main and auxiliary analog stereo outputs are balanced. Digital connectivity is equally comprehensive with 8-channels of AES I/O on an industry standard 25-pin D-sub connector, S/PDIF input and AES and S/PDIF stereo digital outputs.

FEATURES

8-Track Location Sound Recorder
- Rugged, all in one, portable 8-channel hard disk (HD) audio recorder
- Audio is recorded in industry standard BWF (Broadcast Wave) and SDII (Sound Designer II) formats onto an included 20GB 2.5” hard drive housed in a compact, robust, shock resistant removable caddy
- Over 2 hours of uncompressed 8-channel 24-bit/96kHz recording or over 9 hours of 4-channel 24-bit/48kHz recording on removable HD
- Metadata can be stored and transferred with audio files

Extensive Analog and Digital Inputs and Outputs
- 6 high gain XLR balanced mic/line input channels with individual phantom powering, ‘gangable’ limiters, input pads, HPF, delay and phase reverse
- 2-channel balanced line level analog return input using a single 5-pin connector
- 8 channels of AES digital inputs and outputs on a 25-pin D-sub connector
- FAT32, HFS hard drive formatting ensures compatibility with Mac and PC-based digital audio workstations
- Session based recording using either AES31 ADL or Pro Tools V5 formats, simplifying production workflow
- 10 second pre-record buffer
- Built-in slate mic and tone generator
- Advanced power management

6x2 Digital Mixer
- The built-in 6 x 2 digital mixer enables the simultaneous recording of a stereo mix alongside 6 discrete inputs
- M/S decoding is available on inputs and outputs
- Complete routing flexibility allows you to easily record from analog and digital sources simultaneously
- Extensive headphone monitoring capability including designated 6-2 mixer

Timecode and Sync
- Reads and generates timecode in all popular international frame rates – a 5-pin LEMO socket is used for interfacing
- Supports tri-level synchronization used with emerging HDTV technology
- Dedicated word clock output on a BNC connector
- Sync input (word clock, video, tri-level) on BNC connector
- Comprehensive remote control via RS422 (Sony P2) and parallel remote socket

Data Communication Interfaces
- A SCSI interface is provided for data transfer to and from external storage device
- USB 2.0 and Ethernet ports support high speed data transfer to/from a computer as well as software upgrades
- A PS2 port allows you to connect and ASCII keyboard to ease logging and labeling
Front Panel

- 6 multi-function rotary encoders with collar LEDs allow displayed values to be altered
- A 5-position rotary transport control allows you to initiate Record (with or without lockout); Stop (with and without lockout); a Review function allows the user to check the last audio take and a Mark button enables easy identification of points within a session
- Four Primary Mode (PMODE) buttons allow rapid access to the control, metering and monitoring of all audio signals
- A large transreflective LCD displays the menu associated with the currently selected PMODE and the 6 rotary encoders
- Undo, Jam TC, Slate, Tone, and Group functions above the display are protected from accidental use with an ‘Enable’ button
- A push-lock rotary level control prevents accidental adjustment of the headphone output and built in speaker

Metering

- 18-segment high-visibility LED meters for each channel have selectable ballistics allowing variable peak hold time as well as a variety of display modes for power economy
- Digital clip indicators, limiter activity and track record arm status are also provided
- A tri-color LED indicates data write errors, TC/sync errors and low battery level

Top Panel Functions

- A highly intuitive, hierarchical navigation system is accessed by 8 dedicated menu function buttons – Input, Busmix, Track and Output functions mirror those on the front panel; Disk, Session, TC and Setup functions allow recording sessions to be configured to suit your workflow
- Four cursor keys and a large data wheel allow you to navigate and alter information displayed on the large transreflective LCD
- Further pages within the selected menu are listed along the bottom of the LCD and are easily accessed through the row of function buttons immediately below the screen
- Functions can be disabled to avoid mis-operation and to conserve battery life
- Large transport controls – besides the usual Play, Stop and Cue functions, a Locate button allows you to access audio by take, marker or timecode value

Easy To Navigate Menu System

**INPUT**

- Set-up of each input, including name, pairing, source, 48V phantom powering, attenuation, HPF, limiter, adjustable delay and phase reverse
- Adjust input levels enable the 2-channel return with optional limiter

**BUSMIX**

- Create a 2-channel mix of inputs 1-6 with pan, level adjustment and M/S decoding
- Route the mix to 2 disk tracks – ideal for exporting rushes at the end of a session

**TRACK**

- Source select for each disk track, M/S decoding as well as setting of the number of recorded tracks for each take

**OUTPUT**

- Configure the output mix with Source, nominal level and M/S decoding settings for the Main and Aux outputs
- Digital options include source select, sample rate, bit depth, etc.

**DISK**

- Controls formatting, file and folder creation/deletion and naming on each disk

**SESSION**

- Specify disk format, sampling rate, bit depth, number of tracks, TC/sync
- Sessions can be named, stored and recalled – information is continuously saved

**TC**

- Timecode menu with internal generator, chase, jam and user-bit capability
- Frame rates include 23.976, 24, 25, 29.97df, 29.97nd, 30df and 30nd. FPS, with T.O.D., Rec Run, Free Run and external timecode modes

**SETUP**

- Controls general system parameters including tone generator, slate, power management, LCD contrast, meter and time / date settings

- An optional 5.25” Docking Station allows the removable HD caddy to be plugged directly into a computer drive bay or external drive enclosure

- Powered by an industry standard 50 watt hour Lithium-Ion NP1 battery or an A/C adapter (both supplied)
- When fully charged, the battery provides a minimum 2 hours of constant operation
- When the PORTADRIVE is not in use, the A/C adapter doubles as a charger for the battery

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
SONY

Portable DAT ‘Walkman’ Recorders
Ultra-portable digital audio recorders that fit in the palm of your hand, the DAT Walkmans by Sony feature the same pristine CD sound quality found in high end portables and decks. They feature selectable sampling rates of 48kHz, 44.1kHz and 32kHz. Analog and digital I/O allow them to integrate seamlessly with most hard disk recorders, sound cards, digital samplers and non-linear video editing systems. Ideal for live music, sound effects and dialog recording, they deliver superb audio at an affordable price.

FEATURES
◆ 16-bit record mode for CD quality sound (12-bit in Long Play Mode)
◆ Selectable sampling rates of 48kHz, 44.1kHz and 32kHz for both analog and digital recording.
◆ Dynamic range over 87dB
◆ Digital input and output.
◆ 1/8” (3.5mm) stereo mic/line input
◆ 1/8” (3.5mm) stereo line output
◆ Long play mode for up to 4 hours of recording on a single 2 hour tape.
◆ Automatic and manual recording levels are switchable
◆ Large backlit display with level, battery status, time & date and program info
◆ ID subcodes can be set either automatically or manually while recording.
◆ Hold switch prevents unwanted operation of transport functions.
◆ 100x high speed AMS (Automatic Music Sensor) search function finds and plays tracks, skips forward or back up to 99 tracks at 100 times speed.

Optional Microphones for DAT/MiniDisc Recorders

ECM-MS907 One-Point Stereo Mic
Incorporating a sensitive electret condenser mic and Mid/Side switch, the ECM-MS907 is designed for high-quality instrument recording with MiniDisc and DAT recorders. Features Mid/Side (M/S) capsules for natural stereo panorama; the Mid capsule picks up mono sound while the Side capsule picks up left/right difference sound. Mid/Side (M/S) switch selects pickup angle between left and right channel; choose 90° for a single voice or instrument or 120° to pick up many voices and instruments, arranged across the stage. Supplied with stand/holder, windscreen and carrying case.

ECM-717 One-Point Stereo Mic
An ultra-compact, one-point stereo mic, the ECM-717 is ideal for use with portable DAT and MiniDisc recorders-- in table-top or clip-on applications for hands-free recording of music performances, meetings, lectures and interviews. One-point stereo recording design is like having two mics in one: Stereo unidirectional (cardioid) pickup pattern is more sensitive to sounds from the front, less sensitive to sounds from the side, rejects extraneous noise and emphasizes what you want to record.

TCD-D100 and PCM-M1 Step-Up Features
◆ Smallest, lightest DAT Walkmans ever
◆ Built-in switchable limiter prevents digital clipping of the audio signal to tape
◆ Mic preamps use same components as SBM-1 Super Bit Mapping Adapter
◆ On the PCM-M1 (only) SCMS is defeatable

DAT Walkmans and Accessories

TCD-D8 with carrying case, cleaning cassette and AC adapter ..................................599.95
TCD-D100 with two rechargeable batteries and battery charger, carrying case, cleaning cassette, AC adapter, headphones and remote control .......................................................... Call
PCM-M1 with two rechargeable batteries and charger, carrying case, cleaning cassette and AC adapter .........................................................679.95
RMD-100K Optical/coaxial digital interface with remote control and timer ............179.95
SBM-1 Super-Bit Mapping Adapter ........419.95
Professional DAT Recorder

Designed for professional recording, the TCD-D10 PRO II provides XLR balanced mic/line inputs, AES/EBU digital I/O and has a 4-motor Direct Drive (DD) transport to ensure consistent and reliable performance. Ideal for field recording, it also features a pistol grip with integrated wired remote control that allows you to mount a microphone while simultaneously controlling the transport of the machine. A built-in speaker allows playback without headphones, and a comprehensive self-diagnostic system monitors vital signs for worry-free operation.

**FEATURES**

**Professional Design**
- Precise 4-motor direct drive tape transport controls the head drum, capstan and reels individually
- Dual independent analog to digital converters offer improved channel separation
- Available sampling rates are 48kHz, 44.1kHz and 32kHz for playback and digital recording and 48kHz for analog input.
- Built-in mic limiter and 20dB pad enable audio capture at extremely high SPLs without causing overload or distortion.
- Multi-functional backlit LCD provides 20 segment peak level metering with overload indicators, 5 segment battery indicator, absolute time, program time, time remaining and a built-in calendar and clock.
- Sophisticated self-diagnostics warn of tape trouble due to problems with the head drum, capstan and reels as well as transport and load/unload time. Also has a sensor warning for excessive moisture.

**Inputs/Outputs**
- Stereo XLR balanced mic/line inputs with independent L/R level controls variable from -60dB mic level to +4dB line level.
- Unbalanced stereo RCA line output and AES/EBU digital I/O interface.
- Monitoring is available via 1/4” headphone output and built-in 5cm speaker.

**Supplied Accessories**
- Includes a carrying case, shoulder belt, two NP-22H rechargeable batteries, charger, AC adapter, digital I/O connecting cable and RMT-D10P remote control.

**SBM-1 Super Bit Mapping Adapter**

An all-in-one package for superior analog and digital recording, the SBM-1 is designed for Sony’s DAT and MiniDisc Walkman line of portable digital recorders. 20-bit analog to digital converters ensure more natural sound reproduction with lower noise than standard 16-bit A-D converters.

- 20-bit quantization, supporting sample rates of 48kHz, 44.1kHz and 32kHz
- Manual record level for each channel
- Line inputs via 2 x phono (RCA) jacks
- Mic inputs via stereo mini jack with plug-in power and 2 x 1/4” phone jacks
- Connects to any compatible digital interface via standard optical and coaxial S/PDIF I/O
- Compatible with the entire line of DAT Walkman and MiniDisc recorders
- Supplied accessories include; carrying case and AC adapter.
ECO CHARGE

EC-50/EC-90

6- and 12-volt Lead-Acid Battery Systems for Portable Recorders

The 6-volt EC-50 and 12-volt EC-90 are the first sealed lead acid batteries with a mind of their own. Their advanced design offers a host of features to provide a new level of reliability, flexibility and convenience. They provide two 4-pin XLR output connectors so you can power two recorders from the same battery without the hassle of Y-cables. Each output is protected with automatic short circuit protection for maximum safety. Far more reliable and easier to maintain than any nicad battery pack, there are no inherit memory effects so you never have to fully drain them before recharging. The rugged carrying case offers belt loops for situations when you want to wear the battery.

FEATURES

- Reliable and affordable Sealed Lead Acid technology with no memory effects—less hassle and maintenance
- Dual XLR output connectors for powering two devices from a single cell
- Confidence is achieved with the built in LED battery level meter. At the push of a button, the amount of power remaining is indicated with a 4-position LED meter.
- Both the EC-50 and EC-90 use industry-standard Neutrik XLR connectors to provide the ultimate reliability and convenience. Eco Systems offers a selection of power cables to connect with today’s most popular devices.
- They incorporate an internal smart charger with global (110-230v) power supply allowing them to cost substantially less without sacrificing quality.
- They are have features to maximize battery life. The smart charger design monitors battery requirements and automatically adjusts to provide the optimum charge cycle. In addition, the intelligent circuitry monitors battery voltage and automatically shuts off power when it’s time to recharge.
- For portability and protection, each battery includes a Cordura heavy duty protective case with belt loop and shoulder strap.
- The 5.5 lb. EC-90 is available in 3 different voltage combinations:
  > Dual 12-volt; 12 and 7.5-volt; 12 and 6-volts
  > The 3 lb. EC-50 is available in dual 6-volt or 6- and 4.5-volt configurations

Optional Power Cables for the EC-50/EC-90

Available for: Apogee MINI-ME; LunaTEC V3; Tascam DA-P1; Sony TCD-D8/D100 and PCM-M1; E.A.A. mic preamp; 6v XLR, 12v XLR

PORTA BRACE Audio Recorder Cases

The custom-tailed, foam-padded Audio Recorder Case is the ideal case for professional portable recording equipment. The flaps, clear vinyl windows and protective coverings provide access to cassettes, batteries, cables, dials and switches. The RM-Multi case is the second component to help organize the most essential accessories. It holds spare cassettes, batteries, wireless microphones, and other small items. A comfortable brown suede shoulder strap is provided.

**TASCAM/FOSTEX**

**DA-P1**

**Portable Pro DAT Recorder**

A full-featured portable DAT recorder, the DA-P1 is built to handle the most rigorous field applications. It has a dual direct drive motor transport for unprecedented reliability, and it offers XLR-balanced mic/line inputs with switchable 48v phantom power for use with condenser mics. When recording from an analog source, sampling rates of 44.1 or 48 kHz can be selected. Coaxial S/PDIF digital I/O allows you to output directly to compatible digital equipment, while the digital input will automatically adjust to sample rates of 32, 44.1 and 48 kHz.

- Rotary 2 head configuration and dual motor transport for reliable operation.
- Built in a well-constructed hard shell, that makes ideal for field use but also at home in any studio.
- A-D converters allow analog recording with selectable sampling rates of 48kHz and 44.1kHz. Digital recording rates of 32, 44.1 and 48 kHz are also supported.
- Independent L/R level controls
- A switchable mic limiter and 20dB pad ensures audio capture without distortion.
- Easy to read backlit LCD displays input and playback levels, ABS (Absolute Time), sampling rate, program number, ID select functions and record margin.
- A hold switch prevents accidental operation of the transport functions.
- SCM S (Serial Copy Management System) free recording, allowing unlimited digital tape cloning.
- Includes 2-hour, long-life life rechargeable battery (charges in 30 minutes) as well as a AC adapter and shoulder belt.

**Inputs/Outputs**

- XLR balanced mic/line inputs accepts a broad range signals from -60dB to +4dB.
- RCA unbalanced line inputs and outputs
- Coaxial S/PDIF digital input and output
- 1/4” headphone jack with level controls

**Optional Accessories**

BP-D1 Rechargeable Battery.................84.95
CB-D1 Battery Charger...................69.95
CS-D1 Carrying Case....................109.95

**FOSTEX PD-4M**

**Professional Portable Timecode DAT Recorder**

Used in award-winning movies and television shows throughout the world, the PD-4M is a complete, all-in-one portable field recorder that meets all the requirements of the demanding professional on location. Rivaling a studio production DAT recorder in quality and capability, the PD-4M features three XLR-balanced mic/line inputs, confidence monitoring via the four head transport, a unique “anti-jam” transport mechanism, variable frame rates and sampling frequencies including 48.048kHz for digital video. There is also full timecode recording, on-board three channel mixer with mic attenuation, phantom power and a headphone matrix. Weighing less than 7 lbs. the PD-4M is designed for the most demanding field work—whether in film, video, live music or ENG applications.

- Rotating 4-head drum with off-tape confidence monitoring enables you to hear what is being recorded directly off of the tape not from the input signal.
- 3 into 2 XLR-balanced mic/line mixer with independent gain control, -20 dB attenuation pads, 3-position pan switches, 48v phantom power and high pass filter variable between 20Hz to 250Hz z for each channel and a master output control.
- Sampling frequencies are selectable between 44.1kHz, 48kHz and 48.048kHz
- A switchable stereo limiter prevents transient peaks from overloading tape.
- Choice of monitoring using 1/4” headphone output or the built-in speaker
- Edit date in Rec/Pause or Stop Mode
- XLR-balanced AES/EBU and S/PDIF digital I/O
- Operates for two hours on a single NP-1B battery. Can also be powered by a power belt or optional AD-15 AC adapter.

**Timecode**

- Timecode reader/generator supports all frame rates including 24, 25, 29.97 DF, 29.97, 30 DF and 30 frames per second.
- TC modes including external run, free run, record run and 24 hour clock.
- Jam Sync is selectable for accepting external references and will output external timecode for maximum flexibility.
- Reel number editing is available in 24 hr Run Mode
Portable CD Players

Portable, professional-quality CD players designed especially for the performing arts, the PSD-220 and PSD-230 are ideal for music and dance practice, with controls so intuitive that even beginners can operate them. Both are capable of increasing or decreasing the tempo of a song on CD without affecting the pitch, while the PSD 230 can also change the key without affecting the tempo. Add to that the ability to loop a segment of music infinitely for repeated listening and practicing, and you have what could be considered the definitive practice tool. Use them for transposing, mastering a solo, rehearsing a vocal harmony, transcribing lyrics—even choreographing a dance step or aerobics.

Features

- Simple button controls let you quickly increase/decrease tempo by 50% in 1% increments without changing the key (musical pitch). Slow down a music track as a valuable practice aid.
- 10-second anti-shock buffer to prevent skips and jumps in the audio when the unit is moved or shaken while playing.
- Read and playback finalized CD-RW discs.
- 3-band EQ with bass, mid, and treble controls
- Single Track Play feature plays one track at a time without having to create a custom play program. While in this mode, the players will cue a selected track at the beginning of audio (cue to music), rather than at the true start of the track.
- A-B Repeat provides even more control during practice by allowing a segment of a track to be selected and continually replayed (looped) until mastered. Simply select a start and end point with the touch of a button. Makes no difference if you are working on smaller parts of a song or solo, whether a two-bar phrase or an A section
- Both offer analog stereo line output (RCA) as well as a digital coaxial (RCA) output.
- Built-in speaker allows you to listen or practice with a CD without having to connect to external speakers. They also have a 1/4” headphone jack if private listening is desired.
- Three-way power capability includes the supplied AC adapter, three ‘D’-size alkaline batteries or the optional RB-430 nicad battery. Both have a battery life indicator.

PSD 230 Step-up Features

- Change the musical key ±1 octave in 12.5 cent steps without changing tempo. This makes it easy to play or sing along with a popular song in the key of one’s choice.
- Tuning control on the PSD230 allows an audio CD to be tuned ±2% in 0.1% increments to your musical instrument—rather than tuning the instrument to the CD player.
- The PSD 230 includes a special processor that can reduce the volume level of the lead vocal track on a CD. The voice reduction system allows a practicing musician to better hear the instrumentals or a vocalist to sing along as the new lead.
- Mic/line input (1/4-inch or XLR) input allows a microphone or music instrument (line level) source to be mixed together with the CD sound for practice purposes.
- Mix/Split switch determines how a signal from the Mic/Line input is mixed with the sound from the CD. The MIX position will mix (combine) the input signal with both the left and right channels of the CD playing back. The SPLIT position will separate the input signal and the CD playing back by sending the input signal to the right channel and both channels of the CD to the left channel.
- Built-in CD-TEXT displays information regarding the disc title, artist name, etc.,
Dual-Drive CD Recorder + CD-R/RW Player for the Performing Arts

The PSD-300 is the world’s first CD recording system for the performing arts that combines a professional CD-R/RW recorder with a CD-R/RW player featuring innovative CD manipulation controls. This portable stand-alone system is designed specifically as a valuable portable music rehearsal and performance tool.

In addition to its recording drive, the unit’s CD player features the same performing arts controls found on the PSD230 portable CD player. These special controls allow musicians to practice with their favorite artist or a specialized music accompaniment CD and manipulate the key or tempo of that music on the fly.

**Applications**

- For music transcription, the PSD300 can convert a music CD to a half-speed CD-R, CD-RW copy, essentially slowing tempo by 50% and lowering every note by exactly one octave.
- The PSD300 also functions as a 2x speed stand-alone duplicator, for making perfect digital copies of any disc, including CD-R/RW discs recorded on the machine itself. A music teacher, for example, might record an ensemble’s practice session and provide CDs for each student to take home.

**Features**

- The PSD300 can adjust the tempo of any music CD as much as -33% to +50% without changing the music’s original key (unlike standard pitch control found on some tape and CD machines).
- It can instantly transpose the music’s key in musical half step increments or micro tunings without affecting tempo.
- It can significantly reduce a lead vocal from a song at the touch of a button.
- The unit can also simultaneously change key and tempo.
- Portions of music can be easily slowed down and programmed to continuously loop until a riff has been mastered.
- This means that using only the PSD300, musicians can play their instruments or sing along to music on CD, manipulate that music dramatically in real-time, and then record their live performance blended with the prerecorded music to blank CD-R or CD-RW discs. Superscope has made it easy for musicians to record ideas and practice sessions and immediately play them back to hear how they sound.
- To record, simply place the PSD300 on a table-top, plug it in and record live - with programmable mic/line EQ, noise filtering, and manual or automatic level control - using either the internal microphone or external microphones that attach to stereo XLR or 1/4” mic/line inputs.
- No external mixer or other equipment is needed. The recordings can be played back on any CD player that reads finalized CD-R or CD-RW data or music discs.

High-Resolution Master Disc Recorder

The standard for high-resolution two-track audio, the MasterLink ML-9600 is a standalone system that integrates hard disk recording, digital signal processing, audio editing and CD creation/playback. By bringing together all these capabilities, MasterLink provides an affordable, all-in-one solution for high-resolution mixdown, mastering and CD-burning. Fully compatible with today's CD and digital audio formats plus offering the sonic quality you'll need for tomorrow, the MasterLink ML-9600 is a uniquely versatile and affordable solution for everyone from large commercial audio facilities to project studios and recording musicians.

FEATURES

**Hard Disk Recording**
- Most everything begins when you record two-track audio to the high-capacity 20GB internal IDE hard drive. There is a full complement of connections for bringing in analog or digital audio from your mixer, DAW and other sources. You can even use the integrated CD player as an audio source.
- During hard disk recording, choose from four sampling rates (44.1, 48, 88.2 or 96 kHz) and three word lengths (16-, 20- and 24-bit). For mixdown, delivery and archiving, choose 24-bit/96kHz as the primary format.
- State-of-the-art 24-bit digital converters offer better sonic performance than any other affordable mixdown format. For creating standard audio CDs, MasterLink’s sample rate conversion and noise shaping technology is specially designed to keep your audio sounding its best at every resolution.

**Track Editing and DSP Finishing Tools**
- After recording a track on hard disk and assigning it a name, you can set precise start and end points to each song using MasterLink’s cropping features.
- Built-in mastering toolbox includes non-destructive DSP capabilities: real-time compression, equalization, limiting and normalization. These functions can be adjusted and combined, allowing you to optimize the timbre and dynamics of each individual song, as well as establishing a professional sonic consistency from track to track.

**Multiple Custom Playlists**
- With MasterLink’s multiple playlist capability, you can create, name and edit 16 different playlists containing up to 99 songs in each. Each playlist offers full control of song order, track gain, fade-ins and fade-outs, and length of time between tracks. With MasterLink you can store 16 CD masters worth of music with polished, professional quality and presentation.

**CD-24**
- After fine-tuning your playlist on the MasterLink hard drive, CD creation is easy. A one-button command records your master onto CD-R using the 16-bit/44.1kHz Red Book standard (compatible with CD players worldwide) or Alesis’ 24-bit/96kHz CD-24 format (perfect for high-resolution archiving or delivering mixes to mastering studios. The high-resolution discs can also be accessed by Mac and Windows computers. Since CD-24 uses the ISO 9660 CD-ROM disc format and the standard AIFF audio file format, the discs can be used by digital audio workstations at professional facilities worldwide.

Head and shoulders above any CD burner, MasterLink lets you capture mixes to the internal hard-disk recorder at up to 24-bit/96kHz resolution via analog (XLR balanced, RCA unbalanced) or digital (AES/EBU and SPDIF coaxial) inputs. Once tracks are on the hard drive (up to 25 hours of stereo 16-bit/44.1 kHz audio can be stored), they can be assembled into playlists. There is room for 16 playlists, each of which can contain up to 99 tracks.

Once in a playlist, a track can be edited and processed in preparation for burning to CD. When you’ve processed and edited the tracks in the playlist to your liking, simply insert a blank CD-R and then hit the Create CD button. The playlist and the tracks are written to a special area of the internal hard drive as a CD image, then the image is burned to the CD in either the Red Book standard or at up to 4-bit, 96kHz resolution using Alesis’ revolutionary CD24-AIFF technology.
CDR830/CDR830 PLUS

‘BurnIT’ CD-R/CD-RW Recorders

Housed in a durable, 19” rack-mounting chassis, the CDR830 BurnIT and BurnIT PLUS feature very high-quality 24-bit A/D and D/A converters and an advanced laser assembly that ensures consistently accurate recordings compatible with a wide range of CD players.

The CD-Text facility, enables disc, artist and track names to be stored and displayed, and an SCM S-free digital input and built-in sample rate converter making synchro recording easy from CD, DAT, MD or hard disc. A unique facility for recording direct from dynamic microphones removes the need for additional pre-amplification equipment thereby increasing the recorder’s versatility and range of applications. The addition of a digital record gain control allows level adjustment of digital input signals.

The CDR830 BurnIT PLUS steps up with balanced XLR analog inputs and outputs with line/mic input gain switching, balanced XLR digital input and output, word clock input (enabling sync playback at 44.1k or 48k sample rates) and parallel remote input – a range of connectivity that will satisfy the needs of most analog and digital recording environments.

FEATURES

- Precise design of the CD laser assembly means that every single CD-R and CD-RW disc is exceptionally accurate, providing greater compatibility with other CD players and recorders.
- Five CD-RW erase modes for flexibility when compiling recordings. These include erasing individual tracks, several tracks, all tracks, the table of contents or entire disc.
- Built-in SRC (sampling rate converter) accepts signals from 32kHz to 48kHz so you can record from other digital sources.
- Three digital and analog synchro recording modes for recording and finalizing CDs: One/All Tracks and All Tracks with Finalize.
- Left/right digital balance control enables the balance of a CD, DAT, MD or any other source, digital or analog sources to be adjusted before they are recorded.
- CD Text display input and editing enables you to store disc, track and artist names with every recording. Entries can be up to 120 characters in length, with the title scrolling if it is too long to fit in the display.
- Fade in and out times can be adjusted from 1 to 12 seconds.
- Digital balance control lets you control the left/right balance of digital or analog sources before they are recorded.
- IDs can be triggered on both analog and digital recordings by adjusting the auto track increment level threshold from -24 to -78dB in 6dB steps.
- Signal levels can be monitored during input, recording or playback using the LCD meters.
- SCM S-free digital input lets you record from any CD, DAT, MD or hard disk. Plus, you can set the SCM S status when burning CDs (Copy Prohibit, Copy Once, Permit).
- Both the coaxial and optical digital inputs have their own digital gain control.
- Digital input gain control can be adjusted using one of the five available scaled values: +12dB to -12dB in 0.5dB steps, +20dB to +12dB in 1dB steps, -12dB to -24dB in 1dB steps, -24dB to -48dB in 3dB steps, -48dB to -84dB in 6dB steps.

SuperScope
PAC-750/PAC-770

Professional Integrated Sound Systems

The 45 lbs. PAC770 (built-in 110-watt stereo amp) and 27 lbs. PAC750 (pre-amplifier only) provide a remarkably easy to use, feature-rich, and cost-effective installation solution for applications requiring music and public address. In one durable, commercial-grade product taking up just 4U of rack space the PAC770 combines four quality system components: CD player with music playback features specially designed for the performing arts, a full-featured cassette recorder, an elegant mixer that any novice can handle with ease, and a powerful and reliable amplifier. Ideal for small-to-medium sized venues like houses of worship, schools and meeting rooms, they are also portable on an A/V cart or in an optional case.

**CD Player**
- Playing speed can be adjusted from -33% to +50% without changing the key (Tempo Control). This is done in 50 intervals (1% from previous tempo setting).
- The key of a CD can be altered by ±1 octave, in 1/16th note increments (Key Control) without changing tempo.
- Audio loops can be defined within a CD track utilizing the A-B button.
- Single or multiple tracks can be programmed for custom repeat playback.

**Inputs/Outputs**
- 4 mic/line inputs (XLR=1/4")
- 48v phantom power
- Pan control and 2-band EQ per channel
- Aux Line In (RCA x2)
- CD Line Out (RCA x2)
- Tape Line Out (RCA x2)
- Master Effect In/Out (RCA x2)
- Unbalanced Line Pre-Out (RCA x2)
- Balanced Line Pre-Out (XLR x2) PAC 750
- Binding Post Speaker Out
- 1/4" Headphone Out
- RCS Remote In/Out (AM X/Crestron)

7-Channel Mixer
- Simultaneous control of 4 XLR mic/line inputs, tape, CD, and stereo aux inputs.
- The amount of signal each input sends to the mixer can be easily adjusted using each input's gain control knob. Easier still, the auto gain feature will set an optimal level for the mic/line inputs.
- Master output volume, EQ, and balance are simply controlled from the front panel, while individual mic/line EQ, panning, phantom power, and input attenuation are designed to be “set-once” on the back panel.
- Parametric EQ and speaker processing can looped through the unit.
- Voice reduction circuit can reduce the lead vocals from CD, tape and aux sources.
- For paging applications, the unit can be set to automatically duck music when any mic/line input is active, either eliminating levels or reducing them by -15dB.

**Cassette Recorder**
- Quick Auto Reverse – optical sensing of leader reverses the direction of tape transport, for seamless double-sided recording.
- ±12% pitch (tempo + key) control
- Dolby B/C/HX Pro noise reduction
- Manual and automatic (ALC) record levels
- Memory point; music search; normal speed dubbing

**Amplifier or Preamp Only**
- The PAC750 is built with a preamplifier only, enabling flexible installation. The PAC770, however, comes with a high performance amplifier. It includes:
  - Stereo or Mono Bridge Modes – The unit allows stereo or monaural amplification.
  - Power Protection Circuit – The amplifier is designed to protect itself from running at levels that can cause damage.

**Optional Accessories**
- RC5PMDSW Infrared Remote Kit (includes handheld IR remote, IR receiving eye). Can control tempo remotely............................................. Call
- WRC200 MKII Wired Remote Control ...... Call
- MIC300 Wired Handheld Mic ...... Call

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
Marantz’s line of professional single and dual well cassette decks combine thoughtful engineering with uncompromising audio quality. From their entry level single well PMD-501 to the top of the line PMD-520 dual deck, they offer problem solving solutions for the most demanding mastering, dubbing and installation systems. All are housed in a 3RU high chassis and are easy to use.

- Optically sensing quick auto reverse detects leader at the end of a tape and automatically flips the tape with a minimum of audio loss or, in the case of a dual deck, will activate the second deck when the first has completed recording on both sides.
- Automatic tape type selector detects the type of tape formulation such as CrO2 or normal bias cassettes and adjusts the bias for optimum recording performance.
- Dolby B noise reduction
- Large transport control buttons with LEDs
- Recessed record balance control
- Marantz CD player equipped with RC-5 interface can control the start and stop of a PMD-series cassette deck placed in the REC/Pause mode (CD synchro recording).
- One-piece 3RU high chassis

**PMD-502 Only**

- Output level control
- Pitch control (±15%)
- Front panel microphone/auxiliary inputs
- Digital linear time-based counter
- Memory rewind
- Front panel input select switch
- Dolby C and HX Pro
- Fluorescent peak holding bargraph meters
- Defeatable automatic level control (ALC) overrides the manual input level control and sets the input to its optimum level.
- MPX FM filter eliminates the 19kHz pilot tone associated with FM radio signals — essential for proper Dolby B encoding.
- Optional XLR502PM D balanced-XLR kit

**Inputs/Outputs**

- Unbalanced RCA inputs and outputs
- Headphone output with level control
- Marantz RC-5 remote control I/O. This remote interface also allows seamless integration of any PMD cassette deck with an AMX or Crestron control system.
- Optional wired and wireless remotes allow simultaneous control of multiple units for synchronized dubbing and other remote capabilities.

**RC-5 Infrared Remote Control**

- RC-5 can control multiple cassette decks simultaneously using RCA cables connected serially in between units. Ideal for realtime duplication systems.
- Two mounting options include a 1 unit rack panel and a single gang wall plate.
- Infrared receiver can be mounted up to 30 feet away; ideal for situations where decks need to be heard and not seen such as boardrooms and houses of worship.
- Includes handheld infrared remote controller, infrared receiver and AC adapter (RCA connection cable optional).

**WRC Wired Remote Control**

- Hard wired rugged table top remote control for PMD series recorders and players.
- Includes 6 foot RCA to RCA patch cable to interface with RC-5 interfaces.
- Yellow and green LED indicates current control over CD or tape. Ideal for duplication systems with decks serially connected via RC-5.

**XLR Balancing Kits**

- Add +4dB balanced XLR inputs and outputs to the PMD-series cassette decks.
- Kits consist of rear panel assembly and ribbon cables for solderless installation.
Independent Dual-Well Cassette Deck

The PMD-510 is one of the most comprehensive and flexible dual-well cassette decks ever made for professional use. Each of the two wells is a completely independent cassette deck (simultaneous playback on well A while recording on well B or vice versa), with their own distinct set of stereo inputs and outputs, pitch control, stereo bargraph meters, linear time counter, Dolby B/C selector, and large transport buttons. In addition to independent operation, the two wells can work together to record from one input.

An extension remote port allows the connection of several PMD-510s for long-term continuous recording and playback. All auto-reverse, well-switching, and cascade operations are optically sensing for minimal audio loss in continuous record and playback modes. The PMD-510 also features a headphone output that is switchable between well A, well-B, or both wells. The remote port is compatible with Marantz (RC-5), AMX, and Crestron control systems.

Dual Deck Operation

◆ Each deck features independent large transport buttons with LEDs. Each deck also has level, balance, pitch and noise reduction controls as well as independent LED bargraph meters and linear (minutes and seconds) time counters.
◆ Perform synchronized dubbing from deck to deck at normal and high speed (2x). Normal and high speed programmed dubbing of up to 16 tracks in any order is also possible.
◆ Pressing Play button twice on either well sets the current track to loop continuously.
◆ Up to 15 tracks can be programmed to play back in any order.
◆ Continuous (serial) play or recording from deck A to deck B or deck B to deck A.
◆ Simultaneously record to both decks from an external source (parallel recording)
◆ Independent inputs allow recording on each deck from different sources.
◆ Link several PMD-510s together in series for continuous playback or recording using the cascade (EXT) connectors.
◆ All auto-reverse functions for well switching and cascade operations are optically sensing for a minimum of audio loss during record and playback modes.

◆ You can record on one well while playing back on the other.
◆ Independent outputs allow simultaneous playback of tapes in both deck A and B.
◆ QMS (Quick Music Search) will fast wind to the beginning of the next or previous track. QMS can advance up to 15 tracks.
◆ AMS (Auto Music Scan) mode fast winds and plays the first ten seconds of the next track.
◆ While recording, Quick Rewind function automatically returns the tape to its initial record position and enter the stop mode.
◆ Optional XLR510PMD balanced-XLR kit.

PMD-505

Marantz's most economical dual-well cassette recorder, the PMD-505 features auto play/record on power up, normal and high speed dubbing, auto tape select, record mute with auto-pause, music search (QMS), Dolby B/C/HX Pro noise reduction, record balance control, ±10% pitch control (compared to ±15%) on the other PMD-500 series decks) and timer record/play function.

It is equipped with RCA line input/output, RC5 remote input/output, headphone output (without level controls) and unlike the other Marantz dual-well cassette decks, it doesn't offer an optional balanced-XLR kit.
Independent Dual Well 3-Head Cassette Deck

The top-of-the-line PMD-520 has all the capabilities of the PMD-510 plus adds three uniquely distinct features. It has three stationary heads allowing direct off-tape (confidence) monitoring in real-time. This is useful for tracking master recordings and live audio capture and is an efficient way of spot checking tapes during extended duplication runs. The next two features are unique for any deck. Direct tape insertion/removal eliminates tape doors for easier access to cassettes while the tape mechanisms can be removed allowing servicing of installed decks with a minimum of fuss. The cascade recording feature is also taken to the next level by allowing a three minute overlap when recording from one well to another. The loop through outputs are perfect for cascading multiple decks for duplicating or serial recording. Also offers a 25-pin connector for customized remote control in addition to the Marantz RC-5 interface.

- Stationary 3-head mechanisms in each deck provides confidence monitoring. The monitor button switches between tape and source (input) for comparison of the input versus off tape signals.
- Direct tape insertion/removal eliminates mechanical problems (no eject mechanisms or hinged doors). Makes reloading more efficient during large duplication runs.
- Innovative construction allows each tape mechanism to be completely removed for service if needed, while the other remains available for use.
- When cascading multiple decks (up to 100 units can be chained together) for duplication, the stereo Loop-through outputs carry the input signal out to the next deck in the chain, freeing up the standard outputs for monitoring (eliminates the need for a distribution amp) and ensuring that the input to each deck in the chain is unaffected by the previous decks electronics.
- To prevent any loss of audio during long format recording, an overlap series recording feature automatically engages the next deck cascaded in the chain 3 minutes before the current deck runs out of tape.
- To ensure optimum performance, a microcomputer controlled automatic tape calibration adapts the bias, record gain, mid-frequency gain, high-frequency gain and high frequency peak of the deck to the specific tape(s) being used.
- Individual bias reset button returns the bias settings to their factory default.
- Recessed, front panel ±3% fine speed control allows you to fine-tune motor speed without having to unreack the unit.
- 25-pin contact closure control port to control transport functions and bias control.
- Stereo LED meters with peak hold
- Auto rewind when the tape ends
- Tape stop alarm uses a buzzer to indicate a tape has stopped playback or recording
- Tape time button selects the length of tape being used (60/90/120/10/20/30/46 minute) ensuring that the counter display will show accurate information.
- Optional XLR520PMD balanced-XLR kit

PMD-511

Dual Well Cassette Deck

The PMD-511 is one of the most versatile and functional dual well cassette decks ever made for professional applications. In addition to all the features expected from an independent dual-well cassette deck, it includes stereo microphone inputs and a built-in recording mixer. Mics input to the PMD-511 can be mixed with an incoming line level source and then recorded onto either tape well. A front panel Mix Level control adjusts the amount of mic signal that is mixed with the line signal. The PMD-511 also features a high (2x) speed mode, allowing either high-speed duplication or ultra-high quality recording, a sophisticated ALC (Automatic record Level Control) system for worry-free recording, and 25-pin GPI port that allows contact closure control of the PMD-511.

www.bhphotovideo.com
CD with MP3/Cassette Combo Deck

Marantz combines the strongest attributes of their CD player and cassette recorder/reproducer technology in the 3RU PMD-351 combo deck. Designed to offer maximum flexibility for everything from mastering and dubbing applications to broadcast, installation and DJ rigs, the PMD-351 is equally competent as an independent CD player and tape deck, as it is an integrated combo deck.

**CD Features**
- Cue to music feature allows instant start of program material.
- A-B rehearse function loops audio between any two points in a track.
- Program play up to 20 tracks in any order.
- Repeat function (all tracks on the disc or in the current program list).

**Cassette Deck Features**
- Optically sensing quick auto-reverse.
- Defeatable automatic level control (ALC) as well as manual level control with a recessed left/right record balance control.
- Dolby B, C and HX Pro noise reduction.
- Memo button stores a specific point on tape allowing you to FF or REW to that point from anywhere on tape.
- Automatic tape type selector sets the bias and equalizer levels for the tape (Normal, Chrome, Metal) you are using.

**Rear Panel**
- Separate and mixed RCA tape and CD outputs.
- Left and right 1/4˝ high impedance mic inputs.
- Coaxial digital output.
- Multiple Marantz decks (equipped with RCA-EXT cascade connector) can be looped together for extended playback or recording. When the first deck completes both sides of a tape, the next deck starts.
- MPX Filter switch eliminates sub and ultra sonic frequencies transmitted during FM broadcasts that can interfere with Dolby noise reduction operation.
- Independent fader start jacks - when receiving a dry switch contact closure the CD will switch between Play/Pause and Play, and the tape deck between play and stop mode.
- Marantz RC-5 Remote I/O allows basic remote control for a single unit or synchronized control of multiple units.

**Front Panel Functions**
- One-Touch Automatic Dubbing (from CD to cassette) function scans the CD to find the peak level, sets the optimum recording level using the Automatic Level (ALC) Control and commences recording.
- Multi function display indicates the operating status of the main functions for both the CD and cassette deck.
- Large transport buttons with LED inset.
- Separate ±12% pitch controls for tape and CD.
- Headphone output with source selector switch; CD, Tape or Mix

**Additional Features**
- One-piece 3U rackmount chassis.
- Optional balanced XLR kit (XLR350PMD).
- Optional wired or infra-red controls.
- AMX and Crestron compatible.

¹ Signal-to-noise ratio “A” weighted  * Tape section
CDR-300

Portable Desktop CD Recorder with Built-in Mic Preamp

Designed for stand-alone portable recording, the CDR-300 is a professional CD recorder that offers the functionality of a professional tape recorder—while recording directly to blank CD-R/RW media. Once finalized, recorded discs will play back in virtually any CD player.

To record, simply place the compact and lightweight CDR300 on a table-top, power it up via 120v AC or 12v DC power and record live using either the internal mic or external microphones that attach to stereo XLR or 1/4” mic/line inputs. Because it has a built-in preamp, an external mixer or mic preamp is not required. A built-in speaker or headphone jack conveniently allows recordings to be monitored. High and low EQ and high and band pass filtering can be independently adjusted for each mic/line input in the preset menu. 48v phantom power is available for condenser microphones. The CDR-300 also provides manual or automatic level control, limiter, and digital level meters.

**FEATURES**

- The CDR-300 records to both music and computer CD-R and CD-RW discs. Track titles can be input using CD-Text. It can make a perfect digital copy of any CD.
- Built-in mic preamp with phantom power and onboard mixing capabilities means you can plug quality microphones straight into the XLR or 1/4” mic/line inputs for stereo recording of live events. No need for a separate mic preamp and mixer.
- Capture ambient room sound with a pair of mics and mix in the stereo feed from a larger sound system to make a great live CD recording of any musical event.
- Record CDs from any analog or digital source including LP, DAT, cassettes, or MiniDisc.
- Internal AC power supply, plus a 4-pin DC power input that enables it to be used with external 12v battery packs.
- Portable design and easy operation enables convenient direct-to-CD recording anywhere—from churches, band and practice rooms, to classrooms, auditoriums and outdoor venues.
- For CD playing you can add (mix in) your own microphone or instrument input, connect to an amplifier/speaker system, connect to an external CD recorder, connect an additional CD player (or other line input) to the CDR-300 and mix that input.
- Built-in microphone and full range speaker allows listening to a CD without having to connect to other equipment for amplification.
- Tone controls include:
  - TREBLE High frequencies (6 kHz)
  - MID Middle frequencies (2 kHz)
  - BASS Low frequencies (150 Hz)
- 3-band master EQ
- Programmable mic/line EQ
- Programmable mic/line high and band pass filtering
- Manual or automatic level control (ALC) for recording
- On-board switchable limiter
- Stereo XLR & 1/4” mic/line inputs
- Computer CD-R/RW disc compatible
- 48V Phantom Power
- RCA line out
- Stereo RCA Aux input
- Digital S/PDIF coaxial input and output
- Includes full function IR remote control
- An optional foot pedal (FT200) can provide Play/Pause control for the CDR drive

Portable design and easy operation enables convenient direct-to-CD recording anywhere. And it is designed to be as easy to use as a portable tape recorder. Just place the CDR-300 on the table at your next meeting, record using the built-in condenser mic and automatic record level control, and capture every word with clarity. You can start and stop recording just like a tape, and you can even erase the disc or last track if you use rewritable discs.
CDR-631 CD-R/CD-RW Recorder

Offering superb flexibility and reliability in a rugged rack-mount design, the CDR-631 is a next-generation digital recorder that lets you create your own custom CDs from any audio source. Powerful feature set includes a rich assortment of I/Os including balanced XLR analog and AES/EBU digital for connecting to other analog and digital gear. Also offers a sample rate converter, memory buffer, complete SCMS programmability, remote control input and the ability to use a variety of CDs, including computer discs.

CDR-500 & CDR-631 Both Feature

- CD-Text function lets you save the CD title, artist and track names via the menu using simple input controls.
- For a wider choice in media with greater flexibility and additional cost savings, they accept CD-R and CD-RW discs, including 1X-speed discs for computer use.
- Sync recording mode for fast and easy duplication of CDs, MiniDiscs, and DATs. Track increments are automatically detected, and for analog source material, a silence of 2.7 seconds is automatically detected as a track increment.
- Automatic sample rate conversion handles any source from 11 kHz to 56 kHz and converts it to the 44.1 kHz standard (44.1 kHz sources bypass the converter).
- They have a memory buffer that prevents the beginning of tracks from getting cut off.
- Auto Stop Control allows dynamic sources (eg. classical music) to be recorded effectively.
- 2x speed disc finalization.
- Program up to 99 tracks to play in any desired sequence.
- Coaxial digital input includes loop-out for unprocessed connection to other digital equipment.
- RC5 remote control input for installed (AMX/Creston compatible) controllers.
- Bypass SCMS copy protection when duplicating a disc. Or select among copy protection options when recording your own discs.
- Manual Track Increment • via remote.
- Auto Stop On/Off • •
- CD-TEXT Display + Encoding • •
- 10-key Pad • via remote.
- Program Play • •
- Repeat 1/ALL • via remote.
- Random Play • via remote.
- Rackmount Height 2U 2U

CDR-500 CD-R/CD-RW Recorder and Player

CD-R/RW recording and playback has never been easier. The CDR500 features two independent drives: one for CD-R/RW playback and recording and a second drive for playback only. This means it can operate as a stand-alone 2X CD-R/RW duplicator; make a recording from any analog or digital source; program a playlist that selects tracks from both CD drives; play from both drives at the same time.

Industrial CD Player

The PMD-325 offers great versatility and reliability for music playback, background music, and other applications. In addition to playing CDs it will play finalized or unfinalized CD-R (write-once) and CD-RW (rewritable) discs, as well as MP3 files on CD-R/RW. And, equipped with RS-232 serial control, will revolutionize music playback for your professional A/V system. Customization options for audio playback give you full control over how the music plays—single-track, randomly, or by time without requiring a monitor or touch panel display. In addition to RS-232 and standard CD functions, other features include pitch control, direct track access, A-B loop, auto cue, CD text, XLR with adjustable trim and GPI contact closure control of many features.

FEATURES

- Built for installation, the PM D 325 can receive AMX or Crestron compatible control signals via its rear panel RS-232C serial port or RC5 port.
- It also features a GPI port with fader start. The fader start trigger input enables playback and pause control from an external switch or fader from a mixing desk.
- While many DVD players play MP3 files, they require a TV monitor or touch panel display to navigate the files, and they are not designed to fully control how the music plays. The PMD 325, however, provides single track, random, and timer play for both music CDs and MP3 files.
- Plays CD-RW discs without a hitch, and also display CD-TEXT for identifying CD and song titles at a glance.
- ±12% pitch control in 0.1% increments. A Calibration button is used to calibrate and return the CD player to normal pitch.
- Single track and program play. Program up to 30 tracks for playback in any order while a time display calculates the total accumulated program time of the selected programs.
- Remote control with 10-key pad (0 - 9) and rotary knob for direct track access and selecting tracks in program mode.
- Auto cue can be set to an adjustable threshold
- Time button switches the displayed time between elapsed time and time remaining of current track, total length of disc and time remaining on disc.
- Three repeat modes include 1-track, all-tracks, A-B repeat
- Equipped with unbalanced RCA and balanced-XLR analog outputs with level control, and XLR, optical and coaxial digital S/PDIF outputs, enabling easy integration into professional A/V systems.
- One piece 2U rackmount chassis

With four models to choose from, the Marantz family of single-well professional CD players provides a solution for every need—from the demanding broadcast studio environments where dependability and precise control are key, to corporate installations, theaters, houses of worship, and other applications that require a CD player with professional features and ease of use.

