- All channels of the MA 6S are completely independent. Each is contained on its own circuit board making it immune to the actions of any other channel.
- Power supply is designed so that signal won't back-feed from a heavily loaded channel to any other channel. This makes power supply cross talk between channels inaudible.
- Euroblock quick disconnects allow fast and inexpensive connection of input and output signals. Up to 12 AWG wire can be used.
- Individual indicators for each channel indicate the status of the Mute Relay, Clipping Protection, and Safe Operating Area (SOA) Protection circuits.
- Heavy gauge all-steel construction offers a high level of mechanical integrity, even when the amp is rack-mounted and unsupported in the rear. As an added benefit, mounting holes are provided on the side rails so the amplifier may be supported from the back.
Ideal for powering near field monitors or a headphone amplifier, the Servo 120 gives you "reference-class" audio performance and reliability in a compact package. Ideal for recording, live sound and home theater situations, the 120's bipolar design and toroidal transformer power supply ensure reliability and quiet performance. A headphone jack with a speaker-disable switch lets you work through late night mixing sessions without disturbing anyone.

- 1RU servo-controlled stereo power amp
- 60w per channel into 4 ohms (stereo), 120w watts into 8 ohms (bridged mono mode)
- Wide, flat frequency response of less than 10Hz to plus 100kHz for high-quality audio
- Relay-controlled power-on circuitry prevents speaker “thumps”
- Individual left and right Level controls with 5-segment, 3-color LED meters
- Push-spring terminal outputs
- Convection-cooled design eliminates fan noise and maintenance problems
- Bipolar design and toroidal transformer power supply
- Overheating and over-current protection circuitry
- Front panel headphone jack with speaker-disable switch
- Balanced 1/4” TRS inputs and unbalanced RCA inputs on gold-plated connectors for improved conductivity

DS70 70-Volt Speaker Distribution System

Rugged and reliable, the 2RU high DS70 transforms the 4 ohm output of a standard power amp to a 25 or 70-volt level for use in multiple ceiling-mounted speaker systems. 4 independent channels allow for 4 mono or 2 separate stereo zones.

- Transforms conventional 4 ohm amplifier output to a 70 or 25 volt level for sound distribution in commercial installations
- 4 independent signal paths
- Binding post inputs and terminal strip outputs
- Maximum power for each output: 120 watts (240 watts in bridged mode)
- 4 high-quality toroidal transformers for full-range audio with extended high frequency reproduction

F800/F1200

The 3RU high F800 and F1200 are rugged amps ideal for sound reinforcement, DJ use, commercial installations and PA systems. The F800’s amp section produces 400 watts per side into four ohms and 800 watts into eight ohms in the bridged mono mode. The F1200’s amp section produces 600 watts per side into four ohms and 1200 watts into eight ohms in the bridged mono mode. Housed in a three rack space chassis, they both feature a bipolar design to ensure stable operation and accurate audio reproduction. Their front panel includes a Power On/Off switch along with Power, Bridge and Peak LEDs. Other practical features include 1/4” balanced and RCA input connectors and Binding Post output connectors.

- F800 produces 400w per channel into 4 ohms and 800w into 8 ohms (bridged mono mode), the F1200 produces 600 watts per channel into 4 ohms and 1200 watts into 8 ohms (bridged mono mode)
- Dual temperature-sensitive, speed-controlled fans for maximum efficiency and reliability
- Stable bipolar design for long life and enhanced audio reproduction
- Dual protection, power and bridging LEDs
- Balanced 1/4” and RCA input connectors
- Binding post output connectors
- Resettable in-line fuse on rear panel
Power Amplifiers

A versatile performer in a compact package, the Servo 170 is excellent for near field monitoring, stereo midrange/high frequency bi-amping applications and low power distribution systems. It also works effectively for powering vocals and acoustic instrument setups in small clubs, restaurants and bars. Like all Samson Servo amps, the 170 is designed to ensure quiet, reliable performance every time you use it.

A mainstay of the line, the Servo 260 can be used to power near field monitors, passive headphone distribution systems in the studio and small live sound reinforcement setups. It is also a great choice for stereo keyboard or guitar amp setups with external mixer or preamps, or amplifying a large screen TV or video system. The Servo 260 is dedicated to transparent audio, consistent performance and the rugged construction you need from a professional amplifier.

Using the Servo 550 in the bridged mono mode is a great way to power a separate subwoofer system as an enhancement to your overall sound. The 550 also shines in other live sound reinforcement uses, monitoring and dedicated recording applications like powering near and midfield monitors and passive headphone distribution systems. A/V installers appreciate the 550’s versatility, quiet performance and reliability for distributed sound, clubs, restaurants and home theater settings.
Sturdy and reliable, the S500 is perfect for live sound or fixed installations where 500 watts is the right amount of power.

Exceptionally rugged and reliable, the S700 fits seamlessly into a variety of sound reinforcement applications and fixed installations. It is capable of producing 350 watts a side and 700 watts (mono bridged) from a compact rack-mountable format. Two temperature-sensitive, speed-controlled fans and a bipolar design as well as comprehensive control and protection capability ensure stable performance over the long haul.

A smart choice for powering all kinds of live sound projects, commercial installations and PA systems, the rugged S1000 provides plenty of power, reliability and protection. Dedicated to transparent audio and long term reliability, the S1000 is built tough and provides exceptional control and interfacing capability.

Efficient and highly reliable, the S1500 provides plenty of power on the road, in commercial installations and for PA use. It produces 750 watts per channel into 4 ohms (stereo mode) and 1500 watts into 8 ohms (bridged mono mode). Its flat frequency response ensures great audio. Other features include full front-panel control, metering and protection capability and a wide range of interconnect options.

The rugged S2000 delivers plenty of power, reliability and protection in live sound situations, commercial installations and PA situations. It produces 1000 watts per channel into 4 ohms (stereo mode) and 2000 watts into 8 ohms (bridged mono). It offers a wide frequency response; dual temperature-sensitive, speed-controlled fans, Bipolar design for consistent performance and full front-panel control, metering and protection capability along with a wide range of interconnect options.

**S500 Features**
- Heavy-duty dual rack space stereo power amplifier
- 250 watts per channel into 4 ohms, 150 watts into 8 ohms (stereo) and 500 watts into 8 ohms (bridged mono)
- Temperature-sensitive, speed-controlled fan
- XLR and locking TRS inputs; banana jack outputs with Speakon connectors
- Parallel outputs allow several amps to be “daisy-chained” together
- Front panel input level controls with 41 detents and 3-segment output LED meters
- Overheating and over-current protection circuitry with LED monitoring

**S700 Step-up Features**
- Produces 350 watts a side into 4 ohms (stereo mode) and 700 watts into 8 ohms (bridged mono mode)
- Dual temperature-sensitive, speed-controlled fans
- Bipolar design for greater stability
- Relay-controlled outputs linked to the protection LEDs

**S1000 Step-up Features**
- 500w per channel into 4 ohms (stereo) and 1000w into 8 ohms (bridged mono mode)
- Linear frequency response for exceptional audio performance

**S1500 Step-up Features**
- 750 watts per channel into 4 ohms (stereo mode) and 1500 watts into 8 ohms (bridged mono mode)
- Flat frequency response for superior audio performance
- AC mains: IEC and Neutrik Powercon connector included

**S2000 Step-up Features**
- 1000 watts per channel into 4 ohms (stereo mode) and 2000 watts into 8 ohms (bridged mono)
- Linear frequency response for exceptional audio performance
YAMAHA

P1600/ P3200/ P4500

“P” Series Amps with Exceptional Efficiency

Remarkably efficient, the “P” series also offers excellent cost per watt value. Utilizing Yamaha’s EEEngine technology, these amplifiers deliver outstanding sound quality with remarkable efficiency. All of this power and performance comes in a compact 2-space rack-mount size that makes installation and transport easy. If you need transparent amplification with excellent reliability and superior performance, give the new “P” series a close look.

FEATURES

Power Efficient
Yamaha’s EEEngine (see box) consumes power efficiently, which allows the amplifier to produce the same amount of output power with about half the input power required. The EEEngine outperforms other efficiency-enhancing schemes like drive voltage switching, pulse-width modulation and switching series regulators - without degrading sound quality.

Quality Sound
Transparent amplification without sound coloration is supplied with a frequency response of 10Hz to 50 kHz. A high damping factor of >200 provides excellent bass response and total harmonic distortion is <0.05% — perfect for today’s digital sources and musical instruments.

Input/Output
Input attenuators are 31-position, db-calibrated and allow independent L/R adjustment with smooth, noise-free control. Balanced XLR jacks, a barrier strip and balanced 1/4” phone jacks accommodate input connections. Five-way binding posts provide solid, reliable speaker connections.

Three Output Modes
— In stereo mode, separate input signals are routed to each channel with independent L/R signal control.
— An extra margin of flexibility is provided in parallel mode, which feeds a single input signal to both channels while maintaining independent L/R signal control.
— Bridged mono mode can be used for extra high power.

Comprehensive Protection
◆ They offer comprehensive protection designed to prevent accidental damage to the amplifier itself and any connected speakers.
— Power ON muting suppresses the outputs until the amplifier circuitry has stabilized.
— To keep the operating temperature stable, they are equipped with ultra-quiet variable speed cooling fans.
— Added protection is supplied with heat oversink protection, noise filtering, a PC limiter for short circuit protection and an attenuator security cover to protect level settings.

Yamaha’s EEEngine
By means of switching drive system, Yamaha’s EEEngine technology reduces AC power requirements and heat loss while maintaining output power and sound quality. Input power is supplied through a high-efficiency current buffer. During low requirement periods, it transparently switches the input power on and off automatically as needed. As the signal becomes large, an independently responding auxiliary power line supplies the additional power, as required. The output isn’t compromised because the auxiliary power line is driven by the power supply voltage, which can maintain the maximum output to the speaker load. The amplifiers make more efficient use of the AC power than conventional amplifier technology. With EEEngine technology, the electric company will wonder how you’re doing it!

Power Rating- (20Hz - 20kHz)
P1600:
160W @ 8Ω stereo, 200W @ 4Ω stereo, 400W bridged mono

P3200:
340W @ 8Ω stereo, 440W @ 4Ω stereo, 880W bridged mono

P4500:
460W @ 8Ω stereo, 620W @ 4Ω stereo, 1240W bridged mono
“P” Series II Amps

Yamaha's engineers have designed these new P-Series power amplifiers as perfect mates to the popular Club Series speakers. To achieve this, they provided them with big power output that matches the power handling capabilities of the speakers. Each amp is also equipped with the specially designed YS (Yamaha Speaker) Processing circuit to deliver a signal that is tuned to the specific response of the Club Series speakers for superior audio quality and performance.

The amps feature both XLR and 1/4" TRS inputs and Neutrik Speakon, phone plug, and 5-way binding post outputs to make connections quick and easy. Other features include Yamaha's exclusive EEEngine technology which delivers high performance with exceptional efficiency, sweepable high and low pass filters for optimizing output to any loudspeakers, compact and durable 2U chassis, and variable speed cooling fans.

FEATURES

◆ They deliver a robust amount of professional quality power in a wide range of configurations. In a 4-ohm bridged application, the P7000S delivers 3200 watts, the P5000S delivers 2600 watts, the P3500S 2000 watts, and the P2500S 1300 watts.

◆ Each is equipped with independent sweepable high and low pass filters on each channel so you can optimize output for subwoofer or full range systems to provide peak audio quality and performance from any speaker system you may be using.

◆ The P2500S and P3500S are respectively light in weight making transport and setup less strenuous. What's amazing though, is the comparison in weight per watt when you look at the P5000S and P7000S. The use of a switching power supply makes these two models very lightweight while maintaining superior audio quality.

◆ To provide the most flexible connectivity possible, all four are equipped Neutrik Speakon output jacks, and 1/4-inch output jacks for each channel in addition to 5-way binding post. Channel inputs consist of both XLR and 1/4-inch TRS jacks.

◆ Continuously variable-speed fans mounted internally on either side of the front panel offer quiet, efficient cooling.

◆ Their industrial design delivers a refined and impressive look with deep blue faceplates bordered in silver trim, handles, and mounts. The chassis is specially designed to provide added durability and strength.

◆ EEEngine Technology makes more efficient use of AC power by reducing power consumption and heat generation without degrading output power or sound quality. See box on previous page.

◆ Comprehensive protection consists of power on/off muting, DC detection, thermal protection, current limiting, and a protective cover for the attenuators.

◆ With YS (Yamaha Speaker) Processing, you get direct compatibility with Yamaha's Club Series speaker. This circuit optimizes output from the amps to match the characteristics of Club Series delivering a signal that is precisely what the speaker requires. With the YS Processing system, extra-smooth highs and enhanced low frequency from your Club Series loudspeaker system is assured.

The M1 Active mk2 combines Alesis’ expertise in reference monitor design and studio amplification to provide professional accuracy, clarity and performance in an affordable powered monitor. A bi-amplified reference monitor, the M1 Active mk2 is incredibly accurate with a wide sweet spot, high power handling and detailed high- and mid-frequency response that translates perfectly to any playback system. Ideal for desktop video and post production facilities as well as home and project recording studios.

- Attractive mirror-imaged, charcoal-toned cabinet and shielded drivers allow placement next to computer or video monitors, while blending beautifully into your studio’s decor without being obtrusive.
- Can be mounted either horizontally or vertically to fit your studio’s requirements.
- The woofer and tweeter were designed for the most linear, low distortion response. The 6.5” woofer cone is formulated from non-woven carbon fiber. Used in the skins of combat aircraft wings, carbon fiber has more tensile strength and is 25% lighter than polypropylene (the most common driver material). The result is quicker transient response in the low frequency range for superb bass response as well as a vast improvement in the detail of critical upper-mid frequencies.
- Internal active crossover and custom dual amps ensure consistent performance under different studio conditions and program material. The result is a broad, extremely flat frequency response, clear imaging with a wide sweet spot, high power handling and detailed high- and mid-frequency response.
- Pure silk 1” tweeter dome’s natural response prevents ear fatigue during long mix sessions. It also features an internal pole piece mounted phasing plug and is ferrofluid cooled to maintain the best balance of transient response to power handling.
- Offers a audiophile-quality 75w woofer and 25w tweeter amp along with 8th order high- and low-pass electronic crossover filters. The crossover point is a low 1500Hz, and produces an extremely wide dispersion zone as well as low midrange coloration.
- Time alignment circuitry in the tweeter section of the crossover synchronizes frequency output from the high and low drivers avoiding the time smear that’s typical in less advanced powered speakers.
- Dual front-mounted ports provide fast, coherent and extended low frequency augmentation. Also, the unique offset design of the high frequency driver allows for the flattest frequency and power response in a speaker that offers such wide dispersion.

Monitor One mk2

An award winning studio monitor, the Monitor One has an extended dynamic range, excellent imaging and transient reproduction, powerful bass and smooth, extended high frequency detail. Ideal for high-quality monitoring in project studios and commercial recording facilities. Exclusive SuperPort speaker venting technology extends low frequency response while eliminating the “choking” effect of port turbulence.

- 6.5” polypropylene low-frequency driver with tight, accurate bass response is matched with a 1” pure silk-dome, high-frequency transducer for smooth, accurate detail and response, and a broad sound stage.
- Ferrofluid-cooled, high-frequency driver prevents ear fatigue during long mixing sessions.
- 45 Hz – 20 kHz +/- 3 dB frequency.
- 2kHz crossover point provides a true, flat frequency response for accurate mixes that translate to other playback systems.
- The cabinet has an attractive professional finish, and is a mirror image left/right pair for symmetrical speaker placement.
- Magnetic shielding allows use next to video and computer monitors.
- Radiused edges for reduced edge diffraction, along with improved porting. Thanks to exclusive SuperPort venting technology, the monitor eliminates the “choking” effect of smaller, shorter ports. The result is a low-frequency response which extends well below comparable near field monitors.
**Powered Studio Reference Monitor with DSP Control**

Building on Alesis’ award winning speaker designs, the ProLinear 720DSP delivers unprecedented accuracy, control, and flexibility for any studio monitor application. The ProLinear 720DSP is a bi-amplified two-way reference monitor with a 7” kevlar woofer and a 1” silk-dome tweeter, with several distinct advantages over traditional studio monitors.

By integrating proprietary 28-bit DSP, the ProLinear 720DSP implements the crossover entirely in the digital domain to provide a precisely controlled response. The ProLinear 720DSP further leverages its digital control to enable users to set and store multiple EQ curves for individual speakers, or for every speaker in the studio. Settings can also be adjusted via the built-in 4-band fully parametric EQ. Additionally, by using the PC interface, users can adjust and set EQ settings remotely from a “sweet spot” listening position. No other monitor offers this degree of control, flexibility, or total performance.

- Built-in digital crossover and 4-band parametric EQ with 8 pre-sets and 8 user defined settings
- 24-bit/48kHz processing
- 80 watts (LF) / 40 watts (HF)
- Serial interface allows PC control of up to 16 speakers

---

**ProActive 5.1 THX-Certified Surround Sound Speaker System**

The ProActive 5.1 is equipped with Dolby Digital and DTS hardware decoding for true 5.1 digital sound. The first system to deliver THX-certified surround sound to the professional audio and music industry, the ProActive 5.1 is the ideal solution for the home recording studio, with simultaneous connection to up to four audio sources including PCs, home audio and recording equipment, and other sources such as DVD players and portable audio players.

- THX-certified, 5.1-surround sound system with 450 watts of RMS power.
- 8” long throw subwoofer driver with a flared bass port for powerful, distortion-free bass.
- Dolby Pro Logic II for creating realistic 5.1 surround sound from stereo music, movies and games.
- Digital optical and coaxial inputs, as well as six channel analog inputs, for simple connection to nearly any audio device.
- System is controlled by a digital console with a wireless remote, for easy adjustment of the speaker controls from anywhere in the room.
**EDIROL**

**DESKTOP SPEAKERS**

**DM-5 Bi-amp Monitors**
Durable, dependable and affordable, expect superior performance from this near-field monitor. 120mm woofer is powered by a 30W amplifier, the 19mm tweeter by its own 20W amp and both have their own level control. In addition to analog input (Speakon, XLR and 1/4” in a single connection), accepts S/PDIF, coaxial and optical digital input and supports 24bit/96kHz data.

- 120mm LF driver with 30w amp, 19mm HF driver with 20w amp
- Bass-reflex ducts for rich, bass-range reproduction
- Digital in and power indicators on the front panel
- S/PDIF digital inputs (coaxial and optical) support 96 kHz sampling rate and 24-bit D/A conversion

**MA-5A/MA-5D Analog & Digital Stereo Micro Monitors**
Bass-reflex system powered speakers in a compact and stylish design, the MA-5A provides a wide range of dynamic sound. The MA-5D is identical but adds a digital input on the front.

- 5w x 5w, 70 mm full range speakers
- Equipped with 2 inputs (RCA/stereo mini); you can also mix 2 analog input sources
- Plug in a variety of audio devices, such as CD/MD/DVD player and electronic musical instruments
- Bass, Treble control knobs on front panel

**MA-10A/MA-10D Active Analog & Digital Desktop Monitors**
The MA-10A is a compact active monitor featuring some remarkable specifications as well as a striking contemporary blue or black natural wood finish. Fine wooden cabinets ensure a more defined sound quality. They are magnetically shielded and provide 20 watts of genuine power (RMS) with bass-reflex enclosure system. It is so important to monitor your audio with a good pair of speakers that can guarantee good dynamic range and frequency response.

- 120mm LF driver with 30w amp, 19mm HF driver with 20w amp
- Bass-reflex ducts for rich, bass-range reproduction
- Digital in and power indicators on the front panel
- S/PDIF digital inputs (coaxial and optical) support 96 kHz sampling rate and 24-bit D/A conversion

**MA-20D Digital Stereo Near Field Monitors**
Designed for the higher-end consumer and hobbyist, the MA-20D speakers are attractive Near-field Monitors with impressive sound capabilities - two 20-Watt amplifiers and a stylish black & silver design. Building on the widely popular MA-10 series, the MA-20D’s have twice the power and all the style of the MA-10’s. They include the same functionality of the MA-10D and MA-10DBK speakers; including Treble & Bass controls, two independent Volume controls, S/PDIF digital input, and a headphone out. Each speaker in a MA-20D pair is individually powered with its own amplifier and have a bigger woofer for a better low-end response.

- Superb Response for unparalleled sound quality in its price range
- 20W x 20W power in a 2-way bass-reflex design
- Power amp in each speaker for uniform stereo sound
- 4½” woofer for good punch and excellent Bass Response
- 24-bit/96 kHz capable S/PDIF connections

**STUDIO MONITORS**

- **580**

- **Available in Blue or Black**

- **580**

- **Available in Blue or Black**
Precision Direct Field Monitors

The 20/20 Direct Field Monitor delivers wonderfully clean, accurate, pleasing sound at a price most musicians would consider eminently affordable. Exceptionally reliable, attention to detail permeates every aspect of the design. Custom asymmetrical second-order passive crossover ensures smooth sonic transition from the woofer to the tweeter at the crossover point. The tweeter is recessed to provide flatter frequency response. The diecast aluminum trim ring which minimize acoustic discontinuity between the driver and the cabinet, is also a unique, self-aligning four-point mounting system for the woofer.

- Magnetically shielded, 25mm natural silk dome provides accurate, detailed high frequency reproduction.
- Internal high frequency pole piece damping element aids in smoothing out the signal, allowing for extended listening periods.
- For improved reliability, there is a ferrofluid-cooled aluminum voice coil support that reduces heat; a special flexible lead wire minimizes wire fatigue as well as insures consistent performance.

- The woofer provides smooth, consistent extended-range frequency response without the need of added EQ
- The driver itself is a magnetically shielded 8” mineral-impregnated polypropylene cone with a highly-damped linear rubber surround
- It also boasts a 1½” high-temperature voice coil for reliable operation at high power levels

Cabinet

- 5/8” laminated MDF cabinet filled with acoustical damping material reduces internal standing waves—a perfect acoustic complement to the transducer components.
- Front-mounted large diameter low air restriction bass port delivers direct, uncolored low frequency reproduction, even at very high volumes.
- The port is front-mounted, allowing the speakers to be placed close to walls without compromising the low end response.

20/20BAS

Biamped Precision Direct Field Monitors

The 20/20BAS puts world-class reference monitoring into the hands of musicians previously shut out by the high cost of those systems. Based on the 20/20 design, which in itself offers exceptional sound, the 20/20BAS takes it to the next level with an active asymmetrical fourth-order crossover—with phase response so accurate that the resulting stereo imaging simply must be heard (make that seen) to be believed. Add the custom 130w amplifier designed specifically for the woofer, followed by the 70w tweeter amp—that’s 200 watts of ultra clean power per side, and then independent trim controls for each amplifier, making it easy to adjust the speakers’ response to your particular monitoring environment. Simply put, the 20/20 delivers exactly what you want in a reference monitor system: superbly clear, detailed sound. Flat, uncolored, accurate frequency response. Precise imaging. Non-fatiguing to the ears.
Bi-Amplified Direct Field Monitors

It’s about confidence. Confidence that your monitoring system is accurate. Confidence that what you’re hearing from your speakers isn’t being colored. Confidence that your mixes will sound the way you meant them to sound when they get played in the car, or in your living room – or in the office of a record company executive. The Project Studio monitors inspire that confidence, giving you the same precise, accurate sound as the award-winning 20/20 series. Not everyone has the space for full-size direct field monitors. But everyone does have the need for speakers that provide pure, accurate, detailed sound. And that’s exactly what you get with the Project Studio series:

- Full-range, non-fatiguing monitoring in a small profile format.
- More importantly, PS speakers provide you with monitoring you can trust, so you know that your mixes will sound the same in the outside world as they do in your studio. This is accomplished through the use of custom driver components, as well as amplifiers and electronic crossovers designed specially for those components. The result:
  - Increased dynamic range.
  - Higher SPL.
  - Greater transient response.
  - Improved damping.
  - Smoother phase response.
  - Lower intermodulation distortion.
  - Oh, yes, and great sound.

TR5/ TR8
Tuned Reference Bi-amplified Direct Field Monitor Systems

Like their names intimate, the TR (Tuned Reference) 5 and 8 monitors are precision tuned to provide flat frequency response and uncolored sound, giving you a true sonic reference for mixing. So when you mix on a Tuned Reference monitor, you know your mixes will translate accurately to other playback systems.

However, you might think that this level of mix precision comes at a high price. But thanks to a powerful new ultra-efficient amplifier (actually two of them, since these are biamped systems), they are able to bring you high definition, non-fatiguing monitoring at prices so low they’re downright silly. But don’t let the cost fool you: The TR series monitors are filled with time-tested Event technology, and designed by the same engineering team behind their full line of critically-acclaimed monitors. So pick up a pair of TR monitors today. Your mixes will thank you.
S250 System Subwoofer

The S250 Subwoofer is the core foundation of a professional full bandwidth surround sound monitoring system. With a massive 15” driver and 250W of clean, linear power, the S250 effortlessly provides the high SPL low frequency output necessary for multi-channel production work. Why a subwoofer with six inputs (discrete, active, balanced inputs, at that)? The first input is used for monitoring the Dolby Surround LFE (Low Frequency Effects) channel; signals appearing at the LFE input are fed directly to the subwoofer amplifier through a dedicated 120Hz crossover. The other five inputs are for the five mains channels. These signals are summed into an additional bass channel, used to extend the main monitors’ frequency response well below their natural roll-off.

◆ The dual input, dual crossover design features three operational modes, allowing you to monitor the Dolby LFE channel, extend the low frequency performance of the mains monitor channels, or do both functions simultaneously.

◆ Includes a variable Monitor Blend crossover control, fed by the summed mains signal; use the control to precisely and seamlessly match the subwoofer’s high end with the natural low frequency roll-off of the mains monitors.

◆ The Variable Phase Control, also fed by the summed signal, allows you to compensate for phase differences that arise from sub /mains-to-listener placement. The result is system-wide low frequency response that is accurate, defined, and completely in your control.

◆ This flexibility, along with low frequency reproduction that is simply unrivaled for clarity, definition, and pure, thundering power, makes the S250 the perfect complement to today’s direct field monitoring systems—including the 20/20bas, 20/20, and Project Studio models.
FOSTEX

PM-1

Powered Studio Monitors

Listening correctly doesn't have to be expensive. With 120 watts of biamped power, a bass response that's full and dynamic, and a high end that sizzles, the PM-1 not only delivers astonishing sound— it does so at an even more astonishing price. Consisting of a 6.5” LF driver and a 1” soft dome tweeter, the PM-1 offers an impressive 50Hz to 20kHz frequency response and a biamped output power of 75w+45w @ 8 ohms. The amplifiers are precisely calibrated to match the performance of the drivers.

High Frequency Driver

The voice coil is made of super high purity copper wire to achieve very low distortion. The 1-inch soft dome tweeter employs Fostex’s UFLC technology (polyurethane film laminated cloth) to achieve lightweight and high stability performance.

Low Frequency Driver

The 6.5” LF driver has been developed to output extremely pure music reproduction by employing the latest technology in cone material. The LF cone uses a mixture of cut and milled fibers that are made from aromatic polyamide. It is then impregnated with resins to simultaneously achieve high rigidity and optimum damping. The cone has an olefin film thermally adhered to its surface to control frequency response and to establish long term reliability. The center cap is made of non-wood cellulose material and is also impregnated with resin.

PS-3.1 Powered Monitor System

The PS-3.1 offers a complete 2-way monitoring solution, combining one 5 ⅛” bass reflex subwoofer and a pair of matching shielded satellite speakers with 3” full-range drivers in a compact, affordable package. The subwoofer contains its own 15-watt power amplifier, a crossover network, and two 5-watt power amplifiers for powering the satellite speakers—making the PS-3.1 a self-contained system that fits nearly any studio application without the need for external amplification. System response is 80Hz-20kHz.

- Satellite dimensions are 7¾ x 6½ x 4¾” (HWD) and weigh 3.7 lbs each.
- Subwoofer is 10 x 11¼ x 8¾” (HWD) and weighs 14 lbs.

PM-1 SPEAKER SPECIFICATIONS

| CABINET DIMENSIONS | 8.5 x 15 x 11.25” (WxHxD) - includes heat sink |
| WEIGHT             | 22.9 lbs.                                  |

POWER REQUIREMENTS

120v AC , 60Hz

POWER CONSUMPTION

100 watts
1 RU Stereo Monitor

The ideal solution for monitoring in tight industrial environments, the RM-1 is the perfect speaker for machine rooms, VCR monitoring, surveillance, mobile and stationary control rooms, theme park applications or any other situation where monitoring is required and space is tight. The unit is a 1 rack space high industrial design, utilizing robust construction for around the clock operation. The aluminum front panel has a multitude of user options so that the audio output may be configured for the application at hand.

- A/B input select switch selects the A or B stereo group to output to the drivers or headphone jack.
- Rear panel, stereo left and right inputs let you monitor two different stereo sources from one unit.
- Dual Concentric Volume control can be used to adjust the left or right inputs independently. Front portion of the control adjusts the left channel; the rear portion of the control adjusts the right channel input volume.
- Two stereo balanced +4 dB inputs with four XLR and 1/4” Neutrik combo connectors
- Front panel stereo Gain control
- On-board electronic matrix switching for: L Channel only, R Channel only, Mono, Stereo and Mute
- High intensity multi-colored LEDs for mode tallies
- Front panel headphone jack with gain control; mutes speakers when used with phones
- Signal presence indicators change with intensity of audio input
- Multi-line-power conversion with on-board input transformer
- Two 15-watt in 8 ohms amplifiers
- Fully shielded to prevent interference from video monitors

6301 BEAV

A small, portable, versatile monitor that delivers impressive sound, the 6301 BEAV can be used in pairs or alone. Ideal for use with instruments in project studios, on stage, in remote recording vehicles, video productions and multimedia presentations. The 6301 BEAV accepts any line level input and has a built-in 10-watt amplifier (8 ohm load) that is perfectly matched to a magnetically-shielded 10cm full range driver to deliver big sound, full of clarity from such a small monitor. Manufactured from cast aluminum, these little monitors have earned a reputation for being rugged and road worthy.

- XLR and 1/4” inputs
- Rotary level control
- EXT SP terminal
- Automated protection circuit
- Optional 9610 Bracket (vertical/horizontal)

SPA-11

The powered SPA-11s offer superb sound in compact, portable cabinets. Each incorporates a 100-watt internal amplifier with two 10cm full-range speakers, mic and line inputs as well as a level control, and they can be daisy-chained and stacked for multiple speaker coverage. A number of mounting and stacking accessories are available to facilitate installation - both temporary and permanent. Constructed of resin-impregnated plastic for durability and superior acoustics.

- EXT SP terminal
- Automated protection circuit
- Optional 9610 Bracket (vertical/horizontal)

Optional Mounting Accessories for SPA-11

GENELEC

1029APM

Compact 2-Way Active Nearfield Monitor

With performance comparable to much larger systems, the 1029A's excellent dispersion and precise imaging, together with its compact size, make it ideal for near field monitoring, mobile vans, home studios, multimedia and home theaters. The amp unit includes an active electronic crossover, over-load protection circuitry and two power amplifiers, one for each driver. The 1029A has a LF extension (-3dB at 68Hz) sufficient for most monitoring applications. (If a lower cutoff frequency is required, it can be complemented with the 7050A subwoofer). Genelec's unique Directivity Control Waveguide (DCW) technology provides excellent stereo imaging and frequency balance, even in difficult acoustic environments. Versatile tone controls allow further matching of the system to its surroundings. A pair of 1029A's can produce peak acoustic levels of over 110 dB SPL at 1m. The speakers can be used vertically or horizontally, and are easy to set up and use. The 1029A's integrated design allows the amplifiers and the drivers to be calibrated as a single unit ensuring consistent quality. The rugged cast aluminum cabinet has rounded corners and a hard painted outer surface. Available in black, gray, or white cabinets. (The protective grilles and volume and power knobs are black regardless of cabinet color).

FEATURES

Crossover Filters

Although more commonly used in large and expensive control room monitors, an active crossover is the ideal method for dividing the input signal between the driver units. To maintain uniform frequency balance in differing acoustic environments, special calibrated controls are included in the active crossover network. These controls include treble 'tilt', bass 'tilt' and bass 'roll-off' switches.

Amplifiers

The bass and treble amplifiers produce 40 watts of output power each, with very low THD and IM distortion values. The amps are designed to ensure the highest subjective sound quality possible. The amplifier unit also contains a protection circuit that monitors the output levels and prevents any damage to the drivers. This makes the system immune to overloads and spurious signals.

Drivers

- A 3/4” metal dome tweeter is loaded by a DCW, and is used to reproduce the high frequencies. The DCW is integrated into the one piece cabinet front baffle.
- The 5” woofer is a bass cone driver mounted in a 4.5 litre vented cabinet. The -3 dB frequency is 68 Hz and the LF response extends down to 65 Hz (-6dB).
- Protective grills are placed in front of both drivers, and both are magnetically shielded, allowing use near video monitors.

Mounting Options

- On the base of the monitor is a 3/8” UNC threaded hole which can accommodate a standard microphone stand.
- There is a provision for an Omni-mount size 50 bracket, for which two M6x10mm screws are required.
- Alternatively the speaker can be hung on M4 screws with suitable heads by one of the three keyhole slots on the backpanel.
- The speaker can be hung in a horizontal or vertical position. Friction pads are provided for placement on a shelf or a stand.
6½” Bi-amplified Active Monitor

The Genelec 1030A is a very compact bi-amplified active monitor system, which has performance comparable to much larger systems. The vented speaker enclosure has an amplifier unit set into the back. This unit contains an active electronic crossover, over-load protection circuitry and two power amplifiers: one for each driver. The system’s excellent dispersion and precise imaging together with its compact size make it ideal for near field monitoring, broadcast and TV control rooms, mobile vans, home studios and travelling engineers. Genelec’s unique Directivity Control Waveguide (DCW) technology is used to provide excellent stereo imaging and frequency balance, even in difficult acoustic environments and the versatile crossover controls allow further matching of the system to its surroundings. A pair of 1030As can produce peak acoustic levels of over 115 dB SPL at 1m. The speakers may be used in vertical or horizontal orientation.

DCW (Directivity Control Waveguide) Technology

Incorporated in the 1029A and 1030 monitors, Directivity Control Waveguide (DCW) technology is a means of improving the performance of a direct radiating multi-way loudspeaker under normal listening conditions. One of the basic aims is to match the performance of the drivers in terms of both frequency response and directivity. This results in a smoother overall frequency response on and off axis. In addition, the improved directivity control causes more direct sound and less reflected sound to be received at the listening position. This provides improved stereo imaging and ensures that the system is less sensitive to differing control room acoustics than conventional direct radiator design.

DCW Technology improves the drive unit sensitivity by +2 to +6 dB (depending on the particular application), thus also increasing the available system maximum sound pressure level.

Accessories:
- Vertical Wall Mount Kit: $259.95
- Vertical Floor Stand Kit: $364.95
- Green Carry Bag for 1030 pair: $169.95
- Green Carry Bag for 1029 or 2029 pair: $84.95

**GENELEC**

**2029A/ 2029B**

**Digital Monitoring Speakers**

The 2029A and 2029B are near field monitors that combine digital audio and analog audio inputs in a single speaker system. They are ideal for working with a digital audio workstation or if you are processing audio in a modern studio where your signal is digital. The 2029A/B support all the same modes of operation as the analog 1029A. You can use them with a subwoofer. You can use them in surround audio systems. Due to their compact size, integrated construction, excellent dispersion and precise stereo imaging, they are ideal for near field monitoring, mobile vans, digital audio workstations, broadcast and TV control rooms, surround sound systems, home studios, multimedia applications and also for use with computer sound-cards. They also incorporate Genelec’s Directivity Control Waveguide (DCW) technology for excellent frequency balance even in difficult acoustic environments.

---

**FEATURES**

**Digital Interface**
- The 2029A is precision-aligned and balanced—from the single stereo 24-bit S/PDIF digital input—to the highly efficient 110dB/SPL matched drivers. The 2029A is 48kHz compatible. The 2029B offers the same precision alignment with an AES/EBU digital interface on a digital XLR-type input. The 2029B is 9kHz compatible. Both monitors incorporate extremely linear, integrated D-to-A converter circuitry to offer a precision-matched electrical interface to the active electronics and amplifiers.

**Drivers**
- The bass frequencies are reproduced by a 130 mm (5") bass driver mounted in a 4.5 litre vented cabinet. The -3 dB point lies at 68 Hz and the frequency response extends down to 65 Hz (-6 dB).
- The high frequency driver is a 3/4" metal dome. Uniform dispersion control is achieved with the revolutionary DCW Technology pioneered by Genelec.
- Magnetic shielding is standard on the 2029A/2029B. Shielding is vital for applications such as video post production, where stray magnetic fields must be minimized.

**Integrated Construction**
- As the digital interface and amplifiers are built into the speaker enclosure, the only connections required are the mains supply and the digital input signal, making them very easy to set up and use.

**Crossover**
- Their active crossover network is acoustically complementary and the slopes are 24 - 32 dB/octave. The crossover frequency is 3.3 kHz. The room response controls (‘treble tilt’, ‘bass tilt’ and ‘bass roll-off’) allow exact match to any installation.

**Amplifiers**
- The amplifier unit is built inside the speaker enclosure. The bass and treble amplifiers both produce 40 W of output power. The fast, low distortion amplifiers are capable of driving a stereo pair to peak output sound pressure levels in excess of 110 dB at 1 m. The unit incorporates special circuitry for driver overload protection.

**Tone Controls**
- The response of the system usually has to be adjusted to match the acoustic environment. The adjustment is done by setting the tone control switches on the rear panel. The tone control has four switches and can adjust ‘treble tilt’, ‘bass tilt’ and ‘bass roll-off’. The factory settings for these are ‘ALL OFF’ to give a flat anechoic response.

---

**Digital Audio**
- The quality of a digital audio signal is defined by two parameters: word length and sampling rate. The word length defines how precisely the audio signal is represented. Longer word length leads to smaller noise and distortion level. The typical word length in CD records is 16-bits. Studio recording systems use word lengths of 20-bits and above. The sampling rate determines what frequencies can be represented in the digital audio signal. A higher sampling rate allows higher frequencies to be recorded.

- Turning the digital presentation to an analog signal using a DA converter involves significant sources of error. Your digital-to-analog converter may have inferior performance. It may be misaligned with your amplifiers. The interface between the converter and the amplifier may distort the signal or it may change the frequency balance. Your monitoring volume level may need to be adjusted in the digital domain instead of analog. Genelec 2029A Digital allows you to solve all of these problems. The alignment of the whole system from the digital input connector is carefully balanced, to make sure that you hear the whole digital truth, and nothing but the truth. All you have to do is to supply the digital signal, and adjust for the volume you desire.
### Analog and Digital Cabling

Special interconnect cable connects between the XLR connectors of the two 2029A Digital monitors. The IEC958 interface cable from your digital audio source connects to one of the 2029A Digital units. In the digital audio reproduction mode the output level for both speakers pair is controlled with the right unit. The balance is automatically calibrated correctly with the proposed output level setting on the left unit. The balance is automatically calibrated correctly with the proposed output level setting on the left unit.

#### Mounting Options

There are several possibilities for mounting the 2029A/2029B. On the base of the monitor is a 3/8" UNC threaded hole which can accommodate a standard microphone stand. There is a provision for an Omnimount size bracket, for which two M6x10mm screws are required. Alternatively the speakers can be hung on M4 screws with suitable heads by one of the three keyhole slots on the back-panel. They can be hung in a horizontal or vertical position. Friction pads are provided for placement on a shelf or a stand.

---

### 7050A 8” Active Dual-Input Subwoofer

The 7050A is a very compact subwoofer incorporating all the amplifier and crossover electronics needed to combine it with a Genelec 1029 or 2029 series speaker. Adding the 7050A to a 1029/2929 system creates a compact nearfield monitoring system capable of a flat frequency response from 38 Hz to 20 kHz (± 2.5 dB).

- Summed, balanced inputs on two XLR connectors
- Sensitivity can be attenuated by from 0dB to -18 dB for easy level matching with the main speakers for varying positions.
- Produces 70 W of output power, with very low THD and IM distortion.
- 8” magnetically shielded long throw cone driver is capable of producing SPLs up to 105 dB in half space.

To make the system immune to overloads and spurious signals, the circuitry includes driver overload protection and power-on signal muting. Also incorporates thermal overload and short circuit protection.

Like the larger 7000 series subwoofers, the 7050A features Genelec’s Laminar Spiral Enclosure (LSE) cabinet construction resulting in a robust and reliable system. The handsome cast-aluminum grille protects the magnetically shielded 8” driver.

---

### 7060A/ 7070A 10” and 12” Active Multi-Channel Subwoofers

The 7060A and 7070A are powerful and precise bass monitoring tools for today's 5.1 or 6.1-channel surround sound or traditional stereo systems. With their 19Hz (7070A) or 29Hz (7060A) lower cutoff frequency, high sound pressure output capability and versatile bass management systems, they can be adapted to all low frequency monitoring situations.

- The built-in bass management unit has six signal input and output channels (L/C/R Front and L/C/R Rear), LFE input and summed signal output connectors, providing great flexibility and easy connection.
- The discrete LFE signal input is equipped with a selectable 85/120 Hz low-pass filter and a 0/+10 dB LFE sensitivity switch.
- Adjustable sensitivity, bass roll-off and phase matching controls let you tailor the response of the subs to the environment.
- Laminar Spiral Enclosure (LSE) cabinet construction ensures reliability
- Integrated 85 Hz test tone generator for accurate crossover phase alignment.

You have one goal when choosing a reference monitor. Music. Accurate music. Nothing else matters. Hafler has the same goal. They don’t design for price points. They design for application and performance. However, Hafler did challenge their best engineers to design the finest sounding active near-field monitor available at an affordable price. The result was the TRM 6.1 Trans•ana and TRM 8.1 Trans•nova Reference Monitors – heralded by some as the finest powered monitors available.

Every component is designed and matched to deliver the most accurate music possible. They provide honest, consistent sound from top to bottom with sonic clarity usually found in much more expensive speakers. They feature built-in amplification, active crossovers, and Hafler’s patented power amp circuitry – known for its accurate soundfield, in width, height and depth.

They Both Feature

- Patented Trans•ana (TRM-6) or Trans•nova (TRM-8) output stage configured for “power gain” allows simpler front end circuitry, dramatically lower cross talk and noise
- 1” softdome ferro-fluid controlled tweeter for more open, natural sounding high frequencies.
- MOSFET outputs deliver higher output current, rugged reliability, superb sound quality
- Symmetrical 4th order Linkwitz/Riley crossover
- +/-4dB Bass and Treble shelving adjustment to match the environment
- Shielded woofer allows use near computer monitors
- Wide dynamic range at all levels (no compression)
- 3-Year Warranty

TRM8

- DIAMOND driver stage provides up to 14dB additional dynamic range in amplifier front end.
- Balanced XLR or 1/4", unbalanced RCA inputs
- Pre-drilled for Omni Mount

THE REFERENCE

Hafler designs monitors for application and performance. Every component of their TRM Series monitors is designed and matched to deliver the most accurate music possible.

To Hafler’s engineers, nothing else matters.
**Downfiring Trans•ana Class-G Active 10- and 12˝ Subwoofers**

A perfect match for the TRM 6.1, the TRM 10.1 Subwoofer delivers a lot of punch from a small package, and offers unusual flexibility and adjustability at a great value. Extends your system’s frequency range to well below 30Hz. However, when your program material demands ultra-low distortion energy at rock bottom low frequencies the TRM 12.1 is a powerhouse, delivering true full range monitoring.

- Patented Trans•ana output stage configured for “power gain”. Allows simple front end circuitry, dramatically lower cross talk and noise.
- Adjustable symmetrical 4th order Linkwitz-Riley crossover from 40 to 110Hz
- CLASS G: Provides higher efficiency amplification at all listening levels
- Balanced XLR, unbalanced RCA inputs
- Adjustable input level sensitivity
- 3-year warranty

CIRCLE 3/ CIRCLE 3 ACTIVE

Passive and Active 4½” Nearfield Monitors

The Circle 3 (passive version) and Circle 3 Active (powered version) are compact monitor speakers designed for nearfield use, or in critical monitoring applications where space is limited. The Circle 3 uses a highly linear, custom-designed 4.5˝ bass driver, built on an acoustically dead chassis to eliminate undesirable resonant effects. High frequencies are reproduced by a ferro-fluid cooled soft dome tweeter. And despite standing just over 10˝ high, the Circle 3 delivers a robust, full range sound with a surprisingly extended low end response.

The Circle 3 Active adds a bi-amp module delivering 60w of power to the bass driver and 30w to the tweeter. And unlike most compact active monitor designs, the Circle 3 Active’s LF amplifier is not limited, as this unbalances the sound at high listening levels. Rather, the bass drivers are engineered to handle the full amp output. And controlled order crossover management makes the Circle 3’s particularly easy to listen to, even on long sessions. Magnetic shielding on both versions, makes them ideal for use in any application where close proximity to a CRT monitor is required.

Circle 1
12˝ Subwoofer

Much more than just a subwoofer, the Circle 1 is a complete speaker management system, forming the heart of a high performance, professional surround sound monitoring system. In addition to a 12˝ low moving mass bass driver and 160-watt amp module, the Circle 1 also features 5 channel active filtering with a mode switch making it easy to configure the system for a variety of stereo and surround monitoring applications.

◆ Low frequency boost control is provided to increase the level of the bass component in low level monitoring applications
◆ Phase control can be used to achieve optimum sub bass performance in differing room acoustics.
◆ XLR connectors on all inputs and outputs
◆ Design of the cabinet porting assists in producing a frequency response that extends down to 33Hz.
◆ Mode switch for different surround decoders and stereo setups

Connection to the Circle 1 is via six balanced XLR inputs and five XLR outputs. Although the Circle 1 is designed primarily for use in a surround sound system, there are many people who would like to increase the bass frequencies or overall level available from their speakers. So when two or more speakers are connected to the input channels, the Circle 1 sums the signals from the front left and right speakers and filters out their bass frequencies for reproduction from the sub-woofer, leaving the satellite channels to reproduce the mid and high-frequencies.

A switch on the back of the Circle 1 sets it for 5.1 surround sound operation where, instead of reproducing the filtered frequencies from the satellite speakers it is driven from a dedicated sub input. Additional rotary controls are provided for input sensitivity, LF Boost and Phase. With its outputs connected to five active Circle 5’s, the result is a powerful, detailed and truly universal 5.1 monitoring system.
Passive and Active 8” Midfield Monitors

Accurate and revealing monitors ideal for use in midfield stereo or surround sound monitoring applications, both the passive (Circle 5) and powered (Circle 5 Active) share a custom-designed 8” bass driver that is injection-molded from a specially formulated plastic compound. The rolled sheets used by other manufacturers retain a grain pattern in the molded cone, introducing unwanted compressions both with and across the grain and ultimately degrading performance. The random grain pattern in the HHB cone suffers none of these problems and resonances are minimized yet further by varying the thickness of the cone across its surface.

Like the Circle 3, the Circle 5 uses controlled order crossover management to achieve an accurate sound that never tires the listener. And like the Circle 3 Active, there is no amp limiting so the full bass component of sound is present at all volume levels.

**Circle 3**
- Custom 4.5” (110mm) bass driver with acoustically dead chassis reduces any unwanted resonant effects, producing a perfectly damped impulse response. This results in both the active and passive speakers being incredibly easy to listen to, even over long periods of time.
- Ferro-fluid cooled soft dome tweeter
- Active biamp module: Bass (60 watts), Tweeter (30 watts)
- Circle 3 uses binding posts for connections, the Circle 3 Active uses XLR and RCA connectors
- No limiting on LF amplifier so the full bass component of sound is present at all volume levels—sound is always balanced
- Controlled order crossover management controls the rate at which the LF ramps down and the HF ramps up at the crossover point, resulting in an accurate, untiring sound — even on long sessions.
- Magnetically screened for use near video and computer monitors

**Circle 5**
- Custom 8” (200mm) bass driver with injection molded cone
- Ferro-fluid cooled soft dome tweeter with Polyswitch protection. Rather than attenuating HF power and unbalancing the sound in the event of overload, Polyswitch cuts the power completely until the tweeter has cooled, illuminating a warning LED in the process.
- Active biamp module: Bass (140 watts), Tweeter (70 watts)
- Circle 5 uses binding posts for connections, the Circle 5 Active uses XLR and RCA connectors
- No limiting on LF amplifier so the full bass component of sound is present at all volume levels—sound is always balanced
- Controlled order crossover management controls the rate at which the LF ramps down and the HF ramps up at the crossover point, resulting in an accurate, untiring sound — even on long sessions.
- Anti-magnet cancels magnetic fields that can distort video monitors
JBL
CONTROL SERIES

The Control Series combine high performance and smooth, powerful, wide range response with a compact design and rugged construction for unprecedented versatility. Also one of the easiest systems to install, the Control Series are perfect for applications where tight corners and tough angles are all too common. A wide variety of available mounting systems allows positioning for optimum performance.

STUDIO MONITORS

Control 1
The Control 1 is a 150-watt, two-way miniature monitor with well balanced sound and exceptional power handling. Ideal for any installation requiring professional control monitor performance from a compact source including recording studios, mobile audio video control rooms and broadcast studios. It is also highly suitable for foreground and background music use in restaurants, discos, and A/V applications.

- Incorporating a 5½” low frequency loudspeaker, 3/4˝ high frequency radiator and high performance dividing network, the Control 1 provides full-range, low distortion reproduction in a variety of applications
- High and low-frequency transducers are magnetically shielded, allowing use near video monitors
- Mounting versatility is enhanced by a complete line of installation accessories

Control 5
The Control 5 is a high-performance 175 watt, two-way wide range control monitor suitable for use as the primary sound source in a variety of applications. Smooth, extended frequency response combines with wide dynamic capabilities to provide acoustic performance that makes the Control 5 ideal for recording studios, audio-video control rooms, remote trucks and broadcast studios. Clean, functional visual design also makes ideal for foreground music systems, moderate level sound reinforcement, discos and music playback systems.

- 6½” low frequency driver provides solid, powerful bass response to 50 Hz
- High frequency response to 20 kHz is handled by a pure titanium 1” dome
- HF (high frequency) and LF (low-frequency transducers are magnetically shielded, permitting use in close proximity to video monitors
- The dividing network incorporates protection circuitry to prevent system damage and utilizes high quality components including bypass capacitors for outstanding transient accuracy

EQUIPMENT LEASING AVAILABLE
4200 SERIES

The standard for over a decade, the 4206 (6.5”) and 4208 (8”) are console-top monitors designed specifically for near field use in multi-purpose studio environments. Starting with the unique Multi-Radial sculptured baffle, the monitors direct the axial output of the individual components for optimum summing at the most common listening distance (approx. 3 to 5’). To deliver maximum stereo imaging while reducing the potential for listener fatigue, the pure titanium dome tweeter and cone transducer are aligned to deliver both high and low-frequency information to the listening position at precisely the same instant. They monitors also deliver smooth, extended bass output with little distortion and power compression. The 4206 and 4208 are rated at 8 \( \Omega \) and are magnetically shielded.

- Multi-Radial baffle positions the drivers to achieve alignment of their acoustic centers so that low, mid and high frequency information reach the ears at the same point in time—resulting in superb imaging and greatly reduced phase distortion.
- 1” titanium HF transducers deliver smooth, extended response. The tweeter features a uniquely shaped “lens” which acts as a mechanical filter to balance energy output to within ±2 dB to 20 kHz.
- The long linear excursion design of the low frequency transducers results in smooth extended bass output with less distortion and power compression.
- Smooth transition from low to high frequency components is achieved through carefully engineered high complexity crossover networks. Tight tolerances are maintained to achieve seamless summing and minimal distortion.

4400 SERIES

For years recording, broadcast, movie and TV studios worldwide have depended on the 4400 Series as their critical listening source. Countless music recordings and movie soundtracks were created with 4400 Series monitors, while broadcast studios rely on them to deliver faithful sound reproduction, typically 24 hours a day, seven days a week. Available in two-way and three-way systems, they all utilize JBL transducer technology with SFG magnet structures, large diameter voice coils and titanium dome tweeter.

Low frequency drivers employ Symmetrical Field Geometry (SFG) magnet structures to minimize harmonic distortion, resulting in maximum definition of bass and low midrange information. Large voice coils provide excellent transient response characteristics and outstanding power handling. Titanium dome tweeter further minimizes distortion levels, delivering even smoother, clearer high frequency information. And the tweeters are oriented to the create “Left” and “Right” models, achieving mirror-imaged pairs for excellent imaging. With a tight crossover network design, the 4400 Series provides absolutely smooth transitions between transducers for perfect imaging and unparalleled power response.

- 4408A 2-way 8˝ Studio Monitor
  Two-way compact monitor system ideal for smaller recording studios or for broadcast studio monitor control rooms.
- 4410A 3-way 10˝ Studio Monitor
  A three-way monitor loudspeaker system designed as a vertical line array. This system delivers incredibly fine transient response characteristics and spatial detail.
- 4412A 3-way 12˝ Studio Monitor
  For applications requiring maximum low frequency output from a bookshelf-sized monitor, this 3-way system tightly clusters its transducer complement for accurate close proximity listening.
THX-Approved Studio Monitors

The Linear Spatial Reference (LSR) philosophy is based on a set of design goals that carefully control the overall performance of the system in a variety of acoustic spaces. Instead of focusing on a simple measure such as on-axis frequency response, LSR designs require much better control over dispersion via transducer design and crossover frequency selection. Critical decisions of image placement, EQ, balance and timbre are typically made within ±15° vertically and ±30° horizontally. This workspace is where the engineer, producer and artist make critical mixing decisions. By incorporating LSR into the system design requirements, placement rules are relaxed, a more stable stereo image is maintained and off axis coloration is minimized.

**LSR25P Compact Bi-Amplified Monitor**

The LSR25P is sized to provide an extremely accurate reference for workstations, edit suites and small control rooms.
- Combines 100 watts of low frequency power and 50 watts for the high frequency with an active crossover system
- 5.25” woofer incorporates Symmetrical Field Geometry (SFG) with integral shorting ring for maximum linearity.
- Unique Workstation Boundary Compensation control adjusts the bass and mid-bass output for optimum performance. Precisely maintains correct spatial response when used next to video monitors in typical workstation environments.
- User adjustments include level calibration and fine tuning of levels with a variable level control. XLR and RCA inputs accommodate balanced and unbalanced signals.
- Frequency response can be tailored to compensate for placement and room absorption characteristics. Select between two high frequency response contours. An 80Hz low frequency filter can be added for use with subwoofers that have their own low pass filtering.
- Integrated mounting points for horizontal or vertical suspension. Shielded for use near video monitors.
- The high frequency transducer of all three monitors is 1” composite diaphragm integrated with an Elliptical Oblate Spheroidal (EOS) Waveguide with 60 x 100° dispersion which is critical to the smooth spatial response required in today's working environments.

**LSR Measurement Techniques**

LSR is the underlying design philosophy that explains why speakers that measure the same, sound different. By going beyond simple on-axis frequency measurement, LSR techniques define the ultimate performance specifications of JBL’s monitoring technology—what it will sound like in your room. They go beyond the performance of an on-axis frequency response at one point in space, which other manufacturers use.

LSR uses a technique of measuring a monitor over a sphere that encompasses all energy radiated into the listening room in every direction. This data reflects 1296 times the information of a single on-axis frequency response curve. Using psychoacoustic principles allows the calculation and optimization of the entire sound field heard by the listener - this includes the direct sound field, the reflected sound field and the reverberant sound field. In place of spectral smoothing, which actually conceals data, LSR techniques expose flaws in systems such as resonances, poor dispersion and other off-axis colorations.

**LSR28P Bi-Amplified Monitor**

- Combines 250 watts of low frequency power and 120 watts for the high frequency with an active crossover system
- 8” woofer is based on JBL's patented Differential Drive technology. With dual drive coils, power compression is kept to a minimum to reduce the fatigue of spectral shift as power levels increase. An added third coil between the drive coils acts as a dynamic brake to limit excess excursion and reduce audible distortion at the highest levels.
- Adjustments include level calibration and fine tuning of levels with a variable level control. XLR and RCA inputs accommodate balanced and unbalanced signals. The frequency response of bass and treble amplitudes can also be adjusted to compensate for placement and room absorption characteristics.

**LSR32 3-Way Studio Monitor**

- 12” woofer based on JBL’s patented Differential Drive technology
- The midrange is a 2” neodymium magnet structure with a woven 5” Kevlar cone. The crossover points are located at 250 Hz and 2.2 kHz to match the directivity characteristics of the three transducers.
LSR12P Powered Subwoofer

The LSR12P is the ideal companion to the LSR25P, LSR28P and LSR32. It is multi-channel compatible for AC-3, DTS and other surround sound formats. It features a 12” Neodymium woofer based on JBL’s patented Differential Drive technology. The cone is made of carbon fiber composite for low cabinet resonance and stable inertial ground. The integrated 250-watt power amp provides correct drive levels for optimized frequency response. Bass management for multiple formats is provided with separate left, center and right crossover functions as well as a discrete input.

- Subwoofer signals are fed by the Left, Center, Right and Discrete inputs. This unique arrangement provides excellent bass management for a wide variety of formats. The subwoofer signals can be derived from the front channels or from the discrete input with a simple remote switch contact. Alternatively, the subwoofer can be muted with full range signals routed to the front channels for comparison with or without subwoofer support. Calibrated input levels for -10 dBV and +4 dBu inputs are included.
- In addition, an input attenuator can be inserted into the circuit for continuously variable level control to fine tune subwoofer level matching. Subwoofer low pass filtering uses steep 5th order low pass filtering to minimize the possibility of localization of the subwoofer acoustic output. High pass filtering for the Left, Center and Right outputs are at 12 dB/Octave.

- There are six dip switches that allow you to optimize the LSR12P’s performance. The first three switch settings adjust the calibration level of the Left, Center and Right inputs. Switch four inverts the signal polarity of the subwoofer feed. This is used to correct for placement mismatch between the subwoofer and satellite spacing. Switches five and six adjust the low frequency spectrum to compensate for boundary effects when a subwoofer is placed against walls or corners.

- A 1/4” jack is included on the back panel which allows remote control bypass of the subwoofer and selection of the discrete input. Shorting the Tip and Sleeve of the jack will remove the high pass filtering from the Left, Center and Right outputs and sources the subwoofer feed from the discrete input.

Bi-Amplified Reference Monitors

The V-Series are bi-amplified near-field reference monitors capable of satisfying the most critical listening requirements. Separate built-in power amplifiers for the woofer and tweeter and a true electronic crossover that tailors the power and frequency response specifically for each transducer, combine to deliver the dynamic range and performance required for everything from digital production to 5.1 surround sound. KRK’s goal for the V-Series was to create monitors capable of accurately reproducing sound with unsurpassed clarity and accuracy. Other monitors tend to modify, extend, or “tilt” their response above 1 kHz to sound more “spatial, exciting and impressive”. What is often overlooked is this practice tends to make you incorrectly balance your mixes to compensate for this effect, leading to poor “translation”. The V-Series was designed to reproduce the signal with a minimal of frequency enhancement. Rather than attempting to defy physics, they deliver unaltered high frequencies and respectable low frequency response with exceptional accuracy from their woofer in a reasonably small cabinet.

Ability to Translate -
A mix made on a V-Series monitor will translate to other environments and other monitors with no surprises—saving you time and eliminating extra work. They monitors will perform flawlessly for years in professional and non-professional environments alike.

Balanced Power -
KRK’s amplifier construction is proven, durable and straightforward. Output wattage is balanced to optimize LF and HF driver performance. V-Series monitors use a toroidal power transformer for the lowest possible hum and minimum noise artifacts.

Flexibility -
They contain an active input circuit specifically designed for balanced or unbalanced input signals. They accept XLR and 1/4” phone or TRS connectors.

Active Filter Crossovers -
Each monitor cabinet contains three active filters (subsonic, low-pass and high-pass filter). These three filters work together to deliver superior linear frequency response. Active filter crossovers generate less heat resulting in no signal drift or component variations to provide a more stable image.

No Compression -
V-Series monitors contain no signal compression which artificially limits the dynamic range of the program source. Although some monitors use signal compression to make them sound louder, fuller, and to control unwanted characteristics of the raw drivers, the result is a compromised mix. V-Series design is uncomplicated without extras between you and your mix.

Furniture-Grade Construction -
The cabinetry of a V-Series monitor is constructed from 3/4 to 1” medium density fiberboard (MDF). They are specifically designed to minimize unwanted cabinet resonance. All edges and port openings are heavily radiused to reduce edge diffractions and port flutter. Finish is a neutral fingerprint proof gray Zolatone.

Custom Made Drivers -
All except the V6 (uses a specially designed polyvinyl LF driver) use a woven Kevlar LF driver custom-designed for their individual cabinet volume with one goal in mind—minimal compromises, no surprises. Kevlar is one of the strongest, lightest, most rigid materials that can be used in modern speaker cone construction.

---

Surround yourself in quality Hi-Fi sound at an easily affordable price. Get a 5.1 linear system, which includes five V4 monitors and one S8 subwoofer, in one complete package. The V4 has separate amplifiers for both the tweeter (15w) and the woofer (30w), which makes the sound extremely clean and virtually eliminates any distortion. The S8 subwoofer is powered with 100 watts, and includes an 8” Kevlar woofer, variable low-pass filter, phase correction switch and variable input sensitivity.

The V4 Orbital Pack is living proof that good things come in small packages!
V4
There's big sound coming out of the V4 mini monitor. In KRK fashion, the V4 has separate amplifiers for both woofer and tweeter, which make it extremely clean and virtually eliminating any distortion. Video shielding is standard, making it an optimum choice for small audio workstations. A Neutrik Combo connector gives it ultimate flexibility for both balanced and unbalanced signals, it also gives you the option of using 3 different connectors (XLR, 1/4” TRS, or 1/4” Instrument). Paired with the S8 subwoofer, it just goes to show that good things do come in small packages!

V6
The exciting V6 offers the best sound per dollar in a small, active near field monitor. Featuring separate amplifiers for the woofer and tweeter, an active crossover, and video shielding as standard, the V6 is the perfect cost-effective active monitor solution for digital audio workstations. Using the Neutrik Combo connector, the V6 can handle both XLR and .25” phone plug inputs. Teamed up with the new S10 powered subwoofer, five V6's make a great 5.1 surround sound mixdown system.

V8
For the professional who needs an active near field monitor able to satisfy the most critical listening requirements, yet be portable enough to take on location, the new V8 studio reference monitor is the answer. The V8 uses a separate power amplifier for the woofer and tweeter with an electronic crossover so that the power and frequency response is tailored to each transducer. The V8's Kevlar woofer is extremely fast and does not have audio band resonances that color the sound. Using the Neutrik Combo connector, the V8 can handle both XLR and .25” phone plug inputs, and video shielding is standard.

V88
Want more bass? More SPL? The V88 has two 8” woofers that will definitely shake up your studio. The V88 is actually bi-amped, with a 160 watt amplifier for the low frequencies and an additional 60 watt amplifier for the tweeter. There is no other monitor with this much output in this form factor. And of course it is magnetically shielded.
KRK

CLOSE-FIELD PASSIVE MONITORS

RoKit II

The same cutting-edge technology and smooth, musical sound as the K•RoK II in a compact package. KRK's most affordable monitor, the RoKit II brings KRK sound quality to desktop workstations, offline editing suites, or any environment and budget where great audio isn't just a luxury, but an absolute necessity. The RoKit II monitor features 7/8” MDF (medium-density fiberboard) construction to control sound reflection and standing waves within the monitor. Double-layer anodized aluminum cone offer extremely low distortion. Carefully molded woofer beauty rings improve midrange frequencies, while advanced dual-port tube designs create improved air flow for rich, solid bass response. Standard magnetic shielding makes placement easy in any studio environment.

K•RoK II

The next generation of K•RoK monitors take passive near-field to a higher level. The attractive new-look cabinet offers an 8” aluminum tweeter and 1” silk dome tweeter that offers exceptional, accurate, smooth response and higher power handling without ear fatigue. The K•RoK II monitor features 7/8” medium-density fiberboard construction to control sound reflection and standing waves within the monitor. Double-layer anodized aluminum cone offer extremely low distortion. Carefully molded woofer beauty rings improve midrange frequencies, while advanced dual-port tube designs create improved air flow for rich, solid bass response. Standard magnetic shielding makes placement easy in any studio environment.

6000

The 6000 is a high quality compact monitor prescribed for all close-field applications. Weighing only 18 lbs. each (shielded versions are 4 lbs. more), the portable 6000 combines extremely smooth frequency response with very low distortion. Modestly priced, it derives its sonic attributes from the 7000B and shares the same special design inverted dome 1” Kevlar tweeter. The 6000 is also available fully shielded for video applications (6000/S.).

7000B

The 7000B close-field monitor is the industry standard for top-of-console placement. It offers improved frequency response and lower distortion, a Kevlar woofer and tweeter, and features KRK's phase alignment design. Also very portable at 25 lbs. each), and compact enough (14.25 x 11 x 11”) to fit neatly into facilities with limited space. With a larger 7” woofer and larger cabinet, the bass response of the 7000B extends lower than the 6000. Available fully shielded for video applications (7000B/S.).

The S8 is ideal for small areas. Construction consists of 3/4" MDF, which reduces resonance diminishing coloration to provide a more even sound. Like its big brothers, the S12 and S10, the S8 has radiused corners and edges, and a slotted port to give you tighter bass. One of the features of the S8 is a low pass variable that enables you to tailor the crossover point to match satellite monitors. The phase switch also gives you flexibility in room placement. Matched with five V4 powered speakers, it's the perfect surround solution for limited space.

For those seeking perfection, the Exposé E8T is by far the most advanced studio reference monitor available. From the unusual shape to its cutting-edge components, the E8T was designed as the ultimate near-field monitor. Extremely linear frequency response and beautiful stereo imaging starts with two symmetric discrete power amplifiers and newly designed crossover circuitry. A double-woven Kevlar woofer provides commanding bass. The 1" Tioxid 5 tweeter matches titanium for mass and stiffness, but offers superior damping qualities for highs you can reach out and touch. Available in custom colors and finishes. Video shielding is standard.

**S SERIES SUBWOOFERS**

### S8

The S8 is ideal for small areas. Construction consists of 3/4" MDF, which reduces resonance diminishing coloration to provide a more even sound. Like its big brothers, the S12 and S10, the S8 has radiused corners and edges, and a slotted port to give you tighter bass. One of the features of the S8 is a low pass variable that enables you to tailor the crossover point to match satellite monitors. The phase switch also gives you flexibility in room placement. Matched with five V4 powered speakers, it's the perfect surround solution for limited space.

### S10

The S10 features a cast frame 10" woofer with a special Kevlar cone. Created wide instead of tall, it fits easily under your mixing console. The built-in active crossover is designed for both LCR and 5.1 systems. Look inside and you'll see incredible attention to detail; the S10 has both vertical and horizontal internal braces, and even the ports are covered with sound deadening material. These are the kind of details that add up to make the S10 the best sounding active subwoofer in its price range.

### S12

Virtually the same as the S10, the S12 features a cast frame 12" woofer with a special Kevlar cone. It has both vertical and horizontal internal braces, and the ports are covered with sound deadening material. Compared to the S10, the S12 has a better low frequency limit (31 Hz) and is 3 dB louder.
MACKIE

HR624/ HR824

6.7” and 8.75” 2-Way Active Near-Field Monitors

One of the most accurate near-field monitors ever built, thousands of recording studios and post-production facilities rely on the HR824 to reveal details that comparable monitors simply cannot resolve. Frequency response is an astonishing 38Hz to 20kHz ±1.5dB. To achieve such a sweet spot and smooth response, the HR824 uses technology not found in typical vented-box near field monitors. A cast zinc exponential waveguide disperses sound evenly and integrates the output of the HF and LF drivers. Its servo-coupled LF transducer works in conjunction with a rear-firing passive transducer to extend low octaves and eliminate vent noise. The HR824 uses two separate high-current amplifiers with discrete circuitry. And it is fully stuffed with dense foam to fully damp internal vibrations before they can escape through the LF transducer.

Employing the same acoustic technology as the HR824, but in a compact version, the HR624 is ideal for rear surround sound channels in existing HR824 front left/right systems or as a main monitor system in control rooms and editing suites where space is at a premium. When using the HR624 as the primary monitor in project rooms or off-line editing suites, mixes will flawlessly transfer to an “A” room that employs HR824’s. The HR624 is flat ±1dB from 55Hz to 20kHz.

HR626
Dual 6.7” Active Studio Monitor

The latest addition to the HR series, the 140-watt HR626 employs a D’Appolito woofer-tweeter-woofer design (one 6.7” woofer on each end of the cabinet with the dome tweeter in the center) to provide a bottom end coupled with low-level accuracy of the mid range—the essential component for establishing vocal placement within a mix. Placing the HR626 in a vertical position provides extremely accurate reference monitoring for mid-to large-sized studios. Additionally, with its symmetrical left-right sound field, the HR626 can be placed horizontally making it a perfect center channel for 5.1 and 7.1 surround sound studio or home theater systems. THX PM3 certified, the HR626 uses a high-frequency Waveguide-loaded 1” dome tweeter for crisp, evenly dispersed highs along with dual 6.7” low frequency drivers that are able to provide extended low-frequency response while preserving the speed and accuracy of a single 6” design.

Like the HR624, the HR626 incorporates dual FR Series amps (100w to the woofer, 40w to the tweeter), 1/4” XLR balanced and RCA unbalanced inputs, sensitivity control, 80Hz high-pass filter, ±2dB high frequency shelving filter, Acoustic Space control and Auto On switch. Front panel provides a Standby/Mute switch along with power and overload LEDs. 5/8” internally braced MDF cabinet is extremely rigid and non-resonant.

HR624/HR824 Features

- Wave guide technology matches the high frequency dispersion pattern to the bass transducer for a seamless midrange transition. Furthermore, the high frequency transducer is recessed, providing acoustic alignment of high and low frequencies.
- 1” high-frequency aluminum dome driver with ferrofluid-cooled voice coil.
- High frequency shelving control adds or attenuates frequencies above 10kHz by 2dB.
- 6.7” (HR624) or 8.75” (HR824) RCF Precision low frequency transducer with mineral-filled polypropylene cone, die-cast magnesium frame and extra-long-throw voice coil are servo-coupled with a dedicated 100-watt or 150-watt amplifier.
- 40-watt (HR624), 100-watt (HR875) high frequency amplifier. Proprietary Fast Recovery circuitry prevents latching when the amps are driven at their maximum.
- Low frequency switch with 49Hz (full range) and 80Hz roll-off settings (HR624); 37Hz (full range) 47Hz and 80Hz roll-off settings (HR824).
MACKIE

HRS120/ HRS150

12” 500-watt and 15” 950-watt Active Subwoofers

The HRS120 is not only designed to work perfectly with the HR624/824 monitors, but with any active system where fast, precise low-frequency reproduction and flexible monitoring and control options are required. Rather than creating boomy “home theater”-style bass, the HRS120 delivers extremely accurate low end (flat to 21 Hz and just 3dB down at 19 Hz). If your mixes are heavy in bass and beats, such as rap, hip hop and techno, the HRS150 with 950 watts of power driving the 15” downward firing woofer and dual 12” passive radiators is the perfect choice.

- The subs can be defeated while keeping the satellite speakers in high-pass-only mode, or switch out the subwoofer and open up the satellite speakers to their full frequency range
- A 110/Hz elliptical filter for Dolby AC-3, THX Crossover Defeat switch, and 0dB/+10dB Output Level switch for AC-3/THX Dot1 operation make the HRS120 a serious tool for sound production

**HR624/ HR824**

- Magnetic shielding
- Input sensitivity control, ideal for dealing with sensitive artists or insensitive clients
- Overload LED indicates when protection circuitry kicks in
- Acoustic space switch allows bass optimization when placed freestanding (full space), against back walls (half space), and corner placement (quarter space)
- 1” MDF (Medium Density Fiberboard) front board. Internal cavity is filled with high-density foam to absorb the internally-projected midrange before it can exit through the low frequency transducer cone
- Three mode power switch: On, Auto On (with front panel clipping LED and a signal present/power indicator), and standby
- XLR and TRS jacks accept virtually any line-level input from a mixing console
- Power cord and all inputs (balanced XLR and 1/4” TRS, unbalanced RCA) are mounted on a downward-facing, vertical panel. This allows speaker placement close to walls and eliminates strain on the connectors.

**HR624/ HR824**

If you have limited space or budget, the sound of the SP-5B near-field monitors will amaze you. You get the same engineering criteria and component quality that goes into the SP-8B reference monitors: two-way bi-amped power, magnetic shielding, swivel-mounted tweeter, high-quality crossover network electronics and Sub-Frequency Port. The 5” mineral-filled polypropylene woofer and 3/4” silk tweeter accommodate a smaller cabinet design that allows placement just about anywhere—all with a frequency response of 48Hz to 22kHz. Backed by 75 watts of power, these babies scream.

The SP-8B offers two-way bi-amped near-field technology delivering 100 watts of professional sound at a fraction of the cost of similar-sized monitors. The 8” mineral-filled polypropylene woofers and 1” silk tweeters work in conjunction with 4th-order Linkwitz Riley crossover networks and custom cabinet designs to yield smooth frequency response across the audio spectrum. The Sub-Frequency Port even pumps out frequencies down to 33Hz. Magnetic shielding minimizes interference with computer monitors and the unique swivel-mounted tweeter design even allows you to fine-tune your sweet spot.

**Studiophile Standard Features**

- Active design with integral crossover and amplification
- Silk high-frequency drivers incorporate ferrofluid cooling and internal damping technologies to minimize resonance
- Low-frequency drivers feature mineral-filled polypropylene cones with high-temperature tolerant voice coils and damped rubber surrounds
- Electronic time alignment of drivers delivers controlled dispersion for superior three-dimensional imaging
- All drivers are magnetically shielded for desktop music production
- Protected from RF interference, over temperature, turn on/off transients
- The tweeter is swivel mounted so that you can adjust the position and direction. This unique feature accommodates various loudspeaker-mounting positions, allowing great control over imaging.
- The Sub-Frequency Port discharges extreme low frequencies under 30Hz. The monitors take advantage of this port to generate extreme low frequencies despite the small footprint of the enclosures.

**Why Studiophile Monitors?**

You can have all the best gear in the world and still turn out inferior mixes unless you have monitors that tell your ears what’s really happening. With that in mind, M-Audio designed the Studiophile line—world-class reference monitors that deliver exceptional quality at amazingly affordable prices. Choose from the SP-8B with 8” woofer or the bookshelf-sized SP-5B with 5” woofer. Add the optional SP-8S subwoofer to either and you’ve got all the bass you need to rattle the rafters.

The key to the Studiophile line’s accurate sound is the synergistic design and integration of all elements, thus providing superior performance and fidelity over component systems. Specially designed network and power amplifiers properly distribute low, mid, and high frequencies to reduce distortion and power loss. M-Audio further optimized the active circuitry to deliver flat frequency response, smooth transition in the crossover region, and maximized power handling.

The silk tweeters are swivel-mounted, allowing you to adjust their position for ultimate control over imaging and sweet spots. The tweeters also incorporate magnetic shielding to minimize reaction time, as well as ferro-fluid and internal damping technologies to minimize resonance. The woofers feature a magnetically shielded mineral-filled polypropylene cone with a high-temperature tolerant voice coil and damped rubber surround. And the cabinet designs produce amazing bass for these sized enclosures thanks to a Sub-Frequency Port designed to discharge extreme low frequencies.
Reference Monitors

The latest in the popular Studiophile series, the BX5 and BX8 deliver exceptional quality and professional sound. They offer 5.25” (BX5) and 8” low-frequency drivers (BX8), 1” high-frequency drivers, and 75 or 130 watts of bi-amped near-field technology at a fraction of the cost of other monitors of this quality. The 1” natural silk high-frequency drivers employ a flush design and electronic time alignment with the low-frequency driver, resulting in controlled dispersion for superior three-dimensional imaging. The tooled rear Sub-Frequency Ports reduce low-frequency turbulence and optimize driver excursion for amazing bass in a small footprint.

Monitors that adapt to your needs

Your monitors should be able to adapt to any changes in placement or work environment. That’s just what the BX5 and BX8 do. Since a monitor’s bass response can change depending upon proximity to walls, their Acoustic Space control section allows you to optimize their performance—no matter whether you need to put them on stands, on a bookshelf or in the corners. You can also adjust the high-frequency response to compensate for reflective surfaces like glass. The presence control gives you an automatic mid-range boost for added flexibility. There’s even a variable low-frequency roll-off to optimize response at crossover points when adding a subwoofer like the SP-8S.

SP8S Subwoofer

While the SP-8B and SP-5B offer as much or more bass response as you’ll find in any monitors of similar size, the addition of an SP-8S subwoofer puts 120 watts of truly bone-shaking bass in your face. In fact, so many consumers have subwoofers that you’re not really mixing accurately without having a sub yourself. M-Audio’s unique Stereo Bass Management System splits the signal at the variable crossover frequency, routing everything below to the sub and everything above to the mains. The SP-8S is so affordable, it makes an excellent companion to other monitors as well.

What’s Stereo Bass Management?

When subwoofers are added to many systems, all frequencies are routed to both the main monitors and the sub. The sub typically has a low-pass filter to roll off the highs as does the SP-8S. The problem is that both the main monitors and the sub are still trying to put out the same low frequencies, thereby compromising fidelity. Our Stereo Bass Management System solves that and delivers optimal quality. The SP-8S accommodates the stereo outputs from your mixer, and your main monitors then connect to outputs on the sub. The SP-8S’s internal crossover network splits the signal at a user-defined crossover frequency (50-180Hz), routing everything below it to the internal sub and everything above it to the main outputs. This significantly improves fidelity because the sub and mains aren’t tripping over each other to reproduce the same frequency—and each component only has to reproduce frequencies to which it is ideally suited.
**Modular Amplification**

The first element that distinguishes NHT monitors from other powered monitors is their use of "external" amplifier/crossover modules. The benefits of powered systems are widely recognized, but it often goes unnoticed that integrating the crossover and amplifier into the speaker enclosure can produce performance and convenience penalties. NHT’s external approach maintains the advantages of a unified system, while overcoming the limitations of single box designs. Dynamic headroom and sustained power output capabilities are on par with the finest rack-mounted amplifiers, with response tailored exactly to the monitors. Controls are easy to reach, logical to use, and designed for positive, repeatable setting.

**Crossovers**

They use passive components that are small, electrically well-behaved and can be made to naturally “track” changes in the driver frequency for consistent response at high listening levels. Furthermore, single amp systems can be designed with a lower residual noise floor than bi-amped ones, due to a much simpler signal path, and to the introduction of bandwidth filtering just prior to the driver terminals. Each modular systems comes with matched, controlled-parameter, low impedance XLR speaker cables.

**A-20 System**

When your work demands the absolute in resolution, the A-20 is your ally in excellence. By providing both frequency and time domain performance that sets new standards of accuracy, the A-20 reveals the minute differences in sound character that distinguish the very finest recordings. Details of microphone selection and placement, processing and equalization, reverberation and acoustic signature, signal purity and integrity, are revealed without emphasis or disguise.

**C-20 System**

The C-20 is a powered center channel monitor designed for surround recording. Combined with the A-20 system and B-20 powered subwoofer, the C-20 forms the basis of a matched, balanced reference-quality 5.1 monitoring solution. The C-20 is an exact duplicate of A-20 stereo monitoring system in a monaural configuration. The 250-watt amplifier is housed in a space saving 1RU chassis with the same input and control set. It employs the same A-20 driver configuration in an acoustic suspension design. However, the enclosure is rectangular for proper center channel dispersion.

**Features**

- Dedicated 250-watt/channel, fully discrete mono (C-20), stereo (A-20) amplifier
- 6.5” high excursion, treated paper cone woofers
- 1” metal-dome, fluid-cooled tweeter
- Magnetic shielding (partial on the A-20)
- Power, clipping indicator
- Matched impedance cable(s) included
- Angled speaker cabinets improve detail imaging (A-20 only)
- Headphone output (A-20 only)

**Controls**

- Inputs: XLR and 1/4” TRS (parallel)
- Outputs: XLR
- 5-position input sensitivity: (+11, +4, -3, -10dB, mute)
- 5-position LF compensation for boundaries
- 5-position HF compensation for near, mid, and far field
- Power: On/Off
- Diagnostic display: SPL, line VAV, heat sink temperature
**Powered Subwoofer System**

Designed to integrate seamlessly with NHT Pro's flagship A-20 monitors or any larger powered monitoring system, the B-20 produces remarkable, musical bass from a compact and flexible design. With output >100dB at 30Hz, the B-20 adds full frequency response and dynamics to near, mid and far-field monitoring environments. Offering a fully featured set of controls, the system can be seamlessly integrated with most monitors and most rooms. And the remote control included in the B-20 system integrates it into any sort of mix or production, offering on the fly stereo/mono switching and system in/system bypass, which also engages or defeats the high pass filter.

**FEATURES**

- The B-20 is a 3-piece system consisting of two acoustic suspension subwoofers mated to a dedicated external stereo amplifier. The system maintains nearly perfect transient response, and whether in stereo or mono mode delivers flat bass response with minimal room interaction and remarkable system coherence.
- Employs two custom designed, extremely long throw paper cone woofers with massive surrounds. Excursion for the woofer is 2˝ peak to peak and 1.6˝ linear allowing high output with low distortion.
- Each 14˝ square B-20 cabinet is constructed of 1˝ MDF bonded to high-pressure laminate both internally and externally creating a rigid, sonically-neutral environment for each driver. Cones are provided to decouple the woofer from the floor if required.
- The system's control amplifier is similar to other NHT Pro modular designs. This approach offers superior heat dissipation and eliminates potential vibration induced problems allowing higher power levels and improved headroom. As a result, the B-20 Control Amplifier, featuring dual-mono construction with discrete output devices, delivers 250W RMS/CH (400W peak), while taking up only two rack spaces.
- Ergonomically, this modular design puts the B-20's user controls, all of which are located on the front of the amplifier, within reach of the listening position providing ease of setup and fine adjustments.

**Controls**

- A five-position low frequency compensation circuit is provided for adjusting the system's bass response for corner placement (three boundaries), mid-room room placement (zero boundaries), or anywhere in between. Lets you maintain a consistent, flat power response in a variety of positions or differing locations.
- High and Low Pass filters provide the ability to seamlessly match the subwoofers to the monitors and add improved system dynamics. High pass settings are 35Hz, 60Hz, 85Hz and 100Hz. The low pass settings are 70Hz, 85Hz, 95Hz and 105Hz. In addition each filter circuit includes a Bypass setting.
- Five-position input sensitivity control (+11dB, +4dB, -3dB, -10dB, and Mute) provides for noise free gain matching with virtually any output device, but also allows the listener to easily turn off the monitors when other playback systems are desired.
- Five position (-180, -90, 0, 90, 180°) phase compensation control for such variables as room placement, listening position and the types of monitors being used. Phase positions are:
  - Subwoofer gain control matches the B-20 output level to that of the monitors. The B-20 gain circuit offers a 20dB range of adjustment.

**FEATURES (continued)**

- The B-20 S-00 is a 3-piece system consisting of two acoustic suspension subwoofers mated to an integrated self-powered subwoofer. The system maintains nearly perfect transient response, and whether in stereo or mono mode delivers flat bass response with minimal room interaction and remarkable system coherence.
- The system's control amplifier is similar to other NHT Pro modular designs. This approach offers superior heat dissipation and eliminates potential vibration induced problems allowing higher power levels and improved headroom. As a result, the B-20 Control Amplifier, featuring dual-mono construction with discrete output devices, delivers 250W RMS/CH (400W peak), while taking up only two rack spaces.
- Ergonomically, this modular design puts the B-20's user controls, all of which are located on the front of the amplifier, within reach of the listening position providing ease of setup and fine adjustments.
**NHT PRO**

**M-00**

**Powered Mini-Monitor**

Versatile, powerful, compact and portable, the M-00 combines the refined sonics of a high-end mini-monitor with rugged construction, high output, logical controls and a wide range of input options, making it ideal for location work, multimedia, the control room, editing suite, surround monitoring and desktop audio production. The M-00 packs substantial output, surprising bass response and startling accuracy in a remarkably small monitor. The fully magnetically shielded M-00’s are sold individually, providing application flexibility in mono monitoring, two-channel, 5.1 or daisy-chained configurations for use in “light” commercial installations.

- Paper cone 4.5” woofer with a two-layer voice coil allows sustained high temperature operation, while the 1” ferro-fluid cooled, fabric dome tweeter employs a sophisticated “under-hung” motor design for improved transients and lower distortion.
- Cast aluminum-zinc alloy enclosure is structurally rigid, minimizing audible resonance and sonic coloration. The enclosure also acts as a massive heatsink, allowing the use of a high voltage, discrete power amplifier.
- Fully discrete power amp provides 75W RMS continuous (150W peak) output. Magnetically shielded as well to allow use in direct proximity to computer monitors.
- XLR, TRS and phono input jacks, allow easy direct connection to a variety of devices while minimizing the need for adapters.
- Also provides noise free connection to a wide variety of devices, via its +4dB/-10dB input sensitivity switch.
- XLR and TRS inputs are paralleled so that multiple M-00’s can be daisy chained on a single channel.
- Capable of near-field and mid-field listening positions depending on your listening proximity, with a simple flip of the switch.
- The M-00 has mounting bosses and threaded holes for use with the popular OmniMount 50/53 Series bracket systems. May also be wall or ceiling mounted.

**S-00 Powered Subwoofer**

For those wanting a full-range compact surround monitoring system, the S-00 is a compact, subwoofer designed for use with the M-00 or other small powered monitors. The S-00 features a 125-watt high voltage built-in amplifier incorporating low and high pass filters and a footswitch for bypass. Its driver is a long-throw treated paper 8” woofer providing output down to 39Hz. Less than one cubic foot in volume, the S-00’s cabinet is constructed from 3/4” MDF, providing a structurally sound and fully acoustically neutral cabinet. A durable powdercoat finish protects it in portable uses.

- Switchable high pass filter, variable low pass filter
- Detented variable subwoofer output control
- Defeatable Auto Power-On sensing circuit with front LED indicator
- Two-position input sensitivity (+4, -10dB) control
- Subwoofer + highpass filter defeat via footswitch
- Balanced TRS outputs; parallel balanced TRS, XLR, and unbalanced phono inputs
Active Reference Monitors

The Resolv 50a has a compact cabinet that will fit anywhere. It features 70 watts of bi-amped power; with 50 watts driving a 5.25” midrange driver, and 20 watts driving the 1” ferro-fluid titanium high frequency driver. It has an active crossover, 1/4” and RCA inputs and the compact cabinet is ported, carefully tuned and wall mountable (with optional bracket).

RESOLV 65/ RESOLV 65a
Passive/Active Reference Monitors

Ideal for professional, project and personal recording, as well as multimedia setups, the Resolv 65 (passive) and 65a (powered) sound full and balanced with an uncompromised transparent midrange, leaving room to accurately mix vocals, snare hits and reverb trails.

◆ They feature 6.5” copolymer butyl surround Woofer, a 1” titanium diaphragm, high-frequency driver and gold plated binding posts all mounted in a ported tuned cabinet.

◆ The Resolv 65 and 65a utilize a midrange contour control. In the nominal position, the monitors are clinically accurate, but by dialing in the control, you can tailor the frequency response from Hi-Fi to an aggressive midrange, emulating classic near field monitors.

◆ Otherwise identical, the Resolv 65a is powered by a dual power amp, (75 watts low and 25 watts high) perfectly matched to the drivers. The active crossover allows precise control of the crossover frequency.

RESOLV 80a

Ideal for mid- to large-sized control rooms where high volume and serious bass response is required. Bi-amped, with 75 watts driving an 8” woofer and 25 watts driving a 1” ferro-fluid filled titanium tweeter. The Resolv 80a has 1/4”, RCA and XLR inputs. The 80a features a four-position adjustable midrange control.

RESOLV 120a Active Subwoofer

Taking care of the low end is the Resolv120a powered subwoofer. A powerful 120 watt low frequency amplifier drives a heavy-duty 10” transducer, reproducing tones between 40–180 Hz. The unit has a built-in active crossover, a phase switch, an auto sleep mode and a convenient mute switch jack allowing the user to easily switch on and off the subwoofer on the fly.

The Proto-J is the latest playback monitor from Tannoy. It has an extremely detailed, dynamic sound with a wide, flat frequency response - all of which are essential for monitoring with reliable accuracy. The 3/4˝ soft dome HF unit is seamlessly matched to a 6.5˝ long throw bass unit by the precision low-loss crossover network. The drive units are discretely mounted on a 3/4˝ MDF baffle. The front edges of the vented enclosure are chamfered to reduce high frequency diffraction. The back panel features two 5 way binding post inputs and integral inserts to accommodate OmniMount 50 Series wall brackets that allows wall mounting for easy and flexible 5.1 surround sound installs. Proto-J is designed to complement the Tannoy PS 110B 5.1 Subwoofer as a complete package.

The System 600 and System 800 offer the advantages of point source operation in a very cost-effective design. Their advanced 6.5- and 8˝ Dual Concentric drivers incorporate a high performance tweeter positioned immediately behind the center of the bass cone. This design produces all frequencies from a single point, mirroring the way sound is produced in real life. The accurate phase response achieved delivers a realistic soundstage along with a smooth and natural sound which is unfatiguing over long listening periods. The speakers are also capable of high volume levels without compression and deliver an excellent transient response. In addition, the attractive octagonal shape of their cabinet with their original rounded edge corners front panel contributes to the excellent acoustic performance of the cabinet. And though they are designed to be located on top of the mixing console, in a landscape format, they can be used in portrait mode without any drawback, if the situation calls for it.

Capable of producing accurate, high quality sound for a wide range of applications, the System 600 is the ideal choice for those who want consistent performance in a compact enclosure at a very sensible price. A slightly larger version, the System 800 uses an 8˝ Dual Concentric driver for extended bass and higher monitoring levels. Finally, for those who need to use the near-fields near video monitors, shielded versions of the System 600 and System 800 are available.

Conventional monitor designs lock you into a tiny ‘sweet spot’ monitoring position. Move to adjust a fader and the sound changes. Not with Tannoy’s Dual Concentric monitors. The patented Point Source design creates a coherent wavefront that is consistent both on and off axis. The result is a high performance reference monitor which you can trust, providing consistent accurate sound over a wide mix position.

The System 600 and 800 monitors use the Dual Concentric design, in which the woofer and tweeter are mounted on the same axis. Their 6.5- or 8˝ polypropylene woofer crosses over at 1.6 kHz to the tweeter centered in the woofer cone. This design forms a point source, which results in sharp stereo imaging. It also prevents the lobing often seen with staggered drivers. If you sit anywhere off-axis — up, down, left or right — the response is consistent. The speakers can be placed horizontally or vertically with the same response. The shape of the woofer cone acts as a hyperbolic waveguide for the tweeter sound waves, producing a spherical wavefront. And since the low-and high-frequency signals are aligned in time, the phase response is uniform and the transient response is tight.
### System 600/800 Features

- Ferrofluid cooling in the tweeter lets it handle high power. Diaphragm is made of aluminum/magnesium for stiffness and low mass. Around the diaphragm is a nitrile rubber surround with a narrow roll that eliminates resonances below 25 kHz, and cannot be destroyed by fatigue.
- Signal input is via a Neutrik combi connector, which combines a three-pin XLR-type with a TRS locking 1/4” phone jack.
- Made of 36mm thick rigid MDF, damped to prevent breakup. The cabinet is covered in black vinyl wrap, while the front baffle is painted midnight blue.
- Cabinet is shaped like an elongated octagon, with beveled edges that reduce diffraction.
- Two panels in the cabinet are fitted with magnetic shielding plates
- Each speaker weighs 23.1 lb. and measures a compact 9 x 14 x 11” (HxWxD)

### System 600A/800A Step-up Features

- Two EQ switches on the back control the bass and treble response (LF / HF contour)
- The LF settings are free-field and half-space. If your speakers are placed relatively far from nearby surfaces, use the free-field setting. If the speakers are near a wall or console, use the half-space setting
- HF adjustments are +2/0/-2 dB shelving
- Selectable input level (-10 dBV and +4 dBu)
- On the front of the cabinet are two bass-reflex ports and a power-on LED

### System 600A/800A

**Active 6.5” and 8” Dual Cocentric Near-Field Monitors**

Combining the proven quality of the System 600 and 800 with two amplifiers and fully optimized electronic crossover in a single compact package, the System 600A and System 800A provide the complete solution to active monitoring, yet are in the same price range as some passive speakers.

The System 600A and System 800A offer all the advantages of point source operation in a cost-effective design, combined with the benefits of active speaker technology: a highly optimized active crossover section; ideal matching between amplifiers and transducers; higher output for lower distortion. Active user controls are also provided to allow further bass extension (LF contour) and greater flexibility.

#### System 600A

Active reference monitor, with two 70W amplifiers and electronic crossover. Unique cabinet shaped for optimum acoustic performance. Ideal for left-center-right in a project studio surround system.

#### System 800A

8” Dual Cocentric drive unit, with two 90W amplifiers and electronic crossover. A complete monitoring package with the ability to exploit the full performance of today’s digital recording equipment.

6.5˝ Two-Way Nearfield Studio Monitors

The Reveal combines a number of speaker cabinet innovations with a distinctive speaker enclosure. Ideal for multimedia, project studios, an editing desk, or a broadcast production room, the Reveal has an extremely detailed, dynamic sound with a wide, flat frequency response—all essential for monitoring with reliable accuracy. The 1˝ soft dome HF unit is seamlessly matched to a 6.5˝ long throw bass unit by the precision low-loss crossover network. The drive units are mounted on a massive 1.5˝ thick baffle, curved to minimize diffraction and creating the loudspeakers distinctive styling. Both drive units are magnetically shielded to allow the system to be used close to video monitors. Housed in an attractive red/grey finish, the Reveal’s compact dimensions (13.75 x 8.75 x 10.75˝ HWD) and shielding make them ideal for studios where space is at a premium. The same monitor as the plain Reveal, the Reveal Active adds two 50-watt amplifiers and fully optimized electronic crossover in exactly the same sized cabinet. By integrating power in the cabinet, the amps are ideally matched to the drivers and distortion is lower at the same volume level compared to passive speakers. Like the Reveal, the Reveal Active is compact (same dimensions) and shielded. However they are a different color (gray with an azure blue front) and slightly heavier (each speaker is 18.7 lbs. vs. each 15.4 lb. plain Reveal speaker).

PS110B
10˝ Active Subwoofer

The PS110B delivers extended bass to small nearfield monitors and provides LF (low frequency) impact to create either subtle or exciting effects. Use with passive and active nearfield monitors such as the Reveal or System 600, where the high pass outputs from the sub allow greater performance from the monitors—great for studios where space is at a premium. In multi-channel environments, the PS110B is ideal for the LFE (low frequency effects) channel in surround sound environment. A single PS110B can be used in small to medium-sized rooms, while multiples can be used in larger environments.

10” and 12” Dual Concentric Mid-Field Monitors

Incorporating 10” and 12” Dual Concentric drivers in the same unique cabinet design as the System 600/800, the System 1000 and System 1200 are professional systems designed for a wide range of midfield monitoring applications from music/project studios to broadcast and multimedia. They are capable of high volume levels without compression and deliver excellent transient response. Their unique Dual Concentric design produces all the frequencies from a single point, mirroring the way sound is produced in real life. The accurate phase response achieved delivers realistic soundstage, along with a smooth and natural sound which is unfatiguing over long listening periods. The System 1000 can be used as a near or mid-field reference monitor, the System 2000 as a midfield or for main monitoring in smaller studios. Both are also available with shielding option.

System 15 DMT II/ 215 DMT II

15” Dual Concentric Main Monitors

The System 15 DMT II is a main monitor system for recording and post-production studios where the requirement is for high performance, natural sound reproduction. With a single coherent wavefront thanks to the 15” Dual Concentric point source driver, sound presented to the engineers is remarkably distortion free. And with the enlarged monitoring position provided by this remarkable drivers wide dispersion, monitoring with the System 15 DMT II is particularly fatigue free.

The System 215 DMT is the ultimate realization of the Tannoy Dual Concentric principles in a studio monitor. The 15” Dual Concentric driver, with its wide dispersion characteristics, provides an enlarged ‘sweet spot’ monitoring position, while the complementary 15” bass driver reproduces the true impact of low frequencies. A superb, natural sounding monitoring system for those studios where only the best is good enough.

Tannoy's SuperTweeters were designed to provide the extended high frequency response demanded by modern program material and sources such as SACD (Super Audio CD), DVD-Audio and DTS which have driven the requirement for loudspeakers with extended frequency bandwidth performance. By allowing the listener to experience a far wider range of bandwidth information of instruments than is currently possible with conventional loudspeakers, the ST50 and ST100 complete the musical picture. They not only have the ability to resolve fine detail of high frequency notes but also effectively enhance the listening experience even at lower frequencies.

**FEATURES**

Music contains transient information and rich harmonics beyond the range of human hearing for pure tones. Even bass notes have leading edge transients reaching 30kHz with other instrumentation extending yet further. Operating between the roll-off point of the high frequency unit of your existing loudspeakers and 54 kHz, the SuperTweeter will accurately reproduce the leading edge of individual notes allowing the listener to experience the entire bandwidth information of instruments.

Extending the frequency response by two octaves, corrects time and phase response within the bandwidth of normal human hearing. Taking these acoustical phase anomalies beyond the range of human hearing adds realism to the soundstage by improving imaging and placement of instruments. The SuperTweeter provides an increased immediacy, airiness and impact - making music sound more natural and true to life.

With the universal nature of the crossover design the SuperTweeter concept has been extended to match the majority of quality loudspeakers, whether they are from Tannoy or from other manufacturers. Adjustments are provided for crossover frequency and sensitivity level to allow system matching.

Discrete drivers, widely used in loudspeaker design will benefit greatly from the addition of a SuperTweeter. The spatial imaging and detail accuracy will be enhanced without the impression that another information source has been added—such is the integration of the SuperTweeter into the system.

The ST50 is constructed from solid aluminum die-castings coated with a soft feel, non-reflecting finish. Not only are they designed to visually blend in with all types of speakers, but they also provide an instant acoustic upgrade that is unavailable in any other way. The ST100 comes in solid black ash and with a Performance Platform. Includes specific crossover and frequency control settings suited to all types of speakers, regardless of manufacturer. In addition the ST100 is optimized for use with older Tannoy Dual Concentric models, many going back over 40 years to the original 15” Monitor Red derivatives.

- High stiffness titanium dome minimizes effects of dome break-up and extends frequency response.
- Neodymium magnet system also extends frequency response by minimizing eddy current losses in voice coil.
- Copper clad aluminum voice coil on aluminum former for high power handling.
- Provision for driver magnet system earth ing, to avoid interference and information masking caused by radio interference.
- Gold plated terminals for optimum signal transparency.
- Radio frequency quality inductors in crossover for good high frequency characteristics.
- Non-inductive resistors to avoid losses associated with normal wire wound types.
- High quality polypropylene film capacitors, selected for high frequency use.
- Unique Tannoy Performance Platform gives stable support and variable adjustment for the ideal listening position.

Powered 8” Studio Monitors

From the classic NS1000 through the ever-popular NS10M series, thousands of pros worldwide have chosen Yamaha speaker systems for critical monitoring applications because of their exceptionally accurate, natural reproduction and reliability. With the MSP10 Studio, Yamaha takes monitor performance to new levels.

The monitor features an 8” long-throw woofer housed in a compact bass reflex design cabinet to provide deep and tight low end reproduction. The 1” pure titanium dome tweeter with wide dispersion waveguide horn provides a smooth, high frequency response well past 40kHz—perfect for 24-bit/96kHz masters and a well-articulated stereo image. Other features include trim switches for easy room matching, XLR inputs and magnetic shielding.

Designed for post-production, broadcast, professional recording and project studios, the MSP10 Studio has a 120-watt power amp for the low/mid driver and a 60-watt amp for the tweeter. It also adds a low-cut filter for optimum matching with high-performance subwoofers like the SW10.

- Custom-designed 8-inch woofer and 1-inch titanium-dome tweeter feature advanced magnetic structures that achieve exceptionally low distortion.
- Tweeter operates in conjunction with a waveguide horn that achieves broad, uniform high-frequency dispersion for optimum balance regardless of listening position. Advanced driver and enclosure design also ensures smooth, uniform dispersion across the system’s full reproduction range.
- Balanced XLR input for compatibility with professional equipment. Also allows the speakers to be placed at the end of long cable runs without being susceptible to hum and induced noise.
- Sensitivity control dial lets you adjust the volume according to the output sensitivity of the connected device.
- 120-watt power amplifier for the low/mid driver and a 60-watt power amplifier for the tweeter (total power of 180 watts).
- Magnetic shielding allows placement near all types of video and computer equipment.
- Clip indicator if the output level is too high.
- Wall-mounted with optional wall brackets.

SW10 Powered Subwoofer

If you need the kind of bass response normally associated with a large speaker system, without giving up the compact convenience and positioning ease of the MSP10 Studio, simply add an SW10 Subwoofer for solid, accurate bass response down to well below the audible limit. The SW10 features a long-stroke 10” woofer which achieves exceptionally smooth, low-frequency reproduction, while a built-in amplifier delivers 180-watts of power. A variable low pass filter (40 to 120 Hz) makes it easy to achieve optimum crossover with just about any main speaker system, and a built-in phase switch allows instantaneous phase reversal without having to modify cables or connections.

The SW10 features three balanced XLR-type inputs and outputs (the outputs feed the audio signal through to the main speakers) for direct connection to professional equipment. Finally, heavy wood construction ensures that the engineer hears the audio signal, not the cabinet.
YAMAHA

MSP3

Powered Monitor Speakers

Engineered for today's multimedia environments, the compact, two-way powered MSP3 provides high quality, cost-effective monitoring for home studio, computer-based recording and educational applications as well as personal computers, gaming systems and music keyboards without integrated speakers.

Utilizing many of the same technologies found in the MSP5 and MSP10 Studio professional level monitors, the internally powered MSP3 provides 20W of output power to a 4" woofer that reproduces a surprisingly tight low end, and a 3/4" dome tweeter with a smooth, high frequency response to 22 kHz. For added flexibility, there are balanced XLR and 1/4" phone jacks and unbalanced RCA connectors on each speaker. In addition, each MSP3 has trim switches that allow both the low and high frequency response to be custom-tailored, allowing installation in a wide range of environments. Full magnetic shielding allows positioning near sensitive recording equipment and media.

- Designed for use in personal music production systems, a built-in 20-watt amplifier drives both the 4" cone and 3/4" tweeter
- Magnetic shielding and compact size allow placement near video monitors
- Balanced XLR, 1/4" and unbalanced RCA inputs for versatile connectivity
- Separate volume controls for Line 1 (RCA) and Line 2 (XLR/phone) inputs plus High and Low tone controls for sound tailoring
- Incorporates Yamaha's Waveguide Technology for uniform dispersion of the tweeter's high frequencies
- Mic stand mountable with optional BMS10A Microphone Stand Adapter

MSP5

Powered Monitor Speakers

High quality, powered monitors have traditionally demanded premium prices. The bi-amped MSP5 monitor speakers deliver extraordinary sound quality, at an equally attractive price! The ideal choice for a wide range of professional recording and post production applications including 5.1 surround mixing.

Ultra-compact enclosures allow easy placement. Small face print makes them very accurate for "point source" listening. Hookup is quick and easy with both XLR and 1/4" inputs. 67 combined watts of audio power in a monitor this size, let alone near this price, was previously unheard of -- until now. Titanium offers excellent response, separation and durability. The MSP5’s dome tweeter, surrounded by a wave guide horn offers a broad coverage area of 120°. Upgrading to studio level monitoring has never been easier.

- With two separate amplifiers, incredibly lower distortion is realized. 67 watts (40 to the woofer and 27 to the tweeter) generates a much larger sound field than would normally be expected from a system of this size.
- Flat frequency response out to 40kHz makes the MSP5 great for mastering, where high sample and bit rates are the norm.
- XLR-balanced and 1/4" unbalanced inputs
- The smooth circular horn surrounding the tweeter delivers uniform dispersion without distortion or coloration.
- Complete magnetic shielding and compact size permits easy placement near all types of audio, video and computer equipment.
- 4-position low frequency (+1.5, 0, -1.5, -3 dB at 60 Hz) and 3-position high frequency (+1.5, 0, -1.5dB at 15 kHz) frequency TRIM switches enable adjustment of the bass and treble, letting you optimize system response in a wide range of acoustic environments.

MSP5 Speakers shown with YST-SW305 Subwoofer
**Advanced Active Servo Processing Subwoofer**

A compact, high performer, this affordable subwoofer can be purchased separately or as part of a monitor system. The YST-SW 005 features Advanced YST for dynamic bass response, 55W high power output, switchable high cut filter, auto standby with sensitivity selector and two input connections to deliver powerful, high quality bass with superb efficiency and convenient operation.

Available in a complete system, the MSP3 Speaker Bundle includes two MSP3 powered monitors and one YST-SW 005 complete with cabling and instructions to make hook up fast and easy.

- Advanced Yamaha Active Servo Technology (Advanced YST) for powerful bass response
- 55W high output power
- 6-1/2” multi-range driver
- Magnetic shielding
- Switchable high-cut filter (high or low)
- Auto standby with sensitivity selector (high, low or off) and LED indicator
- Two input connections: Speaker Level or Line Level (pin jack)
- Low 0.8W standby power consumption for exclusive power transformer.

Yamaha MS101II/MS202II

10- and 20-Watt Powered Speaker Systems

Designed for home and portable recording, multimedia, MIDI studios and PA applications, the MS101II and MS202II pack lots of power and outstanding response in small packages. They feature 10 watts of power with a single 4” full-range driver (MS101II) or 20 watts of power with two 4” full-range drivers (MS202II) in a bass-reflex enclosure. Frequency response is 70Hz to 18 kHz. Each has multiple inputs, and offers comprehensive Low, High EQ and volume controls. Fully shielded, they can be used in close proximity to computer or video monitors without affecting the picture.

- Independent Low and High EQ controls allows sound to be tailored to the listener’s requirements and the acoustic environment. The low end is enhanced by an internal EQ circuit that boosts the bass without muddying the sound.
- Full magnetic shielding allows use in close proximity to video or computer monitors
- The MS202II has a 1/4” mic input plus three line inputs (RCA in the rear, two 1/4” mono phone jacks in the front) as well as a 1/4” mono output in the front

MS60S

60w Powered Speaker System

Designed for a wide range of applications, including small sound reinforcement, and on-stage or studio monitoring, the 60-watt MS60S is the ideal “small-venue” portable amplification system. Multiple input configuration and controls permit direct and trouble-free connection with any setup.

- Completely portable, the MS60S has a built-in carrying handle and weighs only 22 lbs. It can also be placed horizontally or vertically.
- 60 watts of power with an 8” low-frequency driver and horn-type high frequency driver. A sturdy metal grille protects the drivers.
- The amplifier comes with Active Servo Technology for a truly BIG sound from a small box
- Three inputs (balanced XLR mic/line level, and two unbalanced 1/4” phone inputs) allow use with a mixer/line level source, guitar/bass/keyboard source, and Mic source... all at the same time
- Sound can be tailored using the two-band EQ circuit, giving you 5dB of cut/boost at the low end, and 8dB of cut/boost in the treble
- Volume levels can be adjusted for proper balance between all three sources using the Input 1, Input 2, and Master Volume Level controls
- The MS202II has a 1/4” mic input plus three line inputs (RCA in the rear, two 1/4” mono phone jacks in the front) as well as a 1/4” mono output in the front

MSR100

8” 100-watt Powered Speaker

A mixer, power amplifier, and speaker system combined in a single, compact unit, the MSR100 is perfect for small events and club gigs. Compact in size but big in sound and versatile features, the MSR100 packs a powerful sonic punch — making it ideal as a personal stage monitor; a utility speaker for electronic drums, keyboards, guitars, and vocals; or a small-scale FOH PA system.

- An 8” custom woofer handles the low end, while a 1” pure titanium diaphragm compression driver delivers the high frequencies. Horn provides a wide 90° x 40° sound dispersion for optimum coverage.
- Built-in mixer provides 3 inputs (balanced XLR mic/line level with a -50dB/+4dB pad switch, and two unbalanced 1/4” phone inputs)
- Each input has its own level control, with a Master Level control for overall output. Two-band EQ gives further control over the final sound. A CLIP indicator alerts you when the input signal is too high.
- Stand upright for conventional sound reinforcement, or lay it on its angled side for use as a floor monitor. A variety of mounting options let you place it on a pole, suspend it from the ceiling, attach it to a wall, or even safely stack multiple units on the floor.
SM SPKR BRKT Multi-Angle Mount
This bracket provides a low cost solution for mounting smaller (up to 15 lbs.) speaker systems. An ingenious radiused mounting plate allows up to a 140-degree range of rotation. The wall and speaker components separate for ease in mounting to their respective surfaces before being joined. Two 5mm screws attach to Yamaha speakers equipped for mounting are included. Other speakers can also be accommodated. Includes steel cables for extra safety .......................................

49.95

Varistand
Height Adjustable Speaker Stands
The Varistand all steel design gives solid support for small monitor speaker systems. While designed to support the MSP5 monitors (with the APS adapter plate); the mounting platform of the Varistand accepts many different bolt patterns. The base of the stand is hollow, allowing the addition of sand or lead ballast to increase stability. The ingenious T-shaped base has a very small footprint, allowing the user to place them into tight spots behind desk and consoles. Stands are height adjustable with one knob, and extend from 27” to 42”. Maximum recommended weight is 20 lbs. per stand .........................

139.95

BWS20 Series
Wall/Ceiling Mounting Brackets
The BWS20 Series allow mounting of speakers weighing up to 15.4 lbs. Designed for use with the Yamaha M S10I, M S20II, M S20S, and M SP3, these brackets will also work with other speaker systems. Hardware is included.

Designed for maximum safety, all adjustment points are connected in a way that keeps them from coming apart, even if all the adjustment screws are missing! Screws to attach these brackets to the speaker are included. Additional hardware to attach these brackets to the wall or ceiling is required. Thick steel flanges on these brackets are both welded AND riveted to assure their strength.

BWS20-120: 4¾” ........................................69.95
BWS20-190: 7¼” .......................................72.95

BWS50 Series
Wall Mount Brackets
The BWS50 Series allow mounting of speakers up to 44 lbs. Designed for the Yamaha M S60 and NS10M C speakers, these mounting brackets can easily adapt to other speaker systems as well. Collars on both ends of the bracket allow 360° rotation. Additionally, the joint in the shaft of the bracket swivels over 200° (in 6-degree increments). Flexibility like this allows an endless possibility of mounting positions, in order to attain the desired coverage.

BWS50-190: Wall Mount Bracket for M S60 (pair) ...........124.95
BWS50-260: Wall Mount Bracket for M S60 (pair) ..........139.95
Wireless Personal Monitoring System

The UHF EarAmp brings professional in-ear-monitoring to a wide range of users. Offering superlative audio quality and extensive control, the EarAmp system includes individual volume and balance controls for the best possible mix, and separate bass and treble controls to fine-tune the signal and a limiter control to set the audio level and protect your ears.

Ideal for keyboard players, drummers and other more stationary performers who want the advantages implicit in personal monitoring, the EarAmp can be operated in stereo mode with all controls operating as labeled, or in the Mix mode with two independent mono signals with the balance control adjusting the relative volume of source 1 to source 2. In Mix mode, the mixed signal is presented to the headphones in mono. Also includes a 15 dB pad control to attenuate “hot” inputs, a headphone jack and all required cabling.

By eliminating the need for loud onstage “wedge” monitors, the EarAmp allows you to hear yourself better, greatly reduces feedback problems, and makes the overall sound coming from the stage significantly cleaner.

Diversity Wireless Monitor System

EarAmp’s freedom of movement and reliability come in part from its diversity design. If you already use a wireless mic or instrument system you know that diversity reception is essential for ensuring signal reliability.

With its microprocessor controlled diversity design, UHF EarAmp’s range is maximized. The user experiences fewer drop-outs, increased rejection of unwanted signals and crystal-clear audio fidelity.

UHF EarAmp offers an extraordinary level of frequency and agility with 8 groups of 16 channels each—128 total. Frequencies can be selected by group and channel, or by direct selection in 25 kHz increments. And a single transmitter will broadcast to an unlimited number of receivers.

</table>
Receiver
The system operates in both Dual Mono and Stereo modes. This gives performers the choice to listen the way they want. The unique Dual Mono mode allows for blending of two discrete input signals, which are routed to both ears using the balance control to mix them. The dedicated volume control adjusts the overall level to suit the listener’s needs. A center detent lets performers feel the setting if changes are required during the show. An adjustable Limiter manages signal levels, prevents overload and protects the listener’s ears from aggressive transients.

- Independent Treble and Bass controls allow performers to achieve their own personal in-ear mix. There’s even a Loudness switch for enhanced articulation when the unit is operating at low levels.
- Frequency selection is fast and easy. An exclusive feature allows the receiver to automatically reset to the correct frequency for precise channel-matching at the flip of a switch and the push of a button.
- The UHF EarAmp receiver runs for approximately 8 hours on a single 9V battery. An LED on the receiver alerts you to low battery levels.

Transmitter
UHF EarAmp’s transmitter features dual inputs for a choice of stereo or an additional mono signal in the performer’s mix. The level is independently adjustable for each input. A 5-segment LED meter tracks the input level for optimum gain staging. In addition, an easy to read backlit LCD displays the selected Group, Channel and Frequency.

- The transmitter provides monitor engineers with the flexibility they need. Extensive input/output capabilities allow for inserting custom sub-mixes, adding effect returns or daisy-chaining transmitters.
- Neutrik Como (XLR or 1/4”) inputs also provide for a range of signal levels and sources. A switchable 15dB pad is provided on both the main and auxiliary inputs.
- The transmitter is portable as well as rack mountable

Buds
Samson’s high-quality flesh-colored ear buds provide the perfect match for UHF EarAmp’s performance, allowing a slight amount of stage ambience into the mix. However, the system is universal and allows for the performer’s choice of any standard third-party earpiece for total freedom of choice.
Personal Monitors for Installed Sound

Since their introduction, Shure PSM systems have become known as the best wired/wireless monitors available for sound quality, flexibility and affordability. What’s more, they are simple to use, conserve space on stage, and are easy to transport. They deliver a full frequency range and great stereo separation. An impressive signal-to-noise ratio minimizes ear fatigue while increasing fidelity. This allows performers to concentrate better on their performance because they can now hear their mix more clearly at lower volumes. The audience will hear a better performance, too, because no wedges means no feedback can occur when users (intentionally or unintentionally) alter the position of the floor monitors relative to the microphones, and a cleaner mix for the room.

Unlike conventional floor monitors, Shure’s PSM systems function as a closed system. The mix is sent directly to the performer’s ear, so there is no chance of the monitors coloring or competing with the front-of-house speakers. The difference in perceptible sound quality is truly amazing. All PSM systems feature mono, stereo and MixMode operation. MixMode gives performers greater control over their monitor mix by turning the receiver into a 2-channel mixer.

In MixMode, the performer receives two discrete channels of audio, just like in stereo. The difference is that each channel is sent to both the left and right earphone. The performer hears the two signals mixed together in each ear.

By adjusting the balance knob on the body-pack, performers can control the relative level of each signal, making one softer and the other louder in both ears. For example, a performer may choose to have their vocals (or instruments) sent through one channel and the rest of the band sent through the other. Using the balance knob on the receiver, the performer can determine exactly how much of themselves they want to hear in the mix. Musicians, in particular, enjoy the flexibility of MixMode because it gives them the ability to adjust their mix from one song to the next without having to signal the engineer at the soundboard. This means they can have exactly the right balance for every song with a minimum of fuss and distraction. Other possible MixMode configurations:

- One channel is lead instruments and the other is the rhythm section
- One channel is the bands monitor mix and the other is crowd noise
- One channel is the musician’s mix and the other is a click track

To meet the budget requirements for a wide range of installations, Shure offers a full line of PSM systems in both wireless and hardwired configurations:

</tbody>
</table>
Personal Monitor Systems

The PSM 200 is a frequency-agile, in-ear monitor system for use in a wide variety of applications. Its many features help overcome the difficulties associated with stage monitoring:

The P2R Receiver is the world’s first bodypack receiver to function as a wired receiver, a wireless receiver, or both at the same time.

The P2T TransMixer is another breakthrough design for in-ear monitoring. It allows you to connect two mic or line-level inputs directly into the transmitter. The two signals can then be mixed independently. You can connect microphones or instruments directly to the inputs, use line outputs from a mixing console, or connect it to Shure’s Aux-Pander. No matter what the output device, you can probably plug it into the P2T TransMixer.

The complete PSM 200 System includes the E2 Earphones, which feature a dynamic driver that produces crisp, full-spectrum sound. They include a variety of sleeve options to provide the best fit and isolation for your ears. The E2, like all Shure earphones, work well with CD and MP3 players, and anything else with a 1/8” (3.5mm) stereo output.

System Features

The PSM 200 makes the benefits of in-ear monitoring accessible to a wide array of cost-conscious musicians and houses of worship with exciting features including the built-in ability to upgrade the receiver from wired to wireless, a transmitter that is also a mixer, and a high fidelity earphone. Wired or wireless systems feature integrated mix control with two mic/line XLR-1/4” combo input channels plus XLR split outputs that connect signals to a mixing console or other device without affecting original settings. The frequency-agile wireless transmitter features eight channels per system (up to four simultaneous compatible systems).

P2R Hybrid Receiver

For those that can’t initially afford wireless, the P2R Hybrid Receiver protects their investment by allowing them to upgrade at a later date. The hybrid receiver starts as a wired bodypack and with the addition of the Transmixer, operates fully as a wireless receiver.

- Dual-function receiver operating as a wired and wireless bodypack
- Volume control, and a built-in limiter that can’t be defeated.
- LED indicators for power, RF signal strength, frequency, limiter, and battery level.
- Integrated cable management system keeps cables under control
- A 1/4” line input jack for convenient, integrated line input to connect monitor mixes, click tracks, or effects
- Up to 6 hours, volume dependent, on a standard 9V battery.

P2T TransMixer

By combining frequency-agile wireless transmitter functionality and a two-channel mixer, the P2T TransMixer offers you complete control of the in ear mix right on the stage.

- A frequency-agile transmitter with eight channels per system.
- Up to four simultaneous compatible systems (country dependent).
- A range of 100 m (300 ft.) under optimal conditions.
- LED indicators for input level and frequency.
- Volume controls for mic/line inputs helps you create your own mix.
- Integrated mix control with two mic/line XLR-1/4” combo input channels for personal control.
- XLR split outputs that connect signals to a mixing console or other device without affecting original settings.

E2 Earphone

- In ear, high fidelity sound Isolation to help you keep what you hear on stage under your control Interchangeable flex and foam sleeves to give you the perfect fit.
Versatile Personal Monitor Systems

The PSM 400 makes professional quality, personal monitoring available to more performers than ever before. Designed for performers who are tired of the limits of floor wedges, the PSM 400 offers hands-on control and freedom to musicians who have a limited budget for gear. With a wide range of available options - from complete wireless and wired systems to individual components - there is a PSM 400 that is just right, rehearsal through performance, for almost anyone who performs live music.

The PSM 400 offers a personal mix free of unwanted stage sounds; individual volume and balance controls; a freedom of movement that releases performers from standing in only one spot on stage; and an ease of portability far greater than bulky floor wedge monitors. Furthermore, the PSM series, when used properly, can aid performers in hearing conservation. These many benefits are further enhanced by the P4M mixer, which brings complete control of the in-ear mix right to the stage.

Setting the standard for price and performance, PSM 400 systems are available in both wired and wireless versions and offer user-friendly features such as LCD controls and a battery fuel gauge. The wireless system is frequency agile with 16 UHF frequencies (8 compatible).

E1 and E5 Earphones—In Ear Comfort and Clarity
Unobtrusive, low mass/high energy earphones, the E1 and E5 are designed specifically for use with Shure PSM systems and deliver the incredible sound and performance ear buds and other headphones can’t. Don’t go In-Ear without them. The E1 and E5 earphones provide numerous advantages over earbuds. Along with their high fidelity, full-bandwidth transducers, the natural design of these stereo earphones allows them to rest comfortably in the ear canal, providing a tight seal for sonic isolation and a snug fit. Sound quality and isolation are the two most important things to consider when choosing an earphone. The E1 and E5 provide superior sound quality due to their high fidelity, full-bandwidth transducer design. Virtually the same, the E5 is a special dual-driver earphone that delivers an extended frequency response resulting in truly incredible sound. They have a universal 1/8” plug that connects to Shure’s PSM body pack receivers, as well as many other personal audio applications, and they can be used with foam, flex or triple flange accessory sleeves (provided).

Earphone Sleeves
Each choice provides comfort and isolation in a variety of sizes and materials for the right fit.

- Reusable Plastic Flex Sleeves (5 pairs):
  - PA750 Cylinderical Foam Ear Sleeves (5 pairs) ..31.83
  - PA756S - Small ..15.90
  - PA756M - Medium ..15.90
  - PA756L - Large ..15.90
- PA755 Triple Flange Ear Sleeves (1 pair) ..........15.90

dbx IEM
In-Ear Monitor Processor with Digital Multi-band
Compressor/Limiter/Parametric EQ/PeakStop Limiter/Lexicon Reverb
A digital signal processor specifically designed for in-ear monitor applications, the IEM is the ideal tool for fine-tuning mix monitoring for in-ear monitoring devices. Not only does the IEM provide the legendary dbx effects in the digital domain, such as 4-band stereo compression, PeakStop limiting and 5-band parametric EQ, but the IEM also includes stereo adjust, dbx proprietary Type IV conversion system, and for good measure, custom reverb algorithms using industry-standard Lexicon technology.

- In addition to an intuitive user front panel which provides instant access to all effects at the push of a button, and a large custom display which shows all operational information in a logical manner—all parameters and features can be controlled by the bundled software. On-board IEM firmware is updateable via the web and the built-in RS-232 port.
The PSM 600 features crystal-controlled analog operation. Ten personal stereo mixes can be created using as many wireless transmitters. Or, by using only PSM wireless transmitter along with several PSM 600 wireless receivers, bands using a single monitor mix can have a full professional monitor system for a fraction of the usual cost. For musicians who maintain a single position throughout the performance (seated performers such as drummers and keyboard players), PSM 600 wired body packs are the perfect choice, allowing a direct patch from the sound board.

**PSM600**

**P6HW**
- Wired Bodypack Receiver
  - Detachable input cable
  - Rugged metal chassis
  - Controls include mode (stereo, mono, MixMode), volume and balance, defeatable limiter, high-frequency boost, -15 db Pad
  - LEDs show peak input, battery life

**P4R**
- Wireless Bodypack Receiver
  - Rugged metal chassis
  - Frequency locator
  - Controls include mode (stereo, mono, MixMode), volume, balance, defeatable limiter, high-frequency boost, frequency select
  - LEDs show RF reception, battery life

**P4T**
- Wireless Transmitter
  - 1/2 rack space, built-in audio limiter
  - Removable/combinable antennas
  - Controls include input knob, mode (Stereo, Mono, MixMode), frequency select
  - 8-segment input level and transmission frequency LED indicators
  - Two 1/4˝ TRS line level outputs, earphone monitor

**PSM700**

If you need more than 10 personal mixes but don’t want to compromise wireless mobility, the PSM 700 is synthesized, giving you greater frequency agility. Plus its sound quality surpasses all other personal monitors on the market. With 32 compatible UHF frequencies, the PSM 700 gives system engineers the power to create up to 16 stereo mixes simultaneously—perfect for larger installations with many performers who want their own mix.

**P7R**
- Wireless Bodypack Receiver
  - Rugged metal chassis
  - Frequency locator
  - Dynamic overload protection
  - Controls include mode (stereo, mono, MixMode), volume, balance, defeatable limiter, high-frequency boost, channel selector and group select switch
  - LEDs show RF reception, battery life

**P7T**
- Wireless Transmitter
  - 1/2 rack space
  - Removable/combinable antennas
  - Controls include input knob, mode (stereo, mono, MixMode), earphone volume, channel selector and group select switch
  - 8-segment input level and frequency group LED indicators
  - Two 1/4˝ TRS/XLR combo line level inputs; two 1/4˝ TRS loop outs, earphone monitor

- Frequency Locator Mode reduces set-up time by allowing the installer to locate the optimal frequencies using the receiver as a tool.
- Dynamic Overload Control automatically protects the system from distortion that can occur when a performer gets too close to the transmitter.
- PSM 700 antenna combiners can be linked into one dedicated combiner to minimize the number of antennas used during the performance.

Four-Channel Personal Monitor Mixer

A highly versatile four-channel, two-bus stereo mic/line mixer designed to provide greater control and flexibility in monitoring situations, the P4M interfaces with both personal monitor and floor monitor systems. For the performer, the P4M offers the ability to make quick adjustments without having to go back to the main mixer. For the installer, the P4M's routing capabilities make it a great solution not only for monitoring, but for any application that can benefit from a convenient two-bus mixer. The P4M features four balanced mic/line inputs, each with level and panning controls. Corresponding XLR split outputs allow input signals to pass through the unit unaffected, while providing an independent mix.

Personal Stereo Monitors

When coupled with personal monitors, the P4M gives performers the ability to adjust personal mix levels onstage - even during a performance - without affecting the front-of-house system. This enables users to create and maintain consistent monitor mixes, regardless of the venue.

Installed Sound Systems

The P4M can also be used as a small "piggyback" mixer in applications such as houses of worship, or courtrooms. The unit acts as a console bypass when a permanent installation of a large, operator-controlled mixing console may require just a few microphones for smaller events.

Given its dual-bus output capabilities, the P4M can also serve as a "two zone" mixer, routing any combination of mic or line-level signals to two different zones.

Each mic/line input splits internally, so you can "tap into" existing signals, control them the way you want, and let the original signals pass through uninterrupted to their intended destinations.

The P4M has a pair of 1/4" auxiliary inputs that can be used to add channels from other sources. For example, multiple P4M mixers can be linked together to increase the number of inputs. In addition, sources not present in the original mix - such as a click track for live percussion - may be included via the auxiliary inputs.

Applications

Created to provide greater control and flexibility in monitoring situations, the P4M's routing capabilities also make it a great solution for any application that can benefit from a convenient 2-bus mixer:

- Capturing a secondary mix for recording or broadcast feeds
- Sending and controlling mic/line level inputs to an existing mix
- Sending ambience or other signals to a remote location such as a "cry" room
- Creating a small "piggyback" sub mixer for activities where a live engineer is not viable
- Enabling director's cues and interruptible foldback

Audio Signal Path for the P4M Mixer

1. SPLIT OUTs are unaffected by front panel settings
2. When using one AUX INPUT: AUX IN 1/L MONO goes out to MIX OUT 1/L and 2/R goes to MIX OUT 2/R only
3. Both AUX INs go directly to MIX OUTs at unity gain. If distortion is heard, decrease level of incoming signal.
Auxiliary Expander: 8x8 Insertable Matrix Mixer

Traditionally, the number of auxiliary sends available on mixing consoles has been sufficient and proportional to the number of inputs needed for a given application. However, with Personal Monitors (PSM) rapidly becoming the monitoring solution of choice for live performers, the demand for auxiliary outputs to serve those systems can quickly outstrip the supply on most small to medium-size mixing boards. The AuxPander is an auxiliary expander designed as a flexible and cost-effective way to address this issue. With an AuxPander, you can boost the output abilities of existing mixing consoles to eight busses without investing in a dedicated monitor console or bulky, complex large frame mixing board. An easy-to-use, 8 x 8 analog mixing matrix that will grow and adapt with your system, the compact and transportable AuxPander is capable of mixing eight input signals and distributing them to any of the eight available outputs, in any combination, and at any volume level.

- Offers endless options for mix and signal path creativity. Craft personal monitor mixes for an individual or an entire band. Quickly and easily add users and resources to your mix—night after night, gig to gig.
- Strengthens every link in the production chain. House sound or recording engineers can easily accommodate special recording and monitoring requests. Bands traveling with an AuxPander can ensure a uniform monitoring environment from a rehearsal to a gig. No matter what mixing equipment awaits, just plug and play.
- Use in conjunction with modular digital multitrack recorders (MDMs) for live and studio recordings.
- Combine input signals from multiple sources and route them to a single output.
- Inserted between a MDM and a mixing console, the AuxPander can mix to individual stereo cue mixes without interrupting the signal flow to the mixing console.
- Create stereo auxiliary sends to incorporate the stereo inputs of effects processors.
- Mix to eliminate feedback in certain distributed installations where each monitor receives a different mix by subtracting the source closest to each monitor.
- AuxPander is expandable both horizontally (16 x 8) and/or vertically (8 x 16) if more output mixes are required.

AuxPander taps up to eight input signals from a standard mixing console through its insert points. It then provides up to four stereo or eight mono auxiliary mixes and a new insert point without disrupting the levels established at the front of house soundboard.

- Balance controls let you pan the input signals between the left and right channels of a stereo output
- Level controls let you increase or decrease the volume of each of the eight input signals. Route signals to any of the eight outputs at any level and in any combination.
- With direct input jacks you can expand input channels (daisy-chaining) while keeping the same number of mixed outputs. For example, connect one AuxPander to another to create a 16x8 matrix.
- Four pairs of balanced, line-level 1/4˝ output jacks carry the mix created
- Insert jack lets you integrate processors (EQ, compressors, gates, etc.) in a particular signal path. Once a processor is connected, it can affect the AuxPander inputs, the console inputs, or both via the Insert Assign Switch.
- In Global Mode both the AuxPander and the mixing board receive the processed signal. In Local Mode only the AuxPander receives it and the console’s inputs are unaffected. In Remote Mode only the mixing board receives it while the AuxPander inputs are affected.
- A single jack, rather than dedicated “in” and “out” jacks, receives and returns signals from the mixer, eliminating the need for Y-cables. One conductor on a 1/4˝ TRS cable jack receives signals. The other returns them. So connections of a console’s insert points can easily be made with a TRS-TRS cable.
- When using 1/4˝ TRS cables, some consoles use the tip conductor as the send (tip-send) and others use the ring conductor (ring-send). AuxPander in/out jacks are compatible with both via the Tip Assign Switch.

**K 55**
The K 55 stand out from "good value" headphones by their truly exceptional price/performance ratio. These big, elegant headphones provide both excellent comfort and superior sound. Large 1.6” “Turbo Bass” transducers deliver an uncommonly powerful bass range and a clean high end for unparalleled listening pleasure. The circumaural earphone design adds to low-end power. The unique AKG styling makes the K 55 an eye-catcher while low weight, soft circumaural leatherette ear pads, a self-adjusting headband, and flexibly suspended earphones ensure a secure, comfortable fit.

**K 66**
Elegant, genuine Hi-Fi stereo headphones, the K 66 combines excellent wearing comfort with superior sound and optimum price/performance. With the proven AKG self-adjusting headband, soft circumaural leatherette ear pads, low weight, and flexibly suspended earphones, the K 66 conforms perfectly to your head for a comfortably fit. Unique styling makes the K 66 an eye-catcher and the semi-open earphones provide an airy sound. AKG "Natural Sound" technology uses large, high performance 1.6” transducers to ensure superior sound quality for a perfect listening enjoyment.

**K 70**
The K 70 is a lightweight monitor quality headphone that offers many of the features found in AKG’s professional format headphones. Modern lightweight open back headphone with full bandwidth reproduction, self-adjusting headband, replaceable and washable ear pads—all in a semi-professional cost effective format. The K 70 offers premium audio quality at a price anyone can afford.

**K 100**
A brilliant sound performance, recyclable material construction, comfortable self-adjusting headband, changeable and easy-to-clean ear pads, changeable ASD filter, and an exclusive inner leather headband make the K 100 an outstanding headphone.

**K 270S**
Closed design, excellent isolation and low sound leakage. The patented Parabolic Transducer Array in the K 270S has two optimized transducers in each earcup, both precisely configured in a tuned enclosure to focus sound waves at the entrance to the ear. The result is a dramatically increased perception of spaciousness, extremely accurate response, and no audible distortion at output levels far beyond the capability of single transducer headphones. This, combined with the endorsed design, makes the K 270S an ideal choice in situations where quality monitoring is required in competition with high ambient levels, such as for live or studio drummers. A micro-switch built into the headband disconnects the audio circuit whenever the headphones are removed, preventing potentially damaging feedback or leakage when “hot” headphones are suddenly exposed to open microphones.
**K 301**
In the K 301, the oscillatory behavior of the diaphragm has been completely redesigned, with high internal attenuation suppressing unwanted partial oscillations. This has been made possible by a very finely structured diaphragm sound zone. Music lovers of any style will enjoy the highly accurate, balanced tonal response. Self-adjusting headband.

**K 401**
The K 401 provides everything rock and pop music fans want to hear: tight, powerful bass; crystal-clear sound quality; and impressive power. The low frequency performance is enhanced by the Varimotion System technology, resulting in a powerful overall sound. Self-adjusting headband.

**K 501**
The K 501s are concert hall headphones designed for lovers of classical music. The unique Varimotion System technology provides perfect spatial separation and an outstanding sound resolution, resulting in a superbly defined sound. Self-adjusting headband.

**K 1000 Automated Reference Listening System**

A standard for music lovers and sound purists throughout the world

Our sense of hearing detects depth and directional information in sound via a complex series of comparisons of what is heard by the two ears. Differences in sounds arrival time, as well as phase and frequency response, are used to determine where the sound is coming from. A stereo pair of loudspeakers provide this directional information for the listener. Conventional headphones make this process impossible; sounds appear on each side, but with no sense of space or depth. The K1000 was the first commercial headphone to produce the experience of proper depth and spatial orientation.

Highly accurate, close field reference monitor, the K1000 features a unique open air, radial magnet transducer to produce total acoustic transparency. Speakers are angled in parallel with the ears and do not touch them. Use as confidence monitors in acoustically inferior edit rooms. Standing waves, comb filtering, and reverberant fields are deleted from the mix perspective. Its open binaural design will not produce “in head localization”. Natural time delay from the speaker is heard in each ear, providing proper depth and spatial orientation.
AKG introduced the K 140 in 1974 and the K 240 Monitor in 1975, which became the most widely used headphones in recording studios and broadcast facilities worldwide. Generations of musicians and audio engineers use these AKG products to create great mixes, hit songs and albums cherished by millions around the world.

The new AKG Professional Studio headphones carry on the tradition of these audio tools and are a sound investment that will pay handsome returns with years of flawless sonic performance for professional recording engineers and demanding users of high quality home or portable audio equipment.

New XXL Transducers with Varimotion Diaphragm

The new XXL transducers use AKG’s patented Varimotion diaphragm to ensure extremely accurate response at any listening level. This technology creates a diaphragm that is thinner, more elastic toward the outside edges for more powerful bass response and thicker, less resonant in the center for pure, accurate mids and clear, detailed highs. The large size of the transducers makes the overall sound more lifelike and three-dimensional to capture the emotional and sonic content of your soundtracks.

Gimbal-type Suspension

A gimbal-type suspension makes sure the earcups of both supra aural and circumaural models will conform to the user’s ears without pressing on them. Thanks to this dynamic adjustment mechanism, you can wear the headphones for hours without feeling pinched by them.

Detachable Cable

The headphones utilize a detachable input cable for easy replacement if ever necessary. The cable and headphones use mini XLR connectors for perfect contact and secure connection. The cable is made of 99.99% oxygen-free copper and has gold-plated plugs on both ends including the screw-on 1/8” to 1/4” jack adapter for maximum signal transfer.

Self-Adjusting Headbands

To ensure your listening comfort, the Professional Studio headphones utilize a self-adjusting headband with a flexible steel structure to deliver optimum fit for your headphones without any fiddling. The structure is flexible, yet strong enough to allow bending for single ear use and is durable enough to withstand rough handling. A gimbal-type suspension ensures the earcups of all Professional Studio models will conform to the shape and size of your ears without pressing on them for hours of fatigues-free, comfortable listening.

Rugged construction, a non-twisting headband, and powerful sound allow you to use your headphones on a single ear only or wear them in any other way you may prefer. AKG Professional Studio headphones are ideal for DJ and live sound use because they are durable enough to withstand the roughest kind of handling during transport or on stage.

Perfect for Many Applications

You need good quality audio for all your listening applications— including computer, Minidisc, portable CD or DAT player – as well as in the studio. Owing to their high sensitivity and wide dynamic range, the Professional Series headphones are efficient enough to be used with these lower level output sources and still deliver the high definition sound you need when working in the studio or on stage.

For applications that require the performance and 600-ohm impedance of the original models, the famous K 141 and K 240 Monitors are still available with their fixed cables.

K 141 Monitor

A proven “workhorse” throughout the recording industry, the K 141M serves as the reference standard for supra-aural (on-the-ear) monitor headphone designs. A small coupling volume in the ear cup, combined with an “integrated semi-open” venting system behind the transducer, gives the K 141 M its trademark sound: punchy, accurate and crisply defined. The K 141 M will deliver high sound pressure levels without distortion and it is solidly built to withstand around-the-clock session use.

K 240 Monitor

A classic design which has become a standard in monitoring. The “integrated semi-open air” design incorporates a highly accurate dynamic transducer, and an acoustically tuned venting structure behind the element that produces a naturally open sound quality. The circumaural (around-the-ear) pads are designed for hours of wearing comfort, while the steel-cable, self-adjusting headband construction and single-sided pro quality audio interconnect ensure extended reliability in demanding studio applications.
K 141 Studio
The K 141 Studio is an updated version of the classic AKG K 141 Monitor, one of the world’s most popular models. Lightweight and comfortable, easy to use and listen to, the K 141 Studio features new XXL transducers with lower impedance for higher sensitivity and a more powerful sound. Supra-aural (on-the-ear) design combined with a semi-open vented system gives the K 141 Studio its trademark sound: punchy, accurate and crisply defined.

K 171 Studio
Designed specifically for monitoring in noisy environments, the K 171 Studio combines the benefits of a closed-back design with the lightweight and comfort of supra-aural headphones—an excellent choice for DJ and broadcast applications where no sound can bleed from the headphones into live microphones. Closed-back, loud and rugged design gives the K 171 a different low-frequency character than the K 141, yet maintains its comfort and flexibility.

K 240 Studio
An update of the “classic” AKG K 240 Monitor, the new K 240 Studio delivers even wider dynamic range and higher sensitivity than its well-known and widely used predecessor. The secret to the semi-open K 240 Studio’s sound quality is the new XXL transducers in acoustically tuned vented enclosures with circumaural (around the ear) pads. The circumaural pads envelope your ears nicely and reward you with smooth, solid bass and well-balanced, articulate mids and highs.

K 271 Studio
The K 271 Studio combines the benefits of AKG’s circumaural design for extreme comfort and a closed-back design for maximum isolation from ambient noise. Thanks to its XXL transducers it sounds clean, smooth and very rich. The K 271 Studio is the perfect choice for any application where sonic bleed could cause problems such as broadcast work. It also has a switch in the headband that mutes the audio just as soon as the headphones are taken off.

Digital Surround System

The HEARO 999 is a new reference for headphones monitoring. Many sound engineers, producers, and musicians use the same monitors for years so they become their definitive reference for assessing a mix. The HEARO 999 Processor allows you to take a familiar reference sound wherever you go so you can evaluate any mix meaningfully, no matter what monitors may be available on location. The beauty of this system is you can always tell whether a mix actually meets your own standards or not because the HEARO 999 Processor gives you the same familiar audio wherever you are, anytime. At last, you can carry your own proven reference monitor system with you that enables you to decide on your own whether a mix sounds good enough or not. The perfect choice for professional mixing, editing, overdubbing, etc. in the studio or on location.

Thinking of Buying a Headphone?

An indispensible tool for audio and video professionals, headphones provide a cheap, but excellent reference environment—the standard against which open-air room listening is judged. Audio reference monitoring is the most important tool producers have for deciding what changes to make to a track and for insuring consistency throughout a production in which narration, music and background audio may be recorded at different locations. By design, headphones eliminate the acoustic interaction with a room that can affect the recording of audio signals, and they reproduce exactly the sound that the audio engineer generated during the final mix-down of a recording or that the cameraman captured during the interview. Of course they offer the ultimate in portability. With a good pair of headphones, your sound will meet your standards wherever you go.

Excellent Acoustics and Great Value

Headphones reproduce sound so well because they have less air to move than do open-air speakers, and because they do it in a tightly controlled environment. Their sound quality can be five times better than that of speaker systems selling for the same price, or better yet a $200 set of headphones can have the same specifications for fidelity (frequency response, nominal impedance, sensitivity and total harmonic distortion) as room speakers costing $1000. In addition, headphones are a great value. They are basically small, low-power speakers, and they don’t contain expensive parts that can heat up and blow the way speakers do. Ultra high reliability is also the result of new materials and new manufacturing techniques.

The Makings of a Good Headphone

Many headphones, especially consumer ones are poorly engineered and use the cheap circuitry. Headphones are miniature speakers and miniature speakers require miniature power amps. For professional applications, the headphone amp should be a separate part of the amplifier. That’s because headphone amps and speaker amps require completely different specs for output power, damping factor, output impedance, slew rate and other variables. If the amplifier is not optimized for headphones, you will soon suffer from common problems like inner-ear fatigue and poor sound imaging. Poorly imaged audio will have no feeling of continuity from left to right, and no sense of depth or space.

Headphone Pad Design

Another headphone-related ailment is outer-ear fatigue. The outer ear is an amazingly delicate part of the body, and few headphones are designed with the long-term listener in mind. Even open-air foam pads can be annoying and painful when pressed against your ears for a while. The design of the headphone pads and the level of comfort they provide should be a deciding factor in your choice. Headphone ear cups generally come in three designs: "supra-aural" (the against-the ear or "open" design), "circumaural" (the around the ear or "closed" design) and inside-the-ear, or Walkman-style. Inside-the-ear headphones can be brutally uncomfortable for extended listening and are certainly a last resort for professional applications. They also feature some of the worst imaging and specs available.

Open-air supra-aural headphones don’t block out sound from the outside world and are a good choice if you need to listen for the phone while working. If you don’t want interruptions, buy close-ear, or "sealed", circumaural headphones—the type worn by most audio professionals for critical listening applications. Circumaural headphones also prevent audio "leakage", or the bleeding of sound into the mic while the headphones feed the listener. Enclosed headphones are ideal for while doing voice-overs for video work, because they prevent the original audio track from bleeding into the voice-over. The voice-over takes up a mixer track whose volume has to be separate from that of the background tracks captured with the video camera’s mic.
ATH-M2X / ATH-M3X
Mid-Size Dynamic Headphones

If listening to CDs through your headphones leaves something to be desired—like richness, accuracy and comfort—plug in the ATH-M2X or ATH-M3X. Designed to reproduce the wide dynamic range found in digital program materials, their high-performance drivers and low-mass diaphragms provide maximized power handling capability with improved frequency and transient response. The open-back ATH-M2X offers a clean, linear low-end, while the closed-back ATH-M3X is better for isolation and powerful bass. Both have soft cushioned earpads and an adjustable headband for hours of listening comfort. The M2X includes an 11.5” cable while the M3X includes a 9.8” cable with 3.5mm stereo mini-plug and 1/4” phone plug adapter.

ATH-M30
Full-Size Dynamic Headphones

Embodying AT’s latest transducer technology, the ATH-M30 offers sonic accuracy in a design engineered to provide maximum comfort for hours of listening. The ATH-M30 features a low profile, closed back design providing exceptional clarity and superior isolation in high volume listening situations. Extremely accurate, the headphone features 40mm drivers, neodymium magnets, CCAW voice coils and has a frequency response of 20Hz-20kHz. The ATH-M30 has a lightweight and adjustable cushioned headband for maximum listening comfort. In features a gold-plated stereo 1/8” (3.5mm) connector with strain relief and professional screw-on 1/4” adapter, and a sturdy, ultra-flexible 11” cable with single-side exit.

ATH-D40fs / ATH-M40fs
Precision Studiophones

AT’s Precision Studiophones deliver premium performance, long-lasting reliability and comfort for specialized uses. Built for power and precision with large 40mm diameter drivers, neodymium magnets and CCAW voice coils, they deliver 1600 mW of power handling and very high SPL capability while maintaining exceptional clarity and accuracy. They have adjustable padded headbands and sturdy, ultra-flexible strain-relief cables made of OFC litz wire, with convenient one-side exit. Circumaural earpieces provide maximum isolation, and can be rotated 180° to permit one-ear monitoring. The ATH-D40fs features an enhanced bottom-end response (from about 20Hz to 500Hz), making it ideal for use with predominantly low-frequency sound sources such as bass instruments and drums. The ATH-M40fs is designed specifically for professional monitoring/mixing, with a flat, extended low-frequency response to 5Hz that ensures accurate sound reproduction.

ATH-COM1/ATH-COM2
Ideal for hands-free voice-activated computer, multimedia and DJ applications, AT’s COM Series headsets offer excellent sound quality for monitoring and speaking or singing with a combination headphone plus dynamic microphone. Choose the ATH-COM1 for one-ear monitoring, or the ATH-COM2 with dual-earphone stereo sound and enhanced operator isolation. Both have neodymium dynamic microphones for crisp, accurate vocal pickup. The flexible mic boom, cushioned earpads and overall lightness provide added convenience and prolonged listening comfort.

BEYERDYNAMIC

HEADPHONES WITH MICS

DT-108 / DT-109
Single- and Dual Sided Headset with Noise Cancelling Unbalanced Mic

The DT-108 (single-muff) and DT-109 (dual muff) headsets are designed for live and remote broadcasting in studio, film and TV-applications. One side is open on the DT-108 to monitor ambient sound. The headphone transducers feature extended frequency response. The protective ear cap attenuates up to 20 dB of ambient noise. Adjustable, noise-cancelling microphone provides clear, audible speech transmission.

- Highly sensitive headphone and microphone transducers
- Excellent ambient noise attenuation
- Capable of handling very high SPL

DT-280 / DT-290
Single- and Dual Sided Headset with Hypercardioid Dynamic Microphone

The DT-280 and DT-290 are the benchmark for low-profile, studio quality, professional on-air headsets. Lightweight with fully modular construction for easy field servicing, these closed headsets are ideal for announcement or command purposes in broadcasting applications. They feature an efficient neodymium magnet system, precision reproduction and a balanced sound. They also have a wide 10Hz-30kHz transmission range and come with 80-ohm systems.

- Soft circumaural earcaps and the fully adjustable padded headband offer a high degree of wearing comfort.
- Dynamic microphone can be optimally positioned with the flexible gooseneck.
- Hypercardioid polar pattern guarantees high-gain-before feedback and noise cancellation.

DT-190
Dual-Sided Headset with Noise Cancelling Balanced Microphone

A closed headset with the addition of the DM-190 dynamic, hypercardioid microphone, the DT-190 is designed for broadcasting, monitoring and communications. Use it for commentating at sports events or for intercom systems at live concerts and other situations which require precise audio performance. The DM-190 is a balanced, noise cancelling microphone with high SPL capability. It is mounted on a fully adjustable boom allowing accurate positioning for optimum sound and minimal explosive “p” popping.

- Noise cancelling microphone and high SPL capability (97dB)
- Excellent isolation from ambient noise
- Modular design for easy servicing
- Ruggedly constructed

DT-297 PV
Dual Sided Headset with Hypercardioid Dynamic Microphone

The lightweight, closed DT 297 PV features an efficient neodymium magnet system, high reproduction precision and an optimized speech reproduction for an excellent intelligibility. Has a wide 10Hz-30kHz transmission range.

- Mic can be optimally positioned with the flexible gooseneck.
- Soft circumaural earcaps and the fully adjustable padded headband offer a high wearing comfort.
- The cables to the earcaps run safely in the headband
**DT-150**  
Dynamic Studio Headphone  
The DT 150 is a dynamic studio headphone for use in broadcasting, film and recording studios and other audio monitoring applications where size, comfort and performance are primarily requirements. Due to its closed design it features excellent ambient noise isolation for reference monitoring. The padded headband can be adjusted for any head size.
- High long-term wearing comfort
- Rugged construction
- Extended bass response
- Modular construction for easy servicing

**DT-250**  
Dynamic Studio Headphone  
The DT 250 is a stylish, closed dynamic headphone offering excellent ambient noise isolation and a linear response designed for reference monitoring. It is suitable for all kinds of professional environments including film, sound, ENG/EFP, and other audio monitoring applications where size, comfort and performance are the primary requirements. It features an efficient neodymium magnet system, reproduction precision and a balanced sound. The soft circumaural earcups offer a high degree of comfort and excellent ambient noise insulation. The padded headband is fully adjustable and can be adapted to each head size. The main connecting cable is single-sided with combination 1/4”/mini jack plug.

**DT-770 PRO**  
Stereo Studio Headphone  
The DT770 PRO is a closed, dynamic headphone designed for professional studio applications. The rugged headband construction gives the headphone a secure fit and the reliability that is required for daily use. Features a wide 5 Hz to 35kHz frequency response and 250-ohm supplied gold-vaporized 1/8” stereo plug with 1/4” adapter.
- Closed studio headphone, equalized to meet diffuse field EQ requirements
- Innovative bass-reflex-system
- Robust spring steel headband
- Single-sided cable
- Soft head-pad
- Gold plated mini stereo jack (3.5mm) and 1/4” adapter

**DT-831**  
Stereo Hi-Fi Headphone  
Closed back Hi-Fi headphones, the DT831 features an extremely strong neodymium magnet system with newly developed magnetic circuit of super-refined steel for natural dynamics. The neutral but direct sound characteristic is an essential feature that you normally would only expect from a headphone in open design.
- Improved acoustical figures due to new computer calculated ear cups
- Acoustically patented ear pads with viscose
- Excellent diaphragm construction eliminates unwanted resonance
- Powerful, distortion-free bass response even at high levels
- Coiled cable with gold-plated stereo mini jack and 1/4” adapter
- Easy servicing, all parts replaceable
FOSTEX THEATERPHONE HSM6240

Surround Sound for Headphones

With TheaterPhone, monitoring a surround sound mix doesn’t have to be restricted to studios with a 5.1 speaker setup. When access to loudspeakers is limited, you can still monitor in the “sweet spot” of a full multi-dimensional surround mix with sounds in front of and behind your head. The experience is as if speakers were mounted up on the walls and around you. In fact, you’ll take off the headphones the first time you hear it, just to convince yourself it’s not coming from the room.

TheaterPhone HSM 6240 features three types of virtual listening spaces approved by Dolby Laboratories: DH1 (reference control room), DH2 (livelier dubbing size room), and DH3 (larger theater-size room). Each room was meticulously modeled with impulse response measurements of real acoustic environments and combined with Lake Technology’s extensive experience with Binaural HRTF Virtual Reality research. The result is an innovative technology call Dolby Headphone technology—a revolutionary signal processing system that can take up to six channels of audio from any source and make it sound like it’s coming from six speakers placed in a real listening room. The “in your head” effect of stereo headphone listening is replaced by a spacious, natural 5.1 soundfield.

- Incorporates Dolby Headphone technology—a revolutionary signal processing system that can take up to six channels of audio from any source and make it sound like it’s coming from six speakers placed in a real listening room. The “in your head” effect of stereo headphone listening is replaced by a spacious, natural 5.1 soundfield.
- Realistic surround sound simulation on stereo headphones
- Supports stereo and 5.1 formats
- Choice of three listening environments
- 6 discrete input channels for five speakers plus subwoofer
- Post-processed stereo line outputs for headphone distribution amps
- 24-bit/48kHz converters
- Applications include surround sound monitoring, music production, audio post production, project studio surround, machine room monitoring, DVD quality checking, home theater and much more.
Unique RP Technology
Key to the excellent and superbly transparent sound reproduction is Regulated Phase Technology, a proprietary transducer and diaphragm design that has earned Fostex more than twenty international patents. This unique technology has been applied successfully to microphones, headphones and loudspeakers used and relied upon in professional and commercial sound installations worldwide. And in the case of the T50RP, technology has been enhanced still further in a new RP Diaphragm which uses copper foil etched polyimide film to provide superb resistance to high level input peaks of up to 3000mW.

Clarity of Sound
The headphones deliver supreme uncolored reproduction and a natural clear sound across the full frequency range. The highs sparkle, the mids are crystal clear and nothing is missing from the low-end. But it’s the sonic quality at high sound pressure levels (SPLs) which really sets these headphones apart. The bass is always powerful and distortion-free even at high levels. Essential when headphone monitoring in noisy environments such as ENG recording, DJ work, and where you need to concentrate on the program material. The leatherette padded ear cushions provide excellent sound isolation and superb deep bass reproduction.

Rugged Construction
Manufactured to the most exacting standards with durable, tough and rugged materials and components, RP Series headphones are built to last. They’re also built for comfort. Those padded ear cushions and wide, self adjusting headbands ensure maximum comfort and fit during extended wearing periods. A nice touch is the lockable, single entry jack which minimizes cord tangles and offers excellent serviceability. Whether you’re monitoring analog or digital audio sources, work in a professional or project studio, mixing live, or need a great pair of headphones for DJ applications, RP Series headphones simply do the job.

The T50RP—Why Is It So Special?
The T50RP utilizes a new development called an ‘RP Diaphragm’. This unique Fostex technology employs a copper foil etched polyimide film to provide resistance to high level input peaks of up to 3000mW combined with a neodymium magnet for high sensitivity and excellent transient handling. This combination lifts quality of the T50RP’s audio reproduction above that of the already superb T40RP and T20RP. In short, the T50RP offers perhaps the most natural and uncolored sound yet heard from a pair of studio headphones.

T20RP
Semi-open style—smooth vocal reproduction along with punchy low and well balanced mid/high frequencies
• Frequency Response: 20Hz - 30kHz
• Light weight for extra comfort
• Excellent transient characteristics
• Includes lockable 3m headphone cord
• Headpad supplied for extra comfort
• Ideal for professional use in commercial recording studios and DJ work

T40RP
Enclosed style for maximum feedback prevention and clear transparent reproduction of all audio frequencies
• Frequency Response: 20Hz - 25kHz
• Prevents feedback into the mic at recording sessions
• Includes lockable 3m headphone cord
• Headpad supplied for extra comfort
• Ideal for professional use in commercial recording studios and DJ work

T50RP
Damped semi-open style and unique RP technology result in extended low-frequency range plus crystal-clear mid and high frequency reproduction.
• Frequency Response: 15Hz - 35kHz
• Neodymium magnet for high sensitivity and excellent transient handling.
• Includes lockable 3m headphone cord
• Superb quality and perfect for commercial recording use
SAMSON

STEREO REFERENCE HEADPHONES

PH60
Designed to offer great sound in a lightweight, high style “see-through blue” design for personal stereo listening on the go, the Samson P60s use a special 34mm Mylar driver with an isotropic Ferrite magnet for a surprisingly big, open sound not typically found in these kinds of headphones. Their distinctive clear blue appearance also sets them apart.

RH100
Combining professional specifications, exceptional comfort and high quality audio at a very accessible price, the RH100 headphones from Samson also use a newly designed high performance transducer along with a high output neodymium magnet and leading-edge headphone circuitry. Engineered for comfortable listening over extended periods of time and natural, uncolored audio, the RH 100s sound great in any kind of studio and/or home music playback situation.

RH300
Offering unparalleled audio quality and a comfortable listening experience, Samson’s mid-line RH 300 headphones also benefit from the latest transducer technology along with a special driver and neodymium magnet. An open-ear design and specially designed acoustic mesh fabric provide an enhanced ambient listening experience while reducing listener fatigue. Endowed with a wide dynamic range and linear frequency response of 20Hz to 22kHz, these phones are ideal for any number of playback situations.

RH600s
The top-line model RH 600s use a specially designed, high performance driver with a thin, responsive 40mm diaphragm coupled with a high output neodymium magnet and sophisticated circuitry to provide true “reference quality” audio. Its ambient open-ear design with special acoustic mesh fabric ensures clear, transparent sound and a comfortable listening experience. The RH 600s also feature a very wide dynamic range and a linear frequency response from 20Hz to 22kHz for accurate, balanced audio reproduction.
Samson offers two different studio headphones for recording, monitoring and music listening applications: the CH 700 and CH 70 studio reference headphones. They feature a closed-ear design with a special mesh for clear, transparent sound. The CH 700 features sophisticated, high-quality ultra-thin and responsive 40mm Mylar diaphragm drivers with high-efficiency neodymium magnets for high output and superior audio quality. The CH 70 also employs 40mm Mylar diaphragm drivers with high-output neodymium magnets. Both headphones employ a wide dynamic range and linear frequency response from 20Hz to 22kHz for exceptional reproduction and a balanced, articulate sound.

**CH-70**

CH 70 headphones are ideal for any listening and monitor application where critical sound reproduction is needed. The closed-ear design provides maximum isolation reducing unwanted bleed that can be picked up on live microphones. The CH 70 employs exceptional 40mm drivers with ultra thin Mylar diaphragms and high-output neodymium magnets. The result is a wide dynamic range and linear frequency response from 20Hz to 22kHz for exceptional reproduction and a balanced sound making them a perfect choice for monitoring digital audio. The large earpiece further extends the low frequency response and the adjustable headband and lightweight design provide comfort and easy listening through the longest sessions.

**CH-700**

CH 700 headphones are ideal for any listening and monitor application where critical sound reproduction is needed. The closed-ear design provides maximum isolation reducing unwanted bleed that can be picked up on live microphones. The CH 70 employs exceptional 40mm drivers with ultra thin Mylar diaphragms and high-output neodymium magnets. The result is a wide dynamic range and linear frequency response from 20Hz to 22kHz for exceptional reproduction and a balanced sound making them a perfect choice for monitoring digital audio. The large earpiece further extends the low frequency response and the adjustable headband and lightweight design provide comfort and easy listening through the longest sessions.

**Sennheiser HDC-450 / PXC-250 Noise-Cancelling Headphones**

Experience high fidelity and comfort any time you travel with Sennheiser noise-cancelling headphones. Recommended for aircraft or other mass transit travel, these units feature active noise cancellation and to reduce ambient noise levels, along with Open Aire design to produce excellent sound quality in a high noise environment.

The PXC 250 is a closed, dynamic, supra-aural mini stereo headphone with NoiseGuard active noise compensation (attenuates frequencies below 1,000 Hz by up to ~15 dB). The headphones are foldable and come with a convenient belt pouch, making them an ideal travel companion.

- 1.8m Kevlar-reinforced OFC copper cable with 3.5mm jack plug, 1/4” stereo adapter and 3.5mm double mono (for airline audio)
- High-resolution sound due to Sennheiser “Duofol” diaphragms with spiral embossing
- Bass tube for powerful, punchy bass

An ultra-light, open-air active noise cancellation headphone, the HDC 451 incorporates Sennheiser’s exclusive NoiseGuard technology to reduce low frequency cabin noise by up to 10 dB. Allows you to listen at much lower and safer volume levels.

- Incorporates an in-line battery box that can easily be clipped to your clothing, proving ideal for portable applications.
Sennheiser’s Evolution Headphone Series offers today’s recording artists and musicians an alternative in high performance headphones. Combining outstanding clarity and performance with sleek, sophisticated design and a surprisingly affordable price point, the Evolution Series is the ideal choice for up-and-coming performers who have long sought to bring Sennheiser’s technical excellence and sound quality to their own home and studio listening environments. Consisting of three dynamic headphone units, the EH1430, EH2200 and EH2270 all offer durability, versatility and rich, full sound. All incorporate a 3.5mm stereo jack with a 6.3mm (1/4”) adapter.

- Bionetic Design - designed to fit the shape of the ear and head, the result is comfort for extended use
- Parts can be replaced easily
- DuoFol Diaphragms for clearer highs and more solid bass response than standard diaphragms. DuoFol diaphragms also offer lower distortion

**EH1430**
The Evolution EH1430 is an open-air, stereo headphone that can be connected to both Hi-Fi systems and personal stereos (CDs, DATs, DCCs, etc.). Ideal for rock and pop music listening, the EH1430 delivers 22Hz-20kHz frequency response and excellent bass response in a supraural design.

- Open-air, dynamic stereo headphones
- Matte black finish
- 9’ highly conductive OFC cable with 1/8” stereo jack and 1/4” adapter
- Replaceable ear cushions
- 2-year warranty

**EH2200**
The Evolution EH 2200 is a closed, hi-fi stereo headphone that can be connected to both hi-fi systems and personal stereos (CDs, DATs, DCCs, etc.). Ideal for DJ monitoring, the EH2200 creates superb sound reproduction with powerful bass in a circumaural design.

- Closed, dynamic stereo headphones
- Very lightweight for extended use
- Award-winning BioNetic design offers an ergonomically correct fit for maximum comfort
- DuoFol technology which fuses two diaphragm materials to virtually eliminate standing waves in the capsule
- Detailed sound reproduction with excellent bass response
- Significant reduction in ambient noise levels, decreasing sensitivity to feedback
- Single-sided, detachable, kevlar-reinforced OFC signal cable
- Fully modular design with replaceable parts for long life

**EH2270**
The top of the Evolution Headphone Series, the EH 2270 is designed for playback in recording applications. It’s closed-cup, circumaural ear couplings provide total isolation, while its frequency response of 12-22,000 Hz makes it a great choice for performers and recording engineers in critical listening situations.

- Closed, dynamic stereo headphones
- Award-winning BioNetic design offers an ergonomically correct fit for maximum comfort
- Neodymium magnets for powerful dynamics and high sound pressure levels
- DuoFol technology which fuses two diaphragm materials to virtually eliminate standing waves in the capsule
- Revolutionary damping element for controlled diaphragm oscillation
- Single-sided, detachable, kevlar-reinforced OFC signal cable
- Fully modular design with replaceable parts for long life
- 2-year warranty
Open-Aire Dynamic Hi-Fi Stereo Headphones

Employing Sennheiser’s famous Open-Aire construction and featuring high performance capsules, each 400 Series model is an especially good value in a full-sized headphone.

**HD 457**
- Enjoy music at home or on the road - the HD 457 deliver wide dynamics, excellent stereo sound and warm bass for fusion, soul, funk and percussion. Convenient wind-up clip for on-the-go use.
- Open-Aire, dynamic, supraural hi-fi stereo headphones
- Ideal for home mini hi-fi systems and mobile audio sources such as CD, MiniDisc and MP3 players
- Very comfortable to wear due to ultralightweight design
- Rugged outdoor design with extremely flexible headband

**HD 477**
- These open, dynamic hi-fi stereo headphones with clear, transparent sound and powerful bass reproduction are ideal for rock and pop music. Mix a trend-setting design with superlative audio and the result is the HD 477. Impress even the most discerning ear with clear, well-defined sound and a wide dynamic range. Lightweight and comfortable, you may never want to take them off! Robust design with detachable signal cable - a durable companion for any application.
- Completely new ergonomic design
- Extremely lightweight and comfortable
- Clear dynamic sound with enhanced bass response
- 3 m highly conductive OFC copper cable
- Replaceable fabric-covered ear cushions
- 2-year warranty
- Clear sound and rich warm bass makes the HD457 ideal for soul, funk, percussion and fusion

**HD 490**
- This open, supra-aural, dynamic hi-fi stereo headphone is ideal for hi-fi and portable systems. It’s acoustic properties create superb sound reproduction with powerful bass. With its ultra-light BioNetic design (headphones adapt to the shape of your head) and a dampening technique (controls diaphragm oscillation), the HD 490 is an ideal choice for the most discerning music lover.
- Detailed sound reproduction with powerful bass
- Detachable, single-sided signal cable made from highly conductive OFC copper
- Duofol diaphragms to reduce standing waves
- Suitable for all types of hi-fi equipment, especially digital sound sources
- High-efficiency drivers - great for use with portables
- Detachable OFC copper cable
- Two year warranty

**HD 497**
- The HD 497 open, dynamic hi-fi stereo headphones deliver crystal-clear, well-defined trebles and absolute precision across all audio frequencies. Delivers crystal-clear, well defined highs and absolute precision across all frequencies. With a warm, natural, detailed sound image they not only give a brilliant performance on Hi-Fi systems, they will also bring your portable player to life! Ideally suited to all types of music.
- Completely new ergonomic design
- Extremely lightweight and comfortable
- Extended frequency response and warm, natural sound reproduction
- High-efficiency drivers - great for use with portables
- Detachable OFC copper cable
- Two year warranty
Designed for professional and critical listening situations, the 500 and 600 Series headphones exhibit full frequency response and exceptionally transparent sound reproduction. They all feature a computer-optimized magnet system that minimizes harmonic and intermodulation distortion, exceptionally natural, spatial, and accurate sound, and detachable Kevlar reinforced OFC copper cable.

**HD 580**
A high-end open, dynamic HiFi professional headphone, the HD 580 is ideal for professional recording engineers, specifically those recording classical music, because it offers exceptionally natural, spatial, and accurate sound. The advanced design of the diaphragm avoids resonant frequencies. In every respect, this is a headphone of exceptional quality.

- Extremely lightweight aluminum voice coils ensure excellent dynamic response
- Neodymium ferrous magnet system ensures optimum sensitivity and great dynamic response

**HD 590**
Exemplifying Sennheiser’s BioNetic headphone designs, the HD 590 offers a virtually unsurpassed combination of comfort and performance in an open, dynamic stereo headphone. With a weight of just 9.4 ounces and a sophisticated design the HD 590 is an ideal choice for the professional monitoring of classical music recordings.

- Audiophile, Open-Aire, hi-fi stereo headphones
- Award-winning BioNetic design offers maximum comfort
- Duofol technology reduces standing waves
- Dampening element for controlling the diaphragm oscillation, optimally matches the headphones to all sound sources
- Velour ear cushions

**HD 600**
The HD 600 is an audiophile quality open dynamic hi-fi/professional stereo headphone. The advanced diaphragm design eliminates standing waves in the diaphragm material. The HD 600 can be connected directly to hi-fi systems of the highest quality, in particular DAT, DCC and CD players. This headphone is an ideal choice for the professional recording engineer recording classical music.

- High-quality open metal mesh earpiece covers for an extremely transparent sound
- Extremely lightweight aluminum voice coils ensure excellent transient response
- Neodymium ferrous magnet systems ensure optimum sensitivity and an excellent dynamic response

**HD 500 Fusion**
Creating a buzz among listeners of jazz, funk, rock and hip hop, the HD 500 fuses improved audio technology with a BioNetic design that offers unsurpassed comfort. Duofol diaphragms and special damping elements ensure a warm, yet transparent sound reproduction.

**HD 570 Symphony**
Perfect for the demanding classical or jazz aficionado who wants superb sound. The HD 570 has all the refinements: a combination of Duofol diaphragms, lightweight voice coils and innovative damping elements to ensure wide dynamics, fast transient response and a smooth, spatial sound reproduction. The unique BioNetic design ensures many hours of exceptional comfort.
900 MHz Wireless Headphones

Now musical enjoyment knows no limits: Sennheiser’s cordless headphones free you from the restrictions of a headphone cable, delivering quality sound through walls and ceilings. The RS Series not only features dynamic sound reproduction and low noise, but also offers truly innovative design and exceptional comfort. They can be automatically recharged when stored on the transmitter. Each system easily accommodates multi-users, simply by purchasing additional headphones.

RS 30

Transparent, balanced sound makes this system an ideal choice for rock and pop music. The ideal entry into the world of cordless sound. The RS 30 wireless RF system with Open-Aire supraural headphones offers accurate sound reproduction for “live” effects and a punchy bass response. Its transparent and balanced sound makes this system an ideal choice for rock and pop music. The ideal entry into the cordless world of sound.

RS 45

Wireless RF headphone system featuring Center Lock auto tuning, spatial sound reproduction and solid bass response. The RS 45 wireless RF system with Open-Aire supraural headphones features warm, spatial sound reproduction with powerful bass response. The transmitter automatically recharges the battery when the headphones are placed on the base unit. Center Lock auto tuning ensures hassle-free, comfortable listening.

RS 65

Wireless RF headphone system with Center Lock auto tuning and transparent, balanced sound. A switchable SRS processor turns the RS 65 into a surround sound headphone system— and a TV film into a true home theater experience. The circumaural RS 65 delivers extremely transparent, balanced sound. Velvet-like ear cushions, very light weight and Center Lock auto tuning make listening a pure pleasure. Music recordings will benefit from truly outstanding sound, immersing the listener in a real concert hall atmosphere.

RS 85

Top-of-the-line wireless RF headphone system features “HiDyn plus” noise reduction for ultra-quiet transmission, extended frequency response and unparalleled sound reproduction. Includes Center Lock auto tuning. The ultimate in wireless headphone listening! The RS 85 wireless RF system with Open-Aire circumaural headphones features “HiDyn plus” noise reduction (used in professional wireless microphone systems) for ultra-quiet and superb sound quality, ensuring a very natural and detailed sound reproduction. Includes Center Lock auto tuning.

Optimized for reference studio monitoring, these headphones feature closed construction for maximum isolation and incredibly full response. They not only shut out ambient noise, but have also set the standard for natural sound.

**HD 202 / HD 212 PRO**
The HD 202 and HD 212 Pro are closed, dynamic hi-fi stereo headphones with good insulation against ambient noise and a deep bass response that make them ideal for DJs or anyone who likes to listen to modern, powerful music without disturbing others. They offer high efficiency drivers for maximum performance.

- Earcups can be removed from the headband
- Specially designed damping perforation ensures powerful bass response
- Lightweight diaphragm material with “turbine” embossing for low bass
- High levels and crisp bass for modern rhythm-driven music
- Comfortable, ultra-lightweight design
- Replaceable leatherette ear pads
- 2-year guarantee

**HD 202**
- Powerful neodymium magnets and lightweight diaphragms for high sound levels
- Clips to the belt: convenient cord take-up for adjusting cable length

**HD 212 Pro**
- Extra-thin diaphragms for precise trebles
- Well defined mid-band and spatial sound reproduction due to foam damping element

**HD 25**
Perfect for ENG, sound reinforcement, studio monitoring, and many other applications, the HD 25 is a closed dynamic compact professional monitoring headphone that offers high attenuation of background noise. Capable of handling very high sound pressure levels and featuring extremely robust construction, the HD 25 performs exceptionally well in high noise environments.

- Very good attenuation of background noise
- High sensitivity
- Low weight
- Comfortably fitting adjustable headband
- Detachable single-sided connection cable
- Frequency response: 30-16,000 Hz
- Impedance 85Ω; Sensitivity is 100 dB

**HD25SP**
A compact, closed back dynamic headphone, the HD 25SP offers high attenuation of background noise, extremely robust construction, and is capable of handling very high SPLs (Sound Pressure Levels), making it ideal for use in noisy environments. The HD 25SP is a lightweight and comfortable alternative for those who spend a great deal of time wearing headphones and need maximum isolation. While extremely rugged, the HD 25SP ensures an accurate response for critical studio recording and mixdown applications. The low impendence, high sensitivity drivers exhibit unparalleled efficiency, providing sufficient volume even in applications that have classically required an additional headphone amplifier.

- 30Hz - 16kHz frequency response
- 85 ohms nominal impedance
- Adjustable headband ensures optimum fit for each user’s taste
- Sensitivity is 100dB
- 10’ single sided steel cable with a 1/8” to 1/4” stereo phone plug
- Two year warranty on parts and labor
HD250II
A dynamic HiFi/live sound recording headphone, the HD 250II is extremely popular with live sound recording engineers and hi-fi enthusiasts alike. The HD 250 II is a closed headphone with the feel of an open design. Their precise sound reproduction, excellent THD and wide dynamics will keep you spell-bound!

- Excellent THD
- Wide dynamics
- Frequency response: 5 – 40 kHz -10 dB;
  10 – 25 kHz -3 dB

- Transducer principle dynamic, closed
- Nominal impedance 300 Ω
- Characteristic SPL at 1 kHz 94 dB
- Load rating 200 mW

HD265 Linear
The closed HD 265 dynamic stereo headphone is excellent for critical studio listening as well as for professional monitoring applications. The circumaural design combined with the sealed principle deliver a totally quiet listening environment, perfect for professional monitoring applications. The HD 265’s lightweight, copper-coated aluminum drive coil in conjunction with the dual layer “Duofol” diaphragm offers amazingly precise sound reproduction with superb bass response. Large, leatherette earpads provide maximum isolation from ambient noise while allowing maximum extended comfort.

- 10Hz- 25kHz frequency response
- 150 ohms nominal impedance
- Sensitivity is 97dB
- Fully adjustable, padded headband.

- Two year warranty on parts and labor
- 10’ OFC (oxygen free copper) cable with a 1/8” to 1/4” gold-plated stereo phone plug.

HD 270
The closed, circumaural HD 270 stereo monitoring headphones can be connected to both hi-fi systems and personal stereos (CDs, DATs, DCCs, etc.). Designed for playback in recording applications, the headphone provides total isolation, while its frequency response of 12 - 22kHz makes it a great choice for critical listening situations.

- Neodymium magnets for powerful dynamics and high sound pressure levels
- Duofol Technology reduces standing waves
- 10’ single-sided, kevlar-reinforced OFC cable
- Fully modular design with replaceable parts for long life

HD 280 Professional
Designed to exceed the demands of the professional environment, the closed, circumaural HD 280 boasts extremely robust construction combined with extensive features that meet the requirements of today’s most demanding applications. The unique collapsible design combined with swiveling ear cups, offers maximum flexibility in any application.

- Accurate, linear sound reproduction for critical monitoring applications
- Optimum impedance ensures universal compatibility
- Collapsible, rotating earcups
- Up to 32 dB of ambient noise attenuation
- Neodymium magnets for high max. SPL
- Single-sided, coiled cable with 3.5mm mini jack with locking 1/4” adapter
- Rugged construction with user-replaceable parts
- 2 year warranty
SONY

STUDIO MONITOR HEADPHONES

All Sony Studio Monitor Series Headphones incorporate high-end materials and advanced engineering to deliver critically clean, exceptionally clear sound for professional and high fidelity applications.

MDR-V600

Designed for high-end studio applications, the MDR-V600 features a circumaural earcup design, 40mm Aura-Nomic driver, Neodymium magnets, CCAW voice coil, reversible earcups, gold-plated plugs, cushioned headband and a folding design.

- Circum-aural earcup design in the natural shape of the human ear positions the driver unit at a correct distance from the ear canal and creates a sealed resonance chamber over the earlobe itself, reducing pressure on the ear for a more comfortable fit, especially during extended listening sessions.
- 40mm Aura-Nomic designed driver is positioned within the earcup at an angle which directly corresponds to the angle of the opening of the ear canal for the most natural listening experience possible.
- 1000 mW power handling for professional applications; use at high output levels
- Uses Neodymium magnets for maximum energy and minimum size
- Gold-plated plugs resist corrosion for high conductivity and low noise
- Reversible earcups enable single-sided monitoring flexibility
- Cushioned headband adds to wearing comfort and a better overall fit. Provides comfortable listening for hours on end.
- Single-sided OFC cable and gold plated Unimatch plug provides both 1/8˝ mini-jack and 1/4˝ TRS phono connectivity
- Folding design for easy storage.

MDR-V900

Sony's highest-performance studio headphone, the MDR-V900 features a circum-aural earcup design, 50mm Aura-Nomic driver, Neodymium magnets, 3000 mW power handling, and an Amorphous Diamond Evaporated Diaphragm for much more natural sound.

Same features as the MDR-V600 PLUS—

- 50mm Aura-Nomic designed driver
- 3000 mW power handling
- Class 1 oxygen-free copper (LC-OFC) connecting cord for maximum conductivity
- Amorphous diamond evaporated diaphragm stiffen the drivers to maximize their tonal qualities while minimizing additional weight for much more natural sound

MDR-CD580 Digital Reference Headphones

A high-quality closed-front open-back headphone, the MDR-CD580 features large 40mm drivers and Neodymium magnet for deep bass, wide dynamic range and frequency response. Also offers a double-band headband, UniMatch plug adapter and detachable cable.

- 40mm drivers provide deep bass, low distortion and wide dynamic range. Frequency response extends all the way from a low 10Hz to 25kHz.
- Aura-Nomic design positions the earpads in accordance with the angle of the head.
- Anti-Resistant ABS Resin Baffle Board minimizes resonance to produce purer sound
- Neodymium magnet for maximum energy in a minimum size.
- Detachable OFC cable and gold plated Unimatch plug for 1/8˝ mini-jack and 1/4˝ TRS phono connectivity
- Self-adjusting double-band headband provides a customized fit and increased comfort
- Cloth earpads are removable and washable

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
SONY

STUDIO MONITOR HEADPHONES

MDR-CD780

Digital Reference Headphones

A high-quality closed-front open-back headphone, the MDR-CD780 features large 50mm drivers and Neodymium magnet for superb audio performance. For convenience, it offers 25mm thick Urethane earpads, double-band headphone and a detachable cable.

Same features as the MDR-CD580 PLUS—

◆ 50mm drivers — larger than many headphones — delivers deep bass, low distortion and wide dynamic range. Frequency response extends all the way from a low 5Hz to 30,000 Hz.
◆ 25mm thick Urethane earpads distribute pressure evenly around the ear for exceptional comfort over extended listening sessions

MDR-CD2000

Digital Reference Headphones

In addition to large 50mm drivers and Neodymium magnet for superb audio performance, the MDR-CD2000 incorporates a Bio-Cellulose diaphragm blended with Vectran to enhance natural sound reproduction. 25mm thick Urethane earpads ensure exceptional comfort.

Same features as the MDR-CD780 PLUS—

◆ Bio-Cellulose diaphragm blended with Vectran enhances natural sound reproduction

MDR-CD3000

Digital Reference Headphones

The top-of-the-line, the MDR-CD3000 has a large circumaural design, floating ear cup system, organic diaphragm and earcup housing, and a unique earpad design to deliver performance so superb, it is matched only by the perfection of digital sound itself.

Same features as the MDR-CD2000 PLUS—

◆ Super-large 50mm drivers with CCAW (Copper Clad Aluminum Wire) construction for increased power handling capacity, light weight and superior frequency response
◆ Natural fiber Bio-Cellulose diaphragm is organically grown for enhanced sound velocity and natural, delicate music reproduction
◆ Floating earcup system improves resonance characteristics and sonic performance
◆ Organic fiber composite earcup housing provides a personal concert hall for the ear with high resonance suppression for pure, natural sound reproduction
◆ Voice coil with CCAW (Copper Clad Aluminum Wire) construction for high sensitivity
◆ Litz Wire connector cord made of 6N oxygen-free copper, provides exceptional conductivity for maximum signal transmission and clearer sound reproduction
◆ Large-sized circumaural design provides an excellent fit for any size head and hours of tireless wear.
◆ Unique earpad design uses a collagen-like material for a natural feeling of comfort

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

MDR-7502

Designed for a broad range of applications, for general sound monitoring in the studio or the field. The rugged MDR-7502 is a high quality, low-cost alternative to consumer headphones.

- 60Hz–16kHz frequency response
- 45Ω impedance
- Sensitivity is 102dB
- 30mm driver unit delivers clear, high quality sound reproduction.
- Closed-ear design for comfort and reduction of external noise interference.
- Gold connectors and OFC cord - reliable and stable signal connection and transmission.
- Stereo uni-match plug - 1/4” and 1/8” applications.

MDR-7505

The MDR-7505 is a professional stereo headphone designed to meet the needs of professional musicians, broadcasters and DJs on a budget. Their durable and flexible design makes them ideal for recording, control room and live DJ applications.

- Swivel mechanism allows for various wearing positions
- Acoustically sealed ear-cup allows for easier listening in loud environments.
- 40mm driver
- Neodymium magnet for powerful bass and clear highs
- Gold-plated, uni-match connector for universal compatibility with desk top and portable devices.
- Convenient folding design for easier portability
- Extendible, LC-OFC coiled cord for low-loss signal transmission.

Due to its low impedance, the closed ear MDR-7506 does an outstanding job of cutting down background noise while providing plenty of volume in the studio or field. Ideal for use with MIDI workstations, camcorders or other equipment with less than powerful amplification.

- 15 to 18kHz frequency response
- 63 Ohms impedance
- Sensitivity is 106dB
- Rugged design - proven to be reliable in the toughest situations.
- 40mm driver unit for clear, high quality sound reproduction.
- Folding construction - compactness in storage.

The MDR-7509 is a high-quality stereo headphone for critical and demanding professional applications, including studio and broadcast monitoring.

- Circum-aural design covers the entire ear for tight acoustic seal and extreme comfort.
- 5–30kHz wide frequency response
- 50mm drivers for superior bass response and low distortion.
- Neodymium magnet for superior bass response and sensitivity Amorphous diamond evaporated diaphragm provides natural sound reproduction.
- Self-muting mechanism prevents leakage when headphones are taken off.
- Reversible ear-cup design allows single-sided monitoring.
- Gold-plated uni-match plug, with 1/4” and 1/8” adapters
- Convenient folding design
- Coiled LC-OFC cord for low signal loss.
**SONY NOISE CANCELING HEADPHONES**

With these headphones you can actually reduce noise by up to 70% when noise canceling circuit is switched on. Noise canceling circuit actually senses outside noise with built-in microphones and sends an equal-but-opposite canceling signal to the headphones. Cancels noise from 50Hz to 1000Hz, with a maximum of 10dB noise cancellation in the critical range from 100 to 400Hz -- where the human ear is super-sensitive.

### MDR-NC5

By reducing outside noise by more than 70%, the MDR-NC5 lets you block out noise, listen to music, or do both at once! Ideal for sleeping on planes, trains or buses. Equally great for outdoor use, either walking on a noisy street or gardening in your yard.

- 30mm diameter driver delivers deep bass down to 30Hz; provides outstanding dynamic range
- Uses Neodymium magnets for maximum energy and minimum size.
- Open-air headphone design provides lightweight comfort, hour after hour.
- Up to 46 hours on a single AAA battery
- Folding headband and pivoting earpads allow easy storage in a briefcase or purse
- Noise canceling On/Off switch with LED indicators. Headphones continue to function for music listening even when noise cancelling is off.
- Includes a carrying pouch and airline plug adapter for compatible in-flight audio systems

### MDR-NC10

The MDR-NC10 reduces outside noise by more than 70%, letting you block out noise, listen to music, or do both at once! Similar to the MDR-NC5, the MDR-NC10 uses a snug, yet comfortable Fontopia in-the-Ear design eliminating the need for headphones.

- Fontopia in-the-ear design fits snugly, yet comfortably inside the ear - eliminating the headband, so you can enjoy music while you're really moving - while exercising, skating or dancing.
- Hot-line switch to temporarily admit outside sound.
- Additional noise reduction thanks to the structure of the headphones, which serve to physically block outside noise.