PMD-331/340
Industrial CD Players

Marantz audio products have long been recognized for having exceptional sound quality. And the PM D-331 and PM D-340 are no exception. Adhering to Marantz’s rigorous audio standards, they are not only built with the highest quality D/A converters, but they employ state-of-the-art digital and analog filters and noise sampling technology to maintain pure signal clarity. It’s a difference you can hear.
**PMD-331**

All the features of the PMD-325 except no MP3 playback, RS-232 serial port or infra-red remote control

- Up to 25 different functions (pulses) can be individually programmed using the intuitive front panel control. Items include end of track warning, tray lock, fade-in/out time, default time display, disc start and end marker time.
- CD mechanism is designed to handle rackmount installations at up to a 45° angle.
- 10-second anti-shock buffer
- Jog wheel enables especially quick pitch change as well as faster searches.
- In addition to ±12% pitch in 0.1% increments, pitch bend function allows quick ±8% adjustments in pitch.
- Outstanding cue point handling gives you the ability to search within a track for the exact point for playback to start. Precise manual cue points are set using the FF and REW buttons to advance the track one audio frame at a time.
- Frame-accurate searching allows you to hear CD frame as an audible signal, and zero in on a recognizable note of music or word syllable.
- High contrast LCD displays information at a glance, such as time remaining (shown graphically or numerically), end of track monitor, track pitch, scrolling CD-TEXT display, and current play mode.
- 25-pin D-sub GPI Port

**PMD-340**

Step-up Features

- Has the same features and functions as the PMD-331, however, the PMD-340 is specially designed to hold up in the most demanding environments such as broadcast, recording/duplication studios and mastering facilities.
- One of the most durable and reliable professional CD players available, the PMD-340’s extremely durable and reliable CD mechanism includes a die-cast frame, a highly durable, brushless spindle motor, and a high-resolution, heavy-duty precision laser for outstanding tracking.

**PMD-371**

5-Disc Rotary CD Changer

The PMD 371 can receive AMX or Crestron compatible control signals, and play up to six hours of uninterrupted music on 5 discs, during which 3 discs can be changed. It also feature easy programming, the ability to edit a play list for fitting tape length, Introdisc scan (play 10 seconds of every song) and a custom rackmount kit for smooth installation integration.

- Full programming and program editing, random play, single or multiple track repeat
- Change discs while playing
- Audible Cue and Review
- Analog RCA outputs
- Marantz RC-5 Remote Input/Output AMX and Crestron Compatible
- Removable 3U rackmount handles
MARANTZ

PMD-910/ PMD-930

Professional DVD Players

The PMD-910 features 3:2 pull down progressive scan, Dolby Digital and DTS compatibility, and is both NTSC and PAL compatible. In short, it's ideal for corporate and institutional users who demand high definition picture quality and exceptional sound. One rack space installation is possible only with an 1/8” bottom clearance on mid-section. Otherwise, two rack spaces are needed.

The PMD-930 is a global-compatible DVD Player with an RS-232 port offering maximum flexibility. It accepts all DVD discs, including DVD-RW and DVD+RW discs that are rapidly becoming the preferred media for edited video. So DVDs and Video-CDs created by a corporate office or university in another part of the world will play back problem-free in the PMD-930. It also plays MP3 audio files on CD-R and CD-RW discs. Moreover, its operating system can be easily flash upgraded via CD-ROM in the DVD drive to accept future DVD formats.

PMD-910

◆ The PMD-910 will display a range of formats, from DVDs, Super Video CDs, and video burned to DVD-R, to MP3 files. Because timing is critical for presentations, the PMD-910 provides controls for rapid title, track, and time searches and fast file opening.
◆ Delivers stunning Dolby Digital and DTS multi-channel compatible sound. It boasts 96kHz/24-bit audio D/A converters and a four special 3D sound mode for playback of music CDs and MP3 files.
◆ Can be tailored to an installation’s requirements. Audio and video outputs defaults can be changed for bit-stream, downmix, dual mono mode, and 96k sampling rates. Aspect ratios can be set for 4:3 or 16:9. Front key lock prevents unauthorized usage.

PMD-930

◆ The PMD-930 is built to last, offering three times the Mean Time Between Failure (MTBF) of a standard DVD player—45,000 hours. For presentations, the unit provides fine tune controls for color, saturation, brightness and contrast, eliminating the need to adjust a monitor or projector when alternating between multiple video sources such as DVD, VHS, or teleconferencing equipment.
◆ The PMD-930 offers an extensive array of navigation and picture search modes, such as zoom, shuffle, repeat, fast-motion search, and time search capability. It's possible to select A-B points to repeat specific portions of a video.
◆ Allows favorite DVD titles and chapters to be stored in memory. Navigation menus that are hidden by other players can be readily accessed and navigated by the PMD-930.

DV7110P

Professional DVD Player w/RS-232

For any A/V system under wired remote control the DV 7110P boasts an RS-232C port enabling complete control and feedback. It is packaged with a custom rackmount kit to ensure smooth integration into installations. Not only does this DVD player provide exceptional picture quality and 5.1 Dolby Digital and DTS surround sound, but it also plays DVD-R and DVD-RW discs, which are quickly becoming the preferred media for corporate and educational video.
**PHILIPS**

## CDR-795

**Dual Deck CD Player/CD Recorder**

Make your own compilation CDs with the CDR795. This system allows 4x recording and playback of CDs, CD-Rs, and CD-RWs. CD Text capability enhances the display of your CDs (remote control has CD Text capability for further ease). Want to program in advance? Program up to 99 tracks. A Sample Rate Converter keeps digital audio consistent when recording.

- 4x speed precision recording from built-in CD player
- Simple "COPY CD" button for making a quick copy
- Audio Core drive with Bit Sync technology for true copies
- Plays computer CDs with MP3 music (for over 12 hours of music)
- CD Text display, edit and recording
- 2 disc changer mode for long listening
- Archive old cassettes and LPs on CD
- Digital, optical and analog inputs allow recording from any source
- Enhanced Auto Sync Start recording from external analog sources
- One Touch Timer recording from external sources
- Smart Finalizing reminds you to finalize only when needed
- Headphone output with level control

### PMD910
- 45000 MTBF
- Global Compatible
- DVD and Video CD
- NTSC / PAL Conversion
- Super Video CD
- DVD-R, CD-R, CD-RW
- User Upgradable
- MP3 Compatible
- Progressive Scan
- Random / Shuffle Play
- Program Play
- Bar Code Capable
- Bitmap Upgradable
- Startup Screen
- Time Search Direct Play
- Playback Control for Use with VCD & SVCD
- Bitrate Indicator
- Video Shift
- Fine Tune Color, Saturation, Brightness & Contrast
- Black Level Shift Adjustment
- Screen Saver (dim 75% after 15 min.)
- Hide OSD and Icons via RS232

**CDR-820**

**CD Recorder + Integrated 3 CD Changer**

Easy to set-up and easy to use, the CDR820 makes recording CDs a breeze. The 4 disc changer mode plays CDs, CD-Rs, CD-RWs, and MP3 discs. Record your discs at 4x speed in less time. Automatic Level Control allows you to record compilations all at the same volume level. Add CD Text to your recorded CDs or from original CDs on the recorder or use the standard PC keyboard input for easy editing.

- Make your own compilation CDs
- Precision 4x recording from internal CD changer
- Plays computer CDs with MP3 music
- Record compilations at the same volume level with Auto Level Control
- Mix and record your own voice on CD with stereo microphone input
- Add CD Text to your recorded CDs or copy from the original CD
- PC keyboard input for easy editing
- Digital & analog record level control for correct recording volume
- Headphone jack
- Remote control with CD Text input possibility
- Advance and easy programming (99 tracks) for recording compilations
- Sample rate converter for recording from multiple digital audio sources
- Audio buffer for perfect track starts
- Automatic CD Synchro Recording start from all analog & digital sources
- Digital coaxial and optical inputs & line input and outputs
- Direct Line Recording for perfect digital copies (for true bit recording)
- Instruction video tape included

The incredibly unique aspect about MiniDisc is that it is your music. No other audio format allows you to make your own custom, digital recordings—with the ease and flexibility that MiniDisc gives you. And the mixes you record are distinctively your own. The titles you create can be as open as your imagination. Create and re-create mixes as often as you want— you can continually re-record on a single MiniDisc up to 1 million times without any loss of quality. MiniDisc hooks into everything. Record from your favorite digital (CD, DAT) or analog (LP, cassette, radio) music source to make your mixes. Some models even offer high-speed dubbing from CD-to-MD. Record live sound from dictation or, at concerts and lectures using a portable with mic input.

MiniDisc also connects to your PC. You can record music files straight from your hard drive or the Internet. Convert and playback any standard audio format, including MP3, Real Audio, Windows media audio, ripped CD tracks, and Liquid Audio to make your mix complete. Indulge in complete mastery over your music. There isn’t a sound around that MiniDisc can’t add to the mix. No other portable, recordable digital player can do this and still sound so good.

---

**The Perfect Format for Creating and Editing Music Mixes**

**Easy Editing:**
MiniDisc records in non-linear fashion. You can edit the order of tracks with the touch of a button, a feat that is impossible on recordable cassette and somewhat difficult with recordable CDs. You can even store a single song as several fragments if you want to be able to jump right to your favorite part.

**Portable:**
MiniDisc is tiny (2.5”) and is encased in a protective cover, so you can carry lots of discs with you and enjoy hours of music. On the other hand, CDs aren’t nearly as easy to carry around. You can fit four or five MiniDisc in your shirt pocket.

**All Digital:**
MiniDisc recordings have great, clean sound with wide dynamic range, incredible frequency response, low distortion, and no hiss. In addition, MiniDisc has great editing features which allows you to customize your music selections.

**Durable Construction:**
MiniDisc machines are practically unshockable. Their special system for storing information allows your player/recorder to pinpoint the exact position of the laser, even when suddenly bumped. It reacts with incredible speeds to readjust the laser so you hear sweet music instead of sweet music.

**Flexible Playback:**
As the MiniDisc line continues to expand, you are not limited to playback on the go. You can record and playback at home, in your car, and even from your PC.

**Affordable Media:**
MiniDisc media is really affordable when compared to the cost of other standard flash media used in most MP3 players. The average price of a 80 minute MD is under $2, while a 64 MB of flash media (which holds approximately 2 hours of music) is over $60. You don’t have to be so cautious when deciding what to save on MiniDisc; you can build your recorded music library affordably.

### CD Player/MiniDisc Recorder

With the amazing MXD-D40 you can dub from CD to MiniDisc—at 4x normal speed. That means you can record a three minute song in just 45 seconds, or a 74-minute CD in less than 20 minutes. The MXD-D4 has two transports, one for the CD you want to copy, and one for a blank MD. And it’s easy to use. It features dual front-panel jog dials (one for CD and one for MD), plus a large two-line display that shows titling information for CD (if it’s a CD Text disc) and MD. Digital record level control lets you match volumes from song to song when making a “mix MD” from multiple CDs. Of course, you also get all the classic MiniDisc editing functions: titling, instant erase, move, divide, combine, etc. A sampling rate converter lets you make direct digital recordings to MD from non-44.1 kHz sources (like DBS or DAT) via the optical digital input.

- M DLP-compatible, the MD-E470 can record 74 minutes (Standard Mode), 2.5 hours (LP2 Mode), or 5 hours (LP4 mode) on a single disc
- PC Link terminal for full computer control with the optional PCLK-MN10
- Analog and digital recording levels ensure better control over your recordings
- Two line fluorescent display shows title information for both CD and MD
- Automatic CD Text and Custom File transfer via Control A-1 II interface
- Scale Factor Edit enables you to adjust the volume of each track after recording, without disturbing the music itself. Ideal for compiling MDs, discs recorded at different times and from different sources.
- Optical digital input, headphone output

---

### MXD-D5C

**CD Changer/MiniDisc Recorder**

Load five CDs, a blank MiniDisc, and you’re set! The MXD-D5C gives you tremendous functionality and versatility by integrating multi-CD playback, MD recording, editing and playback, and internal high-speed 4x dubbing from CD to MiniDisc—in one compact deck.

- Very similar to the MXD-D40, the MXD-D5C has all the same features except it doesn’t have a PC Link terminal and cannot record in MDLP mode. It does add a PC keyboard input allowing use of any standard PC keyboard for typing in disc names, artist names and song titles.
- Dual front-panel jog dials (one each for CD and MD) and a direct-access remote keep you in control, while a large two-line display keeps you informed. Enter disc/track titles for your MDs; you can even plug in your PC’s keyboard for easy and fast title entry. Additional features include digital record level control so you can match volumes from song to song when you’re mixing from a batch of CDs, and Scale Factor Edit allows you to adjust MD track volumes after they’re recorded.

---

### MZB-100

**MiniDisc Business Recorder**

Lightweight and easy to transport and use almost anywhere, the MZB-100’s built-in stereo flat mic provides convenient recording versatility in a variety of situations.

- Stereo flat mic records separate left and right channels
- Voice Operated Recording (VOR) activates the recorder only when audible sound is present, saving tape and eliminating soundless passages
- Record up to 320 minutes using standard 80 minute MiniDiscs—record business meetings or press conferences without worrying about recording capacity.
- Record 14 hours or playback 45 hours on one AA battery
- Other features include -20%/+10% playback speed control, multiple track marks for later reference, large 3-line dot matrix LCD, built-in front speaker, easy search function, and an external microphone jack.
MiniDisc Recorders

Digital, portable, recordable and virtually unshockable, MiniDisc records music your way. MiniDisc stores your music as computer files so you can Move, Combine and Divide tracks to your heart's content. No FF or REW to search for tracks. Save disc name, track names and artists names. The MDS-JE470 is a basic recorder, while the JB-940 adds a host of extra features including Scale Factor Edit to create professional sounding fade-ins and fade-outs, coaxial digital inputs and outputs, playback pitch control and PC keyboard input for disc and track names.

Highest Quality

- MDLP-compatible, the MDS-JE470 can record 74 minutes (Standard mode), 2.5 hours (LP2 mode), over 5 hours (LP4 mode) on a single disc.
- PC Link terminal for full computer control with the optional PCLK-MN10
- ATRAC Type ‘R’ – the heart of MD recording technology, features error evaluation, a second stage of bit re-allocation and superior processing accuracy to yield smooth, more clearly delineated sound.
- 24-bit A-D converter establishes high precision in the record mode, with a wide dynamic range. Forms the input for Sony’s Wide Bit Stream technology, which maintains 20-bit processing throughout the recording process, for clearer reproduction of delicate, low-level music.

Recording/Playback

- Time Machine recording with 6-second frame buffer lets you hit the record button up to six seconds late and still capture every note. Ideal for recording live events or radio broadcasts.
- CD Synchro Record simplifies making tapes from compatible Sony CD players by releasing from Record/Pause when the CD player goes into Play.
- Sampling Rate Converter lets you record from sources with different sampling frequencies, such as DAT. Automatically converts them to MiniDisc’s 44.1 rate.
- Smart Space function provides a uniform three-second spacing between all songs.
- Play modes include Continuous, Shuffle and Programming of your favorite songs in your own selected sequence.

Editing

- Move, divide and combine tracks—shape your music even after you’ve recorded it. For example, you can combine Track 1 with Track 5 for seamless, uninterrupted play. Perform editing functions like A-B erase—ideal for deleting interruptions like radio commercials. Undo lets you reverse your last move, erase or combine.

Conveniences

- Jog dial for track selection and text entry. There is storage space for hundreds of characters of text, so you can store disc names, track names and artists names.
- Record without first searching for the end of a recorded section—the deck automatically finds blank spots on the disc and records on them without interruption.

PCLK-MN10 PC Link Kit

The optional PCLK-MN10 kit (consists of USB audio device, M-crew CD-ROM, optical and USB cables) allows you to use your PC to remotely operate all transport functions on the MDS-JE470 (and MXD-D40), play audio CDs in your CD-ROM drive and tune into Internet radio stations. You can record music CDs or .WAV files to MiniDisc. You get full editing control of the MiniDisc in the deck. Go through it track by track entering names or other information. Keep track of played or recorded music via a Disc Library, access related websites to the tracks you’re playing, while you’re playing them, set recording and playback timers and even automatically print out MD labels.

MDS-JB940 Step-up Features (no PC Link)

- Scale Factor Edit enables you to adjust the volume of each track after you’ve recorded it, without disturbing the music itself. Ideal for compiling MDs, discs recorded at different times and discs recorded from different sources.
- Variable Coefficient Digital Filter allows adjustment of the audio tone to complement your audio system, listening environment, and the type of source being played. Customize the music the way you want, by changing the slope characteristics of the filter. Operates at 24-bit word length for superlative precision.
- PC Keyboard input enables you to plug in a standard PC keyboard and type in disc names, artist names and song titles.
- Playback Pitch Control lets you change the playback (pitch) speed. Tone rises at higher pitches, and falls at lower pitches. Pitch Control is ideal for speeding up or slowing down foreign language tapes or lecture notes. Also enables you to “fine” playback sharper or flatter, to match your instrument. (You can lower the pitch by up to 36 steps or 3 octaves. Additionally, you can control the playback speed in 0.1% increments from -87.5% to 0.0%).
Professional MiniDisc Recorders

Elegantly housed in a 1RU high enclosure, the MDS-E10 and MDS-E12 are affordably priced professional MiniDisc player/recorders with an impressive list of editing and programming features. They offer pitch control, non-destructive editing and "Hot" starts which allows the beginning of up to 10 songs to be stored in memory for instant start capability. They also include a full function remote control and standard PS/2 keyboard input allowing even easier editing and programming capabilities. With their compact design and remote interface capability they are well-suited for use in variety of mobile A/V, live sound (contractor) and broadcast applications. The MDS-E12 has all of the features and functions of the MDS-E10 plus adds control interface capability (RS-232 and Parallel), rec/play relay control I/O and balanced XLR analog I/O.

FEATURES

**Highest Quality**
- High-quality 24-bit A-D and D-A converters assure accurate sound reproduction
- Sony's Wide Bit Stream technology handles signals during processing at 20-bit resolution providing a dramatic improvement in the accuracy with which low-level signals are processed. Results in higher recording quality, with a wider dynamic range.
- Record levels are adjustable on both digital and analog inputs:

**Conveniences**
- Machine status, audio levels, menus, disc and track info are displayed with a large, easy-to-read fluorescent display.
- The TOC of a disc, even a protected master disc can be copied to RAM and edited without changing the TOC data on the disc.
- Time machine Recording function continuously stores 6 seconds of audio data in its memory buffer ensuring no program material is lost because of missed cues.
- Engaging the Music Sync button puts the recorder into Record/Pause mode waiting for the source deck to begin playback, at which time recording will start.
- Auto Space feature inserts 3 seconds of silence in between tracks.
- Auto Repeat function with four modes: all tracks, current track, shuffle and program.

**High Performance**
- Full-featured TOC (Table Of Contents) editing includes undo, divide and combine.
- ±12.5% vari-speed playback in 0.5% steps in standard mode and +0 to -12.5% when playing back an M DLP2/4 recording
- The first few seconds of up to 10 tracks are memorized to provide an instant, hot start, from any of these tracks. This is useful for radio/DJ and live theater production.
- M DLP (Long Play) stereo recording mode is useful for recording meeting minutes, logging, etc. Two stereo modes are available: x2-for up to 160 mins & x4-for up to 320 mins. (using 80 min. MD media).
- When recording a single, long track, the track to be divided into segments of identical duration. This makes it easier to locate material during editing and production. Tracks can be marked automatically at timed intervals (from 1-10 minutes) or via a level sync mode which detects the start of music after a long pause.
- Scale Factor Edit allows relative levels of various tracks to be changed after recording. This prevents wildly different playback levels, which can occur in productions done from various sources. Fade-in and fade-out can also be added to recorded tracks.
- Up to 1,700 characters can be used to title a disc and individual tracks.

**Input/Output**
- Headphone output with level control
- S/PDIF coaxial and optical digital I/O
- RCA unbalanced analog I/O
- Automatically converts 32 or 48 kHz audio to M iniDisc's 44.1kHz sample rate.
- Frequency response of 5Hz to 20kHz with 97dB dynamic range
- Their front panel is equipped with a standard PC keyboard interface, which allows easier access to remote and track/disc titling functions, plus hot starts. Provides the same functions as the wired/IR remote.
- Supplied dual-mode RM-DR1E Remote Control operates as a conventional IR remote or wired remote when connected to the Control-S jack via supplied 5m cable.

**MDS-E12 Step-up Features**
- Connect several M DS-E12s together with a stereo 3.5mm mini plug for uninterrupted sequential playback and recording.
- RS-232C machine control interface
- Coaxial S/PDIF digital I/O (no optical)
- Switchable XLR balanced and RCA unbalanced inputs and outputs. Balanced outputs are switchable (+4dBu to -10dBu)
- 9-pin parallel remote interface allows external control and monitoring of machine functions including fader start.
DAT Recorders

The PCM-R300 is a semi-professional rackmount DAT machine well suited for the home studio and desktop video suite. Equipped with standard RCA (phono jacks) and S/PDIF digital I/O (both optical and coaxial), the PCM-R300 easily integrates into most any recording environment. It also incorporates the same Super Bit Mapping 20-bit analog to digital converters as Sony's higher-end decks for superior audio reproduction.

Features

- Analog recording supports 16-bit 44.1 and 48 kHz sample rates (standard mode) and 12-bit/32kHz Long Play Mode (4 hours recording on a 120-minute tape).
- Digital input recording accepts sample rates of 32, 44.1 and 48 kHz.
- 20-bit Super Bit Mapping analog to digital converter gives you a S/N spec close to that of an actual 20-bit recording.
- RCA (Phono) line inputs and outputs
- Coaxial and Optical S/PDIF digital I/O
- Headphone output with level control
- Input monitor lets you audition audio without engaging transports. This saves the tape and heads from wear and tear.
- AMS (Automatic Music Sensor) lets you easily shuttle to any track on a tape.
- Program Number and Start, and ID subcodes can be written manually or automatically for direct track number access via remote control or AMS function.
- Jog dial/Shuttle wheel - shuttle wheel allows audible cue and review ±0.5 to ±8 times normal speed (±1 to ±8 times in Long Play mode), while the jog dial is used as a data entry device for menu options and AMS (Automatic Music Search) Program Number access.
- Erase start-ID and skip-ID function
- Repeat function plays a single track or entire tape continuously
- Renumbering function searches all start-Ids from the beginning of the tape and writes consecutive program numbers
- Specific absolute time locations can be temporarily stored and recalled using the Mark and Locate function. Stored locations are lost once a tape is removed or the deck is turned off.

PCM-R500

Step-Up Features

- 4 Direct Drive motor transport ensures a reliable and extremely stable tape path
- Independent record level controls for left and right analog inputs
- Automatically or manually writes Program Numbers, Start Id's, Skip Id's and End Id's subcode information.
- Level sync detection is settable to on or off.
- The ability to recognize CD-Q codes (track numbers) when recording from a CD is settable to on or off.
- Level sync blank time sets how long the audio signal must stay below the sync threshold before a new start ID is written.

5 Reasons to Choose Sony PDP Series DAT Tapes

- The PDP Series employs ultrafine "Chrystal Art" magnetic particles, which deliver high retentivity and outstanding output.
- Sony's H D&R Binder Systems allows for higher densities and better durability, while the special backcoating ensures a tape with low error rates, even after 1000 cycles.
- The anti-static resin lid shuts out dust and other unwelcome particles. Also, the high-precision heat resistant shell prevents warping due to excessive heat.
- Polypropylene material of the case won't crack, even when dropped.
- "Dust-free" lid guards against dust being generated during openings and closings. A stronger lock mechanism and roundish edge construction protect against shocks from falls while also preventing tape slack.

PCM-R700 Step-Up Features

- Key protect function disables certain front panel controls to prevent accidental erasing or manipulation of a tape.
- 4 heads allow confidence monitoring (monitoring off of tape while recording)
- Automatic Fade in & Fade out adjustable between 0.5 to 9.5 seconds
- Memory Start Function (3 seconds) makes the PCM-7040 suitable for on-air applications and audio post production.
- Time Code Reader/Generator, Digital I/O, Memory Start and Edit Memory are all standard.
- Automatic time-stamping of recording
- Start ID level Sync Function enables the PCM-7040 to write a Start ID automatically each time the audio level rises from period of silence and exceeds a selectable audio threshold.
- RS-422 (9-pin) serial remote and RS-232C for convenient control from external equipment and computers.

PCM-7040 Digital Audio Recorder

Supported by a wide range of essential features for DAT recording and editing, the PCM-7040 is the ideal 2-track digital recording solution for professional post production and broadcast. Features such as an onboard timecode reader/generator, digital I/O, memory start, an RS-232 interface and edit memory are standard. Using the internal timecode reader generator, editing, chase synchronization and conversion between the SM/PTE/EBU/FILM and DAT timecode formats is possible. Both drop and non-drop frame rates are supported as well as the ability to reference to composite video, composite sync and blackburst signals or in the case of a digital audio configuration, word clock I/O is also supported. The memory start function stores 3 seconds of stereo audio, overcoming the inherent delay found in a normal rotary head DAT system, thus allowing the instant capabilities required by broadcast facilities.

- 4-head rotary system provides two recording modes:
  - RAW (Read-After-Write) and RMW (Read-Modify-Write). In RAW mode, real-time off tape monitoring is provided. In the RMW mode, the PCM-7040 allows enhanced punch in and punch out operation with crossfading at the punch in and out points.
  - Precision-controlled transport allows ±12.5% variable playback speed. Vari-speed recording is also possible allowing "pull up" and "pull down" ±1% recording sample rates (for example, 48.048kHz or 47.952kHz). Pull up or pull down recordings permit automatic ±0.01% speed change during playback for film/video post production when necessary.
- Memory Start Function (3 seconds) makes the PCM-7040 suitable for on-air applications and audio post production.
- Time Code Reader/Generator, Digital I/O, Memory Start and Edit Memory are all standard.
- Automatic time-stamping of recording
- Start ID level Sync Function enables the PCM-7040 to write a Start ID automatically each time the audio level rises from period of silence and exceeds a selectable audio threshold.
- RS-422 (9-pin) serial remote and RS-232C for convenient control from external equipment and computers.
Sony CDP-D11

Professional CD Player

An incredibly compact—only 1RU high—professional CD player, the CDP-D11 offers a host of state-of-the-art features including instant start of tracks, variable speed operation, a dual mode IR wireless/wired remote controller and connectors for both RS-232C and programmable parallel remote control. Superb audio performance is guaranteed by high density linear digital to analog converters. The CDP-D11’s space saving design includes a slot-in loading mechanism designed for high reliability and with resistance to shock and to high temperatures. A three-second Advanced ESP anti-shock memory is also standard. Outputs include balanced-XLR and unbalanced RCA connectors as well as coaxial and optical digital outputs. Ideal for commercial and professional applications including recording studios, theatres and A/V presentations.

Features

- Instant start allows immediate playback from start of any track
- Mark and locate feature allows user defined spot as cue point.
- Advanced electronic shock protection with 4MB D-RAM buffer (2.972 msec) virtually eliminates unwanted “skipping” due to vibration or dirty CDs.
- Search modes include AMS (Automatic Music Sensor) dial for fast and convenient access to CD tracks and menus, Direct Play and Music Scan
- Three search speeds: Low speed search (2x), standard search (20x), and high speed search (80x)
- Play and repeat modes include Program and Shuffle, A-B repeat is also available
- Auto cue pauses track at the start of music. Sound level (threshold level) can be selected from five levels (-72dB, -66dB, -60dB, -54dB and -48dB).
- ±12.5% pitch control in 0.5% steps
- Last Memory Mode retains the last settings after the unit is turned off and returns to them when power is turned on.
- Connect with an external timer to start or stop playback at a specified time.
- Long-duration sequential playback can be achieved using several CDP-D11 units connected via the Relay Play input and outputs (using a stereo mini plug cable). After a first unit ends, a control signal goes through the jack and makes a second unit start to playback automatically.

Remote control via RS-232C or parallel remote control ports. The parallel remote can be user-assigned to control and monitor several functions of the machine.

Flexible interfacing includes balanced XLR and unbalanced RCA connectors for analog output and coaxial and optical S/PDIF (IEC 958 type II) digital outputs.

Supplied dual-mode wired/IR wireless remote controller connects to the 3.5mm Control-S jack with a supplied 5m cable. Wired remote control is ideal for use in installations with multiple players. Or simply operate as a wireless remote if desired.

CDP-3100

A professional CD player with superb sound quality, the compact CDP-3100 features 18-bit 8x oversampling D-A converters, fader start function, end-of-track alarm, AES/EBU digital output, balanced analog outputs, and headphone and monitor outputs for previewing of cue point.

It also features extensive transport control and location functions such as Jog Search, CD frame-accurate location, “Instant Start”, selectable timer modes (Remaining, Actual and Set Time), single play mode and index mode, and ±12.5% variable speed playback when equipped with the optional CDS-3100 remote control or DABK-3101 Memory Board.
**CD-R/CD-RW Recorders**

Even among professional CD recorders, the CDR-W33 and CDR-W66 stand apart. Three DSP functions fine-tune your sources. There’s a limiter with adjustable ratio. A 3-band EQ. And Super Bit Mapping circuitry captures near 20-bit quality on industry-standard 16-bit CDs. Physically similar and sharing many features, both the innovative CDR-W33 and the CDR-W66 feature 24-bit A/D and D/A converters, easy-to-read fluorescent display, sample rate converters, CD-Text support and are rack mountable (2RU). Remote transport control can also be accessed via Control-S or a PC keyboard. In addition, they include a dual-mode wireless/wired remote control.

**Designed for budget-conscious users**, the CDR-W33 is equipped with RCA analog as well as coaxial and optical digital (S/PDIF) I/O. The CDR-W66 adds balanced XLR analog and AES/EBU digital I/O, Word Clock interface, RS-232 and parallel (GPI) control ports, and 2x speed duplication link for dubbing audio titles (using 2 CDR-W66 units), making it ideal for mid-to-high-end recording studios and TV/radio broadcast production. On the CDR-W66, DSP functions are available on digital inputs as well as analog.

**Features**

- 24-bit A-D converters work together with the Super Bit Mapping (SBM) filter to provide natural sounding 20-bit quality when converting 24-bit data to 16-bit data.
- Digital limiter lets you maximize recording levels without introducing distortion caused by hard clipping. The limiting ratio is adjustable up to 100%–at which the gain is increased by 6 dB.
- Built-in digital 3-band (Bass/Mid/Treble) parametric EQ provides up to ±6 dB of correction (in 1 dB steps) allowing you to change sound character.
- Record disc and track name in CD-TEXT format. You can record up to 23 characters each for disc name and track name.
- For convenience, it offers synchron-recording with a similarly equipped Sony CD Player.
- 32-48 kHz sampling rate converter lets you record not only CD and MiniDisc 44.1 kHz signals, but also 32 kHz and 48 kHz signals from digital sources such as DAT, satellite digital broadcasts and DVD.
- Skip setting function lets you create discs that skip unwanted tracks (when playing back) from among those that have been recorded. (Requires compatible player).
- Record level adjustments is available on both digital and analog inputs.
- CD-TEXT function allows disc/track names to be displayed and entered from either the front panel AMS controller, the supplied remote control or an optional PC keyboard.
- Equipped with useful recording functions such as fader (adjustable between 1 and 8 seconds), mute recording (4 seconds or as long as you press the mute button), music sync recording (automatically starts recording, depending on the input signal), and auto track marking.
- Playback functions include shuffle and program mode, auto-pause, music scan (play the start of tracks one after another), and repeat play (1 track/all tracks/A-B repeat).
- Equipped with both analog (RCA) and digital (optical and coaxial) inputs and outputs.
- Supplied dual-mode wired/IR wireless remote controller connects to the Control-S jack with the supplied 16-ft. cable. Wired remote control is ideal for use in installations with multiple players. Or simply operate as a wireless remote. A PC keyboard can also be used to control transport functions.

**CDR-W66 Step-up Features**

- All DSP functions including Super Bit Mapping (SBM), digital limiter and EQ can be applied to both the analog and digital AES/EBU inputs. (CDR-W33 only enables DSP functions on the analog input.)
- Unique 32-to-96 kHz sample rate converter allows compatibility with higher resolution music recording formats.
- RS-232C and 9-pin parallel connectors allow the CDR-W66 to be externally controlled from a PC or remote-control options such as GPI triggers (fader starts).
- Duplication bus link allows 2x speed CD dubbing from one CDR-W66 to another.
- Adds XLR-balanced analog inputs/outputs plus AES/EBU digital I/O.
- Word Clock input assures accurate sample clock synchronization to other digital audio sources.
- User-selectable SCM S (via menu) allows you to select the level of SCM S copy-prohibit data written to the disc. CDs may be written with the maximum level of protection or none at all.
FOSTEX

PD-4M

Professional Portable Timecode DAT Recorder

A complete, all-in-one portable field recorder, the PD-4M combines a professional four head timecode-enabled DAT recorder with a three-channel mixer in one lightweight but rugged package. Used in award-winning movies and television shows throughout the world, the PD-4M meets all the requirements of the demanding professional on location, in a package that actually rivals a studio production DAT recorder in quality and capability. The PD-4M features three XLR-balanced mic/line inputs, confidence monitoring via the four head transport, variable frame rates and sampling frequencies including 48.048kHz for digital video, full timecode recording including JAM sync, on-board three channel mixer with mic attenuation, phantom power, low-cut filter, limiter on each channel, and a headphone matrix. Powered by on-board NP-1B type batteries (or via an optional AC adapter), weighing less than 7 lbs and equipped with a unique “Anti-Jam” transport mechanism, the PD-4M is designed for the most demanding field work—whether in film, video, live music or ENG applications.

- 3 into 2 XLR-balanced mic/line mixer with independent gain control, -20 dB pads, 3-position (left, center, right) pan switches, 48v phantom power and high pass filter variable between 20Hz to 250Hz for each channel and a master output control.
- Sampling frequencies are selectable between 44.1kHz, 48kHz and 48.048kHz (for digital video).
- XLR-balanced AES/EBU and S/PDIF digital I/O
- A switchable stereo limiter prevents transient peaks from overloading tape.
- Choice of monitoring using 1/4” headphone output or the built-in speaker.
- Subcode functions include PNOs (Program Numbers) and Start ID's
- Comprehensive illuminated display with transport direction tallies, timecode, level and subcode status.
- Panel lock feature prevents unwanted operation of the transport and false triggering of keys out in the field.
- Operates for two hours on a single NP-1B battery. Can also be powered by a power belt or optional AD-15 AC adapter.

D-5

Affordable Full-Featured DAT Recorder

An affordable full featured DAT recorder, the D-5 features balanced XLR analog I/O and AES/EBU digital I/O, three selectable sampling rates, and +4 or -10dBu compatible analog inputs. It also offers a unique jog/shuttle function that makes audible cue and review of a tape a snap.

- Supports 16-bit recording at 48, 44.1kHz sampling rates and 12-bit/32kHz in Long Play mode. Long Play doubles the amount of recording time available on tape for long recording sessions.
- 3x and 5x speed audible CUE/Review in playback, 300x search speed (under 60 seconds for a 120 minute tape) and Automatic Index search for locating Start ID’s.
- Auto recording of Start-IDs and Program-Numbers (PNOs)
- Margin display with reset key, numerically references the highest input level in dB, aiding in setting optimum input levels.
- Recognizes CD-Q codes (track numbers) via the S/PDIF input. This ensures accurate Program Number (PNO) encoding when digitally recording from CD.
- SCMS free recording allows unlimited duplication of DAT tapes
- AES/EBU and optical S/PDIF digital I/O as well as XLR-balanced analog I/O. Inputs are switchable between +4dB and -10 dB.
- GPI input for external transport control, ID search and fader starts.
- 1/4” headphone jack with level control
Professional Timecode DAT recorders

A very affordable timecode capable DAT recorder, the D-15 series offers XLR-balanced analog and AES/EBU digital I/O, jog/shuttle wheel and instant start capabilities, essential for professional audio applications. A 4-motor transport ensures rock solid performance as well. Upgradable or available with the ability to read and output timecode (D-15TC) at any frame rate or RS-422 machine control (D-15TCR).

**Features**

- Supports 16-bit recording and playback at 44.1 and 48kHz sample rates.
- 18-bit, 64X oversampling A-D and 20-bit, 8X oversampling D-A converters.
- Efficient 4-motor transport (2-DD) for stable performance and reliability. Up to 200x search speeds.
- Jog/Shuttle allows you to audibly cue or review tape at 1/2 to 2x speed in jog mode and 1/2 to 15x in shuttle mode.
- Input reference levels can be set to -12, -18 or -20dB. Default setting is -12dB.
- Instant start without pre-loading into RAM or you can use the 10 second RAM buffer for locating specific start points.
- 100 locate points can be stored in memory for editing complex tapes.
- Auto Record when used in conjunction with memory locate points 00 and 01 allows punch-in/out recording with a 5 second pre-roll. Locate points can be rehearsed before executing the punch.
- Skip ID mode allows three selectable options; stop, play or off.
- Auto Cue mode enables automatic recording of Start-IDs and PNOs. Auto Cue mode is executed when the initial sound threshold level is exceeded. Cue levels are settable to -55, -40, -30 or -20dB.
- Analog and digital inputs can be made active without engaging transports.
- Individual front panel trim pots for reference level calibrating. Allows control of input levels in ±2dB increments.
- Level trim controls adjust the balanced and unbalanced analog outputs.
- Front panel lockout function.

**Inputs/Outputs**

- XLR balanced and RCA unbalanced I/O
- XLR balanced AES/EBU and optical S/PDIF digital I/O
- 37-pin interface for external control of transport functions, RAM scrubbing and ID writing/searching.
- GPI input and output for control of the transport functions and RAM scrubbing.
- Headphone output with level control.

**D-15TC and D-15TCR**

Intended for professionals who need to sync to video sources, the D-15 when outfitted with the optional timecode expansion card is the lowest price professional timecode capable DAT recorder available. The D-15 has two expansion slots in the rear. The 8335 External Sync card can be installed for video reference facilitating striping of the tape with externally generated timecode and output of LTC or AbsoluteTime (ABS). AbsoluteTime can also be converted to LTC giving you the option of referencing externally to Video or World clock.

The second expansion slot may be used for the addition of the 8336 RS-422 protocol Serial Card (with the exception of vari-speed command). The 8336 board allows you to have your controllers shuttle the machine to desired locations. (Note, the 8336 must be used in conjunction with the 8335 Sync Card).

- Reads, writes and chases externally generated timecode. Can input and output LTC through its XLR or RCA I/O.
- Supports 24, 25, 29.97 and 30 frames per second (drop and non-drop frame).
- Timecode can be offset against master machine.
- Can reference to external video or word clock (BNC connectors).
- 9-pin RS-422 control.
- 8335 option card adds TC capability to standard D-15.
- 8336 option card adds 9-pin RS-422 port to D-15TC.
Portable DVD-RAM Location Recorder with Timecode

When Fostex started out to design a successor to their PD-4 portable timecode DAT machine, they had set for themselves no easy task. Having invented both timecode and portable timecode DAT, Fostex location recorders had become, and still are, the most widely used and respected DAT machines for film & television sound production around the world, helping their users win many coveted international awards. That's why they knew it was important to follow the design and philosophy processes that had made their previous machines the first choice of sound mixing professionals. Namely, to prove the technology in a stationary, stand-alone format and obtain comprehensive and wide-ranging user-feedback. The result of this process is the PD-6. A portable location recorder which offers six audio tracks, timecode-locked DVD-RAM recording plus full-function integrated mixing, industry-standard BWF file format, IEEE1394 interface, pre-record memory buffer and extensive time code facilities—all in a rugged, lightweight and proven design.

**FEATURES**

- BWF recording file format (interleave 1 file mode) in either 2, 4, 5 and 6 track modes along with simultaneous two file recording modes of 1+5 and 2+4 tracks for guide track audio.
- UDF (Universal Disc Format) on DVD-RAM allows discs to be mounted and read instantly on both PC and Mac platforms.
- On-board timecode generator with ± 1ppm accuracy and built-in backup offers all frame rates including 23.976 and 29.97 plus drop and pull-up/down. Generator can be 24H, Rec Run, Free Run or external complete with jam, while output can be repro or generator derived.
- BWF files recorded on the PD-6 can also be imported directly into Avid Film Composer (depending on software version) along with information about Scene, Take, Reel Number, Event, etc. being transported from the files Metadata. (The Metadata area is user-editable for future expansion).
- Circle Take to mark files/takes for easy identification leading to quick imports and EDL references.
- Alphanumeric keypad for quick file/take and track naming, EDL manipulation, location, etc. Attach full-size keyboard via USB for easy alphanumeric entry and keyboard shortcuts.
- Up to 100 cue points per file/take.
- Option of SDII and AIFF file recording modes via software update.
- EDL management built-in to create & edit multiple ALE (Avid Log Exchange) compatible edit decision lists per DVD-RAM.
- IEEE1394 interface for fast back-up and restore. When interfaced to PC, PD-6 DVD-RAM discs can be mounted on desktop.
- Pre Record enables PD-6 to constantly buffer up to 10 secs of audio (no more missed takes).
- 128 x 64 back-lit dot matrix display offers various display modes including alternative level meter resolution indication modes and provides for high visibility with low power consumption.
- Digital I/O selectable between AES/EBU and S/PDIF has auto input sensing, overriding individual analog inputs as required.
- Auxiliary bus input/output provides for remote camera working and monitoring (e.g. HD cam) and is switchable between +4dBu, -10dBu and -60dBu to cater for most camera manufactures requirements. Provided on industry standard 10-pin Hirose connector.
FOSTEX

PD-6

- Slate mic and tone generator on-board
- Flexible monitoring through headphones and/or built in speaker & amplifier. All track combinations can be monitored post-disc either individually or in summed mono and stereo modes. MS monitoring as standard. Aux return and stereo bus live monitoring is provided plus individual channel PFL. All accessed through just two rotary and one toggle switch.
- External power supply input works within 12-24v range for greater flexibility (use the optional AD-15B AC power supply).
- NP-1 type battery provides approximately 2 hours of operation
- Two auxiliary 12-volt outputs on standard Hirose 4-pin connectors provide power for radio mic receivers, etc. to allow for truly self-contained operation on location
- External word & video sync inputs (auto selection) and word output plus parallel remote connector
- Optional AATON connector complies with ASCII & LTC I/O specifications for external loggers, synchronizes, etc.
- Automated file/take naming routine speeds set-up time between takes complying to US and Euro standards. Individual track naming rolls through to next file/take until changed by user, if required
- Comprehensive software selectable UBIT output format combinations including Scene, Take, Event no., etc.
- Propriety expansion connector allows the PD-6 to dock with Fostex rack-mounting full-size DVD-RAM & power supply unit for extended recording time on location.
- An optional back-up hard drive is available to mirror the PD-6’s main DVD-RAM drive.

Applications
- Post Production, Archiving, Logging
- Stereo mixdown, Final Master sequencing
- Field Dialog and Music recording
- Live concert recording
- Broadcast playback
- Theme Park playback
- ADR (Automatic Dialog Replacement)
- Commercial background music source

Full-Featured On-Board Mixer

The six channel mixer accepts either microphone level, with both 12v T-Power and 48v phantom power, or line level. Phase reverse is provided on the three even channels while each channel features adjustable input gain; a generous defeatable and variable high pass filter; and a digital limiter with user adjustable characterizes via software.

The most ingenious part of the mixer however is the routing capability: working in conjunction with each channel’s level control mounted on the face of the PD-6, the ‘Disc Feed’ switch allows the recording section of the machine to derive its audio ‘feed’ PRE the channel level control, meaning levels are set once with the earlier trim pot, leaving the front level controls for bus mixing; POST of the channel level control providing for regular level adjustment on the easily-accessible controls; or from the Stereo Bus, routed by the PAN switch providing not only simple stereo mixing of all six channels, but also by using a combination of the modes, parallel mix (guide) tracks can be made while recording of either five tracks (mono guide track) or four tracks (stereo guide track) Fostex calls these “1+5” and “2+4” recording modes as separate BWF files are created. Additional features such as PFL monitoring and peak led indication on each channel complete this very flexible mixer.
FOSTEX

DV40

DVD-RAM Master Recorder

Working hand-in-hand with post production facilities, sound mixers, broadcast professionals and recording houses, Fostex have developed a mastering machine ready to handle every application and exception in today’s, and tomorrow’s, constantly changing and challenging audio environments. In short, you can now move from Timecode DAT to ‘Timecode DVD-RAM’ with supreme confidence.

The future of post production recording, the DV 40 is designed to replace (tape) DAT technology in a mastering format by recording audio data directly onto a DVD-RAM disc. The DV 40 employs the UDF file format mode that establishes file compatibility between computer-based work stations. You can select either SDII or BWF (.WAV) as the desired audio format and either 24-bit or 16-bit resolution. This means you can take your media out of a DV 40 and load it right into a Pro Tool based computer editing system without doing any file format conversion.

FEATURES

DVD-RAM Recording Format

◆ The successor to DAT tape, DVD-RAM has already established itself as the film industry’s preferred media format due to its built-in error correction and longevity. This security is enhanced by the use of ‘Verify/Write’ technology which constantly examines the recorded data being stored on DVD-RAM, in real-time, for total error-free recording.

◆ To ensure the widest range of compatibility throughout the industry and maximizing the DVD-RAM technology, the DV 40 can record up to four channels of simultaneous audio in a vast number of permutations.

◆ Offers two recording modes: New File and Insert. The Insert mode offers Time Jump UNDO functions supported by time and date. In Tape mode (destructive mode) data security for accidental power loss is secured up to the point where the power loss occurred. For back up and archiving a Disc duplicate mode is available by installing an optional hard drive, while Audio file duplicate modes are possible on board.

◆ DVD RAM incorporates Defect Sector Management to prevent data being recorded to defective sectors on a disc. DVD-RAM also offers extensive error code correction with more resolution than DVD-R/RW.

Universal Disc Format

◆ As the DV 40 employs a UDF (Universal Disc Format) file layout, its DVD-RAM media can be removed, (or accessed via the house media network), and instantly read by Mac and PC workstations running a variety of operating systems. This can be a huge time saver as it alleviates the costly process of having to convert audio data through third-party programs beforehand.

◆ DV 40 discs be read by any operating system (Windows, Mac, Linux, etc.) which makes it easy to transfer audio files to and from the DV 40 for external editing.

◆ Records in industry standard SDII (Sound Designer II) or BWF (Broadcast .wav File) formats (more in development). Both formats can exist together on the same DVD-RAM disc and have been enhanced by the ability to include Fostex User Bit (UBIT) information in the file format.

◆ DV 40 files can be set-up as 4-track (Multi), stereo or mono files in 24- or 16-bit resolution with a vast choice of sampling frequencies: 44.1, 48, 88.2, 96, 176.4 and 192kHz. A 0.1% pull up/pull down can also be applied to the selected frequency. (Optional HD installation required for 88.2 & 96kHz/4-track and 176.4 & 196kHz recording.

Editing

◆ Once files have been recorded or imported, they can be processed with built-in non-destructive editing functions such as Copy, Paste, Insert, Cut and Erase with a virtually unlimited number of Undos.

◆ Editing functions are made easy with the combination of a high precision tracking jog/shuttle wheel and a clear and concise FL display. The large high-resolution (200 pulses per rotate) jog/shuttle dial and clever digital tracking technology result in incredible analog audio scrubbing.

◆ File backup and duplication functions are also provided, either to the same DVD-RAM disc, or via the fitment of an optional internal hard disc drive.

◆ The DV 40 offers internal file conversion between four-track or stereo files and multi-track mono files. File editing modes offer non-destructive edit functions such as Copy, Paste, Insert, Cut and Erase.

◆ Editing can also be enhanced with the installation of the optional VGA I/F graphics card. The plug-in card enables easy file management and waveform editing via an external VGA monitor. There is also a back panel port to interface to an ASCII 2 keyboard for inputting file names, TC locations, etc.
Superb Audio

- Delivers superbly transparent, natural sounding audio recording and playback. It produces up to 110dB of clear, quality audio with an incredibly wide 20Hz - 80kHz frequency range.
- The recording reference level can be set in software to -12dB, -18dB or -20dB with fine recording level adjustment on each channel ensuring a good match with the incoming audio feed.

User-Friendly Ergonomics

- The DV40 offers the most user-friendly interface ever seen on a professional recorder. The clear and concise front panel features a large multi-function fluorescent display, oversized illuminated transport keys, a large high-resolution (200 pulses per rotate) jog/shuttle dial and the kind of logical button and switch layout which makes any new user feel instantly at home.
- For example, cue point store and recall functions are based on the BWF format. Direct location of internal memory points and other locate functions such as Last Record Start/End points and Last Play Start point can easily be accessed via simple key presses.
- A front-panel alphanumeric keypad makes for quick and simple file naming (up to 255 characters) and direct timecode entry, etc. while the added advantage of being able to add a standard PS/2 keyboard and pointing device via front-mounted sockets will be appreciated in busy edit suites.
- In addition to UDF PD-6/DV40 files, DV40 can also read files created on other manufacturers recorders in FAT16, BWF Interleaved format complete with timecode information.