### MDR-NC20

Incorporating noise canceling circuitry and a closed headphone design, the MDR-NC20 provides even greater isolation from outside sound. Block out noise, listen to music, or do both at once!

- 30mm diameter driver delivers deep bass all the way down to 16Hz; provides outstanding dynamic range.
- Closed headphone design provides even greater isolation from outside sound.
- Folding headband and pivoting earpads allow storage in a briefcase or purse.
- Detachable input cord to connect an audio source and listen to music.
- Noise canceling On/Off switch with LED indicators. Headphones continue to function for music listening even when noise cancelling is off.
- Gold-plated miniplug provides exceptional corrosion resistance, superb conductivity and low noise.
- Up to 45 hours on a single AAA battery.
- Includes a carrying pouch and airline plug adapter for compatible in-flight audio systems.
**Behringer HA4600 Powerplay Pro**

**4-Channel Stereo Headphone Amplifier**

Developed for the most demanding broadcast, digital production and professional recording applications, the HA4600 is ideal as a reference unit to assess the quality of a final mix, and as a distribution amplifier for the addition of playbacks in studio use. The HA4600 offers premium sound quality even at maximum volume and houses four independent high-power stereo amplifiers each with a stereo aux input, mono/stereo and left/right mute switches, balance and volume controls and more, plus numerous master features, in a single rack space.

- Three outputs for each channel (one front, two rear) enable connection of up to 12 headphones.
- Ultra musical 2-band EQ per channel
- Independent input/aux sections provide up to four stereo mixes.
- Stereo aux inputs for each channel permit the inclusion of additional sound sources.
- Adjustable direct in on the front panel for additional stereo signal source.
- Paralleled main outputs allow cascading of several HA4600’s
- 8-digit LED output meters for each channel enable precise level control.
- Servo-balanced, gold-plated XLR and 1/4” TRS inputs and outputs
- Balanced loop through XLR connectors are mic/line switchable. A 30dB pad attenuates loud line level sources.
- 1/4” and 3.5mm stereo jacks
- Powered by 9v battery or external 12-24v DC power supply.

---

**Shure FP-22 Headphone Amplifier**

The FP-22 is a battery-powered stereo headphone amplifier that provides headphone feeds from any audio input source. It has the unique capability of monitoring mono, stereo and mixed mono and stereo inputs. It monitors and combines these signals in the headphones without affecting the original signal. With 81dB of gain, it can monitor a wide range of signal sources in many different configurations. Ideal for field production, studio recording and trouble shooting applications.

- Loop through 1/4” stereo phone jacks (can be internally switched to become separate left and right inputs).
- Overall headphone balance control, overall stereo/mono switch for headphones.
- Independent control of headphone volume as well as loop-through volume
- Balanced loop through XLR connectors are mic/line switchable. A 30dB pad attenuates loud line level sources.
- 1/4” and 3.5mm stereo jacks
- Powered by 9v battery or external 12-24v DC power supply.

---

**Fostex PH-50 Headphone Amplifier**

The PH-50 is a remarkably quiet headphone DA (distribution amplifier). Each output has its own amplifier as well as its own level control - so individual requirements can be met with ease. Multiple PH-50s can also be cascaded to handle a large number of listeners making it ideal for orchestral, multimedia, education and trade show applications.

- 5 headphone outs - each with its own amplifier
- Each input routes to its direct output, plus Aux 1 source (cue feed)
- Multiple inputs: balanced XLR, phone, unbalanced RCA jacks
- +4dBu or -10dBV switchable for balanced inputs
- Individual level controls with peak reading LED
- Stereo or mono input select
- Cascade inputs & outputs for ‘daisy chaining’ units
- Aux In with level control for cue feed from main mixer
- Freq. response is 30Hz - 20kHz
RANE/SAMSON

HC-4

Four Stereo Headphone Amplifier

Four people want to listen to the same mix under headphones. Simple, just take the HC 4, plug in, turn on, adjust your individual volumes, and groove.

- Master stereo Inputs which can be used to drive the four stereo headphone amplifiers.
- A Mono switch is provided on the front panel to drive both channels of all four amplifiers from a common mono source.
- Delivers up to 200 milliwatts into headphones with rated impedances between 32-600 ohms (depends on the exact impedance of the headphone in use and the number of headphones connected to the unit).
- Under most conditions, the HC 4 produces sound pressure levels in excess of 120 dB. This level is more than adequate for most listeners.

HC-6 Six Stereo Headphone Amplifier

Master stereo Inputs which can be used to drive any or all of the 6 stereo headphone amplifiers. A Mono switch is provided on the front panel to drive both channels of all 6 amplifiers from a common mono source.

- Six individual unbalanced stereo inputs are available to drive any individual amplifier from a separate stereo source.
- Under most conditions, the HC 6 produces sound pressure levels in excess of 120 dB. More than adequate for most listeners.
- Outputs for all six channels are provided on the front panel and on the rear panel.
- Two pairs of headphones may be driven from each channel.
- Inputs can be converted to mono balanced Inputs through internal jumpers if required.
- Delivers up to 450 milliwatts into headphones with rated impedances between 32-600 ohms. The precise amount of power depends on the exact impedance of the headphone in use and the number of headphones connected to the unit.

Samson S•Phone

Four-Channel Headphone Mixer/Amplifier

The S•Phone is a versatile single rack space four channel headphone amplifier, loaded with advanced features that provide tremendous flexibility for monitor and cue mixing. The Master Input features an input level and LED meter to control and display the overall stereo input. A convenient Stereo Auxiliary input is provided on each channel allowing individual line signals from direct or buss outputs to be mixed with the main stereo input. A Balance control adjusts the ratio of the Main and Auxiliary signal or the left to right balance (based on the setting of the ST/2CH switch) so that each headphone mix can be further tailored for a particular listener’s individual needs (“More Me”).

- Two master stereo inputs plus stereo link output
- 8-segment LED metering on each channel and master
- 2-band EQ on each of the four channels
- Three headphone outputs per channel (one front and two rear panel) with an overall volume control and individual level meters.
- Auxiliary input with balance control provides four channels of “More Me” mixing
- Mute and Stereo/2-channel mode switches on each channel
- Maximum output power on each channel (regardless of headphone impedance)
- Three-year warranty

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
ROLLS

HEADPHONE AMPLIFIERS

HA-43
4-Channel Headphone Amp
The HA43 is for expanding or generating headphone channels. It has a 1/4” stereo input, 4 volume controls, 4: 1/4” stereo output jacks and is powered by an AC adapter (included). The HA43 has a 20Hz - 20K Hz response, small size, and is very easy to use.

PA-71
7-Watt Amp
The PA71 Plus mixes an XLR microphone signal with stereo (mixed to mono) RCA signals. The combined signal is sent to spring loaded output terminals via a seven watt power amplifier. The unit also features a 1/4” Line/Powered output. The XLR input features switchable 12v DC phantom power. This PA-71 PLUS is ideal for small room applications where a simple mix of a mic with a cassette or CD player is needed.

RA-53 5-Channel Headphone Amplifier
The RA53 is a five-channel headphone DA (distribution amplifier) with a variety of input options. There are four different ways to send a master mix to the RA53; Discreet 1/4” Right and Left inputs, Right and Left RCA jacks, a 1/4” stereo TRS plug connected to the Right input, or a 1/4” mono TS plug connected to the Left input. In addition to the four master mix input configurations, three separate mixes can be monitored using the main inputs and the two Insert jacks on Channels 1 and 2. Inserting a 1/4” TRS jack into Inserts 1 and/or 2 interrupts the master signal, sending different mixes to Channels 1 and 2, leaving the master mix on Channels 3 through 5.

RA62HA 6-Channel Headphone Amplifier
The RA62HA is a six-channel headphone amplifier for high quality audio monitoring. Since the Mono/Stereo switch is after the pan control, it will mix 2 Mono signals and their balance can be adjusted with the Pan control. Up to six individual monitor mixes may be listened to via the rear panel insert jacks. There are two auxiliary inputs (right and left) on the rear panel.

◆ 6 Headphone outputs with level controls
◆ 6 Insert jacks for separate use of channels
◆ Up to one-half watt output per jack
◆ Stereo/Mono switch allows mixing 2 mono channels
◆ Front and rear input jacks
◆ DC to 30khz response for accurate sound
**PM52**  
**Headphone Tap**

The PM 52 is for connecting headphones to a speaker line. The 1/4” mono/stereo loop jacks are for connecting many boxes in series. There are two headphone jacks and volume control. The PM 52 uses the speaker line signal for power, and uses no batteries.

---

**HM Series**

The HM Series headphone mixing system offers a great-sounding, cost-effective and flexible way to provide custom monitor mixes in recording and live sound environments. The combination of unique functions and signal processing add functionality and convenience to any single or multiple-user monitoring application. The system provides each musician with six volume controls: four monaural (for mixer channels or busses), plus one for an overall stereo mix and one for a stereo effects return.

- The HM 60 master unit can stand alone or serve as a front end for HM 59 and/or HM 58 remotes.
- The remotes come with a 25’ DB25 MF cable and can be “daisy chained” around the stage or studio as desired. The DB25 cable is a standard 25 pin computer serial cable and is available in several lengths.
- The HM 60, HM 59 and HM 58 units are ideal as low distortion headphone drivers for the most critical listening situations.
- The HM 57 Headphone Monitor interface provides an inexpensive solution for getting the audio out to the HM 59 and HM 58 Remotes.
- They have mixing capabilities, as well as important signal processing functions to provide a clear and comfortable listening environment.
- The HM 60 and HM 59 each have a nine-band graphic equalizer, and the HM 58 has Bass, Mid, and Treble controls.
- Each unit employs a Rolls 2:1 AGC compressor to provide even signal dynamics.
- In addition to providing high current differential buffered signals, the HM 60 and HM 57 also provide power and ground to the HM 58 and HM 59 remote mixers.
- The units can be clamped to any mic stand using the optional MSC106 Microphone Stand Adapter.
- They are housed in rugged painted steel chassis, use only the finest quality components, and come complete with a limited One-Year Warranty.

---

**The PM50s/PM50sOB**  
**Personal Monitor Amplifiers**

The PM 50s and PM 50sOB mix a microphone signal with a line-level stereo monitor signal to two headphone outputs. The microphone signal is passed through (hard-wired for no signal degradation) to a mixer or pre-amplifier. They are ideal for performers who need to monitor their own signal, such as their vocal, with the main mix.

- Both units feature a monitor level control, mic level control, mic In and pass through XLR jacks, two headphone output jacks, and a stereo TRS 1/4” monitor input jack.
- The ideal monitor tools for drummers who need to hear a click track, choir singers who need to hear themselves, etc. Also useful as a line tester for troubleshooting an audio system.
- The PM 50s works on AC only and includes an AC adapter. The PM 50sOB can be powered via 9 volt battery or AC with the optional PS27 AC adapter.

HA-6AB

Headphone/Monitor Amplifier

The HA-6AB is an economical 20 watt per channel stereo amplifier. However, unlike a conventional power amp, it has six headphone outputs (stereo phone jacks) on the front panel, each with volume control. When used for overdubbing or rehearsal, this provides more than adequate loudness in all headphones (even older low-impedance models), and allows each musician to set his or her own comfortable volume level. When the overdubbing is complete and the musicians remove their headphones, the HA-6AB can power the tape playback through either (or both) of two sets of studio monitor speakers.

- Combination headphone amp and a conventional power amp—powers headphones and speakers for added space/cost-savings.
- Utilizes an efficient toroidal power transformer for silent operation and low magnetic leakage.
- Two balanced XLR and two unbalanced 1/4" phone inputs
- 6 headphone outs, each with volume control
- With 20 watts-per-channel the HA-6AB can drive headphones of any impedance to their full rated listening level, and do so with minimal noise and distortion.
- Just right for the small “cube” reference speakers used in most recording studios as a comparison with the main control room monitors—the HA-6AB powers them without overpowering them.
- Convenient front panel input level control.
- Switches for two sets of speakers
- Automatically switches to mono mode when right channel is not used
- Overload and signal-present LEDs for each channel; ground lift, power-on indicator
- Provision for remotely controlling volume
- Fully protected against thermal overload, it can also withstand a short circuit on any or all outputs for an indefinite time without damage.

Optional HR-2 Headphone Remote Station

Designed for the HA-6A, the HR-2 is a compact, unobtrusive box that clamps to a mike stand or belt, providing two headphone jacks, each with its own volume control. Any number of HR-2 stations may be connected to a HA-6A using standard mic cables. Comes with snap-on, snap-off mike stand clamp.

HDS-6 / HR-6

Headphone Audio Distribution System and Remote Mixer

The HDS-6 with the HR-6 offers a great-sounding, cost effective and flexible way to provide custom mixes for up to sixteen people in recording and live sound environments. The combination of unique functions add unprecedented functionality and convenience to any multiple-user audio application.

The system consists of two components: the rackmount HDS-6 Audio Distribution System, and one or more HR-6 remote mixers. Linking them is as easy as plugging in cables — multiple HR-6’s are simply daisy-chained together. A pair of 25-foot linking cables is included with each HR-6. For applications where daisy-chaining is not practical, a twelve port or larger ethernet patch panel can be wired to allow multiple HR-6 units to connect from a central location. Up to eight HR-6 remote mixers can be linked to an HDS-6, and two pairs of headphones may be plugged into each HR-6.
HDS-6 / HR-6, continued

HDS-6
- Every performer in a studio or live sound setting can now have a personalized mix without any adjustments at the board. Perfect for use as a headphone system in the studio, plus drives powered monitors in live sound applications.
- HDS-6 provides gain trims and overload LEDs for each input, ground lift and on/off switch, and system status LEDs.
- The HDS-6 connects to the mixer/console to provide interface and power supplies to drive a group of HR-6 remote mixers. Trimpots are provided on the front panel to adjust input levels.
- Ideal as a low distortion headphone driver for critical listening situations. In addition to providing high current differential buffered signals, it also provides power and ground to the HR-6 remote mixer.

HR-6
- The HR-6 is a compact six-channel, five-pot remote mixer that clamps to any mic stand. When used with the HDS-6, the HR-6 allows musicians to customize their own headphone or monitor mix, and the engineer doesn’t have to touch the board.
- A “Submixes Included/Excluded” button mutes the four mono pots, allowing only the stereo source to be heard, without having to alter the HR-6’s four monaural settings.
- The HR-6 mixer provides each musician with five volume controls: four monaural (for mixer channels or busses), plus one for an overall stereo mix or a stereo effects return.
- 25-ft. linking cables are included with the HR-6, as is a universal mic stand clamp.

HDS-16 / HRM-16
Headphone Audio Distribution System and Remote Mixer

An enlarged and enhanced version of the HDS-6/H-6-6, the HDS-16 Headphone Distribution System and HRM-16 Personal Headphone Mixer are designed to function equally well for both live (in-ear or stage monitors) and studio applications, allowing greater flexibility and ease for both the user and the engineer.

The HDS-16 with the HRM-16 cleanly routes 8 mono and 4 stereo signals to remote mixing locations. Up to eight HRM-16’s can be connected to a single HDS-16, allowing as many as sixteen users (two per each HRM-16) to customize eight different mixes. A unique talkback system allows each user to communicate with other users and the main mixing location. Additionally, a SOLO system allows the engineer to mute all but one stereo send from the mix location—very handy for reviewing recent takes or rough mixes. Additional HRM-16 features include local effects send/return, line out, overall bass/treble controls, talkback level, and a master level control.

HDS-16
- Provides full patching functions on its front panel via 1/4” and TT input jacks.
- Provides power to drive the HRM-16. In addition, it includes two 1/4” jacks for the two-way talkback functions, and a SOLO REMOTE switch with an indicator that allows muting of all but one stereo feed at all HRM-16’s—ideal for isolating tracks for critical listening without having each HRM-16 user turn down all but one channel.

HRM-16
- Attaches to a mic stand with included hardware. Includes flexible 25-ft. cable that can be extended or routed through walls and daisy chained to other HRM-16’s.
- The eight mono and four stereo signals have level controls.
- Each mono channel also has a pan control and an effects send control which feeds its own rear panel 1/4” send/return jacks; the affected signal is returned into the mix and controlled via a stereo effects return knob.

XTREME & LIBERTY SOUND SYSTEMS

AC- and DC-Powered Portable Sound Systems

With a built-in CD player and up to three built-in Anchor Wireless UHF Receivers, the Xtreme and Liberty expands their capabilities beyond any other system in the industry.

An AC-powered sound system, the 130-watt Xtreme delivers a powerful 123dB of crystal clear speech projection—enough to reach crowds of up to 2,500 people. The 50-watt Liberty is a DC-powered system that delivers 117dB of clear sound to crowds of 1000 or more.

With the convenience of a built-in CD player and a wireless microphone, the Xtreme is great for large indoor and outdoor events such as press conferences, sports events, graduation ceremonies, musical productions or any other settings needing powerful and clear voice or music amplification. Rugged, reliable and crystal clear, Liberty is used at the White House for Presidential press conferences, at thousands of schools around the world, at corporate training centers and on many U.S. aircraft carriers.

Xtreme

- Clear and powerful sound, thanks to an 8˝ woofer and constant-directivity horn inside a ported enclosure.
- Delivers up to 123 dB of clear sound
- Handles crowds of 2,500 or more.
- Biamplified; separate high and low frequency amplifiers for enhanced performance.
- Active limiter—keeps sound clean even when driven hard.
- The XLR input allows the use of line level or microphone sources, with or without condenser mic power
- Line-level, balanced output supplies signal to additional sound system
- Neutrik Speakon connector for use with XTR-6001
- Bass and treble controls
- Speech projection mode provides crystal-clear voice projection
- Comes with a hassle-free 6-year warranty

Liberty

- Comes with a hassle-free 6-year warranty.
- Tough, injection-molded case is remarkably durable
- 8˝ woofer and titanium dome compression driver in tuned enclosure
- Features lead-acid batteries and a built-in charger
- Handles crowds of 1,000 people or more
- External speaker output powers optional companion speaker
- Integrated circuit amplifier with short circuit and thermal overload protection
- Speech projection mode (on/off selectable) provides crystal-clear voice projection

XDP-6000 Xtreme Deluxe 2-Speaker Package

Includes Xtreme XTR-6000CU1 sound system, built-in CD player and built-in Anchor Wireless UHF with 16-user selectable channels, speaker stand (SS-550) and choice of wireless mic: handheld mic (WH-3000) or body-pack transmitter (WB-3000) and headband mic (HBM-3000) or lapel mic (LM-3000) or collar mic (CM-3000)

XBP-6000 Xtreme Basic Package:
Includes Xtreme XTR-6000CU1 sound system, built-in CD player and built-in Anchor Wireless UHF with 16-user selectable channels, speaker stand (SS-550) and choice of wireless mic: handheld mic (WH-3000) or body-pack transmitter (WB-3000) and headband mic (HBM-3000) or lapel mic (LM-3000) or collar mic (CM-3000)
Strong, Full-Range Sound for Crowds Up To 250 People

Explorer is a favorite of audio rental companies and hotels for a quick setup in a conference room. Weighing 20 lbs. this sound system has also traveled the world with missionaries and aboard cruise ships. Delivers a great balance of speech clarity and music fidelity. (A battery-powered model is also available.)

- Heavy-duty amp and full-range speaker system deliver fidelity sound
- 6.5” woofer coupled with a high-output horn tweeter
- Simple to set up and operate
- Durable injection-molded polypropylene case
- Short circuit and thermal overload protection
- Weighs less than 20 pounds
- Speaker output to power companion speakers
- Comes with a 6-year warranty

EBP-2500 Explorer Basic Package:
Includes Explorer PA-2500W sound system, (SS-550) speaker stand and choice of wireless mic: (WH-58) Shure handheld mic or (WB-II) body-pack transmitter and (HBM-60) headband mic or lapel mic (LM-60) or collar mic (CM-1000).

EDP-2500 Explorer Deluxe Package:
Includes Explorer PA-2500W sound system, Explorer P-2501 companion speaker, two (SS-550) speaker stands and choice of wireless mic: (WH-58) Shure handheld mic or (WB-II) body-pack transmitter and (HBM-60) headband or lapel mic (LM-60) or collar mic (CM-1000).

MegaVox PA System

- Police, firemen, coaches, FBI agents, Marine drill sergeants, auctioneers, all choose the MegaVox. This PA system delivers an amazing 126dB of clear speech projection that can operate for up to 10 hours on a charge. Incorporating a rechargeable battery, this unit weighs just 15 lbs. and is available with wireless microphone for convenient field operation.
- Injection-molded case
- High-efficiency re-entrant horn driver
- Speaker output powers optional companion speaker
- Built-in wireless microphone receiver
- Powerful amplifier and horn driver combine for 126 db output
- Runs up to 10 hours on a charge
- Speaker stand receptacle molded into bottom
- 6-year warranty

MEGA-BP MegaVox Basic Package: Includes MegaVox with built-in 2-channel selectable wireless receiver, (SS-550) speaker stand and choice of wireless mic: (WH-1000) handheld mic or (WL-1000) body-pack transmitter and (HBM-40) headband mic

MEGA-DP MegaVox Deluxe Package: Includes MegaVox with built-in 2-channel selectable wireless receiver, MegaVox P-351 unpowered companion speaker, (SC-50) 50” cable connector and two (SS-550) speaker stands and choice of wireless mic: (WH-1000) handheld mic or (WL-1000) body-pack transmitter and (HBM-40) headband mic

AN-100 Sound Systems

AN-100 packages are the perfect choice for classrooms small conference rooms and corporate road warriors who rely on their sound systems to command the audience. Plus, it's the perfect companion for a video projector. The AN-100 produces such accurate sound that it is used by movie studios to hear their mix on the master sound tracks. Weighing in at just 8.5 lbs, this powerful sound system is designed for audiences up to 100 people.

- 25 watt amplifier provides lots of sound.
- 2-way speaker system combines 4.5” woofer and dome tweeter
- Built-in two selectable channels RF wireless receiver
- Durable injection-molded case
- 6 year warranty
- Magnetically shielded speaker.
- Has mic, instrument & 2 line inputs
- AN-100:
AN-100 all by itself with nothing else. Just plug in a microphone or the video projector cables, and you’re ready to go.

AN-100BP AN-100 Basic Package:
Includes AN-100 Wireless VHF Receiver and choice of wireless mic: (WH-1000) handheld mic or (WL-1000) body-pack transmitter and (HBM-40) headband mic
EVID (EV INNOVATIVE DESIGN)

Premium Surface Mount Speaker System

The EVID concept means innovation. From its unique, superior design to its innovative acoustical integrity, EVID delivers value, performance and ease-of-use to the contractor and end listener alike. In designing EVID, Electro-Voice evaluated all the current products available and asked contractors and typical end users, “What do you want?” End users wanted something attractive and superior sounding amidst a world of plain black boxes. Contractors wanted a comprehensive line that would provide flexible choices for easier system design and installations. EVID achieves these goals. The result is a comprehensive background/foreground speaker line with the key characteristics installers need and users want. Why settle for anything else?

Features

- Cast aluminum Strong-Arm-Mount (SAM) system provides excellent strength and reliability
- Dual woofers for extended bass, greater power handling and output
- Coherent coverage Waveguide Horn design on models 4.2 and 6.2
- Dual low frequency ports provide extended bass output
- Treated woofer cones for added weather resistance and increased reliability
- Over 100° of swing and 45° of rotation for incredible installation flexibility
- Titanium dome tweeters with Neodymium magnet structures provide clean highs and added weather resistance
- One-piece ABS cabinet provides outstanding strength and acoustic rigidity
- Durable zinc-plated steel grille
- Simple keyed hex head adjustments make installations quick and easy
- Smooth lines and innovative cosmetic design complement any décor or environment
- Magnetically shielded transducers allow placement close to sensitive equipment
- Treated woofer cones for added weather resistance and increased reliability
- Durable zinc-plated steel grille
- Simple keyed hex head adjustments make installations quick and easy
- Smooth lines and innovative cosmetic design complement any décor or environment
- Magnetically shielded transducers allow placement close to sensitive equipment
- Treated woofer cones for added weather resistance and increased reliability
- Durable zinc-plated steel grille
- Simple keyed hex head adjustments make installations quick and easy
- Smooth lines and innovative cosmetic design complement any décor or environment
- Magnetically shielded transducers allow placement close to sensitive equipment

3.2 Very Compact Full-Range Speaker System

Loaded with dual 3.5” LF drivers and a 3/4” Ti direct radiator, the EVID 3.2 produces sound that defies its small size. Its unobtrusive profile is ideal for background music and paging support in a wide variety of environments (e.g., offices, retail stores, restaurants, etc.) Coupled with the 12.1 Subwoofer, two to four EVID 3.2 speakers deliver amazing SPL levels for foreground music.

4.2 Compact Full-Range Multi-Use Speaker System

Perfect for a variety of environments where full-range audio is needed but space is limited: restaurants, bars, bistros, department stores, and outdoor venues. Offering the bass response of a much larger speaker, dual 4-inch woofers make the 4.2 a phenomenal performer. The 1” waveguide coupled titanium tweeter delivers controlled clean mids and highs. Combine it with the 12.1 Subwoofer for an amazing listening experience. Full system protection and EV’s unique Strong-Arm-Mount (SAM) make the EVID 4.2 a solid choice in any environment.

6.2 Extended-Range High Output Speaker System

Comprised of dual 6” LF drivers and a 1” Ti waveguide, the EVID 6.2 is perfect for applications that require exemplary audio and the capability to fill large areas with sound. Additionally, the flexible Strong-Arm-Mount (SAM) system provides the versatility to accommodate any installation challenge. EV’s unique 6” dual woofer design delivers crisp and clean program for the utmost in listening experience regardless of the location. Great for larger areas that demand higher SPL levels, the 6.2 delivers the outstanding, full bass output required for shopping malls, stadiums, airports, etc.

12.1 Dual Input Subwoofer

To augment and extend the low frequency response of any full-range models, an attractive and powerful subwoofer completes the EVID line. The 12.1 provides an easy installation by incorporating dual voice coils to handle both channels of a stereo pair. In addition, the unit can power up to four satellites with its four crossed-over audio outputs on the back panel. For extended bass performance in demanding installations.
SOS 3.2 Monitor Speaker Mic Stand Personal Monitor

The EVID SOS 3.2 is a new approach to personal monitors! Its unique design enables the use of only one stand for the microphone and monitor. It frees up stage space and puts the monitor closer to the performer for additional clarity. The SOS 3.2 features a 1/4” input connector for easy connection to the amplifier. In addition, the performer can precisely adjust the speaker volume level using the L-Pad adjustment on the back of the unit.

The compact design of the SOS 3.2 makes it unobtrusive on stage and easy to pack and carry. The SOS 3.2 package includes the SOS 3.2 speaker, all stand mounting adapters and a shock mount clip ready for use on your favorite boom-mount mic stand.

EVID ACCESSORIES

AB-34 and AB-64 360° Mounting Bracket Kits
AB-34 and AB-64 series kits feature a 4-sided powder coated steel mounting assembly that allows the mounting of 4 EVID speakers into a 360 degree pattern array configuration. The mount offers additional flexibility in your EVID system designs. The AB-34 works with the EVID 3.2 series and can be used with a threaded rod for suspension from the ceiling. The AB-64 is used with the EVID 4.2 or 6.2 series speakers and can be used with a speaker stand tripod or hung from the ceiling using a threaded rod. All necessary accessories and parts needed for use are included.

AB-32 and AB-62 180° Mounting Bracket Kits
AB-32 and AB-62 series kits feature a 2-sided powder coated steel mounting assembly that allows the mounting of 2 EVID speakers into a 180 degree pattern array configuration. The AB-32 works with the EVID 3.2 series and can be used with a threaded rod for suspension from the ceiling. The speakers can then be positioned on the bracket to cover a variety of patterns to best serve the installation requirements. The AB-62 allows the EVID 4.2 or 6.2 series speakers to be used with a speaker stand tripod or hung from the ceiling utilizing a threaded rod. All necessary accessories and parts needed for use are included.

HS-3 Horizontal Tabletop Stand
The HS-3 horizontal tabletop stand allows the EVID 3.2 or 4.2 to sit on a table, meter bridge, desk, bookshelf or other flat surface. Ideal for portable applications, the stands are made of steel for strength and durability and include rubber feet to protect surfaces. Sold in pairs.

VS Series Vertical Tabletop Stands
VS series vertical tabletop stands are available for any EVID full range model. The stands allow the hassle-free vertical orientation of EVID speakers on a table, desk, bookshelf or other flat surface. Ideal for portable applications, the stands are made of plastic coated steel for strength and durability. Sold in pairs.

TC Series Terminal Covers
TC-4 and TC-6 terminal covers protect the input connections on EVID speakers from the long-term effects of moisture. The covers are available for the EVID 4.2 and 6.2 speakers. The covers easily attach to the rear input panel of the speaker and include a weatherproof cable connector.

MA-3 Mic Stand Adapter
The MA-3 microphone stand adapter allows use of the EVID 3.2 with a standard boom mount mic stand. This unique kit includes adapter pieces for both the mic stand and boom sections. These adapter pieces allow a solid and secure junction between the microphone boom on one side and microphone stand side on the other.
EV

Sx-SERIES

Speaker Systems

Designed by the company who pioneered the concept and use of injection-molded structural foam enclosures to make compact speaker systems lighter and stronger, the Sx-Series provides outstanding performance and flexibility in cabinets designed for portable and permanent installation applications. Featuring a wide range of models—from 8-inch two-way to 15-inch two-way systems—to meet your specific requirements, each is equipped with PRO driver protection circuitry and RMD for level-independent fidelity and incredible vocal reproduction. Sx-Series speakers weigh as little as 18 lbs. and have power capacities up to 400 watts. Molded-in attachment points and optional mounting and arraying brackets make them ideal for a wide variety of small-to mid-size portable or fixed applications.

Using exclusive EV manufacturing processes and quality control measures, the Sx-Series far surpass normal industry standards. Designed for musicians, DJs, performers and presenters in clubs, smaller auditoriums, churches and theaters, Sx-Series systems are used at the House of Blues in Las Vegas and have been used at prestigious events such as ShoWest and the Sundance Film Festival.

Ring-Mode Decoupling (RMD), the same technology that gives the EV X-Array concert touring series its incredibly clean and powerful performance has been applied to all SX-Series and components. This gives the SX-series precise speaker intelligibility and true dynamic integrity independent of volume levels by virtually eliminating distortion caused by spurious component vibrations.

Each SX-Series speaker system is created with a precise driver, horn and woofer combination. Pure titanium-diaphragm compression drivers with TimePath phase plug and Resonant Drive technology are coupled to EV-exclusive Constant Directivity HF horns with VariPath throat geometry for silky smooth, extended response, plus detailed and accurate highs.

Sx-Series woofers were developed to complement the performance of the high-frequency section. Sx-Series woofers use a core material with extremely high internal damping for suppression of unwanted resonances and feature beryllium-copper lead wires, low-mass, edge-wound voice coils and cast-frame aluminum frames for the highest sound quality and rock-solid reliability. And the performance of the Sx-Series speakers is protected with EV’s proprietary PRO circuit that prevents the compression drive from being damaged if a dangerous condition occurs.

The Sx80 is a compact, high efficiency, constant directivity speaker system for sound reinforcement and monitoring. The small size, high sensitivity and high power-handling capacity of the Sx80 make it an excellent choice for use in studios, clubs, bars theaters or other applications.

- Two-way 8˝ system with 175 watts continuous, 700 watts peak power handling
- EV DH2005 pure titanium compression driver for great sound and reliable performance
- 90° x 65° constant-directivity high-frequency horn
- Ring-Mode Decoupling for superior vocal reproduction and smooth, accurate vocals and mids
- Suspension points accommodate Sx80MBB and Sx80MBW wall/ceiling brackets and OmniMount Series 75 mounting hardware
- Optional Sx80SM stand-mount adapter allows use on 100BK and other speaker stands with 13⁄8˝ diameter

Sx80B (Black)

- Sx80B [11483160]: Push-terminal connectors, flying and stand mount (with Sx80SM adapter), paintable black polystyrene
- Sx80BE [11483254]: Sx80B with Neutrik Speakon connector
- Sx80BP [11483253]: Sx80B with 1/4˝ connector
- Sx80TB [11483162]: Sx80B with internal 70.7/100-volt, 60-watt transformer (60-, 30-, 15-, 7.5-, 3.8- and 1.9-watt taps)

Sx80W (White)

- Sx80W [11483161]: Push-terminal connectors, flying and stand mount (with Sx80SM adapter), paintable white polystyrene
- Sx80WE [11483255]: Sx80W with Neutrik Speakon connector
- Sx80WP [11483253]: Sx80W with 1/4˝ connector
- Sx80TW [11483163]: Sx80W with internal 70.7/100-volt, 60-watt transformer (60-, 30-, 15-, 7.5-, 3.8- and 1.9-watt taps)

Sx80P (Weather Resistant)

- Sx80P [11483164]: Weather resistant version of Sx80B
- Sx80PIX [11483169]: Same as Sx80P with internal 70.7/100-volt 60-watt transformer (60-, 30-, 15-, 7.5-, 3.8- and 1.9-watt taps)

SOUND REINFORCEMENT

666

www.bhphotovideo.com
The term versatility is testament to the inherent design considerations of the Sx-Series. A high performance Sx cabinet using wall mount accessories can cover an audience. The same cabinet using adapter hardware becomes an unbeatable low-profile stage monitor for a rock band. They meet the needs of both musicians and audio engineers by offering adjustable stand mounts and stacking footprints built-in to service various portable setups. Comfortable carrying handles assist in moving Sx systems from job to job. Industry-standard rigging and hanging accessories accommodate any application from concert sound to a local church. To satisfy the demands of professional installations, the Sx full-range systems are available in weather-resistant packages with or without transformers.

**Sx100+**

The Sx100+ is a compact 12˝ two-way system with 200 watts continuous, 800 watts peak power handling. Durable polypropylene enclosure is light and very strong.

- 65° x 65° constant-directivity horn has excellent projection capability and allows the system to be used vertically or horizontally with identical coverage
- Ring-Mode Decoupling delivers smooth, accurate vocals, instruments and mids. Sound quality remains even over a wide dynamic range.
- Rubber feet attached to the bottom of the cabinet and mating sockets molded into the top provide a means of stacking systems
- Built-in stand mount and inserts accept a wide range of accessories to allow safe suspension, arraying and use as a floor monitor

**Sx250**

Only 40 lbs, the Sx250 is designed for applications that require the warmth lower end while maintaining small size and light weight. Multi-angle enclosure allows use in different sidefill and floor monitor orientations

- 15˝ two-way speaker system with 350w continuous, 1,400w peak power handling.
- 80° x 55° constant-directivity horn has better projection capabilities than 90° horns.
- High-performance EV DL12BFH cast-frame woofer and DH 2010a pure titanium compression driver
- Ring-Mode Decoupling delivers rich, smooth vocals, and accurate, detailed mids
- Dual Neutrik Speakon connectors for loss-free signal transfer
- Built-in metal socket allows mounting on a pole or speaker stand
- Built of 18 mm plywood and finished in black Futura, a sprayed-on polyurethane finish that is very rugged
- Optional SK-1 hardware kit makes flying the Sx250 vertically safe, easy and cost-effective

**Sx300+**

The Sx300 is a 300-watt, 12˝ two-way, high-efficiency, constant-directivity compact speaker system with Ring-Mode Decoupling (RMD). The high-frequency section utilizes a molded-in, 65° x 65° constant-directivity horn. This unique pattern contributes to high intelligibility. Vocals sound natural yet “cut through” in reverberant, noisy rooms.

- The world's best lightweight, high-power speaker system with 300w continuous, 1,200w peak power handling. Delivers over 125 dB continuous, 131dB peaks at full power.
- Constructed of high-impact polypropylene structural foam, the cabinet provides a stiff and extremely durable enclosure.
- Integral carrying handle and a stand socket for mounting on 1¾” stands such as the EV 100BK. Rubber feet and mating sockets provide a means of stacking systems.
- 65° x 65° constant-directivity horn allows vertical or horizontal use with identical coverage. Delivers better pattern control and projection than typical 90° horns
- Trapezoidal-shaped cabinet, in combination with uniform, 65° x 65° directivity, make the Sx300 ideal for use alone or in arrays.
- Proven, reliable EV components including DL12BFH cast-frame 12˝ woofer and DH 2010a pure titanium compression driver
- EV PRO Circuit protects the compression driver from damage if a dangerous condition occurs.
- Built-in stand mount and inserts in enclosure allow the system to be safely suspended and arrayed using a wide range of optional hardware. Can also be used as a floor monitor with F200 attachment

**Sx300E**

- 300-watt 12˝ two-way, 65° x 65°, Neutrik Speakon connectors, flying and stand mount, black polypropylene
- Ring-Mode Decoupling delivers smooth, accurate vocals, and accurate, detailed mids
- Dual Neutrik Speakon connectors for loss-free signal transfer
- Built-in metal socket allows mounting on a pole or speaker stand
- Built of 18 mm plywood and finished in black Futura, a sprayed-on polyurethane finish that is very rugged
- Optional SK-1 hardware kit makes flying the Sx250 vertically safe, easy and cost-effective

**Sx300WE**

- Weather resistant (including full grille) version of the Sx300E
- Sound quality remains even over a wide dynamic range.
- Ring-Mode Decoupling delivers smooth, accurate vocals, and accurate, detailed mids
- Dual Neutrik Speakon connectors for loss-free signal transfer
- Built-in metal socket allows mounting on a pole or speaker stand
- Built of 18 mm plywood and finished in black Futura, a sprayed-on polyurethane finish that is very rugged
- Optional SK-1 hardware kit makes flying the Sx250 vertically safe, easy and cost-effective
**Sx500+**

The Sx500+ is a 400-watt, 15” two-way, biampable, high-efficiency constant-directivity speaker system featuring a vented-horn woofer section.

- Two-way 15” full-range system with 400w continuous, 1,600w peak power handling
- DL15X 15-inch woofer and large enclosure volume extend and increase bass output
- High-frequency horn is driven by the DH2T one-inch throat, wide-bandwidth, titanium-diaphragm driver.
- The driver uses a unique, convex-drive TimePath phasing plug structure for smooth and extended high-frequency performance.
- Dual Neutrik Speakon high-current connectors
- PRO circuit for high frequency driver protection
- Ring-Mode Decoupling (RMD) technology for increased intelligibility
- Asymmetric 75° x 60° constant-directivity HF horn aims down 10° - helps direct sound at the audience when vertically stand mounted
- Horn loading of the woofer controls the coverage pattern down to 500 Hz - unheard of in a product of this size - for higher vocal intelligibility and musical clarity. Also provides more bass punch at greater distances than conventional front-loaded woofers
- Attachment points for secure suspension with optional brackets
- M b600 and horizontal array kits available for side-by-side arraying of two systems (requires one M b500 wall/ceiling bracket per speaker)

**Sx600PI / Sx600PIX**

- Dual 12” two-element vertical array based on a powerful Neodymium woofer.
- HF section features a DH2T compression driver coupled to a molded-in 65° x 65° constant directivity horn using EV's Varipath throat geometry.
- Exclusive SuperSAM mounting system allows 60° of vertical adjustment and 180° of horizontal pan with simple adjustment.
- Molded polymer enclosure combined with aluminum & neodymium components provide a lightweight, easy to handle system.
- Multilayer stainless steel grille protects against rain, sprayed water, dust, humidity and salt spray to military and environmental grade specifications.

**Sb121 300-Watt 12” Subwoofer**

The Sb121 is a compact, lightweight subwoofer designed to add bass enhancement to Sx Series speakers. The Sb121 combines a long-throw 12” woofer with a lightweight, yet strong polypropylene enclosure. The Sb12 woofer has a specially designed deep frame geometry with a magnetic structure optimized to yield the best possible combination of performance and output capable in this enclosure size. Its Kevlar composite cone and special surround give it nearly 2 inches of total excursion capability. The Sb121 can handle 300w continuous, 1200w peak and can be safely used with amplifiers in that power range, as long as they are not driven to clipping. Using 1/2 or 1/4-space loading as well as mutually coupling multiple Sb121’s give this small box very impressive output capability. The Sb121’s parallel Neutrik Speakon connectors allow loss-free signal connection. The enclosure can be stacked, stand-mounted and safely suspended using a variety of flexible, inexpensive optional hanging kits.

- 12” low-frequency system with 300 watts continuous, 1200 watts peak power handling
- Very durable polymer enclosure can be safely suspended
- Integral handle makes lifting easy
- Dual Neutrik Speakon high current input connectors
- Cast-frame 12” woofer with Kevlar reinforced cone
- Adds bass impact and range to systems using Sx80, Sx100+ or Sx300 speaker systems
- Black polypropylene enclosure is light, strong and non-resonant
- Accommodates M b100 / M b200 / M b300 hardware accessories for safe, cost-effective hanging and arraying
- Built in pole mount
- Compact and lightweight, weighs only 32 lbs.
**SB180 600-Watt 18” Subwoofer**

The SB180 is a 600-watt subwoofer which combines the attributes of both horn-loaded and vented-box designs. It utilizes the unique SubScoop cabinet construction with an EVX-180B woofer, as used in the X-Array concert systems. The design behaves like a horn over much of its range, but without the time delay and weight problems usually associated with conventional designs. Vented-box principles take over for the lowest octave and assist in producing exceptionally high levels of clean, punchy bass from a sub-compact box. The reverse woofer orientation has been used to optimize the rear chamber volume and decrease the horn flare rate for extended low-end performance. The SB180 will augment the bass performance of any EV stage system. A 1 3/8” stand-mount receptacle on the top of the SB180 allows satellite speaker systems such as the Sx500 and Sx300 to be used. A 34” mounting pole is also included.

- **Concert-proven EVX180B woofer with 4” voice coil has unsurpassed long-term fatigue resistance for excellent reliability and incredible response to 31 Hz**
- **Rugged, road-ready cabinet, metal grille. Enclosure is built with 18mm plywood and is finished in Futura, a sprayed-on polyurethane finish that is very rugged.**
- **SubScoop enclosure combines the extended response of a vented box and the projection and punch of a horn-loaded system**
- **Natural high-frequency roll-off**
- **600-watt continuous, 2,400 watts peak power handling**
- **Dual Neutrik Speakon inputs**
- **1 3/8” stand mount on top allows use of satellite system.**
- **Includes 34” long mounting pole for elevating satellite speakers.**
- **Only 23.75” tall, includes metal handles for ease in transportation**

### Sx/Sb System Accessories

- **100BK**: Speaker stand for speakers with integral stand mount or any system up to 110 lbs (1-3/8” shift diameter), black
- **F200**: Pair of monitor feet for Sx100+/300
- **Mb100**: Forged eyebolt attachment kit for Sb121, Sx100/300, black
- **Mb200**: Wall/ceiling U-bracket kit for Sb121, Sx100/+ and Sx300, black
- **Mb200W**: Same as above in white
- **Mb300**: Kit for side-by-side arraying of two Sb121, Sx100+, Sx300, (M b300 one M b200 U-bracket kit per speaker system), black
- **Mb300W**: Same as above in white
- **Mb500**: Wall/ceiling U-bracket for Sx500+, black
- **Mb600**: Kit for side-by-side arraying of two Sx500+/s (M b600 requires one M b500 U-bracket kit per speaker system), black
- **Mb700**: Forged eyebolt attachment kit (set of three) for a single Sx500, black
- **PD500**: Padded case for Sx500+
- **PD Sx**: Padded case for Sb121, Sx100+ and Sx300
- **SK1**: Suspension kit for Sx250
- **Sx80MBB**: Wall/ceiling U-bracket kit for Sx80, black
- **Sx80MBW**: Same as above in white
- **Sx80SM**: Stand-mount adapter for Sx80
- **VPC500**: Vinyl cover for Sx500+
- **VPC Sx**: Vinyl cover for Sb121, Sx100+ and Sx300
- **Sx80**
- **Sx100+**
- **Sx300**
- **Sx250**
- **Sx500+**
- **Sx600PI**

Self-Powered Speaker Systems

If you need solid, clean powerful audio in the lightest package possible, direct your ears to the SxA-Series. These self-powered speakers work well in a wide range of sound reinforcement applications, from a simple vocal reinforcement PA to a large, multi-box, high-SPL sound system. The SxA100+ and SxA250 full-range systems set new performance standards for powered speakers. They provide multiple inputs with full mix capability, a flexible EQ section and plenty of power in compact, easy-to-move enclosures. They make setting up a high-performance sound system quick and easy.

The compact SbA750 and full-size SxA180 powered subwoofers add hard-hitting bass to the SxA or other full-range systems.

### SxA100+/SxA250 Powered Speakers

- Designed to provide high SPL without excessive heat, the high quality mic preamp provides great sounding vocals or speech. A master level control sets the desired SPL, and the line input can be mixed and balanced with a mic with its level control.
- Linear response is easily optimized for speech or music with the onboard multiband equalization.
- Built-in pole mount and optional hardware makes it easy to position them without expensive accessories.
- High frequency section utilizes a molded-in 65° x 65° and 80° x 55° constant-directivity horn coupled to a DH2010A. The result is vocals that sound natural yet “cut through” in reverberant, noisy rooms.

### SbA750 15” Powered Subwoofer

The SbA750 is a high-power compact sub designed to match the SxA100+ and SxA250. The state-of-the-art H class power amplifier module delivers 750 Watts RMS power to an EV DL15Y 15” woofer. The patented LPN (Low-Pass-Notch) filter compensates for transient distortion of dynamic signals and allows, in combination with the PowerMax 12 crossover filter, the SbA750 to achieve a higher acoustic output than expected from a compact cabinet that size.

### SxA180 18” Powered Subwoofer

- Built-in crossover with Linkwitz-Riley filters continuously variable from 90 - 125 Hz
- Built-in storage compartment with ample room for cables and included 34” pole
- Detachable transport dolly with 4 heavy-duty casters
- Active balanced XLR-type input and outputs for both filtered and unfiltered signals
- Designed to provide high SPL without excessive heat, the high quality mic preamp provides great sounding vocals or speech. A master level control sets the desired SPL, and the line input can be mixed and balanced with a mic with its level control.
- Linear response is easily optimized for speech or music with the onboard multiband equalization.
- Built-in pole mount and optional hardware makes it easy to position them without expensive accessories.
- High frequency section utilizes a molded-in 65° x 65° and 80° x 55° constant-directivity horn coupled to a DH2010A. The result is vocals that sound natural yet “cut through” in reverberant, noisy rooms.

Powered Speaker Systems

The new generation of FBTMaxX speakers is made of polypropylene with gas injection molding, producing an ultra-light FBT product that is extremely sturdy. The special design, coupled curves and rounded edges, permits multi-functional application in all audio-professional application systems: such as stage monitors, for wall or ceiling installation and with special adapters to stack the enclosures. Special attention has been paid to the accessibility of controls in all conditions of use. FBTMaxX is the perfect marriage of power, mechanics and leading-edge technology.

FBTMaxX 2A
- Extremely light and sturdy enclosure made of polypropylene with gas injection molding
- 200-watt RMS 10” low frequency woofer with a Neodymium magnet and die-cast aluminum frame, and a 50-watt RMS 1” high frequency compression driver with Titanium diaphragm coupled to a custom-designed constant directivity 90° x 60° horn.
- The control panel designed for accessibility under all operating conditions, features both Neutrik XLR and 1/4” inputs, mic/line switch, and ground lift switch. Volume control, variable gain control, 3-band EQ, and LED clipping indicators are also provided.
- Incorporates ADAP (Advanced Dynamic Active Protection) Processor for total protection of the LF & HF drivers and a 24dB/oct active crossover filter.
- Frequency response is 50Hz to 20kHz and it will handle 250 watts @ 8 ohms.
- The built-in ergonomically designed carry handle allows for a “balanced” feel when transporting.
- Built-in stacking adapters enable cabinet stacking and two M-10 flying points for wall or ceiling mounting, either vertically or horizontally, as well as a standard 1-3/8” speaker socket for speaker stand mounting.

FBTMaxX 4A
- Same as FBTMaxX 2A except:
  - 300w RMS 12” LF woofer with a Neodymium magnet, die-cast aluminum frame, and a 100w RMS 1” HF compression driver with Titanium diaphragm coupled to a custom constant directivity 90° x 60° horn.
  - Frequency response is 50Hz to 20kHz and it will handle 400 watts @ 8 ohms.
  - Four M-10 flying points

FBTMaxX 6A
- Same as FBTMaxX 4A except:
  - 700w 15” LF woofer with a Neodymium magnet and die-cast aluminum frame, and a 200w RMS Class G high frequency compression driver with Titanium diaphragm coupled to a custom-designed constant directivity 90° x 60° horn.

FBTMaxX 9Sa
- 900 watt RMS 15” dual coil low-frequency woofer with a Neodymium magnet and die-cast aluminum frame.
- Frequency response is 40Hz to 125Hz and it will handle 400 watts @ 8 ohms.
- Two M-10 flying points for wall or ceiling mounting, either vertically or horizontally, as well as a standard 1-3/8” speaker socket for speaker stand mounting.
- Control panel features left and right channel inputs with a built-in crossover, both input channels with XLR/Neutrik input, XLR Neutrik link connectors, XLR high pass filtered output and volume control.

The innovative Passport Sound Systems are truly portable PA systems. Designed with simplicity, flexibility, versatility, reliability, ease-of-use, and efficiency in mind, each Passport system is ideal for working musicians, acoustic groups, club and lounge performers, school and day-care teachers, coaches, auctioneers, religious organizations, aerobics instructors, corporate educational presenters — anyone or any application that requires a portable audio sound system that sets up easily and quickly (in under 5 minutes!). The truly remarkable aspect of a Passport Audio System design is that for all their high-tech technology, you don't have to be a sound engineer to get professional quality sound. Fender has incorporated years of pro audio experience into the Passport Systems' unique design and powerful features. These include proprietary elements like Vocal Input Priority circuitry that automatically lowers all other signals in the system when you speak into the microphone - (particularly useful when you want to make an announcement over music being broadcast), and One Touch EQ, an extremely powerful tone control circuit that takes the guesswork out of getting great sound quickly. Plus, each custom cabinet contains specially designed, full-range speakers positioned at critical angles to maximize projection and clarity without feedback.

Each system offers flexible input and output connections, tone control on each channel, system tone control, effects send and returns, digital reverb, recording outputs and inputs (for CD, tape, video, DVD, or computer connections), speaker and microphone cables, and Fender's P-51 microphones. All systems are compatible with the new Passport Wireless systems for the ultimate in flexibility and portability. The Passport's durable power supply delivers consistent power - in stereo - whether you are using the system with an AC or DC source, and the entire system is packaged into a unique, weather-resistant, portable case utilizing a patented latching system.

They All Feature:

- Mic/Line inputs are balanced XLR, plus either balanced or unbalanced ¼” TRS. (On the P-150 and PD-150 Deluxe, Input 3 also has stereo RCA connectors buffered to mono). Stereo AUX Return is ¼” TRS.
- Digital reverb provided with EFX / AUX Send on each channel. EFX Return to main control provided with remote bypass
- Single switch configures for stereo (R/L) or (Main/Monitor) use. Master level controls provided for each power amplifier. (P-250 and PD-250 Deluxe systems only)
- Pan controls for Mic/Line channels; balanced controls for stereo input channels
- Overall system EQ (for room conditions) and individual channel EQ
- Tape out and reverb footswitch jacks
- Exclusive VIP (Vocal Input Priority) control provides automatic priority of channel 1. Perfect for voice over announcements, and a systems operator isn't required
- Docking connector for passport wireless receiver
- Innovative deluxe speaker array design for superior sound in any application
- Superb feedback rejection allows the speakers to be placed behind the user, eliminating the need for separate monitor speakers
- 1¾” stand adapters included
- Switching power supply delivers rated performance even when encountering low power line voltages
- Switchable line voltage for international use
- Systems can run on 12v DC power with optional DC adapter
- Systems include one (P-150/PD-150 DLx) or two (P-250/PD-250 DLx) professional cardioid dynamic microphones, 18’ microphone cable(s), two 20’ speaker cables and a detachable power cable. For super convenience, they have a mic/cable storage compartment with latching lid.
PASSPORT SYSTEMS

PD-150

- 28 lbs.
- Four input mixer: Three mic/line, One mono/stereo
- Operates on AC or DC power
- 150 watts (75 per channel) stereo, with digital reverb
- One P-51 microphone (with mic clip, cable and carrying pouch)
- Proprietary DSA speaker design featuring three custom speaker drivers per cabinet

PD-250

- 55 lbs.
- Six input mixer: Four mic/line, Two mono/stereo
- Operates on AC or DC power
- 250 watts (125 per channel) stereo, with digital reverb
- Proprietary DSA speaker design featuring four custom speaker drivers per cabinet
- Two P-51 microphones (with mic clips, cables and individual carrying pouches)

ACCESSORIES

Wireless Executive System
The ultimate in convenience! Plug the docking receiver into a 150 or 250, pop a 9v battery into the transmitter, and away you go! Comes with lavalier mics and instrument cable........229.95

Executive Kit
Same as above without the receiver ........159.95

Wireless Hand-Held Mic System
Includes a handheld electret-condenser cardioid mic and a custom docking receiver ........179.95

Wireless Mic
Same as above without the receiver ........149.95

P-51 Microphone Kit
A high quality, cardioid pattern dynamic mic. Comes with a cable, stand clip and a custom pouch ........................................49.95

12v DC-D-C Power Converter
Allows Passport systems to run off a DC power source. The converter connects between any 12-volt automotive or marine battery and the Passport system .........................77.95

Passport Battery Pack
For use with the 12v DC-D-C Power Converter. This 12v deep-cycle 17 amp battery powers a Passport system for 6 to 8 hours. Included AC adapter recharges the battery .................109.50

Travel Pack 250
A steel adjustable luggage cart and padded water-resistant canvas cover ....................89.95

250 Series Protective Cover
Padded, water-resistant canvas cover ........42.50

P-10 and P-10W
A highly portable, personal sound system that is ideal for paging applications, tour guides, classroom and day-care activities, crowd communications and all situations where you need to raise the volume of your voice to communicate effectively with a crowd or small audience. The systems are battery powered and weigh only 6.5 lbs.

P-10W - Comes with a built-in wireless receiver and hand-held wireless cardioid, electret condenser mic, battery, recharger and shoulder strap .................299.95

P-10 - Comes with a dynamic microphone and a 3’ coiled cable, battery recharger and shoulder strap .............209.95

150 Series Protective Cover
Same as above for the 150 series ..............26.95

ST-275 Stand Kit
Two heavy-duty tripod stands constructed of anodized aluminum alloy tubing with a nylon carrying bag .................................................119.95

ST-280 Stand Kit
The same as the ST275, with two additional mic tripod stands ..........................139.95

Speaker Wall Mount Kit
Custom fitted, universal position wall mounting bracket for a Passport speaker ............49.95

Dual Speaker Mount
Allows you to mount two speakers (P-150 or P-250) on a single speaker stand ...........34.95

DC Power Accessory Bag
Holds the Passport Battery Pack, DC-D-C converter, all cables and microphones ..........59.95
The SoundFactor series offers musicians, DJs and other users of live sound reinforcement speakers the performance that goes with JBL speakers at prices they can afford. To achieve this, SoundFactor includes only those features that contribute to sound quality, reliability, and durability—without sacrificing JBL’s legendary standards. For example, SoundFactor speakers must pass the same 100-hour, full rated-power torture test that JBL high-end touring systems must survive.

SoundFactor’s crossover uses advanced network topology designs that are far more sophisticated than the simple crossovers typically seen in lower-priced systems. Heavy gauge wire is used for inductors to assure that distortion due to coil saturation is minimized and SonicGuard high-frequency driver protection guards against damage caused by inadvertent overpowering of the system. All SoundFactor models are constructed of carpet-covered, 3/4˝ MDF. All-metal handles and an 18 gauge, full metal grille are also used. SoundFactor also uses JBL’s Progressive Transition Waveguide design for well-controlled coverage, low-distortion, and good frequency response. Tough construction, great performance, gentle on your budget – JBL SoundFactor.

### Hardware

All the SoundFactor models use tough, non-resonant all-steel handles with big, beefy bars. And the entire baffle (not just the woofer) is protected by 18 gauge steel grills.

### Enclosure Construction

For SoundFactor, JBL selected a rugged and acoustically superior 3/4˝ MDF enclosure material and put it all together with advanced adhesives and closely spaced mechanical fasteners. Not only are the cabinets rugged, but the denser enclosure walls are more rigid, delivering better low end as a result.

### Crossover Network Design

While the drivers are the muscle of a speaker system, the crossover network is the heart and soul. SoundFactor uses the same kind of sophisticated advanced network that JBL applies to top-of-the-line systems. SoundFactor networks are built using heavy coils with massive cores and heavy gauge wire so they won’t saturate when you drive them hard, and high-voltage capacitors that can handle what you send them. SoundFactor networks use an advanced design that shapes frequency response for coherent summation in the critical crossover region for better mid-range clarity and more consistent coverage at all frequencies.

### SonicGuard

Feedback, dropped microphones, pushing the amps into clipping – all these things can quickly destroy even the best high-frequency drivers. That’s why JBL SoundFactor speakers include SonicGuard protection. SonicGuard circuitry absorbs excess energy without interrupting the performance. No circuit breakers to reset, no fuses to replace, and no “poly-switches” to degrade sound quality.

### Progressive Transition Waveguide

Another example of JBL’s innovation is the PT Waveguide design. For decades, horn designers were faced with trade-offs between well-controlled coverage, low-distortion, and good frequency response. JBL developed proprietary algorithms which allow the design of waveguides that give the PT waveguides the best performance in all three areas.

### The JBL 100 Hour Torture Test

SoundFactor designs have to survive the same 100 hour torture test as JBL’s most expensive systems. When JBL specifies a speaker as having 250 watts continuous power capacity, that means samples of the speaker system have survived a grueling, 100 hour test with IEC noise at 250 watts continuous and 1000 watts peak power. No one in the industry uses a more demanding standard.

SoundFactor speakers have quite a family name to live up to. Just consider its closest relatives - SR-X, M Pro, EON G2... legendary JBL performers in the world of professional loudspeakers; products that outperform anything else their respective classes have to offer. Now, that same commitment to performance, quality and technical excellence is also available with a new ingredient: affordability. By keeping everything that makes a speaker perform and sound its best and eliminating things that don’t, SoundFactor empowers your performance through speakers designed and built by the worlds leading supplier of professional sound reinforcement products.
**SF12M**

**12” Two-way Stage Monitor Speaker System**

The SF12M isn't just a PA speaker in a wedge-shaped box - it was designed from the ground up as a monitor. It is extremely compact, so it won't block audience sightlines or take up too much of the limited real-estate on stage. And it's voiced to let the performers hear the pitch, harmony, and rhythm cues they need for a tight sound. With its high sensitivity (99 dB SPL), it will crank out plenty of sound even with a moderately powered amplifier. For compatibility it's equipped with Neutrik Speakon and 1/4” input connectors. Continuous power capacity is 250 watts and Peak power capacity is 1000 watts. A 35 mm pole mount socket lets it do double duty as a main PA speaker.

**SF22SP**

**Dual 12” Powered Subwoofer**

The SF22SP is a dual 12”, powered subwoofer using a fourth-order symmetrical band pass enclosure design. It has built-in 500 watt amplifier with 300-watts continuous power or 500-watts peak. For versatility and ease of use, you can plug either a line-level or speaker-level signal into the SF22SP. Its balanced, line-level stereo inputs combine both channels for use in systems with a single sub and two satellites. The speaker-level input is especially useful, as this allows connection of the sub via the loop-through connectors, which then pass on the amplified signal to the passive satellite speakers, such as the SF15.

Accepts stereo or mono line level inputs via balanced XLRs as well as single channel speaker level input via a 1/4” phone jack. Integral signal processing includes a stereo crossover and limiting for the internal amplifier. A pair of XLR outputs may be used to pass the input signals to another system or to send a highpassed, line-level signal to a pair of powered, full-range speakers. Satellite speakers can sit atop the 24” pole that is included with the subwoofer.

The SF22SP measures 31.6 x 18.3 x 34.8” and weighs 126 pounds. Transport is aided by four removable swivel 3” casters for easy load-in and load-out.

Subwoofers are usually thought of as having large 15” or 18” woofers, but a pair of 12” actually outperform a single 18”. That’s because how low and loud a speaker can play is determined by how much air it can displace, which is determined by the area of the speaker’s cone times the maximum distance the cone can travel. A pair of 12” actually displaces more air than a single, comparable 18” speaker.

Designed for dance music and live reinforcement of drums and bass, which can demand more than a basic two-way speaker can deliver, the SF22SP can work with either powered or non-powered speakers, external amps or a powered mixer. Add the SF22SP, and you’ve added strong low frequencies to your sound system.

**SF15**

**15” Two-way Sound Reinforcement Speaker System**

This SF15 is a trapezoidal 15” front-of-house speaker that is the choice for live sound, dance music and speech reinforcement. It includes SonicGuard high-frequency protection, a 35 mm pole mount socket, and an impressive peak power capacity of 1000 watts (250 watts continuous power capacity). For compatibility it’s equipped with Neutrik Speakon and 1/4” input connectors.

**SF25**

**Dual 15” Two-way Sound Reinforcement Speaker System**

The SoundFactor SF25 is a dual 15”, two-way speaker system designed for live music performance and playback. However, in reality it is more of a three-way system in that the lower woofer is actually rolled off at a lower frequency than the upper woofer. That makes it right at home in applications where additional low-frequency power and extension is needed but adding a subwoofer to the system is not practical. Continuous power capacity is 500 watts and Peak power capacity is 2000 watts. For compatibility it’s equipped with Neutrik Speakon and 1/4” input connectors.

**Quasi Three-Way Crossover Design**

Dual 15” systems can crank lots of low-end with their double woofers, but they represent a design challenge. The high-frequency driver and both mid-frequency drivers are all trying to produce mid-range. But since the mid-range is coming from three different places there’s lots of uncontrolled “phase cancellation.” The result is what engineers call “comb-filtering” and what listeners call “muddy mids”. The SF25 crossover design solves this problem by rolling off the mids from the lower woofer so it’s working more like a built-in subwoofer. With only the upper woofer and the high-frequency driver covering the mid-range, the SF25 delivers “coherent summation” for clear mids.
The M Pro Series speakers are designed for music pros looking for professional performance and appearance in live sound reinforcement speakers. The M Pro line has two segments, the 200 Series with carpet-covered enclosures and the 400 Series with higher power handling, DuraFlex™ coated enclosures and a Crown-powered Subwoofer. The M Pro 200 Series features premium-grade carpet covered 18mm plywood enclosures. The edges of the carpet are captured by the joint detail to prevent visible seams or peeling. The large-mouth horn design of the M P212, M P215 and M P225 delivers smooth, natural reproduction—especially in the critical mid-range. A 16-gauge, steel grille protects the woofers.

The M P400 Series features JBL's DuraFlex coated enclosures and a Crown-powered Subwoofer. The M P412 and M P415 feature the ARD (Annular Ring Diaphragm) compression driver to deliver extraordinary high-frequency extension.

**MP212**
12” Two-Way Speaker
Compact, portable, 12” two-way speaker in a multi-angle enclosure that’s equally at home as a FOH (front-of-house) speaker or as a stage monitor. Designed for portable applications in live performance, music playback and speech reinforcement, the M P212 delivers excellent performance by itself or as a satellite over the M P255S subwoofer.

**MP215**
15” Two-Way Speaker
The M P215 is a portable, 15”, two-way speaker designed for live performance, music playback, and speech reinforcement.

**MP225**
Dual 15” Two-Way Speaker
The M P225 is a portable, dual 15”, two-way speaker system designed for live performance, music playback, and speech reinforcement. The crossover network employs separate low-pass filters for each woofer. The lower woofer is rolled off at a lower frequency than is the upper woofer. This reduces mid-range phase anomalies while retaining the strong low-frequency output that is the primary appeal of a dual woofer system.
MP255S
Dual 15˝ Subwoofer

The M Pro M P255S is a dual 15˝ subwoofer designed to supplement and extend the low-frequency output of full-range systems in a variety of portable and fixed applications. Bandpass design (uses two tuned chambers to shift its energy down into the low-frequency region) combined with an internal Low Pass Filter (to get rid of the remaining mid-range output) assures solid performance in bi-amplified or single amplified systems. While configured for vertical orientation, the speaker may also be used in a horizontal position when a larger footprint and lower vertical height are preferred.

- Dual 15˝ band-pass design puts the energy in the bass region where it’s needed for “punch” and power.
- Low-pass filter blocks mid-range output from the subwoofer. Combined with the band-pass design, this assures that the M P255S will combine with the mid / high speaker for excellent low-frequency performance - even without a separate subwoofer amplifier. Even greater performance and control is possible in bi-amplified configurations.
- Dual Neutrik Speakon NL-4 input connectors provided for secure connection and loop-through capability.
- Input connections may be reconfigured for pin 1± or pin 2± for compatibility with any cabling scheme.
- Heavy duty casters mounted on the rear of the enclosure for easy transport.
- 35 mm pole mount receptacle. 24˝ steel pole included

MP410 Series

The M Pro 400 Series steps up with enclosures coated with JBL’s exclusive DuraFlex - a rugged, advanced, poly-urea finish. They also feature dual Neutrik Speakon NL-4 input connectors. Designed for portable applications in live performance, music playback, and reinforcement of speech, the M P410, M P412 and M P415 deliver excellent performance by themselves or as satellites over the M P418S and M P418SP subwoofers.

MP410 10˝ Two-Way Speaker

The M P410 is a compact, portable 10˝, two-way speaker system using JBL components in a professional quality enclosure that looks and sounds like the high-end, specialty speaker systems that top audio pros rely on. It incorporates a 10˝, woofer with 2˝, edge-wound voice-coil. Surround design is optimized for maximum excursion and low distortion using FEA (finite element analysis) modeling. The compression driver with pure titanium diaphragm and ferro-fluid cooling provides improved smoothness and thermal power handling.

MP412/MP415 12˝ and 15˝ Two-Way Speakers

The M P412 and M P415 are portable 12˝ and 15˝ two-way speaker systems in a multi-angle enclosure that supports main PA or stage monitor applications. Their high-frequency performance makes them outstanding choices for high-level music playback, especially when combined with subwoofers.

- JBL 2023 12˝ and 2033 15˝ woofer with 3˝, edge-wound voice-coil. SHG (Selective Harmonic Geometry) technology reduces harmonic distortion and improves power response
- With a design that combines very high motor strength with low moving mass, their unique, ARD (Annular Ring Diaphragm) compression driver delivers smooth, extended high-frequency output to 20 kHz
- High power handling - 350 watts (average) and 1,400 watts (peak) power capacity
The MPro M418S is a compact, single 18” subwoofer in a bass reflex enclosure. It is designed to supplement and extend the low-frequency output of full-range systems in a variety of portable and fixed applications. Achieving the power and performance characteristics of the M418S requires the use of a woofer with very high motor strength - the JBL 2241. This woofer uses VGC (Vented Gap Cooling) an exclusive JBL technology that greatly reduces the loss of output resulting from power compression.

A dual-channel Crown amplifier with signal processing is incorporated into the system. While one amplifier channel (the “Internal” channel) is dedicated to powering the internal 18” VGC woofer, the other channel (the “External” channel) may be used in one of two ways:

- In the "Sub + Sat" mode, an MP418SP may be used with a full-range, passive speaker for a single channel, two piece system. The external amplifier channel powers the satellite.
- In the "Sub + Sub" mode, the external amplifier channel is used to drive the MP418S (a passive version of the MP418SP). Stereo, high-passed line-out puts are provided to drive powered satellite speakers or an external amplifier / speaker system.

The MP418SP is a compact, powered, single 18”, bass-reflex subwoofer system. Designed for portable applications, the MP418SP includes heavy-duty, 3” casters and ergonomically positioned steel carry handles to facilitate transport. The MP418SP uses the same driver and enclosure tuning as the non-powered M418S. It is designed for portable applications and includes a heavy-duty, 3” casters and ergonomically positioned steel carrying handles for transport.

**THE ORIGINAL EON SERIES**

The EON system is a made-to-match system. All components are designed to give you hassle-free professional sound quality and performance. EON was the first professional sound system made to be truly portable. The secret behind EON’s feather-weight is a rare earth material called neodymium with 10 times the magnetic strength of ceramic magnets, enabling a few ounces of neodymium to replace nearly 20 lbs. of conventional magnetic materials.

For flexibility, the EON speakers are built to work as both upright speakers and wedge monitors. With ergonomic handles and light weight, they are remarkably easy to carry. Simple to set up. And a pleasure to use.

**EON 15P-1**

The EON 15P-1 is a two-way powered speaker system which incorporates a discrete 130 watt power amplifier for low frequencies and a 50 watt power amplifier for the high-frequency driver in a light weight rugged enclosure. Designed for multi-purpose usage, the EON 15P-1 may be driven from a mixer or a single microphone.

**EON 1500**

The EON 1500 features the same light weight, portability and great sound of other EON speakers, but is designed for use with a powered mixer or external amplifier. EON 1500 features proven JBL components like a liquid-cooled compression driver and SonicGuard protection. Its unique design allows you to use them as a main speaker, tripod mounted or a dual-angle floor monitor. The EON 1500 accepts a 1/4” phone jack or Speak-On input connection wired in parallel for ease of hookups.
JBL

EON G2

Hassle-free with professional sound quality and performance JBL's EON G2 series is designed for applications ranging from live sound reinforcement, speech and vocals to music playback in entertainment, A/V and institutional environments.

Consisting of the compact EON10 G2 (10˝ woofer) and full-range EON15 G2 (15˝ woofer) powered speakers with three input mini-mixer, and the EON SUB G2 powered subwoofer, they are not only ideal for musicians, but for hotels, meeting planners, AV companies and just about any application where portable compact sound reinforcement is required.

They deliver 125 and 300 watts of power (respectively) to a Neodymium Differential Drive low frequency driver. The driver boasts a dual neodymium magnet and dual voice coil motor that delivers high output and low distortion from a lightweight woofer. Meanwhile, the high frequency amplifier delivers 50- and 100 watts of power to a titanium diaphragm compression driver with ferro-fluid cooling. JBL's revolutionary “ThermoMaster Total Thermal Management System” eliminates the need for any internal or external cooling fans. Instead, a single piece, cast-aluminum baffle integrates the woofer frame, horn and amplifier heat-sink while air movement through the finned ports dissipates heat. With their integrated three-input mixer, the speakers can directly accommodate electronic keyboards, drum machines, electrified acoustic guitars, and microphones. An additional XLR output allows the speakers to be daisy-chained together or send the mixed output to an external mixing console.

---

**EON10 G2**

- Multi-angle enclosure for FOH or stage monitor applications
- 60° x 90° constant directivity horn
- 10˝ Differential Drive low frequency driver with neodymium magnet for light weight and reduced distortion
- 1˝ JBL compression driver with titanium diaphragm and ferro-fluid cooling
- 125 watt low-frequency and 50 watt high-frequency (bi-amplified) amplifiers – actual power delivered to the drivers
- Selectable balanced mic/line input and one dual-channel, 1/4˝ TRS line-level input
- Balanced loop/mix output. “Daisy-chain” additional EON speakers or send the mixed output to a mixing console
- Rugged, lightweight, black co-polymer enclosure
- Integral 35 mm pole mount receptacle with securing thumb screw
- Attachment points for fixed-angle and adjustable mounting brackets

**EON15 G2**

**Step-up Features**

- 15˝ Differential Drive low-frequency driver with dual neodymium magnet for light weight and reduced distortion
- 1˝ (throat diameter) JBL compression driver with 1.75˝ titanium diaphragm and ferro-fluid cooling
- 300 watts low-frequency and 100 watts high-frequency (bi-amplified) - actual power delivered to the drivers
- One balanced mic/line input, two 1/4˝ phone line-level inputs
- Two-band equalization
- Extended low-frequency performance — delivers powerful bass down to 39 Hz
- Tailored dynamic processing protects amplifiers and speakers from being overdriven without producing extreme changes in frequency response as level varies

---

With 125 watts for low frequencies and 50 watts for the highs, the EON 10 G2 can be used in AV applications, smaller musical and spoken word performances. Versatile cabinet design allows use in several ways: As a front of house speaker, sitting on a flat horizontal surface or raised in the air using standard tripod speaker stands. Angled back allows use as a vocal or instrument monitor on stage. The EON10 G2 can also be snugly placed atop the EONSUB G2 powered subwoofer for added volume and extended bandwidth. Combined, they provide a full range sound system for small and medium sized events.

With 400 watts of power, excellent sound quality, easy to transport and set up, the EON15 G2 is at home as a main PA or on stage as a monitor or instrument amplification system. Use by itself for casual solo or duo work, or combine multiple EONs into a complete, powerful PA system. Electric guitarists using amp modeling modules will find that the clean, full-range sound of EON15 G2 reproduces all of the subtle tones the modules can produce.
EONSUB G2

The EON SUB G2 offers powerful low frequencies in a compact, durable enclosure, making it a perfect companion for either the EON 10 G2 or EON 15 G2 powered speaker, or any sound system that needs additional low end.

When you combine the EON SUB G2 with either the EON 10 G2 or EON 15 G2, you have a full range sound system whose clarity, volume and low end are truly amazing, considering their small size. Because the power amp and crossover are internal to all EON speakers, set up time and outboard equipment are minimized. Just plug in and play.

- 250 watts of low-end power and a frequency range of 40 to 200 Hz
- Patented Neodymium Differential Drive woofer generates maximum efficiency with minimum weight
- Thermomaster cooling system allows the amplifier and 15˝ woofer to stay cool, even under the most challenging circumstances, without the need for noisy fans or protruding external heatsinks
- Specifically designed to securely hold the EON 10 G2 using receptacles built into the top of the EON SUB G2
- Scratch-forgiving black covering and embossed grill cover for added rigidity

EON G2 Systems

JBL offers the EON 10 and EON 15 G2 in complete full-function sound systems that include two speakers, a mixer, two JBL dynamic M 505 microphones and four 25´ XLR cables for connecting the mixer to the microphones and speakers.

Ideal for smaller musical performances, speeches, coffeehouses, schools, churches or any application that requires quality sound in a smaller venue, the 14 input, 350 watt EON 10 G2 sound system includes the MusicMix 14 mixer and a pair of EON 10 G2 speakers. When combined with the EON SUB G2 subwoofer, the power of the system is more than doubled. Featuring twice the power and greatly enhanced sound, the 16 input, 800 watt EON 15 G2 System sound system includes the MusicMix 16 mixer and two EON 15 G2 speakers.

The EON MusicMix 14 and 16 are feature-packed mixers with six or eight mono inputs, two stereo inputs, two auxiliary inputs, and three band equalizer. Their third auxiliary channel can be selected as either pre- or post-fader, for greater control and flexibility with monitors and effects devices.

- Six or eight mic/line input channels
- Two stereo input channels
- Two auxiliary input channels
- 3-Band channel EQ with variable mid-frequency for precise tailoring of the sound
- Individual channel on/off switches let you mute an input without disturbing your mix
- Low-cut filter to reduce unwanted noise
- 48v Phantom Power
- Three Auxiliary Mix Busses: 1 Monitor, 1 Effects and 1 Selectable
- Complete 'listen' (PFL/AFL) system for setup and trouble shooting
- Smooth 100mm faders faders

MACKIE

PPM SERIES

Professional Powered Mixers

Mackie's PPM Series consists of three professional-quality, high-performance powered mixers designed specifically for applications such as local and regional club bands, rehearsal rooms and general gigs, small-to-medium club PA systems, small-to-medium houses of worship, and corporate A/V. From the 6-input, 500-watt mono 406M to the top-of-line 8-input, 1200-watt stereo 808S, you can count on ultra-low noise, high headroom, graphic EQ, sixteen 32-bit digital effects, rugged composite-molded cases, and a real RF Series high-current amplifier inside.

Features

- In addition to 16 ultra-realistic EMAC 32-bit processing effects, there are two parameter controls that expand the range of each effect for almost unlimited sound possibilities. There is also a special EFX WIDE circuit that can psychoacoustically enhance the width and depth of reverb, chorus, and flange— perfect for set-ups where your speakers have to be placed close together.
- Studio-grade 9-band mains and monitor graphic EQs utilize multiple summing amps and precision infinite feedback band-pass filters to yield exceptionally low-noise low-distortion sound.
- 75Hz low-cut filters in both EQ sections remove microphone thumps, P-pops and stage rumble. Sharp 18dB/octave circuitry works without cutting audible bass.
- Mic/line mixer section based on the MicroSeries 1202-VLZ and enhanced with new mic preamps and many ingenious extra features.
- Level-setting control and LED on every mixer channel makes setting input levels a snap. This is the key to optimizing headroom and reducing mixer noise.
- Break switch mutes Channels 1-6 during set breaks so you can play music (via the tape input and stereo channels 7 or 8) without having to mess up your levels, deal with feedback loops, or worrying about somebody grabbing the microphone while you are on a break.
- Built-in soft-knee compressor works wonders on vocals and percussion, letting you get more out of your speakers.
- EFX to Monitor lets you add effects to onstage monitor mixes independently of the main mix.
- Dual line inputs on channels 7 and 8 (mono models), and stereo line inputs (stereo models) lets you hook up keyboards or CD players without burning up two channels. (Not on the 406M).
- Dozens of conveniences including separate input level control, external effects loop, effects foot switch jack, and a gently tilted front panel that makes it easy to make adjustments.

Power Amp Section

- Power amp routing switch lets you assign power amps to mains or mains + monitors.
- Massive 10,000 microfarad storage capacitors to satisfy current-sucking peak power demands.
- Massive toroid transformer for high current output.
- Massive, full-width 1-piece die-cast heat sink is custom-cast for maximum heat dissipation— keeps output devices running cool even when you're playing hot. Black paint coating improves efficiency by additional 15%.

Rugged Construction

- Rugged injection-molded chassis resists impacts that would destroy most other powered mixers. Built-in handle allows easy transport.
- For durability and reliability, they use mil-spec fiberglass circuit boards (instead of cheap phenolic) to resist physical impact. Rugged, sealed rotary controls resist dust, moisture and other contamination.

www.bhphotovideo.com
**MASTER SECTION**

1. Effects Drive level control & clip OL LED
2. Effects Bypass with LED
3. Effects Wide spatial expander
4. EMAC effects preset select-o-matic
5. Time/Rate & Damping/Depth parameter controls
6. Monitor graphic EQ with centers ±15dB at 63Hz, 125Hz, 250Hz, 500Hz, 1kHz, 2kHz, 4kHz, 8kHz, & 16kHz
7. Monitor 75Hz, 18dB/oct low cut filter
8. Effects to Monitor level control
9. Master Monitor output level control
10. Monitor output level LED ladder
11. Main graphic EQ (same centers as #6 above. EQ is stereo on 808S and 408S)
12. Main 75Hz, 18dB/oct low cut filter
13. Effects to Main level control
14. Main output level control
15. Main output LED ladder
16. Power amp routing switch
17. External effects foot switch jack
18. External effects loop - mono send (stereo return on stereo models)
19. Power amp line in jacks
20. Monitor line output
21. Line level mixer output(s) (bal/unbal)
22. Soft-knee compressor switch
23. Tape input level control
24. RCA Tape inputs and outputs (unbal)
25. Phantom Power switch with LED
26. Break Switch with LED (chs. 1-6 only)

**CHANNEL STRIP**

27. Monitor send for stage monitor feeds
28. EFX send to internal EMAC effects
29. 12kHz H1 shelving EQ; ±15dB
30. 2.5kHz M1D peaking EQ; ±12dB
31. 80Hz LO shelving EQ; ±15dB
32. Pan control (stereo models only)
33. Input Level Control & Level Set LED
34. Master channel level control
35. Channel insert (mono channels only)
36. Line input also handles Hi-Z mics (bal/unbal)
37. Dual (mono unit) or stereo (stereo unit) line inputs on chs. 7 & 8 (not available on 406M)
38. The best mic preamps on any powered mixer

MACKIE

C300/300i

Passive 12” 2-Way Speakers

The C300 (Speakon connectors) and the C300i (1/4” connectors) use the same basic transducers as the active SRM 450 — with two differences. The C300’s 1.75” high frequency compression driver uses a composite mylar diaphragm; the 12” low frequency transducer incorporates a 3” inside/outside temperature-resistant voice coil. Both of these compensate for the fact that the speaker system must be able to handle a wide range of external power inputs (including Mackie’s mega-powered PPM 808S or PPM 808M). The C300/C300i use the same studio-quality horn assembly as the SRM 450, with multi-cell aperture horn throat and large format exponential/conical high-frequency horn mouth for superb dispersion. This means everyone in your audience hears clearly... not just the people in the middle between the speakers.

They have an asymmetrical trapezoidal cabinet for minimum internal resonance and the ability to recline for floor monitor use. Their enclosure is weight-balanced with dual side handles and top handle, built-in pole mount and ten built-in hanging points. Passive speakers (no internal amplification) the C300/C300i have a Low-Impedance Compensated Crossover (LICC) with full built-in transducer protection that just beg to be energized to shock volumes with a powered mixer or amp.

- Wide-dispersion, studio-quality horn assembly with multi-cell aperture horn throat & exponential / conical HF mouth
- 1.75” high frequency compression driver
- Composite mylar diaphragm increases clarity, eliminates resonances
- 12” long-throw low frequency transducer
- Reclines for use as a stage monitor
- Weight-balanced asymmetrical trapezoidal cabinet - strongest & stiffest in its class
- 300 watts RMS power handling
- 8-Ohm nominal impedance
- Choice of Speakon or 1/4” jack connectors
- Two comfortable side handles for easy carry & set-up + top handle for easy positioning
- 10 built-in fly points & built-in pole mount

S500 Passive 15” 2-Way Speakers

Although not the cheapest 15” 2-way system on the market, the S500 is one of the most accurate and easy on the ears at high output levels. Make beautiful music with a Mackie powered mixer — especially when used with a high-wattage model, it really starts shaking your audience up. Tight bass, smooth midrange, spine-tingling treble... at shock volumes up to 127dB.

Low-distortion, high-output horn coupled to a 1.75” titanium diaphragm compression driver provides the correct power response and phase alignment to deliver a wide 75° x 65° dispersion pattern that lets everybody in your audience hear the same great sound. The S500 employs a trapezoidal enclosure that’s both strong and resonance damping. It is built of rugged 16-ply Baltic Birch with tough end caps made of pressure-injected structural resin. The perforated steel grille is coated with a special scuff and weather-resistant polymer coating. Cast aluminum side handles are placed at the speaker’s center of gravity for easy carrying and set-up. Rear panel inputs include both 1/4” and Neutric Speakon connectors wired in parallel.

- 1.75” high frequency compression driver
- Composite mylar diaphragm increases clarity, eliminates resonances
Active Sound Reinforcement Monitor

Forget about what other small PA speakers sound like. Especially forget what so-called “powered” speakers sound like. The active SRM 450 is that different. The most sophisticated, versatile portable sound reinforcement speaker ever developed, the SRM 450 translates the fidelity and performance found in Mackie’s award-winning HR824 Active Near Field Studio Monitor into a tough, portable and easy to use composite enclosure.

The SRM 450 delivers tight, steel-fisted bass to below 55Hz and detailed, articulate treble out to 20kHz. Midrange is warm, natural, and free from ear-fatiguing harshness. Active technology with wide dispersion, studio quality horns lets the whole audience hear clearly, whether they’re in the front, back, or way out on the sides of the room. And above all, the SRM 450 cranks! Without a hint of distortion, it effortlessly achieves sound pressure levels that would melt conventional speakers into a pile of molten slag.

FEATURES

- Combination mic/line level control incorporating Mackie studio-quality low noise mic pre-amp. Built directly into the SRM 450, this allows it to also function as a complete stand-alone PA system.
- 2-way bi-amplified active system — built-in monolithic 300 watt bass & 100 watt mid/high amplifier— no external power amplifier needed
- Servo-controlled RCF Precision 12” (300mm) long-throw frequency transducer with inside/outside voice coil
- Studio-quality maximum dispersion horn design
- High (127dB) SPL output/low distortion
- 1.75” high-output precision compression driver with damped titanium diaphragm assembly
- Level control, contour & low cut switches
- Power On, Thermal, Peak and Signal Present LEDs
- Molded composite, monocque asymmetrical enclosure and metal grille
- Three balanced ergonomic handles make it easy to carry
- Timed Auto-on/Auto-off feature
- Pole-mountable and multiple fly points make it easy to set up— also a great floor monitor

Big studio monitors use an exponential horn design that keeps the air impedance constant and the sound smooth as silk. However, off-axis pattern control isn’t great. Lots of speakers claim 90° horizontal dispersion. But when you examine their polar patterns, you discover that they don’t achieve 90° dispersion at all frequencies. When a speaker has uneven dispersion (poor pattern control) at higher frequencies, acoustic energy projects straight out in a beam—great for the listeners right in front of the speaker, but muddy, dull, uneven sound off-axis.

The SRM 450’s horn design is a unique three-piece assembly derived from high-end studio monitor technology where wide dispersion and precise reproduction of voice and high frequencies is critical. Mackie applied this technology in a high powered, sound reinforcement application coupled with high output compression drivers. The result is an extremely smooth off axis response, which allows everyone in front of the SRM 450 to experience the same high-resolution audio no matter where they are seated.
MACKIE
SA1232/ SA1521/ SR1530

Active 2- and 3-Way
Sound Reinforcement Speakers

Mackie's active sound reinforcement speakers are designed for extreme accuracy, high output, and smooth dispersion across the entire audio frequency range. They integrate FR series amplifier power, active control electronics, and RCF Precision components to provide unparalleled high resolution and clarity in the critical low-mid and mid-range frequencies.

Offering exceptional price/performance ratio, they are used in garage bands, one-man/duos/trios, local club bands, practice room rehearsal halls and school music rooms. They are equally suited for small, fixed or traveling church revivals, small music and dance clubs, assembly halls, conferences and outdoor meetings. The active 15” two-way SA1521 and 3-way SR1530 are ideal for mobile DJ and small house mix, clubs, bars and restaurants, while the active dual 12” 3-way SA1232 is designed to provide high definition and extreme output level sound reinforcement to club or regional touring bands, church PA systems, or medium to large size churches.

◆ They have a signal input panel containing XLR connectors for line-level input and loop-through connections, a level control, and four status LEDs for Power On, Signal Present, Limit, and Thermal functions. (The SR1530 doesn’t have level control or Signal and Thermal LEDs)

◆ Their internal processors provide complete system management of all electronic and acoustic functions. These include an electronic active crossover, electronic phase alignment, electronic time correction, electronic equalization, and complete amplifier and component protection.

◆ To ensure long term reliability, their amps are mounted on a massive extruded heatsink, which is convection cooled and dramatically extends the life expectancy of the heat-producing components.

◆ Their trapezoidal cabinet is designed to withstand Neanderthal-levels of road and rental company abuse. The top and bottom of the enclosure are molded using a high-impact resistant composite resin. The front, back and sides are constructed of heavy duty, 13-ply Baltic Birch used in expensive Hi-Fi speaker systems.

◆ Weight-balanced for stable stand-mounting, they also feature two large-grip, cast-aluminum side handles while top and bottom handles allow optimal portability, setup and repositioning. Full-size, oval punched, weather-resistant steel grille pro-

SA1521 (Active 15” 2-Way)

A ‘high output big brother’ to the SRM450, the 500 watt SA1521 provides the same accuracy but with even more bottom end and a higher SPL. A two-way, bi-amplified, horn loaded, active speaker system, the SA1521 includes a high efficiency, light mass, 15” low frequency transducer with 2.5-inch inside/outside high temperature coil technology. This innovative woofer is combined with a state of the art, 1.75” titanium dome, 1” exit compression driver. This unique combination allows the system to be crossed over at 1300 Hz enabling the woofer to more efficiently keep up with the horn/driver combination. The result is that the SA1521 offers much better mid-band performance than other popular 15 +1 designs.

The fully integrated amplifier module contains two separate amps - one for each driver, which together generate 500 watts continuous RMS of total power and a maximum SPL of 130 dB. The low frequency amplifier uses Mackie's switch mode and Class G hybrid topology to deliver 400 watts of continuous output, and over 650 watts peak at 90% efficiency. The result is very little power being dissipated thermally through the heat sink.

SA1530 (Active 15” 3-Way)

The SR1530 is a three-way, tri-amplified, horn loaded, active system designed for high definition and extreme output levels. Precision components include a 15” woofer with inside/outside high temperature coil technology, a high-output, horn loaded 6” midrange speaker, and a one-inch exit compression driver mounted on a wide dispersion, extreme output high/mid horn design. The SR1530 is powered by an integrated three-channel amp module that generates 500 watts of total power.

SA1232 (Active Dual 12” 3-Way)

The SA1232 is also a three-way, tri-amplified, horn loaded system that includes two 12” woofers with 3” inside/outside high temperature coil technology, a high-output horn loaded 6” midrange speaker and a 1” exit compression driver mounted on a wide dispersion, 90° x 40° mid/high frequency Optimized Wavefront horn design. This unique horn design combines the mid and high frequencies to eliminate unwanted phase shifting. The SA1232 is powered by an integrated amp module that contains three separate amplifiers— one for each driver, which together generate a staggering 1300 watts RMS of total power and a maximum peak SPL of 133 dB.
15- and 18” High Output, Active Subwoofer Systems

Ideally suited for small to medium sized touring groups and mobile DJs as well as fixed installations in churches, corporate facilities, and nightclubs, the SWA1501 and SWA1801 feature high-quality 15- and 18” RCF Precision transducers with high-temperature inside/outside coil combined with a 500-watt continuous/700 watt peak (SWA-1501) or 900-watt continuous/1400-watt peak (SWA-1801) application-specific amplifier. Their cabinets are constructed with 18mm thick, 13-ply Baltic-Birch plywood finished in back splatter paint and equipped with cast aluminum side handles for efficient loading and transport as well as a female pole mount fixture. Together, these robust components allow them to deliver an impressive 128dB (SWA1501) or 135dB (SWA-1801) of peak output. Input output options allow them to be easily configured for most any application. Stereo and mono inputs are provided through XLR style connectors while a high-pass output allows for connection to active full-range speakers or amplifiers powering passive full range speakers. Four function LEDs provide power on, limit, signal present, and thermal condition indication. A rotary level control allows adjustment from -15dB to +5dB.

The S62 and S63 are ideal all-in-one device for recording, live concert and contracting applications. Built tough for reliable performance and long life, they feature 6 electronically balanced mic/line inputs (XLR and 1/4” connectors), a CD/tape input (phono connectors), switchable 48v phantom power, internal reverb, an Aux send and return, along with amp in and preamp and monitor out patch points. Rugged and versatile, they easily integrate into a variety of installations such as small clubs, theaters, schools, restaurants and houses of worship. Like all Samson’s powered mixers, they combine comprehensive mixing and powering capability with extensive EQ and a wide range of useful features.

The S63 steps up with more power, 3-band EQ on each channel and a 10-band master graphic EQ that lets you “tune” the unit to particular environments, eliminating feedback problems.