Optional Accessories

5050 2-CH: With the optional 5050 2-CH (6-channel playback kit), the DV-40 can read the 6 track files created by the PD-6, simply by putting the disc in the DV40's tray. (A software update is provided allowing the meters to be switched between all six channels.

VGA: VGA video output option

HD OPTION: Internal hard drive kit

Timecode

If the audio quality and editing facilities offered by the DV is spectacular, it's the implementation of the timecode facilities which really sets the DV-40 apart. Here is a machine which elegantly addresses the challenges presented by today's 'random access' requirements. And it is here that Fostex's expertise from a lifetime in timecode DAT design for post production facilities to sound mixers through machines such as the D-20, D-10 and portable PD-4, really comes into its own.

- Includes all the standard clock references of word and video and has the ability to resolve to incoming timecode and finish with a regenerated video sync output. That means the DV40 not only reads timecode and sync to any external sync reference, but will also generate and regenerate timecode in all the industry standard formats.
- Built-in timecode generator will generate, regenerate and externally synchronize via 24 hour run, record run, free run and external run modes at all standard frame rates including the 23.97 HD camera mode.
- Timecode formats and LTC offset can be individually set for each new file and being able to switch between timecode and audio formats (with pull-up and pull down), helps solve tricky standard problems which can occur when using high-definition video.
- Offsets can be captured and adjusted on the fly while the display can be scrolled to indicate generator timecode, absolute time, disc timecode, external timecode and remaining time all with simple key presses. Plus with 1/3rd to 100x play speed, the reader will always keep up with external equipment.

DVD RAM offers some outstanding features over the other DVD technology families:

- Can store data safely for 30 years.
- DVD-RAM discs can be played without their cartridge if desired. The Cartridge provides an extra layer of protection and also stabilizes the disc in DVD-RAM drives.
- You can have upwards of 100,000 record and erase cycles on a DVD-RAM disc.
- Uses redundant addressing and timing information, making the chance of losing data, rare.
- DVD-RAM offers the Wobble Land and Groove recording format. This improves clocking and the actual writing (deep burning) of the data.

Interfacing Capabilities

The DV40 features an incredibly comprehensive set of analog and digital I/O interfaces on the rear panel—as one would expect from a machine of this caliber.

- Each of the four audio channels feature balanced XLR inputs individually switchable between +4dBu and –10dBV and the highest quality 24-bit/192kHz AD converters.
- The outputs are provided on both balanced XLR again with 24-bit/192kHz DA converters as well as 1/4” unbalanced phone jacks for easy monitoring hook-up.
- Digital input and output for all four channels via the AES/EBU format (doubling up for 176.4/192kHz) on XLR connectors.
- Flexible headphone monitoring is provided on the front panel with switchable source selection for Track 1+2, Track 3+4, Track 1+3/2+4 and each track individually.
- Interoperability and system integration is taken care of via 9 and 15 pin RS-422 connectors, the latter also providing a 12V 400mA power source for future remote control applications. Both interfaces comply with the 9-pin protocol for VCR emulation and Fostex's own extended instruction set.
- The standard complement of timecode, video sync and word clock inputs and outputs are via BNC style connectors.
- 10Base-T/100-BaseT Ethernet (RJ-45) port and firmware-selectable GPI for remote control, fader starts and 5-ID location rounds off the interface capabilities. The ethernet port allows the DV40 to transfer files via FTP in the media network.
Continuous Duty MD Cart Player/Recorders

The DN-M991R and DN-M991RM are sleek MiniDisk decks that slide into the same 1/3-rack space as the professional Denon CD and cart decks, even using the same audio and remote connections. Ideal for broadcasting, features include 10-track hot start function, a buffer to prevent skipping and ±8% pitch control. They also have a pre-UTOC system that prevents loss of data in case of power failure, and they can be set to start a second deck while recording if the first disk becomes full. Identical in every respect, the DN-M991RM adds five on-air and production features; Visual E.O.M., record and mode lock out, five-minute skip search, high-speed title scroll and long title text.

Record Functions
- Record 74 min stereo, 148 min mono
- Record up to five cue points per track.
- Relay recording allows continuous recording to another DN-M991R
- SCM5 on/off
- In Auto Level Record function, they automatically start recording when an audio signal from a connected unit exceeds the preset level (-36 to -66dB, 6 steps).
- Denon’s pre-UTOC system is capable of detecting a power failure during recording and can play back the portion that was recorded immediately prior to the failure.

Playback Functions
- Rotary track selector knob
- Next track reserve; allows a seamless transfer to your next selected track
- ±8% pitch control in 0.1 steps
- Fader start when connected to a mixer via its 25-pin parallel remote terminal.
- Play modes include single, continuous and Program (up to 25 tracks). Finish modes include Stop, Next, Rescue and Repeat.
- Cue search (up to 5 cue points per track)
- Auto Cue pauses where audio starts, not where the track starts. (Levels can be set between -36 and -72dB or turned off).
- END MON lets you instantly preview the end of the track, to ensure perfect “outs”.
- Monitoring starts can be set within a range of 5 to 35 seconds in 7 steps).
- End of Message (EOM) flashes at the end of a track. Warnings can be set within a range of 5 to 35 seconds in 7 steps).

Editing Functions
- Basic editing functions include: Divide, Erase, Combine, Move, Track and Disc Name. Cue signals can also be edited (erased, rewritten, or added to later). There are two levels of undo and redo.

Hot Start Functions
- Up to 10 tracks or cue points can be instantly played on demand. Ideal for sound effects, commercial spots or music.
- Tracks can be loaded into Hot Start by detecting the Auto Cue Level (selectable -72, -66, -60, -54, -48, -42 and -36 dB).
- Sound can be loaded into Hot Start from any track location.
- Loaded tracks can be replaced with new tracks.
- Seamless Loop can be used during Hot Start playback.
- Hot Start operation is possible using parallel remote, serial remote or a keyboard.

Additional Features
- Sampling rate converter allows digital inputs of 32 and 48 kHz as well as 44.1 kHz.
- Automatic or manual track increment. In auto, they detect the silent portion of the program material and automatically increase the track number. Silent portion can be set within -36 to -66dB in 6 steps.
- Playback, recording, program input, editing and Hot Start via an optional keyboard.
- Slim chassis, 3 units fit in a 19” rack shelf.

Inputs/Outputs
- Stereo or mono output
- Balanced XLR input/outputs (adjustable)
- AES/EBU digital input/output
- Switchable RS-232/422 serial port
- 1/4” headphone output
- Optional RC-650 wired remote control

DN-M991RM Step-Up Features
- Displays a visual end of message (EOM) allowing messages of next track cue, phrase cue, etc.
- Airlock prevents accidental recording even if the lockout tab on the disc is left enabled.
- 5 minute Skip Search through long single track field recordings save editing time.
- High speed title scroll for quick track and disc name recognition.
- Long Name Text/Rescroll lets you leave the important part of the track name on the display for visual reinforcement. Also allows for easy rescrolling of disc and track names.
Professional MiniDisc Recorder

The DN-M1050R is a rackmountable MiniDisc recorder designed for all professional applications. Engineered for studio and broadcast environments, it includes a comprehensive list of editing functions and can be controlled by an external keyboard. Cue signals can be recorded (up to five points per track) at desired points on a disc for quick referencing. A cue tally signal is output from the parallel port at cue signals during playback and can be used to control other devices. Also, A-B sections can be erased or inserted at any point within a track. An optional Hot Start card allows up to 20 tracks to be loaded into memory locations for instant playback at the touch of a key on a parallel remote, serial remote or external keyboard. And an optional SMPTE card provides sync capability with VCR controllers—ideal for post-production applications mixing video with audio.

**Features**

**Record Functions**
- Record 74min stereo, 148 min mono
- SCMS on/off
- Record up to five cue points per track.
- Auto Level Record function automatically starts recording when an audio signal from a connected unit exceeds the preset level (-36 to -72dB, 7 steps).
- Automatic track increment detects the silent portion of the program material and adds a new track with adjustable level sensitivity.
- U-TOC (User Table Of Contents) recording is selectable (Auto or Manual).

**Playback Functions**
- Instant start—playback starts less than 0.01 seconds after play button is pressed
- Play modes include single, continuous and Program (up to 25 tracks). Finish modes include Stop, Next, Rescue and Repeat.
- Cue search (up to 5 cue points per track)
- ±9.9% pitch control in 0.1 steps
- Auto Cue pauses where audio starts, not where the track starts. (Levels can be set between -36 and -72dB or turned off).
- END MON lets you instantly preview the end of the track, to ensure perfect "outros". Monitoring starts can be set within a range of 5 to 35 seconds in 7 steps.
- End of Message (EOM) flashes at the end of a track. Warnings can be set within a range of 0 to 35 seconds in 7 steps).

**Optional Cards**
- ACD-26HM Hot Start Kit
  - Up to 10 tracks or cue points can be instantly played on demand. Ideal for sound effects, commercial spots or music.
  - Tracks can be loaded into Hot Start by detecting the Auto Cue Level (selectable -72, -66, -60, -54, -48, -42 and -36 dB)
  - Sound can be loaded into Hot Start from any track location
  - Loaded tracks can be replaced with new tracks
  - Seamless Loop can be used during Hot Start playback
  - Hot Start operation is possible using a parallel remote, serial remote or a keyboard

- ACD-25FSM
  - Sampling Rate Converter
  - Digital input and output is possible at 32 and 48 kHz as well as 44.1 kHz

- ACD-27MS
  - SMPTE Time Code Sync Unit
  - Conforms to LTC time code format
  - Time Code chase search
  - Video Sync or Word Sync is selectable in preset mode.
  - Word Sync signal supports 44.1 kHz

The DN-M1050R makes a perfect match when combined with the DN-C680 CD Player. Since its basic design is the same as the DN-C680, the DN-M1050R lends easily to the construction of a uniform operating environment.
**DENON**

**DN-780R**

**Twin Output Auto-Reverse Cassette Deck Recorder**

With its dual auto reverse decks, the DN-780R excels at a variety of dubbing and continuous playback applications. Each deck features amorphous heads, non-slip reel drive, Dolby B/C noise reduction and 12% pitch control. Extremely versatile, the DN-780R’s twin output design makes a host of configurations possible, while an Auto-Standby mode ensures you never miss a second recording when cassettes reverse direction or when recording moves from deck A to deck B. Housed in a standard 19”, 3RU chassis with an aluminum front panel.

**FEATURES**

- Quick Auto Reverse and non-slip reel drive components and permalloy heads
- Simultaneous recording on both decks
- Normal and double speed dubbing modes
- Independent return-to-zero, precision music search, tape counters, ±12% pitch control, auto tape selector, and fluorescent peak hold level meters for each deck
- Dolby B and C noise reduction system, Dolby HX Pro headroom extension
- An MPX filter eliminates the 19kHz pilot tone present in FM broadcast sources

**Inputs and Outputs**

- Unbalanced RCA I/O for each deck
- Two unbalanced 1/4” mic inputs on the front panel, with switchable Manual/Auto Gain Control, can be monitored with or without recording to tape
- Headphone output with selectable Deck A, Deck B, or Mix monitoring

**Continuous Record and Playback Functions**

- Independent dual deck functionality, coupled with twin inputs and outputs, allows for advanced playback and recording capabilities including:
  - Playback or record of two separate signals at the same time;
  - Playback on one deck while recording the same or a separate signal to the other deck;
  - Use the Relay Play/Record feature to cycle through both sides of deck A and then both sides of deck B for four sides of uninterrupted playback or recording
  - Multiple DN-780R’s connected via the Cascade In/Out terminals’ provide the ability multi deck relay recording and playback
  - Multiple synchronized recordings can also be made using one or more DN-780R’s

**Optional ACD-780 I/O board**

- Provides independent XLR inputs and outputs for each deck
- Separate Input Select switches per deck facilitate selection between balanced and unbalanced XLR inputs
- A Mono Output switch gives you the option of +18dBu (CD) and +4dBu (Tape) mono output from the unit’s Left channels or -10dBu mono output (CD and Tape) from the unit’s Right channels

**Remote Features**

- Built-in Serial D-Sub 9 pin (RS-232C) connection; Parallel D-Sub 25 pin connection; and Mini TRS connection, support remote Play, Fast Forward, Rewind, Stop, Pause, and Record/Record Mute functions
- Remote control options include the RC-U620 hand held IR remote, the RC-41 wristwatch IR remote, and the RC-770TW wired remote

**DRW-585P**

**Double Cassette Deck**

The DRW-585 is an attractive and affordable dual-well, high-speed dubbing cassette recorder. It offers many convenience features that also enhance the performance. While only one transport is capable of recording, there are separate counters for both decks, and both are equipped with Dolby B and C noise reduction as well as HX-Pro to improve playback. Loaded with playback options, the DRW-585 has a replay button that, when activated, plays through both sides of the A deck, then automatically plays the B deck. Normal and double-speed recordings benefit from a manual bias adjustment that lets you set the bias according to your own preferences. Both transports are backlit so it is easy to see how much tape is remaining, or when you’re passed the leader tape at the beginning of a recording.
**CD/Cassette Combo Decks**

The DN-T625 and DN-T645 are professional combo decks that combine the functionality of a single well of the DN-T820R advanced quick auto reverse cassette deck with a Compact disc player that offers direct track access and 10 second shock memory. The CD player on both units are capable of CD and CD-R(W) playback with the DN-T645 adding the capability of MP3 playback. Both units feature a wide range of flexible I/O including unbalanced (RCA) and balanced XLR I/O as standard along with coaxial SPDIF digital output multiple external control options including RS-232C control that allows the units to to be controlled by remote systems such as AMX and Crestron.

### FEATURES

**General Features**
- Duplicates CD to cassette internally
- Cascade In/Out terminal set can be used to link several units together for extended continuous play
- Relay Playback function for continuous play between the CD and cassette decks

**Both CD Players Feature**
- Playback support for CD-R/RW discs
- Instant start / Cue to music; Stop, Next and Recue finish modes; Next Tr Reserve mode
- ±12% Pitch control in 0.1 steps
- Single and Continuous playback modes, and Program Play (up to 99 tracks)
- 3 repeat modes (Single Track, All Tracks, A-B) for continuous playback, as well as Random mode playback
- An 11 key keypad and a rotary knob are provided for direct track access and programmability as well as Frame Search and Back Cue functions
- Able to display CD encoded text through the use of a highly visible FL tube display
- 10 second Shockproof memory
- Adjustable user presets

**Both Cassette Decks Feature**
- Auto Reverse Full-Logic mechanism featuring a two motor quick reverse mechanism
- ±12% Pitch control
- Music search
- Dolby B and C noise reduction
- Single or Selectable playback cycles
- Memory rewind
- The REC Input source is switchable between internal CD (with CD deck sync recording) and external line input
- Cueing enhancements such as Memory Rewind (Return To Zero) and an Auto Reverse Full-Logic mechanism featuring a two motor quick reverse mechanism

**Inputs/Outputs**
- Stereo balanced XLR and unbalanced RCA inputs with selector switch for tape deck
- Stereo balanced XLR and unbalanced RCA outputs for the CD player
- Stereo balanced XLR and unbalanced RCA outputs for the the tape deck (switchable as a CD/tape mix output)
- Coaxial S/PDIF output
- Headphone output has a level control and source selector switch determines the output signal (CD, tape or mix)
- XLR Balanced Mono Output switch, which gives the option of +18dBu (CD) and +4dBu (Tape) mono output from the unit's respective Left channels or -10dBu mono output (CD and Tape) from the unit's respective Right channels

**External Control**
- AMX & Crestron compatible Serial D-Sub 9 pin RS-232C control port
- Stereo mini hard wire control compatible with Phillips RC5 control
- Options include the RC-U620 handheld IR remote, the RC-41, wristwatch IR remote, and the RC-620 wired remote

**Additional Features**
- A Power On Playback function can be used for automatic playback at a specified time when using an external timer
- Housed in a standard 3R unit with an attractive aluminum front panel with independent FL tube displays for both CD and cassette decks
- Optional AM C-22 lens cleaner

### DN-T645 Adds

- MP3 Playback
- MP3 Folder Search by ID3 Tag; File, Title, Artist & Album
- Automatic Gain Control recording
- H.X PRO headroom extension
- Stereo 1/4” TRS McC inputs

**External Control**
- RS-422A
- DB 25 Parallel
DENON

DN-C635

Industrial CD/MP3 Player

An affordable CD player with an amazing feature set, the DN-C635 is equipped to take on the most demanding tasks in broadcast, DJ, production or installation applications. MP-3 capability, proprietary Super Linear Converter with 18-bit, 8x oversampling digital filter prevents left/right timing errors and zero cross distortion. Three customizable presets allow you to store over 25 of the DN-C635's functions for instant recall. Balanced-XLR and unbalanced RCA line outs as well as a coaxial digital output get you connected, while the large, easy to read fluorescent display will keep you on top of transport status and the multiple programming functions.

FEATURES

◆ 18-bit digital filter with 8X oversampling offers clear, crisp sound.
◆ Index Search, A-B repeat
◆ Instant start (within 0.01 sec from PLAY)
◆ Search accurate to one frame (1 frame = 1/75th sec.)
◆ MP3 playback (folder, artist, album, title)
◆ ±12% playback speed including MP3
◆ Auto Cue pauses a track where audio starts not where the track starts. The level at which sound is first detected can be set between -36 and -72 dB in 7 steps or off
◆ Three program modes (up to 25 tracks) and two power-on playback modes
◆ Play modes include continuous (whole disc) or single (track). Finish modes included Stop (after playing a track or disc), Next (standby at the beginning of the next track) and Recue (standby at the beginning of the same track)
◆ Rotary Track Select Knob allows easy track selection by 1x or 10x normal speed
◆ ±9.9% long stroke variable speed (pitch) fader is adjustable in 0.1% increments. Speed can also be adjusted ±3% in increments of 0.2% using a preset function.
◆ A bar graph display indicates playback points on the track being played. Elapsed time and remaining time displays are switched using the TIME button.
◆ End Monitor lets you instantly preview the end of the track, assuring a perfect “end point”. Monitoring can be set from 5 to 35 seconds in 7 steps prior to track end.
◆ Sleep function stops the player if there isn’t an entry for 30 minutes
◆ As a track nears the end, an EOM (End of Message) is displayed. When the warning begins can be set from 0 to 60 seconds in seven steps prior to the end of the track.
◆ ‘Next Track Reserve’ lets you select and reserve the next track to be played back. When the current track finishes, the unit plays back the reserved track.

Inputs/Outputs

◆ Unbalanced (RCA) and adjustable XLR balanced stereo line output. Also offers level controls for L & R balanced outputs on the back panel.
◆ Digital coaxial (RCA) output
◆ Stereo headphone jack with volume control
◆ 9-pin serial and 25-pin parallel connectors allows fader start operation from a mixer

DCM-280 5-Disc Carousel CD Changer

The DCM-280 is a very affordable CD changer that allows you to change four discs while one is playing. To ensure high quality, the DCM-280 is equipped with a Digital servo laser mechanism, 8x oversampling digital filter and multi-level DAC ensure high quality. Has a headphone jack and includes an infra-red remote control and rackmount kit (3RU high).

◆ 20-Selection Music Calendar Display
◆ 3-mode random playback (Full, Program and Disc Sequential Random)
◆ Combine up to 32 tracks from the five or fewer CDs which are loaded.
◆ Disc Skip button can rotate the carousel tray clockwise or counter-clockwise when searching for a disc. (Counter-clockwise rotation is operable only by remote controller.)
◆ Large, Easy-to-use read FL Display
◆ 8x oversampling digital filter makes possible an extraordinary degree of attenuation and reduces frequency irregularities in the audio range to an absolute minimum.
◆ Advanced Multi-level Noise Shaping DAC removes jitter, and because it is built into the output amp, a clean analog output with suppressed high-frequency interference can be directly obtained.
DENON

DN-C680

Industrial CD Player

The DN-C680 represents the best in CD technology developed by Denon for studio and broadcast production applications. A step up from the DN-C630, the DN-C680 adds Auto Edit and Auto Space functions, jog/shuttle dial and switchable RS-232 or RS-422 control (as well as parallel remote control). A sampling rate converter and SMPTE time code sync unit are also available as options. The DN-C680 also makes a perfect match when combined with the DN-M 1050R MiniDisc recorder. Since its basic design is the same as the DN-M 1050R, the DN-C680 lends easily to the formation of a uniform operating environment.

Same as the DN-C630 PLUS—

- Large fluorescent display and illuminated rubber buttons
- Jog/shuttle for frame accurate searches and fast, easy scans
- When recording CD to tape, the Auto Edit function automatically divides the total recorded time on the disc in half and rearranges the tracks so that they fit neatly onto the A and B sides of the cassette.
- Switchable 9-pin RS-232/RS-422 serial remote for external control
- Auto Space function provides 4 seconds of silent space between tracks

Optional Accessories

ACD-25FSC Sampling Rate Converter—converts digital output to 32 kHz or 48 kHz as well as outputting 44.1 kHz.

ACD-27CS SMPTE Time Code Kit—Conforms to LTC format, Time Code Chase Search, selectable Video Sync or Word Sync

DN-C615

Industrial CD/MP3 Player

The DN-C615 is a heavy duty, rackmountable single CD player with MP3 capability, ±12% pitch control, repeat functions, 4-second auto spacing, Auto Edit, and timer play. Ideal for aerobics and dance lessons, it can also be operated remotely via the optional RC-41 Wristworn Remote Control.

- 20-bit digital filter with 8x oversampling and noise shaper offer clear, crisp sound.
- MP3 Folder Search; File, Title, Artist & Album
- Pitch Control (±12%, 0.1% step)
- Auto space function provides 4 seconds of silent space between tracks
- Direct track selection via 11 numerical keys on the front panel
- Program Play (20 tracks), 20-track music calendar display
- When recording CD to tape, the Auto Edit function automatically divides the total recorded time on the disc in half and rearranges the tracks so that they fit neatly onto the A and B sides of the cassette.
- Repeat function includes the entire disc or programmed selections
- A-B repeat function lets you repeat the designated starting (A) and ending point (B). Once you set the repeat phrase via the front panel, you can control Play/Pause with the optional RC-41 wristwatch.
- Time Counter - elapsed/remaining/total
- Unbalanced stereo output (RCA)
- Digital coaxial output
- Headphone output - fixed level
- 19” rack mountable (2RU)

RC-41

Wristwatch Remote Controller

The optional RC-41 "Wristwatch" Remote Control is designed for aerobics instruction, dance lessons and other activities where the instructor needs remote control but can’t use a conventional wired remote. Operates seven commonly-used functions: Play, Pause, Pitch ±, Cancel Varied Pitch, Next Track and Previous Track.
DN-H800  
5-CD Changer with Tuner

Ideal for installation in bars, restaurants and clubs, the DN-H800 is a professional 5-CD changer with an AM/FM tuner.

Features include RCA analog and balanced XLR outputs for CD and Tuner, CD pitch control (+/-12%, 0.1 steps), 5-way repeat, selectable timer switch operation, Intelligent Disc Scan and the ability to remove CD without interrupting current playback. In addition, the AM/FM/FM Stereo Tuner adds RDS (Radio Data System) functions including PS-program service name, CT-clock time, PTY-program type and TP-traffic program searches.

- Three way operation: via front panel, optional RC-H800 remote control, wired control terminal on rear panel.
- Three random playback modes (all disc random play; disc sequential random play or program random play) and 5-way repeat: single track; entire disc; all loaded discs; stored program sequence; random playback.
- Intelligent Disc Scan allows the carousel tray to rotate clockwise or counter-clockwise when searching for a disc.
- Up to four discs can be exchanged while the fifth disc is playing.

DN-951FA/ DN-961FA
Professional Cart/Tray CD Players

The standard for broadcast CD players, the DN-951FA and DN-961FA combine professional grade construction with a full complement of features. Identical except for their tray loading systems, they serve as workhorse CD players in thousands of radio stations and other professional installations around the world. The DN-951FA is the CD Cart version, offering top reliability when the CD media is subject to rough handling (in the DJ booth, control room, etc.). Housed in the secure cart, CDs are protected from mishandling, especially surface scratches. The DN-961FA is the tray loading version, featuring quick load/unload, just like a conventional CD player, the choice wherever the CD media isn’t subject to abusive handling.

- Startup time is .01 second or less. A delay start of .1, .2, or .3 second is available via user preset. Startup via track flag or program material beginning is possible.
- End Monitor function allows tracks ending to be monitored. End monitor start position can be user-set within a range of 5 to 35 seconds from the end of the track.
- Auto Cue and Back Cue functions:
  - Auto Cue: Pickup is cued to the position within the track where the sound starts and then paused. The sound detection level can be set from -36 to -72 dB.
  - Back Cue: When standby (STDBY/CUE) button is pressed during playback, the standby mode is set with the pickup at the position where playback was last started.
- Single and continuous playback modes
- Variable Pitch (0 to +3% in 0.2 second increments)
- Displays EOM (End of Message) indicating the track is about to end. Warnings can be set within a range of 5-35 seconds from the end of the track.
- Up to 28 presets to customize operation.
- Can read CD-R discs without final TOC, such as multi-session CD-Rs that have not been finalized.
- Play start input connector and delay start function for use with mixing console fader.
- 9-pin RS-422A serial port for external control plus a 25-pin parallel port for the optional Denon RC-680 remote control.
- Auto Track Select (DN-951A Only) reads bar code info off the disc caddy for automatic “pick” track selections.
DENON
DN-C550R

Professional Dual Drive CD-R/RW Recorder

Now it is easier than ever to create CDs in one, all-inclusive package. A professional, rack-mountable CD and CD-R/RW deck the DN-C550R offers a wealth of playback and recording options. Using a mixer, you can playback both of the unit's two drives at once, or program tunes from each drive to be played in whatever sequence you choose. Equipped with professional features such as balanced XLR and coaxial S/PDIF inputs (SCMS defeatable), the DN-C550R is the perfect choice for high-quality CD recording.

FEATURES

◆ The analog XLR inputs feature full 24-bit A/D conversion for highly accurate recordings from analog sources, while the digital inputs use a digital sampling frequency converter to convert 32kHz and 48kHz to the CD standard 44.1kHz.

◆ Text input feature allows disc and track names to be entered for display on the easy-to-read front panel for instant recognition and simple documentation of discs.

◆ The DN-C550R is packed with features allowing its interface with many of the compact disc formats available today:
  — Drive 1 can be used as a dedicated playback deck, accepting both pro and consumer CDs, CD-Rs, and CD-RWs, as well as supporting playback of HDCD encoded discs via the built-in HDCD decoder.
  — Drive 2 functions as either a CD-R/RW recorder, or as a second playback drive (same playback functions as Drive 1).
  — Both drives are also PC/data disc compatible, while both analog and digital inputs of Drive 2 are SCMS defeatable.

◆ Dubbing can be done in real-time or at 2X speed for fast and seamless duplication (HDCD dubbing compatible).

◆ Several different recording modes are also available:
  — Scan Rec Dubbing Mode allows selection of specific tracks for recording, while Disc Dubbing Mode records all information, including HDCD data and user-input text, from one disc to the other.
  — In Synchronized Recording function, recording begins as soon as a signal is seen.

◆ A wide variety of playback modes are also incorporated into the DN-C550R.
  — Repeat Mode lets you select one or all tracks from Drive 1 and/or 2 for repetitious playback.
  — The Relay Play Mode gives automatic, continuous play from Drive 1 to Drive 2.
  — Mix Program Play Mode supports programmed playback of one or both discs, and the Mix Random Play Mode plays random selections from Drive 1 and/or 2.
  — Dual Play mode lets you play discs simultaneously in both drives. Since sound can be output independently from each drive, you can connect a mixer to enjoy mixing the sound.

◆ Selectable Copying (Dubbing) Mode
  — All Track dubbing: Entire disc or programmed tracks are recorded (manual finalization)
  — Make CD dubbing: Entire disc or programmed tracks recorded (auto finalization)
  — One Track dubbing: Records selected track (manual finalization)
  — Scan Rec dubbing: Tracks selected in Intro Scan are recorded (manual finalization)

◆ Selectable Synchro Recording Mode
  — "Disc Sync": Recording is automatically triggered to copy entire disc when the external source player is started.
  — "Make CD": Recording is automatically triggered to copy entire disc when the external source player is started.
  — "1 Tr Sync": Recording is automatically triggered to copy selected single track when the external source player is started.

DENON DP-DJ151 ANALOG TURNTABLE

The DP-DJ151 allows you to record directly to CD-R, MiniDisc or hard disk through its exclusive coaxial digital output. The output maintains a constant 16-bit/44.1kHz signal, regardless of the rotational speed setting. This provides a quick and easy way to archive your vinyl digitally or to capture "samples" for studio remixing.

With the built-in RIAA Phono Equalizer, the DP-DJ151 allows for direct connection to any device that requires a "line level" RCA stereo input, like a cassette deck, sampler or any other audio device that doesn't have a built-in "phono" input.
**TASCAM**

**MD-301MKII**

**MiniDisc Recorder**

An affordable but durable MiniDisc recorder, the MD-301MKII provides maximum flexibility and reliability. Balanced XLR and unbalanced RCA ports offer easy integration with PAs or studios of any level. Digital S/PDIF optical I/O allows digital transfers, while another optical input on the front panel makes it easy to connect portable units without crawling into the back of the rack. For further convenience, there is a front panel keyboard input for easier track naming, offers TOC editing functions and includes a wireless remote control with 10-key for direct track access.

- 20-bit A-D and D-A converters and ATRAC v4.5 compression offer top sound quality
- Play modes include program (up to 25 tracks) and random; Repeat modes include one track, all tracks and A-B repeat.
- Monitor the input signal of the component connected to each input—before recording.
- In sync record, the deck starts recording when the input audio exceeds a certain level and pauses when the audio drops below a certain level for 4 seconds or more.
- When simple recording of long material is required, the MD-301MKII can be flipped to a 148 minute mono recording mode.
- Overwrite function lets you record music by erasing a previously recorded track.
- Track information (start address, end address, title, etc.) is recorded in the U-TOC (User Table of Contents) area. Tracks can be edited by simply rewriting the data.
- Timer function lets you start/stop recording at a preset time (with optional timer).
- Equipped with balanced XLR and unbalanced RCA inputs and outputs as well as two S/PDIF optical digital inputs and one output. Has a headphone output with level control, and a front panel keyboard input.
- The front panel PS/2 port allows you to plug in an inexpensive keyboard for easier track naming, TOC (Table of Contents) editing functions and remote control.
- Includes wireless remote with numeric 10-key and is rackmountable (2RU high).

**MD-350**

**Live MiniDisc Recorder**

The MD-350 has all the features of the MD-301MKII plus it incorporates advanced performance functions, making it the best value for live venues, houses of worship, or budget conscious broadcasters. The MD-350 incorporates version 3 ATRAC encoding allowing up to 320 minutes of record time on a standard 80 minute MiniDisc, and it offers pitch control with a clear on/off switch on the front panel. Finally, cueing functions like Auto Cue and Auto Ready, as well as a complete complement of analog and digital I/O including a digital optical port on the front, make the MD-350 a must have for any theater or cue playback intensive situation.

- 12% pitch control function with a clear on/off switch on the front panel.
- In LP4 mode, the MD-350 can record and playback for up to 320 minutes on a standard 80-minute MiniDisc.
- Auto Cue positions the machine to the first audio in a MD track, rather than the actual ID location. This eliminates dead space in the beginning of the track, allowing tighter cues for live shows or on-air environments.
- Auto Ready pauses the machine at each track ID allowing an engineer to cue in one track and forget about the machine - it automatically sets itself at the next cue. Also prevents the machine from accidentally rolling into the next cue on the MD.

**Same features as the MD-301MKII PLUS—**
Professional MiniDisc Recorder

The ultimate MiniDisc recorder, the MD-801RMKII is designed to meet the most demanding needs for theater, recording studios, and broadcast applications yet still offer the flexibility to integrate with simple installations. The MD-801RMKII provides all the amenities needed in live environments with advanced cueing functions, and a separate cue output for checking a signal without sending it to the main output. Plus, the optional BU-801 RAM buffer can be added for true instant start functionality. All the I/Os needed to make the connections are built in. The MD-801RMKII can be controlled via keyboard, RS-232 port or 37-pin parallel port. There are two wired remotes optionally available.

FEATURES

- Uses highest-quality 20-bit A-D and D-A converters and ATRAC v4.5 compression to offer top sound quality
- Offers thorough editing capability via the front panel buttons, or with a PC keyboard connected to the PS/2 port
- ±9.9% pitch control
- On the digital side, Word Clock In and Thru allow you to clock to another source on playback. This is key for integration into larger digital set-ups with a central clock source.
- Soft mute eliminates clicks when pausing and restarting
- SCMS Copy ID modes (copy prohibit, one generation limit, no copy protection)
- Built-in clock for time stamped recordings
- Optional BU-801 RAM buffer for true instant start—turns the MD-801RMKII into a powerful tool for assembly editing or sound cue drops.
- Balanced XLR main I/O with fine calibration controls; unbalanced RCA I/O; digital AES/EBU and S/PDIF coax digital input/output
- Analog output offers the additional ability to split the balanced XLR and unbalanced RCA outputs into “cue” and “main” outputs, so you can check your cues easily before sending them to your mix.
- PS/2 keyboard port for easy editing and remote control
- Headphone output with level control
- Cueing functions on the MD-801RMKII make live productions easier:
  - Auto Cue positions the machine to the first audio in an MD track, rather than the actual ID location. This eliminates dead space in the beginning of the track, allowing tighter cues for live shows or on-air environments.
  - Call returns the machine to the cue where play began. This is useful for setting cue points in the middle of a track.
  - Auto Ready pauses the machine at each track ID. Ideal for live environments, this lets the engineer to cue in one track and forget about the machine - it automatically sets itself at the next cue. Also prevents the machine from accidentally rolling into the next cue on the MD.
  - Incremental Play will automatically advance to the next track when play is stopped.
- Multiple control ports allow the MD-801RMKII to be controlled by a variety of standards:
  - The PS/2 keyboard port allows transport control and editing functions from a standard PC keyboard.
  - The RS-232 port allows serial control from any number of automation/control systems.
  - Optional RC-8 (simple wired) and RC-801 (full-function) remotes

RCA acts as separate monitor output for engineer cueing purposes.
Master Quality DAT Recorder
An economical master DAT recorder, the DA-20MKII delivers solid, reliable performance with true CD sound quality. Well suited for home studios, "b" rooms and video suites, the DA-20MKII's S/PDIF digital and unbalanced RCA connectors allow integration with most of today's desktop video editors and digital audio workstations.

- Supports 16-bit recording at 48, 44.1 kHz sampling rates and 12-bit/32kHz in LP (Long Play) mode. LP doubles the amount of recording time available on tape for long sessions like sermons or conferences.
- Program Numbers can be renumbered if accidentally inserted out of sequence.
- Auto ID level switching offers four selectable audio levels (-30/-40/-50/-60dB) for easier, more accurate start ID encoding.
- Sampling monitor displays a visual confirmation of analog or digital source signals.
- Margin display with reset button continuously displays maximum peak level in dB.
- Titling and other text (take #, version #) of up to 60 characters per track.
- Self-diagnostic function warns of potential problems like condensation, irregular tape tension, dirty heads or a damaged tape.
- Last memory function retains auto ID and input selector after powering down
- Includes a wireless remote control

Inputs/Outputs
- Unbalanced RCA inputs and outputs, coaxial digital I/O, single stereo input level control with left/right balance

DA-40/DA-45HR Professional DAT Recorders
Found in recording studios around the world, the DA-40 and DA-45HR offer balanced and unbalanced analog and digital inputs/outputs to ensure compatibility with a wide range of audio gear as well as video editing equipment. Well constructed rackmount chassis, large easy to read display, and comprehensive setup menus complement their sonic excellence. And like the DA-20MKII they feature text editing capability, allowing tape and program titles to be inserted in the subcode of the tapes for cataloging and identification. The DA-45HR has all the features and functions of the DA-40—except it is equipped with 24-bit record capability—making it the ideal mixdown deck for today's high-end digital audio workstations (DAWs) and mixers.

All the features of the DA-20MKII PLUS—

- Shuttle wheel (up to 12x speed) for audible cue and review and refining locate points. Data wheel selects program numbers and changes menu and parameter settings.
- Margin display is measured in 1dB increments between 40dB and 20dB and 0.1 dB increments between 19dB and 0dB.
- Counter mode switches between Absolute Time, Program Time and time remaining.
- Two assignable locate points (with selectable 0 to 5 second pre-roll) memorizes precise locations for quick access to any point on a tape.
- Displays Program Number, Margin Mode, Digital Audio Frames mode and Block Error Rate mode.
- Auto ID level detection is selectable from -48, -56, -60, -66 and -72dB.
- Shuttle wheel (up to 12x speed) for audible cue and review and refining locate points. Data wheel selects program numbers and changes menu and parameter settings.
- Margin display is measured in 1dB increments between 40dB and 20dB and 0.1 dB increments between 19dB and 0dB.
- Counter mode switches between Absolute Time, Program Time and time remaining.
- Two assignable locate points (with selectable 0 to 5 second pre-roll) memorizes precise locations for quick access to any point on a tape.
- Displays Program Number, Margin Mode, Digital Audio Frames mode and Block Error Rate mode.
- Auto ID level detection is selectable from -48, -56, -60, -66 and -72dB.
- Supports 16-bit recording at 48, 44.1 kHz sampling rates and 12-bit/32kHz in LP (Long Play) mode. LP doubles the amount of recording time available on tape for long sessions like sermons or conferences.
- Program Numbers can be renumbered if accidentally inserted out of sequence.
- Auto ID level switching offers four selectable audio levels (-30/-40/-50/-60dB) for easier, more accurate start ID encoding.
- Sampling monitor displays a visual confirmation of analog or digital source signals.
- Margin display with reset button continuously displays maximum peak level in dB.
- Titling and other text (take #, version #) of up to 60 characters per track.
- Self-diagnostic function warns of potential problems like condensation, irregular tape tension, dirty heads or a damaged tape.
- Last memory function retains auto ID and input selector after powering down
- Includes a wireless remote control

- Unbalanced RCA inputs and outputs, coaxial digital I/O, single stereo input level control with left/right balance

- Supports 16-bit recording at 48, 44.1 kHz sampling rates and 12-bit/32kHz in LP (Long Play) mode. LP doubles the amount of recording time available on tape for long sessions like sermons or conferences.

- Unbalanced RCA inputs and outputs, coaxial digital I/O, single stereo input level control with left/right balance
Two DAT decks work independently or in tandem. Recording on both decks simultaneously allows you to create a master and back-up master in one pass.

High speed (2x) and real time dubbing lets you clone any DAT including subcode and timecode information.

Continuous long format recording from Deck 1 to Deck 2 at 32kHz, records up to 8 hours on two 120 minute tapes.

Append dubbing allows dubbing from any position on the master tape.

Loop function when enabled starts the master deck after the last slave deck finishes continuous play/record operation.

Seqtime sets the start time for Deck 2 during continuous record. This feature extends to continuous recording when cascading multiple DA-302s. Settable in 1 or 15 minute increments between 0H15M00S and 2H30M00S.

Independent SPDIF digital and RCA analog I/O for each deck. An optional balanced analog I/O kit (LA-D302) offers stereo inputs and 2 sets of stereo outputs.

External control for multiple unit operation with analog and digital cascade outputs.

Optional WR-7000 synchro cable allows DAT clones from one DA-302 to another.

DA-60MKII
Professional Timecode DAT Recorder
You won't find a better 4 head synchronizable DAT value than TASCAM's DA-60 MKII. With complete Sony P2 support, the DA-60 MKII behaves like a VTR and can be integrated with edit controllers and hard disk systems, making it the perfect DAT for post-production environments. More importantly, its onboard synchronizer and improved servo system means virtually instant lock-up times. And with advanced A/D and D/A converters, the DA-60 MKII delivers extremely high dynamic range and very high signal to noise ratios.

DA-302
Dual DAT Recorder/Duplicator
A unique dual mastering DAT deck with high speed dubbing and continuous recording capabilities, the 3RU high DA-302 can make an exact clone of any DAT tape including all subcode information. Flexible and easy to use with exceptional sonic quality and reliability, it is ideal for archiving, mixdown, duplicating and installation. Cascade multiple DA-302's to work in tandem.
102MKII

Professional Cassette Recorder

A precision built, rack mountable cassette deck with excellent sonic performance, the 102MKII offers outstanding value for musicians, system contractors, studio operators, schools and theaters. A three space rackmount design (rack ears included) makes it easy to integrate into any studio setup.

- Dolby B/C noise reduction and Dolby HX PRO extend high frequency performance up to 6 dB and minimize distortion
- HX Pro improves recording quality at high frequencies without increasing noise or distortion. Benefits any tape, regardless of the playback deck
- CPS search function finds the track you want by scanning up to 20 tracks at high speed until 4 seconds or more of blank tape is detected, then enters play mode
- Automatically chooses optimal settings for any type of tape — Normal, Metal or Cr02
- Bias Fine Tuning lets you customize high frequency response
- Left and Right balance control and master record level control
- Multi-counter with both 4-digit tape counter and realtime modes
- Record/mute autospacer automatically inserts 4 seconds of silence between tracks
- Intro Check gives you a 15 second preview of each selection before advancing to the next track.
- Multi function display indicates transport mode, tape counter position, Dolby system, tape type and peak level metering.
- Unbalanced RCA input/output
- 3.5mm CD/ Synchro-Dub jack
- Headphone output

202MKIII/302MKII

Dual-Well Auto Reverse Cassette Decks

The 202MKIII and 302MKII have all the great sound and convenience of the 102MKII plus they add bi-directional dual deck capability making them ideal for multi-purpose recording and dubbing as well as studio applications. Both their decks can record, so you can make two masters of the same source at the same time. You can also use double deck capability for extended recording/playback applications. And two mic inputs make them convenient for recording of groups — great for music teachers or business meetings. The 302MKII steps up with individual audio I/O for each well, pitch control, optical leader sensing, a wired remote control. For long format recording or playback, cascade audio and transport logic is included to automatically trigger multiple machines in succession.

All the features of the 102MKII in a dual deck design

- The decks can be used separately or in tandem during recording and playback.
- Play deck 1 while deck 2 records in either real time (1-7/8 IPS) or high speed (3-3/4 IPS) dubbing.
- Record simultaneously on both decks from an external master in Parallel Mode.
- Continuous mode lets you play/record both sides of Tape 1 and 2 in sequence (repeatable up to 5 times).
- Rev Mode determines when play/record stops: at the end of one side of a tape, after both sides of a tape are played, after both sides of both tapes are played or recorded.
- Teac compatible CD Synchro Dub jack
- Auto Reverse function reverses tape direction during playback and record.
- Synchro Reverse dub reverses the playback and record deck at the same time. Ideal when using different cassette lengths.
- Blank Scan skips long portions of tape (10 seconds or more) and fast forwards to the next section of audio.
- Infinite looping during playback.
- Pre-program playback or recording, when used with a standard commercial timer.
- Independent L/R stereo LED meters
- Dual high impedance 1/4” mic inputs on front panel allow live stereo recording.
3-Head Cassette Deck

A 3-head cassette recorder that puts unprecedented value into your studio, the ruggedly constructed 130 virtually guarantees pristine recording and playback results with years of dependable operation and uncompromising sound. Features such as confidence recording, ±10% pitch control, return to zero (RTZ) function and auto tape select give you the extras you need, so you can work quickly and confidently.

Same features as the 102mkII (no CD Synchro-Dub Jack and CPS Search) PLUS—

- 3-heads provide confidence monitoring so you know exactly what is being recorded.
- Auto Monitor function allows signal monitoring to match the play/record status of the deck. During playback, tape is monitored. In Rec/Pause, input source is monitored. Record mode monitors off-tape.
- RTZ (Return-To-Zero) fast winds the tape to the tape counters zero reference point.
- ±10% pitch control assures accurate playback speed of cassettes recorded on other decks. Makes matching pitch with other instruments a snap.

322

Independent Dual-Well Auto Reverse Cassette Deck

In applications where long-capture or playback is essential, nothing doubles your performance better than the 322. Two fully independent cassette decks housed in a 3U rack-mountable enclosure, the 322 elegantly adds a suite of dubbing and duplicating features to your arsenal. Ideal for musicians and contractors in a wide variety of applications including music studios, boardrooms, house of worship, live venues and more.

Same features as the 202mkIII PLUS—

- Separate RCA inputs and outputs, transport functions including RTZ function, level controls and metering for each deck.
- ±10% pitch control for each deck.
- Up to ten 322s can be connected in series via the stereo RCA cascade outputs and 3.5mm external control I/O (with optional WR-7000 synchro cables) allowing:
  - Sequential playback of multiple cassettes
  - High speed simultaneous dubbing to multiple cassettes
  - Recording an external source to multiple cassettes simultaneously
  - Record separate sources to multiple cassettes simultaneously
**Master Cassette Decks**

Production workhorses, Tascam’s Master Cassette Decks are known throughout the industry for their outstanding performance, stability, and reliability in a wide range of applications. They each feature a parallel port, Dolby B&C noise reduction with HX Pro, an advanced Servo control system and more.

Ideal for production mastering and mixdown, the 112MKII features a parallel port for external control and with the optional LA112 balanced connector kit can be integrated into any studio. Stepping up with Auto reverse and a 3-head design that allows off tape record monitoring the 112RMKII provides exceptional playback for engineers and contractors.

The industry standard for production and broadcast facilities, the top-of-the-line 122MKIII features balanced and unbalanced input/output, gear and clutched input level controls, precision servo direct-drive capstan motors, and a built-in oscillator adjustment signal with front panel bias and level calibration controls.

They All Feature

- Input mode selects the input signal to be monitored at all times.
- Automatically selects the input signal to be monitored in Rec/Rec Pause modes or tape to be monitored in play mode. The 112RMKII and 122MKIII also allow off tape monitoring in record mode.
- LOC 1 and LOC 2 buttons each store a locate point giving you one button access to any two points on a tape.
- Repeat button allows looping between two points with one-touch convenience.
- Precision VU meters with peak LEDs
- ±12% pitch control.
- Front-panel ¼” phone jack line inputs take priority over the rear-panel inputs.
- Rec mute with auto spacer function.
- Dolby B/C noise reduction and Dolby HX Pro headroom extension system.
- MPX filter removes 19Hz and 38kHz tones used in FM broadcasts that can interfere with Dolby B and C operation.
- Return-to-Zero (RTZ) function

Inputs/Outputs

- 25-pin parallel ports provides external control of transport functions when used with the optional RC-134 Remote (122MKIII and 112MKII), or RC-112R (112MKII)
- The 112RMKII and 112MKII can be upgraded for balanced operation with the optional LA-112 expansion kit
- Headphone jack with level control

**112RMKII Only**

- Auto Reverse has two modes; one-time mode plays both sides of a tape once, while continuous reverse mode plays both sides of a tape in a continuous loop.
- Direction button switches tape to other side for playback or recording.
- Tape-end tally signal allows multi-deck operation for continuous recording or playback with two or more decks.
- Compumatic Program Search goes directly to the beginning of a track by sensing 4 seconds of blank space in between 2 tracks.

**122RMKIII Only**

- Three-head transport with separate high-performance record and playback head.
- Equipped with balanced XLR I/O as well as unbalanced RCA I/O ensuring compatibility with all types of recording equipment.
- 400Hz/10kHz calibration oscillator and front-panel record level and bias trimmers. Bias and level are independently adjustable for the left and right channels.
- Hysteresis Tension Servo Control (HTSC) maintains consistent back tension on the tape all through the reel, eliminating wow and flutter.
- Precision FG servo direct-drive capstan motors provide the highest standards of reproduction quality and performance.
CD Player
The CD-150 is a solid, straightforward, rackmountable CD player that easily integrates into almost any environment. A host of convenient features such as Auto Cue, 6% pitch control, timer play function, keypad and programmable playback, make the CD-150 ideal for audio and radio production, as well as DJ, fitness clubs and PA installations.

- Program and shuffle play modes. Program up to 32 songs to playback in any order. Visually review the program to ensure its accuracy. Repeat modes include one track, all tracks, A-B repeat.
- Auto Cue locates track’s first audio-bypassing intro or subcode information. This allows a song to start instantly.
- ±6% Pitch Control with clear on/off switch
- Intro Check plays only first 10 seconds of each track on the disc
- Time counter display is switchable between total disc playing time, elapsed time and time remaining of current track and total remaining time of disc.
- 10-key numeric keypad for direct access to any track
- Analog stereo (RCA) outputs—includes stereo RCA cable
- Headphone output with level control
- Supplied with wireless remote control
- Rackmountable (2RU high)

CD Player
The CD-450 is a solid, straightforward, rackmountable CD player that easily integrates into almost any environment. A host of convenient features such as Auto Cue, 6% pitch control, timer play function, keypad and programmable playback, make the CD-450 ideal for audio and radio production, as well as DJ, fitness clubs and PA installations.

- ±12% Pitch Control
- Numeric keypad for direct track access
- Repeat modes include one track, all tracks, A-B repeat.
- Single Play mode stops the CD player at the end of the current track
- Program mode (up to 30 tracks)
- Auto Cue function cues any track up to the first frame of audio for immediate playback. Auto Cue threshold level is settable to -72, -66, -60 or -54dB
- Auto ready function, upon completion of the current track, cues the player to the start of the next track and enters pause mode ready for the next cue
- Call key returns to the last Ready cue position stored in memory
- Built-in timer allows unattended playback and stop control
- Incremental play begins playback of the next track every time the play key is pressed or will enter Auto Ready mode if the stop key is pressed
- Program material can be searched by track number, index number or time.
- Selectable display shows elapsed time, remaining time or total time remaining
- Can automatically trigger an external machine to commence playback facilitating smooth playback transitions across multiple machines
- Fader and Event start for recording applications such as flying in sound effects. The CD-450 will begin playing when it receives an audio trigger from an open fader or other audio event.
- Fader stop ceases playback from the CD-450 and automatically cues the player to the next track
- End Of Message indicator lights when nearing the end of a track and is settable from 5 to 35 seconds
- Back-up memory retains full operating status of the repeat, single and increment play, display mode, auto cue and search functions
- 2U rackmountable

Outputs
- RCA unbalanced analog outputs
- S/PDIF digital output
- Tally jack for connecting LEDs for monitoring the operating status of the deck
- Remote control output
- Optional LA-450 Balancing Kit gives you XLR balanced analog outputs with 12dB maximum trim control and balanced AES/EBU digital output.
5-Disc CD Player

Multi-disc capability makes the CD-305 perfect for applications that require continuous playback or quick access to multiple discs. Discs can be played back in sequential, random, or program order with a 32 track memory. Ideal for use in commercial sound installations or production environments, equipped with balanced XLR and S/PDIF digital outputs for connection to professional, and studio equipment.

- Rotating carousel accommodates up to five CDs and is solidly built with a robust transport mechanism
- Bypass any disc in the tray (disk skip), you can also remove any unused disc while another disc is playing
- Programmable (up to 32 tracks), random and repeat playback modes
- 3-beam laser tracking system and CIRC error protection circuitry ensures exact reproduction of the original CD
- XLR-balanced and RCA unbalanced analog outputs as well as a coaxial S/PDIF digital output
- Includes wireless remote control with 10-key pad for direct track access

CD-A500/ CD-A700 CD/Cassette Combo Decks

The CD-A500 and CD-A700 combine a CD player and cassette deck in one very affordable package. The two decks can act as totally separate units with individual outputs, or take advantage of the combination with direct dubbing, long play (combo) capabilities, and an input-saving cascade output mode. Both include unbalanced RCA inputs and outputs for the CD player and cassette recorder and each includes a wireless remote control. The CD-A700 adds XLR inputs and outputs, S/PDIF coaxial digital output (from the CD player) and 15-pin paralleled port for external control.

Cassette Deck Features
- 15-program music search
- Dolby B and C noise reduction
- ±12% pitch control
- Auto reverse mode allows continuous looping of both sides of a tape, play the tape once through or play one side only
- Record mute button inserts 4 seconds of blank space in between program material
- Two directional play buttons let you pick which side of a tape to play or record
- Counter reset and return to zero function

CD Player Features
- The CD player offers program (up to 20 tracks) and shuffle play, and continuous play of one track, or all tracks. Repeat playback includes 1-track/all-tracks/A-B
- Intro check function plays the beginning of each track for 10 seconds.
- A Side/B Side program dubbing feature allows monitoring the accumulated time of programmed material for even distribution to both sides of a cassette
- Auto spacing inserts 4 seconds of blank space in between program material.
- CD Sync recording allows one touch CD to cassette recording. Once the cassette is set to record, the CD player will start counter reset and return to zero function

Inputs/Outputs
- CD outputs can be shared as a common out for CD and cassette.
- Headphone output with level control
- RCA unbalanced inputs/outputs for cassette deck and input for the CD player

Combo Features
- Continuous play from CD-to-tape and tape-to-CD for long playback in background music installations
- Separate CD and tape function displays
- Includes RC-A500 IR remote control
- Timer engages a function (play CD/ tape, record tape) when the deck is powered up
- Rackmountable (3RU high)

CD-A700 Step-Up Features
- Parallel control port
- S/PDIF coaxial digital output from the CD player
- Independent pitch adjustment (±12%) for both CD and cassette
- XLR-balanced (and RCA unbalanced) I/O for cassette and inputs for the CD player
Triple-CD/Cassette Combo Deck
The CD-A630 builds on the CD-A500’s feature set, adding a triple tray CD player with pitch control, parallel port, and optical digital output. This added flexibility makes it perfect for live shows, exercise studios, restaurant installations, and simple PA systems. The CD-A630 can operate continuously CD-to-tape and tape-to-CD, and discs can be changed individually without interrupting the disc that is playing. Uniquely, a 12% pitch control is provided for both CD and cassette playback to adjust tempo in dance and exercise studios.

CC-222 CD Recorder /Cassette Combo Deck
The CC-222 is the world’s first CD recorder and cassette recorder combo deck, bringing the two most popular formats in one very affordable package. The two decks can be used independently (each have their own discrete set of unbalanced inputs/outputs) as well as for internal dubbing from cassette-to-CD and CD-to-cassette. The CD recorder adds S/PDIF coaxial (RCA) and optical digital I/O and as a bonus, a phono input is provided with the proper preamps and RIAA EQ circuits built-in. This allows direct connection of a turntable for creating CD or cassette masters from your favorite vinyl LPs.

Cassette Deck Features
- Dolby B noise reduction
- ±12% pitch control
- Auto reverse mode
- Counter reset and return to zero function.
- Record mute button (4 seconds)

CD Recorder Features
- Built-in sample rate converter (32-48kHz)
- Digital direct recording
- Sync One and Sync All CD record modes
- Erase and un-finalize CD-RW discs
- Adjustable Auto ID Sensitivity Level
- Selectable Copy ID (Free, Prohibit, SCMS)
- Adjustable auto track/Sync Rec level -72 to -24dB in 6dB steps
- Auto track increment (S/PDIF or Audio level)
- Adjustable fade-in/out (1 to 24 seconds in 1 second increments)
- Play modes include single, continuous, random, program (up to 25 tracks) and 3-way repeat (one, all and A-B) modes
- Timer play function engages the CD deck into play when the machine is turned on.
- Intro check function plays the beginning of each track for 10 seconds.

Same features as the CD-A500 PLUS—
- Separate trays for each CD makes it very clear where a CD is loaded. This is great for live shows when switching between intermission music and show cues.
- Separate drawers also allow discs to be changed individually without interrupting the disc that is playing.
- Multiple tray operation provides more source material for playback—a key for public gathering areas.
- 12% pitch control on the CD player (as well as the cassette deck) is key for performers, allowing minor adjustments in pitch and tempo to CD or cassette.
- Like the CD-A500, it is equipped with unbalanced RCA inputs/outputs for the cassette deck, inputs/outputs for the CD player. Also offers S/PDIF coaxial digital output from the CD player.
- Can be controlled from the supplied remote control or via its parallel port.

Combo Features
- Cassette to CD-R/RW or CD to cassette dubbing
- Rackmountable (3RU high)
- Includes wireless remote control
- RIAA phono input for recording vinyl LPs to CD or cassette.

Inputs/Outputs
- Headphone output with level control for selectable monitoring of tape, CD or mix
- Independent unbalanced RCA inputs/outputs for cassette deck and CD recorder
- S/PDIF coax and optical digital I/O (CD)
**CD-RW4U**

**Compact CD-R/RW Recorder with USB Interface**

The CD-RW4U is perfect for those who want to produce fantastic sounding CDs without sacrificing quality and durability. It is also space conscious. This allows it to be installed almost anywhere including personal studios and mobile systems, directly into a podium on stage, or in a restaurant or club.

The CD-RW4U features unbalanced RCA inputs/outputs, S/PDIF coaxial digital interface, wireless remote, digital level adjustment, Auto ID with adjustable sensitivity level, fades, and input monitor capability. It is also uniquely equipped with a USB interface. This allows direct connection to a Mac or PC and used as a CD-RW drive for archiving data to disc.

**High Quality**
- On-board 20-bit A-D and D-A converters for high quality audio capture
- Can also record to less expensive computer data CD-R and CD-RW media. Doesn't require "For Audio Only" CDs.
- Fade-in/fade-out (from silence) provides smooth beginnings and endings to tracks. Fade times can be set from 1 to 24 seconds in one second increments
- Auto ID function with adjustable threshold control. This allows the deck to identify the breaks between tracks without adding extra IDs in soft passages.
- To assure durability, the CD-RW4U uses a TEAC CD-RW computer mechanism instead of a modified consumer CD player mechanism. The drives are extremely robust, carrying a mean time between failure rating of 100,000 power-on hours.

**High Performance**
- USB connector allows direct connection to a Mac or PC for burning audio and data CDs. Bundled with Windows and Mac authoring software.
- Built-in 2MB RAM buffer for accurate sync starts and auto ID modes—ensures that even the first milli seconds of a track are recorded.
- Record mute function records four seconds of silence on the disc
- Sync record function allows recording to begin when a signal is received, and stopped when the signal ends. A signal level can be set between -24dB and -72dB in nine steps.
- Can override SCMS codes implemented by consumer players. This means you'll be able to make copies of your work.
- Three modes of copy protection (Free, Copy Once, Copy Prohibited) can be applied on a track by track basis to new discs.

**Conveniences**
- Playback modes include program (25 tracks), shuffle and repeat
- A digital gain adjustment is available for boosting low-level digital recordings,
- Track divisions can be entered manually, or produced automatically as a response to the input signal level.
- Monitor the input signal without entering record mode (Input Monitor function).
- In-line sample rate converter seamlessly accepts digital inputs from 32kHz to 48kHz. Connect to DATs, MiniDiscs or DVDs.
- Includes wireless remote control

**Inputs/Outputs**
- Unbalanced RCA analog I/O
- S/PDIF coax digital I/O
- Headphone output w/ level control

---

**CD-RW700 Professional CD-R/CD-RW Recorder**

A step-up from the CD-RW4U, the rackmountable CD-RW 700 features 24-bit A/D and D/A converters for even higher resolution and offers a “Digital Direct” mode which bypasses sample rate conversion to give you an exact copy of the original audio. It also adds a S/PDIF optical I/O and a Timer Record/Play function. Like the CD-RW 4U, the CD-RW 700 can record to standard data CDs, override SCMS codes, and uses TEAC’s extremely robust CD-RW computer drives.

**Same as the CD-RW4U (no USB) PLUS—**

- 24-bit digital-to-analog and analog-to-digital converters provide even higher recording and playback quality for the CD recorder.
- The CD-RW 700 can use its internal clock to start and stop playback or recording at pre-determined times.
- "Digital Direct" mode
Professional CD-R/CD-RW Recorder

The CD-RW2000 is more than just an advanced CD recorder, it also serves double duty as an advanced CD player, making it ideal for live theater, radio production and broadcast as well as the recording studio.

Like the CD-RW 700, the CD-RW 2000 uses advanced 24 bit DACs, the same robust TEAC CD-RW drive, and offers the same simplicity of operation. However, the CD-RW 2000 also offers a word clock input, has a complete complement of I/O ports, and features several cueing functions to make live productions easier.

- Balanced and unbalanced analog I/O, SPDIF coax and optical digital I/O, plus AES/EBU digital I/O covers virtually every 2-track audio format available.
- Word clock input is provided for integration into large digital environments, allowing the CD-RW2000 to chase external word clock while playing a CD.
- Offers a parallel control port for transport controls, including a fader start function.
- Includes RC-RW2000 wired remote control

Several cueing functions on the CD-RW2000 make live productions easier:

- Auto Cue positions the machine to the first audio in a CD track, rather than the actual ID location. This eliminates dead space in the beginning of the track, allowing tighter cues for live shows or on-air environments.

- Auto Ready pauses the machine at each track ID. This is ideal for live environments, allowing the engineer to cue in one track and forget about the machine - it automatically sets itself at the next cue. Also, for presentation and on-air applications, this is ideal since the machine won’t accidentally roll into the next cue on the CD.

- Call is used to return the machine to the cue where play began. This is useful for setting cue points in the middle of a track. Just press PLAY to check the cue, then press CALL to go reset back to that cue point.

Balanced and unbalanced analog I/O, SPDIF coax and optical digital I/O, plus AES/EBU digital I/O covers virtually every 2-track audio format available.

- Signal to Noise Ratio
- THD
- Pitch Adjustment

Analog Outputs

- Unbalanced RCA
- Balanced XLR

Digital Outputs

- S/PDIF (Coaxial)
- S/PDIF (Optical)
- AES/EBU XLR

Analog Inputs (CD)

- Unbalanced RCA
- Balanced XLR
- RCA Phono Inputs

Digital Inputs (CD)

- S/PDIF (Coaxial)
- S/PDIF (Optical)
- AES/EBU (XLR)

* requires optional LA-450
Professional Dual Tray CD Player/Recorder/Duplicator

A professional dual tray CD player/recorder/duplicator, the CD-RW402 combines playback, recording and duplication—in a single compact, rack mountable machine. Record, edit and duplicate CDs without compromising the performance of any of the CD applications. In fact, the CD-RW402 offers reliable functionality and great sound quality for a price that is much less than the cost of three separate machines.

The CD-RW402 offers advanced CD player functions like call, auto cue, and auto ready on both trays. A stutter scrub function allows for cue points to be set frame-accurately. The player deck also adds pitch control capability and two locate points. The record side includes traditional functions like record mute, digital gain adjustment, digital fade in/out, digital direct mode, and auto ID.

So go ahead. Capture a mix on CD-RW, edit the track, add CD-TEXT titles with a keyboard, dump the finished product to CD-R, and duplicate all in the same box. Nothing else can do this as easily, effectively and affordably as the CD-RW402.

High Performance

- 24-bit digital-to-analog and analog-to-digital converters provide excellent recording and playback quality for the CD recorder.
- Incorporating industrial-grade CD-ROM and CD-RW mechanisms, the CD-RW402 is a 1:1 duplicator of audio or data CDs at selectable 1x, 2x and 4x speeds, so you can quickly and easily make multiple copies.
- Disk At Once CD (4x speed disc duplication) can be used for Red Book glass-mastering and duplication, avoiding expensive pre-mastering work at the CD pressing plant.
- Combining the player and recorder together allows you to edit their original tracks. The A-B edit function uses the locate points on Deck 1 to define specific areas for copying to the record deck. A-B exclusive edit can be used to delete gaps in the middle of tracks.
- Powerful software emulates MiniDisc TOC (Table Of Contents) editing—virtual edits can be performed to CD1 and then executed to CD2 at up to 4x speed. Make custom mastering adjustments for your duplicated disks with controls to join, split and remove tracks. You can also adjust the incoming volume level of both analog and digital sources, create custom fade ins/outs (1-24 seconds), and mark indexes the way you want.

Front Panel Operation

- Operation is by means of the front panel, featuring an easy-to-use menu system, and the included wired remote control unit.
- Front panel includes independent displays for each deck offering individual level meters and 12 character text displays.
- Independent displays keep clear which deck is being monitored - a great feature for live and broadcast applications. Front panel also has 1/4˝ TRS headphone jack with source selection and level controls.

Inputs/Output

- Features a host of independent audio inputs/outputs for each deck. Includes unbalanced RCA and balanced XLR analog inputs/outputs as well as S/PDIF optical and coaxial digital inputs and outputs.
- A parallel control offers remotes and tallies with custom control applications. Also includes RC-RW402 wired remote control.
- Entering CD-TEXT information is simple-just plug a standard PS/2 keyboard in the front for track naming and editing.
- If a common output is desired, a dedicated pair of unbalanced RCAs offers a common audio feed.
- Monitor the input signal without entering record mode (Input Monitor function)

Additional Features

- ±9.9% pitch control on CD player. Pitch effects can be made on the transfer as well, committing the effect to the new disc.
- Sampling frequency converter allows the recording of CDs from digital audio sources with frequencies other than the CD standard sampling frequency of 44.1 kHz.
- Disc track divisions can be entered manually, or can produced automatically as a response to the input signal level.
- Built-in RAM buffer ensures that even the first milliseconds of a disc track are recorded.
- Independent jog dials on each deck. Jog function with preview allows precise setting of cue points.
- Cue function allows instant return to the previous start point. Stutter scrub function allows for cue points to be set accurately.
- A multi-function “multi dial” is used to set and confirm parameter settings.
- Playback functions include continuous play, shuffle play, program play (25 tracks).
- Advanced cueing functions including call, auto cue and auto ready (see description on previous page).
- Three modes of copy protection (Free, Copy Once, Copy Prohibited) can be applied on a track by track basis to new discs.
**High-Speed 1x4 CD Duplicator**

The CD-D1x4 is an affordable solution for musicians, independent record labels or anyone else that requires multiple copies of their audio CDs or CD-ROMs. It implements sturdy TEAC CD-ROM and CD-RW drives for years of reliable performance.

Using the CD-D1x4 couldn’t be more simple. Just pop the disc you want to duplicate into the master drive on top, then insert your blank CD media into the slave drives on bottom. In just a few button pushes, you can set the duplication speed and start burning discs! Plus, the CD-D1x4 is capable of duplicating more than just music CDs. CD-ROMs with software and other computer files can be easily replicated. For applications that require larger duplication runs, two CD-D1x4s can be cascaded to act as a single 1x8 replicator.

- Creates four exact duplicates of a CD at once
- Burns CDs at up to 16x regular speed for high-speed duplication runs
- Disc Analyze and Disc Verification features
- Uses reliable, industrial grade TEAC CD-ROM and CD-RW mechanisms
- Cascade port allows two CD-D1x4s to be chained for duplicating up to eight discs at a time
- Standard 19” 4U rackmount design

---

**DV-D6500**

**RS-232 Controllable DVD Player**

The DV-D6500 is an affordable RS-232 controllable DVD player, ideal for residential, commercial and institutional installations. Its wide range of readable media and programming capabilities makes this useful in numerous applications.

In Video DVDs, Super Video CDs and regular Video CDs, the DV-D6500 offers crystal clear picture quality. The true Progressive Scan output option far surpasses imaging of “line doubling” DVD players, with higher resolution and jitter reduction. RS-232 control on the DV-D6500 offers extensive transport control, machine set-ups, counter data, and disc format data. Includes the RC-6500J wireless remote control.

- RS-232 Bi-directional serial control port
- Plays DVD Video Discs
- Plays Super Video CDs and audio CDs
- Reads CD-R, CD-RW and DVD-R media
- Composite, component and S-Video outputs
- Unbalanced RCA analog outputs
- Coaxial and optical digital outputs
- Format adjustments for 4:3 and 16:9
- Progressive scan for improved image quality
- FVPP Image Processing (Gamma, Sharpness, etc.)
- 2-U Rack Mountable DVD Player
- Slow Motion Playback
- Frame-by-Frame Playback
- Program & random play (Audio & Video CD Only)
- Repeat Play Mode (All Formats)
- RC-6500J Wireless Remote Included

**RS-232 Control Features:**
- Transport control & current status info
- Disc format information
- Counter information (Track, Disc)
- Direct Track Number Access
TELEX

COPYETTE EH SERIES

1x or 3x Mono and Stereo Duplicators

One of the best values in cassette duplication, the popular Copyette EH series produce high quality, low cost cassettes in large quantities at nearly 16x normal speed. This means you can reproduce both sides of a C-60 tape in less than two minutes. Available in two versions, the Copyettes are capable of duplicating either one cassette (1-2-1) or three (1-2-3) at a time. In addition, each are available in both mono and stereo configurations.

They couldn’t be easier to use. You simply insert the cassettes, press the START switch and they do the rest. They rewind all tapes to the beginning, copy, then rewind to the beginning again before stopping. The whole process can be stopped at any time by pressing the CYCLE button. Side Select feature allows you to set them up to copy one side of a tape or both sides at once. Copyette EH duplicators provide the quality and reliability you demand, and the speed you need, all at the affordable price you want. They offer one touch copying (tape rewinds to the beginning, copies, then rewinds again), erase heads (allows cassettes to be reused, saving you money), as well as the ability to copy both sides of up to three cassettes in mono or stereo at 16x normal speed. In addition, all Copyette EH duplicators include a track select feature, optical non-reflective end-of-tape sensing system (for gentle tape handling), a carrying handle for portability, a removable power cord and a protective hard cover for storage.

Stereo Copyette 1•2•1

Weighing only 9 lbs. this unit has a durable, impact resistant housing and includes a removable power cord, handle and protective cover. It also has an optical, non-reflective end-of-tape sensing system that provides gentle tape handling. A mono version is available.

Mono Copyette 1•2•1......419.95
Stereo Copyette 1•2•1......679.95

Stereo Copyette 1•2•3

This duplicator copies both sides of three cassettes at once, yet is as small as the 1•2•1. It weighs only 14 pounds and includes a hard cover for protection when not in use. It uses all DC Servo motors for the ultimate in reliability. A mono version is also available.

Mono Copyette 1•2•3......1049.95
Stereo Copyette 1•2•3......1649.95

TASCAM 3000

High Speed Cassette Duplicator

A must have in any studio or house of worship requiring high quality cassette duplication, the T-3000 provides 4x double sided duplication (effectively 8x duplication) of two cassettes within a single unit. For larger duplication setups, up to ten T-3000s can be slaved together.

◆ 1-to-3 high speed cassette duplicator
◆ 4-track/4-channel, ferrite record/play head and a 1/2 track/2 channel inline, ferrite erase head
◆ Auto switchable between Normal Type I and CrO2 Type II tapes
◆ Tape speed accuracy of ± 1 %
◆ 7.5 ips or 4x speed duplication of both sides, simultaneously copying a C-60 cassette in 7.5 minutes
◆ Up to ten T-3000s can be cascaded for larger duplication setups
◆ Well-3 can act as master or slave in larger duplication set-up
◆ Rugged design with easy access to mechanisms for cleaning and demagnetizing
◆ Uses standard RCA and MIDI plugs to connect units together

484

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
Mono and Stereo Audio Cassette Duplicators

Designed for high performance and high production, the XGEN series also offers easy maintenance and unsurpassed ease of use. Available in two-channel mono or four-channel stereo versions each produces 3 copies from a cassette master at 8x or 16x normal speed and each can expand up to 67 copy positions (with additional copy modules). With extra modules duplicate up to 67 copies of a C-60 original in under two minutes. And they copy both sides at once. The XL Series feature “Extended Life” cassette heads for increased performance and wear characteristic as well as improvements in wow and flutter, frequency response, S/N ratio and bias. Additionally the ACC4000 XL allows for either chrome or ferric cassette duplication. All models feature microprocessor controls with direct drive motors in all positions, Ferrite erase heads, a C-60 rewind speed of 30 seconds, track select, modular cassette pockets, end of tape sensing, auto or manual operation, cleaning cycle, audible tone end of copy and two-year limited warranty.

FEATURES

◆ One Touch Copying
◆ Individual rotary level controls
◆ Peak reading LED indicators for quick and accurate monitoring of audio levels
◆ Side A or A/B select button
◆ Stop all tapes instantly, at any point during the copy or rewind cycle.
◆ Automatic or manual selection of rewind and copy operation:

◆ Slanted work surface and unique “heads-up” cassette platform allow less oxide build up on the heads and makes cassette loading and unloading much easier.
◆ Short tape indicators alert you if a tape stops or jams before the original ends
◆ Each cassette position has a three point tape guidance system to eliminate skew problems. Plus, when a tape is inserted, each cassette position is activated to prevent unnecessary wear and tear on the tape head mechanism.
◆ Audio and bias, along with head adjustments, are done from the top of the unit and a switch on the back engages the head and pinch roller for convenient cleaning.
◆ Microprocessor-controlled design means fewer moving parts and direct drive motors means quiet operation, more accuracy and no gears to break down.
◆ Two year limited warranty

Copy Module Features

◆ Each module has four copy positions with erase heads and controls for side select
◆ LED displays indicate end-of-tape status for each pocket

Master Duplicator Features

◆ Produce copies from a master at 30 ips (16x normal speed)
◆ Up to 67 simultaneous tape copies with optional copy modules
◆ Track select, short tape indicators, auto/manual operation

REPLICA Mono Duplicator

At 7 lbs., the Replica is the smallest, fastest copier you can buy. It copies both sides of a cassette in mono at 16x normal speed, and offers a full set of functions including stop, rewind, copy and interrupt, all operated by a single lever. The Replica features durable, impact-resistant housing and includes a recessed handle and removable power cord. An optional carrying case is available as well.
TELEX

**SpinWise SERIES RACKMOUNTS**

### 52x CD Copiers

Telex’s SpinWise Series of certified 52x recording speed (no one is faster) CD Copiers includes high performance rackmount and tower units designed for ease of use at prices no one else in the industry can duplicate.

SpinWise Rackmount models offer the ability to make 1, 3 or 6 CD copies at once, at 52x recording speed. That’s enough power to make up to 180+ copies an hour! The 6-52R features an internal hard drive, while the 1-52R and 3-52R do not. The 6-52R offers a full complement of features, while the 3-52R and 1-52R provide an easier to use, more cost effective alternative to copiers with internal drives.

SpinWise Tower models offer the ability to make 2, 3, 4 or 7 CD copies at once, at 52x recording speed. That’s enough power to make up to 215+ copies an hour! The 3-52H and 7-52H feature an internal hard drive, while the 2-, 3-, 4- and 7-52NH do not. The 3-52H and 7-52H provide a full complement of features, while the 2-, 3-, 4- and 7-52NH offer an easier to use, more cost effective alternative to copiers with internal drives.

#### All Rackmount and Tower SpinWise CD Copiers Feature

- 52x recording speed
- Disc at Once support for Audio
- Support for multiple CD formats
- Multiple fans for maximum cooling
- User-friendly interface for immediate integration into any environment
- Adjust recording speeds of writers and system to 4x, 8x, 16x, 24x, 40x, 48x and 52x
- Update the firmware in the system by loading a CD into the master reader drive; the system will automatically update itself
- Support all business card CD format sizes

#### SpinWise CD Copiers with Internal Hard Drives (Only) Add

- Support for CD+G (Compact Disc + Graphics) and Karaoke CD formats
- Audio track extraction for music disc compilation
- Menu (Status) Commands: Copy, Copy and Compare, Verification, Emulation, and Load to Hard Drive
- Sub Functions: Setup, Hard Drive Partition, CD to CD, Start Writers, Write Method, Write Speed, CD ROM Drive, CD DA Load Speed, Eject Disc, Buzzer, Edit, Copycomp Eject, Skip Read Error, CD+G, Startup Command, Read CDROM Index O
- Original does not have to be loaded onto the hard drive. If you leave original in the 6-52R’s or 7-52H’s reader drive, for example, they will act as a one to five or one to six CD copiers, if desired.

- The 1-52R offers one to one disc duplication at 52x speed. Designed for low volume applications (30+ copies per hour), it supports multiple CD formats, as well as Disc at Once support for audio. Approximate recording time is fewer than two minutes per full disc. Includes rack ears.

- The 3-52R features one to three disc duplication at 52x speed. 19” rackmountable configuration with space saving 2U height. Supports multiple CD formats, including CD+G Karaoke, as well as Disc at Once support for audio. Approximate recording time is under two minutes per full disc. Includes rack ears.

- The 6-52R features an internal hard drive, with six copy drives, a 52x recording speed, and the ability to make 185+ copies an hour. 19” rackmountable configuration/3U, Disc at Once support for audio and support for multiple CD formats including CD+G, Karaoke. Audio track extraction for music disc compilation. Copy, Copy and Compare, Verification, Emulation, and Load to Hard drive are supported. User-friendly interface for immediate integration into studio/production environment.
SpinWise Tower
CD Copiers
without Hard Drive
These towers feature 2, 3, 4, 5 or 8 drives, a reader/master drive and 2, 3, 4 and 7 copy drives, for one to seven disc duplication at 52x speed. Makes up to 215+ copies per hour. They support multiple CD formats, including Disc at Once support for audio.

SpinWise Tower
CD Copiers
with 40GB Hard Drive
These towers feature an internal hard drive, with three or seven drives, a 40x recording speed, and the ability to make 120 or 215 copies an hour. They support multiple CD formats, including Disc at Once, CD+G, and Karaoke. Audio track extraction for music disc compilation. Copy, Copy and Compare, Verification, Emulation, and Load to Hard drive are supported. The original disc can be left in the reader drive rather than loaded to hard drive, to utilize the unit as a one to two or one to six disc copier if desired.

About CD Recording Time:
As music is sampled at a continuous rate for recording to CD, a typical CD (650 MB) can contain 74 minutes of audio. Even though many recordable CDs are used for data-type purposes, most people measure record speed in multiples of ‘real time’. 1x record speed means that it takes 74 minutes to record (“burn”) 74 minutes of audio. 12x speed means: 74 / 12 = 6.166 minutes.

How do you make MP3 files from CD audio tracks?
You need to get conversion software or an encoder of some kind. These programs allow you to take the files from the master CD, encode them to the specifications of your choosing, and store them on your hard drive for later use.

What is finalizing and what does it do?
When you burn a CD-R, you have a choice to either burn the disc as an open session or a closed session. As an open session, you are able to add to the disc at a later time. However, open session discs cannot be played on an audio CD player. For playable audio, you need to close the disc, a process that is called “Finalizing.” Once closed or finalized, you cannot add any more information to the disc. When you finalize, you are creating the TOC (table of contents) within the lead in. The lead out is also created, thus closing the disc. You are also finalizing the disc when you use disc-at-once recording.
**SpinWise CDR100A**

**Automated CD Copier**

A standalone robotic system, the SpinWise CDR100A features 52x record capability, 100 disc capacity, and the ability to reload media on the fly. Supports multiple CD formats, as well as Disc at Once support for audio. Easy one button operation includes start, pick and sequence commands. Reliable pick and place design prevents blank CDs from dropping. Low cost, high performance, and ease of use makes the SpinWise CDR100A ideal for SOHO (Small Office/Home Office) or production/studio environments.

- Best price, throughput and input capacity
- 52x record speed for maximum throughput
- Standalone automated robotic system (no computer required)
- Disc to Disc duplication with one button operation
- 100 disc capacity, with ability to reload media on the fly
- High performance fan for maximum cooling
- Sleek desktop footprint for virtually any environment, including front office

---

**SpinWise DVD Tower Copiers**

SpinWise DVD Tower models offer the ability to make from two to seven CD or DVD copies at once. DVD copies are made at 4x speed, CD-R copies are made at 16x speed. All units are standalone towers with a 40 GB hard drive. Why wait up to 2-3 weeks, and pay up to $40 for a DVD copy, when it’s this easy to own your own copier? Ideal for weddings, memorial services, church services, videographers, and corporate training seminars—just some of the applications where DVD can simplify production and distribution.

- 4x speed for DVD copies
- 16x speed for CD-R copies
- 40 GB internal hard drive
- Backwards compatible (i.e. can copy DVD-R, CD-R, CD-ROM, CDR-W)

---

**SPINWISE DVD**

- Multiple industrial fans provide maximum cooling and protect your data/video
- User friendly interface for immediate integration into any environment
- An easy way to back up your current computer’s hard drive...a great storage tool
- Original does not have to be loaded onto the hard drive. If you leave original in the 7-416D’s reader drive, for example, if will act as a one to six DVD copier, if desired
4800 dpi Automated Print/Duplication Systems

Fully self-contained CD or DVD print and record stations. The ability to send multiple jobs, walk away, and come back to a fully printed and recorded set of CD/DVDs, makes these units a must have. You stack them, they do the rest. You can now ask to do 10 copies of Sundays sermon with graphics, then ask for 10 of Thursdays Choir Practice, 50 backups of internal documents, and so on... the PrintWise 1500 and 4500 do it all.

Need two or four copies done simultaneously, no problem, they have data streaming to make the drives mutually exclusive of one another. PrintWise 1500 offers configurations up to two CD or DVD recorders, the 4500 up to four CD or DVD recorders. You even can have two CD and two DVD recorders in the same device!

PrintWise 4800
4800 dpi CD DVD Ink Jet Printer

Put 24-bit graphics directly onto your CD or DVD in amazing time. Immediate dry times, and immaculate results, the PrintWise 4800 gives you everything you have been waiting for in a CD or DVD printer. The same printer used in the PrintWise 1500/4500 series, the PrintWise 4800 lays down less ink than its predecessors which means faster throughput, less ink consumption, and more compatibility with various types of printable media which results in faster drying times.

Features

- Batch Mode lets you send several jobs to the machine at one time. For example, if you want to do 20 CD/DVDs of one graphic and data, then do 50 of another, 25 of another...you would set up each in the software and the unit would automatically switch to the new job when the time came. Being the input capacities are 100/120 respectively, you could set up jobs to match those inputs.
- Networking capability allows multiple users from different computers within the company.
- Network in conjunction with the ability to "Data Stream" — sending individual jobs to a set of drives or single drive. This unique feature allows two users to use the machine at one time. One sending a job using drive 1, and the other using drive 3 and 4, as long. Most commonly used in the system that houses both DVD and CD drives, where some want to run a DVD job and CD job simultaneously.
16x CD-Recorder, 1:1 and 1:3 Duplicators

The QD-2 (Quick Disc-2) and QD-123 are low cost, high performance, one to one and one to three CD Recordable/Duplication systems. With their user friendly one button operation, sleek desktop footprint, and office environment aesthetics, the QD-2 and QD-123 are perfect for any user requiring easy copying of audio, video, or data CDs. Superior technology allows them to ship without a hard drive; duplication of CDs is done on the fly. CD+G Karaoke support. LED indicators provide you with the status of the duplication process, minimizing the number of faulty discs. Current high speed CD recording is 16x.

ECHO STAR ES-18CD-T CD/DVD Shredder

The ES-18CD-T safely and quickly destroys CDs and DVDs. The system reduces a disc to hundreds of thin plastic shreds. Removable hopper holds shredded CDs and is easily emptied. Heavy-duty electric motors assure smooth, trouble-free operation. A single disc can be destroyed in less than five seconds. Measures 12 x 8 x 14˝ and weighs 12 lbs.

CopyWriter Live

Designed for recording live events to CD, the CopyWriter Live easily integrates with your sound and video system to record a feed directly from your board. This allows for high quality mixed sounds to be recorded directly to CD as the event is taking place.

- You can record from practically any audio or video source, including live feed from a microphone, cassette deck, video camera, mixer, and many others.
- Make a high quality CD on the first try. Make backup copies, or archive your video to CD for playback in most DVD players. Record and pause to create multiple tracks for playback.
- Equipped with two CD recorders and disc spanning capability, the CopyWriter Live allows virtually unlimited and easy recording of live audio or video. As the disc in drive one becomes full, drive two automatically starts recording the second disc.
- A setting in the intuitive menu interface allows for creation of either an audio disc or VideoCD on the fly. Playback of a VideoCD can be done on the CopyWriter Live itself, or on most DVD players. Each CD-R can hold approximately 60 minutes of video.
- The CopyWriter Live is also a 1 to 1 (12x) CD duplicator with automatic detection and support for most CD formats. Simply drop your master in one drive and a blank in the other, and hit “copy”.
- As a rack mount (rackmount kit included) or set-top device, the system integrates easily with existing audio/video equipment.
- If you need multiple copies fast for immediate sales, it can be combined with a high speed duplicator for high volume just-in-time production.
- Combining the flexibility of cassette tapes with the quality and longevity of CDs, in one low-cost, easy to use unit, the CopyWriter Live is ideal for churches, schools, home or office in seminars, conferences, lectures and any other special event.

Inputs/Outputs:
3x RCA inputs (2 rear/1 front)
1x XLR inputs (rear)
1x RCA outputs (rear)
1/4-inch mic input (front)
The Orbit Pro is a sleek, standalone-automated CD duplicator with powerful features. The next generation of the award-winning Orbit II, the Orbit Pro touts two 40x recorders for ultra high-speed CD duplication. And with an Easy Copy Mode for the novice and Expert Mode for the advanced professional, the Orbit Pro fits perfectly in any production or studio environment. A Batch Mode allows unattended duplication of multiple master CDs as the system automatically detects the format of each master CD—a great timesaver.

The Orbit Pro also includes a hard drive for multiple CD image archival and track extraction for custom audio CD compilations. To handle the 150-disc capacity of the system, a removable output hopper has been designed to unload the media onto a spindle, minimizing the handling of the discs. To ensure recording stability, the recording speed can be slowed for media not certified for high-speed duplication. Combining DVD-R and CD-R duplication capabilities, the Orbit Pro DVD gives you all the functionality of the Orbit II with DVD recording at 4x and CD recording at 16x.

- Sleek, charcoal black, molded enclosure fits any environment - desktop, audio and more!
- HDD for audio track extraction and image archival
- Disc to Disc and HDD to Disc copy modes
- Copy, Copy + Verify, and Verify only modes
- Batch Mode for multiple-master duplication
- Selectable recording speeds for up to 40x duplication
- 4-line lit display with intuitive menu navigation and detailed error reporting
- 150 disc input
- Output tray for rejects
- Removable output bin for easy disc unloading

Orbit Pro DVD Only
- DVD recording at 4x and CD recording at 16x (Orbit Pro DVD only)

The Orbit II is a low cost, high performance CD recordable duplication system with a sleek ergonomic design and 40x record speed that is perfect for any office environment. Orbit II’s exclusive kernel autoloading technology, small desktop footprint, and ease of use offers even novices very fast, consistent performance. A choice of copy, copy/verify or verify only is easily selectable through the two button/LCD interface. Orbit II is ideal for a wide range of applications including pro audio, software development, government, desktop publishing, and many more. Combining DVD-R and CD-R duplication capabilities, the Orbit DVD gives you all the functionality of the Orbit II with DVD recording at 4x and CD recording at 16x.

- Low cost, entry level
- Completely standalone, no PC required
- 50 disc input capacity
- “Insert and Duplicate” buttonless operation
- High performance autoloading mechanism
- Small desktop footprint
- Support for almost all CD formats
- Variable Record speed control (up to 48x)

Orbit DVD Only
- Copy from DVD-R/RW, DVD+R/RW and DVD Authoring Media
- 16X CD burning and 4X DVD Burning
MICROBOARDS

DSR & CopyWriter TOWER SERIES

Standalone, Manual Load 40x and 52x Duplicators

The 40x DSR and 52x CopyWriter Tower series are low-cost, easy to use CD recordable duplication systems that utilize superior technology from Microboards. With a compact footprint, and multiple configurations available (up to 8 CD recorders), they can be used disc to disc, or disc to multiple disc for higher volume requirements. No hard drive is required, because caching image files is done on-the-fly, to multiple writers simultaneously. LED indicators detect errors during the record process, preventing bad disc duplication, and monitoring the status of the recording session.

DSR & CopyWriter PRO SERIES

Standalone, Manual Load 40x and 52x Duplicators w/Hard Drive and Control Module

All the features of the DSR and CopyWriter series, the 40x DSR PRO and 52x CopyWriter PRO adds the benefits of a hard drive for image storage, including Bit-to-Bit Data Verification and Audio track extraction, as well as a moveable ergonomic interface module for access to advanced features. They provide high-speed duplication at 40x and 52x speed with configurations of 2 to 16 recorders. An intuitive, menu driven display and simple 2-button control interface are integrated into a sleek remote module. The cabled remote module allows flexible positioning in different ergonomic locations. For example, you can keep the tower tucked under a desk while keeping the remote on top of the desk for easy control and status access.

The powerful interface provides simple one-touch operation for novices while giving pros access to advanced features. The built-in 20GB hard drive allows for CD image archival and track extraction for audio compilations. Recording speeds can be adjusted (slower) when using media not certified for high-speed duplication.

- Automatic detection of virtually all CD formats (CD-ROM Mode 1/2, Form 1/2, Red Book Audio, CD1, Mix Mode, Multisession)
- Selectable recording speeds up to 40x or 52x for recording stability
- No hard drive is required, because caching image files is done on-the-fly, to multiple writers simultaneously.
- Copy directly from the source CD to writer(s) simultaneously
- One-touch operation for simple CD copying, allows novice users to operate it effectively
- Test Mode lets you copy from the source CD to the blank disc as a test. No data is burned to the disc.
- Simulation mode ensures recording stability
- Easy to read LED display for status and error recording
- Remote module interface allows for flexible, ergonomic positioning
- Built-in 20GB hard drive for CD image archival and track extraction for audio compilation CDs
- One touch start for CD to CD duplication
- Read Check ensures all copied discs are readable
- Selectable recording speeds up to 40x and 52x for recording stability
- Bit to bit verification of data formats
- Simulation mode to ensure recording stability
- Easy-to-read, two line display for status and error reporting

EQUIPMENT LEASING AVAILABLE
Print Factory combines Microboards' patented autoloading system with HP's new inkjet printer engine to give users the highest output possible, both in image resolution and print speed. Print Factory has a 50-disc capacity, making the task of printing large numbers of discs fast, easy and hands-free.

- Print Factory is an autoloading printer, so no calibration of robotics or manual feeding of discs is required.
- Print Factory connects by USB or parallel interface to the computer, and comes with label design software.
- Uses standard HP color and black ink cartridges which have a very high yield at a competitive cost. This allows for printing costs of a few pennies per disc.

Print Factory is capable of producing up to 200 discs per hour.

- With the included design software, users can enjoy its benefits whether making a few discs or a few hundred.
- Fast and flexible for any application. While Print Factory was designed to fill a need in the high-volume arena, it also has the ability to print at 4800 x 1200 dpi on both DVD and CD media.

- Print Speed
- Depends upon percentage of coverage and print mode selected:
  - About 108 seconds for 100%, full-color coverage, Photo Normal Mode
  - About 20 seconds for 100%, full-color coverage Text & Graphics, Best Mode
  - About 12 seconds for 20% coverage Text & Graphics, Normal Mode

DSR DVD Series is a multi-drive DVD-R/CD-R duplicator employing the use of general purpose DVD-R recorders. It supports both standalone and computer-based operation and allows you to copy from multiple DVD formats. Configurations of 1 to 16 recorders are available to meet individual production requirements.

An intuitive, menu-driven display and 2-button control interface provide simple one-touch operation for the novice user while giving access to advanced features for the professional. A hard drive comes standard with the system, allowing you to archive an image or perform CD track extraction for CD audio compilations.

- Stand-alone DVD-R / CD-R duplicator
- One Touch duplication
- Speed selectable (1/2/4x for DVD-R and 4/8/16x for CD-R)
- Copy from DVD-R/RW, DVD+R/RW and DVD Authoring Media
- Direct DVD/CD mastering with optional Firewire (IEEE1394) interface for PC or Mac. (Windows software included with the interface).
- Copy and Verify
- Ergonomic placement of remote interface module
- Built-in hard drive for DVD/CD image archival and CD track extraction for audio compilation CDs
- Simulation mode to ensure recording stability
- Easy-to-read, two-line display for status and error reporting
- Updates easily installed through DVD/CD reader
Multitrack Recorders

ADAT Type-II 20-bit Digital Multitrack Recorder

Built with the same 20-bit encoding and expansion capabilities as the rest of the ADAT Type-II line, the LX-20 provides an exceptional value in professional multitrack tape recorders. Also featured on the LX-20 is the 9-pin ADAT Sync interface which allows multiple ADATs to be synced together and the ADAT fiber optic, multi-channel digital interface that has become a standard digital interface found across the ADAT line as well as on a wide range of digital mixers and soundcards. The LX-20 makes the concept of an affordable, all digital tape based recording studio a reality.

ADAT Technology

➤ Uses standard S-VHS tapes to provide more than enough bandwidth to record 8 tracks of 20-bit digital audio.
➤ ADAT tapes are formatted with a proprietary time code with single sample accuracy (up to 1/48,000th of a second) that is much more precise than SMPTE Time Code (1/30th of a second).
➤ ADATs are ideal mixdown decks for surround and theatrical sound applications that require more than two-channels.
➤ Because time code is written into the subcode area of the tape you can synchronize ADATs without giving up a track. Up to 16 ADATs can be synchronized together for a total of 128 tracks—with single sample (20 microsecond) accuracy.

Recording Functions

◆ Eight record enable buttons control the input monitor status.
◆ Input monitoring is controlled with the Auto Input button which automatically monitors record-enabled tracks. The All Input button monitors all inputs regardless of the record-enable status.
◆ Pitch control depends on the current sample rate. +300/-200 cent pitch change is possible when using the 48kHz sample rate, ±200 cent at 44.1kHz.

Transport Controls

◆ Transport controls include REW, FF, stop, play and record. Also offers audible cue and review at 3x normal speed.

Display

◆ Time counter shows the current location of the tape in hours, minutes, seconds, hundredths of a second or optionally frames (1/30th of a second).
◆ Eight 13-segment meters show either input levels or the levels already recorded on tape. Eight red Record indicators located directly beneath the meters show a track's record status while blue indicators show input monitor status.
◆ Three blocks on the lower right hand corner of the display show the active parameter for clock (internal, external, digital) and sample rate (44.1 or 48 kHz), input monitor (all or Auto) and input source (analog, digital or track copy).
◆ Status indicators show the bit depth of the current tape (16 or 20-bit), whether various locate functions are enabled, and if a cassette is properly inserted.
◆ An interpolation indicator warns that error correction is taking place within the LX-20 and the heads should be cleaned.

Auto Locate

◆ There are 5 Locate buttons. Locate buttons 1 through 4 are used for shuttling to specific points on a tape. 0 returns the tape to the zero position. Locate buttons used in conjunction with Auto Play, Auto Return and Auto Record facilitate a number of automated transport functions.

Inputs and Outputs

◆ 8 unbalanced RCA inputs and outputs
◆ 1/4” TRS jack for supplied LRC (Little Remote Control) or punch pedal
◆ ADAT 9-pin female sync input and output allows synchronization and machine control between multiple ADATs and optional BRC remote control.

◆ ADAT optical lightpipe I/O carries 8 channels of digital audio between ADATs and compatible devices. Bounce audio from one ADAT to another, mix and edit tracks completely in the digital domain.
24-track, 24-bit/96kHz Hard Disk Recorders

Designed to fit comfortably into any standard ADAT environment and matching ADAT’s legendary performance and affordability, the HD24 and HD24XR are hard disk recorders built from the ground up exclusively for the purpose of recording music instead of data — resulting in remarkable stability and performance. And yet, thanks to their use of standard, low-cost IDE computer drives, the recording media costs no more than traditional ADAT tape on a per track basis. Two hot-swappable media bays provide convenient access to the recording drives, and allow you to backup data in just minutes. You can edit tracks internally or easily transfer to computer via built-in Ethernet. They’re the only HD recorders on the market with standard ADAT Optical and ADAT Sync, enabling them to work efficiently with existing systems. Essentially the same, the HD24XR incorporates state-of-the-art 24-bit A-D and D-A converters capable of greater than 110dB dynamic range and providing ultra-low distortion, even at nominal sample rates of 44.1kHz and 48kHz. It is also capable of recording and playing back twelve channels of audio at nominal sample rates of 96kHz and 88.2kHz, as well as 24 channels of audio at standard sample rates of 44.1kHz and 48kHz.

**FEATURES**

- The HD24 provides 24 tracks of high-resolution 24-bit recording at standard sample rates of 44.1 and 48 kHz, and supports 12 tracks at 88.2 and 96 kHz when slaved to external digital products. The HD24XR provides 88.2 and 96 kHz analog I/O right from the back panel.
- Standard connections include 24 analog inputs and outputs (+4dBu, 1/4” TRS), plus 24 channels of ADAT Optical I/O. Also includes MIDI in/out, MTC out, Ethernet, ADAT Sync I/O and external Word Clock input to slave to external clock sources.
- Internal editing capabilities include cut, copy, paste, and track-move with undo can be done from the front panel, or remote control. Or just send the files (AIFF format) to a computer DAW via the Ethernet ports.
- Dual recording bays utilize standard low-cost, removable IDE drives so media costs don’t break the bank. With custom drive caddies and protective storage cases, affordable IDE drives are hot-swappable, and offer fast back-up (a few minutes for an entire drive, is possible between the two front-panel drive bays).
- The HD24/HD24XR include a 20GB hard drive which yields 90 minutes of recording time at 24-bit/48 kHz.
- Instant random access to audio using ADAT/FST (File Streaming Technology). Hit REW or FF and you’re there in a flash. The ADAT FST drive format establishes removable drives as the most reliable, easy-to-use multitrack media for pro applications.
- The HD24/HD24XR offer the digital audio and synchronization connections of the existing ADAT for easy integration into an existing system or to synchronize multiple HD24’s to create a larger system. (Up to 5 units can be connected and synchronized to make a 120-track system, simply be daisy-chaining 9-pin sync cables.)
- The rear panel of HD24/HD24XR includes 24 channels of ADAT optical inputs and outputs and ADAT synchronization I/O connectors to allow them to sample-accurately synchronize with other ADATs or a BRC remote controller. When connected to a BRC, the HD24 “looks-like” three ADATs. (Comes with an Alesis LRC remote control, the BRC remote control is available as an option).