- 6 channels with balanced XLR mic/line inputs for each channel allows you to blend a variety of source signals, including mics, keyboards, CD players, etc.
- Balanced XLR connectors (for mic inputs) and electronically balanced 1/4” jacks (for line-level inputs) for each channel; there is also a dedicated CD/Tape input that provides dual phono (RCA) jacks.
- 48v phantom power for mic inputs
- Clean, high-quality amplifier, delivers 150 watts into 4 ohms. Any standard speaker cabinets (two, four, eight, or sixteen ohms) can be connected to the rear-panel 1/4” speaker output jacks.
- A built-in three-spring reverb unit allows you to add reverberation effects to your vocals or instruments without having to use an expensive external signal processor. Front-panel reverb master volume control lets you precisely define the amount of reverb to be added to the signal.
- 2-band EQ on each channel enables you to shape the sound of your input signal sources
- Two Effects sends per channel (one pre-fade and the other post-fade) allow you to route multiple signals to the internal reverb unit or to external signal processors with a single front-panel control for the two. The pre-fade send (Effects send 1) can be used as a Monitor control, allowing you to set up an onstage monitor mix that is independent of the main house mix. A separate Monitor level control is provided on the front panel.
- In addition, a five-band graphic master EQ allows you to “tune” the output of the S62 to the particular room environment you are in. This can be particularly useful for eliminating ringing or feedback problems.
- Master Protection and Peak LEDs shows you at a glance when the internal amplifier is overloading.
- Protection relay circuitry prevents “thumps” when powering on or off. Allows you to use the S62 with a single power strip into which other audio devices are connected, without danger of damage to connected speakers.
- 2 speaker outputs
- Portable design with tough reinforced corners and a carry handle. Can also be rack-mounted (3RU high) allowing integration into any setup. Supplied with rack ears.

- S63 Step-up Features:
  - Clean, high-quality amplifier delivers 200- watts into four ohms. Any standard speaker cabinets (two, four, eight, or sixteen ohms) can be connected to the rear-panel 1/4” speaker output jacks.
  - 3-band EQ on each channel lets you shape the sound of your input signal sources.
  - 10-band graphic master EQ allows you to “tune” the output of the S63 to the particular room environment you are in.
  - Independent input Trim controls for each channel allows you to precisely set the correct input gain.
  - A rear-panel amplifier input allows you to bring external signals from other mixers or audio devices into the S63 power amplifier
  - Rear-panel preamplifier output lets you connect the S63 to external power amps when more power is required and/or when additional amp feeds are necessary.
  - 2 Aux sends per channel
  - 2 stereo returns with dedicated level controls for outboard effects
  - Master monitor and reverb level controls
  - Front-panel LEDs show the current status of the amp’s protection relay circuitry and whether phantom power is being applied.
  - Portable design with tough reinforced corners and a carry handle. Can also be rack-mounted (4RU high) allowing integration into any setup. Supplied with rack ears.
8-Channel Rack-Mountable/ Standalone Powered Mixer

Fully loaded in terms of features and performance, the S83 steps up with 8 mic/line inputs, 300-watts of power into 4 ohms, 4-band EQ on each channel, front-panel output level meter, and headphone amp. The S83 also includes enough Sends and Returns so you always have adequate mixing capability.

- 8 channels with balanced XLR mic/line inputs for each channel
- Clean, high-quality amplifier, delivers 300 watts into four ohms. Any standard speaker cabinets (two, four, eight, or sixteen ohms) can be connected to the rear-panel 1/4” speaker output jacks
- 4-band EQ on each channel lets you shape the sound of your input signal sources
- Peak LEDs for each channel show you at a glance when an input signal is on the verge of overloading. Other front-panel LEDs show the current status of the amplifier’s protection relay circuitry and whether or not phantom power is being applied.
- Four Effects returns give you the ability to blend in the return signal from external signal processors or other line-level devices without having to utilize input channels. Two front-panel Effects return level controls (one for Effects returns 1-2 and the other for Effects returns 3-4) allow you to bring in stereo signals, which are then automatically mixed together in mono. In the S63, two Effects returns are provided, with a single front-panel control for the two.
- Built-in headphone amplifier, with a front-panel 1/4” stereo connector and dedicated level control allows you to monitor your main mix
- Convenient front-panel meter let you see at a glance the continuous output signal level

PA324
Six-Channel Powered Mixer with 24-bit DSP Effects

The PA324 is a compact six-channel, 300-watt powered mixer with built-in 24-bit DSP effects. Optimized for live sound reinforcement and commercial installations, it handles up to six mic/line inputs with power to spare. The power amp section can run in three modes: two channel PA (150 watts per side), PA and monitor (150 watts each) or bridged for 300 watts of power. Each channel features a low noise, high quality mic preamp, 3-band EQ, monitor and effects sends, a level control and a 30dB pad on each of the six channels.

The onboard 24-bit DSP effects range from Hall, Room and Vocal reverb to Chorus and Delay and can controlled via front panel footswitch jack. Other practical features include dual 7-band graphic EQ, tape in and out RCA connectors, Aux in, phantom power and dual 7-segment LEDs. Packaged in a rugged and reliable enclosure, the PA324 comes mounted in a durable carpet covered wood cabinet complete with corners and handle.

- Six mic/line inputs with 1/4˝ phone and XLR connectors
- Built-in, 24-bit DSP with 8 selectable presets including Reverb, Delay and Chorus
- Advanced circuit design, utilizing low noise operational amplifiers
- Three power operating modes: 2x 150-watts, or 150-watt main/150-watt monitor, or 300-watts bridged
- Low-noise mic pre-amps with 48v phantom power
- 3-Band EQ on each channel
- Effects and monitor sends on each channel
- Dual 7-band graphic EQ for Main/Monitor
- Tape/CD Input.
- Mounted in a durable carpeted wood cabinet complete with corners, convenient carrying handle and large rubber feet
SAMSON

TM300/ 500

6-Channel Stereo Powered Mixer

The TM 300 is a practical, full-featured 6-channel stereo powered mixer with built-in signal processing in a compact tabletop design. The mixer can also be rack-mounted with the supplied rack ears. Ideal use in rehearsal studios, small club venues, lounge acts and other sound reinforcement applications, the TM 300 can be used wherever there are a number of microphone or line-level sources that need to be mixed down to a stereo output. Simply hook it up to a set of PA speakers and you’re ready to go. The TM 300 features a comprehensive mixer section with extensive routing and metering capability. Stereo power amp produces 150 watts a side into 4 ohms and uses a fan-cooled, bipolar design for greater stability and long life. A built-in DSP section provides 3 different preset effects. 3-band EQ is complemented by a dual 7-band graphic EQ for more sonic control.

FEATURES

- Six independent channels, each with XLR mic and electronically balanced 1/4” line inputs. A dedicated stereo Tape input provides dual phono (RCA) jacks.
- Flexible switching allows the TM 300 to be used either in standard stereo configuration or in a unique “split mono” mode, where it can drive both main PA speakers and onstage monitors simultaneously.
- Built-in stereo power amplifier delivers 150 watts per side into 4 ohms. Any speaker cabinet (4, 8, 16-ohms) can be connected to the four rear-panel 1/4” output jacks.
- Amp utilizes a variable-speed fan and bipolar design for maximum reliability and long life.
- Onboard digital signal processor (DSP) with three high-quality effects.
- 48v phantom power for mic inputs.
- Two Aux sends per channel (one pre-fader and the other post-fader) allow you to route multiple signals to the internal DSP or to external signal processors.
- Dual stereo aux returns— with dedicated front-panel level controls— give you the ability to blend in the return signal from the internal DSP and/or external signal processors or other line-level devices without having to utilize input channels.
- 3-band EQ for each channel, with 15 dB of cut or boost for low (100 Hz) and high (10 kHz) frequencies, and 12 dB of cut/boost for the mid (1.8 kHz) frequency.
- In addition, a dual 7-band graphic master EQ allows you to “tune” the TM 300’s output to the particular room environment you are in — ideal for eliminating ringing or feedback problems. The graphic EQ can be used in stereo or can be “split” so that one side affects the main PA and the other side affects stage monitors.
- Constant level Pan controls for each channel that allow you to precisely place each input signal in the left-right plane.
- Center detents for all Pan and EQ controls, makes it easy to use the TM 300 even in low-light live performance situations.
- Continuously adjustable wide-range input Trim controls for each channel allow you to precisely set the correct input and output gain structure.
- Independent 65mm faders for each channel and for the stereo bus.
- Pre Fader Listen (PFL) soloing for each channel, allowing headphone monitoring of individual channels, pre-fader (but post-EQ) without affecting the signal being output either by the speaker or various line-level outputs.
- Front panel ten-segment level meter allows you to view at a glance the continuous levels of the main stereo output and/or Aux sends.
- Peak LEDs for each channel show when an input signal is on the verge of overloading.
- Dedicated status LEDs show main power and phantom power on/off.
- Separate Record out jacks (with dedicated level control) allow you to directly connect the TM 300 to any tape recorder. In addition, a handy Mono output jack provides a line-level signal for connection to external monitor power amplifiers.
- An independent front-panel headphone output with dedicated volume control for private monitoring of the main stereo output, Aux sends, or soloed channels.
- Main inserts and four channel inserts allow you to use outboard signal processors such as equalizers, compressor/limiters, or noise gates in a standard “effect loop.”
All-In-One Portable PA System

Expedition Express is the total solution to professional sound, made portable. It gives you everything you need to make a professional presentation anywhere you can roll it. Expedition Express is a great solution for performers on the move. Bands, mobile DJ’s, schools, houses of worship, corporate A/V and institutional applications—anywhere portable, high quality sounds required.

Unlike most portable PA systems, the Expedition Express is designed to sound great. Not just for public speaking either—but for live and recorded music, too.

The system is comprised of a pair of rugged, acoustically balanced two-way loudspeakers, a 4-channel mixer with DSP, a powerful 250-watt amplifier and all the accessories you need. What’s more, the system interlocks, and packs up into a single rolling unit so it’s easy to transport.

The Expedition Express combines a powered speaker with built-in amplification and controls, and a light-weight second speaker or “slave”. When set up for performance, the two cabinets are connected by a single cable. When they are packed for the road, the lightweight passive speaker cabinet locks into the top of the amplified speaker cabinet with a unique auto-locate mechanism. Each loudspeaker is housed in a lightweight, yet heavy-duty, molded resin cabinet with extensive internal bracing to give it rigidity, low resonance and the maximum possible volume.

Pro Quality Electronics

The Expedition Express’s integrated 250-watt amplifier is perfectly matched to the drivers for surprisingly high efficiency. The sound is clear and hard-hitting. Built-in digital signal processing (DSP) adds dramatic pro-quality effects like reverb and echo at the flip of a switch. Selecting from six preset effects makes getting great sound easy and fast.

- It features custom designed high and low frequency drivers. The High Frequency section employs an elliptical wave-guide horn that offers extra wide dispersion for maximum coverage.
- With molded-in handle and wheels, you can roll the cabinet anywhere you want. This makes Expedition Express ideal for boardrooms, classrooms and fitness studios, either as a portable speaker or mobile all-in-one sound system.
- The Expedition Express takes the guesswork out of public presentations. Everything you need is in one package: Speakers, built-in mixer with DSP, Samson microphone and all the cables. Best of all, you don’t have to be an engineer to hook it all up. Sets up (and packs up) in less than five minutes.

ACCESSORIES

Rechargeable Battery
RB2030 rechargeable battery kit is for high quality sound anywhere electricity is not available - from the street to the beach, from parks to pool-side.................................................................89.95

Optional Wireless Module
The Expedition Express is prewired to accept Samson UM-1 or Micro 32 Series wireless mics.

Built-in Cassette Player/Recorder .................................................................34.95
XP100

The passive XP100 enclosure is housed in a sleek molded cabinet with substantial internal bracing to support its thick side wall construction. Designed to be lightweight and compact, the XP100 is still rigid enough to allow maximum energy to be transferred from the cabinet into the room. Two 1/4” Speakon connectors, convenient fly-points, a steel grill and scuff-resistant textured finish ensure exceptional versatility and long life.

The XP100 is a passive enclosure equipped with a custom designed, Kevlar-impregnated 12” Low Frequency driver with a 2.5” voice coil and a 49 oz. barium ferrite magnet to produce an accurate, super-tight bass response. The XP100’s High Frequency section employs a 1” titanium compression driver along with an elliptical wave guide horn that controls dispersion. This in combination with a phasing plug produces a linear overall response with a clear, musical top end.

XP200

Using the same cabinet and speaker design as the XP100 the XP200 adds 200-watts of bi-amped power. It also includes an active crossover and built-in limiter with two XLR inputs. The XP200’s power module gives you three stages of speaker protection, including relay switching for power up and power down. The onboard limiter circuit ensures a clean output even when you push it to maximum sound pressure levels.

Because of its perfectly matched amplifier and speakers, the XP200 is particularly effective as a powered monitor.

AC daisy-chain output for adding additional Expeditions enclosures in stereo, recording and presentation or performance applications.

Three Enclosures, Unlimited Possibilities

The Expedition series are versatile two-way loudspeaker enclosures with Celestion woofers, telescoping handle and locking wheels, available in three different versions: passive (XP100), powered (XP200) and powered with a built-in 4-channel mixer and digital signal processing (XP300).

Delivering huge sound with lots of headroom, a smooth top end and articulate bass response—without taking up much space, these loudspeakers represent smart solutions for clubs and performance halls, mobile DJ use, houses of worship, corporate A/V, fixed installations and any application where portable audio is required.

Incredibly rugged, Expedition enclosures are injection-molded with Polypropylene construction with substantial internal bracing supporting the nearly 1/2” thick side wall construction. Convenient fly-points, a steel grille and a scuff-resistant textured finish ensure extreme versatility, ruggedness and dependable performance.

To finish your system, a range of Expedition options are available including a rechargeable battery kit, a cassette recorder/player with pitch control and plug-in Samson VHF and UHF micro wireless systems.
XP300

The most comprehensive version of Expedition, the XP300 is a powered loudspeaker with a built-in 4-channel stereo mixer and digital effects processing. Designed as a completely portable, all-in-one PA system, the XP300 is ideal for people who want superior audio anywhere they go. Whether you just want rugged and versatile loudspeaker enclosure that consistently deliver big sound, or a complete professional audio system in a highly mobile design perfect for today's fast-paced world, the XP300 is the answer.

The XP300's mixer features two bands of equalization, two Mic/Line channels and a Stereo Channel with a mic preamp. In addition to a standard TRS stereo line input, channel three also has RCA inputs that allow you to easily interface a CD, Mini Disk or Tape player. The digital processing section consists of six high-quality presets that range from a touch of room ambience to lush, reverberant halls. Versatile and easy to use, the XP300's mixer has balanced XLR Left and Right outputs for daisy-chaining additional enclosures (XP200) in stereo, recording and presentation or performance applications. The mixer's output can be monitored via its multi-segment VU meter, and there is also an LED meter indicating power level available from the optional RB20/30 rechargeable battery cartridge.

Like the XP100/200, the XP300's enclosure is equipped with a custom designed, Kevlar-impregnated 12˝ Low Frequency driver with a 2.5˝ voice coil and a 49 oz barium ferrite magnet to produce an accurate, super-tight bass response. The XP300's High Frequency section employs a 1˝ compression driver along with an elliptical wave guide horn that controls dispersion. This in combination with a phasing plug produces a linear overall response with a clear, musical top end.

EX500 Active Subwoofer

The EX500 active subwoofer can produce 500 watts of power in tandem with a custom, heavy-duty 15˝ low frequency driver. It functions as an ideal complement to Expedition series cabinets, or any loudspeaker system, when the application requires a focused yet deep bass response. The built in stereo crossover lets you use the EX500 in mono or as a common subwoofer in a stereo system. It also features a steel grill and rigid corners for durability, as well as an integral pole mount for conveniently mounting Expedition cabinets.

db500a Active Monitor System

Inside the rigid custom designed cabinet is an exclusively designed 15˝ driver, matched with a 1.75˝ Neodymium high frequency driver, aimed through a 1˝ diameter horn. The db500a features 500 watts of Class H power (400 watts low frequency/100 watts high frequency) and has a crossover designed for high SPL. The exclusive Optimax signal processing circuitry provides total speaker protection but won't cut the low end at high volumes, as similar speakers with sliding filters do.

The back panel has a built-in mixer-like preamp section with mic and line inputs, XLR connectors and level controls. Controls for the selectable low pass filter and Optimax processing are also included.

The db500a speaker cabinet features an array of mounting options. Designed with floor monitoring in mind, they are also easily stacked or permanently installed. A 1 3⁄8˝ pole receptacle is built in, and 10 reinforced fly points are available.
Powered Mixers

Ideal for small-to-medium sound reinforcement applications such as solo performers, bands, houses of worship and corporate use, Yamaha's EMX series of powered mixers offer portability, simplicity, economy and reliability. They feature built-in amplification and onboard digital effects, including Yamaha's acclaimed reverb technology. Internal amplifiers deliver 200-400 watts of efficient power and contain proprietary YSP circuitry that tailors the response curve to match Yamaha Club Series speakers. They are housed in rugged high-impact molded enclosures, and since many of today's permanent and portable applications have less space — they can be rack-mounted for integration into any system or installation (optional rack-mounting kit required). This is also made possible by a highly efficient fan cooling system that ensures reliable, stable operation in just about any environment.

Why a YAMAHA Powered Mixer?

So you've decided that you need a powered mixer, why should choose a Yamaha? Start with a solid reputation for professional quality based on more than 25 years experience in the field. And don’t forget that Yamaha also makes some of the world’s finest acoustic pianos, stringed instruments, wind instruments, drums, and electronic instruments as well as industry-standard sound reinforcement gear. In short, the Yamaha name is synonymous with leading-edge technology that also embodies a unique sensitivity to the artistic needs of the musicians and performers who use it. But since we're talking about powered mixers, here is the main reason — superior sonic quality. Yamaha's engineers, sound specialists and instrument designers listen carefully to each product at every possible design stage, making changes and refinements that may not appear in the specifications, but that make an audible difference to the final sound.
**Inputs**
- Four mono XLR mic and 1/4" line inputs. A global +15V phantom power switch is provided for the mic inputs, and an independent pad switch on each channel allows input level matching.
- Channels 5 and 6 provide the option of 1/4" TRS line level inputs channel or 1/4" Super Hi-Z instrument inputs optimized for direct input of acoustic and electric guitars and basses.
- Each input channel features level control and 2-bands of EQ (Hi/Low) as well as separate Monitor and Effect sends.
- The Effects sends can be used to control the level to the internal effects (or an outboard effect processor).

**Digital Effects**
- Choice of three high-quality digital reverb effects (vocal reverb, large hall, small hall) to add ambience and depth to your sound.
- Separate Effect Returns are provided for the main and monitor sections.

**Main Section**
- Main section Master control adjusts the overall level of the main house sound.
- A 5-segment LED level meter is provided as well as a LED Limiter indicator that tells you when the internal limiter circuitry is active due to power amplifier overload.
- 7-band graphic EQ provides flexible sound-tailoring and feedback control for the main output.
- 1/4" Aux In jack allows the signal from an auxiliary source or sub-mixer to be mixed into the main program.
- 2TR (RCA) input, with a dedicated level control, can be used to mix the output from a tape deck or other stereo source into the main outputs.
- 1/4" main output can be used to drive an external power amp or sound system from the main program.
- The dual RCA Rec Out jacks delivers the main mix signal to an external recorder.

**Monitor Section**
- A Master control knob adjusts the volume of the monitor output.
- 1/4" monitor output delivers a line-level signal to an external sound system.

**Output Section**
- 1/4" speaker 1 and 2 outputs allow connection of two 8-ohm speakers or a single 4-ohm speaker.
- Yamaha Speaker processing switch for smoother high frequencies and enhanced low-end output from Yamaha speakers.
- A 1/4" headphone output is also provided.

**Conveniences**
- A 1/4" Effect output delivers the signal from the channel Effect send controls to an external effect processor.
- A 1/4" jack accepts an optional FC5 foot switch to turn the effects on or off.

**EMX66M Adds**
- A 3-band EQ (Low, Mid and Hi) is provided for each input channel.
- XLR and 1/4" TRS inputs on channels five and six.
- 8 effects programs including Vocal Echo and Plate.
- Two 300W amplifiers (4 ohms) can be operated in three modes: Main + Main; Main + Monitor; Main Bridged.

**EMX68S Adds**
- Two 400W amplifiers (4 ohms) can be configured for left and right Stereo Main outputs; Main (L+R) + Monitor outputs or Main (L+R) Bridged.
- Pan controls are provided for each input channel.
- Channels five and six can each be used as stereo line or mono mic inputs.
- The 1/4" Auxiliary inputs, RCA Tape inputs and Record outputs are all configured for stereo operation.
- SPX 32-bit digital effects processor and 24-bit A-D-A converters with 16 programs including Reverb, Gated Reverb, Echo, Delay, Vocal Doubler, Flanger, Distortion and more.
- A second 1/4" FC5 compatible footswitch input is available for used as a Tap Tempo control for the effects processor.
- A Standby switch allows you to instantly mute all inputs except for the Tape Inputs.

**EMX88S Adds**
- Two additional XLR mic 1/4" line inputs are provided for a total of six mono inputs and two stereo mono inputs.

YAMAHA

EMX5000

Powered Mixers

If your show demands serious input capacity and power, the 12-channel EMX5000-12 or the 20-channel EMX5000-20 will probably do the job with performance to spare. Both feature a 500-watt per channel multi-mode stereo power section that will fill even fairly large venues with outstanding sound. And although they're integrated powered mixers designed with convenience and portability in mind, both models deliver features and performance that will satisfy even the most discerning performers and sound engineers.

**Input Channels**
- Available in 12 channel (8 mono and 2 stereo) and 20 channel (16 mono and 2 stereo) configurations
- The mono input channels offer a choice of balanced XLR mic and 1/4˝ TRS line inputs as well as 1/4˝ TRS insert points for insertion of external compressors, equalizers, or other processing gear
- Balanced 1/4˝ TRS and unbalanced RCA inputs are provided for the stereo input channels
- Each input channel features an input gain control, a high-quality linear fader for controlling levels, a Pan control, a PFL solo switch for monitoring individual channels, signal and peak LEDs, two Effect sends, Aux 1 and Aux 2 send controls with pre/post fader switching, and a Channel ON switch for muting individual channels
- Mono input channels also feature a 26 dB pad, 3-band EQ with sweepable mid band as well as a switchable 80Hz high pass filters for elimination low-frequency noise and rumble – stereo channels have a 3-band EQ with a fixed mid band
- The two Effect sends controls can be used to feed a channel’s signal to the dual high-performance internal effect systems, or to outboard effect processing gear
- 48V phantom power is switchable in groups of 8 channels for using condenser mics
- Dual 1/4˝ TRS Stereo Aux inputs with level controls and PFL switches allow convenient connection to sub-mixers or other stereo sources
- Unbalanced RCA 2 track inputs with level control can be used to mix the output from a tape deck or other stereo source into the main and monitor outputs
- Unbalanced RCA record output jacks allow you to route the main stereo program signal to an external recorder

**Outputs**
- 1/4˝ outputs for Aux sends 1 and 2 deliver the corresponding auxiliary signal for external processing or monitoring
- 1/4˝ stereo outputs can be used to drive an external power amplifier or sound system from the main program
- 1/4˝ power amp input connectors facilitate the insertion of external equalizers or other processors into the main program
- Stereo 1/4˝ Sub outputs controlled by a level control, above the mains fader, allows sub-mix cascading to a second mixer
- A 1/4˝ mono subwoofer output is provided featuring a switchable low-pass filter with a screwdriver adjustable cutoff frequency variable from 80 to 120Hz

**Dual Effects Processor**
- Each processor offers a selection of 16 professional-quality SPX digital effects
- A parameter control for each processor can be adjusted to tailor the effect. Settings are memorized for each effect program
- A Tap-delay button makes it easy to produce tempo-synchronized delays
- 1/4˝ TRS Effect Send jacks allow you to route the signal from an channel’s Effect send control to an external effect processor
- Aux 1 and 2 send controls adjust the amount of effect signal sent to the auxiliary buses
- High-quality SPEAKON speaker connectors for fast, reliable connection. 1/4˝ jacks are also provided
- Headphone output jack with independent level control
**Master Section**

- A Stereo master fader with both PFL and AFL switches
- Linear Aux 1, Aux 2, and Mono Out master faders with AFL (after-fader listen) monitor switches
- Precise 12-segment stereo level meters
- A 9-band graphic equalizer with ON switch provides flexible sound tailoring and feedback control
- Linear Effect return faders with PFL and ON switches
- A Power amplifier output selector allows selection of 500, 300, or 100 watt output per channel
- A Power Amp mode selector allows the two-channel power amplifier to be quickly configured for Main + Main, Mono + Aux 1, Aux 1 or Aux 2, or Bridged operation
- Internal limiter circuitry with LED indicators help control power amplifier overload
- A Yamaha Speaker processing switch delivers smoother high frequencies and enhanced low-end output from Yamaha speakers

**Conveniences**

- A Stand-by switch allows you to instantly mute all mono inputs
- Foot Switch jacks accept optional FC5 foot switch to turn the effect 2 on or off, and tap in the tempo for the tempo delay effect “on the fly”
- Carrying handle doubles as an armrest for extra control comfort
- Top Panel BNC Lamp socket

Ideal for many applications including bands, clubs, church installations and small theaters, these rugged, durable performers have a proven track record. For over five years Yamaha Club Series IV speakers have been making performances everywhere easily heard by the audience and performers alike. Club Series IV speakers feature rugged steel handles, metal corner protectors, and heavy-duty steel grille for easy and secure handling. Two input jacks mounted on a metal jack plate allow for loop-through connections. Rugged carpet-covered, trapezoid-style cabinets allow seamless array arcs. Black carpet covering also helps them stand up to abuse without showing ugly “road rash.”

S112IV and S115IV
12- and 15” 2-way Loudspeaker Systems
The S112IV and S115IV are trapezoid shaped cabinets, with oversize steel handles, steel corner protectors, steel jackplate with two heavy duty 1/4” jacks, and a built-in pole socket (1½”) for easy stand mounting. The S112IV’s 12” woofer is a high power, custom design, the S115IV’s 15” woofer is a high power, cast aluminum frame, with a cooling port in the pole piece for extended high power handling. The high frequency driver on both the S112IV and S115IV is a custom 2” titanium diaphragm (1” exit) design with an exclusive phase plug that reduces harmonic distortion inside the driver itself. This driver is mated to a 90° x 40° constant directivity horn to give smooth, even coverage over the pattern of the horn. The internal passive crossover has protection circuitry to help guard against damage that may occur from over powering or sending clipping signals to the speakers.

SM10IV/ SM12IV/ SM15IV
10-, 12- and 15” 2-way Floor Monitor Systems
The SM10IV, SM12IV and SM15IV are low-profile, (horn beside woofer style) floor monitor cabinets, with steel corner protectors, steel grille to protect the woofers, and a heavy steel jackplate with 2 heavy-duty 1/4” jacks. A 1½” pole socket is installed on the end of the cabinet for easy pole mounting, FOH (front of house) duty. They are covered in tough, abuse resistant black carpet. Their low frequency driver is a high power, cast aluminum frame, with a cooling port in the pole piece for extended high power handling. The high frequency drivers are a custom, 2” diaphragm (1” exit) design with an exclusive phase plug that reduces harmonic distortion inside the driver itself. This driver is mated to a 40° x 90° constant directivity horn to give smooth, even coverage over the pattern of the horn. The internal passive crossover has protection circuitry to help guard against damage that may occur from over powering or sending clipping signals (underpowering) to the speakers.
**S115I VA**

*Flyable 15” 2-way Speaker*

The S115I VA is the same as the S115IV 15” 2-way speaker, except it has flying hardware tested and pre-installed in the cabinet. Steel strapping spanning these points inside the cabinet further ensures safety. Two 3/8”-16 forged eyebolts are included.

**S215IV**

*Dual 15” 2-way Speaker*

The S215IV is a trapezoid shaped cabinet, with oversize steel handles, steel corner protectors, and a steel jack-plate with 2 heavy-duty 1/4" jacks. Unique cabinet bracing for extra rigidity. Its covering is tough black carpet, and it has a heavy gauge perforated steel grille for driver protection. The woofers, or low frequency drivers are high power, Cast aluminum frame, with a cooling port in the pole piece for extended high power handling. The High frequency driver is a custom, 2” diaphragm (1” exit) design with an exclusive phase plug that reduces harmonic distortion inside the driver itself. This driver is mated to a 90° x 40° constant directivity horn to give smooth, even coverage over the pattern of the horn.

**SW118IV**

*18” Subwoofer*

The SW118IV is a low profile subwoofer system. Using a cast frame 18” driver, it is capable of delivering powerful low frequency energy to augment smaller systems. It is one of the most cost effective ways to add extra bass to your system. Large, heavy steel handles make transporting the SW118IV an easy one person job.

**SW215IV**

*Dual 15” Subwoofer*

The SW215IV is a dual 15” subwoofer in a particle board enclosure (needed for rigidity). The drivers in the SW215IV are butyl surround, long travel, 3” voice coil, vented pole drivers. They assure very high SPL (sound pressure level) operation without damage or fatigue. The enclosure is rectangular in shape, and the baffle is designed to fold back in the center of the cabinet to form the port for this bass reflex design. This unique construction keeps the large top and bottom sheets that form the top and bottom of the cabinet from resonating. This makes the cabinet one of the most rigid boxes available today. Installed in the top of the cabinet is a metal socket that accepts a 1/2” diameter tube to allow satellite placement of another loudspeaker.

**S115IVA**

*Flyable 15” 2-way Speaker*

The S115IVA is the same as the S115IV 15” 2-way speaker, except it has flying hardware tested and pre-installed in the cabinet. Steel strapping spanning these points inside the cabinet further ensures safety. Two 3/8”-16 forged eyebolts are included.

**CLUB SERIES IV ‘S’ SPEAKERS**

The S version of the popular Club Series IV provides the same high level of sonic performance while adding an attractive cosmetic alternative to the line. The Club S Series features a high-quality, extremely durable black polyurethane elastomeric bonded exterior that creates a high-tech look and offers greater shock absorption. The durable, all-weather elastometric coating also has a low gloss, understated appearance that provides a professional appearance and allows the cabinet to be easily painted for integration into any environment. Like the Club IV and Club IV-OAK, the Club S cabinets include dual 1/4” connectors, corner protectors and heavy-duty carrying handles. Heavy gauge, perforated steel grills provide additional component protection and guarantees years of great performance.
The Se Series is a cost-effective, high-quality alternative for touring or small-to-medium size permanent systems. Combining Yamaha’s advanced acoustics research with computer-controlled woodworking technology, they offer state-of-the-art components and rugged enclosures that will satisfy the requirements—and budget—of any consultant, contractor or engineer who needs a reliable PA system.

Designed for optimal individual performance or as part of a system, each speaker includes a proprietary constant-directivity horn coupled to a 1”. 90° x 40° compression driver, which produces a flatter response, greater intelligibility and better overall performance than piezo-type tweeters. Each has a crossover frequency of 3 kHz, and are built to handle the power delivered by contemporary amplifiers.

In addition to dual 1/4” connectors, all Se Series speakers offer a host of roadworthy features including durable “carpet” finish, corner protectors and heavy-duty carrying handles. Heavy-gauge, perforated steel grills provide additional component protection and guarantee years of great performance and durability.

The CP2000 delivers a maximum 2000 watts of clean power into 4-ohm load when bridged. In a stereo configuration it delivers 1000 watts of power into 2-ohms, 650 watts into 4-ohm loads or 450 watts into 8-ohm loads. Yamaha’s exclusive EEngine technology, combined with a MOSFET amplifier allows the CP2000 to deliver high performance along with exceptional efficiency.

Yamaha Speaker Processing Circuitry enhances audio performance when the CP2000 is used with Club Series speakers. Limiter circuits (same as in Yamaha’s high end H Series amps) provide optimum protection from hard clipping.

CP2000 features three output modes for maximum flexibility. The normal Stereo mode (separate input signals routed to independent channels with L/R signal control). Parallel Mode feeds a single input to two independent channels with L/R signal control, and Bridged Mono for extra high power output. Equipped with balanced XLR jacks and balanced 1/4” phone jacks for input connections, and 1/4” phone jacks and 5-way binding posts for speaker connections.

**MS300 300-Watt Powered Speaker System**

The MS300 is a 2-way speaker system that delivers high-quality, high-powered sound in a lightweight, easy to carry and setup unit. Each unit is equipped with an internal bi-amplified power system that delivers a total of 300 watts—225 watts to the 12˝ low frequency driver and 75 watts to the 2˝ high frequency driver.

It is also equipped with an easy to use but effective built-in mixer that provides independent MIC and LINE inputs, complete with a separate gain control on each input, a two-band EQ (Low, High) and a Master Volume control. The LINE input signal can be sent to other speakers via the Parallel output jack which allows the daisy chaining of multiple speakers. Equipped with a variable high cut frequency control to optimize integration of a subwoofer into a variety of sound systems.

For true versatility, the MS300’s design allows a wide range of setups since it is flyable, stackable and pole mountable right out of the box. It can even be used as a floor monitor when laid on its side. Optional mounting brackets allow the MS300 to be mounted on the wall or from the ceiling.

INTRODUCTION TO WIRELESS MICROPHONES

The decision to go wireless represents both a commitment to your craft as well as the faith that technology will deliver the results you have in mind. To glean the most of both of those ideals, a clear understanding of the possibilities and limitations of wireless operation should be established.

Wireless systems afford freedom of movement that isn’t possible with a traditional hard-wired signal interface. However, in order for this mobility to occur, a specialized radio link is required. Thus, not only do the operational requirements of standard microphone capsule apply, but also the laws of radio, both legal and electrical, apply as well.

Wireless microphones must meet legal requirements—they must have a FCC license number—as well as the electrical laws of radio. The #1 rule of radio is that two signals cannot successfully operate on the same frequency simultaneously within the transmission range of the system. Should this occur, drastic performance problems will arise. A wireless receiver “listens to” any signal that is being transmitted on the frequency it is tuned to, and if more than one signal is being “heard” by the receiver, neither one will be usable.

Given this most essential rule, it is impossible to operate more than one wireless transmitter on any given frequency, and to operate on a frequency that is being used by any other source signal such as television or nearby wireless communications. When specifying a wireless system with more than one transmitter, the number of receivers must match the number of transmitters and a plan for multiple frequency occupation must be established where each system operates on their own discrete frequency. The #2 rule of radio is that there is no limitation on the number of simultaneously operated receivers. Just as in radio or TV where any local receiver can pick up a broadcast, the receiver-to-transmitter ratio is unlimited. This aspect is especially convenient in wireless mic systems when there may be more than one destination of the transmitted signal.

Wireless microphone introduction courtesy of Sennheiser USA.

Handheld Transmitters:

The most visible transmitter is the handheld. This device resembles a standard handheld microphone with the distinction that it also contains the transmitter circuitry and antenna. Handheld transmitters employ an integrated microphone capsule that is electrically connected to the input stage of the transmitter. These capsules are usually available in a variety of polar patterns and transducer types. Typical polar pattern choices are cardioid or super-cardioid. Cardioids are most popular and are chosen for vocal performance and interview applications. They allow for good off axis pickup for working the microphone in close and then away from the mouth, for situations where more than one voice is addressing the capsule, or where close proximity to the capsule is not possible. Super-cardioid polar patterns provide superb off-axis rejection, and are generally chosen in high gain-before-feedback situations such as high volume stage performances.

Another consideration in capsules is whether a dynamic or condenser type is appropriate. Dynamic capsules employ a moving coil within a magnetic field to produce voltage. A large percentage of microphone capsules are dynamic and are generally chosen for their high sound pressure level handling capabilities. The other choice is the condenser capsule, which requires an external voltage applied to elements within the capsule to produce voltage. Condenser capsules produce a sharper, more articulate image. Because of their accuracy in measuring and conveying changes in transient impulses, condenser capsules are often regarded as sensitive, snappy and bright. Care should be used in choosing a condenser element as they are far less forgiving of input overload compared to dynamic capsules. Handheld transmitters require some type of DC battery as a power supply, and AA or 9 volt are the general sources.

Wireless microphones must meet legal requirements—they must have a FCC license number—as well as the electrical laws of radio, both legal and electrical, apply as well. The #1 rule of radio is that two signals cannot successfully operate on the same frequency simultaneously within the transmission range of the system. Should this occur, drastic performance problems will arise. A wireless receiver “listens to” any signal that is being transmitted on the frequency it is tuned to, and if more than one signal is being “heard” by the receiver, neither one will be usable.

Given this most essential rule, it is impossible to operate more than one wireless transmitter on any given frequency, and to operate on a frequency that is being used by any other source signal such as television or nearby wireless communications. When specifying a wireless system with more than one transmitter, the number of receivers must match the number of transmitters and a plan for multiple frequency occupation must be established where each system operates on their own discrete frequency. The #2 rule of radio is that there is no limitation on the number of simultaneously operated receivers. Just as in radio or TV where any local receiver can pick up a broadcast, the receiver-to-transmitter ratio is unlimited. This aspect is especially convenient in wireless mic systems when there may be more than one destination of the transmitted signal.

Another consideration in capsules is whether a dynamic or condenser type is appropriate. Dynamic capsules employ a moving coil within a magnetic field to produce voltage. A large percentage of microphone capsules are dynamic and are generally chosen for their high sound pressure level handling capabilities. The other choice is the condenser capsule, which requires an external voltage applied to elements within the capsule to produce voltage. Condenser capsules produce a sharper, more articulate image. Because of their accuracy in measuring and conveying changes in transient impulses, condenser capsules are often regarded as sensitive, snappy and bright. Care should be used in choosing a condenser element as they are far less forgiving of input overload compared to dynamic capsules. Handheld transmitters require some type of DC battery as a power supply, and AA or 9 volt are the general sources.
INTRODUCTION TO WIRELESS MICROPHONES

WIRELESS MICS

Bodypack Transmitters:
Bodypack transmitters are far less visible and are often chosen for that reason. Popular in video/film production, theater, and general presentation situations, bodypacks require an input source and an antenna. Bodypack transmitter systems are available in four basic varieties that are defined by the desired input source:

1. Lavalier mics are the most common as they apply to general hands-free presentation, and are used for close body-miking in theatrical performance, and in video/film production. Lavaliers are available in either an omnidirectional or cardioid version.

2. Bodypack systems can also contain a headworn microphone, which is ideal for hands-free operation in vocal stage performance, athletic and aerobic instruction, and often in on-camera situations. The headworn microphone element is attached to a flexible boom that extends down the cheek and in front of the mouth, making them ideal for close miking of the mouth in active situations.

3. Instrument systems use the same bodypack transmitter as the lavalier and headworn systems, but employ a standard instrument cable with a 1/4” plug on one end, and a transmitter input plug on the other. Very popular with guitar and bass players, this system allows the performer the mobility to roam the stage and/or venue without the fear of coming unplugged.

Bodypack transmitters require some type of DC battery as a power supply, generally AA and 9-volt batteries.

Plug-on Transmitters:
Plug-on transmitter modules convert a wired mic into a wireless one. Popular in broadcast interview and ENG applications, the plug-on transmitter module attaches directly into the XLR output jack of a low-impedance mic (usually adding 3-4” to the overall length). They are also used in video & film production to convert the overhead boom or shotgun mic to wireless, allowing the boom operator freedom of movement. Plug-on transmitter modules are available in models with or without a 48v phantom power feed required for condenser mic powering. Models without 48v phantom power can only be used with dynamic mic elements. Note, that these plug-on modules use pin 1 of the XLR (ground) as the antenna, and the grounding network of what it is attached to becomes the antenna. Plug-on transmitters require some type of DC battery as a power supply, generally AA or 9v batteries.

Wireless mic systems use FM (frequency modulation) as the method of signal transfer. This means that the audio source signal (output of your input source) modulates a carrier signal that is transmitted through the air. It is important to note that the strength of the source signal determines how strong of a transmitted audio signal is present at the receiver. Transmitters usually have some sort of input gain setting that must be set properly for optimum system performance. Typically, this is known as input sensitivity and setting it properly involves viewing the receiver's audio meter while performing a sound check. While addressing the microphone (or other input source), adjust the transmitter input sensitivity until the receiver's audio meter displays an optimum level. This optimum level is found in the owner's manual.

Lavalier Microphones:

Choosing Between an Omnidirectional or Cardioid
Wireless lavalier systems are unquestionably the most popular for the presentation of the spoken word. These inconspicuous little microphones consistently accomplish the task of concealment quite well, however there are variables that influence how successfully they perform with a sound reinforcement system. Lavaliers are available in a variety of polar patterns, and understanding how these pickup characteristics incorporate into the environmental elements of a room will help guide you in choosing the right lavalier for your application.

OMNIDIRECTIONAL: An omnidirectional pattern microphone has a fairly unlimited field of vision. Their width of panorama is spherical allowing them equal sensitivity to sounds arriving from any direction, and their depth of field is extended due to their liberal sensitivity to sound sources. Delivering a natural openness due to the perceived low ratio of close to distant sounds, omnidirectional lavaliers have a reputation of sounding true-to-life even when attached to clothing near the mouth.

CARDIOID: A cardioid pattern microphone has a limited field of vision. Their width of panorama is generous at the front of the diaphragm, limited at the sides, non-existent at the rear, and their depth of field is somewhat shallow and is dependent on the angular orientation of the sound source to the diaphragm. Delivering an up-close sound due to the perceived high ratio of close to distant sounds, cardioid lavaliers have a reputation of sounding dry due to the lack of ambience. Due to the nature of the pattern, there's a low frequency boost when the microphone is positioned very close to the sound source. This proximity effect is an attractive characteristic of a handheld vocal microphone but it can be problematic with lavaliers.

The next element to consider when evaluating a wireless lavalier is the nature of the performance. Wireless lavaliers afford the speaker the freedom to roam about a venue and to perform with all of the animation required. Consider the amount of gestures, head turns and overall body movements a performer makes during a performance, and how the different polar pattern characteristics will react to these changes in sound pressure. Lavaliers are generally clipped to the tie or lapel at a distance of 5-7 inches below the chin and aimed upward towards the mouth. The omnidirectional lavalier will respond favorably to head turns as its field of vision is quite broad, and changes in vocal amplitude are relatively unnoticeable. Conversely, head turns will be quite noticeable with cardioid lavaliers. As the position of the mouth enters and leaves the microphone's zone of highest sensitivity, the changes in vocal amplitude and tone will be pronounced. This can be distracting to the listener, especially if the presentation is being recorded either on audio or video tape. The general rule of thumb is that if a performance is for broadcast, video or audio recording, omnidirectional lavaliers will render the best results.
INTRODUCTION TO WIRELESS MICROPHONES

Room geometry, cubic area and loudspeaker positions are unique in any venue, and their relationship to any microphone plays a great role in overall system performance. Sound reinforcement systems are designed to lend amplification to sound sources and provide even distribution to the listeners. The amount of sound reinforcement required for even distribution is dependent on two factors: the cubic area of the room, and the positioning of the loudspeakers. Lower cubic areas require less gain, and larger cubic areas require higher gain. The objective of any sound system is to amplify microphone signals to adequate levels without feedback.

Feedback is caused when the input to a microphone is heavily weighted with the output from a loudspeaker that is amplifying the microphone's signal. The number-one cause of feedback is a speaker placement that is directed towards the microphone diaphragm. The second most common cause is poor microphone choice or placement that requires abnormally high gain for the desired sound level to be achieved. Suffice it to say that any microphone/sound system combination that requires abnormally high gain before feedback characteristic for broadcast or reproduction.

Choosing the right lavalier involves understanding the aforementioned sound reinforcement criteria, as well as the gain before feedback characteristics of the different polar patterns. Because of their limited field of vision, cardioid lavaliers have a high gain feedback characteristic and are generally chosen when high levels of sound reinforcement in a large space are required or when the speaker placement is problematic in medium and smaller spaces with high sound level requirements. Conversely, due to their unlimited field of vision, omnidirectional lavaliers have a lower gain before feedback characteristic and are generally chosen when lower levels of sound reinforcement are required, or when the performance is being recorded for broadcast or reproduction.

Feedback is caused when the input to a microphone is heavily weighted with the output from a loudspeaker that is amplifying the microphone's signal. The number-one cause of feedback is a speaker placement that is directed towards the microphone diaphragm. The second most common cause is poor microphone choice or placement that requires abnormally high gain for the desired sound level to be achieved. Suffice it to say that any microphone/sound system combination that requires abnormally high gain before feedback characteristic for broadcast or reproduction.

Choosing the right lavalier involves understanding the aforementioned sound reinforcement criteria, as well as the gain before feedback characteristics of the different polar patterns. Because of their limited field of vision, cardioid lavaliers have a high gain feedback characteristic and are generally chosen when high levels of sound reinforcement in a large space are required or when the speaker placement is problematic in medium and smaller spaces with high sound level requirements. Conversely, due to their unlimited field of vision, omnidirectional lavaliers have a lower gain before feedback characteristic and are generally chosen when lower levels of sound reinforcement are required, or when the performance is being recorded for broadcast or reproduction.
High-quality receivers employ a “true diversity” design to compensate for the inevitable dropouts. “True diversity” receivers employ two antennas that feed two independent receiver circuits (within the unit) whose voltages are measured at all times. A comparator circuit identifies the stronger of the two incoming signals and allows it to pass through to the output stage. The shifting from antenna A signal to antenna B signal (and vice versa) happens in microseconds and there is never audible evidence that it is taking place. Care should be taken in choosing a two-antenna system because not all are “true diversity”. Some models on the market display two antennas that merely sum together and feed a single receiver circuit. To insure that you are choosing the most reliable receiver, look for the term “true diversity”.

Multi-system operation is common, and when using “true diversity” receivers for the best system performance, the number of antennas is twice that of the number of receivers. As discussed earlier, antennas enclosed within a rack should be avoided, as are excesses in the physical distance between transmitters and receiver antennas. Many manufacturers offer antenna splitters that accomplish several necessary tasks. Splitters are designed to deliver minimum quantities of antenna signals to maximum quantities of receivers. Common designs are 2 x 4 (two antennas feeding four receivers) and 2 x 8 (two antennas feeding eight receivers). Combined with front-mounting antenna hardware, splitters allow one pair of antennas to be exposed (best idea) and feed multiple receivers. System performance will be drastically improved by getting receiver antennas closer to the transmitter, as in an auditorium or situations where the receivers are located in a sound booth or another room. Splitters combined with antennas that are specifically designed for remote use will maximize the potential of a wireless microphone system. When using remote antennas, high-grade coaxial cable specified by the wireless manufacturer will allow greater distances to be achieved.

Many manufacturers package transmitters and receivers in kits that provide the ideal pairing of components to meet customer needs. For example, a bodypack transmitter, omnidirectional lavalier and rack-mountable receiver is the ideal pairing of components to meet customer needs. For example, a bodypack transmitter, omnidirectional lavalier and rack-mountable receiver is the ideal pairing of components to meet customer needs. For example, a bodypack transmitter, omnidirectional lavalier and rack-mountable receiver is the ideal pairing of components to meet customer needs. For example, a bodypack transmitter, omnidirectional lavalier and rack-mountable receiver is the ideal pairing of components to meet customer needs.

Frequency Agility

Frequency agility is a term indicating that a system can be tuned to a variety of frequencies. This feature is far superior to fixed-frequency systems that could not be tuned. In today’s “RF economy”, where more and more TV signals take to the air, it is advisable that the user be equipped with wireless systems that can compensate for the changing RF environment. TV stations vary from city-to-city, and if you plan to tour or use your system in a variety of cities, it is imperative to have the means to find open frequencies, and frequency agile systems are the only tools for the job. How frequency agile is it? There are degrees of frequency agility that the specs of a wireless system should identify. The first is tuning bandwidth, or the lower and upper limits of its tuning capabilities. Tuning bandwidths are identified in overall MHz width, and should cite from and to frequencies. Obviously, the wider the bandwidth, the better, but to further quantify the frequency agility, the manufacturer should also identify how many frequencies there are at your disposal. Once again, the greater the number, the better the spec. For example, an ideal spec would be: Tuning bandwidth = 32 MHz, from 518 – 530 MHz, 1280 user selectable frequencies. Manufacturers of high-quality wireless systems will offer their products in a variety of tuning bandwidths, giving the user the opportunity to choose the most ideal bandwidth for their area. Knowing your local RF environment will help in making this an informed decision.

Multiple System Compatibility

The typical contemporary wireless system consists of several systems operating simultaneously. This is due in part to advancements in technology that have provided higher quality frequency agile systems, in wider tuning bandwidths, with highly selective receivers at affordable prices. Manufacturers of high-quality wireless systems should publish a maximum number of simultaneously operated systems per bandwidth spec in their specifications. This number will identify how many systems can operate together, under ideal RF conditions, by following the manufacturer’s frequency-planning scheme. The compromising element here is that you must subtract frequencies from that total that fall inside of local active TV signal bandwidths. Having access to local TV activity information will aid you in choosing bandwidths with the fewest number of TV broadcast signals.

Operating multiple systems requires that precise system tunings take place. Frequency compatibility is basically a set of numbers (frequency tunings), that when used together will not produce interference amongst members of the system. When precisely calculated frequencies are not observed, and random numbers are chosen for multiple system operation, drastically unacceptable results are likely. Manufacturers of quality wireless systems publish recommended frequency selections. Many manufacturers have some or all of these numbers programmed into memory registers at the factory. It is not recommended that you get creative with multi system tunings. Refer to your manufacturer’s web site or published documentation for their recommendations. Frequency agile systems with flexible tuning capabilities will render effective multiple system compatibility.

Understanding the capabilities of wireless systems is the key to met expectations, and identifying the type of system that best suits the needs of your craft will guide you in making the right decision.
AKG

WMS40

UHF Wireless Mic System

The WMS40 is an entry-level wireless system for applications requiring quality audio on a limited budget. It is ideal for small stages, clubs, houses of worship and hotels. The system operates in the UHF range and uses advanced circuitry and SAW (Surface Acoustic Wave) filtering for trouble-free operation under difficult operating conditions. Up to two channels may be used simultaneously. The utter simplicity of the system and its preset operating frequencies allow the user to “plug and play” the system immediately. Beltpack and handheld transmitters feature extended bandwidth for optimum transmission of vocal and instrument signals, On/Off/Mute Switch and battery status LED.

SR40 Receiver

The SR40 receiver may be rack-mounted with the optional RM U 60 kit. Indicators on the SR40 include RF status, power and mute status. A squelch control ensures noise-free reception. A front panel output level control varies the output signal from microphone to line level; both professional XLR and unbalanced 1/4” jacks are provided.

- Adjustable squelch for noise-free reception
- Clear status display including RF, power, and mute indicators
- Output adjustable from mic to line level
- Special strain relief prevents power cable from being unplugged unintentionally
- 1/4” and XLR-balanced output
- Easily mounts into any 19” rack using the optional RM U 60 rackmount kit

HT40 Handheld Transmitter

The HT40 handheld transmitter uses the AKG D880 microphone element to provides wide range and linear response for all applications. Delivers brilliant, uncolored vocal reproduction. Operates in a choice of frequencies: 710.400 mHz (TV channel 54), and 734.600 mHz (TV channel 58). The transmitter provides On/Mute/Off switching and battery status indication.

- Integrated antenna for optimized RF output and perfect transmission quality
- Controls include on/off and mute switches, and a battery status indicator
- Replaceable color code clip for channel identification
- Runs 30 hours on 1.5 V AA alkaline or rechargeable batteries

PT40 Bodypack

The PT40 is made of rugged plastic and can be used with a wide variety of mics, along with direct instrument pickup via the M K/GL instrument cable. Sophisticated audio and RF circuitry ensures that audio quality is identical to that of the equivalent hardwire mic. Same frequency assignments, operating controls and features as the HT40.

- Professional mini XLR connector allows use with all AKG “L” type microphones
- Extended audio bandwidth makes it well suited for use with guitar and bass as well
- Controls include on/off and mute switches, and a battery status indicator. Also has an input level control and mic/line switch for exceptional flexibility
- Runs on 1.5v AA alkaline or rechargeable batteries for over 30 hours

SR40/DIV Diversity Receiver

Slightly more expensive than the standard version, the SR 40 Diversity is a sophisticated receiver designed to be very rugged and more reliable in environments hostile to RF transmission to meet professional requirements.

- The SR40/DIV comes with an all-metal case, and can be installed in any 19” rack with the optional rack kit.
- Front panel is finished in soft-touch enamel. Readouts are protected by an impact, scratch resistant clear Lexan window. Indicators include three RF and two audio level LEDs that include one peak and two diversity LEDs indicating which antenna is active.
- Rear panel provides two outputs; one balanced XLR and one unbalanced jack output. Each output can be adjusted from mic to line level with the output level control.
- A cable strain relief next to the supply cord input prevents unintentional interruptions of the supply voltage.
- Fully compatible with all current WMS 40 series transmitters.
- Available in all standard frequencies, a large front-panel color code label indicates the permanently programmed carrier frequency. The color code makes it easy to identify the various channels in a multichannel system.
- Preset squelch mutes the receiver if the received signal is too weak so the self-noise of the receiver, will not become audible when the transmitter is switched OFF.

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of '100 or more)
The ultimate modular wireless system, the WMS 40 Series and microtools make everything possible. Combining small size, superior quality, and great looks, the WMS 40 microtools make the totally wireless show a reality. Whatever the application, from vocals to instruments, they provide more flexibility and versatility than any other system. Microtools are compatible with the ultra-compact PR40 receiver as well as either SR 40 receiver and have integrated charging contacts.

- They operate on a single AAA alkaline or rechargeable battery
- Integrated antenna for optimum transmission
- On/Mute/Off switch and battery status indicator
- Replaceable color code element
- Input gain control for optimum modulation
- DC/DC converter for constant, transmission quality throughout battery life

**MP 40 micropen**
Small but packed with innovative technology, the MP-40 Micropen provides the most inconspicuous and professional way to transmit a speech signal to the sound system. Just put the miniature transmitter in a convenient pocket or use the supplied cord to hang it round your neck. The mic is nested in the transmitter. You can also detach the mic from the transmitter to get a stronger signal.

- Integrated, detachable C 407 lavalier microphone with cable and attachment clip

**SO 40 snap-on**
Use professional wireless technology with your existing equipment. The SO-40 Snap-on transmitter turns every dynamic microphone or mixer into a wireless one. Professional features include an input gain control for optimum matching to microphone output level and a DC/DC converter for constant, transmission quality throughout battery life. To convert your mic to wireless, simply plug the SO-40 Snap-on transmitter into the XLR connector on the mic.

- Glass fiber reinforced miniature case
- XLR connector matches all dynamic mics

**GB 40 guitarbug**
The GB-40 gives you the freedom of unlimited guitar sounds without the cable mess— all you need to do is plug it into your instrument. Features include an input gain control, battery status indicator, replaceable frequency color code element, and a DC/DC converter. But the best thing about the guitarbug is its “FlexJack” swiveling swivel jack that connects the GB-40 to any guitar jack, oblique, on the top, or on the side. Mates with all guitars from the Stratocaster or Telecaster to a Les Paul.

- Ultra durable glass-fiber plastic case plus heavy-duty swivel joints on the antennas add to the reliability of the receiver.
- Powered by 2 AAA alkaline or rechargeable batteries
- Integrated charging contacts let you to charge the batteries by simply placing the receiver in the CU 40 charger. The battery compartment also accepts a special adapter for powering the receiver from a camera or DC power supply.
- Fixed-line level and adjustable headphone level outputs
- Metering includes RF, audio level and battery status LEDs
- A preset squelch mutes the receiver if the received signal is too weak so the self-noise of the receiver won’t be audible when the transmitter is switched OFF.
- Supplied Velcro fastener allows mounting on a mixer, pedal board, or a video camera.

**CU 40 charging station**
The perfect accessory for the Microtools. Simply set the PR 40, MP-40, GB-40 or SO-40 into the CU-40 Charging Station, and the internal battery is automatically and gently recharged.
AKG

WMS61/ WMS81

VHF and UHF Wireless Mic Systems

With their modular system architecture, the WMS 61 (VHF) and WMS 81 (UHF) provide a custom solution for every application. They are multi-channel systems (up to 20 channels simultaneously), and they both feature SAW (Surface Acoustic Wave) filters and 15 selectable frequencies to ensure interference-free operation. An intelligent battery management system monitors the transmitter battery voltage and computes residual capacity. A pilot tone system transmits battery data to the receiver and to control the Tone Code Squelch and Auto muting functions. WMS 61 and WM S81 bodypack and handheld transmitters have the same transmission characteristics (10 mW output) and via signal companding (compression and expansion), a dynamic range greater than 100 dB is attained at the receiver's output. Audio bandwidth extends from 50 Hz to 20 kHz. Through diversity reception, their performance is uniform over a wide range—up to 330°. Handheld microphone and bodypack transmitters are factory matched to a given receiver. Ideal for vocals, instruments and speech in theaters, conference centers, small sound systems, places of worship, and A/V productions.

WMS80
UHF Wireless Mic System

The WM S80 is an ideal choice for any application when performance and multi-channel operation (simultaneous use of up to 19 channels) is required at an exceptionally affordable price. All the features of the WM S81 (SAW filters and 15 selectable frequencies) except there is no intelligent battery management system to monitor voltage, no inputs for external boosters or antennas, and no pilot tone system to control the Tone Code Squelch and Auto muting functions. Ideal for small and medium size stages, clubs, theaters, places of worship as well as conference centers, open-air performances and sports facilities.

SR 80 Receiver

- 15 selectable carrier frequencies make it easy to set up multichannel systems and avoid interference frequencies
- Microprocessor controlled, digital "Four Level Diversity" antenna management system and SAW (Surface Acoustic Wave) filters provide reliable and noise-free reception.
- Adjustable squelch
- Professional outputs include balanced XLR (mic/line switchable) and unbalanced 1/4˝ jack
- Output level control
- Strain relief prevents power cable from being unintentionally unplugged
- Supplied with 19˝ rackmount kit for easy rack mounting. (Half-rack size)

SR 61/SR 81 Receivers (Step-up Features)

- Tone Code Squelch function (TCSQ) for automatic noise suppression
- Transmitter battery status indicator
- Professional outputs include balanced XLR (mic/line switchable) and unbalanced 1/4˝ jack
- Output level control
- Strain relief prevents power cable from being unintentionally unplugged
- Supplied with 19˝ rackmount kit for easy rack mounting. (Half-rack size)
**PR 81**

**Bodypack Receiver**

The PR 81 UHF camera mount receiver offers unbeatable performance for the price. This portable miniature receiver with its rugged plastic case and mini-XLR output has been primarily designed for use in video and TV camera mount applications. However, the portable receiver can also be used as a distribution system for multiple language translations, in houses of worship, conferences and guided tours.

- Miniature bodypack receiver with rugged plastic case and mini XLR output
- 15 selectable carrier frequencies make it easy to set up multi-channel systems and avoid interference frequencies.
- Pilot tone for battery status data transmission
- Microprocessor controlled “Four Level Diversity” antenna management system for reliable reception with no dropouts
- Clear status display including RF and audio levels, diversity, and mute indicators
- Fixed line level and adjustable headphones outputs on mini XLR connector

---

**All Transmitters Feature**

- 15 selectable carrier frequencies make it easy to set up multi-channel systems and avoid interference frequencies.
- Pilot tone for battery status data transmission
- Controls include frequency selector, on/off, and mute switches, input level control, audio overload and battery status indicators
- Security covers for all controls prevent unintentional readjustment.
- They use one 1.5 V AA or rechargeable battery to keep operating costs low
- Intelligent battery management system computes transmitter battery capacity
- DC/DC converter maintains constant transmission quality throughout battery life

---

**PT 61/PT 81**

**Bodypack Transmitters**

- Miniature bodypack transmitter with rugged plastic case and mini XLR input
- Extended audio bandwidth makes them perfect for use with guitar and bass
- They work with the C417L, C419L, C420L, C 444L, CK77L, and MKG/L instrument cable.

---

**PT 61/PT 81**

**Handheld Transmitters**

- Three mic elements for different applications are available
- Integrated dipole antenna for optimized RF output and perfect transmission
- Available in various colors for channel identification in multi-channel setups
- Security covers for all controls prevent unintentional readjustment
- Pilot tone for battery status transmission
- Controls include frequency selector, on/off, and mute switches, input level control, audio overload and battery status indicators
- Security covers for all controls prevent unintentional readjustment
- Security covers protect the channel selector, squelch control, and on/off switch from unintentional readjustment.
- They use one 1.5 V AA or rechargeable battery to keep operating costs low
- Intelligent battery management system computes transmitter battery capacity
- DC/DC converter maintains constant transmission quality throughout battery life

---

**WMS61/ WMS81**

**PSU Central Power Supply**

Switched power supply for powering four SR61/SR81 receivers or three PS61/81 antenna splitters with up to ten SR61/81 receivers

**UAM1 Universal Antenna Mount**

Blank panel with BNC connectors for mounting receiving antennas on the front of a 19” rack

**Color Coding Kit**

Identifies the individual channels of a multi-channel system by different colors. Includes 8 rotatable security covers for the HT61/81 and 8 color coded clips for the PT 61/81 bodypack transmitters and SR61/81 receivers.
**PS 61/81 Antenna Splitter**

The PS61 or PS81 is an active wideband antenna splitter for up to four SR61/SR81 receivers or three receivers and one additional antenna splitter.

- Stackable four-way antenna splitter
- Compatible with all system components for easy configuration
- Powers remote booster antennas directly through the antenna cables to eliminate cable noise
- Direct receiver powering through antenna cables (using a PSU) saves another AC adapter
- Integrated line terminals for ease of handling
- Cable attenuation
- Status display

**RA61B/RA81B External Antenna**

Remote receiving antennas with integrated booster, the RA61B or RA81B can be powered from a PS61 or PS81 Antenna Splitter (respectively) through antenna cable. Includes a stand adapter.

- Omnidirectional wideband antenna, compatible to all system components
- Integrated booster
- Remote powering through antenna cable
- Status indicator
- Capable of cable runs up to 330’

**SRA1 External Directional Antenna**

The SRA1 is a remote wideband directional antenna compatible with all UHF wireless receivers. Includes a stand adapter.

**TYPICAL CONFIGURATION**

Four-channel system with antenna splitter and central power supply

![Diagram of typical configuration]

SR receivers are powered through the antenna cables

**WMS80**

UHF Wireless Systems

- **WMS80/*** Handheld system with D880WL/1, D3800WL/1, or C535WL/1 head
- **WMS80/** Bodypack system with C417/L omnidirectional lavalier or C55L cardioid lavalier mics
- **WMS80/** Bodypack system with C419/L wind/brass instrument mic, C420/L headset, C444L headset or M K/GL guitar cable

**WMS61**

VHF Wireless Systems

**WMS61/ WMS81**

Combination VHF or UHF Wireless Systems

Combination systems include one handheld transmitter + mic capsule, one bodypack transmitter + lavalier mic, and one receiver + rack mount kit.

- **WMS80/880/17** With D880WL/1 head and C417/L lavalier
- **WMS80/880/55** With D880WL/1 head and C55L lavalier
- **WMS80/880/97** With D880WL/1 head and CK97C/L lavalier
- **WMS80/880/77** With D880WL/1 head and CK77WR-L lavalier
- **WMS80/3800/17** With D3800WL/1 head and C417/L lavalier
- **WMS80/3800/55** With D3800WL/1 head and C55L lavalier
- **WMS80/3800/97** With D3800WL/1 head and CK97/L lavalier
- **WMS80/3800/77** With D3800WL/1 head and CK77WR-L lavalier
- **WMS80/535/17** With C535WL/1 head and C417/L lavalier
- **WMS80/535/55** With C535WL/1 head and C55L lavalier
- **WMS80/535/97** With C535WL/1 head and CK97C/L lavalier
- **WMS80/535/77** With C535WL/1 head and CK77/L lavalier
**D880**
Dynamic performance mic with a frequency response specifically designed for lead and backing vocals. AKG Varimotion diaphragm for brilliant sound and frequency independent supercardioid polar response for high gain before feedback. (Not for the WM S300).

**D3700**
Rugged construction, attractive Tri-Power styling and superior sound for vocalists. The D3700 features an extended frequency response with a slight boost between 3kHz and 15kHz that places vocals up front. A hypercardioid pattern allows close-in usage with maximum gain before feedback right next to monitor speakers. (Not for the WM 61/80/81).

**D3800**
Unlike other dynamic mics, the D3800 provides a unique combination of high output and an exceptionally tight hypercardioid pickup pattern for very high gain before feedback. Easily handles limit-pushing SPLs. Moving Magnet Suspension system dramatically reduces mechanical and handling noise.

**C5900**
Combines the detailed transparency of an AKG studio condenser mic with the road-tough construction and high gain before feedback required of a true stage performance mic. InterSpider 3-point internal shock mount effectively suppresses handling noise. (Not for the WM 61/80/81).

**C535**
Provides the clean, open sound of AKG studio condenser mics, with a gentle 2dB rise between 7 and 12 kHz that makes voices cut through the mix.

**MICS FOR ALL OCCASIONS**

**CK77 Lavalier** From Opera to Movies
The CK77 is the world’s smallest twin-diaphragm lavalier. It is ultra-light (1 oz.) and only 0.56˝ long. Acoustically optimized for vocal performances, the mic can be discretely attached to clothing or covered with make-up.

**CK97 Lavalier** From Newscasting to Talkshows
Designed mainly for TV and radio work, CK97 provides high feedback rejection and a cardioid pattern. Very unobtrusive and easy to handle.

**C417 Lavalier** From Public Address to Conference
For inconspicuous miking of lecturers, emcees, vocalists, etc. Fix the C417 to the lapel and hide the cable beneath the jacket.

**C419 Instrument Mic**
Brass and wind instruments can now go wireless. The C419 sounds natural without any loss of quality in the instrument’s acoustics. Attaching the mic is quick and easy. Just clamp the C419 on the bell, aim at the rim, and find the optimum position.

**MK/GL Guitar Cable**
Eliminate endless instrument cable connections. This 32˝ cable with an WM 561/80/81 system offers total mobility. Just plug it and play, and get great sound.
**AKG**

**WMS-4000**

**UHF True Diversity Wireless Mic System**

The WMS 4000 is one of the most advanced and innovative wireless systems for professional use available today. It offers an inspiring combination of sophisticated engineering, exceptional flexibility, surprising versatility, and maximum ease of use. The application range of the WMS 4000 is almost unlimited, from fixed installations or mobile systems in architecturally difficult environments to motion picture and broadcast work. In large-scale projects including worship center sound systems, theatrical productions, or stadium concerts, the WMS 4000 shows off its professional qualities.

The advanced backlit display on the transmitters as well as on the receiver indicates the selected Preset, remaining transmitter battery life, gain setting, or intermodulation-free frequencies. Transmitters provide a silent mode and a “hidden” pilot tone system for status monitoring. An Environment Scan function on the SR 4000 receiver finds interference frequencies within the RF environment. The Rehearsal function lets you track important system parameters during the sound check to avoid potential problems before the show.

The CU/BP 4000 battery powering system is controlled by the SBMS Smart Battery Management System. A unique innovation, it permanently monitors battery status and prevents overcharging, while Charge Balance Management provides maximum safety and reliability. The antennas available for the WMS 4000 use future oriented technologies, too. Choose from directional and omnidirectional antennas for every application.

**SR 4000 True-Diversity Frequency-Agile UHF Receiver**

The SR 4000 is a state-of-the-art, true diversity receiver that provides maximum ease of use and the most useful functions in its class. Many features of the SR 4000 were never before available or limited to extremely expensive systems. The accurate battery life readout is an invaluable advantage in live sound applications. The transmitter uses a pilot tone to transmit battery status data to the receiver that displays the remaining battery capacity in hours. The pilot tone decoder also detects and displays other important information including the current position of the MUTE switch on the transmitter. The integrated software not only permits automatic setup and frequency scanning but remote control and monitoring from a PC via a dedicated interface as well. Optional MCS 4000 Mission Control Software makes setting up and monitoring highly complex systems incredibly easy. A logic output allows remote control of specific functions on an external device, e.g., an automatic microphone mixer. Naturally, the SR 4000 operates in an extremely wide UHF band (30 MHz) and each frequency preset provides up to 24 intermodulation-free subchannels. Housed in a half-rack, all-metal case, the SR 4000 is the most compact, reliable, and powerful UHF receiver in its price bracket.

- Operates on a 30 MHz-wide UHF wide bandwidth containing preset inter-modulation-free frequencies and access to up to 1,200 switchable frequencies. Three separate 30 MHz channels may be selected for use in the U.S., offering a maximum of approximately 50 usable channels that are limited only to other external RF interference.
- Unique signal compression and expansion circuits provide a dynamic range greater than 112 dB.
- An output level switch allows the selection of three output levels at -30, 0, +6 dB for optimum system gain structure.
- Internal software features AutoSetup for inter-modulation free channel selection, Environment Scan for scanning of the unit’s RF range, and Rehearsal Mode selection for saving system data during rehearsal set-up. Settings like squelch threshold, carrier frequency selection and user’s name can be edited and stored in an easy menu structure.
- Programmable status indicators on the SR 4000 receiver include mute, audio level bar graph, RF level bar graph, and a 6 x 14 segment alphanumeric display and menu control. The unique, programmable Status Control Ring can display the most important system data at a glance.
- The large, backlit color display and a jog wheel make the SR 4000 easy to use and a programmable warning light indicates selectable critical conditions within the system.

---

**EQUIPMENT LEASING AVAILABLE**
PT 4000 Bodypack and HT 4000 Handheld UHF Transmitters

The PT 4000 bodypack and the HT 4000 handheld UHF transmitters incorporate programmed, pre-matched, optimized frequency groups that allow for quick, easy frequency selection. Other features include backlit LCD displays for system status monitoring and a jog wheel for quick system setup and navigation. These transmitters are encased in magnesium metal chassis for rugged on-stage use, and have a usable operation distance of up to 330 ft., with a system audio bandwidth from 35 Hz to 20 kHz.

◆ The HT 4000 handheld transmitter allows for interchangeable microphone modules with three dynamic models D 880, D 3700, D 3800 and three condenser models C 900, C 5900, and the C 535.

◆ The PT 4000 bodypack accepts both microphone and line-level input signals and has an adjustable input sensitivity. A lockable TA-3F Mini-XLR connector is used for easy connection of a broad range of AKG headsets, lavaliers, instrument microphones and instrument cables. The PT 4000 bodypack transmitter also has a 2.5-mm jack connector for the optional RMS 4000 remote switch device.

◆ Both HT 4000 handheld and PT 4000 bodypack transmitters can be powered by either 2 AA batteries or a BP 4000 rechargeable battery pack and incorporate integrated charging contacts for easy use with the optional CU 4000 charging unit.

CU 4000 Charger

The CU 4000 charging unit features two charging bays that are designed to hold two separate HT 4000 handheld, PT 4000 transmitters or BP 4000 battery packs. The CU 4000 can charge two battery packs simultaneously in one hour. A three-step LED display on the CU 4000 displays the charging status. The unit is based on a trickle charge system with inflection point switch-off automation to prevent the battery pack from overcharging. The CU 4000 identifies possible battery memory problems and suggests starting an optional recovery cycle via a recovery button on the CU 4000's front panel. This function refreshes the BP 4000 battery pack by charging and discharging cycles to determine the actual capacity of the battery.

◆ The CU 4000 has a lockable DC connector on its rear panel that allows it to be powered by either an external DC adapter or by the optional PSU 4000 central power supply.

PS 4000 Multi-Coupler

The PS 4000 multi-coupler provides an antenna signal and DC power for up to our diversity wireless receivers. It has a wide-band antenna signal amplifier/divider with a 220 MHz-wide UHF bandwidth custom-tuned to all available WMS 4000 channels. Two additional BNC outputs are also available on the rear panel for cascading the diversity antenna signal to another multi-coupler. Up to three multi-couplers can be cascaded to supply antenna signal to 12 receivers from a single pair of antennas.

◆ The PS 4000 has several operation and failure status LED’s that allow monitoring of correct cable and antenna signal operation. A 10-position switch on the front panel of the PS 4000 will adjust for signal loss caused by cable length, thus providing reception optimization.

◆ Either a single DC adapter or an ASU 4000 central power supply unit can power the PS 4000. The PS 4000 is encased in all-metal chassis and is one standard rack unit high and one-half rack unit wide. When mounted it can be placed side-by-side with an SR 4000 receiver, another PS 4000 multi-coupler, an ASU 4000 and other WMS 4000 rack-mountable accessories.

◆ The PS 4000 uses three different external antenna options, SRA1 passive directional, SRA2 active directional and the RA 4000B active omnidirectional. When cable length between external antennas and PS 4000 exceed the maximum compensation setting an AB 4000 in line amplifier can be added to gain an additional 17 dB of amplification.

Additional Accessories:

An expansive line of additional accessories include the ASU 4000, an in-line power supply unit for use in large antenna networks, HPA 4000 Headphone Amplifier with eight line inputs, HUB 4000 Network Interface (designed for multi-complex systems) that features an ID switch, status display and 8 x SR in, an Ethernet out and the MCS 4000 PC Software that provides additional programming and monitoring of connected receivers, detailed RF and AF functions, a graphical scanner and enhanced auto setup mode.
200 Series (VHF)

With the Freeway 200 Series, Audio Technica again sets the standard for a comprehensive, cost-effective and dependable VHF wireless miking solution. Designed for musicians, live performance, houses of worship, PA and aerobic instruction, the 200 Series is a single-channel, fixed-frequency systems available in three VHF frequencies (169.505, 170.245, and 171.905 MHz) and in multiple configurations.

600 Series (UHF)

An exciting range of frequency-agile UHF wireless, the Freeway 600 Series provides interference-free performance and exceptional audio quality in a wide variety of applications such as live performance, houses of worship, PA and aerobic instruction. Available in multiple configurations, the Series 600 features 10 selectable UHF channels, a removable docking power supply, and an advanced dipole antenna design. Two independent frequency bands allow operation for up to eight simultaneous channels: Band A: 470-480 MHz (TV channels 14-15) and Band B: 482-492 MHz (TV channels 16-17).

ATW-R200 (VHF) and ATW-R600 (UHF) Receivers

The ATW-R200 (non-diversity, single-channel receiver) and ATW-R600 (10-channel frequency-agile receiver) both feature an advanced dipole antenna design (improves operation by providing adjustable ground element in addition to the usual "signal" element) and a unique removable docking power supply that slides into the receiver. For further flexibility, the power adapter can easily be removed from the receiver case and be used as a conventional in-line AC adapter. They also offer squelch and volume controls along with AF Peak, RF and power indicator lights.

◆ Can also be operated from external 12V DC source for portable applications.
◆ Front panel channel selector switch (ATW-R600 only) and output level control
◆ High impact molded case with storage for antennas and docking power supply
◆ 1/4" output jack

ATW-201/ATW-601 Bodypack Transmitters

Bodypack's professional 4-pin locking HRS-type connector provides solid secure connections and works with a wide variety of mics and cables. Dual-impedance input for instruments and mics (high and low impedance audio connections) plus a bias voltage to allow use with dynamic and condenser mics as well as Hi-Z instrument pickups.

Bodypack and Handheld Transmitters Both Feature

Both transmitters operate on a single 9-volt battery with a battery-condition indicator light, easily-accessible, recessed three position Off/Standby/On switch, internal channel selector (600 Series only) and a variable trim control to provide for maximum RF modulation with minimum distortion.

ATW-202/ATW-602 Handheld Mic/Transmitter

Handheld transmitter has rugged unidirectional dynamic element with internal shock mount to minimize handling noise.
Wireless Essentials for A-T UniPak Body-Pack Transmitters

Wireless Essentials are a collection of microphones and cable assemblies pre-terminated with a HRS-type type connector for use with Audio-Technica wireless bodypacks. Included are omnidirectional and cardioid lavalier mics, headworn mics, clip-on instrument mics, and instrument cables along with a boundary mic and a podium gooseneck mic for wireless installations. By providing this wide variety of choices, Audio Technica allows you to "personalize" your wireless system for a specific application. Plus, you can interchange the Essential without having to purchase another wireless system or transmitter. Essentials are properly terminated so that they connect to the appropriate input on the transmitter. This enables the Essential to take advantage of the individual transmitter gain control so that plugging in an instrument cable will not affect the mic trim level and vice versa. The result is maximum flexibility.

True Diversity VHF Systems

Ideal for schools, garage bands and small clubs, the 1100 and 1200 series are affordable crystal-controlled, true-diversity wireless mic systems. Their receivers are equipped with two antennas that feed two completely independent RF sections on the same frequency, while automatic logic circuitry continuously compares and selects the superior signal, providing better sound quality and reducing interference and dropouts. The versatile UniPak body-pack transmitter has both low- and high-impedance inputs plus a bias connection, for use with dynamic and condenser microphones, as well as Hi-Z instrument pickups. Both the handheld and UniPak transmitters use 9-volt batteries and have Off/Standby/On switches, battery condition indicators, and battery-save switches. The 1100 Series receiver is made to be mounted in a standard 19" rack (1U), while two 1200 Series receivers can be mounted side-by-side in a single 19” rack space.

System Features

- VHF Band operation (169.505 - 213.800 MHz TV channel 7-13) crystal controlled for interference resistant operation
- Robust VHF operation minimizes dropouts caused by spurious reflections and is less dependent on “line-of-sight” operation
- True Diversity reception with two independent RF sections in the receiver automatically selects the better signal for highest reliability
- Full FM deviation improves signal/noise ratio for greater headroom and dynamic range
- Choice of 20 VHF frequencies available for minimum interference, including US and Canadian traveling frequencies

Transmitters

- Battery condition indicators alert you when battery needs replacing
- Locking HRS-type type connector on the bodypack provides a secure connection and works with a wide variety of mics and cables
- Bodypack features both high and low impedance audio connections plus a bias voltage to allow use with dynamic and electret condenser microphones as well as Hi-Z instrument pickups
- Handheld Dynamic Transmitter incorporates Hi-Energy element and internal shock mounting to minimize handling noise
- Dual power output switches extend battery life and minimize receiver input stage overload when transmitters are used next to the receiver
- They operate on a single 9V Battery with 15-20 hours of battery life

Receiver

- Heavy-duty metal construction reduces interference and shields receiver from other components
- Mounts in a single 19" rack space (with included rack mount ears) for fixed installations
- Front panel LEDs show power, AF peak and diversity tuner operation
- Balanced (with ground lift switch) and unbalanced audio outputs simplify use with a variety of mixers, amplifiers, and sound systems
- Removable rear mounted antennas enable the receivers to be used in a rack with remote antennas and antenna distribution accessories

Equipment Leasing Available
True Diversity UHF Systems

The 1400 Series is very similar to the 1200 Series except it works in the UHF bandwidth (728.125 - 740.500 TV channel 57 - 59) crystal controlled for interference resistant operation.

Same features as the 1200 Series PLUS—

- UHF Band operation (728.125 - 740.500 TV channel 57 - 59) crystal controlled for interference resistant operation
- Factory pre-selected frequencies enable up to 10 systems to operate simultaneously
- Available in single transmitter (bodypack or handheld) or dual transmitter “combo” configurations depending on your application
- Removable front mounted antennas enable the receiver to be used in a rack for portable applications

ATW-1451 UniPak Body-pack System
ATW-R14 receiver and ATW-T51 UniPak transmitter (with Super Hi-Z input for optimum load for guitar pickups)

ATW-1452 Handheld Microphone System
ATW-R14 receiver and ATW-T52 handheld unidirectional dynamic mic/transmitter (with HI-ENERGY dynamic element)

ATW-1453 Dual Transmitter System
ATW-R14 diversity receiver, ATW-T52 handheld and ATW-T51 UniPak transmitters, and AT831cW lavalier microphone

ATW-7375 UniPak Body-Pack System
ATW-R73 receiver and ATW-T75 UniPak transmitter (includes Super Hi-Z input that provides optimum load for guitar pickups)

ATW-7373 Handheld Microphone System
ATW-R73 receiver and ATW-T73 handheld unidirectional condenser mic/transmitter (featuring the same condenser element used in the AT4033 studio mic)

ATW-7376 Handheld Microphone System
ATW-R73 receiver and ATW-T76 handheld unidirectional dynamic mic/transmitter (featuring a HI-ENERGY dynamic element with superior internal shock mounting)

7000 SERIES
Frequency Agile True Diversity UHF Systems

The 7000 Series features UHF operation with two separate bands (656.125 - 668.500 MHz (TV channel 45-47) and 728.125 - 740.500 MHz (TV channel 57 - 59) for maximum flexibility and to increase the number of simultaneous operating systems. In addition, 100 phase locked loop (PLL) synthesized channels per band with selectable switches on receiver and transmitter provide ease of setup.

Same features as the 1400 Series PLUS—

- Available in two frequency ranges: 656 - 668 MHz (TV channels 45 - 47) and 728 - 740 MHz (TV channels 57 - 59)
- 100 PLL-synthesized channels selectable via switches on receiver and transmitter

ATW-7375 UniPak Body-Pack System
ATW-R73 receiver and ATW-T75 UniPak transmitter (includes Super Hi-Z input that provides optimum load for guitar pickups)

ATW-7373 Handheld Microphone System
ATW-R73 receiver and ATW-T73 handheld unidirectional condenser mic/transmitter (featuring the same condenser element used in the AT4033 studio mic)

ATW-7376 Handheld Microphone System
ATW-R73 receiver and ATW-T76 handheld unidirectional dynamic mic/transmitter (featuring a HI-ENERGY dynamic element with superior internal shock mounting)
3000 SERIES

200-Channel Frequency-Agile UHF True Diversity System

Designed for a wide range of applications including live performance, regional touring companies, fixed installation, public address and places of worship, the 3000 Series operates in the UHF 600 MHz frequency band (655-680 MHz, TV channels 44-49) with 200 selectable frequencies and true diversity wireless technology. All components have soft-touch controls for quick, easy access to the most important functions during set-up and operation. An easy-to-read LCD information display in each unit provides convenient visual indications of settings and operation status.

FEATURES

ATW-R310 True Diversity Receiver

- The ATW-R310 offers 200 PLL-synthesized UHF frequencies, true diversity operation, advanced Digital Tone Lock Squelch, soft-touch controls with LCD information display and step-through menus to minimize set-up time
- Adjustable-slope high-pass filter (Off, 6dB, 12dB, or 18dB)
- Meter hold setting function permits the AF bar graph in the LCD window to capture and display the highest level audio modulation received from the transmitter - very useful during setup or sound check.
- Transmitter battery-life fuel gauge
- XLR-balanced and 1/4˝unbalanced outputs
- All-metal housing for superior shielding, and a ground-lift switch
- Includes two flexible UHF antennas and rack-mount adapters
- Two receivers can be mounted side-by-side in a single 19˝rack space

ATW-T310 UniPak Transmitter

- The versatile ATW-T310 offers a multi-function LCD display and soft-touch controls for easy set-up and operation.
- Low- and high-impedance inputs (with a bias connection) permit use with dynamic and condenser mics as well as Hi-Z instrument pickups.
- In addition to its programmable functions, the ATW-T310 has a three-position sliding cover to limit access to controls as appropriate for the application and user.

ATW-T3110 UniPak Body-Pack System:

- Includes the ATW-R310D receiver and ATW-T310D UniPak transmitter (655 - 680 MHz range). Requires a Wireless Essentials microphone or cable to complete the system.

ATW-T341 Handheld Mic/Transmitter

- Using the same cardioid dynamic capsule (specifically tailored for a more aggressive sound quality that keeps the vocals up-front in the mix) as ATs acclaimed Artist Elite AE4100 microphone, the ATW-T341 provides a focused vocal pickup while offering superior gain-before-feedback.
- Features rugged metal construction, soft-touch controls and a multi-function LCD display.

Both transmitters have dual-power setting: select high for maximum range or low for extended battery life and are powered by two 1.5V AA batteries for 6-10 hours of operation.

3000 Series Systems

ATW-3110 UniPak Body-Pack System:

- Includes the ATW-R310D receiver and ATW-T310D UniPak transmitter (655 - 680 MHz range). Requires a Wireless Essentials microphone or cable to complete the system.

ATW-3141D Handheld Microphone System:

- Includes the ATW-R310D receiver and ATW-T341D handheld cardioid dynamic microphone/transmitter (655 - 680 MHz range)

AT 349 W. 34th STREET (with purchase of $100 or more)
**Frequency-Agile True Diversity UHF System**

Building on the 3000 Series, the 4000 and 5000 Series wireless systems can suit the most demanding performance applications. Multiple receivers of both series can be linked, and both systems feature IntelliScan frequency selection and dual compaction. All components can store up to five preset configurations, with customized “names” if desired. The heart of the 4000 and 5000 Series is their true diversity frequency-agile receivers. The half-rack AEW-R4100 and full-rack, dual-receiver AEW-R5200 offer two hundred selectable UHF channels in the range of 655.500 to 680.375 MHz (TV channels 44-49), with an operational range in excess of 300 feet.

- Receivers may be linked to form a complete system in which the built-in IntelliScan capability can automatically determine and set the best available frequencies on all linked receivers, minimizing interference and intermodulation. An AC pass-through system allows multiple receivers to be powered using only one outlet.
- Dual-band compander circuitry compresses and expands low- and high-frequency audio signals separately, minimizing artifacts such as pumping and breathing and maximizing audio quality.
- Digital Tone Lock squelch system ignores RF that does not carry the wanted signal’s unique signature. Concurrently, the digitally encoded tone also communicates transmitter data for receiver display.
- External mute switch jack to mute the system quickly and easily.
- The AEW-R5200 also includes Ethernet ports, enabling monitoring of system parameters via the supplied Mac or Windows software.
- To complement both the 4000 and 5000 Series receivers, five wireless transmitter options are available. All feature rugged, ergonomic metal bodies, programmable on/off/mute switching, and 10 mW/35 mW switchable RF power, and are compatible with both systems. Five user-programmable settings, plus a default setting, make these transmitters extremely versatile.
- The AEW-T1000 UniPak transmitter offers advanced features such as a recessed dual-impedance 4-pin locking connector, durable metal body, soft-touch controls with sliding cover, and an input level that is adjustable in 2 dB increments.
- Developed from AT’s Artist Elite line of wired mics, the handheld transmitters are specially optimized for wireless operation. Options include two condenser and two dynamic types.
- The AEW-T5000 and AEW-T3300 cardioid condenser mics boast superior clarity and realism, very low handling noise, and sturdy, die-cast construction. The cardioid AEW-T4100 and hypercardioid AEW-T6100 dynamic mics offer assertive sound, outstanding pop protection, and rugged construction.

U100 MULTI-CHANNEL Wireless Mic System

UHF camera mountable with a rock-solid RF design and rugged metal construction, the U100 system is available with either a body-pack or plug-on transmitter. Each system features the ATW-R100 true diversity receiver and operates in the channel 57 to 59 TV range avoiding upcoming DTV stations in the channel 67 to 69 range. The ATW-U101 system includes the ATW-T101 body-pack transmitter with standard Switchcraft TA5F input connector that is compatible with several lavalier and headworn mics. The ATW-U102 system includes the ATW-T102 XLR plug-on transmitter compatible with all dynamic and most self powered microphones.

System Features:
- 100 Phase Lock Looped (PLL)-synthesized channels selectable via switches on receiver and transmitter
- 300’ operating range typical
- Frequency-agility allows operation in both analog and DTV operating environments
- 100 Hz to 15 kHz frequency response
- Operates in the less crowded 728.125 - 740.500 MHz UHF frequency band or TV channels 57-59
- Hinged battery doors on receiver and transmitters

ATW-R100 Receiver
- True diversity operation automatically selects the better signal from two independent receivers, reducing dropouts
- LEDs indicate A or B antenna status, AF peak, and power status
- XLR balanced output with level control
- Removable antennas (BNC) connectors
- Operates on two internal 9 v batteries (for approx 6 hours) or on external 12 v DC
- Headphone jack with volume control
- Helical filter design improves rejection of unwanted signals
- Measures 3.35 x 4.53 x 1.42” (WHD) and weighs 12.0 oz.

ATW-T101 Belt-pack Transmitter
- Features industry-standard Switchcraft 5-pin mic input connector
- Runs on a single 9V battery with approximately 8-10 hours battery life
- Measures 2.52 x 3.78 x 0.91” (WHD) and weighs 5 oz.

ATW-T102 Plug-on Transmitter
- 3-pin XLRF-type input connector compatible with all dynamic and most self powered mics
- Runs on a single 9 volt battery with approximately 7-9 hours battery life
- Measure 1.57 x 4.32 x 1.57” (WHD) and weighs 6.2 oz.

ATW-U101
Includes ATW101 beltpack transmitter and ATW-R100 receiver (no mic)

ATW-U101830
Includes ATW101 transmitter, AT831cT5 lavalier mic and ATW-R100 receiver

ATW-U101831
Includes ATW101 transmitter, MT830cT5 lavalier mic and ATW-R100 receiver

ATW-U102
Includes ATW102 plug-on transmitter and ATW-R100 receiver

U100 Components
- ATWT101 Beltpack transmitter
- ATWT102 Plug-on transmitter
- ATW-R100 True Diversity receiver
- AT831cT5 Miniature cardioid lavalier mic
- MT830cT5 Subminiature omni-directional condenser lavalier mic
- MT830cT5TH “Theater” model (same as above except in beige)

AZDEN

PRO SERIES

VHF Wireless Mic Systems

The Azden Pro Series brings you high performance VHF wireless at a price you can afford. Built around a two-channel design that allows selection of the frequency that provides the cleanest signal — for reliable RF performance up to 250 feet away. They all feature two switchable frequencies — 169.445 and 170.245 MHz for a range of 250 feet, high performance VHF transmitters and receivers incorporating SMD (surface mount device) technology. The compact receivers connect to the camera's external mic jack with the attached mini cable and attach to the camera with a supplied shoe mount or Velcro, and have LED indicators for battery condition, transmit and receive operation.

WHX-PRO
Handheld Mic System

- Completely self-contained VHF wireless handheld microphone/transmitter
- Has two switchable frequencies for selecting the cleanest sound
- Delivers crystal-clear sound at a range of more than 200 feet
- On/off switch with standby position for quiet switching
- Includes shoe mount and Velcro for mounting the receiver to the camera, and an earphone for monitoring
- Both microphone and receiver have LEDs for operating verification

WHX-Pro.................................................................................................................149.95

WLX-PRO
Lavalier Mic System

- Compact, lightweight, transmitter clips to subject's belt
- Sensitive electret condenser lavalier mic with attached tie clip
- Two switchable frequencies for selecting the cleanest sound
- Delivers crystal-clear sound at a range of more than 200 feet
- Receiver includes shoe mount and Velcro for mounting to the camera, and an earphone for monitoring

WLX-Pro...................................................................................................................134.95

CAM-3
Miniature Mic Mixer

This miniature 3-channel microphone mixer allows you to add and mix sound from three microphone sources simultaneously. Only 3¼” x ¾” x 2¼”, it weighs only 3 ounces, uses no batteries, and attaches to the camcorder or the hand strap.

CAM-3 Mixer ...........................................................................................................44.95

WMS-PRO
Two Mic System

- Complete wireless microphone system with two microphones (one lavalier, one handheld)
- Delivers crystal-clear sound at a range of more than 200 feet
- Two switchable frequencies for selecting the cleanest sound
- Miniature transmitter attaches to a belt or fits into a pocket
- Receiver includes belt-clip, Velcro, shoe mount for added versatility

WMS-Pro..................................................................................................................143.95

COMPONENTS (RECEIVERS)

WR22-PRO
Discrete 2-Channel VHF Receiver

- Unique VHF receiver allows use of two wireless microphones simultaneously.
- Captures the voices of two people at the same time, with each on a separate channel.
- Each transmitter can be from 10 to more than 250 feet from the WR22-PRO receiver.
- Smaller than a pack of cigarettes, the WR22-PRO mounts on a camera with supplied shoe mount or Velcro.
- Operates on 9 volt battery and can be powered (with optional adapters) by 12 volt DC or 120 volt AC.