A rear-panel Ethernet port allows the HD24 to be connected as a stand-alone FTP server with its own IP address that can be accessed from a computer network, even over the Internet! Songs appear as folders on any Web browser, containing individual .WAV or AIFF files for each track. You can download and upload files from any HD24 connected to a network. Files can then be processed using computer-based editing applications and moved back to the HD24.
**HD24/ HD24XR ACCESSORIES**

**ADAT/ FST File Streaming Technology**

The HD24 and HD24XR use a proprietary method of writing to hard disk to provide 24 tracks of 24-bit audio on low-cost IDE hard drives, and drop-in compatibility with over 150,000 ADAT systems worldwide.

- To give hard disk the same level of utility as tape, Alesis engineered a new method of writing on hard drives, specifically designed for music recording. Unlike the writing schemes employed by computer-based systems, this new method dramatically reduces fragmentation of data and the required "seek time", providing a much greater level of stability in recording and playing back data.

- Using this method of writing, seek and play functions are much faster than existing systems - under 100ms - and data fragmentation, which can cause crashing, is greatly diminished. As a result, very low-cost, low RPM hard drives can be used with exceptional results. Entire 24-track projects can be stored on a single removable drive, and for the first time the cost of the hard disk storage medium equals that of ADAT tape in cost per GB – less than five dollars.

### HD24 FIREPORT 1394

**Easy Connection of HD24 Hard Drives to PC Using Fast “Firewire Interface**

The HD24 FirePort 1394 is an affordable interface which allows lightening-fast transfers of audio data from the ADAT HD24 or HD24XR to PC. The FirePort 1394 allows you to connect the HD24’s ADAT/FST hard drives to a computer using a Firewire (IEEE1394) interface, where the audio files can then be incorporated or manipulated using a range of computer software.

- Comprised of two elements: a hot-swappable docking station for HD24 caddies with an IEEE1394 connection to the PC, and FST/Connect software that allows you to manage ADAT/FST-formatted hard disk drives on the PC. The software not only allows easy audio data transfers to and from the PC, but gives you the ability to manage the file system on the target drive, i.e., creating, deleting, copying songs, and more.

- The hot-swappable FirePort module allows easy connect/disconnect of HD24 caddies in a convenient and portable desktop design. Once connected, take advantage of up to 400Mb/second transfer rate up. An inline switching power supply eliminates the need for cumbersome “wall warts”.

- With the HD24/HD24XR, the FirePort 1394 offers a complete solution for reliable and expandable cross-platform digital recording.

### AI-4

**8-Channel AES/EBU to ADAT Optical Interface**

The AI-4 is a digital audio interface converter capable of converting AES/EBU and ADAT optical data streams at sample rates of 44.1kHz to 96kHz. Housed in a rack mountable box (1RU high), this powerful converter is the perfect complement for the ADAT owner who needs AES/EBU input, output and conversion. Its simple interface makes this the ideal companion for any ADAT user.

- The AI-4 is designed to satisfy the requirements of the high-end studio ADAT owner, yet priced so it is just as accessible for the home studio recording engineer. There are many studio applications that require 24-bit ADAT optical to AES/EBU conversion (and vice versa); the AI-4 facilitates the interconnection of systems employing these two very popular digital interface formats.

- The AI-4 features 8 channels of AES/EBU to ADAT optical as well as 8 channels of ADAT to AES/EBU format conversion. Includes 4 XLR inputs and outputs capable of simultaneous 8-channel full-duplex single-wire transmission and reception. There’s separate clocking for each format conversion, BNC wordclock input, and flexible clocking options for optical to AES conversions.
24-Track Hard Disk Recorder

A computer-based digital multitrack set-up might be fine for studio use, where you can work around limited inputs and complex operational issues, but when it comes to live recording they simply don’t cut it. There’s only one chance to capture the performance. One chance to capture the magic. You need a solution which is tough, reliable, proven, rack-mountable, expandable and with enough inputs for the whole band—in short, you need the Fostex D2424LV.

Simply the most capable, most flexible, best sounding, easy to use, and affordable digital multitrack ever, the D2424LV is a rackmount digital recorder/editor with removable hard drive and six selectable recording formats, including 24-bit 96kHz. Designed for the live recording/reproduction, the D2424LV features 24-track simultaneous recording capability via 24 switchable balanced/unbalanced 1/4” TRS connectors, 32 virtual tracks, program chain play mode, .WAV file import/export, and non-destructive 99-time Copy/Paste/Move across programs (songs). It also offers MTC/MC & FEX full implementation, MIDI clock with song position pointer, multiple tempo and signature changes per song, and ‘all input’/‘all ready’ control. Connections include ADAT I/O (S/PDIF switchable) Word I/O, MIDI in/out/thru, ethernet, SCSI-2 and RS422 ports. RS-422 I/O is complemented by the optional Timecode/Sync card, allowing the D2424LV to be used in studio and installation applications. A second drive bay is available for simultaneous back-up via optional second hard drive or DVD-RAM disc, making the D2424LV ideally suited for remote/live recording.

**Recording Formats**
- 24 tracks of simultaneous recording and playback is available at 16-bit and 24-bit using sample rates of 44.1 and 48 kHz
- 8 tracks of simultaneous recording and playback is available at 24-bit using sample rates of 88.2 and 96 kHz
- 32 additional ‘ghost tracks’ are available at the 44.1 and 48kHz sample rates for capturing and editing multiple performances
- 48 additional ‘ghost tracks’ are available at the 88.2 and 96 kHz sample rates
- ±6% vari-pitch function by 0.1% step.

**Twin Drive Bays**
- Two 3.5” ATAPI BUS compatible drive bays are available for mounting a removable E-IDE hard drive for recording and playback plus an optional 2nd hard drive or DVD-RAM drive for backup and archiving— an optional caddy with mounting kit lets you use the 2nd bay with a removable drive
- A 50-pin SCSI-2 port is available for backing up recordings to an external hard drive.
- .WAV file import and export is also possible to and from a DOS formatted FAT16 disk via the SCSI-2 interface

**Non-Destructive Editing**
- Non-destructive Cut, Copy and Paste editing with multiple chronological UNDOs (limited only by available disk space)
- Graphical preview function, using level meters, allows you to intuitively pinpoint a desired editing point
- Tracks can be named and exchanged
- Program duplication function creates an identical copy of a song program without using additional disk space
- Editing can be executed across different song programs
- Jog/Shuttle wheel lets you FF or REW through a recording with full audio monitoring—without altering the pitch. The inner wheel and the audio scrub continuously loops around a very small section of audio allowing you to pinpoint an edit start point precisely.

**Comprehensive Editing Functions**

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
**Locate Memories**
- 6 point edit memory and up to 99 locate memories can be stored and recalled using the jog/shuttle wheel or by pressing the Prev/Next key
- The Mark/Stop functions allows you to have the transports automatically stop at a preset Mark point
- Program Chain Play allows for a compilation of programs to be played back in a certain order

**Optional Accessories**

- **9043 Empty Hard Drive Caddy**
  Robust empty caddy for housing 3rd party IDE hard drives (see Fostex website for the latest drive recommendation)

- **9044 Drive Caddy & Mounting Kit**
  Complete assembly for adding a 2nd caddyheld hard drive for back-up and archive

- **9046 DVD-RAM Drive**
  4.7GB DVD-RAM drive (for back-up and archive) fits into the 2nd internal bay

- **8346 Timecode/Sync Card**
  - MTC/MMC & FEX implemented for external MIDI control
  - MIDI In, Out and Thru supports MTC and MMC as well as MIDI clock with song position pointer supporting multiple tempo and signature changes per song
  - There is the choice of three time bases (ABS, MTC & bar/beat/clock), up to 64 tempo and signature changes per song.
  - ‘All Input’ and ‘All Ready’ functions allow you to check all input signals and make all tracks ready with single button pushes.
  - Word I/O (BNC) is standard for keeping multiple-linked digital devices 'in sync'
  - RS-422 D-sub 9-pin remote in and thru connectors
  - The “Virtual Timecode Track” feature allows recording of timecode from internal or external sources to a ‘virtual timecode track’ keeping all tracks free for audio.
  - Optional Timecode, Ethernet and timecode cards are available
  - Footswitch control for start/stop as well as punch in/out functions.

**Synchronization and Control**
- 24 balanced 1/4˝ TRS inputs and outputs using 24-bit 128x oversampling A-to-D and D-to-A converters designed by Asahi Kasei
- The reference level for the analog I/Os are selectable between -12dB and -20dB.
- Three 8 channel ADAT Optical I/O’s (switchable to S/PDIF) are provided for interfacing with a digital mixer, computer-based DAW or any number of multichannel mic preamps with A-to-D converters.
- Back up recordings can be to external SCSI-2 media, DAT, ADAT or to an optional secondary internal hard drive or optional DVD-RAM drive

**Front-Panel Remote Control**
- The D2424LV’s entire front panel is removable for convenient positioning on the work surface, while the body of the main unit remains in the rack. The front panel controller with its large fluorescent display, transport and locate functions and Jog/Shuttle wheel can be removed and setup up 10 meters from the main frame using the optional 8551B extension cable.

**Inputs and Outputs**
- 24 balanced 1/4˝ TRS inputs and outputs using 24-bit 128x oversampling A-to-D and D-to-A converters designed by Asahi Kasei
- The reference level for the analog I/Os are selectable between -12dB and -20dB.
- Back up recordings can be to external SCSI-2 media, DAT, ADAT or to an optional secondary internal hard drive or optional DVD-RAM drive

MACKIE

HDR24/96

24-Channel 24-Bit Hard Disk Recorder with DAW-Style Editor and Pull-Out Media

An incredibly affordable 24-bit/24-track non-linear hard disk recorder, the HDR24/96 features pristine sonics, pull-out media, intuitive analog-like front panel controls and rugged construction. It has processing power for 24 simultaneous channels at 24-bit/48kHz or 12 channels at 24-bit/96kHz. An internal 20 GB IDE Ultra-DMA hard drive provides storage for up to 90 minutes of 24-track recording while an on-board drive bay accommodates Mackie’s Media M-90 pullout disks. Perfect for recordists, as a replacement for older tape-based digital recorders, or in multi-deck, multi-room operation.

Front panel controls are fashioned after familiar tape-based systems. But unlike them, the HDR24/96 offers true, non-linear recording and editing capabilities—record multiple versions of a track or track segment without destroying the original—nothing is lost. All edits are non-destructive as well.

Full-featured DAW-style editing software is accessible by adding an SVGA monitor, two-button mouse, and a standard PC keyboard. No external computer is required to take advantage of the HDR24/96’s rich graphic operating interface and editing software. Rear panel ports let you plug the monitor, mouse and keyboard directly into the recorder. The intuitive editing software includes 999 levels of undo, non-destructive drag-and-drop crossfades, regions and super regions, track slipping, audio phase inversion, normalization, pitch shifting, time compression and expansion, audition and scrubbing modes, quantization, one-to-multiple replacement, 192 virtual takes (8 per track), track and take bouncing, and many other familiar features. The SVGA display also provides complete control over recorder functions and features a meter display, virtual transport controls, time code display, scrolling waveforms with 1x/2x/4x/8x/24x display, time bar with user-defined resolution, Punch, Loop, Cue and Tempo Change markers, snap functions, locate, loop and rehearse.

Designed for project studios, live recording, video post production and professional dubbing facilities, the HDR24/96 connects to any console—large or small, analog or digital—using your choice of four optional 8-channel I/O cards including analog, ADAT, TDIF, and AES/EBU (the same ones used for the D8B). It also syncs to SMPTE, MIDI, video black burst, NTSC and PAL clock sources with no additional hardware required, and offers an optional RS-422 (9-pin) card for integration into professional video systems.

www.bhphotovideo.com
Mackie Media M90

Ideal for studios saving clients projects - or home studios needing to back-up a lot of data, one Mackie Media M 90 removable hard drive gives you over 90 minutes of pre-formatted 24-track, 24-bit audio. Consisting of a 20GB UltraDM33 IDE drive, you can back-up from the SDR or HDR24/96's internal drive - or simply record directly to a Media M 90 and skip the back-up process altogether. Each Media M 90 comes in its own padded storage case, complete with track sheet and project labels for both drive and case.

- Pre-qualified, pre-formatted, pre-tested
- Mackie Media drive tray for easy removal
- Back up entire internal drive at real time
- Includes padded case with ID label and Mackie track Sheets

Serial•9 RS-422 Card

The Serial•9 is an optional PCI card that installs in the HDR24/96 and adds RS-422 control capabilities to its already-rich feature set. The Serial•9 replaces the existing MIDI card seated inside the HDR24/96 and offers both MIDI (MTC & MMC) and RS-422 communication to/from external devices, like remote controllers and digital audio workstations.

Sony 9-pin Device Protocol
- Slave the HDR24/96 to a wide range of remote controllers
- Have all positional reference in one simple connection
- Expands the applicability of the HDR24/96

MTC and MMC Communication
- Slave the HDR24/96 to a DAW
- Control M M C-compatible devices with the HDR24/96's transport
- Distribute to multiple machines for expanding track count

HDR Pro

With the optional HDR Pro package you can add even greater functionality to the HDR24/96. Using the HDR Pro software you can export HDR Project Files as Digidesign Pro Tools Session files (for 3.x, 4.x, 5.x Mac versions only), and allows Pro Tools Session files to be directly into an HDR Project. In addition, HDR Pro comes with a single-bay Firewire drive that is fitted with a Mackie Media M 90 drive frame for direct communication between the M 90 and the Mac desktop. This makes backing up projects or swapping to and from the HDR24/96 and Pro Tools a breeze. Easy project storage, too, since you can swap the hard-drives in the Mackie Media M 90 drive frame when you need to.

HDR Pro is THE solution for anyone who wants to record with the HDR24/96 and import audio files and session data into Pro Tools.
HDR24/96, continued

Built-in Editing Software

No expensive Mac or software-laden PC needed. Simply plug an SVGA monitor, PS2 mouse and PC keyboard into the HDR24/96's rear panel ports - and you're ready to go. If desired, the video can be output to a projector or flat screen plasma display. The HDR24/96's software will unleash your creativity allowing you to easily perform the most intricate tasks such as slipping, trimming, looping, fading and cross-fading tracks. In addition to lots of on-screen navigation tools and keyboard short-cuts, the HDR24/96 has an exclusive "Dive Key". Position the mouse anywhere on the track overview and press the 'Z' key on your keyboard. You are instantly zoomed to where you can immediately select, nudge, trim and edit.

- Front panel controls are on the screen, and you'll rarely see a menu. 24 track meters display 'plasma-style' peak/hold and averaging levels at the same time. Large 'LED' display shows current time, and the transport controls are right there.
- Ultra-fast ATI Rage Pro video card allows real-time waveforms to scroll past a fixed 'now' line (instead of jerky page jumps). Select a color palette. View all 24 tracks. Narrow your scope down to a stereo pair. Zoom to view tracks right down to the sample, in real-time - without affecting the HDR24/96's performance.
- Easily set Cue points, Locates and Punch In/Out points. A pop-out window displays all cue points as you add them. Simply double-click or use the keyboard to locate any point in a project instantly.
- Easy and powerful drag 'n drop editing. Pull a region out of the region list and drop it onto the track view. Snap the region to Hrs:Min:Sec:Frames or Bars:Beats:Ticks. Pull a region from one track and join it to another to create a new region. Slip regions, trim their beginning or end points. Turn on 'Loop' and drag a region's start or end points as far as you need.
- Context-sensitive mouse changes from one type of tool to another based on where you move it. The most complex editing tasks become a drag 'n drop breeze. Pull the top right or left corner of a region to create fade-ins and fade-outs. Right click to select the fade curves. Push one region into another and instantly create a cross-fade with your selection of nine fade curve combinations. The HDR24/96 re-draws all waveforms in real-time as you edit.
- Automate the volume of each region by creating a region volume envelope. Click to add as many volume points as you need. Click again to drag them into position, creating as complex a mix as you can imagine. It mutes, too.
- Scrub all 24 tracks of audio on the HDR24/96 from the jog/shuttle wheel of Mackie's D8B digital mixer, Remote 48, or any other MMC wheel. But scrubbing gets really cool with the HDR24/96's mouse! Listen to what you're doing as you drag to spot edits and set markers. It's all real-time and designed to make you more creative and productive.

I/O Options for the HDR24/96

Each HDR24/96 holds your choice of four 8-channel I/O cards (the same ones as used in the D8B), as well as a 24-channel card. Mix and match for a wide range of input options.

**Opt24: 24-Channel Digital I/O**
Unlike the other I/O cards, the OPT-24 provides 24 channels of ADAT formatted digital audio I/O via three sets of TOSLink optical connectors. Because of its unique feature set and design, the OPT-24 is not used in the standard I/O card cage - it is installed in one of the vacant PCI slots inside the HDR24/96 and provides a permanent 24 channel digital I/O platform that can be used in tandem with whatever other I/O cards may be installed - which means you can interface optical and analog/AES formatted signal together without purchasing and swapping I/O cards.

**AIO-8: Analog I/O Card**
8 balanced line level (+4dBu) outputs and returns for connecting the D8B to analog equipment.

**DIO-8: Digital I/O Card**
ADAT lightpipe and TDIF with format conversion (16/24-bit). Format convert between ADAT and TDIF.

**OPT-8: Low-cost Digital I/O Card**
The low-cost OPT-8 I/O card provides 8 channels of ADAT lightpipe for under $100!

**PDI-8: 24-bit AES/EBU Digital I/O Card**
24-bit AES/EBU with sample rate converter on stereo input pair. Plus it has a 96kHz I/O for audiophile-quality recording via esoteric outboard D/A converters.
Remote 48 Controller

Professional hard disk recorders require professional remotes. But Mackie went far beyond just transport controls and record arm buttons when they designed the Remote 48. It fully duplicates the entire front panel of our HDR24/96 Recorder/Editor — including LCD and LED displays, all function buttons and entry keypad. In fact, the Remote 48 adds features including a weighted jog/shuttle wheel, additional Locate Time display, 10-key keypad and more. Use the Remote 48 to control two HDR24/96s. When connected to an HDR24/96, the Remote 48 controller is fully interactive with the SVG A graphic user interface.

FEATURES

- Status LEDs show sample rate (44.1, 48 or 96kHz), Bit Depth (16- or 24-bits), Sample Clock, and Time Code status information.
- LCD display is identical to the one on the front panel of the HDR24/96.
- Toggle between SMPTE and BBT on the Remote 48 and HDR24/96 front panels.
- Edit Time button lets you edit specific fields within the Locate Time display. Pressing the button once selects the Frames/Ticks field, a second time the Seconds/Beats field, etc.
- Access LCD display menus such as the Track, Project, Backup, Disk Utility, System, Digi I/O and sync menus.
- Record ready buttons for tracks 1-48.
- Copy the instantaneous value of Tape Time into the Located Time.
- Numeric keypad enters time values or cue numbers into the Locate Time or Cue displays.
- Jog gives precise control over transport cueing by playing audio both forwards and backwards at non real-time speeds in proportion to how the Wheel is rotated. Jog play speed varies continuously between 0x and 1x of normal play speed.
- Shuttle allows you to play audio both forwards and backwards at non real-time speeds in proportion to how far the Wheel is rotated. Shuttle play speed is quantized to 1/32, 1/16, 1/8, 1/4, 1/2, 1x, and 2x the normal play speed.
- Jog/Shuttle/Data Wheel is used for data entry in certain Autolocator operations, such as scrolling through the Cue List or changing time values in edit time operations, in addition to controlling Jog and Shuttle motion.
- PUNCH automatically punches into Record at the punch in point, and punches out of Record at the punch out point.
- REHEARSE allows you to practice punching without recording anything to disk, and automatically stores the punch points to the Auto Punch in and out points.
- AUTO PLAY automatically starts playback when you’ve jumped to LOC or Cue point.
- AUTO TAKE automatically increments the active Virtual Take of all armed Tracks at the beginning of each record pass.
- Arm 24 tracks for recording.
- Select Record Ready, Auto Input or Rec Safe.
- Set up to four locate points.
- Select Loop, Punch and Rehearse modes.
- Select 8 virtual takes for each of 24 tracks.
- Select Auto Take Mode for repetitive virtual track recording.
- Delete last record pass button.
- 12-segment LED meter for selected track.
- Full-size transport controls.
- Punch in/out foot switch jack.
- Single cable connection to recorder for power and control data.

Remote 24 Small Remote

Designed to work with the HDR24/96, the Remote 24 provides remote control of the most commonly used functions.
TASCAM
PORTASTUDIO

Since their introduction in 1979, Tascam has sold over 1,000,000 Portastudios, making them some of the most popular tools ever to be embraced by musicians all over the world. Tascam’s four models of analog, cassette-based Portastudios—the ultra-affordable MF-P01, the easy-to-use Port02MKII, the 414MKII and the advanced 424MKIII—each offer respective advantages for several levels of musicians and recording hobbyists. However, what they all share is the inexpensive, readily-available cassette tape recording medium, and the integration of simple mixers and recording devices in one portable package.

MF-P01
The simplest and most inexpensive Portastudio ever made, the MF-P01 is ideal if you’re just getting into recording your own music. Using the MF-P01 couldn’t be easier... just pop in a standard cassette tape, plug in your instrument, select the track you want and hit “Record”. You have four tracks to work with, so recording your drum machine, guitar, vocals and keyboard is no problem. The MF-P01’s easy-to-use recording approach is based on the unit's single Mic/Line input and no bus requirement. To make new songs, simply select the track on which you wish to record by pushing a single button and then adjusting the input level. A 4-dot LED meter allows you to easily identify input signal levels and overloads. During playback, the four-channel mixer section allows users to mix down their songs by simply adjusting each track’s output level. To monitoring recordings, the MF-P01 comes complete with both a 1/4” headphone output and an RCA L/R line output. Its small 12 x 8” footprint and lightweight design (a mere 2.5lbs.) means the MF-P01 can be easily carried to and from music lessons, jam sessions or band practice.

◆ Perfect for musicians and novice recordists
◆ Uses inexpensive standard cassette tapes
◆ Records one track at a time with classic warm analog sound
◆ Includes 1/4” headphone output and an RCA L/R line output.

Porta 02
A cost-effective self-contained unit designed for the home recording musician, the Porta 02 features two Mic/Line input channels each with a dedicated linear fader, a four channel mixer with LEVEL and PAN controls for each channel, a 4-track cassette recorder with 2-track simultaneous record capability, a headphone monitor output with level control and Mono switch and a Master L-R Line output. Sporting an entirely blue color scheme, the Porta 02’s design appearance is especially appealing for today’s young musician. The Porta 02 has a solid and smooth feel to all the knobs and faders - inspiring confidence at every step of the creative process. 2-track simultaneous record capability makes it the perfect tool to capture live performances, as well as multitrack recording. With its mono capability, the headphone monitor output makes it easy to check for phase discrepancies - thus ensuring quality recordings.

◆ 4 track 4-channel cassette recorder section
◆ Two 1/4” mic/line inputs for keyboards mics, guitars, drum machines and most other sources
◆ Up to 2 tracks simultaneous recording
◆ Simple 4-track recording with assignable input-to-track routing
◆ 4-channel Cue mixer for mixing down
◆ 4-stage LED meters for each track
◆ Headphone monitor out with level control
◆ RCA unbalanced line outputs
414 MKII

Packing high-end features in a convenient, compact and economical package, the 414mkI Portastudio is ideal for newcomers or those experienced in multitrack recording. Use it for demos, as a portable sketch pad, or for practicing recording techniques. A high-speed transport, combined with Hi & Low EQ and dbx noise reduction means great sound.

Four full-function input channels, each with mic/line capability and trim control (two feature XLR inputs and one is a dedicated guitar input). High and low EQ make it easy to capture quality 4-track recordings in any setting. Two effects sends per channel, together with two stereo effects returns, give you plenty flexibility when using effects and external audio sources. Also includes a smooth-action 60mm master fader, 12% pitch control, discrete sync output, and a musician-friendly price.

- 4-track, 4-channel format
- Simultaneously 4-track recording
- 4-mic/line inputs with trim control, supplemented by dedicated stereo inputs
- Dedicated guitar input with adjustable trim control
- 2-band High and Low EQ on each input channel
- ±12% pitch control
- Zero return function
- 2 Aux sends for effects processing, one of which is switchable to Tape Cue
- Separate main and monitor outputs allow mastering and monitoring without repatching Recorder section
- dbx noise reduction with Sync on/off select
- 3-3/4 ips tape speed (twice normal speed) for superior reproduction quality
- Stereo Sub input patches stereo sources, such as mixing consoles direct to L/R busses
- Sync out terminal for easy M1D1-tape synchronization
- Optional C-30P foot-switch for hands-free punch in/out control

424 MKIII

A real personal recording studio with a professional mixing console and a logic-controlled cassette deck in a single easy-to-use unit, the 424mkIII is Tascam’s finest four track cassette. The 424mkIII is equipped with powerful musical EQ on all six input channels, flexible auxiliary and monitoring systems, and a comprehensive range of inputs and routing options. Advanced feature set includes 2 independent auxiliaries so you can add two separate effects to the same channel. The 3-band sweepable mid band EQ gives you the flexibility to focus on the sweet spot of the sound to help give it a little more life. The 4 XLR mic preamps keep your inputs quieter, and will save you from the hassles of finding the XLR to 1/4” transformers.

- 4-track 4-channel recording system
- Simultaneous recording up to 4 tracks
- 4 assignable XLR mic inputs
- Logic controlled 4-track tape transport
- Dedicated stereo inputs (channels 7-8)
- 6-full-function input channels with Mid-sweepable 3-band EQ
- 2 Aux sends for effects processing, one of which is assignable to Tape Cue
- Dual tape speed (3-3/4 and 1-7/8 ips)
- dbx noise reduction
- ±12% pitch control
- Return-to-zero and 2 locate points
- Repeat function
- Auto punch I/O with rehearsal function
- Stereo Sub Input
- Separate main L-R and monitor outputs
- Dedicated 4 tape outputs
- Easy-to-read fluorescent display
- Optional C-30P foot-switch for hands-free punch in/out control
High Resolution Modular DTRS (Digital Tape Recorders)

The DA-78HR is a 24-bit tape-based 8-track modular digital multitrack recorder. Based on Tascam's DTRS (Digital Tape Recording System) technology it provides up to 108 minutes of pristine 24-bit or 16-bit digital audio on a single Hi8 video tape. Designed for project and commercial recording studios as well as video post and field production, it features built-in SMPTE Time Code Reader/Generator, Word Sync In/Out/Thru, MIDI Time Code synchronization. A digital 8 x 2 mixer with pan and level controls and a coaxial S/PDIF digital I/O allows pre-mixed digital bouncing and playback monitoring within a single unit, or externally to another recorder or even a CD recorder. Additional features include 8-channel TDF-1 digital I/O, pitch control, test tone generator, electronic patchbay, machine offset in sub-frame or sample rate accuracy and Auto Punch I/O in 0.1 frame accuracy. LCD display, set-up data memory on tape, seamless punch I/O with digital cross fade, adjustable peak hold release time level meter and an A/B head playback error rate-display function. Up to 16 DTRS machines can be synchronized together for simultaneous, sample accurate control of 128 tracks of digital audio.

The DA-98HR has all the features of the DA-HR78 plus it adds the audio quality and critical features required for high-end post production and commercial recording facilities. As well as 44.1 and 48 kHz sampling frequencies, the DA-98HR can record and playback 24-bit or 16-bit recordings at 88.2/96kHz (4-tracks) and 176.4/192kHz (2-tracks) sampling frequencies. In fact, different sampling frequencies can be recorded simultaneously on different tracks on the same tape, providing the ultimate in flexibility. Additional step-up features include confidence replay mode, allowing off-tape monitoring while recording is in progress and 9-pin RS-422 control. XLR time-code input/output terminal with an onboard SMPTE synchronizer. Video sync allows the DA-98HR to be used while synchronized to other recorders so that backup tapes can be constructed as the session progresses. Multi-channel AES/EBU digital I/O provides instant integration into digital patchbays, DAWs, and other systems. Also offers a user-friendly setup menu with comprehensive LCD display and direct menu access soft keys.

Identical to the DA-98HR, the DS-D98 is designed to support the Sony Direct Stream Digital format for Super Audio CD (SACD). The DS-D98 can be configured in both a DSD two-track and PCM multitrack format— the only tape-based machine capable of SACD recording as well as the only tape-based system designed for high resolution DSD audio recording that allows multiple units to be synchronized. In DSD mode, the DS-D98 functions as a 2-track recorder/player with synchronization of up to 16 units and to other DTRS recorders and features Sony's SDIF-3 digital I/O. PCM recordings are backward compatible with existing DTRS recorders.
Transport Controls

- Standard transport controls include Play, Record, Fast Forward, Rewind and Stop
- Pitch is variable ± 6% in 0.1% steps
- Precision rotary shuttle knob advances or rewinds tape at 1/4 to 8 times normal speed. While shuttling tape, the monitor output level is automatically attenuated by 12dB of the normal playback level.
- Shuttle monitor button mutes the over-bearing, high pitched squeals associated with high speed shuttling.
- Fast frame accurate tape location and positioning; end to end winding of a "120" tape is 80 seconds

Synchronization

- Full SMPTE/EBU operation with on-board time code reader/generator and support for all frame rates including 29.97 DF/NDF, 30, and 24 fps.
- ABS (Absolute Time) can be converted to SMPTE time code. SMPTE time code can also be offset from the ABS time code.
- When time code is on part of a tape and you want to strip the rest, an assembly time code function will read a few seconds of the time code and jam sync the generator and stripe the rest of the tape.
- Re-chase time code is achieved monitoring the internal (Absolute Time Code) and external code and then slowing down or speeding up the transport to ensure consistent sync or it can run freely once the initial sync has been achieved, ignoring incoming time code. The re-chase window settable to 1 or 2 seconds, determines the amount of drift that is tolerated before re-chasing is necessary.
- Time code errors of 10 or 30 frames can be set up to be bypassed and ignored.
- The park position of a slaved DTRS machine is the pre-roll time needed for the machine to lock to timecode. Park position can be preset or automatically set to the optimum park position.
- MTC (MIDI Time Code) support allows synchronization between the DTRS machine and a MIDI compatible device and can be output when the DTRS is playing, in FF, rewind or when stopped.

High Resolution DTRS Technology

- Selectable 24-bit and 16-bit recording at 44.1 or 48 kHz sampling rate
- 24-bit, 128x over-sampling analog to digital and digital to analog converters
- 1 hr. 48 min. recording time on a single 120 Hi8 tape
- 20Hz - 20kHz frequency response and 104dB dynamic range
- Fully compatible with DA-88 machines.
- When synching multiple DTRS units, it is sometimes necessary to offset the time between one or more slaves in relation to the master deck. All DTRS units have frame accurate offset capabilities independent of SMPTE time code functions.
- Track Advance and Track Delay from -200 to 7200 samples in 1 sample steps can add subtle nuances to a musical groove or tighten the synchronization of a sound effect.
- Tape formatting process writes subcode information such as ABS (Absolute Time) on the non-audio portions of the Hi-8 tape. This ensures machine to machine compatibility of tape with no potential for loss of timing information due to tape stretching or fraying.
- Exclusive, interleaving write after read 4-head system provides superior drop out protection and yields significantly more area read on tape.

Editing

- Digital Track Copy function allows assemble or composite editing between machines or within a single unit. For example, copy tracks 3 and 4 to tracks 5 and 6 within one machine or copy tracks 3 and 4 of one to tracks 5 and 6 of another machine.
- Highly accurate and reliable transport mechanism features DD brushless motors
- Built-in digital patchbay allows routing any input to any track digitally. For example, input 1 can record to track 2 and input 2 can record to track 1.
- Offset times between master and slave units(s) can be set on the fly while machines are in the play mode, or by entering a specific offset time

On-Board Stereo Mixdown Functions

- Level and pan controls for each channel (controllable via MIDI or from the front panel of the unit)
- They have a read before write feature that allows tracks 1 through 8 to be bounced to tracks 7 and 8
- Digital direct-track copying within a single unit or between multiple units
- Coaxial S/PDIF digital I/O accommodates direct mixdown from the DA-78HR multi-track to a compatible digital recorder such as DAT, CDR or DAW

Auto Locate And Punch

- The points at which recording is started and stopped are automatically stored in memory as punch points.
- Auto Punch allows hands-free punch in and out recording of a section of audio. A rehearsal function allows setting and auditioning the in and out points before executing the punch.
- Two Auto Locate points allow one button access to any two positions on a tape, or use for a beginning and end marker for continuously looping a section of audio.
- The exact position of locate and punch points can be set by min/sec/frames
- Pre-roll times for locate and punch points are independent and can be set from 0 seconds to 59 minutes and 59 seconds.
- When executing an edit or punch, the crossfade time between the signal on tape and the input signal to be recorded, can be set from 10 to 90ms (milliseconds)
- In Auto Play (after rehearsal is complete) the tape automatically rewinds to the pre-roll position before the punch in location
**Conveniences**

- All Input Monitor Button automatically sets all outputs to monitor the audio inputs, regardless of the transport status. This function is primarily used for alignment purposes and is equivalent to pressing all of the input monitor switches.
- Auto Input/Auto Monitor switch automatically activates the inputs when shutting, fast forwarding or rewinding or in stop mode. This is useful for allowing talent to communicate with the engineer when no audio is being played.
- They can display how many hours are on the drum heads. This is useful for determining when routine maintenance such as head cleaning may be necessary.

**Synchronization I/O**

- MIDI in/out/thru allows MIDI timecode (MTC) synchronization as well as MIDI Machine Control (MMC)
- Remote/Sync In and Sync out used for connection with optional RC series remote controls as well as allowing the unit to be used in a master/slave system.
- Word clock in/out and thru (via BNC connector) ensures that digital audio transferred between machines via T/DIF or S/PDIF I/O is synchronized.

**Inputs and Outputs**

- Eight unbalanced analog RCA inputs and outputs
- Two 25-pin connectors provide eight channels of balanced analog inputs and outputs
- 25-pin T/DIF (Tascam Digital Interface) connector is used for transferring up to 8 channels of digital audio to and from units conforming to the T/DIF format.
- Remote punch in/out connector for use with the optional RC-30P footswitch
- RCA in/out allows all SMPTE/EBU time-code frame rates to be read or generated

**Additional Features**

- All functions are front panel accessible including, machine ID (used in multi machine configurations), trim and tape locate positions, test tone oscillator and defining post-roll time.
- 12-segment LED peak reading level displays
- Internal digital sine wave generator provides signals of A-440 and 1kHz at the nominal operating level of +4dBu for tuning and meter calibration
- When recording from a 20- or 24-bit word length to a 16-bit level, dithering can be set to add noise to low level signals to prevent unwanted quantization noise to the signal.
- There are three dither settings available: No Dither, Triangular and Rectangular which gives 3dB better S/N ratio than triangular but may add noise modulation to the signal.

**Optional Remote Control Units for the DA-78HR/DA-98HR/SD-D98**

**RC-808 Remote Control**

- Provides accurate control of up to 6 DTRS machines including all basic transport functions, input monitoring and track arming. It also controls the transport functions of external units conforming to the Sony P2 protocol using the RS-422 interface, as well as parallel and GPI controlled devices
- No power supply, draws power from DTRS units.
- Up to 99 location memories can be stored and edited with frame accuracy.
- Time code values are input with a positive feel numeric keypad.
- Convenient menu system with 20-character by 4-line backlit LCD display.
- Twenty frequently accessed menu settings can be assigned to function keys for quick and easy recall.

**RC-898 Remote Control**

- Controls all of the basic transport functions including, record, auto-locate, monitor switching, track arming and punch

**RC-828 Remote Control**

- For controlling up to four DTRS machines with transport control, track arming, 12 locate memories, jog/shuttle and more

**Additional Features**

- All time code formats are supported as well as pull up/pull down.
- Up to 10 setup configurations of the RC-898 and up to 6 DTRS units can be stored in memory for instant recall.
- Location memories and configuration settings are stored in battery-backed memory.
- Includes remote/sync cable and remote/sync terminator

**RC-808**

- 179.95

**RC-828**

- 529.95

**RC-898**

- 1199.95

**ONE HOUR FREE PARKING**

**AT 349 W. 34TH STREET (with purchase of $100 or more)**
DA-98HR and DS-D98 Step-up Features

Not only can the DA-98HR record 8-tracks of 24-bit audio at 44.1 and 48 kHz, it can also record 4 tracks of 24-bit audio at 96kHz and 2 tracks of 24-bit audio at 192kHz making the DA-98HR the ultimate mixdown deck. The DA-98HR builds on the DA-78HR and adds critical features for post production including the availability of AES/EBU digital I/O for instant integration into digital patchbays, DAWs, and more! The DA-98HR can also be controlled with standard DTRS remotes, or via 9-pin serial.

- Confidence replay mode allows direct monitoring off of tape while recording
- Input monitor mode allows channel by channel source monitoring regardless of tape transport status
- Simplified source/tape monitoring functions with automatic switching
- Edit and punch crossfade times are selectable between 10 to 200ms
- There are three user setup memory banks for storing setup profiles
- Menu settings are displayed on a LCD display with cursor and Enter/Escape keys
- 10-soft key location memories in addition to the basic memo 1 and memo 2 locate points used for looping and punches
- Pull up and pull down functions are provided to adjust sampling frequencies to drop frame rates. For example, since the frame rate of film (24 FPS) and the frame rate for video (29.97 FPS) don’t conform to a simple mathematical ratio, audio sampling frequencies would be affected on transfer back to film
- Ten most commonly used functions can be assigned to soft keys
- 15-segment peak level meters have selectable fall ballistics and hold time ranging from 0 to 9 seconds and continuous peak hold
- Reference levels for the analog I/Os are selectable between three standard values: Tascam (-16dB), SM PTE (-18dB) and European (-20dB)

DA-98 and DS-D98

The DS-D98 is the only tape-based recorder that supports Sony’s Direct Stream Digital (DSD) for Super Audio CD (SACD) creation. DSD recording uses a 2.8224 MHz sampling frequency for the original 1-bit data to allow direct recording of a Super Audio CD master, producing possibly the highest fidelity audio available from today’s digital technology.

The DS-98 can be configured in both a DSD two-track and PCM multitrack format: In DSD mode, the unit functions as a 2-track recorder/player with synchronization of up to 16 units and to other DTRS recorders and features Sony’s SDIF-3 digital I/O. In PCM multitrack mode, the DS-D98 features a selectable 24-bit or 16-bit recording format with 44.1, 48, 88.2, 96, 176.4, 192kHz sampling frequencies. (44.1/48kHz: 8-tracks, 88.2/96kHz: 4-tracks, 176.4/192kHz: 2-tracks). Recordings made on the DS-D98 are backward compatible with existing DTRS recordings. Additional features include: +/- 6% pitch control, an onboard test tone generator, electronic patchbay, TDIF-1 digital audio interface and 25 pin 8-channel AES/EBU digital I/O.

Otherwise identical to the DA-98HR, the 4U rackmountable DS-D98 features a confidence monitoring function, selectable reference levels, a LCD display on the front panel, set-up data memory on tape, seamless punch I/O with digital cross fade, adjustable peak hold release time level meter and an A/B head playback error rate display function. It also supports RS-422 control (P2 protocol). Its synchronization capabilities include XLR time-code IN/OUT terminal with an onboard SM PTE synchronizer, Word Sync IN/OUT/Thru, Machine offset in sub-frame or sample rate accuracy, and Auto Punch I/O in 0.1 frame accuracy.
TASCAM

MX-2424/ MX-2424SE

24-bit 24-Track Hard Disk Recorder/Editors

One of the most popular 24-track recorders ever made, the MX-2424 offers the winning combination of excellent fidelity, sturdy construction, ease of use and digital audio file compatibility for serious musicians, engineers, studio owners and other production professionals.

Extremely powerful, the MX-2424 is capable of 72 simultaneous tracks of throughput (playing back 24 tracks of audio, recording 24 tracks and doing 24 tracks that are crossfaded together at the punch points) without a glitch. Its hard disk formats and audio file types make it the most compatible standalone hard disk recorder for interoperability with leading DAW applications like Pro Tools and Logic Audio. It features a 9GB internal hard drive as well as a SCSI Wide port that supports external hard drives from up to 40 feet away. And optional analog and digital I/O cards are available so the MX-2424 can be configured to suit any environment. SMPTE synchronization, Word Clock, MIDI Time Code and MIDI Machine Control are all built-in for seamless integration into any studio. Finally, the MX-2424 is more than just a recorder. Bundled with Tascam’s MX-View graphic editing software it is also a sophisticated audio editor with the editing capabilities of a digital audio workstation. Exactly the same, the MX-2424SE includes an 18GB removable front-panel SCSI drive.

FEATURES

- Record up to 24 tracks of 24-bit 44.1/48 kHz audio (or 12 tracks at 88.2/96 kHz) simultaneously using any combination of digital and analog I/O.
- Supplied 9GB internal drive allows 45 minutes of audio across all 24 tracks.
- SCSI connector in the back allows you to add external SCSI Ultra2 Wide hard drives or extended recording times and backup. There is also a front panel 5-1/2” bay available for installing an additional drive, or an approved DVD-RAM drive for back-up, using affordable DVD-RAM media.
- Since every hard disk recorder writes a particular type of audio file format to its particular format of hard disk, Tascam chose two of the most popular formats for use in the MX-2424: Sound Designer II for HFS/HFS+ Mac formatted disks and FAT-32 Broadcast Wave (compatible with .wav files) for PC disks. Because they support time stamping, these formats make it easy to move your audio files from the MX-2424 into audio editing systems like Pro Tools, Digital Performer, Cubase and more.

Transport Controls

Whether you’re a novice recordist or an engineer at the top of a commercial recording facility, you’ll appreciate the ways the MX-2424 lets you navigate through a project.

- MIDI In, Out, and Thru ports are built-in for MIDI Machine Control.
- A footswitch port lets you use a punch-in pedal, or an Alesis LRC remote control.
- 100 locate points
- Pre-roll and post-roll functions for auto-punching
- Jump ahead and jump back a few seconds with an easy key press
- Play through, from or to a captured In or Out point for easy edit point previews.
- Numeric keys that let you enter a time code value and press locate.
- Last button locates to where you last hit Play and begins playing
- Scrub/shuttle wheel lets you feel and sound like there are, even scrubbing in reverse

Editing

- Built-in editing capabilities include cut, copy, paste, split and ripple or overwrite
- 100 levels of undo from the front panel
- Offers two recording modes. And while both offer 999 virtual tracks and lightning fast punching performance, each mode provides its respective advantages.
- Loop Mode is a non-destructive recording mode (similar to a DAW) that continuously records new takes without erasing the previous version. This mode is ideal for those who want to take advantage of the extensive onboard editing tools and 100 levels of record/edit Undo.
- TL Tape Mode is a destructive recording mode that rewrites directly over the existing track or tracks during loop recording (just like a tape-based multitrack with a big fat 2” reel of tape!). This mode maintains a predictable amount of disk space while creating single audio files per track that can easily be imported into your Mac or PC DAW and conserving as much disk space as possible.
**TASCAM MX-2424/MX-2424SE RECORDERS**

**Integration**
- Any system compatible with SDII or Wave files can import MX-2424 audio files. If that system supports time stamped audio files, they can be placed at their original time code location with sample accuracy.
- Using a format compatible with digital audio/sequencing programs and digital audio workstations called Open TL, these systems can read and write to/from the disks used in the MX-2424 to offer playlist compatibility and recognition of virtual tracks without having to load, reposition and trim each digital file.

**Comprehensive On-Board Synchronization**
Designed in conjunction with TimeLine, the acknowledged world leader in synchronization tools, the MX-2424 is able to offer the best sync tools of any hard disk recorder today. With exceptionally low jitter and its capability of frame-accurate lock to incoming SM PTE time code, the MX-2424 leads the way in the integration of standalone hard disk recording into the all-digital studio.
- Word Clock In, Out and Thru ports ensure that the sampling rate of connected equipment is properly aligned.
- SM PTE synchronizer for generating or chasing SM PTE time code. This allows the MX-2424 to lock to any device that receives or generates SM PTE time code.
- MIDI In, Out and Thru for controlling the MX-2424 via MIDI Machine Control and MIDI Time Code.
- Video In and Thru: Allows the MX-2424 to lock with a blackburst signal from video.
- TL-Bus synchronization allows up to 32 machines (768 tracks at 48kHz or 384 tracks at 96kHz) to be locked with sample accuracy without any external synchronizer.
- AES/EBU (with selectable input sample rate conversion) and S/PDIF I/O to automatically clock the MX-2424 or transfer audio to digital devices.
- Updates are available via a Smart Card slot in the front panel, or, downloaded directly from Tascam via the ethernet port.
- Ethernet port also lets you transfer audio files to your computer and back, as well as letting you back up entire projects.

**MX-View Editing Software for the MX-2424**
Offering a sophisticated graphic editing interface comparable to full-featured digital audio workstations, MX-View lends powerful editing capabilities to the MX-2424, making it the most comprehensive affordable yet professional recording/editing system ever made.

Running on both Mac and Windows, MX-View is a quick and responsive editor, with the ability to view waveforms down to the sample level. You can repair clicks and pops with the pencil tool, select and nudge audio events to the correct beat, drag and drop audio files with the hard tool, fade, crossfade and trim events on the fly.

The MX-View interface also functions as a complete system interface for as many MX-2424s as you wish. Multiple MX-2424s can be displayed and edited on the screen simultaneously... no need for a separate monitor for each machine. Plus, each machine's 24-track on-screen meters can be clearly seen from the MX-View windows, making it a thorough remote control interface.

Buttons and windows can be hidden as needed, and color-coded edit groups makes editing across multiple tracks a snap. Keyboard command sets can be configured, and windows like the transport, locate markers, and level meter can be moved around freely and stored as a user preference.

**24-Channel I/O Options**
A variety of optional 24-channel audio interface options including analog and a variety of digital protocols such as TDIF, ADAT optical and AES/EBU, allow you to connect the MX-2424 to any digital or analog console as well as popular digital audio recording/editing systems. But that's only half the story... on the MX-2424, you can use both the analog and digital interfaces simultaneously. Using this versatile routing, you could record through the MX-2424's analog converters and monitor via a digital console. And with the exception of the ADAT Optical Interface, all MX-2424 I/O cards support 96kHz sampling rates.

- IF-AN24: 24-channel, 24-bit 96/48kHz A-D/D-A
- IF-TD24: 24-channel TDIF digital I/O
- IF-AD24: 24-channel ADAT digital I/O
- IF-AE24: 24-channel AES/EBU digital I/O

**RC-2424 Remote Control for the MX-2424**
Offers complete transport control and system set-up with the familiar front panel layout of MX-2424 (controls up to 6 MX-2424 machines)
- 8 user-definable macros for frequently used keystrokes. Additional functions for controlling the TL-SYNC
- Status lights offer immediate indication of important functions.
- Additional keys dedicated to editing functions, like capturing and auditioning in/out points for punch-ins or edits, allow you to work faster and more comfortably.
24-Track Digital Personal Studio

The DPS24 is a self-contained digital studio that takes the professional recording, mixing, effects and editing capabilities of the DPS16 to an even higher level. For starters, the DPS24 combines 24-tracks of uncompressed 24-bit/96kHz random access recording and a 44 channel, 20 bus digital mixer with 100mm touch sensitive moving faders that support onboard dynamic and scene automation. A wide range of inputs and outputs are available right out of the box including 28 analog inputs and an MPLP (Multi-Purpose Light-Pipe) optical interface which can be used for 8 channels of ADAT lightpipe or stereo S/PDIF I/O. 12 rotary encoders allow you to adjust a channel’s entire parameter set at the touch of a button. The system’s user interface can be further enhanced with the included ak.Sys Track View utility which allows real-time track displays to be viewed on any Mac or PC computer with a USB connection.

FEATURES

24-Bit/96kHz Digital Recorder
- Supports 24-tracks of linear (uncompressed) 16/20/24-bit recording and playback at 44.1/48/88.2/96kHz
- Up to 20 tracks can be recorded simultaneously without compromise to the systems performance
- 24-track recording is supported via a special transfer mode designed to allow you to make digital transfers from other sources in a single pass
- A total of 256 virtual tracks, limited only by available disk space, can be freely assigned to any of the 24 physical tracks for playback

44-Channel Digital Mixer
- 44-channel digital mixer consists of 12 input channels, 24 disk tracks and 4 stereo effects returns
- Each channel features —
  - Level, Pan, Solo and Mute
  - Compressor/Limiter/Expander
  - Noise Gate
  - 3-band EQ (hi/low shelving, sweepable mid w/variable Q)
  - L/R routing, Group 1 - 8 routing
  - Four pre/post FX sends for accessing the internal FX
  - Four pre/post FX sends for accessing external effects and/or Studio outs for talkback monitoring

12 Faders
- Twelve faders and Five fader banks
  - Bank 1 controls the levels of the 12 inputs
  - Bank 2 controls tracks 1-12
  - Bank 3 controls tracks 13-24
  - Bank 4 controls the Group/FX levels (Faders 1-8 control the Group Outs while faders 9-12 control the stereo FX returns)
  - Bank 5 is a USER bank that allows the 12 faders to be customized by the user

Built-in Automation
- Both dynamic (moving fader) and scene automation are supported
- The twelve 100mm Q-Touch touch-sensitive moving faders provide full dynamic automation of level and pan, channel on/off, FX/AUX sends and FX select, with UNDO/REDO
- The Q-Touch technology makes recording and editing mix automation data as easy as touching and moving a fader. You can easily correct any mistakes made when recording automation — simply grab the fader, make the adjustment and the original control movement will be overwritten
- Automation parameters such as levels, mutes and pans can be enabled/disabled during automation recording allowing you to capture only what you want
- A RECORD SAFE mode allows you to protect automation on individual channels from being accidentally overwritten
- In EDIT mode, when you’re moving bits and pieces of audio around, you have the option of including any automation data associated with the specified audio region. This allows you to maintain the integrity of the mix for that region
**Analog Inputs**
- Twenty four inputs divided into two banks provide a choice of –
  - (Bank A) Twelve balanced mic/line inputs using XLR-1/4” TRS combo jacks
  - (Bank B) Twelve balanced line inputs using 1/4” TRS jacks
- The desired input type can be individually selected with a push button switch located at the top of each channel strip, virtually eliminating the need for continual re-patching by allowing several devices to be connected at any one
- A Hi-Z instrument input on the front panel that overrides input 12 when a guitar or bass is connected
- Two RCA tape inputs are provided for patching cassette deck or CD player as well as two 1/4” AUX inputs for bringing in a sub-mixer or external effects processor
- Switchable phantom power is available for input channels 1-4
- Input channels 1 - 4 also offer separate balanced 1/4” TRS Send and Return jacks that can be used as
  - Channel inserts for patching external dynamics and EQ processors
  - Direct channel outputs
  - Direct ADC inputs — When using external mic-preamps, the ADC inputs allow you to bypass the DPS24's input stage, and route signals directly to the 24-bit A/D converters

**Non-Destructive Editing**
- Non-destructive Copy, Cut, Erase, Insert, Paste and Move functions are supported, with 256 levels of undo/redo, using an edit "clipboard" in much the same way as computer-based applications
- Audio regions can be copied within the same project, or between different projects
- Up to two tracks can be viewed in the waveform screen at once, making it easier to edit stereo tracks

**DSP Functions**
- DSP functions include phase-coherent Timestretch, Pitch Shift, BPM Match, Varispeed, Reverse and Normalize. As with the other edit functions, the user has the option of including the automation parameters when manipulating the audio

**Analog Outputs**
- Separate 1/4” Main, Nearfield and Mono monitor switch, are provided for reference checking a mix
- Two 1/4” stereo headphone outputs, with a dedicated volume control, are provided on unit's front panel

**Digital I/O**
- Coaxial (RCA) stereo input and output
- A M PLP (Multi-Purpose Light-Pipe) optical interface switchable between 2-channel SPDIF mode and 8-channel ADAT mode is also provided

**Optional I/O Interface Cards**
- Three interface slots, on the rear panel, support a variety of I/O expansion options
  - SMPTE time code reader/generator card
  - Firewire (IEEE 1394)
  - 68 pin SCSI (50 pin SCSI is standard)
  - 16 channels of ADAT In/Out with sync

**Akai’s ak.Sys Control and Networking PC/MAC Software**
- The USB interface provides a realtime SVG TrackView display using ak.Sys software installed on a Mac or PC as well as networking capabilities with other Akai products, and software updates
- Using the optional 1394 Firewire interface board, ak.Sys will support VST plug-ins, allowing the ak.Sys computer to be used as a realtime effects engine for the DPS24

**Dedicated Controls**
- A generous complement of dedicated function keys, transport buttons and rotary encoders are available
- Multi-function rotary encoders located above the faders have a collar of LEDs around them that let you see their values at a glance
  - Hit the Q-STRIP keys and use the 12 encoders to adjust pan or effects sends
  - Hit the Q-CHANNEL key and use the 12 encoders to adjust a channel’s entire parameter set
- A dedicated multi-track jog wheel for ‘reel-rocking’ and you begin to get the feeling that it’s you that’s in charge, not the machine’s arcane operating system

**Media & Storage**
- Equipped with a large capacity 60 GB internal IDE drive that provides over 5 hours of audio on 24 tracks at 48kHz. (12 tracks at 96kHz) — Additional IDE drives are available at low cost
- The built-in SCSI interface allows you to link up to seven additional external SCSI drives providing the flexibility of recording cuts of any length, limited only by the size of the selected storage medium
- A built-in 5.25” drive bay supports an optional CD-R/CD-RW drive, providing a cost-effective means of project archiving as well as allowing users to produce professional quality audio CDs

**Conveniences**
- 5.1 surround mixing will be supported using analog the Stereo/Main/Near or digital (M PLP) outputs
- ASCI keyboard input for track/project naming
- The 1/4” footswitch port supports the Alesis ADAT LRC (Little Remote Control)
Q-Link Navigation System
- The Q-link Navigation System is a row of assignable encoders, above the channels, faders designed to provide quick and direct access to all major mixing functions including EQ, Aux send levels, and effects parameters, without the need to wade through complex menu layers. Encoders can be quickly assigned to make adjustments to FX/AUX Send levels, or adapted to become a full Q-Channel channel strip providing access to all parameters of an individual channel.
- The large 6-inch diagonal (320 x 240) graphic LCD display, provides precise feedback of how a track is shaping up with a graphic representation of audio cues on a scrolling track sheet.

Enhanced Q-Link Navigation
- Q-Link features make searching through complex layers of menus a thing of the past by providing direct access to all major Record, Edit, Mix, and Effect functions.
- 6 Q-Knobs located on the large tiltable LCD display offer easy realtime access to effects parameters and system control.

Editing
- Graphic waveform editing is provided down to the sample level with up to 256 levels of UNDO.
- A number of editing functions can be applied to single or multitrack sections of audio including — copy-overwrite, copy-insert, cut-overwrite, cut-insert, insert-silence, cut-discard, cut-move.
- A choice of 54 preset timestretch algorithms provide an unprecedented variety of timestretch options each of which are capable of delivering phase coherent processing of stereo recordings.
- You are also able to normalize and change the levels of audio regions up or down.

Locate Features
- Up to 100 locate points in a song can be named and stored. A “Direct Locate function” that assigns locate points to the keys on the front panel is also available.
- Both Manual Punch In/Out (using the transport buttons or a footswitch) and Auto Punch In/Out (at specified In and Out points) are supported.

What is Non-Destructive Editing?
When a section of audio is copied from one location to another, that audio is re-written on the disk and exists in two separate locations on the drive. This is an inefficient use of disk space and makes your recorder work hard much than it needs to when accessing audio. With non-destructive editing there is no duplication, or re-writing, of the audio on the disk.

Instead, non-destructive editing uses pointers to reference audio on the disk. So when you “copy” the audio you are only adding a second set of pointers that reference the exact same audio on the disk, not re-writing the same audio to another location on the disk. This makes edit functions much faster than on many portable studio products, as well as making the most efficient use of your disk space.
8-Track Digital Multitracker

The Fostex M R-8 is an affordable, ultra-portable eight track digital multitracker which records and plays back 8 tracks of uncompressed audio using a CompactFlash media card. Audio can be recorded at high quality 44.1 kHz/16 bits or 22.05 kHz/16 bits in the extended mode. The M R-8 also features an 8-channel digital mixer, digital effects including the delay/reverb, mastering effects and guitar/bass amp and mic preamp simulation insert effects. The four track cassette-style user-interface allows you to intuitively carry out all the process for digital multitrack recording including overdubbing, track bounce and mixdown – nearly all of the functions available on the M R-8 are accessed directly from physical knobs and buttons located on the top panel.

FEATURES

- 8-tracks of recording and playback using readily available Compact Flash cards (a 128MB card is included)
- 16-bit Delta Sigma A-to-D and D-to-A converters and high quality sound uncompressed linear 16-bit/44.1 kHz digital audio recording and playback (normal mode).
- 2-track simultaneous recording and 8 tracks playback
- Approximately 25 track-minutes of recording time is available using 128MB Compact Flash Card in normal mode (16-bit/44.1kHz). Extend Mode (16-bit/22.05 kHz) doubles the available recording time

Inputs and Outputs

- Two analog input channels – Channel 1 gives you a choice of a balanced XLR mic input or a 1/4” unbalanced line or Hi-Z guitar input Channel 2 Gives you a choice of a balanced XLR mic input or a 1/4” unbalanced line input
- 1/4” TRS main/monitor outputs
- Two 1/4” stereo headphone outputs with level control
- Optical S/PDIF digital output

Effects

- Digital effects include delay and reverb using a newly developed algorithm for the M R-8
- Guitar Amp simulation (Brit Stack, U.S. Metal, and 60’S Combo) with analog style distortion on input A at “Guitar” position) and Microphone simulation (Dynamic, Condenser, Tube) on input A at “Line/Mic” position) as insert effect
- A mastering effect is provided on the stereo bus that allows you to process a song after it has been bounced or during mixdown.

Intuitive Interface

- Intuitive, four track cassette-style operation is ideal for new comers to the world of digital multitrack recording.
- 128 x 64 dot-matrix LCD and self illuminating keys show current operating status
- Using the built-in USB port, on the rear panel, and the free MR-8 WA V manager software allows you to transfer WA V file data between the MR-8 and a Windows PC (XP/2000/M E/98SE) for data editing, CD burning (normal mode) and backup

Editing

- Two locate points are provided for executing a variety of editing functions including auto-punch in and out recording
- Erase, Copy, Paste, Move and Exchange mono or stereo track data with one level of undo/redo.
- Part editing allows you to Erase, Copy, Paste, Move and Exchange data from within two locate points of a track. Part editing also allows one level of undo/redo.

Conveniences

- Powered by 6 AA alkaline batteries (provides just over 2 hours of normal use) or with the included AC adapter
- A built-in microphone allows instant access for recording ideas or events.
- The metronome function generates guide clicks according to the tempo map.
- MIDI output allows you to transmit MTC or MIDI Clock for synchronization with another MIDI compatible device such as a drum machine or computer.
FOSTEX
VF80 • VF80CDR

Digital Personal Studio

The Fostex VF80 is an affordable all-in-one digital multitracker that provides 8-track digital recording, an intuitive digital mixer, A.S.P. + digital effects with mic and guitar amp modeling, 99 scene memory, waveform display, XLR inputs with phantom power and an optional internal CD-R/RW burner. Fostex’s proprietary FDM S-3 technology enables more efficient disk and CPU usage allowing you to obtain a greater amount of recording track minutes per drive without data compression, and faster editing and DSP operations.

FEATURES

• 8 playback tracks plus an additional 16 ghost tracks that allow you to record multiple takes and choose or “comp” the best performances.
• 20-bit A-to-D converters and 24-bit D-to-A converters.
• Internal 3.5” 20GB IDE hard drive provides 64 total track hours of uncompressed 16-bit digital audio at a sample rate of 44.1kHz.
• CD-1A internal CD-RW drive (optional in the standard VF80) for mastering, data back-up and WAV file import and export.

Digital Mixing

• Eight 60mm faders including six mono faders (channels 1–6), one stereo fader (channels 7 and 8) and a Master fader for the stereo bus.
• Two-band shelving EQ with ±18db boost and cut (at 100 and 10k Hz) on channels 1-6 with access to a 36 preset EQ library.
• The 99 mix scene memory, with title edits, allows you to store an entire mixes fader positions, EQ and effect settings for later recall or automated scene changes during final mixdown.

Effects

• A.S.P.+ digital channel effects provide 44 types of effects including reverb, panning, hall, reverb, chorus, flange, and pitch shift effects as well as mic modeling, guitar amp simulations and distortion.
• The Bounce function allows audio from tracks 1 through 6 to be bounced to tracks 7 and 8 at the touch of a button.
• Mastering Mode allows you to apply one of 10 preset Mastering Effects, including EQ, compression and effects to tracks 7 and 8 during your final mix to the internal CD-RW drive or an external recorder.

Editing

• Non-destructive Copy, Move, Paste and Erase audio editing with undo/redo.
• Find precise editing points using the waveform display and audio scrubbing using the onboard jog wheel.
• Clipboard data can be automatically repeated up to 99 times.
• Auto punch in and out.
• ±6% varipitch control.

Inputs and Outputs

• Two simultaneous inputs, with trim controls, on/off switches and peak LED indicators, including two XLR inputs with phantom powered and two unbalanced 1/4” instrument inputs.
• Left and right 1/4” main outputs and a 1/4” stereo headphone output with level control.
• Coaxial S/PDIF digital I/O.
• 1/4” footswitch input provides hands-free manual punch I/O.

Training Mode

• Center signal cancellation and full control of audio speed (tempo) without altering the pitch can be applied to tracks 7 and 8 allowing you to practice along with a stereo track.

Synchronization

• MIDI In and Out connectors allows synchronization and control using MTC, MMC and MIDI clock as well as song position pointer.

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of ‘100 or more)
Digital Personal Studio

The VF160 is a 16-track digital recording, non-destructive editing, mixing and mastering with an internal CD-RW drive included as standard equipment. Up to sixteen tracks can be recorded simultaneously to the included 20GB internal IDE hard drive. The waveform display and 16x zoom feature provides precise editing. The digital mixer features 60mm faders, 3-bands of EQ, solo-in-place as well as two effect and two aux sends for all 16 channels with a 99 mix scene memory. Other features include two independent multi effect DSPs packed with a preset library of great sounding algorithms. And not only are there 8 analog inputs, including two XLR mic inputs with phantom power, there is also an 8 channel ADAT optical I/O that will interface with a host of computer-based DAWs, digital mixers as well as a host of outboard processors.

FEATURES

- 16 playback tracks and 8 track simultaneous record plus 8 additional ghost tracks for multiple takes (16-track simultaneous recording is available when using ADAT interface in addition to analog inputs).
- 7 on the fly marker points, 7 Edit Memory & 99 Event Memory.
- Internal CD-R/RW drive.
- .WAV file export and import.
- 99 programs (songs).
- 3.5" IDE hard drive bay includes a 20GB drive and is upgradeable to accommodate larger drives.
- 17 (60mm) input faders – 8 x analog/track inputs, 8 track inputs and 1 x Master fader (stereo buss).
- Fader pairing allows channels to be grouped in stereo sets.
- Solo, 3-band EQ and plus a Low Pass Filter on all 16 channels.

Digital Mixing

- Two channel compressors assignable to channels 13/14 or 15/16 with EQ off).
- Master compressor and 3-band EQ.
- Two effect sends and two pre/post switchable AUX sends.
- Two built-in Fostex A.S.P. digital effects.
- 100 mix scenes per program.

ADAT Mixer Mode

- Use the VF160 as the front-end, mixer and control surface for your PC/Mac-based audio/midi workstation equipped with an ADAT card and a MIDI interface.
- Eight balanced/unbalanced 1/4” TRS inputs (channels 1 - 8).
- Channels 7 and 8 also give you the option of two XLR inputs with phantom power or 1/4” instrument inputs plus 1/4” TRS inserts for injecting outboard processors into either signal.
- Unbalanced 1/4” L/R Monitor outputs and a 1/4” stereo headphone outputs.
- Two AUX Sends via single 1/4” TRS connector (TIP: send 1 / RING: send 2).
- Unbalanced RCA L/R outputs.
- Optical digital I/O switchable between eight channel ADAT and S/PDIF.
- 50-pin SCSI-2 connector supports additional storage devices including external CD-RW drives.

A.S.P. (Advanced Signal Processing Technology)

The A. S. P. is Fostex’ proprietary digital effect processing technology designed to provide maximum efficiency from a small amount of DSP power. The H. F. A. (Harmonic Feedback Algorithm) achieves a rich high density Early Reflection sound and wonderfully smooth High Dump response while the H. D. L. P. (Hi-Density Logarithmic Processing) delivers an elaborate reverb simulation with clear sounds without the graininess caused by numerous integrated delay module interference.
Digital Recording Studios

The D1200 and D1600V40 are all-in-one, digital audio workstations that deliver uncompressed 16- and 24-bit direct to hard disk multi-track recording, automated mixing, powerful built-in REMS effects processing, a wide range of I/O and routing flexibility, as well as intuitive non-destructive editing capabilities. The D1200 offers 12 tracks of audio playback at 16-bit (6 tracks at 24-bit) and the D1600V40 provides 16 tracks of playback at 16-bit (8 tracks at 24-bit). The D1200’s 16 channel, 4 bus digital mixer and the D1600V40’s 24 channel, 8 bus digital mixer each feature level, pan, mute, solo, 3-bands of EQ as well as effects inserts and 3 effects sends on each channel. Mixer, EQ and effects settings can be stored within each song as scenes and even controlled in realtime via MIDI and external controllers. Balanced XLR and 1/4” TRS analog inputs with high-performance balanced preamps will allow a variety of audio sources to be connected directly to the systems, ranging from mic level to a +16 dBu level. A dedicated 1/4” Hi-Z input is also provided for direct connection of a guitar or bass. The internal CD-R/RW drive, included with both units, makes it possible to backup/restore data, or to create audio CDs in a single integrated package — Go from recording to effect processing to mixing down to CD while staying completely in the digital domain.

PASE (Pure Audio Sound Engine)

- Both units offer uncompressed 16-bit and 24-bit record and playback at 44.1kHz
- The D1200 offers 4 simultaneous record tracks and 6 playback tracks at 24 bit or 4 simultaneous record tracks and 12 playback tracks at 16-bit
- Each of the D1200’s 12 tracks offers 8 virtual tracks, for a total of 96 tracks per song
- The D1600V40 offers 4 simultaneous record tracks and 8 playback tracks at 24 bit or 8 simultaneous record tracks and 16 playback tracks at 16-bit
- Each of the D1600V40’s 16 tracks offer 8 virtual tracks for a total of 128 tracks per song

Digital Mixer Section

- The D1200 features 16 mixer channels which are divided into four input channels and 12 playback tracks. The D1600V40 has 24 mixer channels divided into 8 simultaneous input channels and 16 playback tracks
- The D1200 has 9 channel faders (6 mono and 3 stereo) with pan controls and a master fader that provide smooth, precise level adjustments over individual channels and the overall output level. The D1600V40 has 16 channel faders with pan controls
- Each channel has its own Level, Pan, Solo and Mute controls, Phase (polarity) reverse, a 3-Band EQ as well as an effects insert, two Master effects sends and an Aux send for accessing an external effects processor
- During mixdown, input channels on can be used for submixing external audio sources such as sequenced MIDI tracks as well as outboard effects processors
- A Pairing function allows adjacent channels to be grouped as a stereo pair – ideal for stereo synths and drum loops

Serious EQ

- Three bands of EQ, each with a boost/cut range of ±15dB, are provided for each analog input and mixer channel
  - High shelving band at a fixed frequency of 10kHz and a Low shelving band at a fixed frequency of 100Hz
  - Sweepable Mid band with a frequency range from 100Hz to 20kHz
- Because EQs are separate for the input and mixer channels you are able to assign different EQ settings for recording and playback

Mix Automation

- Mixer settings such as fader, EQ, pan and effects can be stored in a “scene” — Up to 100 scenes can be stored per song
- The Scene playback function allows you to assign scenes for automatic recall at the time locations you specify within the song
- Automation data can be sent and received in realtime, as controller data via a MIDI compatible sequencer, keyboard or computer
Each song can contain up to eleven simultaneous effects programs —
- Up to eight insert effects, including guitar, bass and vocal multis, can be inserted into any analog input or mixer channel.
- Two master effects can be applied to the send from each channel.
- A final stereo effect can be applied to the master L/R as the last stage.

Operations such as copying, pasting, or erasing phrases are as easy as specifying the IN, OUT, and TO locations.
- The Time Expansion/Compression function makes it possible for phrases of differing tempo to be matched after they have already been recorded, or to make a phrase fit into a specific time.

- The Scrub function lets you listen to the recorded sound of a track as if you were manually rocking the reels of an open-reel tape recorder, giving you precise control when editing tracks and for finding the exact punch points.
- 99 levels of undo/redo makes it easy to compare complex edits and arrangements.
- To make the most efficient use of hard disk space, you are able to select between 1, 8 or 99 levels of Undo.
- Four Locate points and 100 Mark points (with names) are available per song providing quick and easy access to playback and editing locations.
- The Normalize function lets you boost the overall level of track to the maximum volume without clipping.

- The Normalize function lets you boost the overall level of track to the maximum volume without clipping.
- To optimize the scrub mode, you can fine-tune the playback speed.

- To access the effects, press the corresponding button on the control panel.
- Each effect program is created with one of 98 different algorithms using Korg’s REMS (Resonance structure and Electronic circuit Modeling System) technology.
- 192 preset effects (128 insert effect presets, 32 master effect presets, and 32 final effect presets) created by professional musicians and studio engineers.
- Preset programs can be editing and stored in 192 user program locations.
- An expression pedal, available separately, can be connected to control an insert effect in real-time.

Each effect program is created with one of 98 different algorithms using Korg’s REMS (Resonance structure and Electronic circuit Modeling System) technology.
- 192 preset effects (128 insert effect presets, 32 master effect presets, and 32 final effect presets) created by professional musicians and studio engineers.
- Preset programs can be editing and stored in 192 user program locations.
- An expression pedal, available separately, can be connected to control an insert effect in real-time.

- The Digital I/O section includes a built-in sample rate converter that automatically converts 48 or 32 kHz sources to 44.1kHz.

- The internal CD-RW-1X8 slim-line CD-R/RW drive makes it possible to backup and restore data, to create audio CDs, as well as playback and record directly from an audio CD.
- A CD burner with the same capabilities is included with the D1600V40.
Both units include an internal 40 GB hard drive providing up to 62 hours of total audio data at the 16-bit resolution.

The D1200 has a built-in USB interface that allows direct connection with a computer. A 2GB partition of the 40GB hard disk is reserved to allow simple drag and drop data transfer between the D1200 and the computer using the .wav file format.

The D1600V40's user-installable 3.5˝ hard disk cartridge/bay system supports affordable, readily available IDE hard disks that can be exchanged when switching between projects. A 50 pin SCSI-2 port supports a variety of fixed and removable drives providing additional record, playback and data back-up options.

Data backed up from earlier D-Series digital recording studios can be restored into the D1600V40, allowing easy transfer of data. Playable D12, D1200 and D16 drives can also be played back by the D1600.

A built-in Metronome with 96 metronome patterns and 215 PCM-based drum patterns covering many different genres of music provide inspiring tempo guides when laying down tracks.

Drum patterns can even be recorded to tracks and used within your songs.

The comfortable size and logical layout of the control surfaces make navigation on both units easy and intuitive.

Both units provide a full range of transport controls including scrubbing as well as dedicated buttons that provide instant access to system functions.

A large 240 X 64 pixel backlit display provides clear access to setup and editing operations, including precision graphic waveform editing.

The D1200's display flips up for easy viewing.

A number of dedicated LED indicators provide visual feedback of system activity:
- Hard disk / CD-R / MIDI activity
- Track status (play, input, rec, mute)
- Transport status

The D1600V40 features a 240x64 pixel, backlit TouchView LCD display system which allows you to select pages, tabs, and parameters, and set their values by pressing their related objects on the screen. Also displayed, during recording or playback are level meters and time locations as well as various other parameters.

MIDI In/Out connectors allow you to:
- MTC (MIDI Time Code) and MIDI Clock can be sent or received allowing the units to synchronize with an external sequencer
- Use MMC (MIDI Machine Control) to allow Stop/Play/FF/Rew/Record/Locate functions to be sent and received between the units and an external sequencer
- Up to 200 tempo map events, that can be dialed in numerically or created using Tap Tempo or MIDI Clock, are available per song, allowing tempo, time signature and rhythm patterns to change during recording and playback.

The Trigger Recording function allows recording to begin automatically in response to an audio input.

The Auto-Save Feature ensures that song data will be automatically saved automatically when selecting new songs and on power-down.

Built-in auto chromatic tuner – In addition to tuning a guitar or bass, you can even check the tuning of a playback track.

Auto and manual punch-in/out recording makes it easy to re-record just the desired portion of a performance.

Loop recording and playback lets you set specific in / out points within a song and loop the audio. This allows you to:
- Rehearse intricate parts to be recorded
- Use the punch-in function while looping, and add new data as the loop plays
- Use the loop playback feature to audition specific regions of recorded audio.

The Program Play function allows you to playback multiple songs in any order, from the internal drive and external drives.
Digital Recorder

The PXR4 delivers 4 tracks of high-quality digital recording and mixing, pro-level editing functions along with great sounding digital effects in a compact, ultra-portable package. The PXR4 records directly to readily available SmartMedia cards from 4MB to 128MB — a 16MB card is included. A full compliment of onboard I/O is provided including a dedicated guitar input, stereo mic/line inputs, stereo line and headphone outputs are provided as well as a USB port that allows you to transfer files between the PXR4 and your computer in stereo MP3 format. The PXR4 can be powered by two AA batteries or the included AC adapter. There’s even a built-in stereo mic ready to capture your musical ideas at a moment’s notice.

**FEATURES**

**Recorder Section**
- Record 4-tracks of high-quality digital audio directly to SmartMedia cards from 4 to 128MB - a 16MB card is included.
- Three recording modes afford maximum flexibility by enabling you to select the one that’s right for the task at hand depending on the recording quality and time you need.
  - > Standard mode provides an excellent balance between recording quality and memory use.
  - > High-quality mode captures your performance with impeccable clarity.
  - > Economy mode delivers maximum recording time.

**Professional Editing**
- Eight virtual tracks per track allow you to record multiple takes of the same track and select your favorite one.
- Equipped with everything you’d expect from a digital recorder many times larger including easy-to-use punch in/out, bounce, copy and delete functions even time compression and expansion.

**Intuitive Interface**
- Five faders, one per track, plus a master fader as well as dedicated controls are provided for all key features making parameter selection and editing easy.
- Clear, backlit display uses an intuitive icon-based user interface.

**Inputs & Outputs**
- 1/4˝ input with a hi/low impedance switch.
- Stereo mic/line input.
- 1/8˝ stereo output jack, plus a stereo headphone output.
- Using the built-in USB port, you can transfer song data to and from your computer in stereo MPEG format.

**Digital Effects**
- 77 different built-in effects, based on Korg’s proprietary REMS technology deliver ultra-realistic models from guitar amps and pedals to world-class microphones as well as studio essentials like reverb, delays, modulation effects and more.
- 100 preset and 100 user multi-effects programs with up to five simultaneous effects.

**Metronome / Rhythm Patterns**
- 55 different rhythm patterns plus 36 metronome patterns, using high-quality PCM sounds are provided for use as a recording guide, or to create the actual rhythm track for your song.

**Included Accessories**
- Model PXRC-00S 16MB SmartMedia card.
- AC Adapter.
- Soft Case.

**Application Note!**
- Not only is the PXR4 a great multitrack recorder, it is also an outstanding tool for practicing guitar —
  - > Hook up a CD player to the line inputs and record a song you want to learn.
  - > Plug in your guitar and dial in the appropriate amp model and effects.
  - > Use the Time Compression/Expansion to slow down the tempo of a solo by half without altering its pitch.
  - > Use the rhythm and metronome patterns to practice your rhythm playing and scales.
Portable Digital Studio

The BR-532 is a compact and affordable battery powered 4-track digital workstation designed to give the guitarist and songwriter “on-the-go” the freedom to record whenever and wherever inspiration strikes. Up to four tracks of simultaneous playback is provided along with 32 Virtual Tracks per song. Audio is recorded directly to affordable SmartMedia cards (a 32MB card is included). Plug your dynamic mic, guitar, bass or keyboard directly into the BR-532 and record using the high quality COSM amp modeling effects without the need for external processing gear. There’s even a built-in microphone. A separate Rhythm Guide track keeps the groove going with a choice of several stereo drum patterns available in a variety of styles. The four playback tracks and rhythm guide can be mixed (bounced) down to a stereo file along with onboard effects.

Features

- Four simultaneous playback tracks and two simultaneous record tracks
- A total of 32 Virtual Tracks (8 per track) are available for capturing multiple takes
- Audio is recorded to ultra-thin 3.3V SmartMedia cards — cards up to 128MB are supported — a 32MB card is included
- When more tracks are needed, you can digitally bounce all four tracks with effects to a single or pair of virtual tracks
- Digital non-destructive track editing tools include Copy, Paste, Move, Erase with one level of Undo/Redo
- Three locator points provide instant access to specific edit points and Auto punch In and Out points
- Manual punch In/Out is also provided
- 24-bit A-to-D and D-to-A converters and 32-bit internal processing

Mixer and Transport Controls

- There are four volume faders for each channel and a master fader
- A dedicated pan button lets you control the L/R position of each playback track
- Besides standard Play, Stop, Record FF and Rew controls, a Time/Value dial is provided that lets you shuttle to the desired song position as well as adjust the values of various editing functions

Inputs and Outputs

- Balanced XLR and 1/4˝ TRS mic inputs allow you to connect a dynamic mic without adapters
- A dedicated Hi-z 1/4˝ instrument input is provided for plugging in a guitar or bass
- Left and right unbalanced RCA line inputs
- Left and right unbalanced RCA line outs are available for mixdown or monitoring
- A 1/4˝ stereo headphone output
- A optical digital output lets you record directly to a computer, standalone CD recorder or other digital device
- A MIDI output allows you to sync the BR-532 with your drum machine, groove sequencer or computer

Two Types Of Editable Stereo Effects

- The first effect is an Insert Effect that can be applied during tracking with a wide variety of COSM amp models and effects patches designed specifically for recording guitar, bass, vocals and keyboards without relying on external amps and processors
- The second effect type is a Loop Effect which allows you to apply spatial effects like reverb, chorus, flanging and doubling to individual playback tracks during mixdown. Each playback track has its own send control for adjusting the depth of the effect for that track

Truly Portable

- A built-in microphone allows you to capture ideas anytime, anywhere even when you don’t have a mic with you
- Up to 7 hours of on-the-go recording using 6 “AA” alkaline batteries (included) – an optional PSA-120AC adapter is available

Rhythm Guide

- The built-in Rhythm Guide, with tap tempo button and dedicated volume fader, provides 8 drum kits using real PCM-based sounds and patterns, in a variety of styles, that can be used during recording and even bounced along with the four playback tracks
- Multiple patterns can be combined to create a full rhythm track

Additional Features

- 20 character by 2 line backlit LCD display
- An Auto Sub Mix switch on the rear panel allows you to monitor the line inputs while recording from the guitar or mic inputs
- The Phrase Trainer lets you slow the tempo of guitar licks without changing pitch
- The Center Cancel function removes lead vocals from a mix
- A built-in chromatic guitar and bass tuner is available via a dedicated tuner button
- A 1/4˝ footswitch jack accommodates start and stop playback, punch in/out recording and effects bypass

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
Digital Recording Studios

The BR-1180 is an affordable digital workstation that offers ten playback tracks and 80 Virtual Tracks plus a stereo mixdown track — all recorded to an internal 20GB hard drive. Using the optional CD-RW drive (included with the BR-1180CD) for burning your music to CD, you’ve got a powerful system with true all-in-one flexibility. Other features include a large icon-based user interface, phantom power for the XLR mic inputs, MIDI controllable faders and recallable mixer/effects scenes. The built-in rhythm guide lets you assemble great sounding drum parts using high quality PCM sounds. You can also import .Wav loops and automatically match them to the tempo of your song, making it easier than ever to have a great sounding rhythm section.

**SAME FEATURES AS THE BR-532 PLUS—**

- Two track simultaneous record and 10 playback tracks — tracks 1 - 8 are mono tracks, tracks 9 and 10 are combined as a stereo pair
- A dedicated stereo Master Track delivers easy digital mixdown and track bouncing
- 80 Virtual Tracks (8 per track) for working out different arrangements and capturing the perfect solo
- The internal 20GB hard drive supports 16-bit linear uncompressed recording as well as Roland’s proprietary modes

**Internal CD-RW Drive**

- The optional user-installable CD-RW drive (included with BR-1180CD) provides high speed data backup and audio CD creation of your mixes. You can also use the CD-RW drive to import .Wav files such as drum loops to be used within a playback track or the rhythm track.

**Enhanced Mixing and Transport Functions**

- Each playback track has its own volume fader (channels 9 and 10 share a single fader) as well as pan and two bands of sweepable EQ
- You can store and recall up to 8 mixer and effects setting configurations per song
- MIDI input allows you to control and automate fader movements from an external controller or sequencer
- 1000 markers help indicate you instantly navigate thru your song along with audio scrubbing function make it easy to do quick and precise edits.

**Input and Output Flexibility**

- Two XLR and 1/4” TRS mic inputs with switchable phantom power available to the XLR inputs
- 1/4” expression pedal input (compatible with the Roland EV5) allows realtime control of effects parameters such as Wah-Wah

**Effects**

- One Insert Effect and two Loop (send/return) Effects processors — one for chorus/delay and the other for reverb
- COSM Speaker modeling

**Mastering Tool Kit**

- The Mastering Tool Kit provides nine fully-editable processing stages including EQ, multi-band dynamics and limiting designed specifically to help you create the perfect final mix
- The signal first enters the EQ section which includes a five band parametric EQ, Low Cut Filter and Enhancer. The signal is then split into three frequency bands (Low, Mid, High) each with its own level control. Each frequency band is then sent to its own Expander and Compressor and then into a mixer section which allows you to readjust the volume of the three frequency bands. Finally the signal is sent to a limiter and a soft clip algorithm for achieving level maximizing for your mix without distortion.
- The final signal can be dithered between 8 and 24 bits.

**Rhythm Guide and Loop Phrase Sequencer**

- The Loop Phrase Import feature allows you to create and edit loop-based audio phrases within an audio track. You can also import loop-based phrases (including .Wav files imported via CD-RW) into the rhythm guide for a fast way to arrange them to fit your song's form and tempo.
- Additional rhythm patterns can be loaded via MIDI as Standard MIDI Files.

ROLAND
VS-1824CD

24-bit Digital Studio Workstation

The VS-1824CD is an affordable all-in-one 24-bit virtual studio with 18-track playback, 28-channels of automated digital mixing, onboard effects (including COSM guitar amp, microphone and speaker modeling), precision editing functions and built-in CD burning capabilities. Up to eight tracks can be recorded simultaneously using a wide range of high quality inputs including two XLR mic inputs with phantom power, six 1/4” TRS mic/line inputs and a dedicated 1/4” guitar input. Even with all of this power and sophistication, the VS-1824CD is surprisingly easy to operate with many of the system’s most important and innovative features available with only a single button push and Roland’s own EZ-Routing functions that take you step-by-step through the process of configuring recording, mixing, bouncing and mastering set-ups.

FEATURES

True 18-Track Recording
◆ 18 simultaneous playback tracks, 8 simultaneous recording tracks and a total of 288 Virtual Tracks (16 per track)
◆ Dedicate any pair of tracks to create your final two-track mix
◆ Internal 10GB hard drive provides enough space for an album’s worth of songs.
◆ 24-bit A-to-D and D-to-A converters combined with the 24-bit MT Pro recording mode provides true 24-bit signal path.

28 Channel Mixer with AutoMix Automation
◆ 18 playback channels plus 10 input channels available for tracking or for adding external synths, samplers and effects alongside your audio tracks during mixdown.
◆ Choice of 3-band EQ on up to 16 channels or 2-bands EQ on all 28 channels.
◆ All mixer settings including fader levels, pan, EQ and effects can be stored as scenes and easily recalled. There are eight mixer scenes available per song.
◆ The onboard Auto-Mix function makes it possible to automate level changes and panning in realtime.
◆ Automix data can be edited using an event list and copied to other locations.

Track Editing
◆ Time Compression / Expansion can be applied to single or multiple tracks by as much as 75 to 125%.
◆ Graphic waveform display and scrubbing (with a resolution as fine as 1/3000 second) allow you to find precise editing points.
◆ 999 levels of Undo/Redo

Inputs and Outputs
◆ Balanced XLR Mic inputs with switchable phantom power (channels 1 and 2)
◆ Balanced 1/4” TRS mic/line inputs (channels 3-8) and a 1/4” Hi-Z guitar input
◆ Four Aux sends using RCA connectors
◆ Coaxial and Optical S/PDIF digital I/O
◆ Independent L/R Master and Monitor outputs using RCA connectors
◆ 1/4” headphone output
◆ A 25 pin SCSI connector is provided for adding external storage devices
◆ MIDI In, Out/Thru connectors allow you to send and receive MTC (MIDI Time Code) or MIDI Clock for synchronizing with an external MIDI sequencer or even a second VS recorder
◆ A 1/4” foot switch input can be assigned to allow manual punch in/out, transport start/stop, mark point selection and more.

Effects
◆ A VS8F-2 effects board provides two stereo effects processors (four mono) with 240 preset and 200 user effects patches based on a wide variety of effects types including reverb, delay, chorus, flanger, dynamics, EQ, Voice Transformer, COSM guitar amp and mic modeling and more.
◆ A second board can be added for a total of 4 stereo/8 mono simultaneous effects.
◆ The Mastering Tool Kit includes a multi-band compressor and offers several templates for creating polished mixes.

Built-In 24x4x4 CD-RW Drive
◆ Create audio CDs and backup data as well as import drum loops and other CD audio data using the CD Capture function.
◆ Audio CD images can be created and saved to the hard disk which significantly speeds up the CD writing process.

LCD Display
- The large, angled 320 x 240 dot backlit LCD display uses icons, event lists, text and metering to provide simple navigation and a visual indication of the unit’s current status.
- Six function keys, under the display, switch between screens and execute commands.

EZ-Routing
- EZ-Routing Step Editing functions provide a step-by-step guide that walks you through the required setup procedures required for recording, mixing, bouncing and mastering.
- Quick Editing allows you to jump directly to specific parameters when preparing to record, mix, bounce and master.
- 4 preset EZ-routing templates are provided for you to edit and then store to any of 29 user templates locations for later use.

MORE ABOUT THE VS8F-2 EFFECTS BOARD
- The VS8F-2 is a user-installable dual stereo (four mono) effects board that provides the VS-1824CD and VS-2480(CD) with 250 Preset and 200 User effects patches based on 36 of Roland’s best effects algorithms, configured in single and multiple algorithm chains.
- Single algorithm patches include many studio essentials like reverb, chorus and delay; while multiple algorithm chains include guitar and vocal multi that use a combination of COSM modeling and standard effects.
- A number of processing effects have also been included to provide a broad creative palette for which to process tracks such as Lo-Fi processing, a Voice Transformer and Vocoder.
- Each V-Studio includes a single VS8F-2 effects board plus you can add a second board to the VS-1824CD and up to seven more boards into the VS2480/VS-2480CD.

COSM Speaker Modeling
- COSM Speaker Modeling simulates the sound of a variety of well known reference monitors (when used with Roland’s 24-bit Digital Reference Monitors) for creating mixes that translate in a variety of listening environments.

Onboard Mastering Tools
- A Mastering Tool Kit with split-frequency compression, enhancers, limiters and parametric EQ designed to give your mixes more punch and attitude.

ACCESSORIES
- VS-CDR3 CD Recorder Option
  - The VS-CDRIII is an external multi-session 40x read/16x write/10x rewrite CD recorder option available for the VS-2480 as well as many of Roland’s legacy V-Studios.
  - Includes Toast (Mac) and EZ CD Pro (PC) CD burning software, a SCSI cable and blank CD-R and CD-RW discs.

- DR-10 / DR-20 Dynamic Mics
  - Professional-quality dynamic mics with cardioid polar pattern
  - Frequency response from 60 - 15k Hz
  - Talk switch for on/off control
  - Includes hardshell carrying case with mic clip and cable

- MB-24 Level Meter Bridge
  Gives VS-2480 users super-accurate, 10-segment LED metering for up to 94 channels (24 simultaneously), plus a monitor readout, main readout, track status indicators, and an LED which displays timecode and bar/beat information. Can also be rackmounted (requires optional VS-24M BA adapter for use with VS-2480/2480CD).

- ADA-7000 8-Channel A/D-D/A
  A 2U rackmount analog I/O expander for R-BUS-ready products like Roland’s VS-2400CD and VS-2480 digital workstations. It features 24-bit and up to 96kHz A-to-D and D-to-A conversion via 8 balanced XLR/TRS inputs with RCA and balanced XLR outputs.

- AE-7000 AES/EBU Interface
  A 1U rackmount box that converts signals between R-BUS and AES/EBU for up to 8 channels of simultaneous digital I/O. It is the perfect solution for integrating products like Roland’s VS-2400CD and VS-2480 digital workstations with other professional equipment adhering to the AES/EBU format, such as ProTools. Word Clock is also supported.

  The RBC-1 (3') and RBC-5 (15') R-BUS cables for exchanging up to eight channels of two-way, 24-bit digital audio between the ADA7000 or AE7000 and the VS2400CD and VS2480(CD).
The VS-2400CD is a Digital Studio Workstation that delivers professional 24-track recording, 48 channel automated mixing, effects and CD burning at an affordable price. Many of the VS-2400CD’s features have been inherited from Roland’s flagship workstation, the VS-2480CD including premium analog components, motorized faders, mouse-based “Drag and Drop” editing and a VGA Monitor output that provides powerful software control. The VS-2400CD even has some unique features of its own such as RSS 3-D panning and V-LINK that allows the VS-2400CD to integrate with Edirol video products thus allowing you to trigger video images via MIDI events. One VS8F-2 effects board is already installed and there’s room for one more for a total of four simultaneous stereo effects. An internal, low-profile CD burner comes standard, giving you everything they need to burn CDs or even import .WAV files directly into a song.

24-bit/96kHz Sound Quality
- 24-track playback up to 24-bit (12 tracks at 96kHz) and 384 Virtual Tracks (16 V-tracks per track) for “comping” the perfect lead vocal or solo.
- Eight simultaneous record tracks are available right out of the box. You can achieve 16-track simultaneous record tracks when interfacing with the built-in 8 channel R-Bus port.
- 24-bit A-to-D and D-to-A converters and 56-bit internal processing provide lots of headroom and dynamic range.

Flexible 48-Channel Mixing with Motorized Faders
- The VS2400’s 48-channel, fully automated digital mixer consists of the 16-channel Input mixer, 24-channel Track mixer and eight effect returns.
- Thirteen motorized faders instantly update to their proper level position as soon as you select the channel group you want to control.
- Scene memories of all mixer parameters can be stored and recalled at the push of a button. There are 100 mixer scenes available per project.
- Dedicated 4-band EQ (2 shelving and 2 peaking) and dynamics on 32 channels.

Inputs and Outputs
- Eight XLR mic, 1/4” TRS line inputs with switchable phantom power that allow condenser mics to be used with the mic inputs.
- Channel 8 can be switched to accept an unbalanced 1/4” Hi-Z instrument.
- Coaxial and optical S/PDIF digital inputs and outputs.
- Independent left and right balanced 1/4” TRS Monitor and Master outputs.
- Left and right balanced 1/4” TRS Aux A and Aux B outputs.
- An R-Bus port allows you to add 8 more input channels via XLR / 1/4” TRS (ADA-7000) or AES/EBU (AE-7000) R-BUS interfaces.
- MIDI In, Out/Thru connectors not only provide MTC, MIDI clock and MMC functionality, they also allow the VS-2400CD to act as a MIDI control surface or be operated from an external device.

Simultaneous Record / Playback Tracks

Mouse-Based Editing
* "Drag-and-drop" Copy, Move, Exchange, Insert, Cut and Erase editing using the included mouse and the LCD display or use an optional VGA monitor which serves as a the ultimate graphic "Information Display" for navigating playlists, mixer settings, and EZ Routing
* Graphic waveform display and scrubbing features makes finding edit points a snap
* 999 levels of Undo to back you up
* A second PS-2 input accommodates an optional ASCII keyboard for quick and efficient naming of tracks and phrases.

Onboard Effects
* Two stereo effects processors expandable to four via additional VS8F-2 Effects Expansion Boards.

RSS 3-D Panning
* The RSS Panning function provides dedicated 3-D panning without complicated editing. Using this function, you can create a 3-D sound field with up to six mono sources and write it into the Automix.

R-BUS Options
* ADA-7000 8 channel 24-bit A-to-D and D-to-A converter with balanced XLR/ 1/4” TRS inputs for connecting additional microphones or instruments
* AE-7000 AES/EBU Interface
* An 8-channel R-BUS port allows you to expand the I/O in a variety of analog/digital formats and provides the ability to record up to 16 tracks simultaneously. You can also use the R-BUS port to exchange eight channels of 2-way audio and MIDI data between your V-Studio and a PC.

---

**V-LINK**
* V-LINK is a video synchronization and control protocol that is a built-in component of many of the latest generation of products from Roland including the VS-2400CD.
* V-LINK allows you to trigger video clips from MIDI events, or you can use the V-Fader function to control parameters such as color balance and brightness.

---

**VGA MONITOR SCREENS**

A. Software-style, mouse controlled graphic waveform editing
B. Edit levels, panning and more for all 24 tracks using the Track Mixer screen
C. The Playlist screen provides a global view of your arrangement and allows drag-and-drop editing of audio regions using the mouse
D. EZ Routing – Simply drag a “virtual” audio cable from source to destination
E. Access individual channel parameters (EQ curves, compressor settings, effects and more) using the Channel View

*In “CDR” recording mode, two tracks are always used in a pair (channel link is on), so recording time is half the above listed.
24-Track Digital Studio Workstation

The VS-2480 is Roland’s top-of-the-line, self-contained V-Studio and is Roland’s first recording workstation to offer 24 tracks of true 24-bit digital recording, with an unprecedented 64 channel digital mixer controlled by 17 motorized faders, dynamics for 48 channels, 4-band EQ and filtering for each channel and two stereo effects expandable up to 8. Analog inputs included 8 XLR mic/line inputs with phantom power and 16 balanced 1/4” mic/line inputs. 24 Phrase Pads allow you to trigger and sequence samples directly from disk. All of these advanced features are greatly enhanced by full mouse-based editing capabilities using the large LCD display or an optional VGA monitor. You can even mix in 5.1 surround sound — ideal for DVD production. The VS2480 offers an optional CD-RW drive with CD burning software for the Mac and PC and the VS-2480CD adds an internal CD-RW drive.

Expandable I/O

- 16 simultaneous inputs (standard) including eight XLR connectors with phantom power and 16 balanced 1/4” TRS inputs not to mention the ubiquitous dedicated 1/4” guitar input. Each input has a sensitivity knob that can accommodate mic and line level signals and a switchable 20dB pad
- Eight balanced 1/4” TRS jacks assignable as 8 direct outputs or in pairs as dedicated Monitor, Master, Aux A and Aux B outputs
- Dual 1/4” TRS headphone outputs
- Dual R-Bus ports allow you to add 16 additional inputs via 8 channel XLR/ 1/4” TRS or AES/EBU R-BUS interfaces

Effects

- Includes one VS8F-2 effects board which provides access to two high quality stereo effects processors (4 mono).
- You can add optional VS8F-2 Effect Expansion Boards for up to eight stereo or 16 mono effects

Phrase Pad Sequencer

- The Phrase Pad function allows you to trigger up to 24 different audio phrases such as one-shot SFX or vocals directly from disk
- Each phrase is assigned to one of the 24 Track Status/Phrase buttons located above each fader
- Phrase Pad performances can be sequenced and played backed alongside audio tracks and bounced onto audio tracks

Additional Features

- Word Clock input (BNC) slaves to a master clock for jitter free recording
- A SMPTE input makes it possible to sync the to video.
- Equipped for 5.1 Surround Mixing – panning is made easy using the included mouse or using the optional VE-7000 Channel Edit Controller’s built-in joystick.
- A built-in Realtime Spectrum Analyzer helps you tune your EQ to compensate for the room’s dynamics and create more accurate mixes.
24-bit/96kHz Digital Reference Monitors

Roland’s 24-bit Digital Nearfield Reference Monitors were designed to be the perfect match for the BOSS and Roland digital studios as well as any computer-based or standalone digital workstation. Each monitor employs a bass reflex cabinet and a 2-way bi-amplified design. An active crossover system feeds each amplifier delivering an ultra-flat response that is sure to aide in creating accurate mixes. The DS series monitors 24-bit/96kHz digital inputs are a no-brainer for the all-digital production environment and help eliminate the noise and hum problems associated with analog cabling. The DS-30A are the most affordable way to add pristine 24-bit/96kHz digital monitoring to your studio. They are ultra-compact monitors that utilizes a 30-watt bi-amp design with a 5” propylene low frequency driver and a 1” soft dome tweeter — ideal for any application where a smaller high-quality monitor is needed. The DS-50A feature a more powerful 50W bi-amp design with a 5” polypropylene woofer and .75” soft dome tweeter. The DS-50A are the ideal nearfield reference monitor if you need a monitor system with a small footprint and their wider frequency response allows them to take advantage of the COSM Speaker Modeling features found in the Roland and Boss workstations. The DS-90A are Roland’s most powerful nearfield monitors and are the reference standard monitors for use with COSM Speaker Modeling. They employ a 90W bi-amped design with a 6.5” polypropylene cone and 1” soft dome tweeter. If you’re looking for a premier monitoring system, with the widest possible frequency response, for your V-Studio workstation, look no further than the DS-90A.