WDR-PRO
On-Camera True-Diversity Receiver

A VHF, true diversity receiver that incorporates two complete 2-channel receivers inside the case and two separate antennas to eliminate dropouts and help you create the highest quality audio. Both receivers are set to the same frequency, and the WDR-PRO’s circuitry selects the receiver receiving the stronger signal from the microphone and accepts this signal. The LEDs on the WDR-PRO turn from red to green as one receiver, and then the other receives a stronger signal. Unlike the WR22-PRO, you can only use one microphone at a time.

- Diversity circuit avoids sudden dropouts and loss of signal
- Compatible with all Azden “PRO” series microphones
- Two selectable VHF frequencies
- Range of over 300 feet
- Attaches to your camera with supplied shoe mount or Velcro
- Balanced output
- 9 volt battery or 12 volt DC operation

COMPONENTS (TRANSMITTERS)

WM/T-PRO
Handheld Mic/Transmitter

Same self-contained, handheld microphone as used in the WHX-PRO, it can also be used with WLX-PRO, WDR-PRO or WR22-PRO receivers...

WX/T-PRO
XLR Plug-in Wireless Transmitter

The WX/T-PRO converts any dynamic microphone with an XLR connector to wireless operation when combined with the WR-22 PRO or WDR-PRO receiver. Adjustable audio level accommodates a variety of microphones. Superb frequency response allow the true sound of your mic to come through. Power on/off, audio mute and status LED complete the full array of on-board controls needed for operational ease. It has a sleek ergonomic design in a durable ABS housing, and can operate for up to 10 hours on a single AA battery

WL/T-PRO
Beltpack Transmitter

Same lapel microphone and beltpack transmitter as used in the WLX-PRO, it can also be used with WHX-PRO, WR22-PRO, or WDR-PRO receivers...

AZDEN

VHF PERFORMANCE SERIES

VHF Wireless Systems

Designed for professional use, the Performance Series offers six receivers including a portable receiver, four transmitters, and is available in a choice of 25 frequencies in the VHF band (174-216 MHz), for the ultimate in flexibility and versatility. With the ability to use up to 10 mics simultaneously, these systems are ideal for schools, bands and house of worship. Working range is 300’ under average conditions.

COMPONENTS (TRANSMITTERS)

31 HT Handheld Transmitter
- High quality uni-directional dynamic element
- Unique rubber-coated durable ABS housing for comfortable feel and low handling noise
- Has 3-position power switch with standby for muting the audio

31 XT Plug-In Transmitter
- Unique plug-in transmitter turns any dynamic “wired” microphone with XLR output into a wireless handheld microphone
- Input level control for maximum flexibility
- Controls include power on/off, audio mute and status LED

31 LT Lavalier Bodypack Transmitter
- Choice of high quality plug-in omni or uni-directional electret condenser microphone
- Input level control for maximum flexibility
- Constructed of durable ABS housing
- 3-position power switch with standby for muting audio

31 IT Instrument Transmitter
- Fixed 1/4” cable for electric guitars and basses
- Durable ABS housing
- Input level control for maximum flexibility
- 3-position power switch with standby for muting audio

32 BT Bodypack Transmitter
For use with all Performance Series and Producer Series receivers. It has the same features as the 31LT plus:
- On-off-standby switch
- Mini locking 3.5mm jack
- Power LED
- Metal belt clip
- The lavalier microphone is designated EX-503L (locking) $84.95

200R Single Channel Receiver
The result of Azden's design and experience, the 200R Receiver is their newest "value" leader. Housed in a durable ABS case, with power on/off, volume control, and available in 25 frequencies, it gives you excellent RF performance at an attractive price. With Power (red) to Receiving (green) LEDs, and 1/4” output jack with volume adjustment .................................. 74.95

211R Single Channel Receiver
Same features as the 200R except the 211R is housed in a metal case for better RF shielding. This results in excellent RF performance even under adverse conditions, and audio quality formerly associated with much more expensive equipment.......................114.95

221R Discrete 2-Channel Receiver
Designed to allow the use of two mics simultaneously, the 221R receiver has 2 complete receiver sets built into one case. With Power (red) to receiving (green) A & B LEDs, and two 1/4” output jacks with independent volume adjustments. Housed in a metal case for better RF shielding and excellent RF performance ....... 185.00

311DR True Diversity Receiver
For the professional who needs "rock-steady" RF signal strength, less chance of drop-outs, and exceptional audio performance. With Power and A/B true diversity reception LEDs, 1/4” output jack, and volume adjustment .............149.95

311DRH Half-Rack True Diversity Receiver
The half-rack version of the popular 311DR, the 311DRH adds RF/Audio displays, On/Off switch, external squelch and rear mounted detachable antennas. One of two units can be rack mounted with either the HR-1 or HR-2 adapter kits, respectively...................... 219.95

111R Portable Receiver
Designed for professional videographers who need excellent audio reproduction, the 111R delivers excellent RF performance and wide frequency response - even under adverse conditions. The 111R features output volume adjustment, balanced or unbalanced output capability and adjustable mute/squelch. It also has headphone output with volume adjustment, removable rubber ducky antenna and 9-volt battery or DC 12-volt power input. Includes a mini-mini output cable, with mini-XLR and mini-phone plug, available as options.................194.50

FMX-2 2-Input Field Mixer
A portable, all-metal 2-channel low-noise field mixer, the ultra-compact (5 x 3.75 x 1.625” WDH) and ultra lightweight (8 oz.) FMX-2 runs on a single 9-volt battery for up to 12 hours making it almost a requirement for any videographer's camera bag.

- Two balanced XLR mic/line switchable outputs plus a stereo mini-jack output for high-quality DV cameras.
- One mic can be mixed to both outputs as well as either single output while two mics can be mixed to either single output or mixed together to both outputs.
- Two balanced XLR inputs with individual level controls
- Twin "PEAK" level input indicators, a "MONITOR" output (stereo or mono) with level control and a POWER On/Off/Low Battery LED indicator.
- Can be attached directly to a camera with provided velcro or belt-worn using the included 3-position belt clip................................. 269.95
AZDEN

UHF SERIES

51BT
Bodypack Transmitter
Housed in a sleek modern case, the 51BT has 63 user-selectable channels, input level control, standby switch, Hirose 4-pin connector and metal belt clip. Available with a variety of lavaliere and headset mics, or as instrument transmitter.......................114.95

51XT Plug-in Transmitter with Phantom Power
63 user-selectable UHF channels. Special "lockdown" XLR connector for secure grip allows you to use your favorite microphone with an XLR output. Features phantom power, adjustable input level control, power on/off and audio mute switches. LED AF Peak and Power indicators.....199.95

41HT
Handheld Mic Transmitter
Handheld with super-cardioid uni-directional mic element and 63 user-selectable channels. Uses 2 AA alkaline batteries.................179.95

411DRH UHF Half-Rack Receiver
A half-space rackmount crystal-controlled, PLL synthesized UHF receiver with 63 user-selectable channels in the 794-806 MHz band. Up to 9 systems can be used simultaneously. It has detachable antennas mounted on BNC connectors, and both 1/4" and XLR outputs with volume adjustment. Has LED indicators for RF and AF levels....329.95

411UDR UHF Receiver
A crystal-controlled, PLL synthesized UHF receiver with 63 user-selectable channels in the 794-806 MHz band. Up to 9 systems may be used simultaneously. It has both 1/4" and XLR output jacks and volume adjustment.

500UDR Portable True Diversity UHF Receiver
Redefining the parameters of cost-effective, high-band portable wireless technology, the 500UDR is a PLL synthesized UHF receiver with 63 user-selectable frequencies in the 794-806 MHz range. True diversity design houses two separate receivers with twin removable antennas in a ultra lightweight, all-metal chassis that is only 4.1" square and 1.37" thick.

- Tone-code squelch
- Dual antennas with BNC connectors
- Ideal for camera mounting, can run over 8 hours on 6 AA batteries, or from your camcorder's battery via a 4-pin XLR 12v DC input
- XLR and headphone output with volume control
- LED indicators for AF peak level, A or B antenna reception, and battery condition
- Compatible with the 41BT bodypack, 41HT handheld mic and 41XT plug-in mic transmitter, the 500UDR easily attaches to your camcorder with the supplied velcro. Monitor the action via the earphone jack with separate volume control .........................356.95

UHF Broadcast Quality Wireless System
In today's crowded RF world you need the ability to find clear channels and at the same time, to deliver rock-solid performance without interference. Available with 63 "onboard" user-selectable channels, Azden's UHF Series transmitters and receivers let you quickly and easily find the clearest channels for superb performance at a very reasonable price. Consisting of three transmitters and three receivers, the UHF Series works in the 794-806 MHz band and incorporates crystal-controlled PLL-synthesized circuitry for drift-free reception. The receivers are all housed in heavy-duty die-cast chassis' for better RF shielding and durability.

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
Event Series UHF Wireless Mic System

Introducing a new standard of performance for entry level on-camera UHF. Consisting of the 100UPR Receiver and the 10BT Transmitter, the Event Series 100LT system is small, lightweight and has 63 user-selectable (794-806MHz) crystal-controlled and PLL synthesized channels.

The 100UPR is a true antenna-diversity receiver with 1/8” mini-jack output, headphone output with volume control, and Power On/Receiving Signal (Red to Green) LED. Powered by 9-volt battery (not supplied), it includes a shoe mount, metal belt clip and velcro. Also includes mini to mini output cable, but can be used with balanced XLR inputs using optional MX-1 cable.

The 10BT Transmitter includes a metal belt clip and the EX-503 omni lapel mic with optional lapel and headset mics available. Features power switch with On LED and separate Standby switch for muting audio. Uses 9V battery (not supplied).

UHF 1000 BROADCAST SERIES

Digitally-Selectible UHF Wireless Mic System

Designed for broadcast professionals, the 1000 Series UHF offers 121 digitally selectable UHF frequencies (723 to 735MHz) in a very compact and lightweight package. Offers performance levels previously attained only with systems costing twice as much.

1000URX • 1000URX/AB • 1000URX-Si

The 9.9 oz. 1000URX receiver features true diversity electronics in conjunction with removable twin high-gain antennas and Azden’s proprietary DLC (Diversity Logic Control) circuitry for superior, noise-free reception. In addition, the receivers use state-of-the-art dielectric filters for improved image rejection and 5th order filters for an improved S/N ratio. It also features a multi-function LCD readout, XLR mic/line output and a 3.5mm headphone output with level control.

The rugged, black metal case measures a mere 3.3 x 3.9 x 1.2” (WHD). Exactly the same model, the 1000URX/AB is a 1000URX integrated with the Anton Bauer “Gold Mount” system which allows the receiver to be powered by the camera battery.

The 1000URX-Si is the drop-in version of the 1000 series receiver, designed for Ikegami and Panasonic “Slot-in” video cameras.

1000BT

1000BT Bodypack with LCD readout, digital frequency selection and various microphone options. To ensure a long working life (up to 8 hours) the 1000BT draws less than 60mA from a single 9V alkaline battery. Available with the Azden EX-503H, Sony ECM-44H or ECM-55H lavaliere mics.

1000XT

The 1000XT XLR Plug-in converts both dynamic and phantom powered mics to wireless. To ensure a long working life (up to 8 hours), the 1000URX draws less than 60mA from a single 9V alkaline battery.
Professional Wireless Mic System

The loudspeaker arrays have gone up. The stage design is finished. The pyrotechnics have been coordinated. The FOH engineer has everything tweaked to his liking. Yet, he takes the time to test and retest the wireless several times. Why? Because like most engineers worth their weight, this guy knows that poor wireless can ruin a show. It is absolutely essential that everything work 100% — with no drop-outs or interference. With over 25 years of experience in wireless behind them, EV’s RE-1 system takes frequency agility to a whole new level... touring market power with unmatched simplicity. The clear channels have always been there, but it took EV to bring them to your fingertips. Now you can feel secure that even the most crowded RF environments — places like New York or the San Francisco — are fully manageable.

CSB-100 Bodypack Transmitter

- Cast magnesium housing weighs only ounces but is durable enough to take the pounding on tour.
- Detachable 1/4-wave antenna allows use of different antenna options.
- Cell phone style beltclip included for quick and easy attachment. Optional pouches also available for wearing under costumes or for more vigorous applications.
- Wide selection of lapel and headworn mics and mic accessories for the bodypack.
- Unique features for guitar applications:
  - Dual band compander circuit provides the audio bandwidth required to cover the lows of a bass guitar to the highs of a solid body.
  - Mic/Instrument switch adds a 20 dB pad in the transmit path so the standard bodypack can be used for microphone and guitars.
  - Guitar patch cord featuring George L’s cable with solderless, interchangeable right angle and straight plugs included to fit your guitar.

CSH-100 Handheld Transmitter

- Unique “smart” battery circuit means there is no way to put the battery in wrong.
- On/off button can be disabled to prevent accidental turnoffs during a performance. Also acts as a mute, great for pauses in presentations and worship services.
- Low battery LED will light when the battery needs a replacement.
- LCD display and the same four control buttons as the receiver so programming a channel or frequency is quick and easy.
- Normal and High power transmit means you use just enough power for the application, which maximizes the number of simultaneous systems and limits RF spill over into adjacent buildings/theaters.

CS-1000 Receiver

- Optimized channel groups allow up to 16 systems to operate simultaneously in one frequency band.
- Programmed in 25 kHz steps across 24 MHz operating bandwidth, there are over 950 possible channels so you’ll always find a clear channel.
- Advanced ClearScan, automatic group and channel selections, allows quick and simple setup.
- Backlit LCD display shows Group/Channel, transmitter battery status, diversity operation, RF & audio level meters, and space for a name (2 lines, 10 characters each).
- Specially designed “Sound Check” mode lets a person walk test the mic in the performance space with tangible results.
- DSP Posi-Phase Diversity System for maximum range and audio quality.
- Balanced XLR mic output and 1/4-inch unbalanced adjustable line-level output.
- Includes rackmount hardware and Three-Year Limited Warranty.

Bodypack and Handheld Transmitters

Both Feature

- Interchangeable head allows a choice of elements to fit vocal style and environment.
- N/DYM 767a premium dynamic vocal microphone with VOB, excellent gain-before-feedback for high SPL stages.
- RE-510 premium condenser vocal mic for vocalists, spoken word and quieter stages.
- Internal 1/2-wave antenna for excellent range, stays out of harms way.
- An over-molded Warm-Grip handle reduces handling noise and encourages proper microphone technique for better performances.

CDR-1000 Dual Receiver

All the features as the CSR-1000 (Advanced Clear Scan, Auto Channel Select, Sound Check and 950-channel frequency agility), the CDR-1000 includes internal power supply, headphone monitoring jack, balanced line-level output, antenna pass through, DC power on antenna jacks for optional RF amplifier, and RE-OneLink PC software for remote monitoring and control.
Camera Mountable Wideband UHF Synthesized Systems

Ideal for corporate and event videography, the Lectrosonics 100 System is designed for field production with compact DV camcorders or portable mixers. The system offers 256 selectable UHF frequencies to alleviate interference problems. The tiny UCR100 receiver provides an adjustable output from -50dBv to 0dBv to match mic or line level requirements. Each transmitter offers a full 100mW of output power to deliver a fail-safe system with an exceptional operating range, free from dropouts. The audio processing includes the Lectrosonics exclusive dual-band compander, which lowers distortion and improves the signal to noise ratio over conventional companders. Machined aluminum housings, door and panel provides the ruggedness required to withstand the rigors of daily use.

TRAM Inc.
TR50 Lavalier Microphone

The market leader for many years, the miniature TR50 has established itself as the most universal microphone of its kind with a combination of features not offered by any other mic. The TR50 is a miniature professional electret-condenser microphone designed to provide high sound quality with low, or even no-visibility. The tiny omni capsule features minimum sound coloration and is therefore easily combined with boom-mics during post production. A variety of accessories makes mounting the mic on or under clothing easy and reliable. The TR50 is available with the TR79 power supply for direct connection to a mixer, or with any of a large range of connectors for direct connection to virtually any wireless transmitter including Beyerdynamics, Sennheiser, Lectrosonic and many more.

TR50 Configurations (Black or Gray):
Each includes Cable Holder (CH), Clip On Holder (COH), Tie Bar (TB), Windscreen (WS), Carrying Case (CC), Tape Down (TD), Tie Tack (TT).
TR50: TR50 with XLR connector............294.95
TR50S: TR50 with Sony 4-pin Hirose 254.95
TR50SQ: TR50 for use with Sennheiser’s EW Series Transmitters..........................216.95
TR50TAS: TR50 with TA5F connector. 216.95
add $25 for White or Flesh (Tan) colored versions

Optional Accessories
MC (MIC CAGE): Makes it easy to mount the TR50 under clothing. The mic is protected from contact noise by two “rails” which keep fabric away from the capsule.
MC-1 Plain Black..............................19.95
MC-2 Clip-on Black............................24.95
TIEBAR: Holds the TR50 while securing itself through the springloaded clamps.
BDTB Tie Bar (Black only)...............18.00
SAMSON
VM-1/ UM-1 SYSTEMS

VHF and UHF On-Camera Micro
Diversity Wireless Microphone Systems

With their compact, lightweight, and streamlined design, Samson’s VM-1 (VHF) and UM-1 (UHF) wireless systems are ideal for professional videography. They offer great performance along with a host of smart, practical features. Up to six systems can be used simultaneously in either VHF or UHF bandwidths. Designed for camera mounting, they offer a wide variety of lavalier, handheld and headset microphones to suit any application from video deposition and wedding videography to corporate and broadcast video.

Virtually identical (except bandwidth) the VM-1 has unbalanced mini-plug output, the UM-1 features balanced-XLR output.

FEATURES

VH-3 and UH-1 Handheld Transmitters

- Transmitters offer a 14 hour typical battery life and three multi-color LEDs indicate relative battery power (low, medium and high)
- External audio On/Off switch allows the audio signal to be muted without inducing a thud or popping sound when disabling the transmitter
- Battery compartment conceals On/Off switch and an audio input trim pot, controlled with a supplied plastic screwdriver lets you optimize audio level performance when using different microphone elements

VT3L and UT1L Beltpack Transmitters

- A number of lavalier and headset microphones can be connected to the beltpack transmitters using a 3-pin Switchcraft mini-XLR jack
- Permanently attached pig tail antenna on the bodypacks maximize RF transmission
- Beltpack transmitters have a belt clip that can be rotated to any desired position or removed

VM-1 Micro Series Systems (Includes VM-1 Receiver)

VM-1 Lavalier Systems with VT-3L Beltpack Transmitter, Mini Cable, Mic Clip and Carrying Case

- VML: Without microphone.................................................................199.95
- VML-350: With Audio Technica MT350 Lavalier Mic..................199.95
- VML-831: With Audio Technica AT831 Lavalier Mic....................249.95

VM-1 Handheld Systems

- VMH-HQ: Includes VH3 handheld transmitter with Samson QMic, mini cable and two 9-volt batteries......................................................209.95

VM-1 Headset Systems with VT-3L Beltpack Transmitter, Samson Headset Mic, Mini Cable and Carrying Case

- VMH-SQE: With QE headset mic....................................................229.95
- VMH-SQV: With QV headset mic....................................................229.95

VM-1 System Components Only

- VM-1 Receiver............169.95
- VT-3 Instrument transmitter......112.50
- VT-3L Beltpack transmitter with P3 connector............................124.95
- VH-3Q Handheld transmitter with Samson QMic mic capsule.....119.95
VM-1/UM-1 SYSTEMS

VM-1/UM-1 Micro Diversity Receivers

- Two discrete receiver circuits are housed in each VM-1 and UM-1 receiver while a processor decides which of the two receiver circuits has the better signal.
- They run 12 hours on a single 9v battery.
- Both offer 1/8” stereo headphone output with level control.
- A/B LEDs indicate whether the left or the right receiver channel is currently in use.
- 3 multi-color LEDs (low, medium and high) are switchable to indicate either battery power or RF signal strength and can be disabled to conserve battery power.
- Peak LED indicator lights red when approaching clipping which may cause audible distortion.
- Battery compartment houses the on/off switch and a Variable Squelch control (with plastic screwdriver) that sets the maximum system range before drop out.
- Both antenna mountings allow full rotation for flexibility in placement and can be folded inward for transporting.
- Attaches to camera using supplied Velcro ties.
- DC input can accept voltage between 6 an 13 volts from a video camera.
- VM-1 has an unbalanced 3.5mm mini stereo phone jack, the UM-1 has a balanced-XLR output (as well as an unbalanced mini). Both include output cable.

UM-1 Micro Series Systems and Components

UM-1 Lavalier and Headset Systems
They all include:
- UT-1L Beltpack Transmitter, UM-1 Receiver, Balanced mini XLR-to-XLR output cable, Mic Clip and Carrying Case

UM-LP3 Without microphone........................................359.95
UM-L350 With Audio Technica MT350 ..........................319.95

UHF MICRO 32

32-Channel UHF On-Camera Micro Diversity Wireless Mic Systems

UHF Micro 32 is a versatile frequency-selectable diversity system offering the highest level of performance for broadcast ENG/field work, corporate video and professional videographers. This remarkable system features 32 channels in both the receiver and transmitter. Sophisticated Diversity circuitry ensures optimum RF performance. The system features sophisticated SAW (Surface Acoustic Wave) filters in the receiver that focuses exclusively on the incoming signal to maximize reception and transmission quality. PLL-synthesized VCO circuitry in the transmitters reduces RF interference from spurious emissions in multi-user applications. The “system of choice” for demanding video professionals.

FEATURES

System
- Three bands of operation (low, medium and high), with 32 different available channels per band, all operating UHF bandwidth. Up to six Micro 32 systems (each tuned to a different frequency within the same band) can be used in the same location without interference.
- Uses SAW (Surface Acoustic Wave) filters like the one used in high-end television receivers for extremely precise and stable tuning. Ensures that the receiver focuses only on the incoming signal, not extraneous noise or overlapping signals.
- True Diversity technology maximizes active range (up to 300 feet) and reduces potential interference problems through automatic switching between two independent receivers.
- Channel and group selectors
- Optimized for use in videography applications, the Micro 32 system is highly customizable, combining a UHF "walkaround" receiver with your choice of beltpack or handheld microphone transmitters, as well as headset systems.
- Built-in companding noise reduction in all components for crystal-clear sound with minimal background noise and hiss.
- 3-year limited warranty

Transmitters
- Transmitters utilize PLL synthesized VCO technology to absolutely minimize spurious emissions such as RF interference in multi-system applications.
- Turning off the audio signal while leaving the carrier signal on, allows audio to be muted without "pop" or "thumps.
- Convenient three-segment multi-color battery strength LED meter for monitoring remaining power in the installed battery.
- They run on 9-volt batteries for 8 hours.
- 3-pin mini-XLR jack offers connection to guitar cables or a variety of popular headsets and lavalier microphones.
- Controls include Power On/Off switch, Audio Frequency Level adjustment, and Group/Channel selectors for 32 channels.
- Compact “beeper-sized” belt-pack transmitter is extremely lightweight (less than 4 ounces with a 9-volt battery installed).

M32 Receiver
- Using the supplied velcro strip, the compact, lightweight M 32 receiver easily attaches to any video camera.
- 3-pin mini-XLR receiver output with supplied XLR to mini-XLR cable.
- Includes a pair of tuned antennas and provides balanced and unbalanced outputs (with a three-position output level switch) and a headphone monitor output with adjustable level. Also includes an audio peak LED, dual receiver indicators, and an RF strength meter.
32-Channel Frequency-Selectable UHF True Diversity Wireless Systems

Designed for use in both live sound and sound contracting applications, the UHF Synth 32 system utilizes state-of-the-art technology to provide a high performance, cost effective wireless solution. Frequency-agile, it is capable of operating over any of a number of selectable frequencies, making it ideal for touring setups or where multiple wireless systems need to be used simultaneously. The system features three bands of operation with 32 different available channels per band. Up to 6 Synth 32 systems can be used in the same location without interference.

Designed for world-wide use, Synth 32 features a compact half-rack receiver with a large, amber-colored LCD display on the front panel. The system includes PLL synthesized VCO circuitry in the transmitters to optimize use in multi-user situations and SAW filters in the receiver for optimum RF performance. Built-in Noise Squelch circuitry is available to reduce wide band noise.

R32 Receiver

The R32 receiver is a half-rack unit that can be used freestanding or mounted in any standard 19” rack, making it easy to integrate into any traveling or fixed installation audio system. It includes a pair of tuned, molded antennas for better reception. It provides both balanced and unbalanced outputs, line/mic output level switch, and continuously adjustable Volume and Mute (noise squelch) controls.

- Large, easy-to-read, backlit, front-panel LCD display indicates the status of key functions such as band/group/channel information, dual receiver indicators, audio and RF level strength meters, and Mute status.
- Intelligent Noise Squelch circuitry automatically mutes wide band noise in the receiver whenever it rises above the threshold level of the carrier signal.
- Two R32 receivers can be mounted in a 1U rack space with the optional DR2 Rack Adapter.

Micro 32 and Synth 32 UHF Systems

With T32 Beltpack Transmitter and M32 or R32 True Diversity Receiver

Transmitter only with detachable P3 connector (no mic)
With Audio Technica M T350 Omnidirectional Mic with detachable P3 connector
With Samson QL1 Uni-directional Mic with detachable P3 connector
With Audio Technica AT831 Cardioid Mic with detachable P3 connector
With Sony ECM -44 Omnidirectional Mic with detachable P3 connector
With Sony ECM -55 Omnidirectional Mic with detachable P3 connector
With Sony ECM -77 Omnidirectional Mic with detachable P3 connector
With Sennheiser MKE-2 miniature Omnidirectional Mic with detachable P3 connector
With Samson QE aerobics mic with detachable P3 connector
With Samson QV vocal mic with detachable P3 connector
With Audio Technica ATM-75 headset condenser mic with detachable P3 connector
With Countryman Isomax mic with detachable P3 connector
With Sony ECM Pro 35X uni-directional mic with detachable P3 connector
With Samson HM40 Brass/Woodwind Mic
With GC32 Guitar Cable

With H32 Handheld Transmitter and M32 or R32 True Diversity Receiver

With Samson QMic Hypercardioid element
With Audix OM-5 Cardioid element
The Revolution in Wireless

The whole point of wireless microphone and instrument systems is to eliminate cables for complete freedom of movement. AirLine Systems takes this idea to the next level with miniaturized transmitters that eliminate conventional body pack transmitters and connecting cables so vocalists, musicians, fitness trainers, public speakers, on air talent and more can cut ALL the cables for the first time! A revolution in wireless technology, Samson’s transmitters are so small, lightweight and aerodynamic, they are nearly invisible, providing a completely “hassle-free” user experience. To create the world’s smallest wireless transmitters, Samson developed new proprietary technology. Featuring miniaturized circuitry and the ability to operate on a single tiny AAA battery (14 hours typical battery life), these transmitters also feature significantly improved wireless reception and sound quality.

AH1
Fitness and Performance Headset Transmitter

The AH1 Headset Transmitter mounts right on to Samson’s comfortable and lightweight headset. Incredibly small, the AH1 still features an easy-to-reach Power On/Off switch; an Input Sensitivity control to adjust the mic level; a Mute (Audio on/off) switch and a multi-function LED that indicates when the transmitter is on and when your battery’s running low. And the AH1 comes equipped with either the Samson QE fitness microphone which is ideal for vocal reproduction or the QV vocal mic with a balanced response for performance. Samson’s breakthrough micro circuitry allows the AH1 to operate on a tiny triple-A battery for 14-hours while giving you great sound and reliable wireless transmission over long ranges, wherever you use it.

AL1
Presentation Transmitter

A revolutionary idea in lavalier wireless, the AL1 is an all-in-one miniaturized presentation transmitter with a built-in electret condenser mic! Tiny, the AL1 still has all Power and Mute switches, an input level control and a two-function red LED that indicates when the transmitter is on and transmitting. Highly flexible, it lets you use the transmitter’s built-in unidirectional electret condenser mic or plug your favorite lavalier mic into the mini input jack. Phantom power is provided for condenser microphones. An alligator clip allows it to be mounted on a lapel, pocket or belt. Or you can use the convenient lanyard to wear it around your neck. Operates on a tiny triple-A battery with 14-hours of life while giving you great sound and reliable wireless transmission over long ranges.

AX1
Handheld Microphone Transmitter

The super-compact AX1 Handheld Transmitter lets you convert any dynamic microphone into a wireless mic. Just plug in the AX1 and you’re good to go! And, because it’s a little smaller than an XLR connector, you won’t even know it’s there. Like all AirLine transmitters, the AL1 operates on a triple-A battery with 14-hour battery life and delivers reliable reception and transparent sound over long ranges.
AH1/ 35x and AH1/ Model One
Wind Instrument Transmitters
The first wireless system for wind instruments without a bodypack or microphone cables to limit your movement on stage. The AH1 Headset Transmitter clips right onto your horn. Super compact, the AH1 still has every control you need: Power On/Off switch, input sensitivity control, a Mute (audio on/off) switch and a multi-function LED that indicates when the transmitter is on and the battery is running low. The AH-1 operates on a tiny triple-A battery with 14-hours of life while giving you great sound and reliable wireless transmission over long ranges. The AH1 is available either with Audio-Technica’s popular Pro 35x or AMT’s (Applied Microphone Technology) Model One microphones to capture the full range of your instrument.

About the AMT Model One
The ability to securely clamp a microphone to an instrument has always been problematic. The mic either interferes with performance or cannot be properly placed for accurate sonic quality. Due to the irregular shapes of instruments a conventional pinch type clip simply will not hold. Handling noise is another troublesome issue associated with attaching a microphone to an instrument. AMT solves these problems by implementing a unique vibration suppression mount into Model One. The four point suspension reduces handling noise as much as 15dB, allowing for much less annoying transients, such as key noise made by touching the instrument. The result is high-quality audio reproduction and an ease of use that is superior to any other microphone in its category.

About the AT 35x
The Audio Technica Pro 35x high-intensity cardioid condenser mic clips on to brass, reeds, piano, acoustic bass, snare and toms, and handles high-intensity sound without distortion. The UniMount clip permits accurate positioning while protecting the element.

AF1 and AG1 Guitar Transmitters
The revolutionary AirLine “plug-in” guitar transmitters come in two versions: the AF1 for Strat(R)-style inputs and the AG1 for traditional Gibson(R)-style end-mount inputs and all others. Less than half the size of conventional body packs, these miniaturized transmitters run on a tiny triple-A battery with 14-hour battery life. Both feature an array of on-board controls: A Power On/Off and Mute switch, red/green LED for Power On/Off, a Peak LED and an input level control for different pickups.

AP1 Guitar Pedal Receiver
Designed for use with your compact effect pedals, the AP1 diversity receiver gives you reception you can always depend on. It features a 1/4” output jack, Power switch, Peak LED and a Volume control. You can use a 9v battery or an AC adapter to power the receiver. When you unplug your the unit, the battery is disabled to conserve power.
AM1 Miniature On-Camera UHF Receiver

The AM1 is a camera-mounted micro receiver developed especially for the AirLine system. Even smaller than the typical wireless transmitter, the AM1 uses the same miniaturized circuitry and 800–805 MHz UHF frequency band as the AirLine Series transmitters. The AM1 is perfect for all video applications requiring outstanding audio and RF performance. Mounting on the hot shoe of your camera or utilizing the belt clip, the AM1 features an audio out, a headphone out with level control for monitoring, a Mic/Line switch for optimized output, a Power Switch and a multi function LED displaying RF, Low Battery and Power. The AM1 receiver can operate 5-8 hours on a single AAA battery. Measures just 2” x 1-5/8”—making it Samson’s smallest receiver ever.

AR1 UHF Micro Receiver

AR1 Micro Receiver is small and lightweight—smaller than even the typical wireless transmitter, yet operates in the 800–805 MHz “clear sky” UHF bandwidth, and comes equipped with a full complement of controls. These include: Output (volume) level control; power on/off switch; LEDs that tell you if the AR1 is receiving a signal (RF LED); and that audio level is okay (Peak LED); Squelch control to eliminate noise and balanced XLR and unbalanced 1/4” outputs for connecting to different sound systems. Swivel mounting allows full rotation for optimum placement of the antenna. A special holder is also included, so the receiver can be easily wall mounted to stay out of the way.

UM1 UHF On-Camera Receiver

Compact and lightweight, the UM-1 is a camera mountable receiver ideal for any application from video deposition and wedding videography to corporate and broadcast video. It features A/B LEDs for channel usage as well as LEDs for battery or RF strength and peak LEDs. Battery compartment houses a Variable Squelch control. Both antenna mountings allow full rotation for flexibility in placement and can be folded inward for transporting. DC input accepts voltage between 6 an 13v from a camera. Runs 12 hours on a 9v battery and has a balanced-XLR output as well as an unbalanced mini.

UR1 Rackmount Receiver

Fully professional, the UR1 operates in the 800–805 MHz UHF bandwidth, and features a True Diversity design with two independent receivers, S.A.W. (Surface Acoustic Wave) technology and built-in tuned, molded antennas for the most stable RF reception possible. Housed in a sleek one space, half rack package, it has a front-panel with RF level meter, squelch control and peak audio LED. It also has a balanced XLR (mic/line switchable) and unbalanced 1/4” output. Two UR1s can be mounted side by side with the optional DR2 Rack Adapter.

- True Diversity system switches to the strongest available signal so you get less dropouts and interference
- 3-color RF level meter indicates signal strength being received
- Built-in noise reduction system accurately tracks the signal for clear sound with minimal noise and hiss
- Squelch control sets minimum threshold level for carrier signal to eliminate unwanted noises and RF interference
- Receiver A/B LEDs indicates which receiver is currently operating
- AF level control adjusts the signal level for both balanced and unbalanced outputs on rear panel
- Audio Peak LED shows when incoming signal is clipping
- Power On/Off switch with status LED
- Tuned molded antennas for best reception
- Rear-panel balanced XLR and unbalanced 1/4” outputs with a mic/line output level switch
AirLine Series Systems

**ELECTRIC GUITAR/ BASS SYSTEMS:**
- SWQSF: A F1 Transmitter (Fender style) and AP1 Pedal receiver
- SWQSG: A G1 Transmitter (Gibson style) and AP1 Pedal receiver
- SWQSB: A G1 Transmitter (Flat End Mount style) and AP1B Pedal Bass receiver with shape circuitry
- SWPSF: A F1 Transmitter (Fender style) with UR1 receiver
- SWPSG: A G1 Transmitter (Gibson style) with UR1 receiver

**HANDHELD SYSTEMS:**
- SWQHX: AX1 Plug-in Handheld Transmitter with AR1 receiver
- SWPHX: AX1 Plug-in Handheld Transmitter with UR1 receiver
- SWPSX: AX1 Plug-in Handheld Transmitter with AM1 receiver

**PRESENTATION SYSTEMS:**
- SWQHX: AX1 Plug-in Handheld Transmitter with AR1 receiver
- SWQPHX: AX1 Plug-in Handheld Transmitter with UR1 receiver
- SWQPHX: AX1 Plug-in Handheld Transmitter with UR1 receiver

**WIND INSTRUMENT SYSTEMS:**
- SWQSWX: AH1/35X Transmitter with Audio Technica Pro 35X Mic and AR1 Receiver
- SWQSWA: AH1/AMT1 Transmitter with AMT Model One Mic and AR1 Receiver
- SWPSWX: AH1/35X Transmitter with Audio Technica Pro 35X Mic and UR1 Receiver
- SWPSWA: AH1/AMT1 Transmitter with AMT Model One Mic and UR1 Receiver

**AEROBICS AND VOCAL HEADSET SYSTEMS:**
- SWQSC: AH1/QE Transmitter with Samson QE aerobics Mic and AR1 Receiver
- SWQSCV: AH1/QV Transmitter with Samson QV vocal Mic and AR1 Receiver
- SWPSQSC: AH1/35X Transmitter with Audio Technica Pro 35X Mic and UR1 Receiver
- SWPSQSCV: AH1/AMT1 Transmitter with AMT Model One Mic and UR1 Receiver

**COMBINATION SYSTEM**
- SWQSWX: AH1/35X Transmitter, AL1 Transmitter with built-in electret condenser mic, AM1 Receiver, R11 and MT350 microphones

**Stage 5 and Stage 55 VHF Wireless Systems**

**STAGE 5**
The Stage 5 system is based on the VR5 receiver. The Super Heterodyne VHF receiver has great RF reception for interference-free performance. Front-mounted, tuned antenna, Tone Squelch control, half-rack VHF receiver design with XLR and 1/4” outputs and easy to read battery, audio and signal level meters. Available in a guitar, hand-held and headset mic configurations.

- **Instrument System:** ST5 beltpack, SR5 receiver, GC5 instrument cable
- **Handheld Microphone System:** HT5 handheld transmitter with Q7 cardoid element, SR5 receiver
- **Lavalier System:** ST5 beltpack, Samson LM5 lavalier mic, SR5 receiver
- **Headset System:** ST5 beltpack, Samson HS5 headset mic, SR5 receiver

All Stage 5 systems come with an AC power supply and a carry case.

**STAGE 55**
Dual antenna True Diversity system at a price never seen before. Super Heterodyne VHF receiver has great RF reception for interference-free performance. Front-mounted, tuned antennas, Tone Squelch control, half-rack VHF receiver design with XLR and 1/4” outputs and easy to read battery, audio and signal level meters. Available in a guitar, hand-held and headset mic configurations.

- **Instrument System:** ST5 beltpack, SR55 receiver, GC5 instrument cable
- **Handheld Microphone System:** HT5 handheld transmitter with Q7 cardoid element, SR55 receiver
- **Lavalier System:** ST5 beltpack, Samson LM5 lavalier mic, SR55 receiver
- **Headset System:** ST5L beltpack, Samson HS5 headset mic, SR55 receiver

All Stage 55 systems come with an AC power supply and a carry case.

**UHF True Diversity Wireless Mic Systems**

Designed to bring high performance UHF wireless within everyone’s reach, the truly affordable, UHF Series One operates in the 800-806 MHz band and employs patented PLL (Phase-Lock Loop) transmitter technology to ensure reliable transmission. Built-in companding noise reduction in all components delivers crystal-clear sound with minimized background noise and hiss. Series One also features S.A.W. (Surface Acoustic Wave) receiver circuitry and True Diversity technology for extremely precise tuning and maximum stability of signal reception for extended periods of time. Both the extremely compact “beeper-sized” UT1 beltpack transmitter and sleek, lightweight UH1 handheld transmitter feature a 3-segment LED “battery-life” level meter. Exceptionally compact, the single-space half-rack receiver is equipped with built-in tuned, molded antennas. An optional 19” rackmount adapter allows two receivers to be mounted in one rack space. Ideal for the performer, public speaker or fitness instructor who wants to take their wireless to the next level, or sound contractors looking for “performance critical” wireless that fits into their budget.

**UR1 True Diversity Receiver**

The UR1 receiver is a half-rack unit that can be used freestanding or can be mounted in any standard 19” rack, making it easy to integrate into any traveling or fixed installation audio system. It includes a pair of tuned antennas, both balanced XLR (mic/line switchable) and unbalanced 1/4” output, continuously adjustable AF level and mute controls, as well as an audio peak LED, dual receiver indicators, and a five-segment RF level meter. Two UR1 receivers can be mounted in a 1U rack space with the optional DR2 Rack Adapter.

- True Diversity system switches to the strongest available signal so you get less dropouts and interference
- Multi-segment, 3-color RF level meter indicates strength of signal being received
- Built-in noise reduction system accurately tracks the signal for clear sound with minimal noise and hiss
- Receiver A/B LEDs indicates which receiver is currently operating
- Audio Peak LED shows when incoming signal is clipping
- Power On/Off switch with status LED
- Squelch control sets minimum threshold level for carrier signal to eliminate unwanted noises and RF interference
- Tuned molded antennas for better reception
- Rear-panel balanced XLR and unbalanced 1/4” outputs with a mic/line output level switch
- AF level control adjusts the signal level for both balanced and unbalanced outputs on rear panel

Two UR1 receivers mounted in the optional DR2 19” Dual Rackmount kit
UT1 Beltpack Transmitter
Incredibly compact, the “beeper-sized” UT1 and UT1G beltpack transmitters weigh less than 4 ounces with a 9-volt battery installed, and incorporate PLL technology to lock in the signal for more stable transmission. The UT1G comes prewired with a permanently attached 1/4” plug for electronic instruments such as electric guitar or bass, while the UT1L provides a mini-XLR connector for connection to a variety of popular headsets and lavaliere microphones including Samson’s Qe (fitness) and Qv (vocal performance) headset mics. Rotating belt clip lets you position the transmitter any way you want. Permanently attached “pigtail” antenna enables optimum reception.

- Patented PLL (Phase-Lock Loop) and dielectric resonation transmitter technology lock in the signal to ensure stable transmission
- External audio On/Off switch instantly mutes the audio signal without “pops” or thumps while leaving the carrier signal on
- They use 9-volt batteries with a battery life of at least 12 hours

UH1 Handheld Transmitter
Comfortable and lightweight, the UH1 handheld transmitter also features PLL technology to ensure stable signal transmission. The UH1 is available with the Samson Qmic and a variety of other mic elements. The Qmic is a high performance wireless dynamic mic design with a modern neodymium element and hypercardioid polar pattern for maximum gain before feedback.

UHF Series One Mic Systems

LAVALIER SYSTEM
SWLSL3: UT1L Beltpack Transmitter, Audio Technica MT350 omnidirectional mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSL1: UT1L Beltpack Transmitter, Samson QL1 unidirectional Mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSL8: UT1L Beltpack Transmitter, Audio Technica AT-831 cardioid mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSP3: UT1L Beltpack Transmitter, detachable P3 connector (no mic included) and UR1 True Diversity Receiver
SWLSC4: UT1L Beltpack Transmitter, Sony ECM-44 Omnidirectional Lavalier mic with detachable P3 connector and UR1 True Diversity Receiver
SWLSC5: UT1L Beltpack Transmitter, Sony ECM-55 Omnidirectional Lavalier Mic with detachable P3 connector and UR1 True Diversity Receiver
SWLSC7: UT1L Beltpack Transmitter, Sony ECM-77 Omnidirectional Lavalier Mic with detachable P3 connector and UR1 True Diversity Receiver
SWLSCM: UT1L Beltpack Transmitter, Sennheiser MKE-2 Omnidirectional Lavalier Mic with detachable P3 connector and UR1 True Diversity Receiver

HANDHELD MICROPHONE SYSTEM
SWLHQ: UH1 Handheld transmitter with Samson Qmic Hypercardioid element and UR1 True Diversity Receiver
SWLHS: UH1 Handheld transmitter with Shure SM58 cardioid element and UR1 True Diversity Receiver
SWLHO: UH1 Handheld transmitter with Audix OM-5 cardioid element and UR1 True Diversity Receiver

HEADSET SYSTEM
SWLSC: UT1L Beltpack Transmitter, Samson QE aerobics mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSCV: UT1L Beltpack Transmitter, Samson QV vocal mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSC2: UT1L Beltpack Transmitter, Audio Technica ATM-75 condenser mic with detachable P3 connector, and UR1 True Diversity Receiver
SWLSH: UH1 Handheld Transmitter with Shure SM87 condenser element and UR1 True Diversity Receiver
SWLSC3: UT1L Beltpack Transmitter, Crown CM-311E Cardioid Mic with detachable P3 connector and UR1 True Diversity Receiver
SWLSCI: UT1L Beltback Transmitter, Countryman Isomax Mic with detachable P3 connector and UR1 True Diversity Receiver

INSTRUMENT SYSTEM
SWLSGT: UT1G Beltpack and UR1 True Diversity Receiver
SWLSWX: UT1L Beltpack Transmitter, Audio Technica Pro 35X unidirectional mic with detachable P3 connector and UR1 True Diversity Receiver

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008
1-800-875-6951 • www.bhphotovideo.com
The Evolution Series Wireless brings Sennheiser's philosophy of affordable performance to the realm of compact wireless systems. Designed from the ground up to give performers, producers and engineers the highest standard of wireless microphone technology, they are ruggedly constructed to survive the toughest performances—night after night. Available in four interchangeable series—the 100, 300, 500 and 550 Series—each system can be configured to fit the requirements of virtually every artist, band, sound system or any other application. Each system is based on a compact, high performance, steel-construction UHF receiver, and comes with your choice of Evolution wireless handheld and bodypack transmitters. The 100 Series is an excellent choice for adding UHF wireless capabilities without sacrificing sound quality or ease of use, and is extraordinarily affordable. The 300 Series offers enhanced performance and is available as an in-ear monitoring system for the ultimate in listening quality and freedom. The 500 and 550 (dual-channel) Series provide utterly professional performance, and are as comfortable on the stage of a national touring act as they are the conference table.

- System operates using switchable UHF frequency technology—previously available only on systems costing several thousand dollars. 1,280 digitally synthesized frequencies are instantly selectable in 25 kHz increments, so it’s easy to pick a wireless channel that’s free of interference.
- Guarantees interference-free operation with the highest transmission reliability. Advanced diversity techniques receive the clearest signal at all times, as every receiver contains dual receiver circuits picking up signals independently as the performers move around the stage. Constantly comparing the two signals, the receivers select the stronger one at any instant for an audio output that’s solid and free of interference.
- Utilizing Sennheiser’s unique HDX compander technology, they deliver crystal-clear sound. A noise suppression system specifically developed for stage applications, HDX compander optimizes the mic’s dynamic range while minimizing unwanted modulation and transmission noise. The result is powerful, dynamic sound quality, equal to a good wired microphone.
- All transmitters feature a flashing low battery warning LED. 300 Series also provide a real-time battery level display on the transmitter body, while on 5000 Series this information is transmitted to and displayed on the off-stage receiver, so the sound engineer can keep an eye on power levels without interrupting the performance.
- Designed by Sennheiser’s engineers to take hard knocks, each transmitter and receiver is protected by a rugged metal housing, built to stand up to the grind of regular stage work.
- High pressure on-stage situations require that a wireless mic system is simple to set-up and use—no go is no show. Evolution Wireless incorporates easy-to-read LED and LCD displays and user-friendly functions, with a logical approach to operations. Frequency, channels, sensitivity and other parameters can be viewed and adjusted in an instant. All components offer this same operating system, so as soon as you’re familiar with one product, you know how the rest of the range works.

Evolution 100 Series

Simply the most affordable way to get professional-caliber UHF wireless. The amazing 100 Series is perfect for any musical style, and offers four switchable presets (reprogrammable to any of the 1280 available frequencies), a true diversity receiver for stable, high-quality transmission, and high-quality metal construction that can stand up to the rigors of life on the road. Makes any stage performance possible, from extreme rock to sensitive ballads, and performers and presenters of any kind.

- 1,280 user-selectable UHF frequencies
- True diversity receivers for highest transmission reliability
- User-friendly menu control via LCD display
- A choice of four preset frequencies saves you much time when operating several channels simultaneously on stage.
- Transmitters and receivers with rugged metal housings
- Low battery consumption allows longer performances (low-battery warning as well)
- HDX compander for crystal-clear sound
- User-friendly display on the mount receiver allows you to quickly read off all the important transmission parameters.
- Preconfigured, ready-to-use systems for every application and every requirement.
Evolution 300 Series

For increased flexibility and power, the 300 Series steps up with eight switchable presets (reprogrammable to any of the 1280 available frequencies), peak-hold level and battery meter status indicators, and variable-level balanced XLR and TRS 1/4” connectors. In addition, an alphanumeric name can be assigned to the receiver.

- Eight switchable preset memory locations (using any of the 1280 available frequencies)
- Peak-hold level indicator
- Name, store and recall individual channel presets (e.g. ‘lead vocal’) in a multi-microphone situation
- Battery status indicator

Evolution 300 Series Wireless In-Ear Monitor System

Why bother with the trouble and expense of traditional floor wedge monitoring when you can go wireless? You get much greater quality, without on-stage feedback problems. The 300 Series In-Ear Monitor System features eight switchable presets, which can be reprogrammed to any one of the 1280 available frequencies, so you can operate several systems simultaneously. It also features the ability to create personalized in-ear monitor mixes for each performer and a unique Focus function, which switches monitoring to “dual mono” mode, enabling performers to individually separate their voice or instrument from the total mix. A switchable limiter protects performers from excessive sound pressure levels.

Evolution 500 Series

Offering the ultimate in performance for concert sound, theater and more, the state-of-the-art 500 Series steps up with sixteen switchable presets (reprogrammable to any of the 1280 available frequencies), assignable alphanumeric names for each of the sixteen presets, headphone output on the receiver (for monitoring), variable level-balanced XLR and TRS 1/4” connectors, and extensive metering including battery telephony. It also features an innovative Soundcheck mode, which allows an artist or engineer to perform their own on-stage level and RF-check.

EM-550 Dual Channel RF Receiver

The EM 550 dual-channel true-diversity RF receiver is designed for professional touring and installation applications where unwavering RF performance and rugged construction is mandatory. Incorporates an active antenna splitter, all metal frame with reinforcement, transformer-balanced outputs and headphone monitoring on the front panel.
The wireless version of the Evolution e835 classic all-around performer. This mic is designed to complement any vocal style, delivering a punch output with a gentle presence boost. Cardioid pattern offers good signal isolation and feedback rejection. Robust metal construction and shock-mounted capsule minimize handling and impact noise.

The wireless version of the Evolution e845 high-quality vocal dynamic microphone. Ruggedly constructed with a super-cardioid pick-up pattern for a higher signal output to cut through high on-stage volume. A full, warm tonal response is matched with an extended high frequency presence lift for clarity and projection. Consistent on/off axis and proximity response maintains the tonal balance when moving around. Full metal construction and extensive shock-mounting minimize handling and impact noise. A tough high performance stage microphone.

The wireless version of the Evolution e865 condenser mic, the sound is marked by an exceptionally smooth, linear frequency response, capable of exceptionally detailed reproduction with the lowest possible levels of noise and distortion. A super-cardioid pick-up pattern handles high on-stage sound levels without feedback. Also well-suited for broadcast and presentation work. Full metal construction and sophisticated shock-mount suspension shield and protect the capsule for use in the most rigorous conditions.

Ideal for presentation and interview work, this compact lavalier design clips discretely onto any item of clothing. With an omni pick-up pattern it projects signals with a flat and extended frequency response for increased vocal intelligibility.

A headset microphone of exceptional quality, the ME3 is designed for music and speech applications that require movement and close proximity signal reproduction. The headband is comfortable and immovable, enabling use during exertive dance or sports activities. Super-cardioid condenser design offers excellent feedback rejection.

A high quality dynamic lavalier cardioid design—perfect for clear, effective signal projection even with high on-stage sound pressure. Provides levels of ambient signal and feedback rejection not associated with the use of a lavalier microphone. Ideal for presenters, vocalists, and acoustic musicians.

**ew100ENG Kit:**
Camera Mountable UHF Wireless Lavalier and Plug-On Bundle
Consists of EK100 Receiver, SKP100 Plug-On Transmitter, SK100 BodyPack Transmitter and ME2 Microphone, Battery, (CL100) Unbalanced Mini-to-XLR Cable (Receiver Out-to-Camera In), (CL-1) Unbalanced Mini-to-Mini cable (Receiver Out-to-Camera In), Antennas, Microphone Clip, Clothing Clip and 2 Year Warranty

**ew500ENG Kit:**
Camera Mountable UHF Wireless Lavalier and Plug-On Bundle
Consists of EK500 Receiver, SKP500 Plug-On Transmitter, SK500 BeltPack Transmitter and ME2 Lavalier Microphone, Battery, (CL500) Balanced Mini-to-XLR Cable (Receiver Out-to-Camera In), Antennas, Microphone Clip, Clothing Clip and 2 Year Warranty
ASP-1 Antenna Splitter
Passive antenna splitter allows a single antenna unit to feed up to four fixed receivers simultaneously, reducing the number of antennas required for simplified set-up. Power is delivered direct to the receivers via the ASP-1 without the need for additional cables. ...................................................... 429.95

AC-1 Antenna Combiner
Enables the signal from four separate In-Ear Monitor transmitters to be transmitted with a single antenna ...................................................... 429.95

A1031-U Antenna
Passive, omni-directional antenna for use as a receiver or transmitter antenna ............... 229.95

AB-1 Antenna Booster
Particularly useful for compensating for the slight attenuation that occurs when antenna splitters are being used, an antenna booster increases signal levels to receiver. The AB-1 is frequency selectable to avoid interference from unwanted RF sources .................. 279.95

GA-1 Rack Adapter
Offers convenient side-by-side mounting of two fixed receivers or transmitters in a 19-inch rack.......................................................... 39.95

AM-1 Antenna Mount
This adapter is used to mount antennas at the front, when used with receivers or transmitters in a 19-inch mounting arrangement, moving them from their usual rear position. This enables easier access and installation when rack mounting ........................................ 49.95

NT-120 AC Adapter
AC adapter for use with the ASP-1 Antenna Splitter ...................................................... 38.50

NT-3 AC Adapter
Mains power adapter for use with the AC-1 Antenna Combiner ........................................ 64.95

MZW-1 Windscreen
Foam “pop shield” for handheld microphone transmitters, the MZW-1 effectively suppresses wind and popping. Simple fitting to all handheld mics ........................................ 11.95

A17 Receiver Antenna
Optional flexible, short receiver antenna, with conductor wrapped around a flexible rod. For use with cameras or camcorders ...................................................... 29.95

DC-1 Camera Power Adapter
Power supply adapter for use with EK receivers and SK transmitters. Draws power for bodypack directly from camera’s own power supply ........................................ 49.95

CL-2 Line Cable
Optional line cable for portable bodypack transmitter ...................................................... 14.95

CC-1 Carrying Case
Hard-shell foam-lined case provides effective protection for your wireless set ................ 58.50

VP SERIES

VHF On-Camera Wireless Microphone Systems

Portable, camera mountable wireless system operating in the 169.445 to 216 MHz VHF, the VP series offers beltpack or handheld transmitters using either the WL93 omni-directional lavalier or the world standard SM58 uni-directional handheld microphone. A total of 10 channels are available, and up to six systems can be used simultaneously in the same environment. The VP3 receiver runs on 9-volt batteries and connects to either balanced or unbalanced camcorders and mixers. Ideal for documentary, broadcast and event videography, the system operates up to 300’ and features a frequency response of 80Hz to 15kHz ± 3 dB.

VP3 Receiver

- Mounting options include velcro, removable belt clip or camera shoe adapter.
- Runs for 8 hours on one 9-volt battery
- Available in 10 frequencies
- Stereo/mono compatible 1/8˝ (3.5mm) headphone output with level control.
- Balanced mic level output

T2/58 Handheld Microphone Transmitter

- Includes SM58 cardioid mic capsule
- Audio Hi/Lo gain switch in the battery compartment controls the audio level of the microphone

T2/58 AND T1 TRANSMITTERS BOTH FEATURE

- On/Off switch mutes the mic without having to turn the transmitter off. This eliminates “pop” or “thump” sounds that occur when the mic is turned on and off.
- Indicators show when the power is on and the battery is good (approx. 18 hours on a 9v battery) or when the battery has less than one hour’s worth of power

T1 Body-Pack Transmitter

- Tini Q-G microphone jack connects to the supplied WL93 subminiature omni-directional lavalier mic or the WA310 XLR microphone adapter cable
- Flexible antenna wire is permanently attached to the transmitter
- Audio level control is achieved with the supplied small screwdriver
- Includes belt clip allowing it to be worn on a belt or waistband

VP WIRELESS SYSTEMS, COMPONENTS AND ACCESSORIES

Complete Systems (including): VP3 receiver, WA460 TA3F to 3.5mm stereo mini cable, (2) 9v batteries, velcro mount and camera “Hot Shoe” mount.

VPL93 Lavalier System: With T1 Belt-Pack Transmitter and WL93 lavalier mic ..........................284.95

VPH58 Handheld System: With T2/58 Handheld Mic/Transmitter ..................................................324.95

Components:

VP3 Receiver ...........................................159.95
T2/58 Handheld transmitter .......................194.95
T1 Belt pack transmitter (no mic) ..............119.95
WL93 Subminiature lavalier mic .................69.95

Accessories:

WA450 Balanced Tini-Q-G to XLR male cable for VP3 receiver ..................................................22.50
WA310 Microphone adapter cable for T1 transmitter .................................................................19.95
WA360 In-line audio switch for T1 transmitter ..............................................................................57.95

UHF Frequency Agile Portable Wireless Receiver

Designed for professional broadcasters and videographers, the UP4 is a portable UHF wireless receiver that provides the perfect combination of crystal-clear audio and rugged dependability — no matter the environment — at a price that will easily fit your budget. The UP4 is available alone or as part of a complete UP Portable UHF Wireless System with your choice of Shure UC or UHF series transmitters. (See UC Wireless Systems [page 756] and UHF Wireless Systems [page 758] for transmitter features and specifications.)

Engineered to avoid interference and deliver a clear, steady signal:

- Frequency Agility - provides over 100 selectable UHF channels
- IF (Intermediate Frequency) Filtering - selects the desired signal
- Phase Locked Loop (PLL) Circuitry - ensures the signal is steady
- Tone Key Circuitry - blocks out other RF signals that could interfere with reception when the transmitter is off
- Noise Squelch Circuitry - analyzes signal quality to evade noise bursts when the transmitter is off
- Patented Shure Predictive Diversity technology anticipates dropouts before they occur, switching antennas when necessary for consistent audio and RF reception

Designed and constructed for dependable and reliable operation even under the most challenging environments:

- Runs up to 10 hours on a single 9V battery
- Extruded aluminum chassis - built tough to withstand the real rigors of the road
- Attaches securely to NP-style and Anton-Bauer Gold Mount battery outfits
- Unique mounting design allows the battery to be changed without removing the receiver from the camera
- Innovative weather-resistant cover snaps easily around the top of the receiver for protection against the elements
- Includes a rugged system carrying case
- Legendary Shure quality - subjected to one of the most stringent environmental and drop testing programs in the industry.

Additional Features:

- Bi-colored LEDs to monitor multi-feature operation status
- Polarity protected battery case
- SMA antenna connectors with removable antennas
- Thread-locking DC input jack for external power option
- Push-lock audio gain control
- Mic level XLR output

UP Systems with UC Series Transmitters

UPC14/93: UC1 Bodypack Transmitter and WL93 Omnidirectional Micro Lavalier
UPC24/58: UC2/58 Handheld Transmitter with SM 58 Capsule
UPC24/87: UC2/87 Handheld Transmitter with SM 87A Capsule
UPC124/93: UC1 Bodypack Transmitter with WL93 Omnidirectional Micro Lavalier mic and UC2/58 Handheld Transmitter with SM 58 Capsule

UP Systems with U Series Transmitters

UP14/93: U1 Bodypack Transmitter and WL93 Omnidirectional Micro Lavalier
UP24/58: U2/58 Handheld Transmitter with SM 58 Capsule
UP24/87: U2/87 Handheld Transmitter with SM 87A Capsule
UP124/93: U1 Bodypack Transmitter with WL93 Omnidirectional Micro Lavalier mic and U2/58 Handheld Transmitter with SM 58 Capsule

All UP Systems include UP4 Portable Receiver with 3´ XLR output cable, weather resistant cover, system carrying case, two 9v or AA batteries, 9v battery, mounting box and DC power cable
VHF Wireless Mic Systems

Whether it’s for vocal, speech, or instrument performance, the T Series has a wireless system for you. Working in the VHF frequency band, the T Series systems give you the reliability and flexibility you need, at a price you can afford. Pre-packaged specifically for vocalists, guitarists, presenters and instrumentalists, all T Series systems feature:

- Convenient mute switch for noiseless control of On/Off function
- Noise squelch circuitry to virtually eliminate noise bursts
- A durable carrying case for easy storage and travel
- Unique “battery saver” technology allows up to 12 hours of operation from a single 9-volt battery. This makes the T Series ideal for live sound reinforcement, conference rooms and other installation applications that require long uninterrupted system performance.

T1/T1G Beltpack and T2 Handheld Transmitters

- 300’ transmission distance
- Audio Gain Control accommodates input sources with different signal strengths (e.g., speaking or playing an instrument).
- On/Off switch mutes audio without turning the transmitter off.
- Powered by 9v batteries, a low battery indicator glows red when less than an hour of operating time remains.
- Power On/Off switch is recessed to prevent it from being accidentally turned off.

T1/T1G Beltpack Transmitters Only

- Belt clip secures the transmitter to a belt, waistband or guitar strap. On the T1, the Tini Q-G input connects to lavaliere and headset mic cables, and Shure WA302 instrument adapter cable. The T1G accepts a 1/4” or guitar cable plug.

T3 Non-Diversity Receiver

- Volume control of receiver output
- Telescoping antenna
- Unbalanced 1/4” output
- RF (radio frequency) signal indicator glows yellow when RF signals are received
- Audio peak indicator flashes red when the input signal approaches clipping levels
- Noise squelch circuit analyzes signal quality as opposed to signal strength, discriminating between noise and desired signal. This reduces noise burst due to environmental RF noise.

T4A Diversity Receiver

- Exclusive MARCAD (MAximum Ratio Combining Audio Diversity) circuitry continuously processes the RF signal from each antenna and combines them to produce one signal of optimum quality.

- Unbalanced 1/4” phone plug and balanced XLR connectors for simultaneous output to different devices. XLR output is selectable between mic and line level.
- Can be rack-mounted with the optional URT rack mount tray

T88 Dual Channel Non-Diversity Receiver

The T88 receiver delivers dual channel performance without having to compromise your budget or standards. Ideal for applications from DJs and Karaoke, to schools and houses of worship, the T88 delivers full, rich sound and allows two transmitters to be used simultaneously.

- Power, RF signal and audio peak indicators
- Audio output level (volume) controllers
- Telescoping antennas
- Independent 1/4” audio output connectors

EQUIPMENT LEASING AVAILABLE
The Guitarist—Designed exclusively for guitars - The Guitarist delivers the crystal clear highs and deep, resonant lows that you’d expect from a wired set up. Shure's rugged Surface Mount Technology and input gain adjustment allow for the best signal-to-noise ratio with the widest variety of guitars and playing styles.

TGS: Includes T1G transmitter, two WA303 Guitar Cables and T3 Receiver .................................................169.95
TGD: Includes T1G transmitter, two WA303 Guitar Cables and T4A Receiver .................................................229.95

The Instrumentalist — Versatile solution for high volume wind, brass or percussion. Features the high SPL WB98H/C mini-cardioid condenser microphone with integrated gooseneck and clip-on clamp for secure fit and positioning.

UT14/98H: Includes WB98H/C Gooseneck Clip-On Instrument Mic, T1 body-pack transmitter with 4-pin mini connector, and T4A Receiver .......................................................... Call

Dual Systems with T88 Dual Channel Receiver Offering dual channel performance without having to compromise budget or standards.

TwinPro Vocal Artist—
T288: Two T2 Handheld Transmitters with PG58 Cardioid Mics, and T88 TwinPro Dual Channel (non diversity) Receiver ........393.50

TwinPro Presenter—
T188/93: Two WL93 micro-miniature lavalier mics, two T1 Bodypack Transmitters with 4-pin mini connector and T88 TwinPro Dual Channel (non diversity) Receiver ............393.50
T188/85: Two WL185 professional cardioid lavalier mics, two T1 Bodypack Transmitters with 4-pin mini connector and T88 TwinPro Dual Channel (non diversity) Receiver ............393.50

TwinPro Vocal Artist/Presenter—
T1288/93: T2 Handheld Transmitter with PG58 Cardioid Mic, WL93 micro-miniature lavalier mic, T1 Bodypack Transmitter with 4-pin mini connector and T88 TwinPro Dual Channel (non diversity) Receiver ........................................393.50
T1288/85: T2 Handheld Transmitter with PG58 Cardioid Mic, WL185 professional cardioid lavalier mic, T1 Bodypack Transmitter with 4-pin mini connector and T88 TwinPro Dual Channel (non diversity) Receiver ........................................393.50
**SHURE**

**PERFORMANCE GEAR WIRELESS**

**UHF Diversity Wireless Mic Systems**

Whether for vocal, speech, or instrument performance, Shure's Performance Gear Wireless has the right system for you. Offered in UHF bandwidths, they give you the reliability and flexibility you need, at a price you can afford. Pre-packaged specifically for vocalists, guitarists, presenters and instrumentalists, all Performance Gear Wireless systems feature:

- **UT4A Receiver**
  - Exclusive MARCAD (M Aximum Ratio Combining Audio Diversity) circuitry continuously processes the RF signal from each antenna and combines them to produce one signal of optimum quality.
  - Unbalanced 1/4˝ phone and balanced XLR connectors for simultaneous output to different devices. XLR output is selectable between mic and line level.
  - Multiple receivers can be stacked or rack-mounted, with two receivers fitting into the optional URT rack mount tray.
  - 3˝ rubberized antennas offer greater durability than telescoping antennas.
  - Yellow diversity A/B lights glow when RF (radio frequency) signals are received from the UT1 or UT2 transmitter on one or both of the antennas.
  - Audio peak indicator flashes red when the input signal approaches clipping levels.
  - Volume control of the receiver output.
  - Noise squelch circuit analyzes signal quality as opposed to signal strength, allowing the circuit to discriminate between noise and desired signal. This reduces noise burst due to environmental RF noise.
  - Retainer secures the AC power cable to the receiver.

- **UT1 and UT2 Transmitters Both Feature**
  - Transmitters work at a distance of up to 300’ from the receiver.
  - Red light warns you that there is less than one hour of battery life left.
  - Power On/Off switch is recessed to prevent it from being accidentally turned off.
  - 9-volt battery operation, a green light indicates that they are on. Runs up to 18 hours on a single battery.
  - On/Mute switch prevents unwanted sounds from being picked up without turning the transmitter off.

- **UT1 Body-Pack Transmitter**
  - Audio gain control accommodates various input signal strengths. A small screwdriver is supplied to make adjustments.
  - Tini Q-G connector allows connection to a variety of lavalier and headset microphones and cables.
  - Flexible wire antenna is permanently attached to the bottom of the UT1 body-pack transmitter.

- **UT2 Handheld Transmitter**
  - Audio gain control hidden in battery compartment, allows sound levels to be matched with the transmitter for better performance.

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
The Vocal Artist - Offers wireless freedom combined with Shure's true-to-life sound and reliability in a single, economical package. Choice of either a T4A or UT4A diversity receiver with power supply, and a T2 Handheld Transmitter with an SM58, PG58 or BETA 58 mic head. Each also includes a swivel adapter, carrying case and 9v battery.

UT24/58: Includes UT2 Handheld Transmitter with SM58 Cardioid Microphone and a UT4A Diversity Receiver

UT24/PG58: Includes UT2 Handheld Transmitter with PG58 Cardioid Microphone and a UT4A Diversity Receiver

UT24/BETA58: Includes UT2 Handheld Transmitter with a BETA 58 Microphone and a UT4A Diversity Receiver

The Headset - As comfortable as it is durable, The Headset features a lightweight, fully adjustable wire frame that's tough enough to stand up to continuous highly active use. Unique elastic band keeps it in place from start to finish. Ideal for aerobic use, DJing, or for singing musicians. Aerobics instructors and DJs will appreciate the freedom, comfort and quality of the Headset system. The WH20 dynamic microphone features a fully adjustable, lightweight frame. The gooseneck microphone can be quickly repositioned for optimal sound clarity or moved aside during breaks.

UT14/20: Includes WH20TQG Cardioid Dynamic headset microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

The Vocal Artist Headset - Combines Shure's true-to-life sound and reliability with the comfortable WH30 headset that provides high-quality voice pickup for active vocalists. Headset includes adjustable wireframe, elastic headband, microphone cartridge and windscren, microphone boom, isolation shock mount, boom hinge and cable.

UT14/30: Includes WH30 Cardioid Condenser headset microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

The Presenter - From stage to podium to pulpit, the Presenter delivers crisp, clean sound and outstanding reliability for speech and theater applications. Choose from omni, cardioid & supercardioid lavalier mics-each providing the big-time performance you need and the freedom to go where you want. Features rugged design and maintenance-free operation.

UT14/93: Includes WL93 micro-miniature lavalier microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

UT14/84: Includes WL184 supercardioid lavalier microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

UT14/85: Includes WL185 cardioid lavalier microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

The Instrumentalist — Versatile solution for high volume wind, brass or percussion. Features the high SPL WB98H/C mini-cardioid condenser microphone with integrated gooseneck and clip-on clamp for secure fit and positioning.

UT14/98H: Includes WB98H/C Gooseneck Clip-On Instrument Mic, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

The Guitarist – Designed exclusively for guitars, The Guitarist delivers the crystal clear highs and deep, resonant lows that you'd expect from a wired set up. Shure's rugged Surface Mount Technology and input gain adjustment allow for the best S/N ratio with the widest variety of guitars and playing styles.

UT14: Includes WA303 Guitar Cable for connection to UT1, WA302 Instrument Cable for connecting UT4A to Guitar Amplifier, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver

Vocal Artist/Presenter - Includes the legendary SM58 handheld transmitter plus the WL185 lavalier and body-pack transmitter. This package is for people who want the flexibility and versatility of two microphone options.

UT124/85: Includes: SM58 Handheld Mic, WL185 cardioid lavalier microphone, UT1 Bodypack Transmitter, and a UT4A Diversity Receiver
VHF Wireless Mic Systems

Widely used in installed sound and live music situations, Shure's LX wireless systems deliver top-notch performance and VHF reliability at a moderate price. With a full line of professional handheld, lavalier, instrument and headworn microphone options, as well as instrument cable, and single-antenna or diversity receivers, a wireless system can be configured for almost any application. Plus, guitar players who demand the highest degree of sound quality and reliability will really appreciate the low noise and uncolored sound of an LX Wireless System.

LX1 Beltpack Transmitter

- Low-profile, highly durable LX1 body-pack transmitter features a wide dynamic range and unsurpassed reliability, plus convenience features like vertical and horizontal actuated toggle mute switches, which are easily identified by touch.
- Belt clip has a wider contact surface for a better grip, and firmly holds thinner, more slippery materials. It can be removed or inverted for special positioning.

Both Transmitters Feature

- 18-20 hour battery life
- Power and mute switch
- Adjustable audio gain control
- Both transmitters include a 3-segment LED that indicates both “power on" and the amount of battery life remaining.

LX2 Handheld Transmitter

- Beneath the sleek, elegant exterior of the LX2 handheld transmitter lie the electronics and engineering that deliver the sound that’s spelled success for so many users.
- Battery mounting provides easy access and outstanding transmitter balance.
- The unbreakable WA555 grip/switch cover accessory, supplied with all LX2 hand-held mic transmitters, prevents accidental movement of the power and mute switches and provides a “grip” feel.

LX3 and LX4 Receivers

- Half-rack wide, the all-metal LX3 and LX4 receivers are supplied with both single and dual rack-mount hardware. An optional WA503 accessory kit lets you front-mount antennas.
- Noise Squelch control located on the front panel for easy access, analyzes signal quality instead of signal strength. This virtually eliminates the possibility of annoying noise bursts coming through your receiver.
- A five-segment audio meter helps to optimize transmitter gain setting and lets you monitor audio level during operation.
- UHF-type connectors provide connection to the supplied 1/4 -wave antennas or to coax cable used with remote antennas. They also provide connection to the optional WA421 remote antenna cable kit used with optional WA380 and WA490 1/2 -wave antennas.

LX4 Only

- Instead of a single RF meter, the LX4 has two 5-segment antenna meters. The dual meters indicate received signal strength at each antenna, and make it easier to identify and troubleshoot RF "dead spots."
- MARCADC (M A ximum R atio C ombining Audio Diversity) circuitry constantly monitors signals from both receiver sections and combines them into a single output signal. Provides improved reception and freedom from dropouts.

LX88-II

The LX88-II is a VHF wireless mic system that provides two channels in one single-rack sized receiver—perfect for DJ or karaoke applications.

- Supplied with anti-roll device for handheld transmitters
- Metal chassis contains two single antenna (non-diversity) receiver sections
- LED indicators: two RF (one per channel), two audio peak (one per channel), power-on
- Two balanced XLR connectors and three unbalanced 1/4” connectors
- Detachable racks ears with holes for optional front-mount antenna connector kit
- Two rear-mounted, detachable antennas with UHF connectors
Headworn Systems

LX14/16: LX1 bodypack transmitter with WCM16 headset mic and LX4 receiver
LX14/20: LX1 bodypack transmitter with WH20TQG headset mic and LX4 receiver

Instrument System

The most popular miniature instrument mic in the world, the cardioid WM98 wireless system is ideal for horns and other acoustic instruments. Included the A98KCS horn clamp which provides mounting capability for most brass and woodwind instruments.
LX14/98: LX1 bodypack with WM98H/C clip-on instrument mic and LX4 receiver

Guitar Systems

The LX Wireless Guitar System features crisp, clean sound and transmitter batteries that can survive several gigs. And Shure redesigned the belt clip to attach more securely to the guitar strap so guitarists can “lose their leashes” but keep all of their tone for hours longer than before.
LX13: LX1 bodypack transmitter with WA302 Guitar/Bass Cable and LX3 receiver
LX14: LX1 bodypack transmitter with WA302 Guitar/Bass Cable and LX4 receiver

Handheld Systems

Available in four versions: with the world standard SM58, the SM87 condenser mic, or the high-performance, premium-quality Beta 58 dynamic and Beta 87 condenser, which are the mics of choice for concert sound. All heads are instantly interchangeable.
LX13/58: With SW58 and LX3 receiver
LX14/58: With SM58 and LX4 receiver
LX13/87: With SM87 and LX3 receiver
LX14/87: With SM87 and LX4 receiver
LX13/93: WL93 lavalier mic and LX3 receiver
LX14/93: WL93 lavalier mic and LX4 receiver
LX13/83: WL183 lavalier mic and LX3 receiver
LX14/83: WL183 lavalier mic and LX4 receiver
LX13/93: WL93 lavalier mic and LX4 receiver
LX14/93: WL93 lavalier mic and LX4 receiver
LX13/83: WL183 lavalier mic and LX3 receiver
LX14/83: WL183 lavalier mic and LX4 receiver

LX Lavalier Wireless Mic Systems (with LX1 Bodypack Transmitter)

LX13/93: WL93 lavalier mic and LX3 receiver
LX14/93: WL93 lavalier mic and LX4 receiver
LX13/83: WL183 lavalier mic and LX3 receiver
LX14/83: WL183 lavalier mic and LX4 receiver
LX13/84: WL184 lavalier mic and LX3 receiver
LX14/84: WL184 lavalier mic and LX4 receiver

WA380 1/2 Wave Antenna Kit

The WA380 is a multi-section, telescoping 1/2 wave antenna that provides up to 3 dB more gain than the supplied quarter-wave antennas. Kit includes wall mounting bracket and bulkhead adapter. LX4 requires two WA380 antennas..........................53.95

WA490 1/2 Wave Cable Antenna Kit

The WA490 provides up to 3 dB more gain than the supplied quarter-wave antennas. A low-cost alternative to telescoping antennas, the WA490 offers unobtrusive wall- or ceiling-mounting in or around the the operating area.................................33.50

WA405 Antenna/Power Distribution System for LX3/LX4

The WA405 combines an amplified antenna distribution system and DC power distribution system in one compact unit. The WA405 uses two antennas, splitting the wireless transmitter signals to feed as many as four receivers. Signal amplification compensates for insertion loss. In addition, four 12v DC outputs provide a combined current of up to 2 amps to power four receivers, eliminating the need for external power supplies. The built-in, high-efficiency switching power supply accepts 120v AC power .........................434.95

WA470 Passive Antenna Splitter/Combiner

When used as an antenna splitter, the WA470 allows two LX4 or four LX3 receivers to receive signals from only two antennas. This minimizes the number of antennas required and helps prevent interference problems in installations with multiple receivers. When used as an antenna combiner, the WA470 routes signals from four antennas to the inputs of a single VHF diversity receiver, while retaining true diversity performance. This is useful in applications where one wireless system must provide coverage in two areas ..........79.50

WA421: 20’ antenna cable with connectors for the WA380 or WA490.........................19.95
WA503: Front mount antenna kit........29.95

LX3/LX4 OPTIONAL ACCESSORIES

LX88 Dual Systems

LX288/58: Two LX2/58 Handheld Transmitters with LX88-II Dual Channel Receiver and PS20 Power Supply, two swivel mic adapters, rack mounting kit, Anti-Roll Devices
LX1288/58: LX1288/58 Handheld Transmitter, LX1 Bodypack Transmitter (no mic) with LX88-II Dual Channel Receiver and PS20 Power Supply, one swivel mic adapter, rack mounting kit, Anti-Roll Device
Professional UHF Wireless Systems

Affordable systems designed for both live performance and systems integration applications, the ULX Standard and ULX Professional UHF Wireless Systems feature Shure’s world-renowned audio and proprietary Automatic Frequency Selection circuitry, an innovation which simplifies system set-up by automatically scanning a user’s environment for open frequencies. Over 30 system configurations available with a variety of handheld, headworn, instrument, and lavalier microphone options.

The ULX Standard is designed for regional and touring performers who have multiple wireless system users, want quick setups between gigs, and want the security of less signal interference and dropouts.

The ULX Professional with advanced controls and displays is designed for professional sound installers who require programmable and lockable front panel settings, rely on advanced LCDs, and need a durable, metal-chassis, rack-mounted system.

ULX1 Bodypack and ULX2 Handheld Transmitters

- Backlit LCD display indicates group, channel setting and battery power level.
- They run for up to 8 hrs. on a single 9v battery
- 300’ operating range (normal conditions)
- -20dB pad switch lets you select 0dB for Voice/Low Output; 20dB for High Output
- Adjustable Audio Gain Control
- Control lockout

Both frequency-agile receivers operate between 554-590 MHz (J1) and 662-6987 MHz (M1) and offer up to 1440 selectable frequencies organized into pre-programmed compatible groups. This enables you to quickly set-up and operate up to 40 compatible systems simultaneously (area dependent) when both frequency bands (J1 and M1) are utilized. ULX receivers also include Predictive Diversity circuitry which virtually eliminates RF drop-out, as well as an easy-to-read, multi-function LCD display for monitoring group/channel selection, battery level, and TV channel.

ULX/S4 Standard and ULX/P4 Professional Diversity Receivers

- Up to 20 compatible systems can be used simultaneously (depending on location)
- LED indicators confirm RF reception and level, as as transmitter audio level
- Detachable 1/4-wave antennas allows front mount capability
- Durably constructed 1/2-rack plastic chassis

ULX/P4 Step-up Features:

- Lockout settings (frequency and volume) protect from accidental changes
- Easy to use LCD interface and advanced front panel controls
- Removable 1/2-wave antennas allow optimum antenna placement for enhanced signal reception
- Ruggedly constructed 1/2-rack metal chassis with supplied rackmount hardware
ULXS14/30: WH30TQG Cardioid Condenser Headworn Mic and ULX/S
ULXP14/30: With WH30TQG Cardioid Condenser Headworn Mic

ULXS24/BETA87A: Beta 87A Supercardioid Condenser Mic/Transmitter
ULXS24/BETA87C: Beta 87C Supercardioid Condenser Mic/Transmitter
ULXS24/87: SM87 Supercardioid Dynamic Mic/Transmitter

WIRELESS MICs

OPTIONAL WIDE BAND ACCESSORIES

Optional wide band accessories include the UA844 Antenna/Power Distribution Amplifier, which enables the use of up to four ULX receivers with just one pair of antennas, the UA830WB Line Amplifier for boosting the RF signal from remote mounted antennas, and the UA870WB Powered Directional Antenna.

UA506 Rackmount Kit For one ULX receiver ................................................................. 29.95
UA507 Rackmount Kit For two ULX receivers .......................................................... 29.95
UA600 Front Mount Antenna Cable Kit ..................................................................... 39.95
WA610 Universal Hard Carrying Case .................................................................... 78.95
UA505 Remote Antenna Mounting Bracket Kit: Lets you mount a 1/2 wave receiver antenna away from the receiver or the equipment rack .................................................... 27.50

UA830 Active Remote Antenna Kit
A low-noise, in-line antenna amplifier, the UA830 is designed for remote-mounting antennas to a ULX receiver in a large installation, effectively shortening the distance from the transmitters. When an antenna is remote-mounted, the UA830 amplifies the received radio signals to compensate for insertion loss in the coax cable. A gain selector switch adjusts for longer lengths of coaxial cable (3dB for under 25’, 10dB for over 25’).
◆ Mountable on supplied desk-/wall-mount or on a microphone stand
◆ Isolates antennas from cable interactions

UA844 Wideband UHF Active Antenna and Power Distribution System
Splits a pair of antennas to multiple receivers allowing the expansion of wireless mic systems. It also amplifies RF signals to compensate for insertion loss that results from splitting signal power. A single UA844 system can support up to 4 wireless receivers. Multiple UA844 systems can be used in a tiered configuration until the maximum number of compatible frequencies is reached................................................................. 341.95

UA870WB UHF Wideband Active Directional Antenna
The UA870WB is an active UHF wireless directional antenna featuring a log periodic dipole array. When compared to an omnidirectional 1/2-wave antenna, the UA870WB’s cardioid pattern offers enhanced reception of the desired coverage area and greater rejection of RF signals outside the coverage area. On-board amplifier offers 3 or 10 dB gain to compensate for cable signal loss. 12v DC power for the antenna amp is provided by a Receiver or UA844 System. The UA870WB can be mounted on a mic stand, suspended from the ceiling, or mounted to a wall using the integrated swivel adapter bracket. It is also weather resistant for use outdoors. For best diversity performance, use two UA870WB antennas ..................................................... 339.95
SHURE

UC SERIES

100-Channel UHF Diversity Wireless Mic System

The Shure UC series gives you more of what you want most in a UHF wireless microphone system. Its flexibility and affordable price makes it the ideal choice for a wide range of applications including houses of worship, trade shows, schools, businesses and club installations. And while each UC system features more than 100 fully selectable frequencies and the ability to operate up to 16 systems simultaneously, its ease of operation eliminates the extended learning curve you'd expect from such a high-performance system.

100 user-selectable frequencies combined with Shure's tried and true MARCAD Diversity technology creates an exceptionally reliable wireless system, free of interference and drop outs— even in the most congested environments. The UC Series also incorporates microprocessor-controlled, Phase Locked Loop (PLL) circuitry for a clear, steady signal. It offers two UHF frequency ranges (692-716 and 782-806 MHz), 500’ minimum working range, and 45Hz to 15kHz frequency response.

UC4 Receiver

- 1/2 rack space design, includes hardware for single and dual rack mounting
- Tone Key Squelch Circuitry prevents unwanted noise from entering including the "pop" noise that occurs when the transmitter is turned on or off
- Noise squelch circuitry analyzes signal quality rather than signal strength, eliminating possible noise bursts
- Dual RF meters and 5-segment antenna LEDs indicate received signal strength at each antenna, making it easy to identify "dead spots" in the performing area. Also has a LED low battery transmitter warning
- Incorporates a two band EQ with 6dB cut/boost to match the sound of wired and wireless products in an installation. Helps compensate for off-axis lavalier mics or to adjust the sibilance of vocal microphones
- Adjustable high pass filter reduces low-frequency signals
- Group/Channel Display indicates the current group and channel settings. Facilitates easy set-up of multiple channel systems
- Audio meter lets you monitor levels to optimize the transmitter gain setting
- BNC connectors provide connection to the supplied antennas or to the coaxial cable used with a distribution amplifier
- Logic In/Out provides logic interface with external devices such as the Shure SCM 810 automatic mixer and AM X or Crestron compatible control systems
- Unbalanced 1/4” and balanced XLR output connectors with mic/line slide switch

UC1 Body-Pack Transmitter

The UC-1 body-pack has a slim, low-profile design, and functions with the full line of Shure lavalier and instrument microphones as well as guitar cables. Supplied belt clip allows the transmitter to be worn on a belt, waistband, or guitar strap. Belt clip can be rotated 180°.

- Rugged plastic case design
- TA4F (4-pin mini connector) provides connection with a variety of lavalier, headworn and instrument mics or cables. Transmitter with LEMO 4-pin input connector (UC1L) is also available.
- Remote audio mute connector allows external audio and/or RF muting capability (requires the UA-101 Remote Mute Switch)
- Two position attenuator switch (0 for normal applications including voice and low output instruments, and –20dB for high output instruments such as electric guitars.)

UC1 and UC2 Transmitters Feature

- Combined power On/Off and mute switch saves time and hassle
- Eight hour battery life with single 9v battery
- Three-segment battery fuel gauge
- Audio gain control to accommodate various sound sources (singing or speaking)

UC2 Handheld Transmitter

- Grille protects the microphone cartridge and helps reduce breath sounds and wind noise
- Available with choice of mic capsules from some of Shure's most popular microphones.

UC1/493: WL93 Omnidirectional Micro Lavalier Mic
UC1/498H: WB98H/C Clip-on condenser instrument mic w/shock mount

OPTIONAL UC SERIES ACCESSORIES

Although UC Wireless systems come with everything you need to operate them, you can enhance the system to new levels with a host of optional accessories:

UA-101 Remote Mute Switch:
The Shure UA101 Remote Mute Switch lets you remotely mute the audio and/or RF from the UC1 bodypack transmitter during presentations or performances. Ideal for vocalists, lecturers, clergy, referees — anyone who needs easy, instant ability to mute the bodypack transmitter ................................................................. 47.50

UA-500 Remote Mount Antenna Kit: For mounting one 1/2 wave antenna .................. 48.50
UA-600 Front Mount Antenna Kit: Mounts antennas for the receiver ......................... 39.95

UA-220 Passive Antenna Splitter/Combiner

The UA220 includes two adapters that can be used as one-input, two-output or two-input, one-output passive antenna splitters/combiners for UC Wireless systems. The UA220 Kit lets you split an incoming signal into two outgoing signals or combine two incoming signals into one signal. Each kit includes two UA220 Splitter/Combiners, four coaxial cables, and attaching hardware.
The UA220 is designed for use with Shure's UA400 1/4 wave UHF antennas, UA820A 1/2 wave antennas, and UA802/UA825/850 50 ohm low loss antenna cable ................................................................. 119.95

UA-845 Antenna Power/Distributor

The UA845 is an amplified, UHF Antenna Distribution System designed to expand a wireless microphone system by splitting one pair of antennas to multiple UC4 wireless receivers. It also amplifies RF signals to compensate for insertion loss due to splitting signal power to multiple output connectors. Each UA845 allows up to four receivers to use the same antennas. CASCADE connectors allows connections to a fifth receiver or a second UA845. There are also power connectors for powering UC Wireless systems. The UA845 comes with hardware to front-mount the antennas, if desired.
• The UA845 maintains clean signals with low noise and minimal distortion
• Whenever a signal is split to multiple output ports, there is a loss in signal strength. The UA845 amplifies signals to compensate, ensuring a strong signal to the receivers.

The UA845 includes two adapters that can be used as one-input, two-output or two-input, one-output passive antenna splitters/combiners for UC Wireless systems. The UA220 Kit lets you split an incoming signal into two outgoing signals or combine two incoming signals into one signal. Each kit includes two UA220 Splitter/Combiners, four coaxial cables, and attaching hardware.
The UA220 is designed for use with Shure's UA400 1/4 wave UHF antennas, UA820A 1/2 wave antennas, and UA802/UA825/850 50 ohm low loss antenna cable ................................................................. 119.95

UA-845 Antenna Power/Distributor

Premium UHF Wireless Systems

Engineered for the most demanding touring environments and installations, Shure's UHF Wireless Series provides the ultimate in wireless technology, with exclusive characteristics, unique flexibility, reliability and an affordable price. Offers up to 1200 fully selectable, user programmable frequencies per frequency band. Individual frequency bands deliver up to 24 compatible systems per band. Using multiple frequency bands, over 75 compatible systems can be used simultaneously. The ideal solution for a wide range of high-end applications—from touring and installed sound to theater to broadcast and video production. But system versatility goes beyond multiple systems, interchangeable components, and a choice of single or dual channel diversity receivers. The UHF Series also offers computer control and monitoring of either single or multiple receivers. Using the optional UA111 Computer Interface Adapter gives you quick setup and monitoring of an individual receiver. Or monitor and control multiple receivers simultaneously from a remote PC with the UA888 networking interface system.

**FEATURES**

**U1 Body-Pack Transmitter**

The U1 body-pack is a compact transmitter that offers all the benefits of Shure handheld transmitters. The U1 functions with the full range of Shure lavalier, headworn, and instrument microphones, as well as guitar cables.

- Power-on LED
- 1/4- wave, efficient whip antenna
- TA4F (4-pin mini connector) or optional Lemo connector (U1L Body-Pack)

**U1 and U2 Transmitters Both Feature**

- Digitally-controlled programmable LCD display
- Combined power On/Off and mute switch
- Five-segment battery fuel gauge
- Power and frequency "lock" feature
- Adjustable audio gain control
- Durable all-metal housing
- 12 hours battery life

**U2 Handheld Transmitter**

U2 handheld transmitters are the top choice of live sound and install professionals worldwide with state-of-the-art UHF technology, five microphone options, and accessories included.

- Grille protects the mic cartridge and helps reduce breath sounds and wind noise
- 1/4-wave, efficient helical antenna
Unparalleled Performance

- Choose from an assortment of legendary handheld mics, including the Beta 87A, Beta 87C and Beta 58A, known worldwide as the mics of choice for live concert sound. Lavalier and headworn designs are also available for a variety of applications.
- Exclusive MARCAD diversity circuitry improves reception and eliminates dropouts.
- Tone Key Squelch keeps unwanted signals and noise from entering the system.
- Patented Power Defeat protection lets you “lock” transmitter power on. System controls prevent accidental transmitter and receiver program changes.
- Reliable and easy to use; batteries last a full 12 hours.
- Receiver’s rugged front plate resists abuse encountered in transport.

Unprecedented Compatibility

- Four operating bands are available, letting you tune across 108 MHz of bandwidth.
- 192 selectable frequencies in 125 kHz increments in UA and UB frequency bands.
- 1200 selectable frequencies in 25 kHz increments in M4 and J4 frequencies allow you to “squeeze out” additional channels.
- Pre-programmed compatible frequency groups assure an optimal number of simultaneous channels in any location. Up to 20 (UA and UB) or 24 channels per frequency band (J4 and M4) can be achieved. With all four operating bands in use, up to 78 compatible channels can be achieved.

Unbelievably Informative

- No other UHF system gives you more ways to monitor vital system functions.
  - Digitally-controlled, programmable transmitter and receiver LCDs indicate group/channel setting.
  - Receiver display shows frequency, user name, squelch setting and menu “lock out” function. LED indicators provide RF and audio level monitoring.
  - Five-segment battery power display on the transmitter and three-segment remote battery indicator on the receiver show how much transmitter battery life remains.