They All Feature

- Compact 2-way near-field reference monitors with built-in bi-amplifier design
- Specially designed bass-reflex cabinets deliver an exceptional flat frequency response with minimal phase shifts and distortion
- Custom active crossover circuitry delivers crystal-clear sound and flat frequency response.
- 24-bit/96kHz coaxial and optical digital inputs
- Analog balanced XLR connections and TRS 1/4” input
- Magnetically shielded drivers for use in proximity to CPU monitors.
- Adjustable Input, Low Frequency, and High Frequency levels

The DS-30A Features

- 5” polypropylene cone LF driver and a 1” soft dome HF driver.
- 78 Hz to 20 kHz frequency response ±3 dB
- Third order active crossover at 2.3kHz
- 30W bi-amplified design – 20 W LF amplifier, 10W HF amplifier
- 11¾ x 6⅞ x 9¾” (HxWxD)
- Weighs 13 lbs 8 oz.

The DS-50A Adds-

- Compatible with COSM Speaker Modeling found in select Roland V-Studios and V-Mixers
- 5” polypropylene cone LF driver and a .75” soft dome HF driver.
- 68 Hz to 22 kHz frequency response ±3 dB
- Third order active crossover at 2.3kHz
- 50W bi-amplified design – 30 W LF amplifier, 20W HF amplifier
- 12¼ x 7¾ x 10¾” (HxWxD)
- Weighs 17 lbs 11 oz.

The DS-90A Adds-

- 6.5” polypropylene cone LF driver and a 1” soft dome HF driver.
- 48 Hz to 20 kHz frequency response ±3 dB
- Fourth order active crossover at 2.6kHz
- 90W bi-amplified design – 60 W LF amplifier, 30W HF amplifier
- 14¼ x 9 x 15” (HxWxD)
- Weighs 33 lbs 1 oz.

</table>
Pocketstudio 5 is a low-cost portable digital multitrack recorder that allows you to playback up to four tracks of digital audio, recorded to readily available Compact Flash cards (a 32MB card is included). An internal MIDI tone generator allows you to arrange and playback the patterns of 100 onboard Standard MIDI Files for use as backing tracks for your compositions. Other features include computer interfacing via a built-in USB port over 100 internal effects, a built-in condenser mic and the ability to run for 2 hours using six “AA” batteries.

**Features**

- Four audio playback tracks available for recording vocals, guitars and other instruments
- 16 bit A-to-D and D-to-A converters and 24-bit internal processing at a sample rate of 44.1 kHz
- All information (audio tracks, MIDI files) is stored on readily available Compact Flash cards between 8 MB and 128 MB – a 32 MB card is included
- Six faders provide volume control of the four playback tracks, the tone generator and the master output
- Each of the four playback tracks as well as the two inputs have Bass and Treble EQ with sweepable frequency control and ±12dB boost and cut
- Pan controls are also available for the 4 playback tracks
- Final stereo mix down is created using the MP3 file format
- Runs for two hours using six alkaline AA batteries (an AC adapter is also included)
- A built-in condenser mic and a headset microphone deliver true portability

**Inputs and Outputs**

- Two simultaneous analog inputs with trim controls and overload indicators
  - Input A is a 1/4˝ guitar/line level input
  - Input B has a choice of an 1/8˝ mic input or a 1/4˝ mic/line level input
- 1/8˝ stereo line level output
- 1/8˝ stereo headphone out with level control

**Editing**

- Eight user-defined marker points allow you to quickly access the different sections of a song
- Two additional marker points can be used for Auto punch in and out and repeat playback Manual Punch in and out is also supported
- Cut, Copy and Paste editing of audio and MIDI tracks (with undo) using bars/beats
- Two Track Bouncing Modes –
  - Mode 1 (Bouncing) four playback tracks (with or without the tone generator)
  - Mode 2 (Bounce +) allows you to combine the two inputs along with four playback tracks (with or without the tone generator)

**Internal Synth Module**

- An internal high-quality General MIDI compatible tone generator, with 16 multi-timbral parts, 128 instruments, 5 drum kits, as well as chorus and reverb, can be used to play back Standard MIDI file sequences alongside the four audio tracks. Each of the 16 parts has independent control over level, pan as well as chorus and reverb send levels
- 100 standard MIDI files are available in a variety of musical styles to provide a solid foundation for building backing tracks for your compositions
- Each MIDI file contains six standard song components or patterns (Intro, Verse 1, Verse 2, Fill 1, Fill 2 and end)
- The key and running order of each pattern, as well as the tempo and instrumentation of the songs can all be changed

**Over 100 High Quality Effects**

- Two multi-effects are available during recording (one effect for each of the two inputs) –
  - The effect for Input A is primarily for use with guitars (either electric or acoustic) and bass and includes a variety of amp simulators and distortion effects that are combined with reverb, chorus, flange or delay
  - The effect for Input B is primarily meant for use with vocals and other instruments including drums and percussion
- A separate reverb effect is also available for use with the audio tracks during mixdown

**Conveniences**

- A built-in USB port allows you to transfer files between the Pocket 5 and a Macintosh or Windows computer
- MIDI input connector allows you to control the internal tone generator using a MIDI keyboard
- Large LCD display navigated by a multifunction cursor pad and data wheel
- Tape-style transport controls
- Built-in guitar tuner
8-Track Digital Portastudio

The 788 brings together 8 tracks of direct to hard disk recording and editing, a full featured and flexible digital mixer, two assignable effect processors and optional CD burning capabilities with the ease of use and affordability of a Portastudio. The hard disk recorder offers 250 virtual tracks per song, and non-destructive editing with 999 levels of undo and redo giving you plenty of room to experiment without fear of over doing it. The mixing section offers complete routing flexibility with the ability to control 18 simultaneous inputs at mixdown — 8 playback tracks, 6 analog inputs, and 2 stereo effects. The powerful effects can be configured as stereo effects, dynamics, or even as a multi-effect processor for guitar effects. Once you’ve created the perfect mic, you can use an approved SCSI CD-R or CD-RW drive to burn audio CDs directly from the 788.

**Features**

**Recording Section**
- Audio is all recorded with Tascam’s own hard disk recording engine that provides 8 tracks of uncompressed 16-bit or 24-bit recording and playback at 44.1kHz.
- Includes an internal 7.5 gigabyte hard drive.
- A SCSI-2 connector is provided allowing you to record and playback to/from an optional, external hard drive up to 64GB.
- 250 Virtual Tracks are provided per song allowing you to record multiple takes and choose the overall best performance or create the perfect take by editing together the best phrases from different takes.

**Punch In/Out**
- Executing overdubs and manual punching is as simple as a single button push or, for hands free punching you can use an optional RC-30P punch pedal.
- The Auto Punch feature lets you rehearse and punch in and out at exact locate in/out points. Auto Punch points can also be created using the last Manual Punch points.
- The Auto punch will allow you to loop record up to 99 takes that can be auditioned and selected at a later time.
- The Last Take Load function allows you to recall your last Auto-Punch session so you can audition them all over again.

**Digital Mixing Section**
- 8 full featured channels, 6 input submixer channels and an 8 channel cue mix.
- Seven channel faders are provided for controlling six mono channels and a stereo pair of channels assigned from the input connectors, or from the recorded tracks.
- Each of the 8 mixer channels feature — Input-to-channel assignment (input or track), Digital pad/gain, 3-band EQ, Level, Pan, Solo, Effect and Aux sends.
- The Effect and Aux sends are assignable pre- or post-fader allowing optimal setup and routing flexibility.
- The pre-EQ, Digital pad/gain control allows you to attenuate signals up to 42dB and increase signals up to 6dB, in 6dB intervals.
- Channels may be linked in stereo pairs, allowing them to share control settings.
- The six submixer inputs are available during mixdown for combining synths, samplers and drum machines with the 8 audio tracks.

**Routing & Scene Memory**
- You can store and recall up to 128 commonly used input assignment (routing) patterns to a user-library available to all songs.
- Each song has a 10 scene library where you can store and recall all of the mixers routings and settings. Saved settings include — Input assignments, EQs, Effect levels, settings and assignment, Aux send levels, Pan, Digital pad/gain, as well as Cue mixer, Fader and Submixer settings.

**Pre-Master Function**
- Contents of the recorded tracks, as well as inputs from the sub-mixer can be mixed down to the stereo outputs, which can be fed to the analog or digital outputs for mixdown cassette or DAT.
- Alternatively, you can “pre-master” or bounce a stereo mix that includes all 8 tracks, the 6 inputs, plus the two effect processors to the hard disk. This will allow you to audition and trim a mix before committing it to tape or disc using the optional CD burner.

**3-Band EQ**
- High and Low sweepable shelf bands and a parametric mid band with selectable "Q" are provided for each of the 8 mixer channels — Boost/Cut (per band) ±12 dB.
- Low frequency range 32 Hz–1.6 Hz.
- Mid frequency range 32 Hz–18 kHz.
- Mid Q Control 0.25/0.5/1/2/4/8/16.
- High frequency range 1.7 kHz–18 kHz.
**Inputs & Outputs**
- 24-bit A-to-D and D-to-A converters
- 6 Analog Inputs —
  - 4 1/4" TRS (balanced or unbalanced) analog mic/line inputs - the fourth input can be switched to accept a high impedance guitar input that can access the internal effects
- A 1/4" stereo Aux Input is available for plugging into a drum machine, synth, or effects processors
- Any input can be easily assigned to any mixer channel by simultaneously pressing the buttons for the input and the channel
- Separate outputs are provided for the monitor and stereo mix sections, allowing you to monitor at different levels without affecting the recording or mixdown levels
- The stereo output is also duplicated as a S/PDIF digital output, allowing you to mix down digitally to a DAT, MD or standalone CD recorder
- A stereo Aux Send output can be used with an external effect processors or for additional headphone mixes

**MIDI I/O Synchronization**
- Generate and chase MIDI Clock, Song Position Pointer or MIDI Time Code (MTC) for locking up drum machines, sequencers and other studio devices including another 788
- A tempo map containing tempo and time signature information can also be transmitted and received over MIDI

**CD-Recording**
- An optional external CD-RW burner (32x12x10) allows you to burn CDs from mastered tracks - and provides a cost effective way of backing up valuable data.
- You can also import and export .Wav files using ISO-9660 formatted discs
- Audio can be recorded one track at a time, leaving the CD open for more songs to be added later - or you can choose multiple songs to be recorded in one complete pass, making a 100% Red Book-compliant CD ready for mass duplication
- You can also import and export .Wav files
- An optional external CD-RW burner
- A tempo map containing tempo and time signature information can also be transmitted and received over MIDI

**Non-Destructive Editing**
- Track editing functions include —
  - COPY -> PASTE, COPY -> INSERT,
  - MOVE -> PASTE, MOVE -> INSERT,
  - OPEN, CUT, SILENCE, CLONE TRACK and CLEAN OUT
- The most common editing functions (COPY, MOVE, and SILENCE) are all located on the surface while some of the more advanced functions are accessible in the Track Edit menu
- Besides editing tracks individually, it is also possible to edit across tracks, or on multiple tracks
- 999 levels of undo / redo with an undo history list allow you to freely experiment with different edits without fear of losing anything
- Track scrubbing and waveform displays (with multiple zoom controls) help you easily find precise edit points

**Built-in Effects**
- Two high quality effect engines capable of producing a wide range of high quality effects including reverb, delay, chorus, pitch shifter, flanger, phaser, and reverb + gate
- A library of user definable presets allows you to store up to 128 customized patches for recall at any time
- Effect 1 can serve as a stereo effect processor, accessed from individual channel sends, or as a multi-effect processor, assigned to a specific input
- Multi-effects can consist of up to five simultaneous effects - although tailored for guitar and bass they can also be used for other instruments as well
- An independent library with 128 user definable presets is also provided for the multi-effect processor
- Effect 2 can also serve as a stereo effect processor, or it can be assigned as an independent dynamic processors across every channel on the mixer or as a single stereo dynamic processor on the stereo output
- The dynamics also have a 128 user definable preset library
- Effect and Aux Sends can be assigned as pre or post fader, allowing them to be configured for effect and monitor routing purposes
- Separate routing and scene memories can store and recall your favorite settings

**Locate Functions**
- Controls for locate points are provided on the surface of the unit, along with standard project navigation keys like Return to Zero
- Up to 999 location marks can be assigned in each song. These markers are stored in a list that can viewed by time or the location marker title
- Timing for locate points can be expressed in Absolute Time, MTC or in musical terms (Bars and Beats)
- Direct location lets you use the cursor keys and the dial to locate a specified position
- The Last Recording Position (LRP) function allows you to return instantly to the point where recording last started — ideal for playing back a track you just recorded, retaking a bad performance or if you need to overdub different tracks at the same position

**Conveniences**
- A repeat playback function allows you to loop a section of a song based on selected IN and OUT points
- The Slow Speed Audition (SSA) function allows you to play back a pair of tracks at the same pitch, but at a slower tempo. This is an ideal rehearsal tool when combined with repeat playback function
- A vari-speed control allows you to play back and record at speeds ±6% of the original - ideal for overcoming differences in tuning
- A built-in metronome provided a useful tempo guide. The metronome sound can be generated by it's own internal source or an external MIDI device
16-Track Digital Audio Workstations

Although the AW16G is Yamaha's most affordable digital audio workstation, it still must be considered an all out professional recording system - sacrificing a few of the frills but not audio quality! Features include 16 playback and 8 simultaneous record tracks of uncompressed 16-bit audio at 44.1kHz, a 36 channel mixer controlled by 13 (45mm) faders, dual stereo effects processors plus mastering effects and dynamics and 4-band parametric EQ on every channel (a unique feature indeed at this price point). Eight mic/line inputs are provided including two XLR inputs with phantom power and a 1/4” Hi-Z instrument input. The included 20GB internal hard drive drive provides 4,000 total track minutes of audio storage (enough room for over 50 five minute songs while the built-in CD-RW drives audio CD and data backup capabilities complete the all-in-one workstation picture.

**FEATURES**

- 8 simultaneous record tracks, 16-track playback with 144 virtual tracks (8 per track)
- 16-bit (uncompressed) audio resolution at a sampling frequency of 44.1kHz (± 6%)
- 24-bit A-to-D and D-to-A converters and 32-bit internal processing
- Built-in 2.5” 20GB IDE hard disk

**36 Channel Mixer**

- 36 simultaneous inputs, controlled by 13 (45mm) faders, are available at mixdown including 16 playback channels, 8 mic/line inputs, 4 internal effect returns and 4 stereo quick loop sampler pads
- Each channel (except for the effect returns) has 4-bands of fully parametric EQ, dynamics (compression, expansion, gate and ducking), bus assign and pan as well as channel on/off, pad and phase reverse
- The 8 bus outs include two busses, two external Auxes and two stereo effect sends
- A 96 Scene Memory allows you to store all mix parameters for all channels and recall them at the touch of a button. You can create different scenes for each section of a song or A/B compare mixes
- You can also save the entire configuration of a single channel’s settings to the dedicated 64 Preset Channel Library
- Independent Dynamics and EQ Libraries each containing 40 Factory and 88 User Presets tailored to specific applications.

**Effects**

- Two onboard digital effects processors using the same DSP found in other AW series workstations have access to 40 Preset and 88 User patches ranging from Reverb, Delay, Modulation, Distortion, Dynamics to Multi-effect combinations
- An Input Channel library, with 40 presets, offers a variety of amp and speaker simulators along with many traditional and not so traditional effects designed specifically for capturing professional sounding vocals, acoustic and electric guitars, and bass tracks
- A CD-ROM with over 250MB of professionally produced drum kits, loops and other stereo samples is included
- The Slice function will automatically sync loops to match the BPM of the current song without changing their pitch

**Quick Loop Sampler**

- Up to 44 seconds of stereo audio samples can be assigned to 16 flash memory locations, independent of the 16 audio tracks, and triggered via 4 stereo sample pads - ideal for recording drums, loops and sound effects
- A CD-ROM with over 250MB of of professionally produced drum kits, loops and other stereo samples is included
- A pair of unbalanced 1/4" outputs are provided for stereo monitoring and a second pair of unbalanced 1/4" stereo/aux outputs can be used for accessing external effects and headphone mixes a 1/4” stereo headphone output is also provided
- Optical S/PDIF digital I/O

**Inputs and Outputs**

- Eight analog inputs are available for recording or submixing synths and effects during mixdown including — two phantom powered XLR inputs, six 1/4” TRS mic/line inputs and a hi-Z instrument input
- A pair of unbalanced 1/4” outputs are provided for stereo monitoring and a second pair of unbalanced 1/4” stereo/aux outputs can be used for accessing external effects and headphone mixes a 1/4” stereo headphone output is also provided
**Easy To Set Up and Use**
- Route input sources to the tracks you want to record to by pressing the respective Input and Track buttons. The graphic display shows the connections you’ve made.
- Display 240 x 64 dot backlit LCD

**Track Editing**
- Non-destructive track editing functions include erase, delete, insert, copy, move and exchange
- A number of destructive editing capabilities are also available including time compression and expansion in a range of 50% to 200% and pitch change ± one octave
- There is also one level of Undo
- Locate points include Start, Out RTZ, A/B, Last Record In/Out
- 99 Marker points can be assigned and quickly accessed using locate commands
- Manual and Auto punch I/O

**Built-In CD-RW Drive**
- Burn final mixes directly to inexpensive CD-R media or back up your recording session data directly to the highspeed CD-RW drive
- A Song Marking feature that lets you split a single song file into separate tracks - invaluable for indexing long jam sessions
- Compatible with the backup file formats of both the AW4416 and the AW2816
- You can also import from audio CD and import/export audio in WAV file format

**Sound Clip - Idea Sketchpad**
- Sound Clip function allows you to capture and experiment with musical ideas at a moments notice, without having to configure time-consuming input routings, track assignments and other setups
- Up to 180 seconds of looped recording time is provided using special memory allocation, separate from the 16 record tracks – Just plug in, hit record, and go
- Phrases can then be copied to a track, or assigned to a sample pad

**Built-In CD-RW Drive**
- Burn final mixes directly to inexpensive CD-R media or back up your recording session data directly to the highspeed CD-RW drive
- A Song Marking feature that lets you split a single song file into separate tracks - invaluable for indexing long jam sessions
- Compatible with the backup file formats of both the AW4416 and the AW2816
- You can also import from audio CD and import/export audio in WAV file format

**MIDI In, Out and Thru**
- Synchronize with synths, drum machines and sequencers using MTC, MIDI clock and MMC commands
- Use faders as a control surface for Cubase, Logic and Sonar
- Remote mode allows you to create remote programming templates by sending MIDI control data from an external device into the AW16G. Controller assignments can then be used for realtime parameter control (i.e. the filter cutoff of a synth).

**Built-In CD-RW Drive**
- Burn final mixes directly to inexpensive CD-R media or back up your recording session data directly to the highspeed CD-RW drive
- A Song Marking feature that lets you split a single song file into separate tracks - invaluable for indexing long jam sessions
- Compatible with the backup file formats of both the AW4416 and the AW2816
- You can also import from audio CD and import/export audio in WAV file format

**Additional Features**
- Built-in metronome follows an internal tempo map
- Magnetically shielded, so you can use them near computer monitors and speakers without having to worry about electromagnetic interference

---

AW2816 / AW4416

16-Track Digital Audio Workstations

The AW2816 and AW4416 are compact console-style Digital Audio Workstations that deliver fully professional multi-track recording, mixing, non-destructive editing, effect processing as well as an internal CD-RW drive option for CD mastering and archiving — Complete music production systems, right at your fingertips! Both units offer sixteen tracks, plus a stereo mixdown track, of uncompressed 16- and 24-bit recording and playback directly to/from an included internal 20 gigabyte hard drive. The AW2816's 28 input x 18 bus mixer and the AW4416's 44 input x 20 bus mixer each provide features that meet or exceed the power and performance of the now-legendary Yamaha 02R Digital Mixer including EQ and Dynamics on every channel, fully automatable motor-driven faders and an intuitive all-digital patching system. The state-of-the-art 24-bit A-D and D-A converters employed on each of the unit's inputs and outputs as well as the 32-bit internal mix processing (44-bit for the 4-band parametric EQs) ensure that the pristine sound quality of the 16-track plus stereo 24-bit hard disk recorder is maintained throughout the production process. Both units also feature the same extensive non-destructive audio editing capabilities at the song, track. The two available stereo multi-effect processors, based on the Yamaha ProR 3, can be individually assigned as channel inserts or in a send/return configuration. A number of optional I/O interface cards are available for each unit that provide direct connectivity with all types of digital and analog gear – the AW2816 has one expansion slot while the AW4416 has three. The AW4416 also features 8 built in polyphonic sample pads and a special recording track which can be used to trigger and sequence loops, sound effects or even for flying in background vocals.

FEATURES

16 Track Hard Disk Recorder

◆ Sixteen tracks of uncompressed audio recording and playback with selectable word lengths of 16-bit or high resolution 24-bit and sample rates of 44.1 or 48 kHz
◆ 16 independent record/playback tracks each with up to 8 virtual tracks plus a stereo mixdown/bounce track provide a total of 130 tracks
◆ Virtual tracks can be used to record alternate takes of a part. The best take can then be selected or the best phrase of multiple takes can be edited together to create the final track
◆ The stereo mixdown/bounce track allows all 16 tracks to be mixed down directly to disk, including effects and automation, as a single stereo track
◆ 8 tracks can be recorded simultaneously on the AW2816 or 16 tracks on the AW4416

Mixer Sections

◆ The AW2816's 28 inputs are comprised of
  ➢ 8 freely assignable input channels derived from 8 analog inputs, digital stereo inputs and 8 channel Option I/O slot inputs
  ➢ 16 hard disk playback channels
  ➢ 2 stereo effect return channels
◆ The AW4416 adds 16 freely assignable inputs derived from 8 analog inputs, digital stereo inputs, (3) 8 channel Option I/O slot inputs and 8 sampling pad inputs for a total of 24 input channels and 44 total inputs
◆ The AW2816's offers 18 mix busses 8 group buses, 6 AUX busses, the stereo bus and the stereo SOLO bus – The AW4416 adds two more aux busses for a total of 20 mix busses
◆ The input channels and the 16 playback tracks feature individual Attenuation, Phase (polarity) Reverse, Channel Delay, Dynamics, Bus Assign, 4-band Parametric EQ, Pan and Channel ON/OFF (mute)
◆ Mixer channels and busses are controlled via smooth and responsive 60mm motorized faders (8 on the AW2816 and 16 on the AW4416) that represent actual levels when using automation or switching between mix layers or scenes
**Analog Inputs & Outputs**
- Eight balanced high quality analog inputs are provided right out of the box:
  - Channels 1 & 2 feature two balanced XLR / 1/4” TRS mic/line inputs with switchable phantom power
  - Channels 3-8 offer balanced 1/4” TRS jacks for microphone or line input
  - Channel 8 also offers an unbalanced 1/4” Hi-Z input that allows direct connection of an electric guitar or bass
- Unbalanced RCA L/R main outputs and balanced 1/4” TRS L/R monitor outputs are provided as well as a 1/4” TRS headphone output with level controls
- Four unbalanced 1/4” TS Omni outputs, assignable from the 4 aux sends on each mixer channel, are ideal for an external effects processor or for creating alternate monitor mixes for headphones

**24-Bit Coaxial Digital I/O**
- Allows you to mix and transfer audio files between mastering decks, samplers and computer-based audio systems

**Open-ended Expandability**
- Optional Yamaha Mini-YGDAI cards can provide up to 8 channels of additional I/O in a wide range of formats including mLAN, ADAT lightpipe, T-DIF, AES/EBU and Analog
- Performance enhancing cards are available from 3rd party companies including the AP8BAD and AP8DA AD/DA converter cards from Apogee as well as the Y56K DSP card from DSP developer Waves which provides on-board access to industry-standard processors such as the L1 mastering limiter and TrueVerb high resolution reverb

**Scene Memory and Automation**
- Up to 96 individual scenes, containing complete control and parameter setups, can be saved within each song
- Scenes can be fully automated to change on the time axis within the song
- Fader movements and parameter changes can be recorded and reproduced in real time using the built-in “Automix” functions
- An Event List allows you to edit the time position, value and channel status of individual automix events
- Up to sixteen automixes can be written to special memory areas within a song and recalled at any time. Data for the sixteen automixes in memory are saved on the hard disk as part of the current song

**Synchronization**
- Can act as either master or slave for synchronization via MTC or MIDI CLOCK for virtually unlimited system expansion and is also MMC compatible, allowing remote transport control via MIDI control change and parameter change messages

**Built-In Multi-Effects**
- Two stereo effect processors, utilizing custom Yamaha DSP LSIs, provide a wide range of ambience, delay, modulation, distortion, and amp simulator effects
- Effects can be used in an Aux send/return configuration or inserted directly into an input channel or the stereo bus
- A preset “Effect Library” provides a broad range of setups that can be used as is or as a starting point for your own variations
- Edited effects programs can be stored in any of the effects libraries 86 user locations

**Optional Internal CD-RW Drive**
- The CD-RW drive option allows you to use inexpensive, reliable CD-R or CD-RW media to take your projects from initial recording right through to creating audio CDs without leaving the digital domain as well as back up and retrieve valuable audio and mix data. You can also use the CD-RW drive to play back audio CDs or load audio and other data directly from CD-ROMs

**Peripheral Connectivity**
- A 50-pin SCSI-2 interface is provided for direct connection to a wide range of fixed and removable data storage devices including CD-RW drives
- MIDI In/Out/Thru jacks and a TO HOST interface provide direct connection to MIDI capable computers and MIDI devices allowing you to automate mixer functions from an external MIDI controller or sequencer. MIDI controller data can be recorded as automix data for vastly enhanced automix versatility
- A footswitch jack makes it easy to punch in or out while playing an instrument
YAMAHA
AW2816/AW4416
MULTITRACK RECORDERS

EQ and Dynamics
On All Channels
◆ 4-band fully parametric EQ and
dynamics processing are provided for all
input channels and the main stereo
outputs. The stereo effects returns offer
4-band parametric EQ
◆ Separate EQ and Dynamics Libraries are
provided, each containing 128 presets
> Presets 001 - 040 have been
professionally configured for specific
recording tasks
> Presets 041 to 128 are user presets
where you can save your own setups

4-Band Fully
Parametric EQ
◆ Each of the four bands features:
- Frequency Range ..........21 Hz–20.1 kHz
- Boost/Cut Range .................±18 dB
- Q Range Bandwidth .............10 – 0.10
◆ The HIGH and LOW EQ bands can be
switched to shelving EQs by turning the
Q knob fully clockwise or a Low or
High Pass Filter by turning the Q knob
counterclockwise

Digital Patching
◆ Routing Inputs to the 16 hard disk
recorder tracks and/or 18 mix buses is
done entirely within the digital domain
using an intuitive graphic interface. This
provides an easy and efficient way of
configuring seemingly complex record/
mix setups while eliminating the signal
loss inherent in analog patching systems
◆ Up to 20 different patch configurations
can be saved in the internal “Patch
Library” memory for instant recall
◆ Signal routing is aided by a graphic
interface to ensure that the patching
process is easy and intuitive

Quick Record
◆ The “Quick Record” function automati-
cally sets up 8 record tracks (or up to 16
when an optional I/O card is installed)
when starting work on a new song

Non-Destructive Editing
◆ All editing is non-destructive, meaning the
original audio data is left untouched
◆ As many as 15 undo/redo levels are available,
leaving plenty of opportunity to change your
mind – even after several edits
◆ Basic operations such as copy and move
◆ Advanced editing functions including time
compression/expansion (50% - 200%) and
pitch change (±1 octaves) capabilities that
give you extraordinary creative control

Song:
Name, Comment, Delete,
Copy, Optimize, Protect

Pitch Change, Import, Export

Locate & Auto-Punch Functions
◆ Intelligent location functions allow you to
find locate points fast and easy —
> Direct key access to START, END RTZ,
A, B, LAST REC IN, LAST REC OUT,
and ROLL BACK points
> Up to 99 assignable locate points, which
can be specified in time or measure
numbers, are available per song
◆ A precision Wave Display allows you to
search for locate or edit points by viewing
the audio waveform
◆ A tempo-map coupled metronome
provides a guide for creating precise auto
punch-in/out points
Sampling Pads

- 8 sample pads are provided allowing you to trigger drum loops, incidental hits and sound effects or fly in vocal choruses without taking up valuable hard disk playback tracks
- Samples can be assigned to the pads in a number of ways —
  - Recorded directly from a mixer input channel
  - Loaded from hard disk or other external SCSI device
  - Imported from an audio CD or in WAV format from CD-ROM
- Up to sixteen sounds can be assigned to the eight pads by switching between the two available pad banks and each sample pad can be individually assigned to any of the 24 mixer input channels
- The sample pad section offers 8 notes of polyphony and the ability to load up to 90 seconds (approx. 8MB) worth of samples into the available RAM
- Sounds are sampled into the 8 pads at the same bit depth (16 bit or 24 bit) and sample rate (44.1 kHz or 48 kHz) as the current song
- Each sample pad can trigger a mono sample — stereo samples can be utilized by assigning the left and right audio regions to adjacent pads
- The playback start and end locations of a sample can be trimmed allowing you to eliminate unwanted portions of a sample
- A simple sequencer is provided that allows you to record and edit, with frame accuracy, the timing of trigger events that occur when you strike a pad
- Events can be moved, copied repeatedly as a pattern, or erased

Inputs and Outputs

- Channels 1 and 2 offer 1/4˝ TRS insert I/O that allow you to patch external analog signal processing devices
- Three Option I/O slots are provided on the rear panel allowing you to add 24 additional inputs and outputs to the system in a variety of analog and digital formats

Self-Contained Palmtop Recording Studio

The Zoom PS-02 Palmtop Studio combines a “smart media” multi-track recorder, drum and bass machine, guitar multi-effect processor and amp modeler in a super compact device small enough to fit in your jacket pocket. As it is portable and self-contained, you can easily create a digital multitrack demo anytime, anywhere. This new generation multi-track recorder uses a Smart Media card and offers 6 audio tracks, a stereo drum track and a bass track for a combined 6 tracks of creative power. Even better, up to ten virtual takes per audio track let you hone a song until you get it just right. And digital technology ensures that the sound stays crisp even after multiple passes.

The PS-02 incorporates more than 200 rhythm patterns using realistic drum and bass sounds. Various patterns for intros, fill-ins, and endings let you build your own song configurations. You can program drum patterns and bass chord progression for up to 100 songs. 50 template songs are already contained in the unit, which can be used for practice or as stepping-stones for your own creations.

The PS-02 features 50 built-in effects for all sorts of instruments, with the capability to use 6 modules and 8 types simultaneously. The patch memory with 60 preset and 60 user patches lets you create and store your own variations. For guitars, the Variable Architecture Modeling System developed for the GFX-8 Guitar Effects Processor is used, letting you record with genuine amp modeling sounds. A built-in microphone allows convenient vocal recordings, while a high-quality Mic-preamp with a direct connection of a dynamic microphone, allows high class recordings of vocals and any kind of instrument.

**FEATURES**

- Three available audio tracks are recorded directly onto a Smart Media card.
- Record and playback up to 3 separate audio tracks with the ability to digitally “bounce” tracks together.
- Each audio track offers 10 additional virtual tracks or “takes” to choose from.
- A bounce function available with panning capability allows you to overdub or mix audio tracks onto a buffer track for an endless number of audio tracks.
- Virtual Track function lets you record up to ten takes on each of the audio tracks. One of these takes can be selected and played back.
- You can get approximately 17 minutes of recording time in Stereo “Hi-Fi” mode with a 64MB memory card (32kHz) or over 2 hours in Mono “Long” mode with a 128MB memory card.
- A punch in/out function is also available.
- Stereo recording of a CD or MD source input via the AUX IN jack is also possible.

**Inputs and Outputs**

- 20-bit oversampling A-to-D and D-to-A converters
- Unbalanced 1/4” input with switchable gain settings for accommodating both guitar and mic level signals.
- Built-in dynamic microphone and Auto-chromatic tuner
- 1/4” stereo output jack and 1/8” mini stereo headphone output.
- 1/8” mini stereo aux input

**Rhythm Track**

- 2 internal tracks of drums and percussion and 1 internal track of bass sounds each with 256 preset patterns
- A selection of High-quality stereo drum patterns, drum kits and bass sounds can be sequenced as a basis for your recording.
- Incorporates more than 200 rhythm patterns using realistic drum sounds. Combine patterns and chords to create up to 100 songs – ideal for composition or practice.

**24-bit Multi-Effects and Guitar Amp Modeling**

- A variety of Zoom guitar-based multi-effects are provided as well as a number of guitar and bass modeling sounds using proprietary VAM S technology.
- A dedicated Vocal effects can be used with the PS-02’s built-in dynamic microphone.
- Additional effects are available at mixdown and for mastering.
- 60 preset and 60 user effects programs are provided based on a total of 50 effects – up to 6 effects can be used per program.
- Back-lit LCD display
- Runs on the included power supply or up to 4 hours using 4 AAA batteries.
- Extremely compact size – 3.58 x 3.26 x 1.32” (HWD).
- Includes an 8 MB Smart Media card, power supply unit and a belt clip.
Four-Track Digital Recorder

With its simple 4 track cassette-like interface, the MRS-4 is truly digital recording made easy. Just turn the power on and start recording. Saving recorded audio to smart media cards, the MRS-4 can bounce tracks without degradation, giving you a virtually unlimited number of tracks. The custom back-lit LCD screen always displays all functions along with 8 points x 8 level meters (input 1 & 2, track 1-4, master L/R), and location in Minutes/Seconds/m-Seconds plus optionally in Bars and Measures.

With the MRS-4, extensive digital editing tools are at your fingertips. Copy & Paste makes it a snap to create loops, erase any unnecessary parts or exchange data between tracks. Up to 50 marker points can be inserted anywhere in a song, A-B repeat from any point or block is possible, and manual and auto punch in/out capabilities are included.

Up to 2 tracks can be recorded simultaneously. With 8 virtual takes for each 4 physical tracks, you get up to 32 takes of recording. Save your work to the supplied 32MB Smart Media card, and get 17 track-minutes in Hi-Fi mode and 34 track-minutes in Long mode. With an optional 128MB card, you can record up to 135 track-minutes in Long mode. Stereo-Link function enables stereo sources (like synthesizer, sampler, drum machine) to maintain their surround-sound. Stereo bounching is possible onto virtual takes even when the 4 playback tracks are full.

The MRS-4 is light-weight and compact, has a 2 way power supply as Battery and PSU, and will operate for over 5 hours with 4 AA batteries, allowing for flexible song writing anytime, anywhere.

**Features**

- 4 tracks simultaneous playback tracks and 2 tracks simultaneous record tracks.
- 8 virtual takes per track, a total of 32 tracks can be recorded.
- The digital bounce feature allows you to internally mix the four playback tracks down to two tracks.
- 17 track-minutes of recording time in Hi-Fi mode (32kHz) using the supplied 32MB Smart Media card, 34 track-minutes at Lo-Fi (16kHz)
- Five 45mm faders (four channel and one master)
- Two-band parametric EQ, pan and an effect send are provided for each channel.

**Inputs and Outputs**

- Two 1/4” inputs with continuously variable input gain to accommodate a wide variety of audio sources.
- Two 1/4” Aux inputs are provided also for accommodating line level signals
- Unbalanced RCA master outputs and a 1/4” stereo headphone output.
- Insert effects include dynamic effects such as compression and limiting as well as guitar-based effects like cabinet Simulation and a mic preamp can be easily added to the tracks.
- The Power, Boost and Vocal Mix Down effects can be used simultaneously with the send effects for a perfectly finished mix.

**Editing**

- Digital editing tools include Copy and Paste, Erase and Exchange.
- Manual and Auto Punch In/Out
- 50 marker points for transport position and A-B Repeat, from any point or any block.

**Additional Features**

- Large back-lit LCD displays two input levels, tracks 1-4 and Master L/R output levels.
- Location can be displayed either as Measure/Beat or Min/Sec/mSec.
- Built in metronome and chromatic tuner.
- Free downloadable “MRS-4 Card Manager” software can convert audio files for each track to/from WAV files and can be used with your desktop DAW software.
- Links with the Zoom MRT-3 RhythmTrak. The MRS-4 receives signal directly from the outputs of the MRT-3 and is synchronizes via MIDI clock.
- Runs on 4 AA batteries or an optional AC power supply.
**Digital Multitrack Hard Disk Recorders**

The MRS-1266 and MRS-1266CD represent Zoom's most advanced digital audio workstations. Both units feature ten tracks of 16-bit / 44.1kHz playback, 24-bit effects, plus two independent drum and bass tracks using the built in drum machine and bass synth. Both units accommodate six simultaneous record tracks from a variety of input sources including: two XLR mic inputs with switchable phantom power; two 1/4” instrument inputs; and six 1/4” line inputs. That’s enough inputs and tracks to capture your whole band live. The MRS-1266CD includes an internal CD-R/RW drive (optional on the MRS-1266) that allows you to back-up data from the internal 20GB hard drive as well as make audio CDs from your final mixes.

**FEATURES**

- Six track simultaneous record tracks and ten playback tracks: 8 mono and one stereo. A stereo master track is also provided for mixdown.
- Ten virtual tracks are provided for each of the ten audio tracks and the stereo master track. This allows you to record multiple takes and pick the best performance. With a 20 GB hard drive, you can record up to 60 hours of music.
- The bounce function allows you to mix down the 10 ten audio tracks along with the drum and bass tracks into one or two new audio tracks. The target for the bounced tracks can be V-tracks or the dedicated master track.

**Mixer**

- Twelve faders: channels 1 - 8 are mono channels, 9/10 is a stereo channel, drum, bass, stereo master
- Each channel features a dual band EQ with sweepable frequency ±12dB boost and cut; two effect sends; pan and solo
- Besides the 10 playback tracks, there are six simultaneous inputs for accessing external synths and processors, and a stereo master channel for mixdown.

**Inputs and Outputs**

- Two XLR balanced mic inputs with switchable phantom power as well as two 1/4” unbalanced Hi-z instrument inputs and six 1/4” unbalanced line inputs.
- Stereo RCA main outputs and an optical S/PDIF digital output
- 1/4” stereo headphone output plus a 1/4” stereo sub out (each with dedicated level controls) that can be used for a second set of phones or for carrying a submix
- MIDI In and Out connectors will allow you to use an external MIDI controller and/or sequencer to program the 1266’s drum and bass patterns, or you can use the MIDI out to control external devices.

**Rhythm Section**

- Built-in bass and drum machine with 12 touch sensitive pads (a full chromatic scale), 30 note polyphony and a 20,000 note capacity.
- There are over 400 pre-programmed patterns included plus you can create over 500 of your own patterns per project.
- You can create your own original patterns using either step or real-time recording.
- 127 different sounding drum kits with 36 sounds per kit (12 pads x 3 banks) featuring the best of Zoom's critically acclaimed drum sounds. 26 high quality bass sounds, each with a 5 oct. range are also provided.
- Completed rhythm patterns can be processed with the insert and Send/Return effects and bounced to an audio track.

**Phrase Import**

- Pre-recorded drum beats, samples and phrases can be imported using the optional CD-R/RW drive.
- Up to 100 samples can be stored per project, and by cutting and pasting, loops can be created and dropped in and out of songs quickly and easily.
There are two effects types available: an insert effect and two Send/Return Effects.

The Insert effect can be inserted into any input channel, track channel or on the master fader channel for mixdown.

There are 94 different insert effects available based on five different algorithms including VAMS (Variable Architecture Modeling System) Guitar/Bass Amp Modeling, Microphone, Line, Dual input (guitar and vocal mic) and Mastering. Each algorithm is built from four major effect modules (compressor, pre-amp/drive, equalizer and modulation/delay).

A total of six effect types can be chained together, and saved into any of the 280 patch locations available for each project.

The two Send/Return effects allow you to add chorus/delay and reverb separately on each track via the send control available on each channel. There are 20 chorus/delay patches and 20 reverb patches available per project.

Logical User Interface

- Designed with ergonomics in mind with all of the functions and buttons logically positioned for easy, intuitive access. Level meters and tracking info is displayed on 96 x 63mm back-lit display. The ins and outs you use the most - guitar/bass, headphones, sub-out, expression pedal, and foot switches - are all located on the front of the chassis.

Additional Features

- An optional, user-installable USB interface will allow you to share audio data with a Windows or Macintosh computer and your favorite DAW software.
- Built-in auto chromatic tuner
- A footswitch jack can be used to start and stop the transport or can be switched to control punching in and out
- An expression pedal input can be used with the optional Zoom model FP02 expression pedal for controlling effects parameters.

Options

- ZUSB-01 is a USB option card that allows you to connect the MRS-1266 or MRS-1266CD to your PC or Mac.
- CD-01 - Optional (User Installable) CD-R/RW Drive Kit for the MRS-1266 allows you to master and burn your own CDs, backup and restore project data as well as import WAV/AIFF and Audio CD data.
- FP02 - Expression pedal for controlling effects parameters.
- FS01 footswitch for controlling start/stop and punch I/O.

RA SERIES

150/300/500 Watt Studio Reference Amplifiers

With their rugged construction, striking good looks, and a long list of features, the RA series will quickly find a home in project and commercial recording studios, broadcast and post-production control rooms around the world. Whether used for studio reference monitoring, live sound reinforcement, or instrument amplification, the RA-Series will provide clean, quiet, reliable power with the high quality found in all Alesis products. They are designed to provide more power and better performance at a lower overall cost per watt than any other competing amp. As a result, they can better match the power needs of virtually any passive speaker or studio monitor, offering a significantly better fit for an exceptionally wide range of budgets, applications and customers. They also provide a crisp, clean signal for outstanding performance and extended speaker life.

Designed for studio use, each RA series amp incorporates advanced convection cooling for heat dissipation. The result is long, stable operation unaffected by heat-related complications and without the added distraction and annoyance of fan cooling. Also helps eliminate the danger of losing hard-to-hear details due to noisy amp performance.

FEATURES

- DC coupled, fully complementary discrete amplifier topology
- Actively biased, dual differential inputs
- Wide bandwidth, low distortion design
- Fully protected from all fault conditions
- Front panel level controls
- LED output level metering (RA300 and 500 only)
- Overload/fault indicators
- Bridged mono operation
- Relay-controlled turn on/off
- Silent convection-cooled design
- Heavy-duty steel chassis
- RCA inputs (-10dB unbalanced)
- 1/4˝ TRS inputs (+4dB balanced)
- XLR input connectors (RA 300, RA 500)
- Heavy-duty, dual binding post output connectors

Four- and Six-Channel Power Amplifiers

Using a state of the art, high-speed MosFet switching design with spread spectrum switching technology, the Powerflex 4400 and 6250 provide uncompromised power with exceptional efficiency greatly reducing wasted power (heat). The 4400 delivers 275w RMS @ 8Ω or 400W RMS @ 4Ω of superior audio fidelity through four independent channels, while the Powerflex 6250—five times as efficient as conventional Class A or AB linear power amplifiers—delivers 150W RMS @ 8Ω or 250W RMS @ 4Ω through six independent channels.

◆ Their four or six channels may be used as individual, independent power amps with more than enough power to satisfy nominal audio applications. Additionally, three and two channel configurations of the Powerflex 4400 are possible for even greater flexibility. Channels may be bridged in pairs delivering 800W RMS @ 8 ohms.

◆ On the Powerflex 6250, five, four and three channel configurations are possible. Channels may be bridged in pairs providing for up to three higher power (500W/Ch @ 8 ohms) or 70-volt applications. The Powerflex 6250 can drive as many as six independent 25v or three independent 70v amps without the need of external transformers.

◆ The 4400 features bridgeable channels and switchable high pass filter on each pair of inputs. The 6250 offers a switchable high pass filter on each input. Both feature level controls located on the rear panel, XLR-1/4˝ and euroblock input connections, 5-way binding post output connections and a quiet three-speed fan for on-demand cooling.

◆ Applications include any multichannel power amp application, monitor amp, small FOH system amp, paging systems, cinema systems, boardroom audio applications, multiple zone restaurant bar, theme park or auditorium. The Powerflex 6250 can also be used for any 25 and 70V system, surround sound, recording studios, PA and DJ applications.

SRA-120 Stereo Amp

The SRA-120 is a professional amp with superior sonic quality, rugged construction, and many useful features in a single rack space chassis. Very compact (only 10˝ deep and under 20 lbs.), the SRA-120 is suitable for full-range applications, such as small control room monitor systems or as an ideal headphone distribution amp. With its excellent bandwidth, the SRA-120 is also well-suited for driving the high end of a bi-amplification sound system setup.

◆ Amplifier design is based on Class A voltage amplifier stages with a complementary bipolar output section for low distortion and excellent overload behavior.

◆ Turn-on delay circuitry and instantaneous turn-off to eliminate any transients to the speaker. Each channel will also independently turn off its output if an overheated condition occurs.

◆ Rear panel switches let you select between two input sensitivities, stereo or mono operation, or normal or bridged mode.

◆ Input connections can be made via 1/4˝ balanced phone jacks or barrier strips with ground lift provision.

◆ Level attenuators for each channel are provided on the front panel, along with a stereo headphone jack.

◆ Status LEDs on each channel include signal present, clip alert, and “protect-mode”
ASHLY

FTX-1501/ FTX-2001

Stereo Amplifiers
The FTX-1501 and FTX-2001 utilize ASHLY’s proven output stage design, consisting of the latest generation of paralleled power MOS-FETs for current gain. These devices have smooth transconductance curves and run at a relatively high idle current, thus preventing crossover notch distortion. FTX Series III amplifiers require no dissipation limiting protective circuitry and provide virtually infinite power gain, keeping load reflections from the driver stage promoting stability and extremely low distortion.

- The FTX-1501 puts out 185 watts at 8Ω, 275 watts at 4Ω and 275 watts at 2Ω
- The FTX-2001 delivers a full 300 watts per channel at 8Ω, 475 watts into four, and 550 watts when confronted with a true two ohm load
- Both can be mono-bridged at a power rating twice their 4Ω per channel capability
- The FTX-2001 (only) can be used to drive 70V systems when configured in bridged mono mode without the use of external transformers
- Superior sonic performance with MOSFET outputs and class-A driver. Fan cooled for continuous high-power operation
- Both amps are Ashly PowerCard compatible for other input option possibilities
- They are also THX approved for use in cinema and home theater applications. To ensure compliance with the specifications of commercial installations, they are U.L. approved
- Modular construction for reliability and serviceability. Both also include Ashly’s exclusive 5-year worry-free warranty

MFA-8000
High-Power Stereo Amplifier
The MFA-8000 is a very high power amplifier for the true sound professional. A three-level MOSFET power supply design is employed for maximum power efficiency and minimum AC power requirements. All power and gain stages use discrete, full complimentary transistors for very low distortion and clean overload behavior. The MFA amp utilizes a dual-monaural design, with each channel electrically and physically identical. This improves audio performance by minimizing power supply interaction, while also increasing reliability. Any necessary maintenance is also very easy to perform. The MFA-8000 puts out 800 watts continuous into 8 Ω, 1200 watts into 4, and a thundering 1500 watts into 2 Ω operating conditions.

Employs Sophisticated Monitoring Circuits to Detect Abnormal Conditions
- A highly accurate detector illuminates the true CLIP LED at the onset of clipping. Further increases in signal level will activate a limiter circuit to prevent severe overload distortion from occurring, while an illuminated LIMIT LED lets you know that the function has been activated.
- Advanced thermal management circuitry senses temperature at four different locations in the amp and adjusts fan speed accordingly.
- A Thermal LED on each channel indicates above normal operating temperatures, while protective circuitry automatically attenuates the input signal until the amplifier returns to within a normal operating range.
- Output is automatically shut-down in the event of severe overheating, shorted output, DC voltage, or ultra high frequencies at the output. Each channel’s limiting, thermal, and protection management is completely independent of the other channel.
- Each channel features a ten-segment LED level meter on the front panel
- Inputs include balanced XLR (with a transformer available as an option), 1/4” TRS and barrier strip terminals with ground lift provision. Outputs include Speakon and five-way binding posts.
- High power output with efficient power supply and output stage
- PowerCard compatible
- Modular construction for reliability and serviceability
**PowerCard Input Options**

Four option cards are available to replace the standard input card on the FTX and MFA amplifiers. Replacement is fast and simple, simply remove the standard input module, disconnect the signal connector, and reconnect the separate power and signal headers to the new input option card.

**TR-2 Transformer Isolated Input**
The TR-2 Transformer Isolated Input features transformer isolation of inputs, stereo/mono/bridged mono switch, 1/4˝ TRS, XLR, and barrier strip connectors, and individual gain potentiometers. This card is identical to the ‘stock’ input card shipped with every FTX and MFA amplifier except the outputs are transformer balanced.

**XR-1 Three-Way Crossover**
The XR-1 Three-Way Crossover features 24dB/octave filters, 20 Hz Low-cut filter, 360 degree phase control, internally adjustable frequency, CD Horn EQ switching, auxiliary outputs, and a mode switch for biamped or low only configuration.

**MM-6 Mic/Line Mixer**
The MM-6 Mic/Line Mixer features two stereo or four mono line inputs, two mic inputs with low-cut filter, switchable phantom power, stereo-mono bridged mono switching, and insertion points on both channels.

**CL-2 Compressor/Limiter**
The CL-2 Compressor/Limiter features adjustable threshold (peak detect) with indicator LED, 10:1 ratio for driver protection, stereo mono-bridged mono operation, and tamper-proof recessed controls.

</table>
The CA series is designed to achieve unsurpassed sonic performance and long-term reliability—even when operating under extreme stress—in touring or fixed installation applications. Absolute sonic accuracy is the hallmark of every Crest amplifier. Bass is solid and defined to the limits of audibility, with ample current reserves delivered by an “over-engineered” power supply and advanced Class AB output circuit design. Wide-bandwidth output devices assure detailed, transparent high frequency response. And, thanks to Crest’s exclusive IGM circuit, they (except the CA-2) will drive 2-ohm loads safely without compromise in performance. CAs form the backbone of discriminating rental systems and high-power club installations world-wide. Auditoriums, churches, regional tour sound, and mobile DJs are all ideal candidates for the CA series’ combination of value and sonic quality.

FEATURES

- Crest’s legendary “overbuilt” power supply
- Toroidal power transformer
- High-speed, wide-bandwidth output devices
- Twin tunnel cooling with back-to-front air flow
- Input sensitivity selection
- Recessed, stepped attenuators
- Dual, variable speed DC fans
- Massive, extruded aluminum heat sinks
- Balanced XLR and 1/4” (TRS) inputs
- 5-Way binding post outputs or Speakon connectors (market dependent)
- Stereo/parallel/bridged mono mode selector switch
- Front panel circuit breaker switch
- Ground lift switch
- Modular construction
- Five-year warranty

Tour Class Protection

CA series is designed to operate at full-rated output under conditions that are far from “normal.” Because human error and external circumstances can create extreme conditions that no amp can safely handle, all the amps (and connected loads) are safeguarded by a comprehensive array of protection circuits:

- ACL (Active Clip Limiting) automatically reduces gain in any channel that is continuously clipping, protecting speakers and output stages from uncontrolled feedback and extreme system gain settings. ACL is removed from the circuit and totally transparent when normal conditions are restored.
- IGM (Instantaneous Gain Modulation) monitors connected loads to detect conditions that may overstress output devices, allowing safe operating into nominal 2 ohm speaker loads.
- AutoRamp gradually increases gain to attenuator setting when amp is turned on.
- TourClass Protection also includes: comprehensive thermal management, short circuit protection, DC voltage, turn on/off transient, current in-rush and sub/ultrasonic input protection.

Construction and Quality Control

The CA series is built exclusively in Crest’s own USA manufacturing facility, with internal components selected for premium quality and proven durability. Each modular subassembly is pre-tested, and the assembled CA amp receives a rigorous "hot room" burn-in before thorough final checkout on precision test equipment.

www.bhphotovideo.com
PRO 200 Series
Crest's latest series of professional power amplifiers—the Pro 200 Series—offer increased power, lower weight, and a smaller enclosure at a reduced cost. The Pro 8200 offers 1450 watts per channel (4500 watts bridge mode) into 4 ohms, Pro 7200 provides 1000 watts per channel (3300 watts bridge), and Pro 5200 has 525 watts per channel (1800 watts bridge).

Apart from the differences in power, the three amplifiers have very similar specifications, including a frequency response within +0, -3dB from 10 to 100kHz, with hum and noise better than -110dB, “A” weighted. The input impedance is 15k ohms, balanced. Each occupies 2RU and weigh 25 lbs.

- The Pro 200 Series amps feature Automatic Clip Limiting (ACL) to protect connected drivers, while IGM Impedance Sensing automatically modifies the gain to suit whatever impedance outputs are connected, allowing more efficient operation and loads as low as 2 ohms, as well as short-circuit protection.
- Tunnel-cooled high-efficiency heat sinks and variable speed DC fans limit the operating temperature and thus extend the life of the amplifiers. Automatic temperature sensing systems monitor the temperature of the air as it is funneled from the rear-mounted cooling fans to the front panel exhaust, and shut down a channel if temperatures exceed operating limits. AutoRamp circuitry minimizes the likelihood of power-on “thumps.”
- Input connections are via XLR on the rear panel, and are actively balanced. Both Speak-On and binding post output connections are provided per channel for loudspeaker connection.
- Front panel controls include input attenuators and a combination AC power switch and circuit breaker. Five front panel LEDs per channel indicate ACL, signal, temperature protect, DC protect (which lights when a DC voltage is sensed), and Active (output relay closed and operational).
- On the rear panel, a mode switch determines stereo, parallel, or bridged mono mode, and a gain select switch determines whether the overall amplifier gain structure is x20 or x40.

Designed for mobile sound systems, fixed installations and a wide variety of audio applications, the CPX Series delivers superlative performance with Crest's legendary reliability and sound quality. Series includes three models - the CPX900, CPX1500 and CPX2600. They offer a comprehensive feature set that includes built-in defeatable GCL clip limiting, low pass filters (18dB per octave @ 80 Hz), and electronic crossovers with direct outputs. In addition, all CPX Series amplifiers feature extensive protection circuitry heretofore not found in amps at this price point. These include: GCL Gain comparator (monitors input/output gain), Thermal Protection, DC Triac Crowbar (prevents DC in/out), and Turn On/Off Muting. In addition, all CPX amps utilize a unique heat sink configuration which creates a “venturi effect” that greatly enhances the cooling capabilities of these amplifiers.

**FEATURES**

- They feature a built-in crossover (150 Hz, 24dB per octave tuned for subwoofers), with individual in/out switches for Channels A & B.
- Barrier strip and female XLR 1/4-inch TRS input connectors; speakon output connectors for channel A & B, and bridged mono binding posts for bridged mode.
- Amps are 2U tall, have a mode selector switch for stereo and bridged-mono operation, and have a two-speed DC cooling fan.

**Protection Circuitry**

**GCL (Gain Comparator Limiting):**
Monitors input/output gain and reduces signal when distortion or excessive high current conditions occur. Protects speakers from dangerous transients and unexpected level changes. Transparent in operation, yet very effective for its designed purpose.

**Thermal:** Amp monitors internal heat sink temperature and temporarily shuts down during extreme thermal conditions.

**DC Triac Crowbar:** Prevents amps from putting out or receiving dangerous DC over the speaker lines.

**Turn On/Off Muting:** Outputs are muted during turn on and turn off to prevent audible pop through speakers.

### LQ Series Speakers

Designed for a wide-variety of mobile and fixed sound reinforcement applications, the hallmark of the injection-molded LQ series is incredibly high power handling capability with the ability to maintain clarity, even at extreme power levels. All LQ enclosures are made from high-impact, injection-molded polypropylene in a trapezoidal shape for easy stacking or cluster formation, and feature extensive ribbing and bracing. The grille utilizes perforated metal protected by a high-quality vinyl coating.

20- and 24-Input Rackmount Mixers

The XR-20 and XR-24 address a wide range of applications, including project studios, houses of worship, broadcasting, and all facets of live sound reinforcement. Crest's engineers group drew from decades of large and medium-format console design to create a compact, feature-filled rack mount mixer that exceeds all others in terms of quality, reliability and flexibility, regardless of price. AES-suggested grounding procedures are followed, resulting in excellent rejection of RF interference and ground-related noise. X-Rack mixers exhibit less than ±30° of input to output phase shift, which is significantly better than most other consoles. XLR connectors are used on all primary inputs and outputs, while 1/4” TRS connectors are used for inserts, making it easy to interface with most professional audio gear.

FEATURES

- The XR-20 has 12 mono + 4 stereo inputs (20 inputs total); the XR-24 has 8 mono and 8 stereo inputs (24 inputs total). All inputs have mic preamps and individual 48volt phantom power switches.
- 100mm faders on all inputs and Left, Right, and Mono (center) outputs. 60mm faders on the 4 subgroups.
- Four-band EQ on all inputs
- 18dB per octave high pass filters on mono input channels
- Insert on all inputs, subgroups, aux outs and L, R & M outputs
- 6 Aux buses, selectable pre or post fader in pairs
- Auxes 1 and 2 are configured as Level/Pan for stereo operation
- XLR L, R & Mono outputs switchable between Line and Mic level
- Internal universal-voltage power supply
- 1/4” TRS and RCA connectors on Alt Output, Monitor Output and Tape Input
- Five-Year Crest Audio warranty

XR-M

The XR-M is a compact and versatile rack-mount, monitor mixer designed to provide professional, desktop quality mixing performance in control applications, fixed installation systems and more. Housed in a compact 10-rack-space package, the XR-M provides up to 12 independent mono mixes, or up to six stereo mixes for stereo “in-ear” monitoring systems. Taking up minimal space in a sound control booth, the XR-M is small enough to travel with musicians who take their own self contained in-ear system with them on the road. Highly versatile, it can be used as a mono/stereo matrix mixer with 12 mono and four stereo mic/line input channels, all with mic preamps and individual 48V phantom power switches.

- Optimized for “In Ear” monitor systems, capable of generating up to 6 stereo mixes (each input channel with individual level and pan controls) or up to 12 mono mixes.
- May be used as a stereo or mono monitor mixer or a combination of both, or a matrix mixer or for front-of-house applications.
- 12 Mono inputs plus 4 stereo mic/line inputs (20 total), all with Mic preamps and individual (per channel) 48volt Phantom power.
- Splitter system on all mic/line inputs with ground lift switches on each input channel.
- Additional common stereo inputs on XLR and 1/4” connectors for use with click or Reference track sends to artists
- Four-band mid sweep EQ on mono and stereo input channels.
- 18dB per octave high pass filter on mono input channels
- 12 balanced XLR inputs and outputs
Power Amplifiers

Crown's CE-Series amplifiers are professional tools designed and built for professional use. They feature front-panel detented level controls, useful function indicators, proportional fan-assisted cooling, short-circuit protection and more.

For superior flexibility, they can work with a range of Crown SST (System Solution Topologies) modules which provide true professional features like fixed-point crossover and summed bass output. With a powerful, reliable performance, CE-Series amps easily handle real 2-ohm loads and are capable of chest-thumping lows. Backed with a three-year, no-fault warranty that covers everything.

FEATURES

- Accurate, uncolored sound with very low distortion for the best in music and voice reproduction
- Bridge mono/stereo mode switch allows you to set up your amps/speakers in the configuration that best suits your needs
- Extremely versatile they can handle a wide range of speaker impedances and outputs
- Switchable input sensitivity
- Proportional speed fan optimizes cooling efficiency
- Removable front-panel level control knobs
- They can be mounted in 19” or shallow 14” racks or stacked on top of each other
- Choice of Speakon (comes standard), binding post, or barrier strip outputs
- Choice of balanced 1/4” (6.35-mm), XLR, or barrier strip inputs
- Advanced protection circuitry guards against shorted, open or mismatched loads; over-loaded power supplies; excessive temperature; chain destruction phenomena; input overload damage; and high-frequency blow-ups
- They also protect loudspeakers from input/output DC, large or dangerous DC offsets and turn-on/turn-off transients
- Three-year No-Fault (fully transferrable) warranty even covers round-trip ground shipping in the U.S. for all warranty work

SST Modules

For superior flexibility, Crown CE-Series amplifiers are compatible with a range of Crown SST (System Solution Topologies) modules to tailor the amp to your application. The modules provide true professional features like fixed-point crossover and summed bass output and install easily into the back of the amplifier to save rack space and simplify system wiring.

The SST-MX module is a fourth-order Linkwitz-Riley type crossover with a fixed crossover point set at 100 Hz. Truly a professional crossover, the SST-MX uses hard-wired precision components that stay at the frequencies you have selected for consistent bandwidth control.

- Stereo biamp
- 24-dB/octave Linkwitz-Riley crossover fixed at 100 Hz
- Stereo sub outputs
- Neutrik Combo input jacks

The SST-SX module is a fourth-order Linkwitz-Riley type crossover with the crossover point switchable to either 80 or 120 Hz. High-frequency (HF) signals are routed to the internal amplifier channels, and low-frequency (LF) signals are summed and routed the mono output connector. Truly a professional crossover, the SST-SX uses hard-wired precision components that stay at the frequencies you have selected for consistent bandwidth control.

- Stereo biamp
- 24-dB/octave Linkwitz-Riley tuned filters
- Crossover switchable to either 80 or 120 Hz
- Stereo sub outputs
- Neutrik Combo input jacks
- Male 3-pin XLR Sub Output

SST-MX: 100-Hz Linkwitz-Riley crossover with stereo sub-bass outputs
SST-SX: 80-/120-Hz switchable Linkwitz-Riley crossover with mono summed sub-bass output
SST-SBSC: variable Linkwitz-Riley stereo cross-over with mono-summed sub-bass output

Engineered from the bottom up for top performance and unmatched reliability, the CE 4000 was designed using Crown's award-winning BCA (Balanced Current Amplifier) engineering to provide superior power output, increased efficiency, legendary Crown sound, and extraordinary reliability. With typical output power at 1,200 watts per channel, and Burst Power up to 1,800 watts per channel, the CE 4000 not only handles but excels at handling 2-ohm loads. In repeated stress tests, the CE 4000 continued to perform at levels 12 dB into clip, long after others had shut down.

Flexibility is also unsurpassed with features like selectable on-board high- and low-filter sets, optional signal control modules, and dual output connectors. So whether you're a touring band, DJ, A/V rental company or looking for a fixed install amp, the CE 4000's lightweight, modern design and lowest cost per watt of any amp in its class, make it the obvious choice.

### FEATURES
- Patented BCA (Balanced Current Amp) technology delivers high efficiency and superb sound. Generates more power and less heat than traditional linear amplifiers.
- Delivers 1800 watts per channel (both driven) into 2 ohms, 1200 watts into 4 ohms, and 600 watts into 8 ohms.
- Compatible with SST (System Solution Topologies) input modules for additional signal control. SST modules offer a variety of active crossover configurations.
- 31-step detented rotary level control for each channel.
- 3-way sensitivity switch is switchable among 0.775, 1.4 or 3.46 volts for full output into 8-ohm load.
- Protection from shorted, open or mismatched loads, input and high-frequency overloads. Loudspeakers protected from in/out DC, and power on/off transients.
- Amplifier is automatically muted during power up to avoid turn-on transients.
- Designed for the utmost in flexibility, the CE 4000 features sub-bass output via integral 4-position high-pass and 3-position low-pass filter sets for each channel.
- Clip LED indicators for each channel.
- 5-Way Fault Indicator:
  1) blinks during power-up;
  2) excessive heatsink temperature;
  3) transformer thermal protection;
  4) short at amplifier output;
  5) output stage non-operational.
- The CE 4000 is extremely energy efficient—more than twice conventional switching amps. It requires much less energy to deliver its massive power into virtually any load, no matter how difficult. This efficiency means that you realize significant savings over the life of the amp. It also allows more CE 4000's to be plugged into a single AC circuit, reducing installation costs.
- Choice of dual output connectors:
  - 5-way binding post plus Neutrik Speakon
  - 5-way binding post plus barrier strip
  - Dual Neutrik Speakon
- Enhanced switch-mode power supply with PFC (Power Factor Correction) allows you to plug the amp in anywhere in the world with any line voltage.
- Easy to transport and set up (only 34 lbs.)
- Extremely reliable keeps running under the harshest of conditions. However, just in case, it includes a 3-Year "No-Fault" full warranty (even covers round-trip ground shipping in the U.S. for all warranty work).

CROWN

D-45/ D-75A

With their long history of reliability, D-45 and D-75A amps are the choice of professionals for use on the road, at home, in recording studios, laboratories and public facilities. Very compact (1RU), the convection cooled D-45 and D-75A provide ultra-low distortion for medium power applications making them perfect for moderate power applications such as recording or broadcast studio near-field monitoring, video suite audio monitoring, audio recording/broadcast headphone amp or a small paging system. Designed, built and carefully checked to ensure reliable operation with a wide variety of loads, Crown's AB+B circuitry ensures efficient use of output transistors while incorporating protection against shorted, open, mismatched or low-impedance loads. Both include the industry's only 3-year, no-fault, fully transferable warranty.

- Powerful AB+B class circuitry yields maximum efficiency with minimum crossover “notch” distortion
- IOC (Input/Output Comparator) alerts of any distortion that exceeds 0.05% to provide proof of distortion-free performance
- Detented level controls for precise repeatability
- Ultra-low harmonic and intermodulation distortion result in the best dynamic transfer function in the industry
- Very low noise and wide dynamic range
- High damping factor provides exceptional loudspeaker motion control
- Signal presence indicators verify the presence of amplifier output
- Convection cooling dissipates heat through the heat sinks and chassis for optimal cooling and maintenance-free operation
- Mounts in a standard 19" rack
- 3-Year, no-fault, transferable warranty

XLS SERIES
XLS202, XLS402, XLS602

The XLS Series represents a new era in affordable, quality power amplification. Consisting of three models in a uniform, rugged chassis, the XLS Series incorporate the best of tried-and-true design principles and innovative features to meet demanding audio requirements—reliably and within budget. Plus, they are backed by Crown's unequaled 3-year warranty that covers everything.

- Housed in a rugged, all-steel 3U chassis
- Selectable high-pass filter on each channel enables amplifier to work more efficiently when full band-width is not required
- Precision detented level controls, power switch, and four LEDs, which indicate clip for each channel, power and fault conditions
- Pair of linear optocoupler clip limiters protects loudspeakers from being over-driven
- Efficient forced-air fan prevents excessive thermal buildup
- Electronically balanced XLR inputs and touch-proof binding post outputs
- 3-year, fully-transferable warranty
Crown's Macro-Tech Series (MA-602, 1202 and 2402) deliver superior sonic accuracy and enormous amounts of power from a low-profile design—perfect for touring and fixed installations. They offer a combination of features and flexibility not available from any other amplifier, including three separate power supplies, PIP2 compatibility, XLR connectors, detented level controls and more. Patented ODEP protection and Grounded Bridge output circuitry provide incredible reliability while at the same time virtually eliminating distortion. Finally, dual bridge-mono or parallel-mono modes allow you to optimize power to your loads, while IOC (Input/Output Comparator) circuitry acts as a supersensitive distortion meter, providing you with proof of distortion-free performance.

- Crown’s Grounded-Bridge design delivers large voltage swings without using easily stressed output-transistor configurations like conventional amplifiers. The results are lower distortion and superior reliability.
- Patented ODEP (Output Device Emulation Protection) circuitry compensates for overheating and overload to keep the amps working when others would fail. Front panel ODEP indicators show the reserve thermodynamic headroom for each channel.
- Complete protection against shorted, open, and mismatched loads, overheating, DC, high-frequency overload, and full internal fault protection provided by “Quad-Mute.”
- Dedicated power supply transformers isolate channels in stereo mode for superb crosstalk characteristics and reliability—each channel is virtually a separate amplifier.
- High damping factor provides superior control over low-frequency drivers for a clean, accurate low end.
- PIP (Programmable Input Processor) connector accepts accessories that tailor the amplifier to suit specific applications.
- Enhanced PIP2 connector accepts new accessory modules that further tailor the amp to suit specific applications, including wideband load current monitoring.
- Two mono modes (bridge and parallel) for driving a wide range of load impedances.
- 3-year, no-fault, fully transferable warranty.

K2 Series

Housed in a durable, maintenance-free package that’s just 2RU high, K2 Series amps incorporate Crown’s exclusive Balanced Current Amplifier (BCA) circuitry to provide massive amounts of power while generating just one-tenth the heat of conventional amplifiers. In fact, the powerful K2 can deliver 1250 watts per channel into 2 ohms. And since they are incredibly efficient, they require no internal cooling fan and feature a closed chassis. No fan means no fan noise, while the closed chassis makes them virtually immune to dust, cigarette smoke, stage fog and spilled liquids. In addition, each amp is equipped with a “green” circuit that further reduces energy use during idle periods. Energy draw is so low—only 12 watts or less—the amps may be kept in a continual ready state at minimal cost.

- Accurate, uncolored sound with very low distortion for the best in music and voice reproduction.
- High damping factor for tight, clean bass response.
- Mono mode switches let you set up your amps/speakers in the configuration that best suits your needs— with combined amp inputs, combined amp outputs, or both.
- Advanced protection circuitry guards against shorted outputs, open circuits, DC, mismatched loads, overheating, high-frequency overloads and internal faults.
- Extremely versatile, handling a wide range of speaker impedances and outputs.
- BCA (Balanced Current Amplifier) power design provides super efficiency for quiet, fan-free operation.
- Switchable input sensitivity.
- “Soft start” prevents the amps from drawing large currents when first turned on.
- Uniquely molded, cast-aluminum front panel provides exceptional air circulation.
- They mount in a 19” rack.
- 3 year “No-Fault” full warranty.
HAFLER

POWER AMPLIFIERS

Hafler designs audio components for one purpose—to help you do better work. Employing some of the best engineers in the world, they have developed patented, cutting-edge technologies such as trans•nova, trans•ana and DIAMOND. Hafler power amps are meticulously assembled using patented surface mount technology (SMT), upon which intricate macro-components are affixed by computerized machinery. Products manufactured using surface mount technology offer advantages that can be heard as well as measured, including low level components that operate at nearly identical temperatures, which is critical at low signals. SMT results in precise, hairline tolerances between components for optimum performance, the end product being fewer incidences of human error in placing parts, reduced hum and noise, and more efficient use of space. The bottom line: the only thing you hear through Hafler equipment, is music.

P1000 100-watt Trans•ana Power Amplifier

A high-quality amplifier with transparent and detailed sound, the P1000 is designed for broadcast studio monitoring, recording or critical listening, headphone system amplification, surround sound applications, paging systems, balanced or unbalanced use, and 115V/230V requirements. The P1000's unique Trans•ana circuitry is based on TRANScendence Active Nodal Amplifier topology, which operates the output stage with its full voltage gain, allowing the input stage to operate from a low voltage regulated supply. The signal is then shifted up in level to the high voltage section by the driver stage, which forms an active node at ultrasonic frequencies. This results in very stable, highly linear operation producing a natural and accurate soundstage with exceptional image focus.

**Amplifier Technology**

In older designs, an engineer had to choose whether to amplify voltage or current at any given gain stage, usually requiring extensive circuitry to drive an amplifier's output devices. But since every stage of amplification adds noise, cross-talk and distortion to the signal, the music often gets lost in the process. Hafler's Trans•nova circuitry configures output MOSFETs to provide voltage and current gain—what they call "power gain," with fewer gain stages required in amplifier front ends. Noise and cross-talk are greatly reduced because the signal travels through the front end in a simpler, lower cost circuit. DIAMOND works in conjunction with the amplifier front end to combine the linearity of a Class A amplifier stage with the headroom of Class B. Providing up to 14dB additional dynamic range in the amplifier front end, this flawless simplicity in the signal path keeps your music perfectly intact.

- Offers an amazing 100 watts of Hafler power from a single rack space. Combines superior sonic quality, weight and power consumption in a very compact size.
- Trans•ana circuitry using patented MOSFET output stage configured for "power gain" allows simpler front end circuitry, and dramatically lower cross talk and noise. Provides a very open three dimensional sound quality at a more affordable price.
- Proprietary NOMAD (NOn-Multiplying Advanced Decision) system provides safe operating area. Smart protection circuitry, NOMAD accurately computes the allowable device current for the device voltage and clamps the gate drive when the actual current exceeds this value.
- Thermal sensing network continuously monitors the heatsink temperature and shuts down the amp to protect it from excessive operating heat. Soft start circuit prevents sending of potentially destructive turn-on/off transients to the speakers.
- Front mounted rotary level controls for each channel.
- Front mounted headphone jack lets you easily monitor your work.
- Balanced and unbalanced inputs offer versatile connections. Each of the two channels has dual-function (XLR or 1/4˝ TRS) Neutrik combo connectors, as well RCA jacks for unbalanced use.
- Front panel LED indicators (signal, clipping, and active thermal protection) for monitoring each channel.
- Ground-lift switch lets you fit the amp in a metal rack without worrying about hum.
- The P1000 has no cooling fans, and its rackmounting case is only 1U high.
- 12˝ wide central portion houses the circuitry and mains transformer, and each of the rack ears is incorporated into a pair of large finned heatsinks that make up the remainder of the rack width. This provide plenty of air space for better air circulation.
200-and 400-watt Trans•nova Power Amplifiers

Designed for the beginning studio professional or musician for use in studio monitoring, touring sound and fixed installations the P1500 delivers nearly 200 watts of power from a 2RU high chassis and features James Strickland’s radical Trans•nova topology (TRANS Conductance Nodal Voltage Amplifier) as well as high-quality MOSFET outputs. Same features but twice as powerful, the convection-cooled P3000 is the ultimate studio and touring amp, delivering an unbelievable 400 watts of pure power out the same size chassis.

Unlike other amplifier designs that use “buffers” following voltage gain stages, thus killing current gain, and requiring more parts, resulting in more noise and distortion, Trans•nova provides voltage and current gain at the output stage (power gain), requiring less componentry. The simple nature of Trans•nova’s circuitry provides transparent, dynamic and three-dimensional sound.

**MFSET Outputs**
- They incorporate MOSFET (Metal Oxide Semiconductor Field Effect Transistor) outputs for high output current, rugged reliability and superb sound quality. This sturdiness enables the amp to drive reactive speaker loads without the performance and sound penalties imposed by elaborate protection schemes. Very expensive to manufacture, the advantages of high-quality MOSFET outputs include:
  - Extremely fast switching speed, audio band is easy!
  - Ultrawide bandwidth for effortless audio performance
  - Very rugged, can pass huge bolts of current into a loudspeaker
  - Do not “thermally run away” like bi-polar types, needing less feedback control
  - Have “soft saturation” - much like tubes

**Trans•nova Circuitry**
- They incorporate the latest refinement of the Trans•nova (TRANS conductance Nodal Voltage Amplifier) circuit. Proven to offer sound quality to satisfy the most analytic audiophile or the most demanding professional, their natural sound and realistic reproduction have made Trans•nova amplifiers preferred in many critical installations.
- Each channel of these amps is built as a self-contained module which only requires mounting the heatsink and connection to the chassis-mounted transformer and binding posts to be fully functional. The circuit board contains all the operational components. This simplifies construction and improves service accessibility.

**Input Sensitivity**
- Input sensitivity for each channel can be adjusted individually via the front-panel level controls. Gain control on an amplifier is usually fully advanced to its maximum (rated) sensitivity. However, in public systems where it is necessary to match levels, the knobs can be removed and the controls adjusted with your fingers or a screwdriver.

**LED Status**
- In addition to ‘Signal’, ‘Clip’ and ‘Thermal’ LED indicators, a ‘Short’ LED lights up when a potentially damaging short has been detected. (Due to the self-protecting properties of the output power MOSFETS, there is no need for sonically degrading voltage and current limiting circuits. However in case of a short in the speaker load or cables, a speaker detection circuit shuts down that channel and lights the SHORT indicator.)

**Additional Features**
- 3.5˝rack mount (2-rack spaces)
- 1dB increment gain controls
- Stereo/bridged mono
- Chassis/float ground switch
- Level control security covers
- Serviceable channel modules
- XLR or 1/4˝ balanced inputs
- Gold-plated 5-way binding posts for output connectors. These posts directly accept 12 AWG wire or banana plugs and are spaced on 3/4˝ centers to accept dual banana plugs.
- 5-year warranty

Rear view of the P1500 and P3000
P4000 400-watt Trans•nova DIAMOND Power Amplifier

The standard of sonic excellence for professional applications, the 9505 features the best of Hafler’s legendary technology and performance to create the ultimate balanced amplifier—at an affordable price. Utilizing triple-matched J-FET inputs and MOSFET outputs in combination with trans•nova circuitry and the brilliant DIAMOND driver stage the 9505 effortlessly outperforms products costing two or three times as much, delivering crystal clear, true sounding music with less coloration and added dimension.

P7000 700-watt Trans•nova DIAMOND Power Amplifier

The most powerful and versatile amplifier in the line up, the 2RU high, dual fan-cooled P7000 combines Hafler’s best technologies with unusual flexibility like level control, bridging, and plug-in electronic crossovers, making it perfect for studio, cinema, or musical instruments such as bass guitar or keyboards. The sonic result of this unique combination of versatility and power is immediately apparent to the discerning listener.

Delivers a deep, rich expansive sound stage with incredible transparency and detail.

- Active crossovers are incorporated at the input of the amplifier. These crossovers are controlled through the use of Hafler’s X-Card plug-in modules. Each X-Card can operate as a full-range, high-pass or low-pass filter with a 12dB per octave Butterworth alignment.

- Each channel utilizes two 100Hz X-Cards which in combination can be configured as a 24dB per octave slope or a 12dB per octave bandpass filter. Since the X-Card contains the resistors and capacitors that establish the crossover Q and frequency; specific system requirements can easily be accommodated just by changing the component values.

- Input configuration switches allow the amp to be configured for conventional stereo, two channel mono or single channel bridged use. When the amplifier is run in two-channel mono mode, the level controls and crossovers for each channel are fully functional which allows for using the amplifier as a single channel in a bi-amped system.

P9505 500-watt Trans•nova DIAMOND Reference Amp

The standard of sonic excellence for professional applications, the 9505 features the best of Hafler’s legendary technology and performance to create the ultimate balanced amplifier—at an affordable price. Utilizing triple-matched J-FET inputs and MOSFET outputs in combination with trans•nova circuitry and the brilliant DIAMOND driver stage the 9505 effortlessly outperforms products costing two or three times as much, delivering crystal clear, true sounding music with less coloration and added dimension.
300 and 700-watt per Channel Amplifiers

The SR2300, SR2800 and GX2800 amplifiers are 2RU high, two-channel, fan-cooled power amps suitable for use in the most demanding sound reinforcement and commercial sound installations. They offer outstanding efficiency by means of three technologies: high-efficiency TRANS•nova Class-G circuitry, high-frequency switching power supplies, and constant power output/load impedance selection switches. The GX2800 has the same power output as the SR2800 plus adds selectable low pass/high pass crossovers, time delay, CD Horn EQ and phase switch. However, it doesn’t have daisy chain jacks.

**TA1600**

The TA1600 (Trans*Amp) is a two-channel, two-rack height, convection-cooled MOSFET power amplifier. It is suitable for various applications such as instrument amplification, DJ, Monitoring, Live Sound Reinforcement, and permanent installations. The natural sound and realistic reproduction have made Trans•nova amplifiers the choice in critical installations. They have proven extremely fault tolerant even in abusive situations. This ruggedness enables the amplifier to drive reactive speaker loads without the performance and sound penalties imposed by elaborate protection schemes.

Specialized circuits prevent damage to the amp and speakers, without affecting the audio signal. A soft start circuit prevents sending potentially destructive turn-on and turn-off transients to the speakers. A thermal sensing network monitors the heatsink and transformer temperature, and shuts down the amplifier to protect from excessive operating heat. The need for internal fuses has been eliminated. A sensing circuit monitors the output signal and shuts down operation when it detects a short in the output load. In addition, LED indicators give a visual representation of the operating status of each channel. Any type of fault (clipping, short protection, or thermal standby) will be indicated with a red LED.

High Current Power Amplifiers

Incredibly affordable, the FR (Fast Recovery) Series power amps are traditional “lead sled” designs with massive toroid transformers, huge storage capacitors, state-of-the-art output devices and cooling systems that outperform all amps in their price range. Designed to perform reliably under the most adverse conditions, the amps feature sustained high-current output capability, high voltage and current slew rate, and defeatable clipping eliminator, to ensure that the output is distortion-free. They also deliver enormous amounts of current into extremely low impedances - with dynamic power reserves to spare. For added convenience and versatility, they offer both XLR and TRS inputs, extra XLR signal pass-through, integral servo-controlled limiters, elaborate but normally inaudible protection circuits, automatic turn-on delay, front panel LED ladder displays and detented level controls calibrated in both volts and dB. So whether you want to run your whole sound reinforcement system with a single amp, or need rack upon rack of them back stage, there’s an FR Series amp tailored for your application.

FEATURES

- Fast Recovery
  - FR series amps sound better than their competition when driven into clipping (overload). When an amp clips, you start hearing harmonic distortion. Most amps use negative feedback to help control clipping distortion. The output section of the amp sends a signal back to earlier stages to "throttle the system down. However, this causes its own problem: During clipping, when the amp relies on negative feedback, it electronically "confuses" earlier amp stages, causing them to latch in a clipping mode instead of recovering quickly. Latching causes an amp to sound terrible when pushed too hard, which it inevitably will be.
  - To effectively deal with clipping, an amp must be able to recoup almost instantaneously. That’s what Mackie means by Fast Recovery. FR Series amps use very sparing amounts of negative feedback. Then they use complementary Baker Clamp circuits on the positive and negative voltage amp stages, which prevent the stages from saturating (and latching) during periods of overdrive. An additional transistor senses when the Baker Clamp is active and then activates the amplifiers’ internal limiting circuits. The result is no latching, instant recovery from overdriving the amp — and way better sound.

- Better Cooling
  - The more heat you can conduct away from an amp’s output devices (transistors) the longer they’ll last. The better physical contact that can be made between a transistor and its heat exchanger, the more heat can be pulled away and dissipated. FR amps have a mirror-polished heat exchanger that maximizes thermal transfer.
  - The exchanger itself is transverse mounted with its air inlet in the middle. Cool room air enters the front of the amp, then travels down two short cooling tunnels and exits on the amplifier’s sides. This T-Tunnel design provides a more constant thermal gradient than one long cooling tunnel — in other words, two short air passages keep all transistors closer to the same temperature instead of getting progressively hotter as the air temperature increases down one long exchanger.
  - A dual-speed fan in the center directs air from the front of the amps through a large intake manifold into the cooling tunnel. The cool air is evenly distributed from the middle of the tunnel to each end, where the warm air exits the amp on either side.

Designed for professionals and amateurs alike, the FR Series amps are great for live sound reinforcement applications, as well as studio or broadcast control rooms. With the ability to deliver massive amounts of current instantly, they can handle power-sucking subwoofers, yet remain discriminating and responsive when driving a bank of delicate tweeters. They are designed to drive low impedance loads effortlessly and reliably. Most power amps have difficulty driving anything lower than 4 ohms, but the FR Series can easily drive 2 ohms all day. And like Mackie’s Audio Mixers which are well-known for their ability to withstand the abuses of the road, the FR Series amplifiers are just as durable.
**Sound Enhancing Features**

- All PA cabinets only reproduce bass down to a certain point, called the tuned frequency. Below that point, you get audio sludge and potential woofer damage. FR Series variable low cut filters let you feed your system only the frequencies it can handle. You can “dial in” any tuned frequency from 5Hz to 170Hz. Each amp also includes an infrasonic stabilizer circuit that cuts the really low frequencies that cause visible woofer cone flutter.

- To improve high frequency reproduction, many systems use constant directivity (CD horns). They improve treble dispersion by more evenly distributing high frequencies. But in doing so, they actually create a frequency “dip” that reduces important frequencies anywhere from 2.5kHz to 5kHz. The old way to compensate for this was a very expensive crossover module or a graphic equalizer. The M•800, M•1400 and M•1400i include separate left and right CD horn EQ adjustments. This 6dB/octave EQ’s “knee” position is sweepable from 2kHz to 6kHz — Mackie extended the high end boost so you can add “Air” EQ even if you’re not using CD horns.

- The M•1400/M•1400i feature 3rd order, 18dB/octave, Bessel electronic crossovers with 2 selectable frequencies. The M•2600 features 4th order, 24dB/octave, Linkwitz-Riley electronic subwoofer crossovers with 3 selectable frequencies. All have uniform time-delay low-pass filters. Just select the crossover frequency, connect the subwoofer output to another amp – and drive that subwoofer all over the map.

**Additional Features**

- Amps convert some of the raw power from a wall socket into modulated musical power for your speakers. The rest is turned into heat. FR amps achieve 74.5% efficiency, just shy of 78%— the theoretical maximum.

- It’s easy for an amplifier to put out high frequencies. But low frequencies demand awe-some amounts of power. In order to sound good, a power amplifier has to be able to deliver flat response over an extremely wide range of frequencies. The outputs of an FR Series amplifier are very flat and wide: +0/-3dB from 10 Hz to 80 kHz and full power capability to 100 kHz.

- An amp must be able to reproduce brief, intense bursts of energy—transient peaks—at the same rate they are input to the amp. The ability to do this is measured by its voltage slew rate. The slew rate of an FR Series amp exceeds 50V/μsec. That’s one of the fastest slew rates of any pro audio amp.

- The can operate on as little as 63% of their rated voltage (a big plus during brownouts or at the end of a long extension cord)

QSC

RMX SERIES

Professional Power Amplifiers

The RMX Series amplifiers offer clean, dynamic power with legendary QSC sound quality and reliability for unmatched performance. Providing professional quality at affordable prices, they range in power from 430 watts to 2000 per channel at 2 ohms, all in a compact chassis only 2 rack spaces high and less than 16” deep.

They use a powerful high-current toroidal transformer and ample filter capacitance to ensure generous energy reserves. This makes a critical difference in sound quality, because it allows the amps to effortlessly punch out high level transients, even when driving abusive 2-ohm speaker loads. A full complementary output circuit using the highest-grade linear output devices delivers ultra-low distortion and a ruler-flat frequency response.

RMX output devices are direct-mounted to the heat sink for optimum thermal coupling and cooling. Other features include user-defeatable clip limiters and selectable low-frequency filters to optimize sonic performance. They are equipped with XLR and 1/4” balanced inputs, and Speakon and binding post outputs.

**FEATURES**

**RMX Series Features**
- High-current toroidal transformers for greater 2-ohm power and low noise
- Barrier strip, XLR and 1/4” balanced inputs plus Speakon and binding post outputs provide easy connections.
- Low-noise variable speed fans with rear-to-front air flow keep amps and racks cool
- Front mounted gain controls for easy access
- Signal and Clip LED indicators help monitor performance
- Amplifier protection includes full short circuit, open circuit, thermal, ultrasonic, and RF protection. Stable into reactive or mismatched loads.
- Independent DC and thermal overload protection on each channel automatically protects amp and speaker
- 3-year warranty plus optional 3-year extension available

**RMX “HD” Step-up Feature**
- RMX 1850HD and 4050HD “Heavy Duty” provide improved thermal performance to give you higher continuous power in 2-ohms stereo or 4-ohms bridged applications.
- Independent defeatable clip limiters reduce distortion without sacrificing peak performance. When an RMX is pushed to extremes, the clip limiter automatically finds the exact point of overload and keeps the amp in its “Peak Zone”, preventing severe distortion without reducing performance.
- Prevent low-frequency muddiness with selectable 30 or 50Hz low-frequency filters and boost your system’s response by matching the amp’s range to the speakers. Each channel is separately adjustable: 50Hz for compact full-range speakers; 30Hz for subwoofers and large full-range systems (OFF for studio monitoring).
- The clip limiter and low-frequency filter are independently adjustable for each channel

Thermal Management System provides continuously variable speed fan for quiet operation. Rear-to-front air flow keeps amps and racks cool.
Professional Power Amplifiers

The PLX Series define high impact. Up to 3,400 watts in a 2 rack-unit chassis that's only 13” deep and 21 lbs. They also include QSC’s exclusive PowerWave Technology used in the award-winning PowerLight Series for chest-pounding bass and crystal-clear highs. They also feature hum-free noise floor and ultra-low distortion of 0.03% THD. And to keep them running under the most demanding conditions, they incorporate QSC’s Advanced Thermal Management System.

PowerWave Technology

With PowerWave technology, the PLX series make your music to a whole new level. Not only does it deliver bigger bass and cleaner highs, PowerWave also cuts wasted heat and boosts reliability. PowerWave makes the amps better sounding and more compact—so you don't have to settle for conventional "lead sled" designs with hum, sagging supplies, and backbreaking weight. Provides heavyweight audio performance in less than half the size and weight of typical amps.

PowerWave is a switching power supply that provides ample current to the audio power circuitry by charging the supply rails 230,000 times a second through an ultra-low impedance circuit. So unlike other amps with conventional supplies, the audio signal is never starved prematurely and remains crisp and clean. It virtually eliminates hum and greatly reduces noise, providing a vast dynamic range that can handle any music without running out of headroom.

---

— Conventional power supplies draw 60 Hz AC from the wall directly into the power transformer. This low frequency requires a massive iron core and hundreds of windings. In fact, a conventional 3000-watt amp needs a transformer that weighs at least 35 lbs., as much as two-thirds of the amp’s total weight.
— Worried about hum? PowerWave gets rid of it completely. The 115-kHz PowerWave supply eliminates 60 Hz fields that can couple into internal or external audio circuitry.
— Bass A PowerWave transformer has lower impedance and greater efficiency because its copper windings are short and thick. In essence, it provides a "bigger pipe" to get electrical energy to the amp’s output circuitry. Helps the amps deliver chest-pounding bass.
— PowerWave supply charges the rails 230,000 times per second—a vast improvement over 100–120 times per second in conventional supplies. This high recharge rate minimizes AC ripple that can degrade sonic quality.
Professional Power Amplifiers

Designed as a cost-effective solution specifically for sound contractors, the ISA Series feature three low impedance models (ISA 280, ISA 450, ISA 750) rated for 2-ohm operation, and three “T” versions with 25, 70 and 100 volt outputs for distributed audio systems (ISA 300T, ISA 500T, ISA 800T). Versatile loading options and a comprehensive feature set make the ISA Series a rugged, cost-effective power solution for any permanently installed sound system.

Unique among distributed sound power amplifiers, the “T” versions will drive 8- or 4-ohm loads and a distributed system on the same channel simultaneously. This enables a contractor to reduce the number of required amplifier channels by allowing a limited number of distributed speakers to be attached to the same amp as is powering the main sound system.

Housed in a rugged 3RU chassis, all amps feature rear panel gain controls for tamper resistant operation with 2 dB detents for quick and repeatable settings. Inputs include XLR and detachable Euro-style connectors. Outputs feature covered barrier strip connectors for safety agency compliance. For added versatility, a DataPort permits use with compatible signal processing accessories such as the XC-3 Crossover, SF-3 Subwoofer Filter, LF-3 LF Filter and the DSP-4 with external power supply.

- Rear panel gain controls for tamper resistant operation with 2-dB detents for quick and repeatable settings
- XLR and detachable Euro style input connectors
- DataPort V2 for use with compatible signal processing accessories (XC-3, SF-3, LF-3) and DSP-3 (with external power supply)
- Independent defeatable clip limiters for reduced distortion
- Selectable high-pass filters protect speakers and prevent speaker transformer saturation with minimal effect on program material (30Hz or 70Hz on non-“T” models, 50Hz or 75Hz on “T” models)
- Class H complementary bipolar output circuitry reduces AC power draw and waste heat by 40% (ISA 750 and 800T)
- Front panel indicators include power, signal, and clip
- Covered barrier strip output connectors for safety agency compliance
- Automatic variable-speed fan for quiet normal operation with maximum cooling on demand
- Rear-to-front air flow keeps equipment racks cool
- Stereo, bridge, or parallel operating modes
- Comprehensive protection circuitry including DC, infrasonic, thermal overload, and short circuit protection
- 3-year warranty plus optional 3-year extended service contract

**“T” Models**

- 25-, 70-, 100-volt, and low-impedance outputs available simultaneously
- Simple barrier strip connection determines output mode
The CX Series is designed to meet the specialized needs of sound contractors. Eight 2-channel, three 4-channel and one 8-channel including 70-volt models have been designed from the ground up, combining QSC’s exclusive PowerWave technology with specific features to meet the requirements of fixed installations. With high output power, versatile loading options, high thermal capacity and reliability, the CX Series is the ideal solution to any permanently installed sound system.

**CX 2-Channel Amps**

- 8 models to meet your exact power requirements (five low impedance models, three 70-volt direct models)
- Exclusive PowerWave switch-mode power supply technology for high performance and compact size
- Custom integrated security cover for tamper proof installations
- Variable speed fan for low noise
- 1dB detented gain controls for fast and accurate gain settings
- Active In-rush Limiting eliminates AC inrush current, removing the need for expensive power sequencers
- XLR and detachable Euro style input connectors
- Comprehensive front panel indicators include signal, clip, protect and QSC’s bridge-mono and parallel-input LEDs
- Dip switch control for clip limiters, high pass filters, bridge-mono and parallel operation
- HD15 DataPort connector for QSCcontrol computer control or QSC signal processing accessories
- Selectable high pass filters protect speakers and prevent speaker transformer saturation with minimal effect on program material (33 Hz or 75 Hz on non-V models, 50 Hz or 75 Hz on V models)
- Barrier strip output connector
- Comprehensive protection circuitry including DC, infrasonic, thermal overload and short circuit protection
- Class H complementary bipolar output circuitry for high efficiency (CX702, CX902, CX1102 & CX1202V)
- Optional external transformer pack for isolated 70- and 100-volt outputs (converts CX302 to 400 w/ch isolated output)
- Amps are 2 RU high, 14” deep and weigh only 21 lbs. for easier racking & shipping
- 3-year warranty plus optional 3-year extended service contract

1kHz, 0.05% THD  20kHz, 0.05% THD  1kHz, 1% THD  0.1% THD  1kHz  0.1% THD  20kHz

**CX 4-Channel Amps**

Same as 2-channel models except:

- Channel 1&2 and 3&4 bridgeable for maximum flexibility
- High-performance Class AB+B complementary bipolar output circuitry
- Detachable Euro style input connectors
- 3 models to choose from (two low impedance one 70-volt direct)

**CX 8-Channel Amp**

Same as 4-channel models except:

- Channel pairs bridgeable for maximum flexibility (1&2, 3&4, 5&6, 7&8)
- Four HD15 DataPorts (one per channel pair) for QSCcontrol computer control or signal processing accessories
- Detachable Euro style input and output connectors
- 1dB recessed detented gain controls
MA3 Multichannel Amplifier

The MA 3 is a three-channel amplifier specifically designed for use in paging, foreground music, and background music distribution. Each channel of the MA 3 delivers 40 watts of continuous average power into 8 ohms and 60 watts into 4 ohms. Up to three optional 40 watt, 70.7 volt or 100-volt constant-voltage audio transformers may be installed inside the MA 3, eliminating the need for external wiring or transformer mounting. The combination of a solid, conservative power supply and forced air cooling allows the MA 3 to simultaneously deliver 60 watts of continuous-average-power to all three channels.

- SPIKe dynamic protection circuitry completely safe-guards each channel against over-voltage, under-voltage, overloads, transients from inductive loads, thermal runaway and instantaneous temperature peaks. Biasing is not allowed to occur when an under-voltage condition exists, reducing turn on and turn off transients.
- Fast-response limiters allow the MA 3 to tolerate up to 20 dB of overdrive into 8 and 4 ohm loads while holding THD below 1%. This means no loss of speech intelligibility or harsh clipping. Greatly increases the dynamic range of the system without external limiters. Peak-responding, load-adaptive meters accurately indicate the remaining headroom, and are helpful in setting system levels and indicating signal compression.
- Balanced inputs with Euroblock connectors are provided. Euroblock output connectors accept up to 12 gauge wire. Rear panel level controls allow amplifier sensitivity adjustment.
- Internally selectable 80 Hz highpass filters offer protection against over excursion of small bookshelf speakers and saturation of distribution transformers at low frequencies.

MA6S Multichannel Amplifier

The MA 6S supplies six completely independent amplifier channels in one 3-space rack-mount unit. Each channel delivers 100 watts RMS into an 8-ohm load, or 150-watts each into a 4-ohm load. Adjacent pairs of Channels (1 & 2, 3 & 4, 5 & 6) operate bridged to provide 300-watts into an 8-ohm load. Each channel of the MA 6S includes an input Voltage Controlled Attenuator (VCA). This carefully designed VCA prevents clipping at the output of the amplifier for up to 15 dB of input overdrive. This VCA provides additional headroom to each Channel, making the 100 watt ratings effectively much higher, and the results much louder.

- Unprecedented degree of flexibility:
  - Use it as a monitor amplifier for six separate Channels of stage monitor mixing;
  - Drive a pair of two-way speakers bi-amped with two bridged pairs at 300w for the low end and two 100w channels for the high end, each with limiters for driver protection;
  - Run three bi-amped monitors at 100w each;
  - Drive three passive two-way monitors at 300 watts each.