Programmable, multi-function LCD display to set and view:

- Actual frequency in MHz
- Group/channel setting
- Performer name
- Squelch setting
- Menu lock-out status
- UHF TV channel
- Transmitter battery fuel gauge

Optional Accessories

- UA820A: 1/2 Wave Dipole Receiver Antenna (774-862 MHz)
- UA820B: 1/2 Wave Dipole Receiver Antenna (692-746 MHz)
- UA400: 1/4 Wave Dipole Receiver Antenna (774-862 MHz)
- UA400B: 1/4 Wave Dipole Receiver Antenna (620-722 MHz)
- UA820C: 1/2 Wave Dipole Receiver Antenna (662-698 MHz)
- UA820D: 1/2 Wave Dipole Receiver Antenna (554-590 MHz)
- UA870A: Active Directional Antenna (774-863 MHz)
- UA870UB: Active Directional Antenna (692-716 MHz)
- UA870WB: Wideband UHF Active Directional Antenna (500-900 MHz)
- UA500: Remote Mount Antenna Kit
- UA600: Front Mount Antenna Kit
- UA830: In-Line Antenna Amplifier
- UA845: Antenna/Power Distribution System
Networking Interface System

Now you can have complete knowledge of the up-to-the-second status of your multi-channel Shure UHF wireless microphone system—and the power that goes with it—with the UA888 Networking Interface System. The UA888 is an affordable computer interface accessory that allows you to monitor and control the functions of up to 32 dual channel receivers from a remote site using a PC. Using the supplied ShureLink cable, monitoring of up to 64 channels can be achieved by connecting multiple UA888 units. Ideal for installed sound applications requiring multiple systems such as theater, houses of worship, and for touring sound and audio/video rental.

- Includes rack-mountable interface module, Windows-based software, and connecting cables for using with the U4S or U4D receivers.
- Full monitoring and control of all vital system parameters with complete real-time information. Displays all functions on a single computer screen.
- Sophisticated troubleshooting capabilities include a “walk-around” RF plotter that measures RF signal strength and identifies “dead” spots in the performing area, and a highly accurate frequency scanner that helps minimize RF interference by scanning the airwaves and identifying present frequencies.
- Scene setup and implementation, saves and instantly recalls multiple receiver settings. A password option prevents unauthorized changes to settings.

The UA888 continually monitors an array of functions, including RF level, audio level, A/B antenna diversity and transmitter battery level. What’s more, the system provides monitoring and control capability of group/channel selection, frequency in MHz, squelch, user name and lock/unlock status.

UA111 Computer Interface Adapter

Using the same software as the UA888, the UA111 is a computer interface that allows you to monitor and control one U4D or U4S receiver (monitors and controls up to two UHF wireless microphones when used with the U4D dual receiver). Use in touring sound, installed sound, and audio/video rental applications. Has all the software features of the UA888 Networking System, including:

- UHF frequency scanner
- Walk around RF plotter
- Password protection
- Scene setup
- Squelch control
- Indicators for transmitter battery level, frequency in MHz, group/channel, audio level, A/B antenna diversity, RF levels

SONY WIRELESS MICROPHONES

UHF Synthesized Wireless Microphone System

Sony's UHF Synthesized Wireless Microphone System, consisting of handheld and bodypack transmitters and 7 different receivers, is widely recognized as the outstanding wireless mic system for professional applications. Operating in the 800 MHz UHF band range and equipped with a PLL (Phase Locked Loop) system, they provide up to 94 channels, space diversity reception and LCD indicators. Reliable and sophisticated circuit technology assure low noise, wide dynamic range, and extremely stable signal transmission and reception. An affordable system with superb audio quality and easy handling, the Sony UHF Synthesized system is the ultimate in convenience for applications at broadcasting stations, film production facilities, and in ENG/EFP work.

FEATURES

PLL Synthesized System
A PLL (Phase Locked Loop) synthesized system controls the transmission and reception frequencies of the system. Employed both in transmitters and receivers, these PLL controlled systems provide highly stable, selectable frequencies to be generated in increments of 125 kHz. Users may choose from 94 frequencies on all A-series models and from 188 frequencies on B-series models.

Space Diversity Reception System
A space diversity reception system is used to eliminate noise and signal dropouts, thus ensuring stable reception. Dual antenna inputs and reception circuits incorporated in the diversity system receive signals over two different paths and select the stronger signal as the output. This switching operation is undetectable on the audio output of the receivers. An additional benefit of this system is stable reception and cleaner audio when working at extended operating distances.

Pre-programmed Frequency Groups
Wireless channels are conveniently preset in the CPU of each tuner for use in a multi-channel operation at one location. These are optimum combinations of calculated and practically tested intermodulation-free frequencies. These frequencies are arranged in groups, with each group pre-programmed to allow inter-modulation free operation. The use of preset channels makes it easy to choose the correct frequencies for multi-channel operation, and unlike random selection of channels, prevents interference such as beat noise in multi-channel operation and guarantees better unit isolation.

Advanced Filtering
The Sony wireless units all employ Helical, Ceramic and/or SAW (Surface Acoustic Wave) filters as appropriate. This offers stable reception and excellent audio quality, and also enables the unique miniaturization seen in most of the Sony products.

Wide Dynamic Range and Low Noise
A compander (compressor/expander) system is employed for optimum transmission over a wide dynamic range with low noise and interference. The time constants for attack and release times are carefully chosen in the various transmitters to match the application, providing minimized noise levels and smooth and excellent audio quality.

Informative, Easy-to-Read LCD
Most receivers and transmitters feature a built-in, easy-to-read LCD, which provides extensive status information. All receivers will display the diversity RF and AF signal strength, frequency and channel groups chosen, and battery status of the transmitter. Most transmitters do in essence have the same information available in the display; such as AF input level, and RF output, battery status, current channel number, selected frequency, input attenuation setting, and accumulated battery operating time.

www.bhphotovideo.com
Tone Squelch Circuitry
To ensure accurate audio reproduction, the UHF Synthesized System is equipped with tone squelch circuitry control. Here’s how it works: The wireless microphone transmitters transmit a 32 kHz tone signal along with the program audio signal. In the receivers, a squelch circuit is present, and the program signal is only output when the tone signal has been correctly received. This squelch feature is designed to eliminate undesired signals and noise from other equipment and eliminates RF noise and popping when the transmitter is powered off.

Consistent RF Power Output
DC-DC convert circuit built into the power supply section of microphones/transmitters provides consistent output power over the life of the batteries.

Remote Battery Alarm
For added assurance of continued operation, you can monitor the battery reserves of handheld, body pack and plug-on transmitters. Remaining battery life is indicated on both the transmitter and receiver, with an additional indication approximately one hour before the battery goes dead. On the receiver, the battery indicator on the LCD and LED displays also flash, helping to avoid the chance of battery failure at a critical moment.

Memory Back-Up
Each unit has a convenient memory back-up capability. When the Power switch is turned on, the previous channel setting is automatically recalled and displayed.

System Versatility
In recent years, Sony has enhanced its line-up to fulfill the ever-increasing needs for wireless operations. Offering a broad range of choices, this family presents a solution to virtually any wireless mic application from the very simple to the most sophisticated.

Such applications include ENG and EFP location, conference and entertainment, TV studio production, theater, and live performance to name just a few. A variety of options are also available so the systems can be made to suit different operational needs.
SONY

UHF SYNTHESIZED WIRELESS BODY-PACK TRANSMITTERS

WRT-805B

Although a low-cost transmitter, the lightweight WRT-805B offers 188 PLL-synthesized channels and a host of high-end features.

- Compact, lightweight, tapered bodypack
- 10mW RF output power
- Easy-to-read LCD shows channel number, attenuator, RF and AF condition, battery status and accumulated operating time
- \( \frac{3}{16} \) 3-pole locking mini microphone jack
- Switchable -40/-60 dB input level and phase switch for guitar and lav mic

- Up to 6 hours of continuous operation with a single AA battery
- Low-battery alarm transmitted to compatible receivers

WRT-822B

The WRT-822B provides stable RF performance and high audio quality in a sturdy yet lightweight ergonomic package. It is suitable for use with any Sony UHF receiver and all Sony lavalier microphones, making it ideal for ENG, broadcast or theatre work.

- Compact, lightweight, magnesium alloy body - only \( 2\frac{3}{8} \times 4\frac{1}{8} \times \frac{1}{18} \)
- 20mW RF output power
- Easy-to-read LCD shows channel number, attenuator, RF and AF condition, battery status and accumulated operating time
- Audio attenuation setting from 0 dB to -21 dB in 3 dB steps

- Eight hours continuous operation with 2 AA batteries
- Low-battery alarm transmitted to compatible receivers
- Includes low profile 1/4 wave length wire antenna and leather case

WRT-8B

Compact and lightweight, the WRT-8B Body-Pack transmitter has all the essential qualities for use in fast-moving TV and theater musical productions. Inside its tough, die-cast magnesium body is a highly stable, low noise transmitter providing superb audio quality. It operates for up to 13 hours on two AA-batteries, and features switchable AF input (Mic/Line) and RF output levels (10mW/50mW), variable input attenuator, and easy-to-read indicators. As well as theater and studio use, the WRT-8B has the functionality and rugged construction that makes it ideal for the demanding environments of news gathering, documentary production and sports events.

- Rugged constructed of die-cast magnesium
- Accepts professional lavalier microphones fitted with an SMC9-4P connector, such as the Sony ECM-77BC, ECM-44BC, ECM-166BC lavalier microphones
- Switchable Mic/Line input level and variable attenuator
- Easy-to-read LCD indicates operating channel/frequency, AF input and RF output levels, transmitter battery status and accumulated operating time.
- A red LED indicator also flashes when the AF level exceeds a designated level.
- Selectable output levels: 10mW for multi-channel operations such as in theater and studio productions; 50mW for the long-distance transmissions typically needed for sports and news coverage.

- Runs for up to 13 hour on two AA-batteries at 10mW, up to 6 hours at 50mW output
- Transmits a 32 kHz tone signal along with the program audio signal. This tone is recognized by the squelch circuit in Sony receivers so only the program signal is output when this tone signal is received. This eliminates the output of undesired signals and noise from other equipment, as well as RF noise and popping when the transmitter is powered on or off.
- Easily removable antenna with SMA connector
- As well as displaying battery status via the LCD indicator, the WRT-8B transmits a “low battery warning” which can be monitored by most Sony receivers. In these receivers, a red LED starts flashing one hour before the transmitter’s battery will be exhausted.

ABOUT B&H

SONY

WIRELESS MICS

ECM-44
Omni-Directional Microphone
- Superior sound quality
- Frequency response: 40 Hz to 15 kHz
- Sensitivity: -40 dB SPL (10 mV)*
- Microphone head: ⅜” x ⅜”; 0.07 oz.
- Supplied with holder clip (single/horizontal type), Urethane wind screen, case

ECM-44BC For WRT-822B & WRT-8B ........104.95
ECM-44BMP For use with WRT-805B .......99.95

ECM-66
Uni-Directional Microphone
- Designed for instrumental applications
- Frequency response: 70 Hz to 14 kHz
- Sensitivity: -36.5 dB (15 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.3 oz.
- Includes holder clip, Urethane wind screen

ECM-66BC For WRT-822B & WRT-8B ....237.95

ECM-77
High-Performance, Ultra-Miniature, Omni-Directional Microphone
- Frequency response: 40 Hz to 20 kHz
- Sensitivity: -39.0 dB (11.2 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.05 oz.
- Supplied with 2 holder clips (single/horizontal type and single/vertical type, Metal-mesh wind screen, microphone case

ECM-77BC For WRT-822B & WRT-8B....253.95
ECM-77BMP For use with WRT-805B .......241.95

ECM-55
Uni-Directional Microphone
- Frequency response tailored for enhanced presence and improved voice quality
- Frequency response: 30 Hz to 18 kHz
- Sensitivity: -38.5 dB (11.9 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.2 oz.
- Includes holder clip, metal-mesh wind screen

ECM-55BC For WRT-822B & WRT-8B ...224.95
ECM-55BPT 9.8’ cable without battery or connector (pig tail connection) ..............189.95

ECM-310
Lightweight, Wide-Cardioid Headset-style Microphone
- Provides crisp and clear sound – isolates desired sound from surrounding ambience
- Adjustable hinge and goose-neck
- Frequency response: 70 Hz to 12 kHz
- Sensitivity: -44 dB (6.3 mV) ±3 dB*
- Includes Urethane wind screen

ECM-310BC For WRT-822B & WRT-8B .......97.95
ECM-310BMP For the WRT-805B ..........86.95

ECM-166
Uni-Directional Microphone
- Resists howling and rejects indirect sound
- Ideal for installed sound and contractor applications such as lectures & conferences
- Frequency response: 100 Hz to 10 kHz
- Sensitivity: -45 dB (5.6 mV)*
- Microphone head: ⅜” x ⅜”; 0.12 oz.
- Includes Urethane wind screen, holder clip

ECM-166BC For WRT-822B & WRT-8B ....104.95
ECM-166BMP For the WRT-805B ..........99.95

ECM-44
 omnidirectional microphone
- Superior sound quality
- Frequency response: 40 Hz to 15 kHz
- Sensitivity: -40 dB SPL (10 mV)*
- Microphone head: ⅜” x ⅜”; 0.07 oz.
- Supplied with holder clip (single/horizontal type), Urethane wind screen, case

ECM-44BC For WRT-822B & WRT-8B ........104.95
ECM-44BMP For use with WRT-805B .......99.95

ECM-66
uni-directional microphone
- Designed for instrumental applications
- Frequency response: 70 Hz to 14 kHz
- Sensitivity: -36.5 dB (15 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.3 oz.
- Includes holder clip, Urethane wind screen

ECM-66BC For WRT-822B & WRT-8B ....237.95

ECM-77
high-performance, ultra-miniature, omni-directional microphone
- Frequency response: 40 Hz to 20 kHz
- Sensitivity: -39.0 dB (11.2 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.05 oz.
- Supplied with 2 holder clips (single/horizontal type and single/vertical type, Metal-mesh wind screen, microphone case

ECM-77BC For WRT-822B & WRT-8B....253.95
ECM-77BMP For use with WRT-805B .......241.95

ECM-55
uni-directional microphone
- Frequency response tailored for enhanced presence and improved voice quality
- Frequency response: 30 Hz to 18 kHz
- Sensitivity: -38.5 dB (11.9 mV)*
- Mic. head: ⅜” x ⅜”; approximately 0.2 oz.
- Includes holder clip, metal-mesh wind screen

ECM-55BC For WRT-822B & WRT-8B ...224.95
ECM-55BPT 9.8’ cable without battery or connector (pig tail connection) ..............189.95

ECM-310
lightweight, wide-cardioid headset-style microphone
- Provides crisp and clear sound – isolates desired sound from surrounding ambience
- Adjustable hinge and goose-neck
- Frequency response: 70 Hz to 12 kHz
- Sensitivity: -44 dB (6.3 mV) ±3 dB*
- Includes Urethane wind screen

ECM-310BC For WRT-822B & WRT-8B .......97.95
ECM-310BMP For the WRT-805B ..........86.95

BC models come with a 1.2m cable and a SM C9-4P connector. B M P models have a 3-pole mini-plug with a lock mechanism for secure cable damping.
*(0 dB = 1V/Pa, at 1 kHz)

WRT-847B

UHF Synthesized Transmitter Unit

The WRT-847 UHF Synthesized Transmitter Unit accepts five optional microphone capsules, providing a choice of characteristics to suit a range of different applications. Mic capsules are available individually. (One head is required for it for function.). The CU-F780, CU-G780 and CU-E700 capsules are designed for vocal and speech applications in broadcasting, live music performances and concert halls, while the CU-E672 and CU-F117 options are suitable for interviews in news gathering and field productions. Other features include PLL frequency synthesized circuitry for highly stable operation and an easy-to-read LCD screen.

- Audio compander time constant is switchable to suit different capsules
- Selectable RF output level: 10 mW for simultaneous multi-channel operation and 50 mW for long working distance
- Audio gain and attenuation setting from +9 dB to -12 dB in 3 dB steps
- Easy-to-read LCD with back light indicates extensive information on operating conditions such as channel number, wireless channel frequency in MHz, audio input level, compander time constant, battery status and accumulated battery operating time.

CU-F780
Dynamic Supercardioid Mic Capsule
- Ideal for vocal applications including live music performance
- Dynamic element for extreme durability and high SPL handling
- Super cardioid polar pattern minimizes off-axis pickup and feedback
- Uses the same high quality edgewise winding Copper Clad Aluminum Wire voice coil used in Sony's acclaimed F-780 wired mic.
- Wide 50 Hz to 18 kHz frequency response
- Built-in windscreen
- Dimensions: ø 51 x 90 mm (6.3 oz)

CU-G780
Dynamic Cardioid Mic Capsule
- Ideal for live vocal applications, especially those requiring increased immunity to feedback
- Dynamic element for extreme durability and high SPL handling
- Super cardioid polar pattern minimizes off-axis pickup and feedback
- Designed to cope with high sound pressure level vocals and to provide outstanding feedback rejection
- Wide 50 Hz to 20 kHz frequency response
- Built-in windscreen
- Dimensions: ø 51 x 90 mm (6.3 oz)

CU-E700
Supercardioid Condenser Mic Capsule
- Designed for critical vocal and speech applications
- Super cardioid polar pattern minimizes off-axis pickup and sensitivity to acoustic feedback
- Built-in windscreen
- Electret element for smooth, clear sound, excellent transient response and wide frequency response
- Wide frequency response (50 Hz to 18 kHz) for natural sound reproduction
- Max. SPL: 150 dB
- Dimensions: ø 51 x 98 mm (6.0 oz)

CU-E672
Hypercardioid Condenser Mic Capsule
- A shotgun mic capsule (similar to the Sony ECM-672). Ideal for a wide variety of applications in news-gathering, sports and interviews
- Frequency response: 50 Hz to 16 kHz
- Dimensions: ø 37 x 172 mm (5.3 oz)
- Includes urethane wind screen
- Extreme directional response minimizes off-axis pickup
- Electret element for clear sound, excellent transient response and wide frequency response

CU-F117
Omnidirectional Dynamic Mic Capsule
- The perfect mic for various interview applications, the CU-F117 is an omni-directional dynamic microphone capsule designed to help reject wind noise and popping
- Dynamic element for extreme durability and high SPL handling
- Ideal for use in interviews and ENG applications
- Built-in windscreen reduces wind noise & popping
- Frequency response: 50 Hz to 15 kHz
- Dimensions: ø 44 x 105 mm (6.0 oz)
### WRT-800A
- Wide-cardioid electret condenser capsule for outstanding sensitivity and response
- 12 hours of continuous operation with a single AA battery
- Selectable RF output of either 2.5 mW or 10 mW depending on transmission distance and operating environment.
- Ergonomic grip and miniature low-profile helical antenna
- Low-Battery alarm works with compatible receivers
- Smoothly tapered body with compact lightweight design
- Includes easily detachable mic holder

### WRT-807A
- High sound quality for vocals - powerful, crisp and clean sound as well as presence in the low end and mid frequency range
- Dynamic microphone capsule, same as used in the Sony F-780 professional vocal microphone
- LCD for display of channels, attenuator and accumulated hours
- Up to 5 hours of continuous use with a single AA battery
- Battery alarm transmitted to compatible receivers
- Newly-developed lockable power switch to prevent accidental operation

### WRT-808A
- RF power output: 10mW
- Plug-In transmitter works with any dynamic microphone with an XLR connector
- 94 channel frequency agile
- Runs on two AA batteries
- Battery level indicator
- Level control
- AF/Peak indicator shows condition of audio input level
- Low-Battery alarm works with compatible receivers

### WRT-867A/X
- Uni-directional dynamic mic capsule incorporates a high quality edgewise-winding voice coil with lightweight CCAW (copper clad aluminum wire) and AlNiCo magnet for powerful, crisp and clear sound as well as presence in the middle and high frequency range.
- Four hours of continuous operation at 10 mW RF output level with one AA battery.
- Ideal for critical vocal applications in broadcast and film production.

**ORDER & INFO.** (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
**WRR-805A**

Loaded with features and ready to perform, the compact WRR-805A features PLL frequency synthesized circuitry for highly stable operation and whip antenna that transmits battery status to compatible receivers. An easy-to-read LCD screen and LED’s indicates all the information a user might need.

- Compact and lightweight, the WRR-805A works with any camcorder that has a stereo mini jack for mic input.
- 94 selectable frequency synthesized UHF channels
- RF, battery alarm indication by both LCD and LED to double check operating condition
- Switchable RF muting (squelch): ON (15 dBµ) or OFF.
- LCD for display of operating channel, AF, RF, accumulated operating hours, the tuner’s battery status
- 3.5 mm diameter, balanced line output connector with a lock mechanism for secure camera cable clamping.
- Six hours of operation (with two AA alkaline batteries)
- Convenient headphone monitoring with volume control
- Flexible mounting position and direction ensures secure operation when mounting on DV, DVCAM, Betacam SX, and Digital Betacam camcorders. Optional mounting bracket required for rear-mounting of up to 2 units.

**WRR-861B/WRR-862B**

The WRR-861B (single-channel) and WRR-862B (dual-channel) are cost-effective portable space-diversity receivers designed to deliver high-quality/high-reliability reception in broadcast news and EFP applications. Dual-powered with a lightweight but rugged body made from die-cast magnesium, they are designed for mounting onto Sony professional camcorders with the supplied attachment kit/case, as well as for a variety of other portable applications such as field sound mixing in combination with a portable mixer. High-end features include easy-to-read LCD/LED indicators, selectable RF squelch function, transmitter battery alarm and headphone monitoring function.

- Dual diversity reception for elimination of dropouts and outstanding reception.
- LED indicators display RF input status and transmitter battery alarm. Easy-to-read LCD displays operating channel/frequency, AF output/RF input levels, receiver battery status and accumulated battery operating time.
- Frequencies are arranged pre-programmed groups to allow intermodulation-free operation. Also makes it easy to choose the correct frequencies for multi-channel operation.
- Headphone jack for monitoring the output (with volume control)
- To eliminate ambient noise, a selectable RF squelch function allows audio to be muted when the RF signal decreases to a certain level (can be set to 5 dBu, 10 dBu, 15dBu).
- Battery alarm function monitors their battery level as well as a transmitter’s. LED flashes one hour before transmitter’s battery goes dead.
- Rugged, compact and lightweight, the WRR-861B (10 oz.) and WRR-862B (14 oz.) are easy to mount with the supplied attachment kit and case.

**WRR-855B**

A broadcast quality true diversity receiver designed for use with Sony’s SX cameras, the unobtrusive WRR-855B takes its power and supplies audio directly to the Betacam’s SX’s plug-in slot, or can be used with the BTA-801 adapter to provide external connections on 4-pin DC power cable and XLR audio. For reassurance on location, the WRR-855B also includes an RF scan function, allowing you to identify if any RF noise is present. The Pilot Tone Squelch, Low RF Muting and Excessive White Noise Muting functions work together to ensure optimum noise free and seamless performance. Preprogrammed groups of intermodulation free frequencies make it easy to select an used channel on busy shoots.
SONY

UHF SYNTHESIZED DIVERSITY RECEIVERS

- Water resistant structure
- Muting RF Level: 10dBu or Off
- Space diversity tuner for camcorder
- Squelch circuitry operated by ultrasonic tone for positive transmitter reception
- The WRR-855A has a 15-pin connector for audio output to a Betacam SX camcorder
- Can be mounted on Sony camcorders with the optional BTA-801 mounting adapter. The camcorder can power the WRR-855A when you use the DC cable supplied with the BTA-801.
- The audio is recorded to either (or both) track 1 or 2 on an SX camcorder, either with manual or (AGC) automatic gain control. In addition, audio is always recorded onto track 3 with AGC regardless of any other settings on the camera.
- Compact and lightweight— only 11 oz

BTA-801 mounting adapter .................. 399.95

WRR-802A
Single Channel Rackmount Receiver

Half size 19” rack width and 1U height, single-channel space diversity tuner with LCD display of channel and battery alarm. Output volume control. Balanced output connectors with XLR & TRS phone jack. Front mount antennas.

- Two front mounted antennas allow the receiver to constantly compare signals and to choose the strongest one
- Mic/line selectable XLR and 1/4” TRS balanced output
- Convenient front panel located volume control knob for quick level adjustments
- AF, RF and battery alarm indication by both LED and LCD to double check operating condition (channel indication by LCD only).
- Also monitors the battery power of any transmitter that transmits battery power (includes WRT-800A & 805A transmitters
- Half 19” rack width and 1U high

MB-806A and WRU-806B
Tuner Base Unit and UHF Synthesized Tuner Unit

The MB-806A is a tuner base unit featuring slots for six WRU-806B diversity receiver modules, with an internal antenna divider for six channels of diversity operation in a single rack space. Using the optional WD-820A Antenna Divider, you can go even further, with up to 12 wireless mics operating simultaneously on a single pair of AN-820A active antennas! The MB-806A also features a convenient autochannel assignment function. Once an operating group is set on one of the installed WRU-806B receiver, channels within the same group are automatically assigned, and unusable channels for the additional receivers will be automatically detected and skipped. This enables instant and automatic multi-channel setting of the entire rack of receivers.

- Modular 19” rack mount tuner frame (1RU)
- Six XLR-balanced output connectors plus an XLR balanced mix output
- Selectable mic/line (-58dBm/-20dBm) output level switch
- Accommodates up to 6 WRU-806B diversity receiver modules for up to six simultaneous channels of operation. With the optional WD-820A Antenna Divider, up to 3 systems (18 mics) can be operated simultaneously

SONY

MB-8N and WRU-8N

Wireless Mic Tuner Base Unit and UHF Synthesized Tuner Unit(s)

Incorporating cutting-edge wireless microphone technology, the breakthrough MB-8N Tuner Base Unit together with the WRU-8N UHF Synthesized Tuner Unit set new standards for performance, flexibility and functionality in a wireless mic system. Although only 1U high, the MB-8N Tuner base unit accommodates up to four WRU-8N tuner units, and it includes a built-in antenna divider making it easy to daisy-chain up to four of these base units to form a 16-channel system. The WRU-8N offers exceptional standards of RF performance. It features space diversity reception, and a wide dynamic range with low levels of noise and distortion. But what sets this system apart from any other, is the level of remote operation and monitoring the MB-8N/WRU-8N combination provides. Over standard Ethernet connections, a complete system can be set up and controlled from a PC using the supplied GUI software. This includes the store and recall of different channel configurations, a feature that is particularly useful for location use and equipment rental organizations. A separate audio monitoring feature is included to allow the individual outputs of the tuner units to be checked.

MB-8N Tuner Base Unit

◆ Easy to install in both fixed and mobile applications, the MB-8N Base houses up to four WRU-8N tuner units in a compact 1U high, 19” rack mountable design. This allows flexibility in expanding the number of wireless channels in a system according to budgetary and operational needs.

◆ Using the controls and LCD on the MB-8N’s front panel, users can quickly generate and store channel names for each WRU-8N Tuner Unit installed. Since the stored names can be recalled to the LCD panel, operators can immediately verify the sound source assigned to a given unit. Additional controls include output level (mic/line selectable), variable RF squelch level for each tuner unit, antenna attenuator value, and power to the AN-820A UHF Antennas connected to the MB-8N Tuner Base.

◆ The MB-8N has a built-in antenna divider, allowing four units to be daisy-chained without the need of an external divider. Since each tuner base unit accommodates up to four tuners, a 16-channel system is easy to configure (requires 16 tuner modules).

◆ With the use of the optional Sony WD-880A Antenna Divider, simultaneous operation on up to 42 channels is possible. This combined with the pre-programmed channel plans, makes it easy to build a high-quality, sophisticated, multi-channel wireless system.

◆ Headphone monitor jack and level control are located on the MB-8N front pane. Output can be selected to monitor the sound from individual WRU-8N tuner units or the mixed sound from all installed units.

WRU-8N Tuner Unit(s)

◆ Wide dynamic range ensures that the WRU-8N can provide optimum reception of signals from current and future Sony wireless mics and transmitters.

◆ The three technologies used in the WRU-8N — PLL frequency synthesized system, pre-programmed frequency groups and Space Diversity Reception System — result in extremely stable RF reception, a vital factor for any wireless microphone system.

◆ Each tuner has a jog dial for quickly choosing channel/group number settings as well as LCD panel and LED indicators for information on operating conditions.

◆ LCD indicates the operating channel group and frequency, and has four-segment displays of AF output and RF input levels, while the LED’s indicate RF input and AF output status and the battery reserve of the transmitter. A red LED starts flashing one hour before the transmitter’s battery will run out.

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
Computer-Based Control

For added operational convenience, the MB-8N/WRU-8N system allows computer-based remote control. To provide straightforward and intuitive operation, the MB-8N and installed WRU-8N units can be set up, controlled, and monitored from a PC interfaced via a simple Ethernet connection and running the supplied software. Full monitoring of operating status in one window. The GUI simultaneously displays the status of up to 16 channels in one window, which can be switched to a 25-channel or 49-channel display. Both a quick reference to each tuner’s reception status and that of the entire configuration are displayed on the left side, while details of the channel status are displayed on the right side. Through a simple drag-and-drop operation, the operator can designate the channels to appear on the right side for access to an extensive range of operating controls and information which includes the channel name, selected channel group/frequency, tone squelch status, noise squelch status, RF squelch level, AF/RF input levels and transmitters battery alarm. The AF level is indicated in steps of approximately 2.5 dB, while the RF level is indicated in steps of approximately 5 dB. The GUI also allows the control of all other settings available on the MB-8N Base Unit.

The pre-programmed channel frequencies can also be selected from this GUI. This is especially useful for complex multi-channel operations, since operators can adjust frequencies while simultaneously viewing all channels. Once the appropriate frequencies are selected, the setup can be stored as a file. This is extremely useful, since the setup for a particular multi-channel system can be easily re-established by loading the appropriate file.

WD-820A UHF Antenna Divider

- Four diversity distribution output connectors for distributing the RF input signal from up to three MB-806A tuners
- Two pair of antenna input connectors for connection of up to four AN-820A antennas- allowing expansion of the operating area
- Cascade three WD-820A’s to control up to 19 channels

WD-820A Antenna Divider .......................................................... 1113.95

WD-880A UHF Antenna Divider/Channel Multiplier

- Expands simultaneous operation from 19 channels to up to 42 channels
- Incorporates RF bandpass filtering technology for stability and reliability
- Supplies 9 or 12v power to the AN-820A

WD-880A Antenna Divider .......................................................... 3579.95

AN-820A UHF Antenna

The AN-820A incorporates an amplifier to compensate for signal deterioration caused by cable transmission and distribution.

- Unique and inconspicuous design allows installation on a wall or in a mic stand with the supplied adapter
- LED indication for installation check
- Powered by the MB-806A or the WD-820A via coax cable

AN-820A UHF Antenna .............................................................. 189.95
SONY

UWP SERIES

Low-Cost UHF Synthesized Wireless Microphone System

Although low-cost wireless systems have proliferated dramatically in recent years, they usually lack in transmission stability and have noise problems that are overlooked. The ideal solution for budget-conscious users seeking rock-solid transmission, the UWP Series incorporates sophisticated wireless technologies from Sony’s top-of-the-line UHF Series including PLL-synthesized system, space-diversity reception and a tone squelch function. Whether for low-cost ENG, EFP or PA systems, the UWP Series delivers the convenience of non-compromised wireless microphone operation at a very affordable price.

The UWP Series consists of five core elements — a lavalier/bodypack transmitter, a wireless handheld mic, a portable tuner, a half-rack-size tuner, and a tuner module. These are available in six turnkey packages, each comprising a microphone, transmitter and tuner, for a ready-to-go system straight out of the box. Each package has been carefully compiled to address almost any application—from video production and A/V presentations, to live performance and electronic news gathering.

FEATURES

- PLL Synthesized System used in the transmitters and tuners, achieves solid transmission and reception by using a stable carrier signal to avoid interference with other frequency channels and to allow the selection of a preferred channel from multiple frequencies (188 selectable frequencies).
- Space Diversity Reception System — used in all UWP tuners — reduces signal dropout to a minimum. Achieves stable reception by using dual-antenna inputs/reception circuits that receive signals over two different paths and automatically select the stronger RF signal for output.
- The antennas of the portable and half-rack-size tuners each allow for angle adjustments, which helps to further eliminate signal dropout.
- Tone Squelch Circuitry prevents the output of unwanted signals or noise from other signal transmissions in the air, as well as the RF noise and popping noise that occur when the transmitter is powered on or off.
- Allows simultaneous operation of up to 16 wireless mics. Optimum combinations of practically tested, intermodulation-free frequencies (stored in the UWP tuners) simplifies the task of system setup.

Lavalier Microphone and Bodypack Transmitter

- Compact and lightweight design
- 3.5mm, 3-pole mini-jack input connector with lock mechanism
- Includes belt clip
- Supplied lavalier is a uni-directional, electret-condenser mic with windscreens and mic clip

Bodypack and Handheld Transmitter Both Feature

- LCD screen displays the operating channel number and its frequency in MHz, attenuator level, RF-output level (High/Low), audio-input and RF-output status, transmitter-battery status and accumulated operating time
- Six hours operation on two AA batteries
- Selectable RF-output level: 5 mW for simultaneous multi-channel operation: 30 mW for long-distance transmission
- Attenuator function allows adjustment of the mic-input level to suit each user’s voice

Handheld Microphone

- Uni-directional, dynamic mic capsule
- Internal antenna design
- Supplied with a microphone holder and a screw adapter
SONY

UWP SERIES

Half 19° Rack-Size Tuner
- Equipped with both XLR (balanced) and 1/4” phone (unbalanced) type output connectors. The output level on the XLR-type connector can be switched between mic and line levels.
- LCD screen displays the operating channel number and its frequency in MHz, plus the audio output status and RF-input level
- Stereo headphone jack with monitor volume-control
- Supplied with an AC/DC adapter

Portable Tuner
- LCD screen provides extensive information, including the operating channel number and its frequency in MHz, audio-output status, RF-input level, tuner-battery status and accumulated operating time.
- Six hours of operation with two AA batteries
- Stereo mini jack with volume control
- Angle-adjustable antennas help eliminate signal dropout and allow mounting position flexibility when mounted on a camcorder.
- Supplied shoe-mount adapter enables easy mounting on Sony camcorders. Also includes mic stand adapter, screw adapter, mic cable and belt clip.

All Tuners (receivers) Feature
- Space diversity reception system for stable RF reception
- RF squelch function virtually eliminates ambient noise and unwanted signals from other wireless microphone systems
- A green LED indicator illuminates when RF-input signals are appropriately received

Lavalier Systems
Each system includes a lavalier mic supplied with a windscreen and mic holder clip, and a bodypack transmitter supplied with a belt clip

UWP-C1
Includes lavalier microphone, bodypack transmitter and portable tuner
- Suitable for a wide range of applications, from news gathering and interviews to talk shows and conferences
- The portable tuner includes mic stand adapter, screw adapter, shoe-mount adapter for mounting on a camcorder and mic cable (3-pole mini plug/XLR-type)

UWP-S1
Includes lavalier mic, bodypack transmitter and half rack-size tuner
- Suitable for use in PA systems
- The half-rack-size tuner is supplied with an AC/DC adapter

UWP-X1
Consists of a lavalier mic, bodypack transmitter and tuner module
- Suitable for use in PA systems

Handheld Systems
Each system includes a handheld microphone supplied with mic holder and screw adapter

UWP-C2
Consists of a handheld microphone and portable tuner
- Suitable for news gathering and for use in PA systems
- The portable tuner includes mic stand adapter, screw adapter, shoe-mount adapter for mounting on a camcorder and mic cable (3-pole mini plug/XLR-type)

UWP P-S2
Consists of a handheld microphone and half rack-size tuner
- Suitable for use in PA systems
- The half-rack-size tuner is supplied with an AC/DC adapter

UWP-X2
Consists of a handheld microphone and tuner module
- Suitable for use in PA systems

Plugin Diversity Tuner Module
- Up to modules can be installed into a Sony mixer/amplifier (SRP-X700P or SRP-X351P), while up to six modules can be installed in the Sony MB-806A tuner base unit
- An LCD screen displays the operating channel number and its frequency in MHz, plus the audio-output status and RF-input level

SONY
WIRELESS MICS

SONY
SRP-X351P

**Powered Mixer**

An audio/video mixer and power amplifier, the SRP-X351P is designed for a wide range of applications, including corporate boardrooms, conference rooms, houses of worship and sports/karaoke bars. Cost-effective and flexible, it has all the key elements of an outstanding presentation system within a rugged, compact design. A built-in video switcher facilitates easy selection of a monitor or projector and the corresponding audio sources. Wide range of connections includes four balanced-XLR mic channels with switchable 48V phantom power; three stereo line inputs; stereo and master record outputs, as well as Echo send out and mic group out that allow for flexible system configuration and easy expansion. Finally, the SRP-X351P offers a unique wireless tuner option. It has two plug-in slots in the back of the unit that accommodate two Sony WRU-806A UHF tuner modules with a built-in antenna divider. Mounts in a 19” rack (3U high).

**FEATURES**

**Inputs**

- Four balanced mic inputs are provided via rear-panel XLR connectors. The fourth input is also accessible via a 1/4-inch jack on the front panel. A sharp cut-off LF filter and a Signal Present LED are provided on all four inputs. 48v phantom power is available on the XLR connectors.
- Three stereo channels with line level inputs. Channel 3 has four input connections, with input selection made by the 4-way A/V selector.

**Outputs**

- Mic Group bus (usually used to route selected mics)
- An insertion point is provided for an optional EQ, dynamics control unit or feedback reducer.
- Stereo Record Bus feeds both the power amps and the record output via an EQ and an insertion point for external signal processing. This means that the stereo record output can feed external power amplifiers with the same signal as the internal power amplifiers.

**Video Switcher**

- Has four sets of composite and S-Video inputs. Any one set of inputs is selected by the four-way A/V selector and routed to two pairs of outputs, one associated with the stereo Master output, and one with the stereo Record output.

**Remote Control**

- RS-232C and Control-S ports allow external remote control of A/V input selection and Master Volume, as well as muting of the power amp and Record outputs. Also includes an infrared wireless remote.

**Wireless Tuners**

- Two Sony WRU-806 wireless tuner units can be directly installed into the rear of the SRP-X351, to integrate high quality Sony wireless mics into the presentation system. 9v DC is provided on the two antenna connectors to power optional Sony AN-820A omni-directional active antennas.

**Power Amp**

- Low-distortion stereo power amplifier outputs 170W per channel into 4 ohms. Loudspeaker protection circuit and clip indication are also provided.

**SYSTEM DIAGRAM**

[SYSTEM DIAGRAM IMAGE]
Digital Powered Mixer

Designed for the modern presentation system, the SRP-X700P has the ability to process material from a wide range of sources including microphones, video, audio, DVD and PC graphics. In fact, it provides the functionality of up to seven tradition presentation devices in a compact, 3U high rack-mounting chassis.

And by utilizing digital processing and control technology, the SRP-X700P combines an impressive set of features with high quality processing and simple operation.

FEATURES

**6x1 Multimedia Switcher**

The SRP-X700P can handle a wide variety of signal sources such as wire/wireless microphones, PC graphics, DVD playback and surround sound audio, and has a ‘six into one’ switcher that allows all the different material to be routed to the presentation system.

- Six picture inputs: 3-RGB/component, 3-composite/S Video
- Six audio inputs: 4 stereo and 2 surround sound (5.1 format)
- High resolution component signal processing, including 480p or 1080i
- High-performance switching, with a 150MHz frequency response for RGB signals (1280 x 1024 pixels, SXGA)

**Integrated Machine Control and Automation Control Interfacing**

The SRP-X700P has extensive machine control capabilities with four CRTL-S control ports for wired machine control, as well as parallel and RS-232C ports for extensive control from professional presentation controllers.

- RS-232C port allows for remote control of Sony projector and plasma monitor
- USB, RS-232C and parallel input ports for remote control from an external PC (or other control systems).
- Control-S ports allow for remote operation of Sony VCRs, CD and DVD players, Minidisc recorders and projectors.

**Bundled Software for Improved System Efficiency**

The SRP-X700P is supplied with two PC applications (SRP-X700P Manager and User Control Panel). The X700P Manager is a ‘set and forget’ application, supplied to allow the unit to be fully configured during installation and provides a complete set of control GUIs. The User Control Panel provides a simple control GUI for real time presenter control. Additionally, the unit’s 20 internal Scene memories, four of which can be recalled from front panel buttons or the user control panel, allow an instant reset all of the internal processing, so downtime is minimized between operating modes.

- 6-mono and 2-stereo channels audio mixing with processing to maximize sound quality
- Can mix and process 6-mono (4 mic, 2 mic/line) and 2-stereo (a stereo line and the 5.1 stereo line input of the switcher) inputs signals to 10 outputs (8 general purpose outputs and a stereo record output).
- Comprehensive audio processing including EQ, dynamics, routing and delay, allows the audio signals to be maximized and provides tools for correcting room acoustics.
- Two additional tools allow ‘professional quality audio’ processing to be setup at the touch of a button:
  - ‘Feedback Reducer’ analyzes and ‘nulls out’ potential howl round frequencies.
  - ‘Automix’ function allows the SRP-X700P to analyze, in real time, the incoming signals and make adjustments to maintain the quality of the output.
- 24-bit/48 kHz A/D - D/A conversion
- Multiple operating modes with 10 outputs and the on board stereo power amplifier
- A routing function allows the SRP-X700P to offer many different operating modes to support surround sound matrix switching or ‘Zoned’ speaker configurations. In addition, the on board 150W stereo power amplifier can be switched between high and low impedance modes.
- Power rating 200 W + 200 W (4•), 150 W + 150 W (8•), Max 150 W (70V Line)
The versatility of the ENG-100 receiver makes this the UHF system of choice. Designed to perform reliably even under the harsh conditions of news gathering, the compact but rugged receiver offers 100 channel frequency agility and delivers superior audio performance on any of 100 selectable channels in the 668 to 746 MHz frequency range. Two integral antennas and a built-in Posi-Phase diversity system assure reception in the most difficult situations. The ENG-100 also features an internal headphone amplifier and an adjustable audio output control to accommodate any situation from news gathering operations to live performances. Equally suited for corporate, industrial and event video applications, the ENG-100 is available in two frequency groups; Group A which corresponds to TV channels 47-48 and Group B which corresponds to channels 58-59.

**LT-100/SH-100 UHF Beltpack and Handheld Transmitters**

- 100 selectable frequencies
- Power on/off and audio mute switches
- Four segment battery life indicator
- Hi/low transmit power output
- They operate on 2 AA batteries
- Handheld transmitter with Audix OM 3 cardioid dynamic mic capsule (SH-100)
- TA-4M mic jack (LT-100)
- Has external charging pins for use with BC-100 drop-in charger (LT-100)

**UT-102 UHF Crystal-Controlled Plug-on Mic Transmitter**

- Housed in an all metal aircraft alloy case with water-resistant seals.
- Although compatible with other dynamic microphones, the UT-102 is perfect for use with the EV RE50, the world standard in broadcast interview microphones.
- Also provides +6V phantom power for electret microphones.

Optional Accessories for the ENG-100

DC-GM Anton Bauer “Sandwich” Mount
Allows the ENG-100 to be sandwiched between the camera and an Anton Bauer battery. Fully compatible with Anton Bauer Gold Mount ............. 229.95

DC-UM Universal Strap Mount Kit
The DC-UM is a universal mounting device that fits virtually any video camera. The adjustable, self-locking Velcro strap ensures a secure mount.......................... 42.95

DC-SM Anton Bauer Side Mount Kit
Attaches ENG-100 to Anton Bauer brand side mount accessory............................... 42.95

DC-NP1 Standard NP-1 Mount Kit
The DC-NP1 allows the ENG-100 to be mounted on standard NP-1 battery holder easily installed and removed with thumb screws.................... 42.95

PROSTAR VR-12 VHF Wireless Microphone System

Going wireless has never been more affordable and natural. Built around the VR12 receiver, the ProStar system offers an audio signal that is processed by the fewest possible components. The allows the signal to follow a virtual “straight line,” producing pure and natural sound. Available in 8 frequencies, up to three systems can be used simultaneously.

The VR12 receiver is rugged reliable and includes the same diversity Posi-Phase technology found in professional Telex wireless systems. It features squelch control, 1/4” output with volume control and a built-in antenna system that eliminates interference and substantially increases the range of the system.

Made in the USA with the highest reliability in their class, the ProStar system delivers clean drop-out free performance every time you power up. Choose from handheld, lavalier or headworn mic systems. For guitarists, the VGR12S system was conceived, designed, and constructed for one instrument only – the guitar. The VGR12S captures everything from the window-rattling lows and the searing highs of a solid body, to the subtlety and nuances of a jazz guitar or acoustic/electric.

VR12C Lavalier System
Includes the VR12 receiver, VB-12 beltpack transmitter with TA4M connector and Audio Technica AT-831b unidirectional condenser lavalier mic with TA4F connector........ 259.95

VR12L Lavalier System
Includes the VR12 receiver and VB-12 beltpack transmitter with attached WLM-10 electret condenser lavalier mic........ 189.95

VR12N1 Handheld System
Includes the VR12 receiver and a VH 12N1 handheld transmitter with EV 167 neodymium dynamic mic element........ 238.95

VR12H Headworn System
Includes the VR12 receiver and VB-12H beltpack transmitter with EV HM 2 headworn mic..................... 289.95

VR12S Guitar System
Includes the VR12 receiver and VB-12 beltpack transmitter with 1/4” plug and cable................................................. 359.95

VR12A Aerobic System
Includes the VR12 receiver, VB-12 beltpack transmitter (with sports pouch) with TA4M connector and Special Projects WHPS-746 aerobics mic with TA4F connector.......... 359.95

FMR-1000
950-Channel UHF Frequency-Agile Wireless Mic System

The FMR-1000 is a breakthrough frequency-agile system that mixes the power of fully programmable channels with the simplicity of Advanced ClearScan. With a push of two buttons, Advanced ClearScan finds the clearest group of channels, and you can set up 16 system installations in minutes with confidence you have the clearest channels in the clearest group. A unique sound check screen allows one person to walk test a transmitter with tangible results. For clear vocals, the HT-1000 handheld microphone offers a choice between two Electro-Voice mic elements. The ideal solution for the needs of sound contractors, A/V rental facilities and performers, the FMR-1000 carries a 3-year warranty and very affordable price.
FMR-1000

System Features

◆ Programmability in 25 kHz steps across 24 MHz operating bandwidth for over 950 possible channels.

◆ Channels are set-up in optimized groups to allow the simultaneous operation of up to 16 units within one frequency band.

◆ At the simple push of two buttons, Advanced ClearScan finds the clearest group of channels, allowing you to configure up to 16 system installations in minutes with the confidence that the clearest channels in the clearest group have been programmed.

◆ Power users can also program their own groups and channels for custom installations and tours.

◆ UHF operation is further enhanced by the patented DSP Posi-Phase diversity system for clear and drop-out free audio.

◆ Front panel parametric equalizer with Level, Q, and frequency controls for sound shaping without a mixing board.

FMR-1000 Receiver

◆ 1/2 rack width metal receiver housing design, RF and audio level indicators, tone code plus adjustable squelch, 950 selectable channels, balanced XLR output, adjustable 1/4” line output, two 1/4-wave antennas, rack-mount hardware for one or two receivers and an in-line power supply cord. Also features a plug-able terminal strip for use in permanent installations.

◆ Backlit LCD display shows group/channel, transmitter battery status, diversity operation, RF and audio level meters and allows space for a custom label.

◆ Unique sound check mode allows a person to walk-test a microphone throughout the performance area with quantifiable results shown on the LCD display.

◆ Front panel parametric equalizer with Level, Q, and frequency controls for sound shaping without a mixing board.

◆ Optional AD-450 antenna distributor provides power and antenna connections for four FMR-1000(s) from just two antennas.

WT-1000 and HT-1000

Bodypack and Handheld Transmitters

The bodypack transmitter is made of cast magnesium and the over-molded Warm-Grip handheld transmitter features detachable microphone elements for rugged performance in the most demanding environments. Both transmitters feature a unique “smart” battery circuit, which makes it impossible to put the battery in wrong. Powered by 9v battery for up to 8 hours.

For clear vocals, the HT-1000 wireless handheld transmitter offers a silent power on/off and LCD channel display, low-battery indicator LED, and the choice between the EV N/DYM 767a dynamic mic element with VOB and the RE 510 professional condenser element.

Wireless Receiver Holders

BEC's Wireless Receiver Holders are manufactured using plate aluminum, formed and welded to the exact size of your receiver. Their skilled metal mechanics use the latest in computer assisted machinery to meet the exacting standards of your cameras and receivers. They apply a durable Dry Powder coating to each holder in a smudge resistant black wrinkle finish. And your receiver is protected by a felt lining that keeps it from the bangs and bumps of everyday use.

Holders mount on all cameras with the Sony screw configuration that is most commonly found on the NP/1 battery holder, the IDX NP/1 battery system and the Anton Bauer Gold Mount system.

Other options like the Sony V-lock system, other Pro cameras and the smaller DV cameras, may need BEC camera brackets, slide plates and other accessories to complete the installation. Everything you need for a no hassle installation is supplied. Includes all the screws, instructions with pictures and a reversible screwdriver.

PORTACOM

2-CHANNEL WIRED INTERCOM SYSTEMS

A flexible, high-performance series of two-channel wired intercom, built smart, simple and affordable without sacrificing power or sound quality. Portacom’s low-noise, broadcast-quality intercom systems are easily expandable and can be tailored to any environment. They are available in pre-configured systems or as individual components. Connection between components are made with standard mic cables and quickly adapt and grow with your needs without having to start all over with a new system. The two channel capability offered by these systems allow a director separate lines of communication to crew members and talent. The small, lightweight aluminum belt packs have their own channel switches and volume controls and Headsets are equipped with mic on/off switches. The noise-canceling microphones reduce background noise and you can power the system with an optional lightweight battery pack. Ideal for use in television/theater/lighting and church production, educational institutions, industrial production, sound contracting and football coaching.

**Components**

- **PC-100: 2-Channel Power Console** - Two channel power console with 4 outputs; powers up to 20 BP-200 belt-packs. Includes wall mount AC adapter (operable on 30-40v DC)
- **BP-200: 2-Channel Belt-Pack** - Lightweight belt-pack with volume control and A/B channel switch, call light and mic on/off switch. Has standard XLR-3 line connector and XLR-4 headset connector. Rugged construction. For use with H-200 headsets
- **H-200S Single Earpiece and H-200 Dual Earpiece Headsets** - Lo-Z dynamic mic and headphones with 6’ cable and XLRF-4 connector. Feature mic on/off switch, and noise cancelling mic
- **B3-100 Branch Box** - For expanding PortaCom systems, 1 input and 3 outputs
- **CC-15F Deluxe Carrying Case** - Custom-cut foam inserts for PC-100, AC adapter, 6 headsets, 6 belt-packs, Branch Box
- **CC-15 PortaCom Carrying Case** - Without foam inserts
- **PBS-100 Portable Battery Supply** - Uses 6 D-cell batteries to power 8-10 headsets for 6 to 8 hours
- **RM-100 PortaCom Rackmount** - Mounts 1 or 2 PC-100 consoles in a single 19” rack space

**Pre-Configured 2-Channel Intercom Systems**

**COM-40 4-Headset System:**
Includes PC-100 power console, 4x H-200 dual earpiece headsets, 4x BP-200 belt-packs, 4x EX-50M 50’ extension cables, CC-15 carrying case

**COM-40FC 4-Headset System:** Same as COM-40 without cables

**COM-60 6-Headset System:**
PC-100 power console, 6x H-200 dual muff headsets, 6x BP-200 belt-packs, B3-100 branch box, 7x EX-50M 50’ extension cables, CC-15 carrying case

**COM-60FC 6-Headset System:** Same as COM-60 without cables

**COM-80 8-Headset System:**
PC-100 power console, 8x H-200 dual muff headsets, 8x BP-200 belt-packs, 2x B3-100 branch boxes, 10x EX-50M 50’ ext. cables, 2x CC-15 carrying cases

**COM-80FC** Same as COM-80 without cables

- Full duplex
- Comfortable noise cancelling headsets
- High performance/low cost
- Battery powered option
- Durable lightweight metal construction
- Call light function
- Standard cables/3-pin XLR connectors
- Offers 20-headset capability with simple branch-box operation

**AARDVARK**

**DIRECT PRO Q10**

10-in/10-out Audio Interface with 8 XLR Mic Preamps

Looks great. Sounds even better.

You've never heard mic preamps sound this good. Aardvark's unique Q10 brings a new approach to computer recording. Its 8 studio quality XLR mic preamps have an ultra quiet .002% THD+N so you can professionally record an entire band direct to the computer without a mixer. Any of the 8 inputs can also be used as high quality 1/4” line inputs and take advantage of Aardvark's legendary sound quality and low-jitter performance.

The Q10 has tons of studio-friendly features like 4¼” analog effects inserts for easy integration with outboard processors, phantom power, 2 EFR guitar Hi-Z inputs, front mounted headphone & line monitor out level controls, S/PDIF, MIDI, a shielded PCI card and comes with a full version of Cakewalk's Pro Audio 9.0 recording software.

The Q10 is compatible with almost all audio recording software, and is often used with Steinberg Cubase & Nuendo, Cakewalk Sonar, Emagic Logic Audio Platinum, Syntrellium Cool Edit Pro 2000 and gets ultra low-latency performance with software synths & samplers like Native Instruments, GigaStudio and Propellerheads Reason.

**FEATURES**

The Q10 embodies all of Aardvark's great hardware technologies to bring to you one of the highest quality systems available. It offers great mic preamps and converters, plus all the appropriate I/O's of an analog mixer. This means that with one unit, you can record direct to your computer without having to go through a mixer, noisy mic preamps and all the extra noisy cables just to record audio on your computer.

- **8 flexible and high quality inputs.** The XLR inputs go directly to the discrete mic preamp circuitry, the 1/4” inputs go directly to the line level inputs.
- **Software controllable analog input gain,** applied before the A/D converter, maximizes headroom and gives you clean gain just like an analog mixer. There's even Aardvark's proprietary EFR™ Hi-Z guitar input circuitry to warm up any guitar you connect directly into the Q10.
- **Unlike other soundcards that use standard “mic-pre-on-a-chip” solutions, which are not discrete and can lack the clarity and definition needed for professional use, the Q10's mic-pre's are a hand crafted, discrete transistor design that yield outstanding noise specs and pristine sound quality.**
- **The mic preamps are shielded in the breakout box and combine with top of the line converters to deliver professional audio quality from your mics to your computer.**

4 Inserts for Outboard Effects

The Q10 has four 1/4” TRS inserts that work just like those of an analog mixer. They connect directly to outboard signal processing gear so you can 'insert' the processed analog signal between the mic preamps and the A/D converter. This means you can integrate your classic analog signal processing gear such as EQ's, compressors, and limiters with the Q10's crystal clear mic preamps, when you record direct to the computer.

2 EFR Hi-Z Guitar Inputs

The selectable front panel Hi-Z inputs (7+8) feature EFR (Enhanced Frequency Response) input circuitry specifically tailored for recording electric and bass guitars with a unique warmth and clarity. If you disliked the sound of a cheap DI box, then you'll love the warm, rich sound the EFR provides.

Headphone & Monitor Output

There is a headphone output on the front and stereo Monitor outputs on the back to connect directly to your speakers. Both outputs have individual level controls to give you mixer-like monitoring capability. Combine that with the 20 channel real-time DSP Mixer, and you have an incredibly flexible and professional system.
**Shielded PCI Card**
With custom shielding on the PCI card, both the breakout box and the card are noise free, keeping harmful computer noise and EMI out of your precious audio.

**Expandable**
You can run up to 4 Q10’s in the same computer for a maximum of 32 analog inputs and 8 channels of digital I/O. (In fact, all Aardvark audio interfaces can be expanded up to 4 units... mix and match!) Just connect the word clock in & outs on the Q10’s to each of the devices and your running sample accurate with an unprecedented 40 channels of great sounding I/O. This is perfect for portable rigs that need tons of I/O and great sounding mic preamps.

**Aardvark Low Jitter Clock**
Every Aardvark computer audio card uses the clocking technology similar to the legendary AardSync II master clock generator. The AardSync II is the industry standard master clock, used to sync the software, digital mixers, A/D converters and other devices, improving their sound via its low-jitter clock. This proprietary clocking technology gives our computer audio interfaces improved stereo imaging and better resolution on extended high and low frequency audio tracks.

**Output Routing (Patch Bay)**
Dealing with the software routing of audio interfaces can sometimes be a big hassle. So Aardvark took a photo of the back panel, and gave easy to use drop down menus to select what you want routed. This includes analog through to the outputs (Analog 1-8), any of the playback tracks (Playback 1-10), generating a tone and using the stereo output of the Control Panel’s Monitor Bus (MONITOR).

**Logo Brightness Control**
One of the coolest features of the Q10 is that the power LED’s brightness, on the front in the shape of the Aardvark logo, can be controlled from the DSP Control Panel to match your studio’s light level. Even the phantom power button on the front activates both an LED on the front of the unit and one in the control panel.

---

### Q10 Software Features

The Q10 also sets itself apart from other interfaces by having a fully DSP powered software control panel. This control panel is packed with user friendly features, and is laid out just like an analog mixer with stereo monitor outputs. The hardware & software combination of the Q10 truly replaces every aspect of traditional analog mixers, except you get better sound and tons more flexibility with digital presets and routing.

**Q10 Control Panel:** — The brain of the Q10, the DSP powered Control Panel replaces an external hardware mixer, while still providing the real-time mixing and easy monitoring that you get with an analog mixer. And since it’s powered by the powerful DSP processor on the PCI Card, mixing, monitoring and metering won’t slow down your computer. Works in combination with the Q10 hardware to provide a total digital mixing solution that includes flexible routing, zero-latency monitoring, snapshot preset recall, input level trim, digital peak metering and is +4/-10 selectable.

The Control Panel can be seen as a 20 channel mixer with a 2 channel monitor output that is routed to 1/4” stereo line outs on the back panel, and a 1/4” front panel headphone out. Ten of the channels are from the physical 10 inputs of the box (8 analog and stereo digital), and the other 10 channels are from the software. Any combination of previously recorded audio tracks can be played back, mixed and monitored individually or in subgroups, while simultaneously recording additional audio tracks. The control panel even comes in 4 cool colors that you can change as often as you’d like. This lets you match it to your studio, or make life easy on the eyes during an all night recording session.

**3-Stage Input Gain:** The input trim (found at the top of each mixer strip on the Control Panel) provides up to 75dB gain on mic inputs. This gain is done in the analog stage (pre A/D conversion), just like an analog mixer. In contrast, most other audio cards provide the gain after the A/D, which dramatically increases the noise. The Q10 software avoids this by sending commands to the analog circuitry in the breakout box to get the best sound possible. Actually has 3 separate gain stages; m2 (Mic 2), m1 (mic 1), and L (Line level), which are each optimized for that particular gain range for the best possible sound.

**ASIO Turbo Mode:** Enhanced ASIO 2 driver provides some of the best latency performance in the industry. Down to 4ms or less with some applications such as software synths and VST instruments. Great for real-time performance.

**ASIO Buffer Slider:** Not only is the ASIO driver really efficient, but it has a unique 31-step ASIO Buffer Slider which lets the user dial in the exact buffer size that is optimal for the computer. No other card goes this far to get real-time performance.

**Snapshot Preset Recall:** Hitting the Presets button on the Control Panel activates the Presets window, which let you save an unlimited number of screen shots to recall at any time. This is particularly useful when you need to change the patch bay settings or the input levels for different studio sessions. It's also nice to save different or special mixes so you can get up and running in no time.
Today's project studios need more than just a sound card. They need the same great sounding 24-bit/96kHz, multi-channel audio and DSP effects that the big guys have. Much more than just a sound card, the Direct Pro LX6 is a high-precision audio and MIDI interface that gives you everything that you need to record and playback professional audio on your computer. The intuitive user interface, professional monitoring capabilities and amazing sound quality make the LX6 a true recording revolution.

Features include 4-in/6-out 24-bit/96kHz sampling capability, real-time DSP mixing & effects and a shielded PCI card to keep out computer noise. The built in S/PDIF makes flawless 24-bit digital transfers to outboard gear, and the integrated MIDI I/O makes it an ideal solution for audio & MIDI workstations. The powerful on-board DSP processor provides real-time, zero latency DSP effects and keeps your computer running lighting fast. There are also separate headphone and line outs for easy monitoring.

The LX6 and Direct Pro 2496 are compatible with almost all audio recording software including Steinberg Cubase VST/32 & Nuendo, Cakewalk Guitar Tracks Pro, Home Studio & Sonar, Emagic Logic Audio and Syntrillium Cool Edit Pro 2000. Their 6 outputs and ultra low-latency performance make the Direct Pro LX6 and Direct Pro 24/96 a perfect match for software synths & samplers like Native Instruments, GigaSampler and Propellerheads Reason. Both also come bundled with a full version of Cakewalk's Pro Audio 9.0 recording software.

A truly professional audio interface for the project studio, the Direct Pro 2496 has all the features of the LX6 but adds XLR mic inputs and four mic preamps to combine all the pieces of a professional studio into one complete and easy-to-use 4-in /6-out system. Its four studio quality XLR mic preamps are quieter than most mixers and outboard mic preamps, with a THD+N of .002%, and can even be used as 1/4" line inputs for those looking to maximize studio quality and flexibility. The Direct Pro also offers 48v phantom power and 3-stage input level gain.

They have a headphone out right on the front of the unit to give you all the control over your mixes. The headphone gain is easily adjustable via the DSP software, which also does the real-time mixing of 10 channels to help you create the perfect mix.

Only Aardvark provides custom shielding on our PCI cards. Both the breakout box and the PCI card are designed to be completely noise free. This extra shielding keeps harmful computer noise out of your precious audio to give a pristine, high quality sound.

The 2 RCA connections on this PCI card provide the 24-bit, 96kHz digital in and out to your computer for lossless digital audio transfers from outboard digital audio gear. A must have for any pro or project studio.

www.bhphotovideo.com
AARDVARK

LX6 & DIRECT PRO 24/96

6 Analog Outputs

The rear-panel of the breakout box features four analog main outputs with 24 bit, 96 kHz +4dBu on 1/4˝ TRS jacks and 2 additional outputs on RCA jacks. All 6 outputs can be used simultaneously to take to a mixer or outboard effects units. These give excellent mix down flexibility and provide plenty of connectivity to the rest of your studio. The six outputs can also be used for surround sound mixing.

MIDI In/Out

Built-in MIDI interface lets you integrate MIDI instruments (synthesizers, drum machines, etc) into your digital audio system. The Direct Pro 24/96 breakout box features both a MIDI In and MIDI Out jack so you can send MIDI data to and from your favorite synth. And since the audio and MIDI are integrated in one box, your guaranteed perfect audio/MIDI synchronization.

Expandable

If you feel like expanding your Direct Pro 24/96 system, you can expand up to 4 units into one computer. In fact, all Aardvark audio interfaces can be expanded up to 4 units... mix and match! No other line of computer interfaces allows as much flexibility and expansion as the Aardvark Direct Pro Series.

Inputs

The LX6 has four 1/4˝ line level inputs, while the Direct Pro 24/96 has four combo inputs that accept either XLR mic or 1/4˝ line level inputs, or any combination of the two. This gives you the ultimate in flexibility, allowing you do all the work right in your computer.

4 Discrete Mic Preamps

Unlike other soundcards that use "mic-pre-on-a-chip" solutions, which are not discrete and can lack the clarity and definition needed for professional use, the mic preamps in the 2496 are a hand crafted, discrete transistor design that yields outstanding noise specs and pristine sound quality. They also have phantom power for condenser microphones. The mic preamps are shielded in the breakout box and combine with top of the line converters to deliver professional audio quality from the mic to your computer.

LX6 and Direct Pro 24/96 Bundled Software

The LX6 and 2496 set themselves apart by having a fully-DSP powered, user-friendly software control panel laid out just like an analog mixer with stereo monitor outputs. The hardware & software combination of the LX6 and Direct Pro 2496 replaces every aspect of having an analog mixer, audio interface, and 3 cool effects units, so you can monitor in real-time while recording direct to the computer with ZERO-latency! This frees up power for the native processor so you can record more tracks and use more plug-in effects processors. The Control Panel replaces an external mixer, while still providing real-time mixing and easy monitoring. And since it's powered by the DSP processor on the PCI Card, mixing and monitoring don't slow down the computer. Works in combination with the hardware to provide a total digital mixing solution that includes flexible routing, zero-latency monitoring, snapshot preset recall, input level trim, +4/-10 selectable I/O and true digital peak metering.

Control Panel

The Control Panel has complete mixing capabilities and is very easy to use. It can be seen as a 10 channel mixer with a 2 channel monitor output that can be routed to any of the 6 line outputs or the headphone output for monitoring. 6 of the channels are from the physical 6 inputs of the box (4 analog and 2 digital), the others are from the software. Any combination of previously recorded audio tracks can be played back, mixed and monitored individually or in subgroups, while simultaneously recording additional audio tracks from the LX6 or 2496. The panel comes in 4 colors, so you can match it to your studio, or makes life easy on the eyes during an all night recording session.

Compressor, EQ & Reverb

The 100% DSP generated Reverb/Echo, Compressor/Limiter, and Multi-band EQ let you add effects to incoming audio "on-input" while recording in real time with no-latency just where you need it most! Choose between simply monitoring the effects while recording "dry" to multitrack software, or you may record DSP effects. You can also audition the effects individually with the effects bypass feature.

Snapshot Preset Recall

Save an unlimited number of screen shots to recall at any time later. This is particularly useful when you need to change the patch bay settings or the input levels for different studio sessions. Saving different preset mixes you can get up and running in no time.

Cakewalk Pro Audio 9.0

The LX6 and 2496 are bundled with Cakewalk Pro Audio 9.0 multi-track recording and M I D I sequencing software. 28 tracks, 24-bit/96kHz support, real-time effects, MP3 enabled, import and sync digital video to audio, edit & print notation w/guitar tablature, real-time Guitar Fretboard display, time expansion/compansion, audio-to-MIDI Conversion, fade/envelope & crossfade, Direct X plug-in compatible, Parametric EQ, Reverb, Delay/Echo, Flange, Chorus, Pitch Shifting, Vintage Amp Simulation.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com

COMPUTER HARDWARE

ASIO Turbo Mode

The enhanced ASIO 2 driver provides some of the best latency performance in the industry. Down to 4ms or less with some applications such as software synths and VST instruments. Great for real-time performance. The ASIO also has a unique 31-step ASIO Buffer Slider which lets you dial in the exact buffer size that is optimal for your computer.

Output Routing (Patch Bay)

The patch bay allows routing of any input signal (as well as the DSP monitor mix) to any output (including the headphone output) in real time with no latency. You simply drag the source to where you want it to go. Tone and Silence signals can also be routed to any output for calibration purposes and system checks.
AARDVARK

AARK 24

10-in/10-out Audio Interface with S/PDIF and ADAT I/O

The Aark24 is a professional quality 10 x 10 PC interface that is in use everywhere, from home project studios to the most modern advanced studios, making amazing digital recordings worldwide. The Aark 24 easily integrates into your studio with eight 24-bit A/D and D/A converters, stereo S/PDIF and ADAT sync/optical digital I/O, all shielded in a rugged rack-mountable external breakout box.

Aark24’s superior 24 bit converters assure every nuance of your audio is captured faithfully. The digital link to any ADAT or digital mixer enables you to keep your audio tracks in the digital realm and achieve the kind of fidelity your audio projects deserve.

FEATURES

10 Inputs/10 Outputs
The Aark 24 has eight front-panel mounted, balanced TRS 1/4” analog inputs and outputs (individually switchable from +4 to -10 in the Control Panel software) connected to eight high-quality 24-bit A/D and D/A converters. The front panel of the shielded breakout box also features digital S/PDIF I/O, giving a high resolution 24-bit connection to digital devices such as external CD-burners.

ADAT Sync & Optical I/O
The rear-panel of the breakout box features ADAT optical and ADAT sync interfaces for professional recording flexibility. The optical I/O and ADAT Sync allow you to easily interface any ADAT or digital mixer to your PC.

Toslink
The Aark 24’s fiberoptic jacks are software switchable to accept the popular two-channel TOSLINK format as well. This lets you fly in tracks optically from DAT and CD players and even allows you to edit your Sony MiniDisc so you can record in the field and then master & edit back home on your PC.

MIDI In-Out
Integrate MIDI instruments (synthesizers, drum machines, etc.) with your PC’s digital audio system via the Aark 24’s built-in MIDI interface. (Although Aardvark’s digital interfaces don’t synthesize MIDI data, the inactive interfaces are developed with the same high standard applied to their active interfaces.

Control Panel Software
The Aark 24’s DSP powered Control Panel lets you meter each input and output signal, route any input or playback signal to any output, and create your own custom monitor mix with full level and pan control. It’s all generated by the on-board DSP, so it won’t slow down your PC’s precious CPU resources! The monitor mix or any input signal can be routed to any physical output of the Aark 24 breakout box via the digital patchbay. The patch bay allows the routing of any input signal (as well as the monitor mix) to any output in real time with no latency - true direct monitoring. Tone and Silence signals can also be routed to any output for calibration purposes.

ASIO Turbo Mode
ASIO drivers drastically reduce the latency inherent in PC-based audio systems. Low-latency, real-time integration makes the Aark 24 one of the most powerful workstations available. The ASIO control panel allows limiting of input and output channels, Direct Sound buffer size, ASIO buffer size and ASIO sample bit size. All assisting you in configuring your computer for optimum efficiency and the lowest latency possible.

Assignable Stereo Monitor Bus
Monitor any input or playback track with the click of a mouse. You can even mix, pan and level control each track independently as you’re tracking or recording to disk!

Switchable I/O Levels
Switch from professional +4dBu to consumer -10dBv, one at a time or change all 8 inputs and outputs at once. This means that the Aark24 interfaces to any mixer, MIDI instrument, or outboard gear. The signal levels for each analog input and output can be switched between balanced and unbalanced levels in the Aark Control Panel.
**Word Clock Sync**
Word Clock synchronization is standard on all professional digital audio gear and is used to keep “sample accurate” synchronization between all connected digital audio devices in your studio. Aardvark’s legendary reputation for high quality digital audio synchronization is prominently implemented in the Word Clock I/O, allowing seamless integration and rock-solid sync with other digital audio gear.

**USB3**
Portable USB Interface with Mic, Guitar and Line In
The perfect system for musicians and guitarists worldwide, the USB3 eliminates the need for an external mixer, sound card, guitar stomp box or even other recording software. The USB3 comes with everything needed to record, mix and play audio from any computer. Just plug it in and go. Extremely portable, you won’t find an easier and better sounding audio experience on your laptop than the USB3—clean 24-bit converters, solid steel construction, premium mic preamp, brilliantly warm EFR Hi-Z guitar input and easy headphone monitoring.

**Inputs/Outputs**
Classic design includes easy access for headphones, mic & guitar input, stereo line I/O and knobs and sliders to control audio levels.
- Convenient 1/4˝ mic preamp captures the audio with absolute clarity and definition.
- Selectable EFR circuit (Enhanced Frequency Response) Hi-Z input adds extra warmth and clarity to any guitar or bass. The EFR lets guitarists connect directly into their computer and get a sound that adds clarity and “punch” to any high-impedance instrument, and warmly enhances the sound of electric guitar or bass.
- Stereo 1/4˝ line inputs and outputs give you full stereo I/O capability so you can record and play easier than ever before.
- The USB3 is powered from the USB bus of the computer. No extra power cord or bulky wall-wart adapter necessary.
- A clever mixing control surface allows for precise adjustments for all input and output audio levels. This gives you total control over your headphones, speakers and microphones, and gets you the best recording levels as well.

**Highest Quality Sound**
The USB3 sounds great because it uses high-resolution, 24 bit A/D converters so you’re getting the most audio detail possible.
- Record at either 44.1 kHz for CD recordings, or 48 kHz when doing audio-for-video applications.
- Solid steel construction ensures proper shielding from magnetic and electrical interference—far surpassing built-in laptop audio, cheap sound cards and other plastic USB audio interfaces.
- Real-time input metering lets you maximize your input levels without clipping.
- Simultaneous Record/Playback feature lets you record and playback audio tracks at the same time, perfect for overdubbing, and it’s enhanced by the high quality drivers which provide ultra low latency.
- Record Select switch allows separate monitoring of recording buses similar to working with an outboard mixer and sound card. This allows for up to 5 channels of low-latency monitoring for recording, mixing and playing back multiple tracks from any audio software.

**Software Drivers**
Record with one application, then transfer the audio files to another application and edit, mix and master to your heart’s content.
- ASIO drivers get down to 4 ms latency and guarantee seamless integration with ASIO programs like Cubase, Emagic Logic, Bias, Native Instruments and Propellerheads. This means you get real-time performance with soft synths & samplers and can monitor with VST plug-in effects in real-time.
- Control your buffer settings to get the best performance from your computer. The TURBO, FAST and NORMAL mode each have specific buffer settings so you’re guaranteed uninterrupted audio with the best latency possible.
- Bundled with Cakewalk Guitar Tracks 2 for the PC and Cakewalk Metro for the Mac. Everything you need to achieve professional results with the USB3, they are creative music production tools simple enough for novice users to start recording, editing and mixing their own digital audio and MIDI tracks right away, but powerful enough for the experienced engineer.

**DSP Engine**
The heart and soul of the Aark 24 is a powerful Motorola 56301 DSP engine. The DSP handles all the software extras that are included in the control panel like digital peak metering, mixing, panning, level control and the flexible output router. It also manages up to four Aark 24 cards in the same PC.
AARDVARK

AardSync II

Low-Jitter Master Clock for Digital Audio

The AardSync II is the master word clock sync generator of choice for professional recording studios throughout the world. Not only does it provide a common word clock source for the digital studio, but it has become legendary in the industry for its sonic benefits. Innovative, proprietary digital technology ensures exceptional jitter reduction in the critically audible region. The resulting pure and precise audio clock signal enables today’s 24-bit A/D & D/A converters to operate more efficiently, improving their accuracy and resolution. The benefits of clocking to an AardSync II are immediate and spectacular.

FEATURES

All digital audio equipment needs some form of master clock to derive its timing reference or to operate at a desired sample rate. Because only one clock source can be the master clock at any given time, problems can occur when multiple digital devices are synced or “daisy-chained” together. These problems usually manifest themselves in audible “clicks and pops” and a general loss in audio fidelity and stereo imaging. As the sole master clock for the entire digital studio, the AardSync II solves these issues. It also gives the A/D and D/A converters a more accurate timing reference, causing them to operate more efficiently, which results in improved sonic clarity and stereo imaging.

To sync to an AardSync II, each piece of digital equipment should be connected to the card’s BNC Word Clock, SuperClock (256), or AES/EBU outputs. For larger studios, additional outputs to the AardSync II can be provided by Aardvarks Word Clock or AES/EBU distribution amps.

- Low Jitter improves A/D D/A resolution!
- Eliminates clicks and pops
- Multiple Clock Outputs
- AES/EBU sync, WC, 2X WC & Superclock outputs
- NTSC 4% & PAL .1% Sample Rates
- Problem Free Synchronization
- 2x Word Clock for 96 kHz /88.2 kHz

What Does it Do

The AardSync II guarantees a sample-accurate sync lock between all digital audio gear in the studio, and will lock to video black burst if necessary. This means the audio workstation and everything connected to it will remain in perfect synchronization from beginning to end, recording to playback. The AardSync II can be set to generate 44.1, 48, 88.2 and 96kHz rates as well the standard Pull-Ups and Pull-Downs to easily handle film and video transfers. Keeps perfect sync between digital mixers, A/D/D/A converters, CD-Rs and DAWs. Compatible with digital audio gear from Digidesign, Avid, Mackie, Sonic Solutions, Tascam, Yamaha, and more.

What is Word Clock?

Word clock is a square-wave signal that is transmitted via a 75 Ohm BNC connector. A square wave alternates between high and low states, which makes it ideal as a timing reference. Because many devices can use word clock signals as their master timing reference, it has become a standard type of digital audio system clock.

Makes A/D Converters and Pro Tools Sound Better

When an A/D converter or Pro Tools 888/24 references the AardSync II’s ultra low-jitter clock, it will sample the analog audio wave more accurately than when referencing to its own internal clock. This improvement in accuracy of A/D conversion results in:

- Increased clarity and definition for all musical instruments and voices.
- Bass frequencies become tighter, more focused and easier to place in the mix.
- High frequency instruments sparkle and shimmer with clarity.
- Ambience, reverb and delay effects become easier to manage in the mix.
- Stereo imaging and separation between instruments is vastly improved.
- Digital “harshness” becomes a thing of the past.

Optional Racks:

19˝ Mono Rack: The 2U Mono Rack is a 2 space, 19˝ rack plate/rack tray enclosure that gives your Aardvark PC audio gear a truly professional look. The 2U Mono Rack is compatible with AardSync II, Sync DAs, or Aard DDA flush in the center of the 2U rack.

19˝ Dual Rack: The 2U Dual Rack will mount any two AardSync IIIs, Sync DAs, or Aard DDAs side by side in the same 2U rack.
**1x6 AES/EBU Audio Distribution**

The AardDDA is a 1x6 AES/EBU audio distribution amp that helps you avoid impedance mismatches, clock jitter & signal dropouts, and in general will make your digital life worry free. Combining the standard 1x6 AES/EBU I/O with the optional S/PDIF adapters, you can configure the input and the 6 outputs to perfectly match your setup. For example: S/PDIF input, 4 AES/EBU & 2 S/PDIF outputs. Or an AES/EBU input, 1 AES/EBU & 5 S/PDIF outputs. AardDDA lets you easily interface any number of consumer and professional pieces of equipment easily and efficiently. The AardDDA can also distribute AES/EBU or S/PDIF sync ensuring worry-free digital audio and digital sync distribution. And since the AardDDA’s transformer isolated outputs are also individually buffered you can not only distribute a clean digital audio signal to different devices, but over longer distances as well.

- 1x6 digital audio distribution
- 6 individually buffered digital XLR (AES/EBU) outputs
- Filters out ground loop noise
- Channel Status: Source channel status is echoed
- No re-clocking.
- Optional S/PDIF I/O adapter available

**SYNCDA  Word Clock Distribution**

Because only one clock source can be the master clock at any given time in the digital studio, problems can occur when multiple digital devices are synced or “daisy-chained” together. The Sync DA solves this by providing 6 additional Word Clock outputs from a single clock source. It allows any digital device, such as the AardSync II master clock or a digital mixer to be the master clock in any given situation. The Sync DA feeds Word Clock on 6 BNC outputs, allowing each piece of connected digital equipment to receive a separate feed and be in sync with the master clock device. Two of the outputs can be configured to SuperClock 256, if the Sync DA is receiving an AES/EBU input. The SyncDA is a great way to expand the AardSync II’s outputs, allowing larger digital audio studios to take advantage of its superior clocking technology.

**Compatibility**

Compatible with any digital audio device that has word clock or AES/EBU I/O, including:
- Aardvark’s AardSync II Master Clock Generator, Direct Pro Q10 and Aark 24 Digital Mixing consoles
- Hard Disk multitrack recorders
- Outboard A/D/D/A converters, CD-Rs

**Features**

- Extremely low jitter distribution!
- Makes any DAT, DAW or mixer the Master Clock
- Distributes audio clock throughout the facility
- Verify exact sample rate

**Specifications**

- **Clock Source Inputs:**
  - Word Clock (BNC), AES/EBU (XLR)
- **Clock Outputs:**
  - 5 Word Clocks (BNC)
  - 1 256 SuperClock (BNC)
  - 1 AES/EBU Thru (XLR)
An affordable 16-channel 24-bit/96kHz A-D converter, the AD-16's powerful multi-channel configuration makes it the ideal front end for many digital audio workstations as well as for surround applications. The system offers ADAT optical outputs and optional AES/EBU and TDIF, for compatibility with many digital audio systems, plus syncing to word clock or its own internal high stability clock. Apogee Word Clock output is also provided. Optical outputs on the AD-16 support the Sonorus S/MUX specification for sample-splitting of high sample-rate audio data into multiple ADAT-style optical interfaces. Additional light-pipe outputs are provided to deliver up to 96 kHz digital audio from all 16 channels in this mode. An expansion port allows the addition of optional TDIF or AES/EBU daughter cards.

FEATURES

- An elegant and effective user interface characterizes the AD-16, including a power switch, sample rate/sync selector, clear “overs” button, and two buttons for Soft Limit and UV22HR respectively. Designed to closely match its companion, the DA-16 (16-channel D/A) in appearance.

- Balanced analog inputs are organized into two groups of eight channels on 25-pin D connectors.

- LEDs indicate signal status on each channel, with the intensity modulated by the signal level to give an “analog-like” display. A second LED per channel indicates “overs”, which may be user-configured.

- Apogee’s unique SoftLimit system maximizes digital output level without overs. These features are easily activated with a pair of buttons, and may be optionally applied to channels 1-8, 9-16 or all.

- Includes Apogee’s industry-standard word-length reduction system, UV22HR. Reduce word length from the converter’s 24-bits to 16-bit for CD mastering, Internet audio, etc., or 20-bit for DVD. High resolution detail is retained without creating artifacts.

- Rear panel DIP switches select regular ADAT versus S/MUX mode, over settings, UV22HR output resolution and infinite hold for the over indicators.

AD/DA-16 HD Pack—The Ultimate Pro Tools HD Upgrade

Put your money where your sound is... For a small percentage extra, you can auditorily and significantly improve the quality of your Pro Tools HD system. The AD/DA-16 HD Pack gives you everything you need to add to a 192 Digital I/O. It includes the AD-16 (with AES Expansion card), the DA-16 and the special digital interconnect.

- DigiDesign’s 192 Digital I/O is a 24-bit, 192 kHz multichannel interface designed to allow the interconnection of digital audio sources with the Pro Tools HD environment. 16 channels of AES/EBU, TDIF and ADAT I/O, along with S/PDIF I/O.

- Connect the AD-16 and DA-16 to the 192 Digital I/O using AES/EBU at up to 96 kHz. A special cable, part number AES16-DIG1-IFC, makes the direct connection between the AD/DA-16 and the 192 Digital I/O.
16-Channel 24-bit/96kHz D-A Converter

Designed to interface seamlessly with the latest hard-disk recording systems, the DA-16 'IntelliDAC' offers 16 channels of Apogee quality and 24-bit/96kHz D/A conversion in a compact, convenient 1RU package, at an exceptionally affordable price. The converters can source their digital input from either AES/EBU, ADAT optical or TDIF sources, and the unit can sync to word clock or a specified input. ADAT and TDIF inputs are organized into two groups of eight, and channels 1-8 and 9-16 can have different sources. In addition, the light-pipe inputs accept the Sonorus S/MUX protocol for sample-splitting high-resolution signals into optical interfaces, allowing access to all 16 channels -the first time this protocol has been included on an Apogee converter.

- Input sample rate is automatically detected, and a two-level "Lock" indicator shows "wide" (up to ±150°) and "narrow" (5°) lock.
- LEDs indicate signal status on each channel, with LED intensity modulated by the signal level to give an "analog-like" display.
- Balanced analog outputs come in groups of eight channels on 25-pin connectors, in keeping with other Apogee D/A conversion systems using these connectors (the pinout is the same as on Tascam systems).
- "IntelliDAC" relates to the DA-16's unique "intelligent" two-stage re-clocking system. Apogee excels at removing jitter from the incoming clock signal, but for extremely jittery input sources, even more control is needed.
- The DA-16 does this by using two clocks. A fast-responding 'read' clock, with a wide locking range, fills a dedicated FIFO buffer, while an ultra-low-jitter 'write' clock writes the data out of the buffer, and is used to clock the converters. The advantage is that both incoming clock and data are now de-jittered.

- The system is also less sensitive to phase errors between synchronous digital sources. Errors up to ±150° can be corrected, substantially reducing the chances of glitching, and enabling the D/A converter to offer superior performance even with extremely unstable input signals.
- A calibration mode is also included, allowing quick and easy adjustment of the reference level for each channel.

NativeTools Studio Edition

The power of Nuendo; the sound of Apogee. The ultimate pro-audio combination! Combine Apogee's superb-sounding AD-16 & DA-16 16-channel 24/96 converters with the power of Steinberg's Nuendo workstation - on either Macintosh or PC - and you've stepped into a new world. That's Apogee's NativeTools: the ultimate combination of sonic quality, native processing power and value for money - all in one package. If you're looking for the ultimate pro-audio combination, NativeTools is the answer. Everything you need (except the computer) in one box for the complete DAW system that is taking the audio world by storm.
MINI-DAC
2-Channel 192kHz D/A Converter

Following the huge success of Mini-Me, Apogee's latest addition to their Mini Series, the Mini-DAC is a professional quality, 192kHz D/A converter — and the ultimate portable and compact solution for studio playback, reference monitoring, USB connectivity to your DAW, and premium home audio systems.

Mini-DAC provides AES, optical (ADAT, S/MUX & S/PDIF) S/PDIF Coax, USB inputs, and analog output level control. Also included with Mini-DAC is "digital-thru-mode", a unique USB technology allowing the connection of non-USB digital devices to a computer/DAW.

- If you are using OS X version 10.2 or better, enjoy true plug and play with Apple's Core Audio. Simply plug Mini-DAC into your computer via USB and it will appear as a hardware option in Logic, Bias, Peak, and other Core Audio compatible DAW's.

FEATURES

- A comprehensive mono/stereo monitor section allows you to balance the direct sound you're recording with audio returned via the USB port.
- Low-latency USB interface carries two channels 24-bit/48 kHz audio to and from the computer for monitoring. ASIO drivers are also supplied for minimum latency.
- Includes AES/EBU and S/PDIF (RCA/coax) outputs which are available simultaneously, clocked by a high-stability reference crystal oscillator. Makes it the ideal master clock.
- Low power consumption makes it ideal for battery operation. The supplied power unit supplies 12v, but the Mini-Me will run on AC or DC from 6 to 16 volts.

Front panel feature left and right input level controls with a click stop at the far left that activates a preset line/cal level, set with multi-turn trimmers. Accurate LED indicators between the input level controls give a clear display of available headroom.

Two-channel universal XLR/TRS mic and instrument inputs with preamps and phantom power, and line-level input. (Instrument input is automatically selected when you plug in a TRS jack.)

A single control selects the sample rate and word length. The Mini-Me's converters output a full 24-bit signal at any of the standard rates: 44.1, 48, 88.2 and 96kHz sampling. In addition, select 16- or 20-bit outputs at 44.1 or 48 kHz using Apogee's industry standard UV22 HR system for word-length reduction.

Even if the sample rates get mismatched between the Mini-Me and your computer, it will convert rates automatically. And if you select 24-bit on the Mini-Me and 16-bit on your recording software, the unit will apply UV22HR automatically to the USB output.

Apogee has long been famous for their Soft Limit process, designed to maximize digital level without overs – but now they've added Push-IT – a unique three-curve stereo compressor/limiter circuit. It's ideal when you need extra punch, or require a safety net when making live recordings. This powerful circuitry takes Apogee's dynamics control to a whole new level – from the people who invented soft limiting.

A comprehensive mono/stereo monitor section allows you to balance the direct sound you're recording with audio returned via the USB port.

Low-latency USB interface carries two channels 24-bit/48 kHz audio to and from the computer for monitoring. ASIO drivers are also supplied for minimum latency.

Includes AES/EBU and S/PDIF (RCA/coax) outputs which are available simultaneously, clocked by a high-stability reference crystal oscillator. Makes it the ideal master clock.

MINI-ME
2-Channel Mic/Instrument Preamp

The Mini-Me is a portable 2-channel 24-bit/96kHz A/D converter with built-in mic/instrument preamps, featuring a special low-power, wide range supply-voltage design for maximum flexibility. But this compact unit is not a toy. It is a professional audio product and delivers true Apogee professional-quality audio performance, from input to AES/EBU and S/PDIF digital outputs. And with a low-latency USB interface, you can use almost any software you choose. Other features include headphone out with level and Direct/USB Return Mix knobs, unique multicurve comp/limiter, and flawless 16- and 20-bit output using UV22 technology.

Front panel feature left and right input level controls with a click stop at the far left that activates a preset line/cal level, set with multi-turn trimmers. Accurate LED indicators between the input level controls give a clear display of available headroom.

Two-channel universal XLR/TRS mic and instrument inputs with preamps and phantom power, and line-level input. (Instrument input is automatically selected when you plug in a TRS jack.)

A single control selects the sample rate and word length. The Mini-Me's converters output a full 24-bit signal at any of the standard rates: 44.1, 48, 88.2 and 96kHz sampling. In addition, select 16- or 20-bit outputs at 44.1 or 48 kHz using Apogee's industry standard UV22 HR system for word-length reduction.

Even if the sample rates get mismatched between the Mini-Me and your computer, it will convert rates automatically. And if you select 24-bit on the Mini-Me and 16-bit on your recording software, the unit will apply UV22HR automatically to the USB output.

Apogee has long been famous for their Soft Limit process, designed to maximize digital level without overs – but now they've added Push-IT – a unique three-curve stereo compressor/limiter circuit. It's ideal when you need extra punch, or require a safety net when making live recordings. This powerful circuitry takes Apogee's dynamics control to a whole new level – from the people who invented soft limiting.
“Digital-Thru-Mode”
These days, if you are doing digital, you need connectivity options. Through Mini-DAC’s USB port, you can interface directly with your computer and virtually any DAW via. However, Apogee has expanded the advantage USB capability to offer what they call “digital-thru-mode”. This gives the option of interfacing non-USB digital devices with your computer. To use, you simply set the Mini-DAC’s input selector to “USB”… connect any two-channel digital device like Apogee’s Mini•Me, Trak2, or Rosetta, and you have just USB enabled your favorite A/D converter and interfaced it with your computer/DAW. No other hardware required.

Precision Reference Monitoring
Are you using a massive mixer just to ride your monitor levels? Or do you have a great A/D but inferior D/A? Then make a little room for Mini-DAC. With comprehensive level control and a high quality headphone output you can hear exactly what you are committing to while recording. And when it is time to mix down, Mini-DAC provides the optimum stereo image and the most faithful analog reproduction of your carefully recorded digital audio that money can buy. Mini-DAC is also a great way to optimize your home audio system. Connect your premium CD/DVD player to Mini-DAC and then out to your speakers for a superb sonic experience that your discerning ears will appreciate.

Additional Features
◆ Inputs include AES (single & double wide), Optical (ADAT, S/MUX & S/PDIF), S/PDIF Coax, & USB
◆ Support for OSX CoreAudio and USB drivers available for Windows XP
◆ Analog output level control for direct connection of powered monitors
◆ Low-current, low-voltage - ideal for location/ENG
◆ Stylish, compact and portable (5.5 x 10”)
◆ 1/3 rack width with a 1U rack-mount kit available

The Rosetta 800 takes two of Apogee’s most celebrated products and the latest in high-definition digital and combines them into one impressive package. The Rosetta 800 gives you eight channels of superior AD/DA conversion at sample rates of up to 192k, Apogee’s “SoftLimit”, “UV22HR”, and their advanced “Intelliclock”. The result is a premium digital recording solution that is built for the professional recording facility yet economical enough for the project studio.

All the features of the Rosetta A/D PLUS—
◆ 96k standard and optional 192k sample rates
◆ Optional Firewire card lets you connect natively to any Firewire input device, without additional hardware.

ROSETTA 800
8-channel, 24/96k A-D/D-A Converter (upgradeable to 192k)

Ideal for project studio recording and mastering, the Rosetta A/D is a 24-bit analog to digital converter with the most common digital interfaces as standard. Like the Rosetta Stone, discovered by Napoleon’s soldiers in Egypt in the 18th century which provided the key to translating the mysterious hieroglyphs of the ancient Egyptians, Apogee’s Rosetta A/D is the key to flawless translation of analog signals into multiple digital formats. And, the feature of the Rosetta A/D has been carefully tailored to project studio requirements—you don’t pay for features you’ll never use.

◆ Analog inputs operate at pro or consumer levels, balanced or unbalanced. The highest quality Apogee 24-bit conversion, at 44.1/48 kHz sample rates (standard version) or 44.1/48/88.2/96kHz, feeds two AES/EBU outputs so you can feed two machines at once (44.1/48 kHz version is upgradeable to 96kHz).
◆ Built-in ADAT, TDIF, and S/PDIF coax/optical interfaces (two of each)
◆ User-defined over indication
Trak2 is the ultimate analog/digital combination. With the Trak2, you have it all, in one compact single-unit rack space: superb mic pre; incredible A/D; any interface you need; digital routing; and behind it, Apogee's legendary name and reputation for the very highest audio quality available in the industry today.

Trak2 features the highest-quality 2-channel mic preamp on the market. ±90 dB gain, front panel inputs, analog inserts/outputs and phantom power. Behind the mic preamp is a full 24-bit/96 kHz, 117 dB dynamic range Apogee A/D converter. Built-in AES and S/PDIF interfaces, plus the ability to plug in cards for offer almost any interface you can imagine including Pro Tools, ADAT, TDIF and more. Plus there is optional video sync, optional 2- or 8-channel D/A cards with virtually the same incredible specs, eight-channel routing and format conversion, a serial/MIDI connection, a powerful software-controlled interface giving access to a host of advanced features, and firmware you can update over the Internet.

**FEATURES**

**Superb Mic Preamp...**
The Trak2’s discrete mic preamp is accessible via rear panel XLRs or the front-panel universal XLR/TRS connectors. The sound of this preamp will have you using it on every session, analog or digital. The preamp also accepts hi-Z instrument inputs at the front panel, for maximum versatility. An insert point is included to provide an analog output or to allow the insertion of analog processors into the Trak2 signal path.

**...incredible A/D**
Apogee’s award-winning 2-channel, 24-bit A/D converter operates at 44.1, 48, 88.2 and 96 kHz with a dynamic range over 117 dB. The A/D also includes Apogee’s Soft Limit with digital adjustment control for maximum digital level without overs, and Soft Saturate with digital adjustment to simulate analog tape compression. Both can be switched in and out on one or both channels.

**Add a D/A**
A special slot for an optional 2- or 8-channel D/A card with specifications matching those of the A/D section, turns the Trak2 into a complete digital audio conversion system with two A/D channels and up to 8 D/A.

**Interface Versatility**
Two Apogee Multimedia Bus (AMBus) slots are provided in addition to the built-in AES/EBU and S/PDIF output to interface with Pro Tools, ADAT, TDIF, SDIF-II, SSL HiWay, etc. Many cards support Apogee Bit-Splitting, which enables you to use standard 44.1/48, 16-bit recorders to store 20-, 24-bit, and even 96kHz signals.

**UV22 HR**
Apogee’s industry-standard UV22 HR (High Resolution) system takes a high-resolution digital signal and reduces the word-length to 16 or 20-bits for CD or DVD mastering while maintaining 24-bit detail. Trak2 also includes Apogee’s Ultra-Low Jitter Clock, used to lock the unit to incoming digital or video signals and virtually remove jitter.

**Front Panel**
- Clear LCD display shows configuration and signal flow.
- Cursor controls/delta-wheel for fast settings changes.
- Programmable Quick Keys for instant access to frequently-used functions.
- Easy-to-read 2-channel LED bar metering
- User-definable over detection

**Additional Features**
- 10 to 8 Digital Routing
- Low/High settings for multi-pass and mastering operation.
- Adjustable Soft Limit with digital adjustment control for maximum digital level without overs.
- Soft Saturate with digital adjustment control simulates analog tape compression
- MIDI In/Out/Thru and serial port
- Programmable ‘Quick Keys’ for instant access to frequently-used functions.
- 96kHz Headphone D/A with high output 40W power amplifier.
- User saveable/recallable presets
- Video sync capability
- Clear LCD display shows configuration and signal flow
- Cursor controls/delta-wheel for fast settings changes
- Easy-to-read 2-channel LED bar metering
- User-definable over detection (1-4 digital full scale)
- Ideal companion for Steinberg’s Nuendo system
The Trak2 features Apogee's stunning 24-bit digital conversion. The quality of your A/D converter defines the quality of the entire digital signal from then on - so you need the best. Is it a superlative 2-channel mic preamp followed by the highest quality A/D, or a world-class A/D preceded by the best-sounding mic pre you've heard? Either way, you'll notice the Apogee difference.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Multi-segment, multi-mode peak/average LED meters give a clear indication of level, with user-defined over indication. Meter either before or after your recorder. Super-high resolution calibration mode, and a phase meter to keep you on track.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Apogee's proprietary technologies are selectable on a per-channel basis. Soft Limit allows maximum level without overs; Soft Saturate adds the warmth and punch of analog tape compression.

LEDs indicate phantom power, polarity, insert and aux input status.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Apogee's UV22HR system preserves maximum detail when reducing the Trak2's 24-bit conversion to 16- or 20-bit for CD or DVD. Low (multi-pass) or Normal (mastering) settings for maximum flexibility.

Also, the UV22HR system preserves maximum detail when reducing the Trak2's 24-bit conversion to 16- or 20-bit for CD or DVD. Low (multi-pass) or Normal (mastering) settings for maximum flexibility.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Two 8-channel AM Bus slots are provided, supporting cards like those in the AD-8000. Interfaces include a direct Pro Tools connection, ADAT, TDIF, SDIF-II (DASH), SSL HiWay and others.

All installed interfaces can be used simultaneously; any signal input to the Trak2 is output from all available interfaces. AM Bus technology allows full 8-channel digital format conversion, for maximum versatility in the studio.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Inserts allow you to patch analog processing gear between the mic pre and the A/D converter, or to derive an analog output from the mic pre-amp alone for processing elsewhere.

Inserts allow you to patch analog processing gear between the mic pre and the A/D converter, or to derive an analog output from the mic pre-amp alone for processing elsewhere.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

All installed interfaces can be used simultaneously; any signal input to the Trak2 is output from all available interfaces. AM Bus technology allows full 8-channel digital format conversion, for maximum versatility in the studio.

The super-smooth linear power supply is built around a custom toroidal transformer, minimizing interference and avoiding potential spikes and noise. A generously-specified exposed heat sink is included.

All installed interfaces can be used simultaneously; any signal input to the Trak2 is output from all available interfaces. AM Bus technology allows full 8-channel digital format conversion, for maximum versatility in the studio.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

With the Digi-8+ AM Bus card, the Trak2 becomes a unique Pro Tools interface, communicating direct with the computer for super-quality performance.

With the Digi-8+ AM Bus card, the Trak2 becomes a unique Pro Tools interface, communicating direct with the computer for super-quality performance.

The Trak2 is controlled from the large graphical backlit LCD display, which indicates signal flow and the status of the different parameters. Navigate with the cursor keys; change values with the delta wheel. Push the wheel to set the value.

Inserts allow you to patch analog processing gear between the mic pre and the A/D converter, or to derive an analog output from the mic pre-amp alone for processing elsewhere.
2-Channel 24-bit/96kHz A-D/D-A Conversion System

Apogee’s first 96kHz system, the PSX-100 offers many of the features of the Trak2 but without mic pre-amps and strictly 2-channels. The PSX-100 is equipped with built-in ADAT, TDIF, S/PDIF coax and optical, plus multiple AES/EBU interfaces. It features Apogee’s proprietary UV22HR word-length reduction system (which can be applied to either the A/D or the D/A) and SoftLimit for maximum level without overs. An auxiliary output allows a full-resolution output to be derived even when UV22 is in use on the main interfaces. The wide range of standard interfaces provided and the multiple AES I/O ports allow use for signal distribution and format conversion as well as for A/D and D/A applications.

Three Operating Modes:

- The PSX-100 has separate A/D and D/A sections which may be clocked separately and configured to work together in different ways. The digital inputs and the A/D output are fed into a routing section which sends signals to the D/A and Aux output or to the main digital outputs, depending on which modes is selected.
  - In Confidence Monitor mode the A/D and D/A are independently clocked (and can even run at different sample rates). The output of the A/D is available at all the digital outputs, and the D/A can receive its signal from any of the available digital inputs. The bargraph metering can be switched between A/D and D/A. Two separate signal paths through the unit in this mode, other modes utilize a single path.
  - Digital Copy mode takes the selected digital input and provides it to all the PSX-100’s outputs, digital and analog. Both clocks in this mode are synchronized to the digital input. This mode is ideal for format conversion as well as offering the maximum D/A flexibility.
  - In Analog Monitor mode, the A/D is fed to all the system outputs and to the D/A. The main clock is used as the reference (locked to crystal or an external digital source), while the auxiliary clock is slaved to it.

- Two channels of Apogee’s true 24-bit A/D and D/A conversion with 117 dB dynamic range. Level trim of A/D and D/A levels via easy screwdriver adjustment for instant calibration and gain structure alignment.
- Apogee quality at 44.1, 48, 88.2 and 96 kHz
- Built in interfaces include AES/EBU, ADAT, TDIF and S/PDIF (coax and optical)
- Balanced or unbalanced analog I/O
- Exclusive active self-balancing analog I/O
- Gold-plated XLR jacks for analog and AES/EBU I/O, RCA jacks for S/PDIF I/O
- AES/EBU distribution amplifier capability
- Monitor the A/D output or select S/PDIF coax or optical; ADAT; TDIF or either of two AES/EBU inputs (one AES input at 88.2/96kHz sampling). Synchronize the D/A to digital in or to the A/D sync source.
- Apogee Soft Limit helps you record at a higher level without overs
- Easy-to-read light-bar metering, includes “over” indication with 2-second/infinite hold. User-defined “over” setting (1-4 consecutive digital full-scale readings). Mute the A/D or D/A in “confidence mode”. Calibrate with ±0.1 dB setup accuracy.
- Individual L-R channel muting at the touch of a button, instantly controlling the signal from the main digital outputs.
- Two proprietary Apogee low-jitter master clocks
- Optional video sync card allows the PCX-100 to lock to NTSC/PAL video
- Apogee Bit-Splitting (ABS) modes allow the two-channel 24-bit signal to be recorded using pairs of tracks of a 16-bit 44.1/48kHz sampling recorder, via ADAT, TDIF or AES/EBU. In ABS-96 mode, you can record stereo at 96kHz sampling on a 16-bit 8-track.
- UV22HR encoding process translates 24-bit signals to 20 or 16-bits with no quality loss (Not on 88.2 & 96kHz sample rates)
- Word Clock I/O on BNC connectors. The WC input socket can act as a video input when the video option card is installed.
- A 10-way DIP switch allows ‘set-once’ parameters for analog input/output level; pin 2/3 hot; 2-second or infinite ‘over’ indication; ‘over’ definition; ABS enable on AES input and special sync parameters.
- MDM input selection lets you select the pair of tracks you want to listen to (or the set of tracks for replaying a bit-split source).
- Special Edition (PSX-100SE) available with upgraded op-amps, along with additional level of power supply filtering. The D/A section includes a new third-order Bessel filter, the A/D includes a specially-designed anti-alias filter that smooths top end response.
APOGEE DIGITAL

BIG BEN

Studio Master Clock and Word Sync Distributor

For years audio professionals have been asking when Apogee was going to make their legendary clocking technology available as a stand-alone master clock. Introducing Big Ben, a radical new studio timepiece that will set the pace for all master clocks to come.

FEATURES

C777 Clock
Technology up to 192kHz

At the heart of any word clock regeneration is a phase lock loop (PLL). Currently, and most commonly in audio applications, the PLL is a combination of analog and digital elements without the ability to dynamically adapt to the nature of the external clocks. That's where Apogee's C777 clock comes in. The C777 utilizes an entirely digital process, that Apogee has developed using the most advanced Direct Digital Synthesis (DDS) technology available along with DSP based digital filtering. The result? The most aggressive jitter reduction ever. With a stable, crystal based digital PLL ticking away as it's heart, Big Ben is able to intelligently manipulate incoming signals and adapt to them accordingly.

Realtime Format Conversion

- Not that you would dare expect it from a master clock, Big Ben gives you realtime format conversion between all digital formats. Use Big Ben's intuitive digital display to go from S/PDIF to AES/EBU, AES/EBU to ADAT, ADAT to S/PDIF, etc.
- AES, S/PDIF, Optical I/O - Word Clock/Video In - 6 Word Clock Outs
- Optional Firewire connection to facilitate locking and format conversion with other Firewire devices

“SureLock”

What happens when Big Ben encounters the ultimate disturbance in clocking, a dropped signal? With “SureLock” Big Ben will compensate by remaining locked on the last relevant frequency sent by the delinquent device. When the signal resumes, Big Ben will gradually, and smoothly re-synchronize without interruption.

Termination

Another feature to help you stop watching the clock is Big Ben's termination sensing ability. Very often in an elaborate audio chain word clock signals are improperly terminated. Big Ben will chime in with a visual indication of over or under termination on it's digital display for each word clock output, allowing you to troubleshoot more quickly and get back to business.

Inputs:
- 2 x AES/EBU on XLR 44.1-192kHz single-wide and 88.2 k–192k double-wide.
- S/PDIF optical on TOSLINK 44.1-48k
- S/PDIF coaxial on RCA 44.1-192k
- ADAT 44.1-48k
- ADAT/SMUX II for 88.2-96k
- ADAT/SMUX IV for 176.4-192k
- Word Clock BNC 44.1 –192k
- Video
- Firewire card option provides clocking and format conversion functionality to Firewire equipped devices.

Outputs:
- 2 x AES/EBU on XLR single or double wide 44.1-192k
- S/PDIF coaxial 44.1-192k
- S/PDIF optical on TOS-LINK 44.1-48k
- 6 x BNC Word Clock 44.1-192k (of which 2 can output 256fs at low sample rates)
- ADAT
- SMUX II/SMUX IV
- Optional Firewire

Specifications:
- Sample rates: 44.1, 48, 88.2, 96, 176, 192kHz
- Video: PAL/NTSC/60Hz
- “SuperClock” (256fs)
- Pull up/down 0.1% and 4% from any sample rate
- Three stage termination indicator (under, correct, over) on each Word Clock output
- 4 digit numeric true sample rate indication

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

USB Audio Capture Interfaces

The UA-1A (analog) and UA-1D (digital) are straightforward USB audio I/O devices that turn your USB-equipped computer or laptop into a digital audio recorder—quickly and easily. Convenient USB connection provides clean digital data transmission as well as power—they are completely powered by the USB bus. And they are MME (WIN) and Sound Manager (Macintosh) compatible, so they will work with a host of digital audio recording software packages for both Mac and Windows.

The UA-1A is a mouse-sized device for analog input/output. Internal D/A and A/D converters operate at 16-bit/44.1kHz. A pair of stereo RCA input/output connections allows you to capture audio from CD players, keyboards or any analog device with line level output connections. The UA-1D Digital Audio Capture comes in a similar package, but offers both optical and coaxial S/PDIF digital connection, allowing you to connect any S/PDIF device, including component CD recorders, MiniDisc players/recorders, digital home receivers, DAT, etc. The UA-1D is also packaged with WinDVD so you can send Dolby Digital or DTS encoded audio to your home theater system.

UA-20

24-bit USB-powered Audio & MIDI “Dual” Interface

A complete USB audio recording device, the UA-20 brings portable 24-bit quality to your Mac or PC applications. Your laptop audio is now 24-bit resolution, powered by your computer through the USB bus, and flexible! Easily connect your guitar, mic and line level input with the portable and affordable UA-20.

- Two Line/Guitar/Mic inputs
- Two line (RCA), S/PDIF (optical) outputs
- Fast and stable 1x1 MIDI input/output with FPT
- Direct Monitoring function allows for low latency performance while recording.
- ASIO 2.0 (Win/Mac), MME, WDM drivers and Sound Manager (Mac) compatibility lets you create music with any music software program for Mac or PC.
- USB connection supplies power as well as data
- Headphone (1/8”) jack and volume control

FPT (Fast Processing Technology)

FPT is a technology that allows for high speed, high resolution MIDI data transmission. Using a combination of driver and hardware improvements to take advantage of the high-speed extensive transmission capability of USB, FPT can deliver high speed, low latency, low jitter MIDI transmission across multiple ports, while maintaining high data resolution.

Driver tuned for FPT

The driver for FPT-based hardware devices uses an optimal transmission method depending on the amount of MIDI data being transmitted. The driver then effectively utilizes the bandwidth of USB (depending on the amount of MIDI data) allowing communication to be stable and very fast.

Hardware tuned for the FPT

FPT also allows for high speed, high resolution processing through hardware using HDMR.

The high speed transfer capability of FPT allows for high resolution data transfer without compromising the performer’s subtle expressions even in live performance.
Portable USB Audio Interface with 5.1 Surround Sound Output

USB connectivity brought a revolution in audio interfaces for your computer. Now, Dolby Digital and DTS brings surround as well! The UA-3D allows transfer of 5.1 digital data from your computer via USB to an outboard decoder for a full theater-style listening experience. The UA-3D is a portable, palm-sized USB audio interface, ready to use on both desktop and laptop computers. It features inputs for analog line signals, S/PDIF digital (optical), Hi-Z guitar preamp and 1/8” minijack selectable dynamic/condenser mic.

Includes Win DVD playback software and Cool Edit Pro LE for audio recording and editing. USB cable provides power and computer interface with no need for batteries or power adapter.

- Two RCA analog and S/PDIF digital (optical) input/outputs
- Guitar and microphone inputs
- High quality sound with USB audio capture and UA-3D’s A-D and D-A converters
- Bundled WinDVD and Cool Edit Pro LE (Windows) lets you enjoy surround sound and experience theater style movies. (DVD-ROM and a DTS or Dolby Digital decoder is required for 5.1 surround sound.)
- Ideal for laptops, the UA-3D receives power supply from the computer via USB cable. No need for AC adapter. Connect your audio equipment to your Mac or PC with the UA-3D and just one USB cable.

UA-5
Compact 24-bit/96kHz Processing USB Audio Interface

Compact and stylish, the UA-5 is a complete USB audio recording system. Ready for use on both desktop and laptop computers, it provides the widest range of inputs, including phantom-powered mic inputs, optical and coaxial S/PDIF, and a Hi-Z guitar preamp. A comprehensive array of switches and buttons on the front panel allows for extremely fast and intuitive operation, ranging from gain control, sample rate switch and a unique Advanced mode (ADV) which enhances the hardware performance of the UA-5 when used ASIO or WDM enabled software.

- Two front-panel 1/4” TRS input connectors (XLR, Guitar, balanced/unbalanced)
- Two 1/4” TRS outputs (balanced or unbalanced) and stereo line (RCA) output
- Coaxial and optical S/PDIF I/O
- ASIO (Windows/Mac), MME, WDM drivers and Sound Manager (Mac) compatible
- 48v phantom power
- Unique switch for both native (ASIO) and generic drivers to enhance accuracy in recording environment with low-latency
- Direct monitoring function allows for zero-latency performance while recording/overdubbing
- Portable design, offers easy connection to computer through a single USB cable
- Self-powered via USB when not using phantom power or Advanced Mode
- Compatible with most sequencer/audio recording software programs
EDIROL

UA-700

24-bit/96kHz USB Digital Audio Interface with COSM Technology

Simply call it “The Everything Box”, because that’s just about what it has. The UA-700 combines a high resolution USB audio interface with a built-in effects processor and MIDI Interface into one home studio recording powerhouse. Plus, it has the power of COSM - Composite Object Sound Modeling, so you can tweak that mic to be just the way you want it. It even works as a standalone effects processor. Be careful- if you get your hands on it, you’ll be hooked!

FEATURES

Versatile I/O Capability
- Two combo inputs, XLR/phones, +48v phantom power for condenser mic
- Input for guitar
- RCA Line/Phono input and RCA output
- Optical/coaxial S/PDIF input & output
- Low latency with Direct Monitoring
- ASIO 2.0 (Win/Mac), WDM (WinXP/2K), and Apple’s Sound Manager compatibility

System Effects Section
- The UA-700 has a wide variety of effects processors including Noise Suppressor and Equalizer, that are indispensable for computer recording. Other effects include Reverb and Chorus to make it sound like you recorded your music in a concert hall.
- AUX effects: Center cancel
- System effects: 3-band EQ, Noise suppressor, Reverb (5 types), Chorus

Micropone Section
UA-700 combines Mic modeling engine of COSM technology. Control five kinds of high-quality microphone sounds with various characteristics. Features its original preset compressor for mic recording and also deesser, a must for vocal recording. (Guitar/Mic effect cannot be used simultaneously).
- Reference Microphone: DR-20, Small Dynamic, Head-worn Dynamic, Miniature Condenser, AKG C3000B, Flat
- Modeling Microphone: Small Dynamic, Large Dynamic, Small Condenser, Large Condenser, Vintage Condenser, Flat
- Preset type compressor: Normal, Vocal, Kick, Snare, Kit, Acoustic guitar

Guitar Section
Powerful COSM engine provides a wide range of guitar sounds from heavy distortion with tube amp to soft distorted crunch sound or clean sound. Sounds include delicate tone control of volume and picking. Tweak 11 guitar-amp sounds from every guitar sound in history with effect knobs.
- Amp modeling: JC Clean, Crunch, Lead, Black Panel, Tweed, American and Brit Combo, Vintage, Modern and Metal Stack
- Speaker Cabinet type: Original, 4x12", 4x10", 2x12", 1x12", OFF
- Guitar effects: Flanger, Tremolo, Phaser, Delay, Compressor

UA-1000 High-Speed USB Audio Recording Interface

Ideal as the centerpiece of a project studio and equally at home in your mobile studio, the UA-1000 is the world’s first multi-port Hi-Speed USB (USB 2.0) audio recording interface. It delivers exceptional audio capabilities on 10 separate channels via a wide variety of connections, offering high quality microphone preamps using premium analog components. These include XLR/TRS combo jacks, Hi-Z guitar, S/PDIF, 8 channel ADAT, MIDI, and even inserts for effect send/return.
- Hi-Speed (480 Mbps) USB 2.0 support allows the UA-1000 to offer 10-in/10-out 24-bit/96khz full duplex performance
- 4 front-mounted XLR/TRS combo jacks, with phantom power
- High quality microphone preamps
- S/PDIF (optical/coaxial), ADAT, MIDI, Word Clock
- 4 inserts I/O for effects sends and returns
- Zero latency direct monitoring
- Striking blue 1U high metal rackmount
The DA 2496 is a rack-mount system with a whole host of connections to help your computer become the center of your recording studio.

Whether you are running to your computer from an outboard mixer or directly plugging your instruments into it, the DA-2496 is the best way to get from the instrument to the computer. Record multiple instruments, vocals and performers—each on their own track—all at the same time. Balanced and unbalanced inputs with individual gain control and 48v phantom power as well as digital audio connectors are conveniently located on the front and rear panel. Furthermore, the inputs on the front of the unit can supercede the inputs on the back. So if you have your DA 2496 setup in your rack but want to plug a bass directly into one of the Hi-Z inputs on the card, (no need for a direct box) you don’t need to unplug the back of the unit.

- Up to 24-bit/96 kHz AD/DA conversion
- Up to 8-in/8-out simultaneous multi-track recording on PC and Mac via PCI interface
- Multiple choice of balanced TRS connectors, including mic inputs with 48v phantom power and +4/-10 dB operation
- Direct input for guitar (Hi-Z)
- Optical/coaxial S/PDIF input/output on dedicated channels
- MIDI in/out
- Quick access to digital input sources on front panel—great for CD/MD/DAT inputs
- Full compatibility with the most popular sequencer/audio recording software
- Word clock synchronization via BNC input/output
- ASIO 2.0 (Windows/Macintosh), MME WDM drivers and Sound Manager (Macintosh) compatibility
- 1U-rack mount type break-out box & PCI interface card

‘STUDIO CANVAS’ SD-80
USB MIDI Sound Module and Synthesizer

A high performance MIDI sound generator with a powerful synthesizer engine and high quality waveforms in one slim body, the SD-80 is equally at home on your desktop or in a rack. Edirol started with a footprint that accommodates either application, added tons of connection options like USB, digital S/PDIF (coaxial and optical) interface and 1/4” phone jacks, then made sure the sounds were just right—all 1050 of them. For flexibility, you can even run specific MIDI channels through assignable audio outputs for outboard effects processing to make the sound all your own.

- World leading technology of synthesizer sound engines and high quality waveforms (including the same wave ROMs as SD-90)
- Fast and stable MIDI data transmission realized by FPT (Fast Processing Technology of MIDI transmission)
- GM2/GS/XGlite compatible
- 32-part, 128-voice polyphony
- 1,050 tones, 30 drum sets, 3 MFX (90 types)
- Rack-mounted for studio use, or vertically mounted for desktop use
- Optical/Coaxial Digital output (S/P DIF)
- SD-80 Editor software included (Win/Mac)
- 2-stereo/4-mono multi-outputs
- 2-port external MIDI IN/OUT
- Letter sized design measures 11¾ x 10¼ x 1½” (WxDxH)
- Internal Sound Sets Sound Maps: 6
  (Classical, Contemporary, Solo, Enhanced, Special 1, Special 2)
- Preset Sound Instruments: 128, Drum Sound Sets: 8
- System Effects: Reverb (6 types), Chorus (6 types)
- Insertion Effects: Multi-effects x 3 (90 types)
- Display: 20 characters, 2 lines (backlight LCD)
- Optical Digital Output (S/P DIF)
- The standard GM2/GS/XGlite compatible sound selections provide a variety of music genres such as classical, contemporary, pop and beyond. Play the realistic instruments tones from Grand Pianos, Rippin’ Guitars, Jazzy Sax and Ethnic Drums!!
- Optical digital connection allows for exceptional MIDI sound quality output not found on any sound module in its price range.
- USB bus powered, adapter free
- USB connection supplies power as well as data. The convenience of having all the mobile elements of music production.
- Easy connection to computer (Serial / USB)
- Legacy compatible with serial computers or simply connect through USB for Mac

Bundled SD-80 Editor Software

The SD-80 ships with a powerful software editor that controls the SD-80’s sound parameters by a graphical interface. The editor provides control over tone editing, patch changes, and effect parameters that can be preserved. (SD-80 has a built-in memory for preserving “user patches”. Editor is Mac and Windows compatible.)
USB Audio Interface and MIDI Tone Module

The SD-90 effectively integrates in one unit a top-quality MIDI synthesizer, a complete USB digital audio interface, and powerful Digital Signal Processor — ideal for musicians using original tracks as their backing band, as well as for composers and remixers who can take advantage of its user-friendly environment. Through a simple USB connection to your computer, the SD-90 allows you to play MIDI instruments, record your own original audio from a microphone or a guitar, and process all your music content with a professional effects generator, just like you would in a studio. Works with most multi-track audio and MIDI recording software for Mac and Windows.

- 24-bit AD/DA converters
- 2 input - 2 output MIDI connections
- Optical/coaxial S/P DIF input and output jacks plus 1/4" discrete microphone/guitar inputs
- Fast and stable MIDI data transmission realized by FPT (Fast Processing Technology of MIDI transmission)

UM-1/UM-1S/UM-2

1x1 and 2x2 USB MIDI Interfaces

The UM-1 is a 1x1 MIDI interface device that comes fitted with the USB cable on one end, and two (MIDI In & Out) leads on the other end. It is powered directly through the USB connection to the computer, so it doesn’t require any power supply to function.

The UM-1S delivers the same specification MIDI interface as the UM-1, but allows the use of MIDI cables of your own choice and length. Conveniently offers an attached USB cable to the MIDI In and Out port connectors so you can choose the cables for connection to MIDI keyboard or sound module.

- Connect any MIDI instrument directly to your PC or Mac. This includes sound modules, MIDI keyboards, digital pianos, home keyboards and synthesizers
- Control up to 16 channels of MIDI
- True Plug & Play
- Includes CD-ROM with drivers for Windows 98/2000 and Mac OS
- Powered directly through USB connection
- Controls up to 32 channels of MIDI equipment
- Low latency with FPT (Fast Processing Technology of MIDI transmission)

The UM-2 provides a 2x2 near-zero-latency MIDI interface. Its 3/4” rack design combined with all the same utility functions as its “big brother” the UM-880, make it the “just right” solution for USB connectivity of medium complexity MIDI implementations.

- 5-in, 5-out USB MIDI Interface to computer (control up to 80 channels)
- Stand-alone hardware MIDI Patcher without connecting to computer
- Quick patching, easy operation, and low latency with HDMR (Hardware Direct MIDI Routing) technology
- Fast and stable MIDI data transmission realized by FPT (Fast Processing Technology of MIDI transmission)
- Comfortable patching operation with LED switches on the front panel
- Convenient MIDI utility function (Merge, MIDI Message filter, Preview, Cable check)
- Letter size compact body for desktop use, and variable rack-mount type with detachable adapters
- Multiple units (up to 4) can be connected to the same computer for control of up to 320 channels
- Windows and Mac compatible

UM-550 5-in/5-out USB MIDI Interface

If your creativity happens in a studio environment with multiple MIDI devices, the UM-550 provides a 5 x 5 near-zero-latency MIDI interface/MIDI patching. Its 3/4” rack design combined with all the same utility functions as its “big brother” the UM-880, make it the “just right” solution for USB connectivity of medium complexity MIDI implementations.

- 5-in, 5-out USB MIDI Interface to computer (control up to 80 channels)
- Fast and stable MIDI data transmission realized by FPT (Fast Processing Technology of MIDI transmission)
- Comfortable patching operation with LED switches on the front panel
- Convenient MIDI utility function (Merge, MIDI Message filter, Preview, Cable check)
- Letter size compact body for desktop use, and variable rack-mount type with detachable adapters
- Multiple units (up to 4) can be connected to the same computer for control of up to 320 channels
- Windows and Mac compatible
**UM-880**

**8-in/8-out USB MIDI Interface with Hardware MIDI Patcher**

The UM-880 is the most powerful, easy to use MIDI interface/patcher available. The vast majority of functions are available through either one or two button commands on the front panel. With eight sets of MIDI inputs and outputs, the UM-880 lets you simultaneously control up to 128 channels. It’s easy to connect to your computer— simply connect a USB cable and you’re done. And it is hot-swappable, so you can plug and unplug the UM-880 even while your computer is on. You can also use up to four UM-880 units simultaneously, expanding your system to 512 channels.

The UM-880 features hardware MIDI patcher functionality. MIDI can be routed directly, simply by pressing the panel buttons, and there are none of the complicated settings that are all too common on software patchers. The hardware MIDI patcher makes use of HDMR (Hardware Direct MIDI Routing) technology to ensure low-latency. If you have a lot of MIDI devices, you will find the UM-880 to be an integral part of your studio or stage rack, or both.

- The UM-880 can also act as a Stand-alone MIDI patcher with eight memory locations where you can store patch settings.
- Just a few major benefits of owning the UM-880 include:
  - Fast and stable MIDI data transmission realized by FPT (Fast Processing Technology of MIDI transmission)
  - Eight sets of input/output connections can be stored into memory.
  - Easy USB connection to your computer.
  - Convenient “Merge” function.
  - Cable Check Utility.

HQ HyperCanvas GM2

High Quality General MIDI Software Synthesizer

HyperCanvas GM 2 is GM 2 (General MIDI System Level 2) compatible, with 256 sounds and 9 drum sets. Play Jazz, Rock, Classics and more with your unique collection of studio quality instrument sounds. HyperCanvas GM 2 contains multiple rich sound sources to help you create professional music of any kind. Features include a friendly user interface and a dedicated control panel to easily customize the sounds. Each instrument has levels of variation tones that are useful for a wide variety of music. This high-quality software synthesizer is equipped with a sampling waveform and software synthesizer engine that generates amazing quality sound, ideal for new musical creation possibilities. Roland's synthesizer technology is used to make expressive waveform of various kinds possible. Compatible with two plug-in formats: DirectX Instruments and VST Instruments. This sound source can now be integrated for excellent results using the best sequencing software in the world!

- GM 2 (General MIDI System Level 2) compatible, with 256 sounds, 9 drum sets, 16 part, and 128-voice polyphony
- Hyper Studio GM 2 provides over 500 tone variations that can be saved for use in future projects. 2 types of plug-in software synthesizers: DXi and VST Instruments
- 24-bit/96 kHz performance, 32-bit floating point signal processing
- Dedicated control panel to easily customize the sounds
- 256 preset instrument sounds and 9 preset drum sets (User can add 512 variation sounds and 128 variation drum sets)
- Excellent for SMF data playback
- High Quality reverb chorus/delay & part EQs
- 128-note polyphony with 16 part multi-instrument playback
- Includes Cakewalk's Music Creator and exceptionally well-produced original compositions

SuperQuartet

Plug-in Software Synthesizer for Piano, Bass, Guitar, Drums

Create your own exceptional sound. This plug-in software synthesizer offers outstanding variations of Piano, Bass, Guitar and Drums. SuperQuartet is equipped with a sampling waveform and software synthesizer engine that generates amazing quality sound, ideal for new musical creation possibilities. Roland's synthesizer technology makes it possible to use expressive waveforms of various kinds. Include 3 drums sets - expandable to 128, 67 instruments - expandable to 384, 16 part multi-instrument playback, 128 voice polyphony, chorus and reverb effects, 24-bit/96 kHz processing performance and a full array of customizable editing parameters.

- Dedicated control panels to easily customize the sounds. Each instrument has levels of variation tones that are useful for a wide variety of music:
  - Piano: Concert Grand, Upright, Electronic, Rock, etc.
  - Guitar: Nylon classic, Steel, Electronic Acoustic, Jazz, Clean, etc.
  - Bass: Wood, Finger, Picked, Fretless, etc.
  - Drums: Standard, Brush.
- DXi and VST compatible
- 60 preset instrument sounds and 3 preset drum sets (you can add 384 variation sounds and 128 variation drum sets)
- Unlimited sound expression tools to edit and save as user variation tone
- High Quality reverb chorus/delay and part EQs
- 128-note polyphony with 16 part multi-instrument playback
- Includes Cakewalk's Music Creator and exceptionally well-produced original compositions
Lush Soundtracks and Beautiful Classical Arrangements

Orchestral instruments come alive with rich ambient piano and stereo sampled string sounds in this software synthesizer. The premium sounds in this synth are perfectly combined for lush soundtracks and beautiful classical arrangements. And its multiple output compatible with DXi 2.0 and VST 2.0 means you can enjoy your arrangements through several audio devices...simultaneously! Orchestral provides premium acoustic sounds, focusing on strings, woodwinds, and brasswinds, as well as percussion and keyboards. These high quality samples include realistic articulations such as vibrato, spiccato, pizzicato, and tremolo. Using ample wave memory, Strings/Brass winds tones are selectable from solo, part section, and full section, making this ideal for the composition of contemporary music, sound tracks, and marching bands.

- DXi 2.0 and VST 2.0 support
- Acoustic sounds, focusing on Strings, Woodwinds, Brass, percussion, and keyboards
- Articulations such as vibrato, tremolo, pizzicato, and spiccato
- Up to 16-part and 128-voice polyphony
- Up to 24-bit/96kHz sampling resolution
- Multiple output
- Full assignable MIDI control
- Includes Cakewalk "MusicCreator2002"

VSC-MP1
Virtual Sound Canvas Multi Pack

This application allows you to take MIDI files and customize them to suite your taste. It includes standard effects such as reverb, chorus and delay. Use the playback list function to store and retrieve your compositions. Export your finished files into popular multi-media applications as .WAV or .AIFF file formats. This is MIDI made easy!

- Two plug-in versions (DXi and VST Instruments)
- 16 parts, up to 128-voice polyphony
- 902 tones plus 26 drum sets
- Reverb, chorus and delay effects
- MIDI to WAV/AIFF file conversion
- Includes over 100 royalty-free MIDI file songs
- Playback list function permits easy storage and retrieval of your selections.
- VSC-MP1 is WIN/MAC compatible and ships with 100 royalty-free MIDI files.
EDIROL

PCR-30/ PCR-50

32- and 49-Note MIDI Keyboard Controllers

The PCR-30 (32-note) and PCR-50 (49-note) are the advanced MIDI keyboard controllers available, period. Never before have there been better compact keyboards for use with popular sequencers and software synthesizers. The PCR-30 / PCR-50 take MIDI control to a new level with unprecedented versatility. They can control a number of parameters not accessible from other controller keyboards at this price point; such as RPN, NRPN, SysEx. They are fully compatible with the latest operating systems including WinXP and Mac OS X. They are the ideal keyboards for use with Arturia Storm, SONAR, Cubase, Reason, FruityLoops, and most other popular sequencers and software synthesizers. As such it comes equipped with templates for these and other programs.

- 32 or 49 full-sized, velocity sensitive keys
- 8 assignable rotary knobs (cut off, resonance, pan, tempo, etc.)
- 8 assignable faders (volume, EFX send, etc.)
- 9 assignable buttons (program change, track mute, start, stop, etc.)
- 1 sustain, 1 expression pedal connections
- MIDI in & MIDI out
- Pitch & Modulation controls
- Preset Memory & 15 User Memory locations
- USB Bus powered or AC adapter
- Template sheets for controls

UR-80 USB Recording System and MIDI Controller

The UR-80 is an all-in-one studio box for computer musicians, combining a fully assignable control surface, USB audio interface with 24-bit/96 kHz capability, MIDI and the GM2 Hyper Canvas software synthesizer. The integration of audio capture and highly customizable software control makes the UR-80 a “must-have” in the project studio. The control surface resembles a digital mixer, with transport controls, a time wheel and assignable switches for quick access to music software functions. It comes with a Control Map Editor and eight pre-loaded control maps supporting sequencers such as SONAR, Cubase and Logic, plus a variety of soft synths. (More control maps can be downloaded from Edirol). The UR-80 has a vast amount of MIDI implementation that allows you complete control of your favorite sequencing programs of software synthesizers as well as phantom power support for use with high-end studio microphones. Also offers full PC and Mac driver support, V-LINK support and a variety of input and output options.

- 102 assignable parameters through 43 knobs, buttons and sliders on the control surface
- Up to 24-bit/96kHz recording via USB Audio Interface
- Support for any MIDI parameter, including CC, RPN, NRPN and SysEx
- Comprehensive surface layout for assignable switches for plug-ins and soft synths
- 2x XLR/TRS combo jack with mic preamp & phantom power
- Bundled with HQ-GM2, Hyper Canvas software synthesizer
- ASIO 2.0, WDM, Mac OS X compatible drivers, low-latency support.
- V-LINK for control of Edirol DV-7PR Real-time Video Presenter
V-LINK

V-LINK is an exciting new technology from Edirol enabling the user to link musical performance to video. Using a V-LINK equipped device allows you to trigger clips, perform video effects and transitions all directly controlled by the expression being used in the musical performance. V-LINK uses a standard MIDI connection to control the Edirol DV-7PR. V-LINK is available on a number of Edirol and Roland devices. Many creative artists have discovered the benefits of using audio and video together. V-LINK now makes it easier.

DV-7PR

The DV-7PR is a unique real-time visual performance system. It allows the instantaneous recall of hundreds of high-quality DV material. It is ideal for use in concerts, churches, convention centers and seminars. The DV-7PR integrates a MIDI based control device, such as a MIDI Keyboard, to allow the user to combine DV clips, digital audio, and still images into a synchronized presentation. The DV-7PR can play and loop indefinitely drawing from up to 13 hours of unique content.

The DV-7PR is suitable for:
- Visual presentations in conjunction with concerts, live stage shows, and dance clubs (with MIDI Keyboard, trigger unit, etc.)
- Video kiosk systems
- Video performance presentation at show events such as trade shows, business presentations, weddings, etc.
- Includes DV-7 software, a powerful video editing application

On-Demand Playback of Digital Video
- Native DV audio/video signal output
- Dual image cross-dissolve
- Stores and plays back up to 13 hours of unique content even in a continuous loop

Multi-Interface Control
- Use any MIDI controller (e.g. MIDI keyboard, touch-pad, or V-LINK enabled device)
- Touch screen via RS-232C control
- Compatibility with many third-party devices

Real-Time Operation
- MIDI control of digital video and audio content
- Allows fully automated loop playback
- Dynamic real-time dissolves
- Easy re-display of any sequenced clip with a single key stroke

Integration of Video Formats
- Allows editing of video and audio clips
- Can use removable hard disks (DV-HD60/ DV-HD120) as a media source for dynamic playback and archiving
- Will import DV video clips created on a PC through the CD-ROM drive and FireWire interface
WAVE TERMINAL U24
24-bit USB Audio Interface with Sample-Rate Converter

Perfect for laptop or desktop, the U24 is the most ‘bang for your buck’ USB peripheral going. Use it to record or perform wherever your gig takes you. Offering total USB flexibility and pure digital quality, coupled with true 24-bit capabilities, the U24 will easily qualify as the most useful device in your studio, wherever that may be. The U24 offers three stereo input options (coaxial, optical, analog) that you can select one at a time while the output signal is available on all output formats simultaneously. This allows the U24 to act as a signal converter between coaxial and optical audio. The analog I/Os of the U24 are supported with ultra-wide range 24-bit A-D/D-A converters, and unbalanced 1/4” phone jacks.

- 24-bit playback & record resolution
- S/PDIF coaxial & optical digital I/O
- 24-bit A-D and D-A converters: 100dB(A/D), 110dB(D/A) dynamic range
- Signal to Noise ratio (D/A): 110dB
- -10dBv unBalanced 1/4” phone jack
- Optical <-> Coaxial Signal converter
- Simultaneous audio output through both analog and S/PDIF for easy-mix monitoring
- Internal digital mixer for input monitoring.
- 32, 44.1 and 48kHz sampling rates
- Real-time hardware sample rate converter
- Plug and play installation: no “IRQs” or “DMAs” to set, no addresses to configure
- Headphone amp
- Compatible with Windows 98SE/M E/2000, and XP along with Apple Sound Manager and MAC ASIO 2.0. Includes 6’ USB cable.

Available in two versions:
The GigaPort DG with its ADAT digital connector is the world’s first USB to ADAT optical interface. GigaPort DG is perfect for transferring files or mixing direct to ADAT or any piece of equipment that supports the ADAT optical interface. On the other hand, GigaPort AG is equipped with eight RCA analog outputs which make the possibilities endless. With eight high quality outputs, you could be mixing directly to DVD, transferring files, or just kicking back listening to your favorite DVDs straight out of your laptop in full 5.1 surround.

GigaPort AG Specifications
• 8 x RCA analog outputs (8 x 24 bit D/A Converter),
• S/PDIF optical output
• ASIO 2.0 optical output
• ASIO 2.0 driver Mac & PC
• Headphone output
• WDM driver for Windows XP/2000/M E/98SE

GigaPort DG Specifications
• 1 x ADAT digital output (8-channel out),
• ASIO 2.0 driver Mac & PC
• WDM driver for Windows XP/2000/M E/98SE

GigaPort AG and DG

**AQUA U24M**

**4-in/4-out USB Audio/MIDI Interface**

Built on the foundation of the U24, the U24M is a 24-bit/96kHz 4-in/4-out unit equipped with a 1x1 MIDI I/O port, S/PDIF digital input and output and two mic preamps. Housed in a 1/3 rack space size box, the U24M front panel has two combo connectors that can be switched between mic and line inputs. The mic preamps are equipped with switchable +48v phantom power. Also includes individual input gain controls and a headphone output with its own monitor level volume.

The back panel layout consists of two 1/4” line inputs for channels 1 and 2, and two phono jacks for line inputs 3 and 4. Outputs are comprised of four phono jacks for outputs 1 through 4, and a separate left and right mix out that are serviced by two 1/4” connectors.

- Supports up to 24-bit/96 kHz
- Analog 4-in/4-out
- S/PDIF digital coaxial I/O
- 2 mic preamps with +48v phantom power
- 2 Inserts to use the external effect processor
- Headphone amp with volume control
- Internal monitoring mixer with In/Out level control
- No-latency monitoring with internal mix bus output
- 1x1 MIDI interface
- Windows OS/MAC OS compatible

---

**Waveterminal 192M**

**4-in/8-out PCI Audio Interface**

The stylish Waveterminal 192M features a 4-in/8-out breakout box that connects to a half-length PCI card. The input A/D features high quality 24-bit/96kHz converters, while the D/A output has superior 24-bit/192kHz converters. Other features include support of multiple sample rates up to 192kHz, headphone amp output, 24-bit/192kHz S/PDIF stereo digital coaxial and 24-bit/96kHz optical and outputs, and full duplex (simultaneous record/playback) capability.

The Waveterminal 192M’s versatile breakout box makes it easy to access its four inputs and eight outputs. Two separate balanced TRS mic inputs with +12v DC phantom power can be found along side the 4 unbalanced +4dB line inputs.

- High-quality 24-bit/96kHz A/D (100dB dynamic range) and 24-bit/192kHz D/A (104dB dynamic range)
- Four 1/4” unbalanced +4dBu line inputs
- Eight 1/4” unbalanced +4dBu line outputs
- 24-bit/192kHz S/PDIF coaxial output & 24-bit/96kHz optical output
- 2 mic preamps with +12v phantom power
- Two 1/4” stereo headphone outputs with level control (output 1/2 or selectable mixed output)
- Supports multiple sampling rates: 16, 22, 24, 32, 44.1, 48, 88.2, 96, 176.4, 192kHz
- Full duplex capability—simultaneous record/playback
- 32-bit PCI slot: PCI Bus-Mastering support
- ESI’s powerful E-WDM driver provides perfect compatibility with Windows XP, 2000, ME, 98SE and Mac OS 10.x, offering ultra low-latency performance (ASIO 2.0) with applications such as Nuendo, Cubase, Cakewalk, Gigastudio, Sonar and Logic
- Accepts the optional MI/ODI/O add-on card (see next page).
8-Channel PCI Audio Interfaces

PCI-based multichannel audio interfaces, the 2-input/8-output Waveterminal 192L and Waveterminal 192X are equipped with high-quality A-D and D-A converters, advanced audio capabilities and support ESI’s E-WDM driver for compatibility with Windows XP, 2000, ME, and 98SE offering low-latency performance with applications such as Nuendo, Cubase, Gigastudio, Cakewalk, Sonar and Logic. They also offer complete compatibility with Dolby Digital 5.1 and DTS 5.1 surround formats. Used with a software DVD player, they transform your PC into a full-blown 5.1 home theater system. And with its true 24-bit/192kHz resolution the Waveterminal 192X also supports the DVD-Audio standard.

The Waveterminal 192L features 24-bit/96kHz A/D converters and 24-bit/192kHz D/A converters, all with 100 dB dynamic range. Other features include stereo analog line inputs, mono mic preamp with 12v DC phantom power, headphone amp output, 24-bit/192kHz S/PDIF stereo optical digital output and full duplex (simultaneous record/playback) capability.

For even higher quality, the Waveterminal 192X features 24-bit/192kHz A-D and D-A converters with up to 123dB dynamic range. Also standard is a 24-bit/192kHz S/PDIF stereo optical digital output and full duplex (simultaneous record/playback) capability. Optional M1/ODI/O card adds S/PDIF optical digital inputs, 192kHz S/PDIF coaxial I/O and a 1-in/1-out MIDI interface to the Waveterminal 192L and 192X cards.

FEATURES

- Two-channel (four-channels with the optional M1/ODI/O) recording and 8-channel playback at the same time
- 24-bit 96kHz S/PDIF optical output
- They support multiple sampling rates: 16, 22, 24, 32, 44.1, 48, 88.2, 96, 176.4, 192kHz
- Full duplex capability—simultaneous record/playback
- 32-bit PCI slot: PCI Bus Mastering support
- Headphone amp
- Support the E-WDM driver: Multiple MME, Multiple Direct sound, ASIO 2.0 and GigaStudio support
- Compatible with Windows XP/2000/ME/98SE & MAC OS X

Waveterminal 192L Only
- 24-bit/96kHz A/D 100dB Dynamic range
- 24-bit/192kHz D/A 104dB Dynamic range
- Two+4dBu unbalanced 1/4” TRS inputs
- Three +4dBu unbalanced 1/4” TRS stereo outputs
- 24-bit/96kHz optical stereo digital output
- MIC preamp with +12v phantom power

Waveterminal 192X Only
- 24-bit/192kHz A/D 123dB Dynamic range
- 24-bit/192kHz D/A 106dB Dynamic range
- Two +4dBu balanced 1/4” TRS inputs
- Three +4dBu unbalanced 1/4” TRS stereo outputs
- Supports multiple cards in one computer system (192X only)

MI/ODI/O

The optional M1/ODI/O card lets you get more from your Waveterminal 192 series (192M, 192L, 192X) by adding 24-bit/96kHz S/PDIF optical input and coaxial I/O, and a 1x1 MIDI I/O. Easy to install, M1/ODI/O requires no additional drivers, power supply or new IRQ set up.

- 1X coaxial digital I/O (192kHz)
- 1X optical digital input
- 16 Channels MIDI I/O
- Turns any Waveterminal 192 card into a 4-in 8-out/16 MIDI channel integrated audio interface
10-Channel Integrated Audio Interfaces

The flagship WaMi Rack 192L and WaMi Rack 192X are housed in a single-rack space box designed to form the central core of a complete 192kHz/24-bit recording system. They feature four studio-quality discrete XLR mic preamps (line/mic switchable) inputs with +48v phantom power, headphone output with independent level control, built-in MIDI interface and coaxial S/PDIF connectors. Otherwise identical, the 192L features a 24-bit/96kHz A/D converter, the 192X features a 24-bit/192kHz A/D converter.

- Full duplex capability— simultaneous record/playback
- Headphone amp
- ESI’s powerful E-WDM driver provides perfect compatibility with Windows XP, 2000, ME, 98SE and Mac OS 10.x, offering ultra low-latency performance (ASIO 2.0) with applications such as Nuendo, Cubase, Cakewalk, Gigastudio, Sonar and Logic.

MAXIO XD
The Ultimate Solution for High Quality Audio Production

The MAXIO XD is a complete 24-bit/192kHz recording system designed to handle 32 simultaneous channels of analog inputs and outputs. The basic system consists of the EX-8000, a 2-rack space unit with 8-in/8-out balanced XLR connectors and a choice of a PCI interface for desktop systems, or a cardbus interface for laptop recording. Each interface is equipped with four firewire-like ED1 (ESI Digital Interface) connections, each capable of supporting one EX-8000, giving you 32-channel capability on one card. In addition, the PCI version can support up to 4 cards on the same computer making a total of 128 channels of recording possible. The front panel of the EX-8000 features 8 balanced mic preamps, while combo connectors offer the choice of using XLR or TRS inputs. The EX-8000 also includes +48v phantom power and 10-step LED peak metering lights for each channel, as well as AES/EBU and S/PDIF digital I/O, and a headphone monitor.

- MAXIO PCI card and the MAXIO Cardbus interface include four ED1 protocol ports and a buslink breakout that hosts a 192kHz S/PDIF coaxial I/O, Word Clock I/O BNC connector, and a 1x1 MIDI interface.
- Hardware input monitoring
- Eight XLR/1/4” TRS analog combo inputs and eight 1/4” TRS/XLR analog outputs (+4dBu/-10dBV); plus eight 1/4” inserts
- Headphone amplifier
- Internal 64-channel digital mixer & assign channel to port
- Comes standard with DirectWire, ESI’s powerful and unique virtual patchbay for digitally connecting between popular audio software programs.
- 8-channel digital I/O: AES/EBU & coaxial support up to 24-bit/192kHz
- 4 studio-quality, ultra-clean discrete XLR mic preamps with +48v phantom power
- The WaMi Rack 192L has a high-quality 24-bit/96kHz A/D converter (up to 100dB dynamic range), the 192X’s 24-bit/192kHz A/D converter handles up to 123dB.
- Both have state-of-the-art 24-bit/192kHz A/D converters with 104dB dynamic range
- 1x1 MIDI Interface
- Four analog inputs and 8 outputs on +4dBu unbalanced 1/4” TRS phone jacks
- They support multiple sampling rates: 16, 22, 24, 32, 44.1, 48, 88.2, 96, 176.4, 192kHz
- 24-bit/192kHz supported S/PDIF coaxial digital I/O
- They offer full compatibility with Dolby Digital and DTS 5.1 as well as DTS ES 6.1, and 7.1 surround formats. WaMi Rack 192X fully supports DVD Audio as well.
- Full duplex capability— simultaneous record/playback
- Headphone amp
- ESI’s powerful E-WDM driver provides perfect compatibility with Windows XP, 2000, ME, 98SE and Mac OS 10.x, offering ultra low-latency performance (ASIO 2.0) with applications such as Nuendo, Cubase, Cakewalk, Gigastudio, Sonar and Logic.
ESI

QUATA-FIRE

24-bit 192kHz FireWire 4x4 Audio/2x2 MIDI Interface.

The ultimate mobile solution for audio professionals, Quata-Fire is a versatile 4-in/4-out 1/3 rack space size unit with high-quality 24-bit/192kHz audio performance. Features include two front panel mounted combo connectors that can be switched between mic and line inputs. The mic preamps are equipped with switchable +48v phantom power, individual input gain controls and a headphone output with its own monitor level volume. Also features 2x2 MIDI interface, and a coaxial S/PDIF I/O.

OCTA-FIRE

24-bit 192kHz FireWire 8x8 Audio/4x4 MIDI Interface

Based on ESI’s popular WaM i Rack Series, OctaFire is an 8-in/8-out device features four combo connector mic preamps with +48V phantom power along with a headphone monitor on the front panel. Other great features include 4x4 MIDI interface offering up to 64 channels of MIDI, coaxial S/PDIF I/O, and Worddock I/O.

The QuataFire, OctaFire and HexaFire are all Windows XP and Mac OS X compatible and all feature:

- Powered by IEEE1394 Bus or external power supply
- No-latency monitoring with internal mix bus output
- Cascade (link) up to 4 units via standard IEEE1394 hub

HEXA-FIRE

24-bit 192kHz 16x16 High Definition FireWire Audio/MIDI/SMPTE Interface

The flagship of ESI’s Fire Series is the HexaFire, a 16-In/16-Out box that features 8 balanced mic preamps via combo connectors offering the choice of using XLR or TRS inputs. There is +48v phantom power on each channel as well as 10-step LED peak metering lights for channel inputs and outputs on the front panel. Additional features included S/PDIF digital I/O, and a headphone monitor, along with S/PDIF coaxial I/O, Word Clock I/O, and a 1x1 MIDI interface. Sixteen channels of AES/EBU in and out are accessible via four D-25 connectors. Two IEEE-1394 ports can connect the HexaFire to a computer or daisy chain the unit with up to three other HexaFires.
ESI introduces the power MIDI trio. Three different USB MIDI interfaces to choose from that best fit your budget and production needs. The RoMI/O is a 1-in 2-out, 32 channel interface that fits in the palm of your hand. It offers the flexibility to take your music anywhere and everywhere you need to go. The M4U is a 4-in/4-out device housed in a half-rack sized box that can handle up to 64 MIDI channels. The M8U is built into a full single rack space unit. It has 8 inputs and 8 outputs and is designed to accommodate 128 MIDI channels. The M8U also acts as a stand-alone MIDI patchbay when not connected to a computer. All three units are designed to for use with Windows XP and Mac OS X. Just plug and play.

**THEY ALL FEATURE:**
- High-speed connection to USB-equipped PC or Mac
- MIDI activity indicator for each port

**RoMI/O**
1-In 2-Out, 32 channel USB to MIDI Interface for Mac and PC
- Complete cable type body from PC end to MIDI ends
- USB powered - requires no external power supply
- Extremely compact 83 x 52 x 28mm (WDH)

**MIDITerminal M4U**
4-In, 4-Out, 64 channel USB to MIDI Interface for Mac and PC
- USB powered - requires no external power supply
- Perfect MIDI timing
- Compact 1/3 rack size

**MIDITerminal M8U**
8-In, 8-Out, 128 channel USB to MIDI Interface for Mac and PC
- Perfect MIDI timing
- Various MIDI THRU function
- Unit can be used as a stand-alone MIDI patch bay

**8180FS - MIDITerminal 1394**
8x8 IEEE1394 MIDI/SMPTE Interface
The 8180Fs is an 8x8 FireWire to MIDI interface offering up to 128 channels of MIDI along with full SMPTE and Wordlock synchronization. The front panel is equipped with MIDI activity lights. The unit can be used together with up to three other 8180’s.

- 8in/8out (128 channels) MIDI interface
- H/W based MIDI processing with large size of buffer memory
- SMPTE (LTC) I/O
- Video Sync In, Word Sync Out (BNC connector)
- Stand-alone MIDI Thru/Patch bay BOX feature
- Cascade up to 4 units; provides 32-in/32-out (512 channels) MIDI ports
- Powered by IEEE1394 Bus or external power supply
- Windows OS/MAC OS compatible
When it comes to getting music into and out of your computer, there's no more flexible, powerful, or versatile recording interface than the EZbus. Dual low-noise 24-bit/96kHz mic preamps—complete with +48V phantom power—provide a super clean path for vocals, acoustic guitars, and other miked signals. High impedance, high gain instrument inputs (also 24-bit/96kHz) make tracking superb sounding electric basses and guitars an everyday affair. And Event's unique triple-summed 24-bit/96kHz line inputs can each accept up to three independent signals, so it's EZ to plug in multiple synths, a rack of outboard effects—or both. You won't find the EZbus skimping on analog outputs either. Six, discrete, balanced 24-bit/96kHz outputs plus a TRS stereo headphone output (complete with its own amplifier), make it a snap to interface with your outboard gear, set up control room and cue mixes, monitor a surround mix—or accommodate just about any other audio application you can imagine.

Processing
Each of the EZbus Primary Audio Channels features three bands of super responsive, musical EQ—high- and low-shelving plus a fully parametric mid band. You also get real-time dynamics processing on every channel. Tame your vintage gear with the Noise Gate. Or tap into the fully programmable look-ahead Compressor and never again worry about clipping that perfect vocal take.

Hardware Mixer
If you're making music with computers, the EZbus can make the process simpler and more fun. Take mixing, for example. Without an EZbus, you adjust each of your magnificently crafted tracks one at a time with a mouse. With an EZbus, you reach for an honest-to-goodness hardware mixer, and move eight faders at a time. (Now that's mixing!)

LCD Display
This custom display not only shows you all the normal stuff—levels, mute and solo status, and the like—but cool stuff, like the amount of gain reduction your compressor settings generate, and handy alert messages, such as input overload and clock signal dropout warnings.

Transport Controls
The EZbus sports programmable transport controls that let you easily start, stop, record, rewind, and fast forward through your projects. Use them to set multiple locate points on the fly, then recall them at the push of a button. Navigating through your projects has never been this easy.

Full Control
Virtually every parameter of a DAW, plug-in, virtual instrument, or MIDI-capable device can be controlled from the front panel. Use the factory control surface profiles or create and customize your own. With up to 32 control setups in on-board memory, the EZbus immediately takes center stage as command central of your studio or live performance rig.

Power Routing
Event's exclusive any-input-to-any-output audio routing matrix provides unmatched flexibility for virtually any audio application. Tap into the signal at the input, pre- or post-trim control, pre- or post-EQ, and dynamics, pre- or post-fader—and route it to the destination of your choice. Even route digital signals directly from input to output for bit-accurate digital copying. Now add four Sends, each independently configurable pre- or post-fader, two mono Returns and one stereo Return, and both Main and Alt Mix buses, and there's almost no end to your routing options. Easily generate independent control room, stage monitor, and front-of-house console mixes. Create a multi-bus setup for recording—and monitor it with zero latency. Save your custom I/O configurations for instant recall from the front panel, via footswitch, or using MIDI program change commands. Up to 32 unique configurations can be on-board at any time, and you can archive and organize thousands more using the included EZbus Mix Librarian software.
Control Surface
A single button-push is all it takes to instantly transform the EZbus from an Audio Recording Interface into a Control Surface. Then operate your favorite MIDI and audio software using the EZbus's hardware controls. Customize the controls with your own command set, or use the convenient factory profiles. Presets for major software programs, including VST, Nuendo, Cakewalk, Sonar, and many more are included.

MIDI
With three independent MIDI I/O ports, the EZbus puts you in complete command of your MIDI system. Connect your controller keyboard to either of the MIDI inputs on the EZbus, and trigger your virtual instruments via USB. Now route the audio from the virtual synths back into a couple of EZbus channels via USB, and mix the signals with your regular hardware synths (which are plugged into other EZbus channels). Your entire keyboard rig—real and virtual—is now a fully integrated system!

Digital I/O
What could be easier than hot-plugging the EZbus into your computer's or laptop's USB port and getting your musical ideas recorded fast? Connect to lightpipe-equipped gear via the ADAT optical ports. Interface with digital effects units, DAT recorders, or any S/PDIF device via the coaxial S/PDIF outputs and the coaxial and optical S/PDIF inputs. You can even mix and match sample rates via the coaxial S/PDIF input, so that killer track you recorded at 44.1kHz can easily be imported into your 48kHz session. And the low jitter word clock output will keep all your digital devices locked with

EZ8 24-bit/96kHz Optical Audio Interface
Expand your EZbus into a full-blown multitrack recording system with the EZ8 Optical Audio Interface. This low-cost/high-performance PCI card provides eight discrete channels of full-duplex 24-bit/48kHz digital I/O via ADAT lightpipe.

JL Cooper
CS-32 MiniDesk

Amazing 32-Channel Miniature Control Console that fits in the Palm of Your Hand!

The CS-32 MiniDesk is a miniature control surface for fast access to the most commonly used functions in most audio programs. It works with ProTools, X-Track, Nuendo, Cubase SX, VST, Digital Performer, Soundscape RED, Cakewalk Pro, Sonic Foundry, Ableton Live, Merging Technologies Pyramix, Logic Audio and most audio software programs! The CS-32’s radically small size does not reduce it’s intense capabilities as an extremely powerful controller with 32 Dedicated Faders/Channel Strips for real-time control of volume levels, Mute, Solo, Track Arming and more— record, edit and mix your projects to perfection.

The “Mini” has Tactile Transport Buttons, Cursor Keys and Weighted Jog/Scrub Wheel, just like the big guys. Six Rotary Knobs give you hands-on, automation control of panning and plug-ins. A full bank of quick function keys are ready for frequently used editing features.

MiniDesk takes up less space than a sheet of paper. Use it almost anywhere, even on the most crowded desk. Perfect for portable recording applications with a laptop. With a controller this small, you might want to get an extra one to keep in your car.

◆ Adds tactile controls to most digital audio editing systems, MIDI sequencers and animation software
◆ 32 dedicated channels with 20mm faders and channel buttons eliminate fader bank switching confusion
◆ Puts over 150 dedicated controls at your fingertips
◆ Perfect for project and home studios
◆ Weighted Jog/Scrub Wheel (optically encoded)
◆ 2-digit alphanumeric LED display
◆ Dual LED activity indicators
◆ Sends various messages — CS-10 Emulation, General Controllers
◆ Low profile and compact design with heavy duty construction
◆ MIDI/MMC, USB and RS-232 models available
◆ USB version includes software (Mac and Win) and Keysets
LYNX

LYNXONE

24-bit Digital Audio/MIDI PCI Card

Representing a great value in integration and professional capabilities, LynxONE is the perfect “front-end” for any studio quality audio or MIDI workstation. LynxONE combines studio-quality 2-channel analog I/O (sampling rate up to 50kHz), bit-perfect AES/EBU or S/PDIF digital I/O supporting up to 96kHz, and 32 channels of low latency MIDI to create a new standard in interface hardware for audio and MIDI workstations. And LynxONE’s compatibility with all popular Windows-based audio editing and MIDI sequencing software allows users to choose their own working environments. Applications include critical audio recording and editing, CD mastering, restoration, audio for video, music composition, and MIDI sequencing.

FEATURES

◆ Two-channel 24-bit A-D/D-A converters and a simple analog signal chain ensure exceptional sound quality. (Software selectable +4dBu or -10dBV levels).
◆ If you are working in an all digital environment, the LynxONE delivers bit-perfect digital audio at up to 96kHz, via an AES/EBU or S/PDIF I/O (software-selectable in the LynxONE mixer application).
◆ Low-jitter PPL sample clock allows the LynxONE to be used as a slave or master timing source, enabling up to four cards to be linked together for multi-channel operation.
◆ The flexible mixer application also provides keyboard and mouse control over the sample clock generator, monitor source, analog trim and levels of all four channels, with peak level metering.
◆ PCB layout and circuit design techniques reject computer related noises. Because of this, LynxONE offers 103dB of “real-world” dynamic range when installed in a typical computer.
◆ The ability to easily monitor the recording inputs is a must during overdubbing sessions. LynxONE lets you select either the analog or digital inputs as the monitor source. This signal can be mixed with playback audio on either the analog or digital outputs or both simultaneously. This capability also allows “stand-alone” A/D or D/A conversion completely on board LynxONE. Because mixing is performed in hardware, recording input-to-output delay is extremely low.
◆ Two independent MIDI ports provide 32 channels of low-latency MIDI I/O, with real-time transfer of Note On/Note Off and MTC messages over the PCI bus for accurate timing and synchronization in music composition and MIDI sequencing applications.
◆ Compatible with Windows-based audio editing and MIDI sequencing software, LynxONE delivers exceptionally high levels of performance in critical audio recording and editing, CD mastering, broadcast, audio restoration, audio for video and MIDI sequencing applications.
◆ Comes complete with balanced analog, digital and MIDI/clock cables for easy integration into your existing setup.

Complete software control of LynxONE’s features is provided with the LynxONE Mixer. As shown to the right, this application permits keyboard and mouse click control of volume, sample clock generator, digital I/O format, analog trim, and input monitoring. Peak level meters are also provided.
192kHz Multichannel Audio Reference Interface

Incorporating state-of-the art converter technology, the LynxTWO is capable of precision never before achieved in a PCI audio card. With performance that exceeds stand-alone converters, LynxTWO sets new standards for signal purity, versatile synchronization, powerful hardware mixing, and extensibility to support a variety of multichannel formats including ADAT and TDIF. The LynxTWO incorporates the latest generation 24-bit/192kHz converter technology to create a PCI audio which rivals the performance of many high-end studio converters. A choice of three multi-channel analog configurations makes it ideal for DVD-authoring, multi-channel recording, mastering, broadcasting, synchronization and video applications, with non-audio digital I/O support provided for Dolby Digital.

- 24-bit analog inputs and outputs with three options: 4-in/4-out (LynxTWO-A), 2-in/6-out (LynxTWO-B) or 6-in/2-out (LynxTWO-C), each with line levels of either +4dBu or -10dBV, selectable in channel pairs through the mixer software.
- The 32-channel mixer application also controls the card's routing, monitoring and sample clock settings.
- Includes balanced audio and sync cable sets
- Has one digital I/O supporting both AES/EBU and S/PDIF formats at 16, 20 and 24-bit depths, and features a sample rate converter for up to 3.1 rate conversion from the digital input signals.
- The internal port allows data routing and synchronization between multiple LynxTWO cards, while the external port allows the connection of Lynx, ADAT, TDIF and other multi-channel interfaces for great system flexibility.
- Two LStream expansion ports support multi-channel interface modules, with each port offering 8-input/output channels of 24-bit/96kHz operation.
- Powerful synchronization and time code facilities include an LTC reader/generator which accommodates all standard frame rates, and a low-jitter sample clock generator, which is capable of locking to NTSC or PAL video signals, and to standard reference and word clock signals.

Lynx L22

192kHz PCI Digital Audio Interface

The Lynx L22 is a professional audio interface card designed for the most demanding audio recording, post-production, broadcast, and measurement applications. Based on LynxTWO technology, the L22 can capture or generate signals beyond the audio bandwidth up to 100 kHz with extreme accuracy. Using proprietary circuit topologies and custom components in the analog stages coupled with the latest converter technology, the L22 achieves a 117 dB dynamic range. Most importantly, advanced noise-rejection design techniques maintain this performance in real world use from computer to computer.

- Large on-board buffers and extremely efficient zero-wait state DMA engine ensure glitch-free recording and playback. This provides tolerance to system latencies and significantly reduces load on the host CPU.
- Extremely flexible onboard digital mixer allows the L22 to adapt to any studio or workstation configuration.
- Each of the mixer's 16 outputs is capable of mixing signals from 16 physical inputs or 16 playback tracks with 32-bit precision.
- A choice of dither algorithms is available on each input to mask low-level artifacts while reducing word widths to 8, 16, or 20 bits.
- The L22 provides I/O expansion via its two LStream ports. Combined, these ports allow 16 channels of additional I/O from external ADAT, AES/EBU, or TDIF devices. The ports can also be used to route data and synchronize to other L22's or LynxTWO's to create high channel-count systems.
**LYNX**

**LS-ADAT**

**Multi-channel ADAT Expansion Card**

The LS-ADAT is a full-function ADAT interface that provides two ADAT lightpipe inputs and outputs and an ADAT sync input for the LynxTWO and Lynx L22 audio cards. Operating at a sample rate of 48 kHz, the LS-ADAT I/O channel capacity is 16. Higher sample rates are supported using S/MUX technology: 8 channels at 96 kHz and 4 channels at 192 kHz.

- The ADAT sync input provides two methods of sample-accurate synchronization.
- In systems using ASIO compatible audio applications, the LS-ADAT utilizes Steinberg's ASIO Positioning Protocol for synchronization to ADAT time code.
- Using the LS-ADAT's cue point capability initiates recording or playback with sample period resolution.

Sample clock source can be derived from a word clock or composite video received by the LynxTWO. In addition, either lightpipe input or the Sync In port can also be selected as the clock source.

- The LS-ADAT can also transmit time code via MTC for general compatibility with many applications.
- Installs in an empty bracket internally in your computer, no PCI slot required.

Now you can easily increase the I/O capacity of the LynxTWO and L22 digital audio cards. The LS-AES and LS-ADAT provide high-performance multi-channel AES/EBU and ADAT connectivity for any Windows or Macintosh based audio or video workstation at sample rates up to 192kHz. Channels from the expansion cards are connected directly to the LynxTWO/L22 digital mixer. This allows almost unlimited routing capabilities with expansion card I/O’s, as well as the analog and digital I/O’s of the host LynxTWO or L22.

Using the LynxTWO/L22 Mixer application, "stand-alone" functions can be configured that place no demand on the host computer. In a LynxTWO system these functions include but are not limited to:

- Four-channel, 192 kHz analog-to-AES or analog-to-ADAT converter
- Four-channel, 192 kHz AES-to-analog or ADAT-to-analog converter
- Eight-channel AES digital patch-bay
- 16-channel ADAT digital patch bay
- AES to ADAT or ADAT to AES format converter
- Composite video or word clock to AES or ADAT synchronizer

**LS-AES**

**LStream Expansion Card**

The LS-AES is an 8-channel AES/EBU or S/PDIF LStream interface module that is designed for use with the LynxTWO and Lynx L22. The LS-AES provides four inputs and outputs that support professional AES/EBU and consumer S/PDIF digital I/O formats. Connections are transformer coupled with pro-quality sample rate conversion (SRC) available on all inputs. The LS-AES is also compatible with Dolby Digital and DTS encoded formats.

- Running at a sample rates up to 96 kHz, the LS-AES provides eight I/O channels in single-wire mode and four channels in dual-wire mode. At 192 kHz, four channels of I/O are available in dual-wire mode and two channels in quad-wire mode.
- For additional channel capacity, two LS-AES cards can be used simultaneously with one LynxTWO or L22.
- The LS-AES can handle both asynchronous and synchronous studio configurations. SRC can be enabled independently on each digital input to accommodate asynchronous signals from multiple digital devices. Alternatively, all inputs can be run synchronously and any input can be selected as the system clock source. The card can also be synchronized to a word clock or composite video received by the host LynxTWO.
- For S/PDIF coaxial connections, the optional Lynx XLR to RCA S/PDIF adapters CBL-XFDRM18 and CBL-XMDRM18 are required. The LS-AES installs in an empty bracket internally in your computer, no PCI slot required.
- Includes: LS-AES Internal Card LS-AES LStream Ribbon Cable 6' AES/EBU Breakout Cable

2-in/2-out USB Audio Interface with Mic Preamps and Digital Output
Record from mics or any line level sources. Optimize levels with gain controls and pads, as well as signal and clip LEDs. Use the Direct Monitor button for zero latency monitoring (direct from the sources without going through the computer and software). Adjust the global output by toggling between +4dB and -10dB. Headphones can be connected for convenient monitoring in the field. When disconnected from the USB port, the Duo functions as a 24-bit standalone A/D converter. Select sample rates via DIP switches (44.1, 48, 88.2 and 96kHz), connect the S/PDIF output to your digital device, and you're ready to record digitally anywhere, anytime.

- 2x2 analog I/O
- 2 mic preamps
- 2 XLR-balanced mic inputs
- 2 balanced/unbalanced 1/4˝ TRS line inputs
- Available gain of 66dB
- 20db pad on each mic input
- 48V phantom power
- S/PDIF digital output (16- and 24-bit)
- Zero-latency direct monitoring greatly simplifies recording and overdubbing
- Multitrack recording and mixing without PCI card installation

USB/Firewire Mobile Studio Interfaces—Take your music anywhere you want
Mobility is about more than just field recording; it's about ease and flexibility. Today the studio is no longer a place, it's a process. M-Audio's mobile audio solutions let you use your laptop or any USB- or Firewire-compatible computer to record and play audio whenever and whatever inspiration strikes. One simple connection gives you all the functionality you need for professional desktop music production or making music on the go. M-Audio's mobile audio solutions offer a variety of configurations to suit every need—including preamps, MIDI and digital I/O—all with M-Audio's legendary driver support spanning all popular operating systems and industry communication standards.

- Mobility and simple connectivity for audio and MIDI
- 24-bit/96kHz audio
- Highest quality components, specifications and fidelity
- Low driver latency, zero-latency hardware monitoring
- Software-controlled internal digital mixing and routing
- Unequalled driver support and software compatibility

QUATTRO USB
4-in/4-out USB Audio/MIDI Interface
The ultimate USB audio interface for professional recording needs, Quattro USB lets you use your laptop or any USB-equipped computer to access the world of digital audio. The Quattro USB couples today's latest technology with pristine A-D/D-A converters to bring you a recording tool that is easy to use and delivers the sound quality of systems that cost many times more.

- 4-in/4-out analog I/O via balanced/unbalanced 1/4˝ TRS connectors
- 1x1 MIDI I/O
- Multitrack recording and mixing without PCI card installation
- AC-powered components for optimal fidelity
- Selectable +4dBu/-10dBv input and output levels (in stereo pairs) via hardware supports guitar/keyboard/line inputs as well as professional and consumer equipment.
- Near zero-latency direct monitoring in stereo pairs
- More professional connectivity via the optional Omni I/O (takes on the functionality of OmniStudio USB)
USB Bus-Powered Preamp and Audio Interface

A bus-powered USB interface with built-in two-channel mic/instrument preamps, the MobilePre USB eliminates the need for an external power supply, making it ideal for field recording and other laptop-based mobile recording situations. It features two XLR-balanced mic inputs with switchable +48V phantom power, 1/8" mini stereo mic jacks for desktop mics, and two 1/4" TRS balanced instrument/line inputs. Each input channel also features a gain control knob (+40dB maximum), phantom power indicator, and a signal presence/dipping indicator. Outputs include two unbalanced 1/4" connectors, 1/8" mini stereo line output, and 1/8" mini stereo headphone output with level control. USB MobilePre also offers zero-latency direct hardware monitoring with software control of levels.

- Two pairs of analog line-level audio inputs (1/4" unbalanced or RCA)
- Two analog line-level audio outputs (RCA) with level control knob
- Two balanced/unbalanced 1/4" TRS high-impedance instrument/line inputs optimized for guitars and basses
- Two unbalanced 1/4" line outputs
- 1/8" stereo line output
- 1/8" stereo headphone output with levels
- Zero-latency hardware direct monitoring (mono/stereo) with software level control

MAXIMUM AUDIO TOOLS BUNDLE

All M-Audio mobile audio solution include M-Audio's Maximum Audio Tools bundle - a great collection of software software that lets you make music immediately. Bundle includes:

- Ableton Live Delta audio sequencer (a basic version of Ableton's revolutionary Live audio sequencer software)
- M-Audio ProSession series WAV/REX samples (125MB)
- Arkaos VJ VMP visual performance software (special edition)
- IK Multimedia SampleTank SE VST sample player (special edition)
- DSound RT Express VST host with WAV player (special edition)

AUDDIOPHILE USB

USB Audio/MIDI Interface with S/PDIF I/O

Audiophile USB is an affordable, no-hassle USB audio and MIDI interface that builds on the success of the Audiophile 2496— to deliver great frequency response, dynamic range and noise specs. AC-powered components that deliver better fidelity than bus-powered circuitry and the bundled Mac and PC drivers let you independently scale bit depth and sample rate (up to 96k) to deliver the lowest USB latency anywhere— whether you're on stage or in the studio.

- Two pairs of analog line-level audio inputs (1/4" unbalanced or RCA)
- Two analog line-level audio outputs (RCA) with level control knob
- S/PDIF in and out (coaxial)
- Supports AC3 and DTS surround sound setups
- 1x1 MIDI I/O
- 1/4" headphone output with level control
- AC-powered for high-performance A/D-D/A
OMNISTUDIO USB

Complete USB Mobile Recording Solution

More than just a simple USB interface, the OmniStudio USB gives you more connectivity, flexibility and core studio functionality than any other USB audio product available today. Based on the award-winning Omni Studio, the

OmniStudio USB puts everything that you need for audio and MIDI recording, monitoring and mixing in one easy-to-transport package. The on-board mixer provides tremendous routing and monitoring control over a full complement of I/O including mic/line preamps, aux ins, direct outs, separate stereo monitor and record outs, effects send/return and more. OmniStudio USB even has two independent headphone outs with level controls so that you can work with a partner anywhere.

- Two front-panel analog inputs featuring:
  - Neutrik connectors (XLR and 1/4” TRS)
  - Mic/instrument preamps with 66dB gain
  - 48v phantom power, individual gain controls, 20dB pad and signal/clip indicators
- Line inputs 3/4 (bal./unbalanced 1/4˝ TRS)
- Direct monitoring and mono/stereo mode for each input pair
- 1 x 1 MIDI I/O
- 4 stereo aux inputs individually routable for monitoring or recording
- 4 balanced/unbalanced 1/4˝ TRS outputs
- Stereo monitor outputs with level control (balanced/unbalanced 1/4˝ TRS)
- Stereo record outputs independent of monitor level (balanced/unbalanced 1/4˝ TRS)
- Two stereo headphone outputs with individual level controls (1/4˝ TRS)
- Effects send with level controls for each of the four D/A or direct monitor signals (unbalanced 1/4”)
- Stereo effects return (bal/unbal. 1/4˝ TRS)
- +4dBu/-10dBV hardware switching for line inputs 3/4, direct outs 1/2 and 3/4

About USB and Firewire

Offering excellent plug-and-play mobility compared to PCI, the USB and Firewire protocols each have their own inherent bandwidth that dictates how much audio it can transfer. Where PCI handles 132MB/sec., Firewire delivers 30MB/sec and USB 1.5MB/sec. Greater bandwidths allow you to record more tracks simultaneously than do lower bandwidths. USB meets the the needs of the majority of users who tend to record one or two tracks at a time. Supplied driver control panel allows you to manage bandwidth according to the needs of each project.

FIREWIRE 410

4-in/10-out Firewire Mobile Recording Interface

Delivering powerful performance for Firewire (IEEE1394) equipped computers, the 410’s 4-in/10-out configuration is perfect for personal recording where you build up tracks one at a time yet need multiple outputs. FireWire 410’s ten outputs allow your computer-based recording system to behave more like a traditional analog recorder or sampler, where signals are bussed to multiple channels of an analog mixer or to multi-channel monitoring systems. Software-controlled DSP handles all internal routing and mixing.

- Two analog input channels each featuring:
  - Balanced XLR and unbalanced 1/4” mic/line inputs
  - Preamp with level control, signal/clip LEDs and amazing available gain of 66dB
  - 48v phantom power (globally switched)
  - 20 dB pad
- 8-line outputs with signal/clip LEDs (unbalanced 1/4” @ -10dBV)
- Stereo monitor level control
- Two-channel S/PDIF digital I/O (coaxial and optical, switched)
- 1 x 1 MIDI I/O with bypass for stand-alone operation
- Two headphone outs with individual level controls (1/4” TRS)
- Two Firewire high-speed ports for connection convenience
- Low-latency software monitoring;
- Zero-latency direct hardware monitoring
- AC3 and DTS surround support via digital output
- Analog outs can directly drive up to 7.1 surround w/o decoder using included software bass management
- Standalone operation via AC adapter
The best-selling audio cards in the world, the Delta series span all studio configurations, feature sets, operating systems, and price points. Full-duplex architecture allows recording and playback simultaneously, while low-latency drivers and zero-latency hardware monitoring insure that your overdubs will be in sync. Each card features outstanding driver compatibility and stability.

- Ultimate support for multitrack hard disk recording and software synths/samplers
- Highest quality components, specifications and fidelity
- Unequaled driver support and software compatibility
- 24-bit/96kHz full-duplex audio
- Low driver latency (as low as 1.5ms)
- Zero-latency hardware monitoring
- 36-bit internal DSP with powerful software-controlled digital mixing and routing
- Expansion flexibility in combining and synchronizing Delta cards
- S/PDIF provides bit-accurate digital transfers and SCM S copy protection control
- Surround-sound ready-outputs AC3 and DTS over S/PDIF to an external decoder

**AUDIOPHILE 2496**

4-in/4-out PCI Audio Card with S/PDIF and MIDI I/O

The Audiophile 2496 is an all-in-one high fidelity soundcard solution for a wide variety of applications, ranging from multi-track recording, LP/cassette-to-CD and digital transfers, to digital mastering and computer-based home theater. It delivers uncompromising professional grade digital audio— but at a price anyone can afford.

- 2x2 analog I/O (unbalanced gold-plated RCA jacks) utilizing professional 24-bit, 96kHz conversion.
- Digital S/PDIF (coaxial) I/O and MIDI I/O provide connectivity to both digital devices, and the world of MIDI.
- Use the S/PDIF I/O for DVD surround sound playback with an external decoder.
- Offers powerful digital mixing, routing and monitoring capabilities with included software, as well as control over SCM S (Serial Copy Management System).
- 4x10 24-bit/96kHz full-duplex recording interface
- Two analog inputs (-10dBV unbalanced RCA) for line-level gear
- 8 analog outputs (unbalanced RCA)
- S/PDIF digital I/O with SCM S copy protection control (coaxial)
- AC3 and DTS surround support via digital output. Directly drive up to 7.1 surround without decoder with included software.
- Comprehensive digital mixing, routing, and monitoring capabilities with the bundled Delta Control Panel software

**DELTA 410**

4-in/10-out Audio Card with Digital I/O

Recordings are often put together one track at a time (a guitar solo here, a vocal there) as opposed to being all tracked simultaneously. So why pay for inputs you don't need. The Delta 410's 4-in/10-out configuration is created with exactly this type of recording approach in mind. You get two analog and one stereo digital input to accommodate keyboards, preamps, CD/MiniDisc players, DATs and other gear. Ten outputs place the I/O emphasis where you need it— flexibility in connecting to a mixer and effects. This configuration allows your computer-based recording system to behave more like a traditional analog one recorder or sampler, where signals are bussed to and from a mixer in the analog domain.

- 4x10 24-bit/96kHz z full-duplex recording interface
- Two analog inputs (-10dBV unbalanced RCA) for line-level gear
- 8 analog outputs (unbalanced RCA)
- S/PDIF digital I/O with SCM S copy protection control (coaxial)
Professional 4-in/4-out Audio Cards

A top choice in PCI-based digital audio solutions, the Delta 44 and Delta 66 are professional PCI audio cards connected to an analog break-out box that provides four analog audio input and outputs (1/4” TRS), compatible with balanced or unbalanced +4dB or -10dB signal levels. Also included is Delta Control Panel software, which allows you to control their comprehensive routing, monitoring, and mixing capabilities. Besides their superb sound quality, performance, and driver support, they provide 96 kHz recording, zero latency monitoring, digital mixing, and controllable SCM S. Otherwise identical, the Delta 66 adds a S/PDIF digital I/O with SCM S copy protection control (coaxial).

If you need more professional connectivity, simply add the optional Omni I/O (see Omni Studio below). With the Omni I/O as their front end, they gain 2 pristine mic preamps, an additional 8 inputs to its mixing section, 2 headphone sends, an FX send and return, dedicated monitor outs and record outs, auxiliary input record bussing, and more.

- 4x4 or 6x6 24-bit/96kHz full-duplex recording interface
- PCI Host card with external audio break-out box
- 4x4 analog break-out box (balanced/unbalanced 1/4” TRS)
- PCI I/O configurable for +4dB and -10dB signal levels
- PCI card provides S/PDIF I/O on RCA jacks (Delta 66 only)

The Delta control panel offers full control over features such as sample rate, direct monitoring, master/slave sync, surround and bass management, latency and more— for up to four Delta cards.

OMNI STUDIO

Delta 66 + Omni I/O -

The Complete PCI Desktop Studio Solution

A unique and powerful songwriting/production tool — the Omni Studio is the ultimate complete recording package for Mac and PC, offering versatility and performance that will change the way you make your music. Consisting of the Delta 66 PCI card, and the Omni I/O interface, Omni Studio is designed to let you record, monitor and mix projects while streamlining your setup and giving you the tools you need to produce music more professionally and easily than ever before. Omni Studio allows you to:

- Mix to digital (CD, DAT, minidisk) and cassette without re-patching cables.
- Record vocals, guitars, keyboards, software synths, loops, samples, turntables, and external FX units.
- Monitor keyboards, MIDI performances, FX sends before recording the FX, using 2 headphones and/or speakers.
10-in/10-out Virtual Studio

The Delta 1010-LT offers a host of interfaces including, eight analog inputs and outputs, two XLR microphone inputs with preamps, S/PDIF and MIDI input/output and wordclock I/O, allowing audio from a variety of sources to be connected. Inputs 1 & 2 on XLR jacks can be set to receive a balanced line or a mic level signal, eliminating the need for an outboard mic preamp. The S/PDIF input offers control over the SCM S copy protection protocol. The card offers zero latency hardware monitoring, and the bundled Delta Control Panel software can set and even fine-tune the input line level.

Delta 1010-LT outputs can be connected to an external mixer or sound system, while the S/PDIF outs feed your digital mixdown deck. The Control Panel Software also controls a hardware mixer embedded in the card, giving still more routing and mixing control. Use the MIDI I/O for your MIDI controllers and sound modules, and finally, connect to wordclock capable devices for rock-solid sample clock synchronization.

• 10-in/10-out 24-bit 96kHz audio card with mic preamps, S/PDIF and MIDI I/O
• 8x8 analog I/O (unbalanced gold-plated RCA connectors at -10dBv to +4dBu)
• Two balanced-XLR mic/line inputs with preamps (mic or line level is selected via hardware jumpers).
• +4dBu/-10dBV operation individually switched in software

DELTA 1010

10-in/10-out PCI-Based Digital Audio System

Recognized around the world as the top choice in host-based PCI digital audio solutions, the rackmount Delta 1010 is designed to handle the needs of the most demanding project and professional studios.

Like the Delta 1010-LT, the Delta 1010 functions as a 10-input, 10-output digital recording interface. However, it consists of a PCI card and breakout box and features eight balanced/unbalanced 1/4˝ TRS analog inputs and outputs plus coaxial S/PDIF I/O — and doesn’t have mic preamps. The sturdy rack-mount unit houses all of the A/D and D/A converters, keeping them away from the internal noise of your computer and assuring the best audio performance possible.

(D/A converters rated at 117dB, A/D converters at 110dB). Also located on the rack unit is Word Clock and MIDI I/O.

• 8x8 analog I/O (balanced and unbalanced 1/4˝ TRS)
• S/PDIF digital I/O with SCM S copy protection control (coaxial)
• 1x1 MIDI I/O

Midiman USB MIDI Interfaces

Midiman's USB MIDISPORT series is the world's best selling family of USB MIDI interfaces. Available in various port configurations, they work with USB-equipped Mac and Windows computers to assure reliable, immediate MIDI transfers. Installation is a breeze—no computer disassembly, no jumpers to set, and no I/O addresses, IRQ’s or DMA channels to configure. Expansion is just as easy—just plug in additional MIDISPORT units for more MIDI ports.

### They All Feature:

- Available in 16, 32, 64 and 128 MIDI channel configurations
- High speed connection between the interface and computer via USB
- Easy expansion — just plug in additional MIDISPORT units as needed
- MIDI activity LEDs for each port
- True plug-and-play installation - no tools required
- Interfaces are hot swappable meaning they can be plugged or unplugged from the USB bus at any time
- The smaller interfaces get power from the host computer via USB so no external power supply required — ideal for laptop computers. Each includes a 6' USB cable
- Each interface is covered by a lifetime warranty

### USB MIDISPORT 1x1

Sub-Compact, Single Port USB MIDI Interface

- 1 MIDI In port and 1 MIDI Out port provides 16 MIDI channels
- Power to the interface is supplied by the computer via the high-speed USB connection
- LED indicates the USB port is functioning properly.
- Sub-compact lightweight design — ideal for use with notebook computers, as an entry level interface or as a simple interface where only limited MIDI I/O is required.

USB MidiSport 1x1 ................................................................. 48.95

### USB MIDISPORT 2x2

Sub-Compact, Dual Port USB MIDI Interface

- 2 MIDI In and 2 MIDI Out ports provide 32 MIDI channels
- USB/MIDI Thru button lets you play your gear even when the computer is turned off — data from MIDI In-A is sent to MIDI Out-A and data from MIDI In-B is sent to MIDI Out-B.
- Sub-compact design with all-metal casing — ideal for use with notebooks, as an entry level interface or simple MIDI setups

USB MidiSport 2x2 ................................................................. 69.95

### USB MIDISPORT 2x4

Multi-Port USB MIDI Interface

- 2x4 architecture lets you go beyond the MIDI specs limit of 16 channels. Two separate 16-channel input ports allow your system to accept up to 32 discrete MIDI input channels, and four individual 16-channel output ports allow you to address up to 64 discrete MIDI output channels.

USB MidiSport 2x4 ................................................................. Call

### USB MIDISPORT 4x4

Multi-Port USB MIDI Interface

- 4 MIDI In and 4 MIDI Out ports provide 64 MIDI channels
- 1/2 rack design with all metal casing — ideal for desktop music systems with moderate MIDI requirements, for extra I/O in an expanded system, or as a truly flexible and roadworthy interface for notebook computers.

USB MidiSport 4x4 ................................................................. 134.95

For Any Inquiries Regarding Your Order, Call Our Customer Service:

USB MIDISPORT 8x8

Rackmounted Multiport USB MIDI Interface/ SMPTE Synchronizer

The flagship of the MIDISPORT line, the USB MIDISPORT 8x8 is a powerhouse with features and bandwidth to spare. It features rock-solid drivers on both Mac and Windows, USB and serial capability (in addition to being a gateway to the high speed and convenience of USB, the MIDISPORT 8x8 can be connected to the “legacy” serial ports of older computers) and full SMPTE implementation.

FEATURES

- 8 MIDI In and 8 MIDI Out ports provide 128 MIDI channels with the 8th I/O ports located on the front panel for easy access
- High-speed connection to USB-equipped PC or Mac computers as well as a 8-pin serial connection for older PC or Macs
- Select between computer-based modes—USB, PC Serial and Mac Serial as well as the four standalone modes — MIDI Patchbay, Thru, Cable Test and SMPTE Writer
- MIDI Reset (panic) button send an “all notes off” and “all controllers off” message to the MIDISPORT outputs in the event of a stuck note or MIDI overload.
- THRU Mode sends every message at the MIDI In ports on to all of the Out ports, helping diagnose connection problems.
- Includes an 8-Pin serial port for non-USB Mac and Windows 95/98 computers.
- Operates as a stand-alone MIDI patchbay and a SMPTE to MTC synchronizer
- Bundled remote control software (Mac and Windows compatible) enables you to control the interface’s SMPTE functions and MIDI patchbay configurations from your computer. Configuration settings can be saved to disk and reloaded for later use.
- THRU Mode sends every message at the MIDI In ports on to all of the Out ports, helping diagnose connection problems.
- Includes an 8-Pin serial port for non-USB Mac and Windows 95/98 computers.

SMPTe Timecode Operation

- SMPTe Time Code Writer/Reader supports 24, 25, 29.97, 30 drop or 30 non-drop frame LTC SMPTe formats.
- Converts SMPTe LTC to MIDI Time Code (MTC) for syncing a video deck or multi-track recorder with MTC capable software.
- “Writing” and “Locked” LEDs indicate SMPTe writer and reader/regenerator status, which indicates that a valid SMPTe code is recognized at the SMPTe In jack.
- The Flywheel Control, found in the included Remote Control software, selects the number of frames, from 1 frame to 255 frames, or infinite flywheel (Jam sync), that will be tolerated if there is a dropout in the incoming SMPTe timecode signal.
- 1/4” SMPTe I/O jacks on the rear panel

Applications:

- The software synth is here to stay, and along with it comes dozens of parameters to be tweaked. Oxygen 8 puts your hands on any 8 parameters of your choice in real time.
- Oxygen 8 lets you get deeper into your software programs, to get more out of them, to experiment and push them to their limits.
- Gives you more freedom on the stage than you’ve ever had before, dynamically increasing the possibilities available to you.
- Instead of taking hours to program drums with a mouse, use Oxygen 8 to play grooves into your program in real time. Use the 8 knobs to manipulate the dynamics, feel, and FX.
- Synthetists can use Oxygen 8 to gain access to, and to automate parameters that exist deep within their hardware, making it easier to get more out of them without having to navigate through dozens of menus.

Features:

- 8 MIDI assignable knobs, one assignable slider
- Inputs and outputs 16 channels of MIDI to and from your computer using the power and convenience of your USB port.
- Fully functional, velocity sensitive 25 key MIDI controller keyboard, capable of sending all MIDI messages, such as modulation, pitch-bend, MIDI volume, and more.
- Powered via USB port or 6 “AA” batteries, or with the supplied power supply.

What is a MIDI Controller?

Unlike traditional keyboards, MIDI controllers have no sound built into them. They are optimized to control other MIDI sound sources such as synthesizers, samplers and today’s popular software synths. For example, here’s how you play sounds within a software program:

Because of M-Audio’s driver technology, your computer will recognize your Keystation as a MIDI interface with which it can communicate. By playing the keyboard, you send MIDI information to your computer, which triggers sounds in a software program that are played via the audio output to your computer’s sound card. You can also send MIDI via the Keystation’s dedicated MIDI output port to external MIDI sound modules like synths and samplers.

OZONE USB Audio/MIDI Mobile Workstation

Your laptop changed the way you live— and now new mobile tools can change the way you make music. The revolutionary Ozone is an all-in-one keyboard, MIDI control surface, mic preamp, USB audio interface and USB MIDI interface that’s no bigger than a laptop. Combined with your computer and software like Reason and Live, Ozone provides a complete personal mobile studio from input to output.

Ozone: Applications:

- Built-in 16-channel USB MIDI interface
- 25-note keyboard with full-sized keys
- Eight assignable MIDI controller knobs
- Pitch and mod wheels
- Sustain pedal jack
- Two MIDI outs (one from computer, one from Ozone)

Ozone: Features:

- Built-in 2 x 2, 24-bit/96kHz audio interface
- Stereo out (balanced 1/4” TRS)
- Mic input (XLR) with built-in preamp and phantom power
- Instrument and Stereo aux in (bal. 1/4” TRS)
- Stereo headphone out
- Monitor switch for zero-latency monitoring
49- and 61-Key USB MIDI Controllers with Realtime Knobs and Sliders

A new breed of controller, Radium is designed to meet the needs of today’s electronic musicians. The Radium 49 (49-key/4 octave) and Radium 61 (61-key/5-octave) give even the most serious players a keyboard that they can love, combined with 16 controllers that can be mapped to any MIDI-assignable parameters in your hardware and software rig. The complement of 8 MIDI-assignable sliders are ideal for mixing with virtual faders, while the 8 MIDI-assignable knobs are great for panning and effects send—and both are great for real-time performance control of synth parameters.

They are also a USB MIDI interface that speaks directly with your computer without any extra devices. Radium is perfect for applications like real-time soft synth control, virtual mixing, drum programming, live performance and more. And they weigh in at only 7 lbs. so you can take them anywhere.

EASY CONTROL

Controls aren’t buried mysteriously in obscure menus. The keys have a second layer of functions, allowing you to program MIDI control information directly from the black and whites. Here’s how it works:

◆ Press the MIDI/Select button
◆ Press the note on the keyboard with label corresponds to the parameter you wish to change
◆ Use the Data Entry slider to select the value or enter numeric values by pressing the keys labeled with numbers

Radium Features

◆ 49- or 61-note keyboard
◆ Who wants to mix with a mouse? Use Radium’s 8 sliders to control your virtual faders, while Radium’s 8 knobs control pan, effects send amount and much more.
◆ USB port routes 16 channels of MIDI I/O directly to and from your computer
◆ Separate MIDI Out jack routes MIDI signals from your computer to control external gear—no separate interface needed
◆ MIDI Out jack routes MIDI signals from Radium to control external gear
◆ Pitch and modulation wheels
◆ Octave up and down buttons extend keyboard range
◆ Fully functional, MIDI controller keyboard sends all MIDI messages, such as modulation, pitch-bend, MIDI volume and more
◆ Keyboard doubles as a data input device
◆ Lightweight (7 lbs.)—easy to take wherever the music is
◆ Powered via USB port, 9v DC power supply or AC Adapter

MAXIMUM AUDIO TOOLS BUNDLE

All M-Audio MIDI controllers include M-Audio’s Maximum Audio Tools bundle—a great collection of software software that lets you make music immediately.

Bundle includes:

• Ableton Live Delta audio sequencer (a basic version of Ableton’s revolutionary Live audio sequencer software)
• M-Audio ProSession series WAV/REX samples (125MB)
• Arkaos VJ VMP visual performance software (special edition)
• IK Multimedia SampleTank SE VST sample player (special edition)
• DSound RT Express VST host with WAV player (special edition)
Mackie Control is a nine-fader (eight channels and master) MIDI controller that provides in-depth mixing, editing, automation, and navigational control for any supported digital audio workstation. The Mackie Control adheres to a compact, desktop-style design and offers a full range of professional-grade features and controls.

Mackie Control has eight channel strips, each of which includes a Penny and Giles 100mm touch-sensitive motorized fader, mute, solo, and record arming buttons, Signal LED, a Channel Select button, and a V-Pot that can be used to control panning, send levels, EQ, dynamics, and other DSP plug-in modules. The eight channels can be bank-switched to control as many channels as the user-selected software supports. Various software parameters are displayed on a back-lit LCD screen that provides channel metering and track naming in addition to DSP and dynamics parameters.

Mackie Control also supports a full automation assignment section, edit buttons, Undo, Redo, and Save buttons, and a Shift Modifier that offers dual functionality for specific commands. Complete navigational control is provided in a tape-style transport with Jog/Shuttle wheel, Loop In/Out points, and timeline quick jump buttons. All controls live within a small, tabletop, analog-style control surface with a backlit LCD display that is comfortable and enjoyable to use.

Mission-specific software “hooks” (or specialized commands) have been written by MOTU, Steinberg, and Cakewalk to support the Mackie Control. DAW-specific Lexan overlays that fit right over the master section can be used to “personalize” the Control for SONAR, Digital Performer, Nuendo or Cubase SX. Additional support and overlays will be available in the future for applications like Syntrillium’s CoolEdit Pro.

What is a “Lexan Overlay”?
A Lexan overlay is a thin sheet of polycarbonate that has DAW-specific nomenclature on the front side and an adhesive on the back. It is designed to be placed over the master section of the Mackie Control and associate the buttons and controls with specific software commands. Because the Mackie Control is supported by a number of different DAW applications, each DAW manufacturer has been given the opportunity to design and implement their own overlay. Using the overlay that corresponds with your DAW software will give you a personalized, mission-specific controller with all the commands for your particular platform at your fingertips.

Slightly narrower than a full Mackie Control, the Mackie Control Extender has all the channel strip features of the Mackie Control—only without the master section. Multiple Extenders can be used with a single Mackie Control to emulate a large-scale control surface with as many faders and pots as desired.
Baby HUI is the direct descendant of HUI (Human User Interface). Originally released by Mackie in 1997, HUI quickly became one of the audio industry’s first totally integrated control surfaces for digital audio workstations. With a similar feature set of single-button automation, editing, and navigational commands, complimented with eight full-featured channel strips that feature a touch-sensitive motorized fader, Baby HUI offers professional-grade features and capabilities in a compact, affordable package.

- Baby HUI is an eight-fader MIDI controller that provides in-depth mixing, automation, and navigational control for any digital audio workstation that supports the HUI MIDI mapping protocol.
- Supports all the major features found on the original HUI - only in a smaller footprint and at a more affordable price point.
- Perfect for DAW enthusiasts on a budget, or space-conscious engineers who have a very small area to use with a controller.
- Eight channel strips that include a 60 mm touch-sensitive motorized fader, mute button, solo button, and a Signal LED.
- Each channel strip also has a multi-functional rotary encoder that can be used for pan or send level control, or can be pushed in to provide Channel Select, Record Arming, or Automation Arming functions.
- One of the key features of Baby HUI is the extensive software support that already exists among the various DAW platforms - today! Baby HUI will operate and interact with any software that supports the HUI MIDI Mapping protocol. This is a HUGE advantage over generic MIDI controllers that require you to map every single control with every software parameter - a process that can take hours away from being creative and enjoying the product.
- Function buttons beneath the displays and knobs let you select the arrangement of those parameters and how they show up on screen.
- The C4 also acts as a “quick fix” tool for fader and pan settings across 32 channels, and can be used independently or with additional Mackie Control and/or Mackie Control Extenders.
- In/out buttons for location point insertion on the fly
- Easy to use MIDI In/Out connections
- Supports full automation assignment section, display buttons, and Undo button and a Shift Modifier to double up certain controls.
- Basic navigational control can be achieved via the tape-style transport and RTZ/END buttons, and any channel can be accessed with the Bank/Channel Select buttons.

Large Touch-Fader Master Controller for Digital Audio Workstations

Designed for video, film, multimedia and recording studio professionals, Mackie’s HUI (Human User Interface) was the original hands-on control surface for Pro Tools, Digital Performer, Cubase and Nuendo digital audio workstations (DAWs). HUI did for digital audio workstation users what the mouse did for computer users: Familiar physical movement is instantly translated into precise creative control. For example, HUI includes what appears to the user to be familiar rotary knobs... but the DAW ‘sees’ a virtual interface that can be stored and recalled digitally.

This complete hardware workstation console has the user-friendly features and ergonomics that Mackie is renowned for... including instantly touch-updatable 100mm motorized faders, transport controls, DAE plug-ins control, keyboard shortcuts, window buttons - even built-in mic preamps! What used to take multiple mouse moves and clicks can now be done at the push of a single button. Instead of individually adjusting “faders” on screen, users can now enjoy hands-on tracking and mixing with touch-updatable motorized faders. With full automation control and recall capabilities, HUI is anything but a conventional fader pack. For serious professionals who work in and day out with Pro Tools, Digital Performer, Cubase or Nuendo, HUI can significantly boost productivity through direct hands-on control.

FEATURES

- Eight 100mm professional grade, touch update, readily re-assignable, motor faders. The quick reactive, conductive metalized fader knobs respond immediately to touch control without separate switch enabling or disabling.

- The motor fader design utilizes a high resolution, tightly tuned servo amplifier to reduce annoying fader chatter, and the conductive plastic fader servo track greatly extends fader lifetime.

- Per channel 4-character LED scribble strip, for updating the Channel ID on the fly and for displaying channel attributes: e.g. group membership, signal phase, source, routing, etc.

- Dedicated per channel Pan and Send encoders and controls for routing, assignment, status, edit and automation control.

- “V-Pots” is a cost effective and novel Mackie “soft” knob design, with illuminated LED segments in the collar that update to reflect values according to function.

- Highly tactile illuminated switches for mute, solo, automation write and record-ready enabling.

- Dual LED ladders per channel for level display status - e.g. mono/stereo levels, dynamics, etc.

- Dedicated plug-in section to edit and automate your favorite DSP functions. Controllers include four rotary encoders with enable switches and a 2x40 LCD panel, with each parameter section containing callout display and precise values. Plus easy paging, assignment and bypass switching.

- Sectioned switch matrix containing automation controls, status views and F-keys for macro style operations.

- Fader view, recall, and reassignment/dedicated bank and channel selectors.

- Analog control room section with talkback, and assignable routing for three stereo or surround audio pairs, with separate output trims and a Master control. Additional master mute, dim, mono monitoring and discrete one to one switching are included in this section.

- Transport controls, jog encoder, zoom and navigation cursors, locate/number pad.

- Rear panel includes two patchable mic preamp sections, an external talkback mic pre-amp and trigger, three pairs of analog I/O jacks (configurable for stereo or surround application), headphone out, four general purpose I/O trigger jacks, 2 sets of ADB mouse/keyboard through-ports, MIDI I/O, an expansion port for joystick or additional V-POTS control and an RS-232/422 port for direct computer connection.
HUI is organized into seven parts:

➤ In the upper-left corner is an assign section where internal mix bus and physical hardware I/O assignments are made.

➤ The main part of HUI is composed of eight assignable channel strips with big-console-grade, 100mm motorized faders and Mackie's innovative V-Pot rotary controls.

➤ In the upper-right corner of the interface is a vacuum fluorescent alphanumeric display for controlling the parameters of DAE-compatible plug-ins.

➤ Below the DSP section is a switch matrix for assigning channel status and/or global session attributes.

➤ The lower right-hand section, with keypad and jog wheel, dedicated keys, and even extra cursor controls, is dedicated to transport/locate functions.

➤ The lower left contains a keyboard shortcut section bank and selector buttons to switch between various Pro Tools screens.

➤ Shoe-horned in the middle of all this is a complete analog control room section with 3 sets of speaker/phones controls and built-in talkback mic. (Trim controls for the two integrated mic preamplifiers and talkback mic are on the back.)

Dedicated Remote Control Surface

The Mixed Logic M24 provides familiar hands-on control for the computer-based audio production environment. It offers a traditional recording console style interface designed to integrate with your favorite digital audio software and provide the best of the virtual and physical worlds. The M24 will complement your existing recording software, improve your efficiency and enhance the recording experience. Works with Cakewalk Sonar, Digidesign Pro Tools LE, TDM and HD, Steinberg Nuendo and Cubase, MOTU Digital Performer, Emagic Logic Audio, and C-Mexx C-Console for the Yamaha DSP Factory. Many more programs will currently work with the M24 under generic support.

The M24 has generic modes in addition to the dedicated host modes. One of the generic modes has bi-directional control of over 1000 different MIDI controllers at a time and keeps track of current values as you jump from channel to channel.

Channel Faders
- Has 24 motorized 100mm touch-sensitive Alps faders with 10-bit internal resolution (1024 steps) and scalable MIDI resolution depending on the host software requirements.
- The faders are assigned in banks to control the on-screen faders in the host software. If you move a channel fader the corresponding on-screen fader will follow the movement and moving any on-screen fader in the current bank will move the corresponding M24 fader to match the corresponding position.
- The M24 faders can also create or update automation. The fader range is in steps as fine as 0.1 DB.
- The M24 faders can control audio track faders, master faders, effect returns and aux inputs, group and volume levels of midi tracks in the normal mode. In flip mode or by reassignment, faders can control just about any other function.
- Moving any fader will cause the LCD display to display the corresponding fader's channel name and control name and fader value on the top line of the LCD display and update the corresponding channel scribble.

Pan Controls
- The M24's 24 rotary controls are used for panning and correspond to the on-screen pan controls in the current selected bank. The pan controls can also double for other functions depending on the host software.

Aux Send Controls, Dynamics
- The top row has 16 rotary controls and 16 switches and LEDs for auxiliary effect send control and dynamics control.
- The number of available auxiliary send controls per channel depends on the current host software.
- All 16 controls can also double for other functions including plug-ins depending on the host software.
- Each channel in the current bank has a select switch that is used to make the Aux Sends, dynamics and EQ and plug in controls active for the selected channel.
- The 16 switches in the top row are used for Pre / Post select or dynamics functions and double for Window select modes, Function switch modes and Aux send mutes.

Equalizer Controls
- Imagine having one type of plug in EQ on several channels and another type on several channels and with the push of one switch you could jump from channel to channel and be able to instantly use the same familiar controls to control similar plug in functions.
- The M24 is the first control surface to feature a complete dedicated equalizer section with 12 controls divided into 4 bands.
- Controls are provided for Gain, Frequency and Width on each band with a band bypass and EQ type switch for each band.
- A soft control is provided for access to additional bands assigned in pages (software dependent) or for use as a trim control.
- Depending on the host software the EQ section can be configured to control a large number of software plug in effects with the ability to use the same common controls for similar functions in effects from different manufacturers across all channels.
LCD Display and Scribble Strip

The M 24 features a 40 character by 4-line LCD display. The top row of the LCD display usually is used to display the most recent control and value including a long channel name, long control name and continuously updated control value. The next three lines of the display usually are used to display the abbreviated channel names for all 24 channels active in the current bank and act as channel scribble strips. Line 2 is for faders 1-8, line 3 is 9-16 and line 4 is 17-24. The LCD has many additional modes and menus depending on the current host software. The P1 in the far right of the first row indicates the current page of controls that are active. The M 24 has the ability to reassign just about every control on the unit instantly to other functions in several pages allowing the use of faders and other controls for very extensive control of plug ins and controllable instruments (software dependent) extending the total number of available controls.

Select, Solos, Mutes and Soft Switches

- The M 24 has dedicated Channel Select, Solo, and Mute switches, 24 each that correspond to the same on screen channel functions in the host software depending on the current bank.
- The 24 Solo and Mute switches are always active, and can be easily reassigned to control additional functions.
- 24 Soft switches are assignable to different functions, such as record enable, depending on the host software. The Soft switches can also be assigned to automation arm, automation mode and punch control depending on the current mode of automation and the host software.
- The Channel Select switch is used to select the current active channel assigned to the remaining controls for effect sends (aux buses), dynamics, EQ and plug in controls.

Connections

- 3 MIDI in and 3 MIDI out connectors allow for multi program use or emulation of three eight channel controllers.
- A USB connector provides a high-speed connection to the host software.
- 25 pin accessory connector
- IEC320 Power connector for standard power cords

Weight and Construction

- Power supply: Two massive internal international switching power supplies (100-250V)
- Dimensions (WDH): 37.5 x 16.5 x 6” (without armrest or wood trim accessories)
- Heavy Duty 16 gauge steel chassis
- Weight 38 lbs (without armrest or wood trim accessories)

Transport and Navigation

- The M 24 has traditional tape style transport controls with additional controls for navigation, selection, editing, menu control and parameter adjustment.
- The M 24 features a large jog, shuttle control that can be used for audio scrubbing, shuttling and navigation. Audio Scrubbing is similar to rocking the reels back and forth on an analog tape recorder and is used during editing to help locate precise start or end points of a sound.

Zoom, Grouping and Mode Control

- The M 24 has 10 switches that are used for mode select and include functions for Zoom, Grouping, Markers, Plug In mode select, Utility and Function modes and LCD and pan modes depending on host software. The M 24 has input and output assignment capabilities as well.

Fader Flip Modes

- A SWAP switch below the Transport controls is used to swap the channel faders function to control the Aux Buss effect send levels for the currently selected send or the pan values if in Pan Flip mode. In send flip mode the pan controls can become send pan controls and send muted are also available.

Bank and Channel Swap

- You can swap the control assignments of the faders, pan controls, solos, muted and soft controls in banks of 24 channels at a time using the BANK SWAP left, right arrow switches. If you are in the first bank the M 24 faders are assigned to tracks 1-24. If you press the right BANK SWAP arrow switch once, the M 24 faders would be reassigned to represent channels 25-48 in a song with over 24 tracks and the faders would move to match the new bank’s on screen fader positions.
- Many of the supported software hosts can also shift the 24 assigned channels up or down one channel at a time. By pressing the BUSS 8 / CHANNEL switch and light the corresponding BUSS 8 / CHANNEL led, you will change the function of the BANK SWAP switches into channel shift switches.
SAC 2.2

Control Surface
The SAC-2.2 is a hardware control surface that allows you to control nearly all of the functions of your favorite software without using a mouse. It features 9 motorized faders, 12 rotary encoders with 31 segment LED rings, three large 2 x 40 LCDs, a jog wheel and a large locator display. The SAC-2.2 is compatible with full-featured audio and MIDI recording software as well as virtual instruments and librarian/editor programs. In fact, the SAC-2.2 lets you control several different programs simultaneously, and switch between them in real time. The SAC-2.2 will automatically update itself with the correct operating mode and parameter settings as you switch between programs! And in addition, this feature is networkable, meaning it will allow you to control different programs on different computers on your network! Got a great Mac-based sequencer and an awesome PC-based sampler? No problem. One SAC-2.2 integrated into your network means you can control them both - at the same time, without the need to re-configure and re-boot!
The SAC-2.2 offers great fader movement, enhanced encoder LED visuals, USB support, and a very responsive and stable operating system. USB connectivity for both the Mac and PC greatly simplifies setup with Plug-n-Play. With its higher bandwidth, the SAC-2.2's fader performance when using USB is able to keep up with even the most complex automation moves. You'll love how responsive the button action is and how fast the LCD refreshes. And when connecting the SAC-2.2 to your computer using USB, the SAC-2.2's MIDI ports can be utilized as a built-in MIDI interface. Great for hooking up a desktop MIDI keyboard.

The music tool which lets you concentrate on your mix and not your monitor. Works with every program that matters in pro audio software.

MOTU Digital Performer:
Superior audio and MIDI software for the professional musician. The SAC-2.2 gives complete access to every significant parameter within the software. An excellent plug-in driver done together with MOTU gives fast access to every essential nuance to create the best professional product. The SAC-2.2 and Digital Performer make a deadly combination.

Digidesign Pro Tools:
The definitive professional post production and audio software. The SAC-2.2 provides total access to the aspects of Pro Tools that not only save you hours of creative time, but allow you to perfect your product like nothing you have ever used.

Nuendo:
One of the future indicators of where professional music production software is going. Native and powerful, taking full advantage of today's power computers. The SAC-2.2 utilizes a control drive written by Steinberg giving complete access to the critical elements of recording and production.

Cubase:
This single program is the most used software in the world. Simple, professional and full of the kind of tools that you need to create the successful mix. The SAC-2.2 works hand in hand to automate and accelerate this complex task.
The goal of the SAC-2.2 is to make your work with both audio and MIDI tracks fast, effortless and far easier than you ever thought possible. Music is all about interaction and organization. The SAC-2.2 organizes every pertinent audio function needed to make a successful mix all within one touch. No searching and no mousing around. Simple, straight forward and designed to let you concentrate on your music as it was meant to be. All tracks are instantly accessible to edited together or singly with enough information in the displays that you will find yourself rarely having to look at the monitor.
8x8 FireWire Workstation For Mac and Windows

The FireStation is a 24-bit audio interface that provides eight simultaneous inputs and outputs to your favorite computer-based recording environment via a high speed FireWire connection. The FireStation utilizes Yamaha’s open mLAN audio networking protocol that can support hundreds of channels of bi-directional digital audio, MIDI and word clock on a single FireWire bus. I/O features include two mic/instrument preamps, switchable between solid state or tube operation; eight 1/4˝ TRS line inputs two outputs; eight channels of ADAT optical I/O; S/PDIF I/O as well as control room and headphone outputs with level controls. Word clock I/O via BNC connectors are provided as well as a MIDI port for connecting synths and control surfaces etc... The FIREstation can also be used as a stand alone 8x2 mixer or A-to-D converter and is expandable to 48 Channels by daisy-chaining multiple units.

Two Dual-Servo Preamps with Switchable Tube Circuit
- Two Dual-Path Mic / Instrument preamps deliver maximum tonal flexibility with the choice of a solid state or 12AX7 tube enhanced audio path.
- Preamp gain and the amount of signal routed to the vacuum tube are controlled independently with a dual concentric knob – greater levels of tube drive can deliver a desirable warmth or richer sound or distortion at extreme more settings.
- XLR mic and 1/4˝ Hi-Z instrument are easily accessible from the front panel via Neutrik combo connectors.
- 48 volt phantom power and 20dB pad switches are available for each channel.
- Each preamp channel has it’s own 1/4˝ TRS direct output send that allow an external processor, such as a compressor, to be placed in the signal chain and returned into the FIREstation via line inputs.

Inputs and Outputs
- Eight balanced 1/4˝ TRS analog inputs and outputs.
- The ADAT optical I/O supports eight channels of 24-bit audio, up to 48kHz to be transferred simultaneously in one direction.
- Coaxial S/PDIF I/O

8x2 Line Mixer
- Each channel can be easily routed to the main outputs of the onboard line mixer. This provides zero-latency monitoring when used with a computer based DAW.
- The mixer can be used whether connected to a computer or not.
- The output level for the headphone and master outputs is controlled by a dual concentric volume knob.

MIDI I/O
- The onboard MIDI I/O port can be used for interfacing a keyboard or fader control surface for sequencing and mixing within your computer based DAW.
- MMC (MIDI Machine Control) and MTC (MIDI Time Control) are also supported.

Synchronization
- BNC Word Clock I/O allows the FIREstation to be configured as the slave or master device in a digital system.
- The ADAT I/O can also provide or carry Word Clock as well.
- A 1/4˝ footswitch input, on the rear, allows you punch in/out recording.

The IEEE-1394 FireWire standard offers the possibility of hundreds of channels of digital audio and MIDI on one network, easy connection of additional interfaces between products, master clock control bus without the need for word clock distribution.
**10-Channel Digital Line Mixer**

The M-1000 is a 1U rackmount mixer designed to mix digital signals of varying sample rates. The M-1000 comes with four stereo S/PDIF digital inputs and a stereo analog input—all with 24-bit/96kHz sound quality—making it perfect for mixing electronic musical instruments and recording gear equipped with digital outputs. The M-1000 can even mix audio from a PC via its USB port. Word Clock is also provided, and multiple units can be linked for greater mixing power.

**FEATURES**

**Mix Multiple Digital Sources**

Today's synthesizers, sound modules and recording gear often feature digital outputs, but musicians have never had a way to mix all these sources at once. That's where the M-1000 comes in. This 1U rackmount mixer can mix up to four stereo digital signals of varying sample rates—along with a stereo analog input and digital audio from a PC—with professional 24-bit/96kHz sound quality.

Take a look at the back panel, and you'll find four S/PDIF digital inputs and a stereo analog input with high-quality A/D converters. That's a total of 10 input channels that can be mixed—regardless of sample rate—using the front-panel knobs. The result can be output via coaxial and optical digital outputs or the M-1000's analog Master and Monitor outputs.

**Flexible Sync Options and Expandable Design**

With its Word Clock input and output, the M-1000 can be easily integrated into professional studios. The clock source itself is selectable among Internal, Word Clock, Digital In and USB* for maximum flexibility. And with its pro-quality specs—including pristine 24-bit/96kHz AD/DA converters and 56-bit internal processing—the M-1000 can be used in a range of applications from home studio setups to world-class recording and editing suites. Best of all, multiple M-1000s can be cascaded for situations when additional inputs are required.

* At 96kHz, it is not possible to send audio in and out simultaneously via USB.

**USB Port for PC-Based Recording**

The M-1000 even lets you integrate your USB-equipped PC into the mix. Using a USB cable, you can route digital signals from a computer into the M-1000, where they can be mixed with other input channels. The results can then be sent back out to the computer for recording. The M-1000 supports sample rates up to 96kHz—even via USB*—so there's never been a better or easier solution for computer-based recording.
ROLAND

SI-24 STUDIO PACKAGE

Studio Package Pro
The Studio Package Pro is a complete hardware and software bundle that gives musicians everything they need to professionally record music on a computer. The Studio Package Pro consists of three elements:
The SI-24 Studio Interface, RPC-1 PCI Interface Card, and Emagic's Logic RPC Pro software for Mac or PC. This affordable combination provides 24-bit/96kHz recording and professional MIDI sequencing with a motorized control surface—a powerful combination at an incredible value.
The SI-24 Studio Interface is a mixing surface equipped with eight XLR/TRS inputs, a Guitar Hi-Z input, plus digital I/O in S/PDIF and R-BUS formats—all with 24-bit/96kHz sound quality. The SI-24's 13 motorized faders, 12 rotary knobs and 5.1 surround joystick can all be used to control Logic's mixing functions and plug-ins. There's even a Screen Set function for changing Logic's screen sets remotely.

Audio is passed from the SI-24 to and from the computer via the included RPC-1 R-BUS Interface Card, a PCI audio card with drivers for Windows, Macintosh and ASIO 2. The SI-24 connects to the RPC-1 via a single R-BUS cable, which can handle eight channels of bi-directional 24-bit/96kHz digital audio, along with MIDI information received from the SI-24's MIDI In and Out ports—making the SI-24 a useful MIDI interface as well.

All recording is handled in the computer via the bundled Logic RPC Pro software. This special version of Emagic's award-winning music production software for Mac or PC provides eight channels of simultaneous 24-bit/96kHz recording, 24 tracks of playback, 5.1 surround mixing, level and pan automation, a host of killer plug-ins and more. And since the SI-24 is designed to control many of Logic's mixing functions— including track level and panning, EQ, plug-in parameters and soft synths—users gain hands-on control of their software for an unbeatable combination. The SI-24 also includes controller templates for popular software such as Pro Tools and Cubase, plus a “Learn” mode for setting up user presets more easily.

Professional Sound Quality
As with any digital recording system, sound quality is a primary concern. That's why Roland gave the SI-24 Studio Interface the best 24-bit/96kHz converters. You can use up to eight analog inputs simultaneously, choosing from either 1/4˝ phone jacks or XLR connectors. Six analog outputs are also provided, plus S/PDIF digital I/O. Once audio is routed into the SI-24, it is transferred digitally in and out of the computer via R-BUS. And since Logic supports 24-bit/96kHz recording, the sound quality is never compromised. You can even dither back down to 16-bits when you're ready to burn a CD.

Fully Automated Mixing
With 13 motorized faders, mixing on the SI-24 couldn't be easier. Simply switch fader banks to access more channels and watch as the faders instantly snap to the proper positions! Naturally, the SI-24's faders can also be used to control Logic's "virtual" faders for more natural mixing. And when you really want to create complex mixes, tap into Logic's wealth of automation functions. Tools like HyperDraw let you draw in fader moves and panning, while the new track-based automation makes it even easier to automate any mixing or plug-in parameter without leaving the Arrange window.

Transport/Function Buttons
Besides functioning as a mixer, the SI-24 works as a remote control for Logic. Dedicated transport buttons and a large Jog wheel make moving around your song easy, while ten numeric keys perform multiple functions: Push the Screen Set button and they automatically select Logic’s screen sets, making it easy to switch between the Arrange window, Mix window or other screens. Press the Short Cut button and the numeric keys automatically perform functions like Save, Undo, Copy, Paste and Cycle. They can even call up automation views for volume and pan. And that's just the beginning!
Easy Editing with Real Faders and Knobs

Logic's mixer makes it easy to see levels, panning and effects—but who wants to mix with a mouse? Instead, try using the SI-24's faders, buttons and knobs for a more "hands on" approach. To adjust a track's level, for example, just grab one of the motorized faders and watch it change onscreen. And when you want to pan a track, simply select the desired channel and twist one of the Pan knobs. Similarly, you can use the SI-24's multi-function buttons and knobs to set EQ and send levels. There's even a dedicated Surround joystick so you can maximize the 5.1 surround capabilities of Logic RPC Pro.

RPC-1 R-BUS Interface Card

The RPC-1 is a cross-platform PCI audio card that serves as the gateway to your computer. Since all the A-D conversion is handled by the SI-24, the RPC-1 busses audio in and out of the computer using the R-BUS port. R-BUS is a multi-channel audio format that permits the simultaneous exchange of eight channels of 24-bit/96kHz digital audio, along with MIDI control information. The supplied R-BUS cable is all it takes to use the SI-24 with Logic RPC Pro.
The Roland MMP-2 is a unique two-channel mic preamp with COSM Mic Modeling, four bands of fully parametric EQ, modeled tube compression, an enhancer and de-esser—plus ultra-intuitive control software for Mac or PC, superb-quality analog circuits, and 24-bit/96kHz A/D conversion. You can even download new effect plug-ins via USB, making the MMP-2 an indispensible tool for recording microphones and acoustic instruments. Uses the same carefully selected analog circuits and components as the mic preamps used in Roland’s VS-2480.

### Cosm Mic Modeling and DSP Effects
- COSM technology models the sound of vintage and high-end studio microphones
- Four bands of fully parametric EQ
- Modeled tube compression, enhancer and de-esser effects are also provided

### Built-in USB Port
- Connect to a Mac or PC and use the bundled control software to draw EQ curves or set compressors using a graphic interface
- Download effects such as noise suppressor, hum canceller, feedback eliminator and modeled tape saturation

### Inputs and Outputs
- Analog I/O includes two balanced XLR / 1/4” TRS combo mic inputs with phantom power and two XLR line outputs
- Coaxial digital input, plus coaxial S/PDIF and AES/EBU (XLR) digital outputs

### 4-band Fully Parametric EQ
- Low, Low-mid, Hi-mid and High EQ bands
- Filter types – Peaking, Low-Shelving, High-Shelving, Low-pass, Highpass, Low-pass2, Hi-pass2, Band-pass and Band-Eliminate
- Sweepable 20Hz to 20kHz frequency range with a ±15dB Boost/Cut and a variable Q of 0.36 to 16

### Dynamics
- Three compression models to choose from: Solid, Tube1, Tube2. Each with variable Threshold (-24 to 0dB), Ratio (1:1 to ∞:1), Attack (0 to 800ms) and Release times (0 to 8000ms) as well as switchable Knee curves (soft/hard) and Level control (±24dB)
- AutoGain function automatically makes up for any level lost during compression
- Expander has a variable threshold (-80 to 0dBu), Ratio (1:1 to ∞:1 as well as Attack (0 to 800ms) and Release times (0 to 8000ms)
- Enhancer/De-esser has variable Sensitivity (0-100) and Frequency (1kHz to 10kHz)
- Adjustable enhancer mix level (-24 to +12dB)

---

**TASCAM US-122**

**USB Audio/MIDI Interface**

Combining affordability and ease-of-use with powerful capabilities and built-in compatibility with your computer, the US-122 is an excellent solution for several levels of computer recordists. With its compact, ergonomic design and rugged steel chassis, the US-122 meets the needs of everyone from hobbyist musicians through advanced professional recording engineers and producers. And it is bundled with Tascam’s GigaStudio 24 sampling workstation software and a special version of Steinberg’s Cubase recording/sequencing software, so you can begin creating and recording new music right out of the box.

- Two XLR-based, phantom-powered mic inputs with analog inserts that allow hardware devices (compressors, etc.) to be placed into the recording signal chain.
- Two line-level inputs on balanced 1/4” TRS jacks are switchable to guitar-level for direct instrument recording.
- Adjustable zero-latency direct monitoring provides a sonically pure reference point before entering DAW processing.
- Two line-level outputs as well as headphone output with level control
- 16 channels of MIDI I/O for use with synthesizers and other MIDI equipment.
- Self-powered via USB making it perfect for location recording based around laptop computers as well as studio recording
- Mac and Windows compatible, ASIO, WDM, GSIF and Apple Core Audio (OS X) drivers turn any USB-equipped computer into a powerful audio recording system.
Professional Control Surface/ Firewire Audio-MIDI Interface

A professional DAW control surface and audio/MIDI interface equipped with high-bandwidth IEEE1394 (Firewire) capability, the FW-1884 provides audio and MIDI interfacing to computers as well as control of DAW parameters via eight 100mm motorized touch-sensitive channel faders, one master fader, and controls for pan, solo, mute and select functions on each channel. Tactile control for four bands of parametric EQ, a weighted jog wheel and a variety of shortcut keys for various popular software applications are also included.

The FW-1884s DAW control capabilities include comprehensive mixing, automation, editing and navigation tools. In addition to its surface control capabilities, the FW-1884 provides eight balanced XLR analog mic/line inputs with high quality mic preamps, phantom power and inserts on every channel. Using 24-bit/96kHz A/D and D/A converters, the FW-1884 offers full 96kHz operation on all analog I/O channels with compatible DAW software. In addition to its two IEEE1394 computer interfaces, the FW-1884 features eight channels of ADAT lightpipe as well as stereo S/PDIF inputs and outputs. Perfectly suited to multi-channel surround production as well as standard stereo mixing, the FW-1884 provides eight analog outputs for simultaneous connection to L/R and 5.1 surround matrices. A headphone output is also provided.

Four MIDI inputs and four MIDI outputs on the FW-1884 allow connection to a wide variety of MIDI sound generation and timing tools. Word Clock I/O allow computer systems to maintain accurate clock synchronization in digital recording environments. Also, its assignable footswitch jack can be used for tasks such as hands-free punching or MIDI control. In use, the FW-1884 allows up to 18 audio inputs to be accessed at once. As a DAW controller, the FW-1884 is compatible with a wide variety of popular applications including Digital Performer, Cubase, Nuendo, Sonar, and more.

For people who require simultaneous control of more audio channels, the optional FE-8 (eight-channel sidecar) expands the FW-1884 with eight additional channel control strips.

FEATURES

- Comprehensive mixing, automation, editing and navigation tools for DAWs
- Eight balanced XLR analog mic/line inputs with high quality mic preamps
- Phantom power and inserts on every channel
- 24-bit/96kHz A/D and D/A converters; full 96kHz operation on all analog I/O channels with compatible DAW software
- Eight channels of ADAT lightpipe, stereo S/PDIF inputs and outputs.
- Eight analog outputs, allowing connection of L/R and 5.1 surround matrices
- Eight 100mm motorized touch-sensitive channel faders, one master fader
- Dedicated controls for pan, solo, mute and select functions on each channel; tactile control for four bands of parametric EQ
- Shortcut keys for various popular audio software applications
- Dedicated headphone output
- Four MIDI inputs, four MIDI outputs
- Word Clock in and out jacks
- Assignable footswitch jack
- Up to 18 simultaneous inputs
- Compatible with a wide variety of popular DAW applications
- Optional FE-8 expands the FW-1884 with eight additional channel control strips (100mm motorized faders and dedicated control buttons). Multiple FE-8’s may be added as needed for big console functionality with any DAW system.
The US-428 is a 24-bit digital audio workstation controller with the familiar interface of Tascam’s Portastudio that professionals have come to recognize over the years. Essentially combining a hardware interface with computer functionality, the plug-and-play US-428 interfaces with Windows and Mac-based sequencing platforms via USB without any additional cards to be installed.

The US-428 offers full control over any number of software faders through eight hardware faders, groups of eight software faders selectable with buttons located beneath the unit’s jog wheel. The control surface also supports transport, EQ and control functions for sequencers and DAWs. The US-428 supports inputs of 16- or 24-bit resolution at 44.1 or 48 kHz, and stereo or mono, with four analog inputs and a S/PDIF digital input. Two audio output channels also support 16- or 24-bit resolution in stereo or mono, and at 44.1 or 48 kHz. The US-428 also comes bundled with a custom version of Steinberg’s Cubase VST recording/MIDI sequencing software.

**Input Section**
- There are four analog inputs and a stereo S/PDIF input, any four of which can be combined to record up to four simultaneous tracks via USB.
- There are four Trim knobs with individual signal present and overload LEDs (one for each analog input) that ensure setting proper input levels before recording.

**Channel Section**
- Eight Channel Faders send continuous controller information to the current bank of eight faders delegated by the Bank select buttons. Each of the eight channels has its own Mute/Solo, record-ready and channel select switches with status LEDs.
- Master Fader controls the level going to the stereo bus output, and/or sends MIDI controller information to the host software.

**The Master Section**
- Dedicated Transport and Locate controls provide one-button access to the corresponding on-screen transport controls of your host application.
- Four Aux Send buttons with status LEDs access the corresponding Aux Send in your software and are controlled using the Datawheel.
- The Datawheel also acts as a continuous controller for a variety of functions such as a shuttle wheel, moving the transport in the direction the wheel is turned.
- Dedicated EQ module controls the currently selected channel of your audio recording program and has continuous controllers for level, frequency and Q as well as selector buttons that access the four available EQ bands (High, Hi-Mid, Lo-Mid and Low).

**Input Section**
- The Pan control allows left/right panning of the currently selected track.
- The left and right Bank Select keys gives you unlimited access to successive banks of eight faders that control the corresponding channels in the software’s internal mixer.
- When changing to a different bank of faders, the Fader Null switch allows you to move the corresponding channel fader, using the Rec and Sel LED’s as up/down guides until the US-428’s fader matches the fader in the software’s internal mixer.

**Rear Panel Connectors**
- Two balanced XLR Mic/1/4˝ TRS line inputs.
- Two unbalanced 1/4˝ inputs switchable from Mic/Line to HiZ for direct connection of a guitar or bass.
- 1/4˝ headphone output, stereo analog monitor outputs (RCA).
- Two independent 16 channel MIDI inputs and outputs.
US-224
Digital Audio Workstation Controller/USB Interface

Combining a hardware interface with computer functionality, the US-224 is a simplified version of the US-428 DAW controller and interfaces via USB. There are no additional interface cards to install, and it is compatible with applications that accept standard MIDI controller messages. Portable and incredibly affordable, the US-224 connects to your laptop for a complete studio you can take anywhere. The US-224’s cool purple control surface gives you more than just mouseclicks for your DAW software. Like the US-428, the US-224 gives you real tactical controls like faders, transports, mutes and solos, panning and more. Plug in a guitar, mic or keyboard and get two channels of audio I/O in 16 or 24 bit quality, as well as 16 channels of MIDI I/O. The US-224 comes with a custom version of Steinberg’s Cubase VST for Windows and Mac. With eight channels of audio and 16 MIDI tracks, the US-224 is a perfect all-in-one setup for anyone getting into the world of computer audio recording.

- The input section comprises a 24-bit audio (44.1 or 48 kHz) interface, capable of streaming two simultaneous tracks of audio into your computer.
- Inputs include two balanced XLR mic, two 1/4” unbalanced line (switchable to high-impedance for direct input of a guitar, bass or other hi-Z source), and S/PDIF digital.
- Outputs include a pair of unbalanced line (RCA), S/PDIF and headphone
- Also has MIDI input and output ports, allowing you to send and receive data and MIDI Time Code (MTC) from your MIDI-based keyboards and other devices.
- The US-224 is powered via its USB connection to the computer with no external power supply required.
- The US-224’s control surface includes a variety of controls which make working with audio software faster and easier. The US-224 allows control over any number of software faders via four hardware faders selectable in banks with buttons located beneath the US-224’s jog wheel. Control surface also supports transport and control functions for sequencers and DAWs.

US-428 Compatibility Reference

- Variable ASIO buffer size latency control
- ASIO 2.0 Direct Monitor ultra-low latency (1.5ms) monitoring with effects
- Sound Manager driver support (Mac) allows use as main sound controller for multimedia, video editing and games, or any editing program that rely on Sound Manager support including Pro Tools Free.
- Provides complete control of Native Instruments’ B4 virtual organ software
- Emulates Pro Tools CS-10 control protocol, allowing use as a control surface for any Pro Tools software (TDM and LE) and Pro Tools Free
- CubaseVST 5.0 or higher (Mac/Windows)
- Nuendo 1.5 - Mac/Windows
- omagic Logic Audio 4.7 or higher
- Cakewalk Pro Audio 9.xx and Sonar1.xx
- Digital Performer v2.7 or higher - Mac
- Sonic Foundry Vegas, ACID and Sound Forge
- Syntrillium Cool Edit Pro
- Minutonka MXTracks - Windows
- BIAS Deck and Peak
- Tascam GigaStudio
- Propellerheads Reason
- Most VSTi instruments
PHASE 26 USB

2-in/6-out USB Interface

The PHASE 26 USB is an external studio interface featuring TerraTec’s tried-and-true audio technology in 24-bit, 96kHz resolution. This makes it the perfect mobile recording solution for all USB-equipped Windows notebooks or Apple PowerBooks. Featuring two analog inputs and six outputs, a MIDI interface, a microphone input, and an amplified headphones output, the PHASE 26 USB is a remarkably versatile audio system for musicians and producers. And with the popular and proven TerraTec Phono Preamp—designed to accept turntables with no further amplification required—it is also the first choice for DJs.

◆ Be it music productions, recording sessions, 5.1 surround productions, digital mastering, or DJ’ing, the PHASE 26 USB offers peak performance and maximum mobility for all audio applications.
◆ An optical and a coaxial digital S/PDIF port, high-quality converters with resolutions ranging up to 24-bit/96kHz, and a dynamic range exceeding 106 dB ensure professional audio quality for mobile laptops and fixed desktop studios.
◆ Operates with or without power unit. It can also be switched on and off on the fly while the system is running. The computer detects the USB automatically, and its advanced software runs smoothly and flawlessly.
◆ Latency is extremely low, courtesy of generic drivers for Windows XP and Mac OS X. And that makes PHASE 26 USB an excellent choice for systems with real-time-enabled software synthesizers.

DMX 6FIRE 24/96

6-Channel Card for Music Recording, DVD, Games

Demanding users will experience an awesome sound experience when using the DMX 6Fire24/96 Sound System: 6-channel audio reproduction in excellent 24-bit quality, advanced connection options on the computer’s front side and full compatibility to audio standards of games, DVD entertainment and music. Uses only the best in sound technology: 24Bit/96kHz transducer components for all inputs and outputs guarantee a straight frequency response and a signal-to-noise ratio beyond-100db!

◆ Combines an EWX 24/96, Phono Preamp, MIDI, and an impressive microphone preamp in a single audio solution. Makes this audio interface the desire of any serious recording musician or hobbyist.
◆ For easy connections, the supplied 5-1/4” front module I/O offers stereo inputs and outputs for analog and digital devices (optical and coaxial supporting 96kHz, AC3, and DTS) as well as MIDI instruments, headphone and microphone.
◆ Allows direct connection of tape deck and record player, while the supplied power pack of phono amplifier and professional software enable you to polish your oldest records with the finest digital sound!
◆ Gamers will be amazed when seeing the range of compatibility: Fast DirectSound, EAX, A3D, Sensaura 3D or MacroFX are just a few of the standards supported.
◆ Award-winning EWS technology with ASIO 2.0 and WDM drivers (2ms latency)

www.bhphotovideo.com
2-in/8-out 192-kHz Multi I/O Recording Interface

Offering a variety of ports, proven TerraTec technology, and transcendent audio performance on all Mac and PC systems, the PHASE 28 packs a powerful one/two punch - sophisticated studio features at a remarkably affordable price. PHASE 28 features two balanced 1/4˝ analog inputs and eight balanced analog outputs, MIDI interface, and S/PDIF digital (coaxial) I/O designed for a variety of uses, on a specially shielded break-put cable. Inputs accept studio levels and signal resolution up to 24-bit/192 kHz. This, plus select converters and cleverly designed circuitry enable recordists to make crystal-clear stereo recordings and playback high-resolution 5.1 and 7.1 surround productions. Gain knobs serve to adjust input sensitivity individually to match analog signal sources. Two signal LEDs make it easy to dial in suitable levels for the premium quality preamp.

- 2 balanced analog 1/4˝ inputs
- 8 balanced analog 1/4˝ outputs
- 192kHz/24-bit resolution
- 1x1 MIDI interface for 16 channels
- Gain knobs and signal LEDs for all input channels
- Coaxial digital ports accept S/PDIF, AC3, and DTS data streams with all standard sampling rates up to 32-bits. What’s more, the output is designed to handle sampling frequencies up to 192 kHz.
- Driver architecture ensures lowest latency
- ASIO support, top performance, and flawless compatibility with the audio platform of your choice. ASIO 2.0, GSIF, MME, WDM, Mac OS 9/X, or Windows XP, the PHASE 28’s software integrates seamlessly into all prevalent systems and programs.

MIDI MASTER USB
Programmable USB-MIDI Keyboard

Making music on a PC or MAC is easier than ever before with MIDI MASTER USB—simply connect the keyboard with only one cable, turn it on and ...hit it! MIDI MASTER USB features an extremely easy-to-play, touch-sensitive 49-key keyboard with pitch and modulation wheel, bright LED display, and ergonomically-placed control sliders and function keys. Additional features include MIDI controller commands freely assigned to controls, adjustable curves for touch sensitivity, MIDI reset and octave switches as well as numeric 10-key keypad.

Via USB, MIDI MASTER is directly available as input device, or as independent MIDI interface for connecting additional devices and accessed by every music software. And of course it can also be used without a computer as a pure MIDI keyboard. Last but not least, voltage supply can be selected from a power supply or USB, thereby saving an additional cable under your desk!

- 49 touch-sensitive keys with variable velocity
- Pitch-bend wheel and modulation wheel (controller assignable)
- Data entry slider (horizontal, MIDI controller assignable)
- USB MIDI-out interface
- 3 x 7 segment LED display
- Connector for optional sustain pedal
- 10 non-volatile memories
- 13 selectable velocity curves
- Integrated demo songs
- Powered via or optional 9v DC external power supply (9V DC)
- Transpose function (transposing)
- Octave up/down button
- +/- keys
- 6 function keys
- 10 numeric keys
- USB MIDI driver for Windows 98, SE, ME, 2000 and XP and Mac OS 9 with OMS
- Includes 2 meter USB cable
**MIC2 & MIC8 SYSTEMS**

**8-Channel 24-bit /96kHz Digital Audio Interfaces**

Incorporating state-of-the-art, versatile technology and built-in premium SPL quality microphone inputs, the MIC2 and MIC8 are advanced and powerful digital audio interface solutions for a host of professional studio applications. At the heart of the systems are the two (MIC2) and eight (MIC8) preamps developed in cooperation with SPL. All eight inputs on both devices can also accept line signals. The front panel offers two audio channels equipped with XLR and 1/4” combo inputs. The many signal routing options enable recordists to configure their studio setups flexibly for the most diverse recording sessions without having to re-connect signal-carrying cords.

**FEATURES**

- 24-bit/96 kHz A/D and D/A converters
- Flexible control center for any studio. Besides analog I/O, the 19” (1RU high) housing also has ADAT and S/PDIF interface, connectors for MIDI and WordClock signals, and headphone output with levels.
- Two front-panel XLR balanced switchable mic and line/instrument inputs with 48v phantom power
- Eight analog inputs/outputs via switchable XLR and 1/4” jacks with +4/-10 dB settings
- Balanced I/O guarantee a low-noise signal management, allowing use as stand-alone preamps or audio mixers. All input channels can be adjusted at the rack module, and can be muted or directly forwarded to an output.
- 2 or 8 high quality mic preamps developed in cooperation with SPL of Germany
- 8 gain controls on front side for analog inputs (20 dB range)
- 8 input signal and clip LEDs on front side
- Direct out setting for all analog channels on front side (monitoring)
- Phase, low-cut and mute settings for each channel
- Integrated ADAT interface
- Toslink interface for ADAT or S/PDIF
- Up to 8 ADAT channels and audio channels can be mixed
- WordClock I/O
- High quality headphone DAC and amplifier for monitoring the mixed signal
- Internal power supply for 110/230v, 50Hz/60Hz operation
- The systems’ open modular interfaces can connect to your computer via optional FireWire, mLAN or TerraTec’s EWS88 32-bit PCI card (see box).
- Bundled, easy to use control software offers extensive routing and signal conversion possibilities. With a click of the mouse, analog, S/PDIF and even ADAT signals can be “wired” almost freely by the hardware and converted among each other.
- Sophisticated WDM driver for Windows 98SE, ME/2000 and XP, ASIO 2.0 and GSIF ensure smooth operation.

**MIC2+ & MIC8+ SYSTEMS**

The Mic 2+ and Mic 8+ “Plus” versions add the EWS88 PCI card with a 4-meter cable to offer a professional, all-in-one computer interface/preamp/converter system. Otherwise, exactly identical to the Mic 2 and Mic 8, the “Plus” versions adds simultaneous recording and playback of all channels with up to 24-bit/96kHz, hardware mixer with internal 36-bit resolution, EWS-Connect, 2 MIDI ports, and a VU-meter in the control panel.
Modular I/O and Multi I/O Recording Solutions

The PHASE 88 is a professional audio and MIDI interface that transforms any Mac or PC into a professional recording system. Eight high-quality analog input and output converters process audio signals (from start to finish and from hardware to software) with up to 24-bit/96kHz resolution. The PHASE 88’s converters are housed in a 5¼˝ module that can be installed in or placed outside the computer. An additional S/PDIF (coaxial) digital input/output on the PCI bus card provides the perfect interface to the digital studio environment.

PHASE 88 RACK offers all the ports required for a music production system. The modular system can be extended to 40 physical inputs and outputs. Based on the PHASE 88 recording interface, the rack version offers eight analog inputs and outputs with 24-bit/96-kHz resolution in an external 19˝ rack module. All inputs and outputs are balanced for noise-free signal routing; 1/4˝ jacks are mounted on the rear panel. In addition to the (coaxial) S/PDIF digital interface and two separate MIDI inputs/outputs, PHASE 88 RACK features two balanced microphone inputs on the front panel.

They Both Feature

◆ Based on proven TerraTec technology, the PHASE 88 interface features optimized conversion components and cleverly designed circuits, enabling recordists to cut crystal-clear recordings on up to eight tracks simultaneously and even play back high-resolution 5.1 or 7.1 surround sound.
◆ To make the most of the 24-bit converter’s excellent dynamic range, they are equipped with an on-board 20-channel hardware mixer with 36-bit internal resolution and 20-in-4 routing. Perfect solution for studios that do without an external mixer.
◆ Every input port features a dedicated analog stage that can be switched from -10 dBv to +4dBv, as well as a variable amp with up to 18 dB gains. Channel thru monitoring generates zero latency, and latency introduced by the ASIO 2.0 driver comes to less than three ms.
◆ For all turntables with moving magnet (MM) cartridges
◆ External housing makes opening up the computer unnecessary. Simply connect the record player to the PC through the phono PreAmp. That’s it! No extra drivers or even a power outlet required: power is taken directly from the USB port.
◆ Adjustable three-stage input capacity
◆ Precision RIAA curve equalization for true-to-life playback
◆ Bundled Sound Rescue software lets you dramatically reduce or even get rid of unwanted noise such as crackling and static in real-time while maintaining the original, authentic sound quality.

PHONO PreAmp Studio USB

Barely the size of a deck of cards, phono PreAmp Studio USB lets you professionally edit records and cassettes on your computer at a level of quality and then immortalize them on CD via a USB port—without sound card!

◆ For all turntables with moving magnet (MM) cartridges
◆ External housing makes opening up the computer unnecessary. Simply connect the record player to the PC through the phono PreAmp. That’s it! No extra drivers or even a power outlet required: power is taken directly from the USB port.

PHASE 88: Expandable modular I/O recording solution

PHASE 88 Rack: Multi I/O recording solution

PHASE 88: Expandable modular I/O recording solution
YAMAHA

01X

mLAN Music Production System

The Yamaha 01X delivers power and flexibility never before offered in any computer audio product and represents a dramatic breakthrough in total integration and flexibility. No more expensive interfaces and control surfaces, the 01X combines both functions in one single unit with mLAN compatibility delivering all MIDI and audio data via a single cable. Featuring Yamaha's next-generation mLAN technology, the 01X guarantees high-speed audio and MIDI networking between computers, synthesizers and other mLAN compatible devices. Connecting the 01X is simplicity itself thanks to the FireWire (IEEE1394) interface. Featuring low latency audio interfacing over mLAN for both Windows and Mac-based computers the 01X delivers remote control power never before offered in a multi-function device.

FEATURES

Total Control

- The 01X offers remote control power never before seen in a multi-function product of this type. With a level of integrated DAW support normally found only in dedicated remote controls costing as much as 01X itself, the 01X can also be the ultimate human user interface between you and your software.
- Functions which can be controlled directly from the 01X include track arming, transport control, plug in editing, mixing, window selection and many more using existing and popular control protocols. This means you have support straight out of the box for Cubase SX, Nuendo, Sonar, Logic, Digital Performer and many more software products besides.
- As well as being the perfect remote control partner for your sequencer or digital audio workstation software, 01X will also control a wide range of parameters with many of your software synthesizers and as the 01X also works as a multi-port MIDI interface, your existing hardware MIDI devices can be connected directly to the 01X, making it truly the heart of your working environment.

Total Mixing Power

- Built on world-renowned 96kHz DSP technologies, found in Yamaha's flagship DM 2000, 02R96 and 01V96 digital mixers, the 01X not only works as a professional digital mixing interface for your computer but also as a total recall, stand-alone digital mixer, ideally suited for live performances.
- High quality mic pre-amps, 48V phantom power on balanced XLR and TRS, line inputs let you plug in guitars, microphones or indeed any musical instrument and know that the quality of your signal is maintained throughout.
- Full dynamics processing, including compressors, gates and limiters as well as 4 band parametric equalization on every one of the 28 digital mixing channels, and two world-class 32-bit effects processors means that the 01X puts no strain on your host computer for mixing or audio processing. Fully motorized faders mean that your mix is recalled at the touch of a button, and is accurately tracked during the course of your song.

Total Network

- Yamaha's 01X is the first product to feature Yamaha's next generation mLAN technology. Offering high speed audio and MIDI networking between computers, synthesizers and other mLAN compatible products, the 01X offers more than any previous computer music product has ever delivered.
- As Yamaha's mLAN technology is based on the industry standard IEEE1394 (FireWire) buss, connecting up your 01X is as simple as plugging in a single cable. Perfect for any environment, the 01X is as happy connected to a laptop as to a desktop computer.
- mLAN being a true network, and not just a point to point connection system, allows for up to 63 mLAN compatible devices to be linked together.
- And with mLAN using a single cable to send multichannel audio and MIDI, you need never have to worry about opening up your computer, fiddling with messy IRQ's or wrestling with awkward set-up configurations. 01X means you just plug in and play.
Total Expansion
- Based on mLAN, the 01X can be expanded to add more channels with optional mLAN channel expansion units, meaning that the system can grow with your needs.
- Up to 16 extra analog inputs can be added to over mLAN with the 01X internal digital processors and mixing channels handling the routing/effects/EQ and dynamics.

Inputs and Outputs
- Eight analog inputs including: two balanced XLR mic pres with switchable phantom power; and six 1/4˝ TRS balanced line inputs. Input eight also features a dedicated Hi-Z 1/4˝ instrument input.

TOTAL SOFTWARE SUPPORT
Unlike other solutions on the market, there is no need to switch to one specific application just to get the full benefit of 01X. With low latency 24-bit/96kHz audio driver support for Windows XP and Macintosh (OS9/OSX) computers as well as full MIDI capability, the 01X slips into your existing working environment with absolute ease.

Bundled with the 01X is a professional suite of user interface control software and commercially available VST effects plug-ins to enhance even further your experience of working with the most powerful computer audio product ever conceived. While 01X itself has one of the most intuitive user interfaces yet designed, using 01X in conjunction with Yamaha’s acclaimed Studio Manager, you can also instantly see and control every parameter directly from a computer screen. On top of this 01X comes with a VST compatible 01X channel module which mimics the hardware DSP and functions of the console, and let's you copy parameters from Studio Manager directly into your VST hosting application, offering a level of integration never before thought possible.

Also with 01X are three world-class VST plug-ins offering enhanced vocal processing, final mastering and studio quality, formant-accurate pitch correction.

SW1000XG
PCI XG/Hard Disk Recording/Effects Processing Card
The SW1000XG is an audio production card with over 1,200 instruments including an incredible 46 drum kits. It features 12 mono (or six stereo) playback channels and multiple effects buses. And it can be set up so that its effects are available to both audio and MIDI tracks within your sequencing software. Additionally, effects can be applied to the output of a software synth package, or to a device that’s connected to the card’s line input. Any combination of these set-ups is also possible.

There are over 70 fully-programmable effects, which are configured as a mixed bag of insert and auxiliary processors. Up to six of them can be used in parallel (these include a reverb, chorus, variation, two inserts and a master parametric EQ) and effect types can be switched on-the-fly over MIDI — and all this without touching one drop of your computer’s main CPU, leaving it free to handle even more audio tracks or additional software-based effects.

- 20 M B wave ROM with over1000 PCM samples
- 7 independent 24-bit effects sections including 12 Reverb, 14 Chorus, 70 Variation, 43 Insertion 1 and 43 Insertion 2 effects, 5-band multi EQs on the master stage, and channelized EQ with hi/low and gain on every single part. Optional PLG100VL adds another 4 unique “VH Insertion” effects for instant harmonies and “Gender Control”.
- More than 1000 normal voices and more than 45 drum kits (kits... not sounds, including the way cool ‘Coffin kit’ and a host of new analog drum samples).
- Real SVA physical modeling synthesis in hardware so no latency or CPU overhead
- Two A/D inputs for independent analog effects processing, stereo analog outputs, S/PDIF, plus 48 channel MIDI support
- S/PDIF digital connector.
- Tone Generation : AWM 2 + optional PLG100VL (Virtual Acoustic Synthesis)
- Sound Module Mode : XG (including VL-XG if fitted ), TG300B (GS), C/M (MT32) all fully programmable.
- Polyphony : 64 notes + 1 (VL) (if fitted)
- Multi-timbral capacity : 32 parts internal, 16 part external (48 part total)
1” Thick Studio that Travel With You

One of the first things you notice about the PowerBook G4— after you admire the looks, and marvel at the fit and finish — is the number of ports it has. And that’s when it hits you: it may be superslim and ultralight, but it also happens to be a full-featured notebook with an astonishing lineup of built-in professional capabilities. And unlike some PC manufacturers who ship lightweight PC notebooks that shed pounds by shedding functionality, Apple makes no compromises.

Available in three sizes, PowerBook G4 models feature optical drives — the legendary SuperDrive (DVD-R/CD-RW) on the 15- and 17” models, and the DVD-ROM/CD-RW Combo drive (upgradable to the SuperDrive) on the 12” model.

◆ All feature FireWire and USB, with an additional FireWire 800 port on the 17”
◆ All feature S-Video output for connecting to a TV or projector
◆ Connect the PowerBook G4 to a PC network or to a Windows PC (and to most USB printers and scanners, as well as Firewire digital cameras, camcorders and external drives). Share .doc, pdf, jpg, gif, tiff, MPEG, Windows Media, QuickTime, MP3, MIDI and CD files with PC users.
◆ 56K modem is standard, while Bluetooth (wireless connectivity) is built into the 12- and 17” models and is available as an option for the 15” model.
◆ The 15- and 17” come with Gigabit Ethernet (10/100BASE-T Fast Ethernet on the 12” model).
◆ Supplied lithium-ion battery powers them for up to 5 hours depending on system configuration and usage.
◆ Housed in a lightweight and durable aluminum alloy enclosure, the 12- and 17” are resistant to stains and scratches. They also have a drop-dead gorgeous design — perfectly smooth on all surfaces, with no doors, protruding latches or levers to break, no external buttons to accidentally press, and no sharp edges to catch on your clothes.
◆ The 15-inch is encased in titanium, the exceptionally strong and exceptionally light metal used in supersonic aircraft engines.

www.bhphotovideo.com
**1GHz 17-inch iMac**

The 17” iMac dazzles with its brilliant 17” widescreen flat-panel display that glides through the air, allowing you to adjust its height, depth or angle with just a touch of your finger. But what’s more amazing is its compact base which packs a powerful 1GHz PowerPC G4 processor with Velocity Engine, 256MB of PC2100 (266MHz) Double Data Rate (DDR) main memory (expandable to 1GB), GeForce4 MX graphics with 64MB of DDR graphics memory and an Ultra-ATA/100 80GB hard disk spinning at 7200 rpm. You also get AirPort Extreme and Bluetooth wireless capability, and the best-of-breed digital lifestyle applications that have convinced so many PC users to switch to the Mac platform.

**FEATURES**

- **iLife—it all connects**
  Bundled with the iMac is a host of iLife software applications including iTunes, iPhoto, iMovie and iDVD. They let you be creative with your pictures, music and movies- and share them-in ways that PC users can only dream about. And whether you’re creating your own music CDs, editing digital video, or authoring DVDs, you can do all without thumbing through a manual.

- **SuperDrive**
  The 17” iMac is equipped with the SuperDrive (DVD-R/CD-RW) allowing you to burn audio and video on a DVD disc that plays in almost any standard DVD player. Even better, the SuperDrive burns DVDs at 4x speed, twice as fast as before.

- **54 Mbps AirPort Extreme**
  Say goodbye to having to set up your computer near a phone. Pop the AirPort Extreme Card into the 17-inch iMac, and you’re ready for wireless networking from anywhere in your home or dorm — up to 150-feet from an AirPort Extreme Base Station.

- **Sync with Bluetooth**
  The 17-inch iMac can be custom-configured with an internal Bluetooth module to connect your digital devices wirelessly. Operating within a 30-foot radius, it enables wireless data transfers between a rapidly growing list of Bluetooth-enabled products. Using iSync, for instance, you can use Bluetooth to synchronize your personal information between your iMac, your mobile phone and your Palm OS-based handheld.

- **Extreme Graphics**
  The 17” iMac has an NVIDIA GeForce4 MX graphics processor with 64MB of DDR RAM. The NVIDIA GeForce4 MX delivers 1.1 billion textured pixels per second. And since the graphics processors feature dedicated RAM — unlike some PC graphics cards that share main memory — they take over the transform and lighting calculation functions from the iMac’s central processing unit (CPU), freeing the PowerPC G4 to perform essential system tasks faster than ever before.

- **Space-Saving Design**
  When developing the iMac, Apple used a rigorous design approach that optimized every available bit of space—and no wasted corners. Starting with a custom-designed circular logic board that fills the entire diameter of the base, Apple engineered enough space to fit in the full-height SuperDrive. On top of the optical drive are a high-capacity 3.5˝ hard disk drive and even the power supply — a split design that tucks neatly into the top of the base.

- **Speakers and Audio**
  The 17-inch iMac has Apple Pro Speakers that handle 18 watts of undistorted digital sound. And since the iMac also provides power to the speakers, you don’t need an additional power brick. The result? Reduced cable clutter. Features an internal speaker, internal tripath digital amplifier, Apple Pro Speaker jack, headphone jack, and an audio line-in jack that lets you use it as a sound editing studio.

- **iBook**
  Perfect for everything from homework to playing games, and from watching DVD movies to burning your own music CDs. With its extra long battery life, compact size and ultralight weight, the 4.9-pound iBook can accompany you everywhere. And with a choice of 12.1” or 14.1” displays, 800MHz or 900MHz PowerPC G3 processors, 30GB or 40GB hard drives, 128MB or 256MB of RAM expandable to 640MB — plus optional AirPort (802.11b) wireless networking and FireWire, USB and Ethernet ports — the iBook gives you world-class performance in a slim, stunning design.
Computers for Music Creation

The world’s fastest personal computers and the first with a 64-bit processor — which means they break the 4 GB barrier and can use up to 8 GB of main memory, Apple’s new G5 line combines rock solid engineering reflective of the full-throttle Xserve architecture with new technologies for massively enhanced output and connectivity. Available at speeds up to dual 2GHz with a new ultra-high bandwidth system architecture featuring AGP 8X and PCI-X, these turbocharged Power Macs rip through digital video and audio projects faster than Pentiums can say “unde”.

Jointly developed by Apple and IBM, the 64-bit PowerPC G5 processor supports up to 8GB of 400M Hz, 128-bit DDR SDRAM — four times more than a typical PC. More main memory and fast 6.4 GBps throughput means you can write large projects to memory 40x faster than to a hard disk.

Available in three powerful configurations — 1.6GHz, 1.8GHz and a dual 2GHz model, they each feature the legendary 4X SuperDrive (DVD-R/CD-RW), three PCI-X slots, one FireWire 800 and two FireWire 400 ports, three USB 2.0 ports (plus two USB 1.1 ports on the keyboard), ADC connector, DVI connector, analog audio I/O, optical S/PDIF I/O, front headphone and speaker jack and built-in Gigabit Ethernet — as standard. In addition, all are AirPort Extreme-ready, and offer Bluetooth capability as a build-to-order option. Finally, each Power Mac G5 is supported by Mac OS X’s robust foundation, which features multithreading and symmetric multiprocessing for an additional performance boost.

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
64-bit Performance
The PowerPC architecture was designed from the beginning to run both 32-bit and 64-bit application code, offering seamless transition to 64-bit performance. Current 32-bit code — such as Mac OS X, the Mac OS 9 Classic environment and existing applications — runs natively at processor speed. With no interruptions to your workflow. And no additional investment in software required.

Graphics and Display Support
◆ Compared with the AGP 4X interface, the Power Mac G5’s AGP 8X Pro graphics bus effectively doubles the maximum transfer rate and doubles the amount of data transferred in a single AGP bus cycle. The 66MHz AGP 8X Pro bus strobes eight times per clock cycle, achieving a 533MHz data rate and a maximum bandwidth of 2.1GB per second — ideal for the ultrafast ATI Radeon 9800 Pro or NVIDIA GeForce FX 5200 Ultra graphics cards they include.
◆ Supports 1920 x 1200 pixel digital resolutions and 1600 x 1200 analog resolutions
◆ ADC and DVI connectors; DVI to VGA adapter included
◆ Dual display support for extended desktop and video mirroring modes
◆ Support for two Apple flat panel displays

Storage and Expansion
◆ Two Serial ATA controllers supporting up to 150-MBps data throughput per hard drive
◆ Two 3.5-inch hard drive expansion bays with drive guides for a second drive
  - One 80GB or 160GB 7200-rpm Serial ATA drive installed in standard configurations
  - Support for up to two internal Serial ATA drives; 500GB maximum system capacity
  - 8MB memory buffers on all hard drives
◆ Optical drive bay with SuperDrive (DVD-R/CD-RW) installed; writes DVD-R discs at up to 4x, reads DVDs at up to 8x, writes CD-R discs at up to 16x and CD-RW discs at up to 10x, reads CDs at up to 32x speed
◆ One of the following PCI expansion configurations: Three open full-length 64-bit, 33MHz H2 PCI slots, or one open full-length 64-bit, 133MHz H2 PCI-X slot and two open full-length 64-bit 100MHz H2 PCI-X slots.

Mac OS X Core Audio
Musicians, audio pros and music educators have long recognized the Mac as the superior platform for creativity. Historically, third party developers augmented the native capabilities of Macintosh with a wide variety of hardware, software and system add-ons, making it possible to use the Mac as a virtual recording studio. However, configuring such a studio became quite complex, and didn’t allow for the highest level performance possible. With Mac OS X, professional-level audio is here. Mac OS X Core Audio integrates audio functions directly into the operating system in ways never before possible, enabling unprecedented performance and ease of use in your virtual studio. Core Audio lays a new foundation for the next generation of world-class audio and music applications from innovative developers.

Performance
Mac OS X delivers the best audio performance in desktop computing. The most fundamental measure of audio performance is throughput latency. That’s the time it takes for audio to enter your Mac, travel through the system to your application and then pass back out to your monitoring system (speakers). Historically, Mac OS offered excellent latency of about 10ms. The Core Audio HAL (Hardware Abstraction Layer) provides ultra low latency of only 1ms — and you get this performance in a full multi-channel environment.

Stereophonic Multi-Channel
Previously you had to install third-party system extensions to work with more than a 2-channel stereo mix. Now with Mac OS X offering native support for multiple channels, you can simultaneously record with more than two microphones, and perform large-scale professional tape transfer in a single pass, with greatly improved performance. The Core Audio HAL also allows multiple applications to share the same device. This means that you could assign channels 1-6 of a eight channel output device to a multi-track program, such as Logic, while leaving a virtual instrument like Reason with channels seven and eight.

High Fidelity
Core Audio manages all audio as 32-bit floating-point data. This allows your Mac to efficiently handle 24-bit/96 kHz audio as well as higher resolutions. Core Audio also delivers highly optimized sample rate converters to allow programs that do not yet use this high-resolution format to provide data to Mac OS X without truncation.

Audio MIDI Setup
Mac OS X has an easy to use setup application called Audio MIDI Setup. This provides applications with the ability to manage MIDI and define a system-wide MIDI configuration that is available to all of your applications. In addition, Mac OS X provides applications with Music Services, which are the fundamental functions of MIDI sequencers including cut, copy, paste, repeat and other common MIDI editing routines.

Reverb-erb-erb
In the absence of a system level plug-in architecture, third party developers created a vast array of DSP effects which are mutually incompatible. Core Audio enables developers to offer audio plug-ins in a more centralized manner, called Audio Units, making it simple to manage the audio capabilities you add to your setup. Apple includes several Audio Units in Mac OS X, including a Velocity Engine-optimized reverb and a sample rate converter.

Plug and Play
Mac OS X includes USB class drivers for connecting audio and MIDI devices to your Mac, and will automatically recognize those devices that comply with industry-standard specifications when you plug them in. You don’t have to install extra software to use them.
**Power Mac G5**

**Peripherals and Audio**
- The Power Mac G5 has a FireWire 800 port, the next generation high-speed serial interface, in addition to two FireWire 400 ports (one on the front panel and three USB 2.0 and two 1.1 ports).
- One of the fastest peripheral standards ever developed, FireWire 800 doubles the throughput of the original technology and increases the maximum connection distance up to 100 meters. Also supports many new types of cabling, making it indispensable for transferring massive files.
- Front headphone jack
- Built-in speaker
- Stereo audio line in and line out minijacks
- Optical digital audio I/O (toslink)

**DVD-R/CD-RW SuperDrive**
The SuperDrive, standard on all models, comes with the software needed to create your own DVDs faster than ever before. With iDVD preinstalled and with optional DVD Studio Pro software, the G5 is a complete DVD production studio. And it's the fastest on the planet, too. And if you want to watch a DVD while your work is burning, or archive material at the same time, all Power Mac G5s offer a second optical bay. Choose a combo DVD/CD-RW to fill it up.
- SuperDrive-equipped G5s lets you read and burn both CDs and DVDs that can be played in most consumer DVD players.
- The SuperDrive (DVD-R/CD-RW) reads DVD titles at 8x and writes to 4.7GB DVD-R discs at 4x.
- Also reads CDs at 32x, writes to CD-R at 16x, and writes to CD-RW at 10x.
- It supports DVD-Video, DVD-ROM and DVD-R, as well as CD-ROM, CD-Audio, CD-R, CD-RW, CD1, CD Bridge, CD Extended, CD Mixed Mode and Photo CD.

**Communications**
- 10/100/1000BASE-T Ethernet connector (RJ-45)
- Built-in 56K V.92 modem card
- Power Mac G5s is Bluetooth-ready. Like AirPort Extreme, Bluetooth connects digital devices wirelessly. Operating within a much shorter range than AirPort Extreme, it enables wireless data transfers between a growing list of Bluetooth-savvy products.
- Built-in antennas and expansion slot for optional 54-Mbps AirPort Extreme Card. AirPort Extreme is a wireless networking technology based on the IEEE 802.11g standard. Just add an AirPort Extreme Card to the Power Mac G5 and it can wirelessly connect to an AirPort Extreme Base Station at speeds up to 54M bps. That's nearly five times as fast as the transfer rates of the current 802.11b wireless standard.

**Laird Telemedia LTM-PROBAY1**
Slide-in Bi-Directional DV Media Converter for Power Mac G4 Systems

With little more than a screwdriver, the LTM-PROBAY slips into a single drive bay opening, turning an existing computer system into a complete DV editing workstation.

The LTM-PROBAY is a fully functioning analog-DV-analog media converter in a 5.25” computer drive bay enclosure. Housed in the new DVMOD technology, PROBAY features easy-to-use front-panel controls, high-quality signal processing, and RS170A stable video output compliant with SMPTE/EBU broadcast standards. The drive simply plugs into a standard drive power connector. The LTM-PROBAY converts component, composite, YC, and XLR balanced audio to DV and occupies a single G5 drive bay. Compatible with Avid XpressDV, Final Cut Pro, Canopus, Adobe, and any other DV-based edit system software.

Each includes Apple keyboard and mouse, DVI to VGA adapter, AirPort antenna, Mac OS X v10.2 “Jaguar”, iLife (iMovie, iPhoto, iTunes, iDVD), QuickBooks for Mac, FAXzif, Art Directors Toolkit, Microsoft Office v.X, TED Drive, FileMaker Pro Trial, OmniGraffle, OmniOutliner, GraphicConverter, QuickTime, iChat, Safari, Sherlock, Address Book, iCal, iSync, DVD Player, Mail, Acrobat Reader, Classic environment & Apple Developer Tools.
17”, 20” and 23” Digital Flat-Panel Displays

An Apple display is an essential component of the Power Mac G4 user experience. Apple offers a lineup of pure-digital flat-panel displays that provide superior image quality and vivid color. The level of integration and the elegance of these displays present Power Mac G4 users with the best possible window on their work.

All Apple displays deliver the benefits of thin and light LCD technology, with twice the brightness, twice the sharpness, and twice the contrast of a standard CRT display. They can be calibrated for color-managed workflow environments and maintain consistent color and quality without requiring frequent recalibrations. Apple displays feature an adjustable base that allows users to adjust the viewing angle effortlessly. And since dual display capabilities are built into every Power Mac G4, it is easier and more cost-effective than ever to add a second display.

- With razor-sharp images, deeply saturated colors and brilliant screens, these best-of-class displays offer 16.7 million colors, a wide viewing angle (170º horizontal and vertical), incredible color fidelity, and an ultrafast pixel response you’ll love when working with audio applications— to say nothing of elegant industrial design.
- Set up is a snap, thanks to the Apple Display Connector (ADC). A single cable carries the digital graphics, power, and USB signals to the display, dramatically reducing the number of cables you have to deal with. Built-in, two-port USB hub (discretely positioned in the back of the displays) lets you connect peripherals.
- Twice the brightness, twice the sharpness, and twice the contrast ratio of the typical CRT display. And unlike other flat panel displays, they are designed with a pure digital interface to deliver distortion-free images that never need adjusting.
- The 17” Apple Studio Display with 1280-by-1024-pixel resolution, is an ideal alternative to a large CRT display.
- The 20” Apple Cinema Display features 1680 x 1050 pixel resolution for display of application palettes. Widescreen format for simultaneous display of two full pages of text and graphics, or full-screen DVD and QT movies.
- The 23” Apple Cinema HD Display provides unparalleled image quality and richly saturated color. Full high-definition resolution of 1920 x 1200 pixels for display of high definition (HD) still and video imagery. Even with such a wide viewing space, text remains sharp and colors are vivid and distortion free from edge to edge. The Cinema HD Display is perfect for enhancing large graphics— enabling high-performance image manipulation in gorgeous, richly saturated, flicker-free color.

Ultra-Thin Digital Music Players

The super-slim iPod redefines what a digital music player should be. It downloads music at blazing speed and can hold up to 7500 songs—so you can take your entire music collection with you wherever you go. It weighs only 5.6 ounces—which is incredibly, 15% lighter than 2 CDs! It is also 65% smaller than a CD and just 0.62 inches thick, so it comfortably fits in the palm of your hand or pocket—and your life. Yet it offers a huge 10GB, 15GB or 30GB hard drive. Do the math: that’s space enough to store three weeks of music—played continuously, 24/7—or one new song a day for the next 20 years. Available for Mac and Windows the iPod incorporates hassle-free functionality and stunning, well-considered design that places it far ahead of the curve and the competition. Use the touch wheel to quickly and easily scroll through an entire music collection—using just one hand!

◆ The iPod is designed for listening to digital music away from your computer—Mac or Windows—and one simple connection does it all. A handy dock connector on the bottom enables the iPod to link to a computer and sync files via FireWire 400 (Mac or Windows) or USB 2.0 (Windows only). The result? Blazingly fast transfer speeds that let you load an album in as little as 10 seconds.

◆ The 15GB and 30GB iPod come with a dock that makes charging and syncing easier than ever. An elegant, convenient home base for iPod on a desk or connected to a home stereo system, the dock provides syncing via FireWire or USB 2.0, charging via FireWire and audio line out for connecting to powered speakers or a stereo system.

◆ Designed to give you the best portable digital music experience ever, the iPod delivers the highest sound quality from input to output. iPod supports the most popular audio formats including MP3 (up to 320 kbps), M3P Variable Bit Rate (VBR) and WAV—giving you access to a wide range of audio file types. And iPod is the only portable digital music player that supports the AAC format (Mac-only), which features CD-quality audio in smaller file sizes than MP3, so you can fit even more songs on your iPod.

◆ Have a particular set of songs you want to hear? Queue up as many songs as you like in a playlist while away from your computer. Want to customize the iPod interface to fit your musical leanings? Just look under settings in the Main menu.

◆ For Mac users, iPod ships with iTunes 4. iTunes 4 supports ripping music into the new AAC format which combines pristine CD-quality sound with smaller files sizes, compared to MP3s. And iTunes 4 lets you share and stream playlists from your personal music library to up to three other Macintosh computers for personal use.

◆ For Windows users, iPod includes the award-winning PC media player MUSICMATCH Jukebox Plus. As you add new songs or rearrange your playlists in MUSICMATCH Jukebox, the music will automatically update on iPod the next time it is connected to your PC.

◆ Supplied earbud-style headphones offer a strong 20Hz to 20kHz frequency response range for high-quality sound with minimal distortion. And with Neodymium drivers, these headphones are five times more powerful than digital player headphones that use aluminum, cobalt or ceramic drivers.

◆ The 15GB and 30GB models come with a wired remote control that lets you fast-forward or rewind a track, play, pause and adjust volume—using just one hand.

◆ The 15GB and 30GB models also include an elegant carrying case with belt clip that protects your iPod. Clip it to your belt, purse or backpack for hands-free operation.

◆ Bundled Software

◆ Optional Accessories

iPod Power Adapter:
Use an extra iPod Power Adapter for home, office or travel. The FireWire-based adapter allows you to charge your iPod when not connected to a computer.

iPod Dock:
Add an additional dock for charging iPod at work or at home. Stereo line out lets the iPod Dock connects seamlessly to stereo speakers, making it a space-saving stereo.

Battery Pack:
Away from your computer for a few days? Optional backup battery pack gives you over 20 hours of battery life on four standard AA batteries.

Car Power Adapter:
Optional car power adapter includes a 3.5-mm lineout that plugs directly into a car stereo input jack so users can play iPod on the road.

World Travel Adapter Kit:
With the addition of this kit, iPod goes anywhere in the world. Includes six AC plugs with prongs that fit different electrical outlets around the world.

iSplitter:
Mini Stereo Y-Splitter connects two ministereo headphones or speakers to one jack so you can share your music with a friend.

Personal Digital Music Library

Bundled with the iPod (Mac version) as well as any Apple computer, iTunes 4 is easily the world's best best application for managing and enjoying your music. iTunes allows you to manage an entire music collection with one application. Everything is in one place—downloads are in the same library as other music you've collected. Create personal playlists or Smart Playlists that update automatically based on your listening patterns and preferences. Listen to your music on a Mac or your iPod, or burn a custom CD of favorite songs or playlists. iTunes 4 provides a soundtrack to your life—add music to slideshows, soundtracks to movies, and background music to DVDs.

• iTunes 4 supports the AAC audio format (think high-quality sound with even smaller file sizes), and lets you share your music with other Mac computers on your local Ethernet or AirPort wireless network. And if you have a Mac with a SuperDrive, you can archive your entire music library to DVDs for safekeeping.

• A big part of MPEG-4 specifications, AAC (Advanced Audio Coding) is a cutting-edge encoding audio codec that's perfect for the Internet. AAC compresses much more efficiently than older formats like MP3 (which iTunes supports), while delivering quality rivaling that of uncompressed CD audio. In fact, AAC audio files compressed at 128 kbps (stereo) will be indistinguishable from the original uncompressed audio source.

• Music Sharing feature uses Rendezvous to give you remote streaming access to your personal music library from any room in your house. You don't have to manually configure anything, Rendezvous seeks out the other Macs on your local network and connects to them automatically.

• Generate dynamic Smart Playlists that reflect your preferences and listening habits. Instead of having to create playlists manually by clicking and dragging individual songs, you simply indicate what kind of music you like to hear. Set parameters with attributes such as Genre, Composer, Artist, Play Count, Last Played and so on — and then creates a personalized playlist that's in tune with your preferences.

• Automatically synchronizes with the iPod at high speeds. Simply connect iPod to your Mac via Firewire and download an entire music CD in just 10 seconds. Plus iTunes 4 lets you stay in sync with Play Count, Last Played and Song Ratings.

• Access your iTunes digital music library and playlists from iPhoto, iMovie and iDVD. This allows you to use your music to build a slideshow in iPhoto, add a background soundtrack to your latest iMovie, or liven up your motion menus in iDVD.

• With iTunes it's easy to create CDs that play in your car, home stereo, Macs and on Windows-based PCs. With iTunes 4 though, CD burning gets even better with Soundcheck. Whenever you select a playlist in your library, the Browse button automatically turns into the Burn button. Click Burn CD, insert a blank disc and iTunes burns away. It's that simple.

• iTunes 4 can play spoken word content from Audible, the service that provides digital versions of books and publications.

The iTunes Music Store—Downloads Done Right

- Free 30-second, full-quality preview of any song
- Download songs directly to your music library
- Exclusive artists and tracks
- Scroll through the latest releases and staff favorites
- Browse entire store library by genre, artist and album
- Search for any artist, song or album plus power search
- Top songs downloads
- Top album downloads

Instantly browse and buy music from your favorite artists. iTunes 4 comes with the fabulous iTunes Music Store stocked with hundreds of thousands of songs that you can preview and own with just one click.
Audio Computer

When today’s computers are on the drawing board, audio professionals are somewhere between the bottom and nowhere on the designer’s list of target users. Working from the outside in, the average PC case does little more than keep the dog out. Covers and plastic front panels are wafer thin and employ clips rather than fasteners wherever possible, so as well as offering minimal sound insulation they also rattle like a snare drum when you monitor anything below 500Hz. They’re also not designed to travel, so if you use a computer for audio, chances are you pretty much accept being tied to your own studio.

On the other hand, the sophisticated manipulation of audio is one of the toughest jobs you could throw at a computer. Accurate timing and synchronization rely heavily on highly stable processing, and one minute of one track of full bandwidth audio soaks up the same amount of memory as the text of ten novels. But the unremitting pressure to lower the price of consumer PCs frequently means manufacturers resort to the cheapest available components. From simple things like switches, down to boards, drives and even memory. And with the emphasis on straightforward ‘office’ applications and web browsing, expandability and future proofing are also low on the list of priorities. Spare motherboard slots for example and bays for additional internal and removable storage, are frequently in short supply or absent altogether.

Welcome to the AC1 Audio Computer

19˝ Rackmount Case Design

A PC fully loaded for audio can weigh as much as 50 lbs - heavier than most studio power amps. The design of a 19˝ rack mount enclosure to safely support this type of load, and accommodate requirements for a high level of access and connectivity, presents several unique challenges.

Carillon uses a box (case) that is over-engineered from high grade aluminum and 2mm 14-gauge steel to provide an incredibly strong and totally rigid housing. A full 4U height contributes to a particularly well cooled, spacious interior with generous capacity for retro-fit components. The massive front panel is precision die cast in ADC 12/LM2 aluminum alloy by 10,000psi high pressure casting machines. This method is far more costly than regular gravity die casting but delivers a stronger, more consistent material, cast to much closer tolerances.

But the Carillon Audio Computer is equally at home on the desktop largely due to specially designed, removable Sorbothane feet. If you do prefer this arrangement, it’s worth noting that the fourteen gauge cover supports a conventional 17˝ monitor effortlessly. And nowhere is this heavy duty approach more appropriate than on the road—making these computers ideal for live and mobile recording use.

Internal layout is clean & spacious and the full-size ATX motherboards have six PCI slots and four USB ports for maximum expandability. Carillon uses Intel Pentium processors exclusively to consistently deliver the floating-point performance necessary for DSP intensive multitrack digital audio.

Front Panel

With software equivalents of most music technology hardware now available, ‘software only’ production is reality for a small but growing number of producers. But real controls are fast and fun so Carillon includes a bay to receive a variety of inexpensive optional control boards like ‘tape’ transport buttons, MIDI controller knobs and a jog-shuttle edit controller. The bay is user accessible by way of stainless steel hex bolts used to fix the main bezel.

High temperatures in some fully loaded enclosed racks, particularly live racks stacked with power amps, necessitate the intake of cooler air through the front panel. The intake features an easily replaceable filter.

There is a standard Neutrik bay housing the highest quality audio socket routed through to the computer’s back panel. It can be permanently connected to the soundcard which often employs fiddly consumer grade connectors intended for infrequent ‘install and leave’ use. Alternatively, you can use it for a stereo headphone output.

In addition to three 5½” bays, the Pentium 4 compatible chassis can accommodate a further two drives mounted transversely inside the machine, both in noise cancelling Silent Drive enclosures.
Quieter by Design

In an ideal world with little pressure on finances and floor space, noisy stuff like tape machines and computers are exiled to a 'machine room' which is acoustically isolated from the studio mixing area. But for many, even if the space is available, countless items come above a separate machine room on the studio shopping list, so the computer sits in the heart of the studio physically as well as functionally. The reality is that most studios operate from one room.

In this situation, comfortable, accurate monitoring is seriously compromised by a noisy computer (how can you hear your gate thresholds properly, or long fade-outs against a background of fan and drive noise?). Worse still, the need to record clean acoustic instruments and vocals can rule out the use of a standard PC altogether. Particularly when you can't run a microphone cable into the bathroom because you are recording yourself!

Solid State

The AC-1 enclosure design cuts hardware noise in two ways: First, the sound insulation properties of the thick steel and aluminum case substantially reduce transmitted noise from internal components. Second, the rigidity of these heavy gauge materials combined with the use of secure bolt fastenings, make for a highly vibration-damped structure. This effectively eliminates rattles and buzzes 'in sympathy' with fans, drives and the music you're monitoring.

Splendid Isolation

Anyone who has ever rested an acoustic instrument on a wooden table while playing, knows that vibrations are transmitted and amplified when solid objects make contact. To combat this the AC-1 incorporates absorbent rubber gaskets to the rear of the 19” rack ears, to reduce metal-to-metal contact between the computer and the rack, and so reduce vibration transmitted from one to the other.

Big Foot

For desktop users Carillon designed large removable feet, utilizing visco-elastic Sorbothane. This unique material is used to isolate scientific instruments and audio-ophile equipment from vibration. Its high storage modulus means that an extremely high proportion of input energy is dissipated rather than transmitted. (Although Sorbothane is extremely expensive, the feet are standard.)

Today's hard drives run at speeds of up to 10,000 RPM. Power hungry applications need the fastest processors and processors will always be able to run faster if you cool them down.

We've selected the real 'church mouse' components. Super quiet hard drives, foam lined sound-proof enclosures, Silent Systems processor fans and our own Carillon low noise PSU.

The power supply is typically a computers noisiest single component. The Carillon UltraMute PSU combines special low hum transformers with an all new fan, featuring substantially smoother fan-motor bearings and a reduced turbulence fan blade design.

A unique processor fan incorporates a radical 360% (radial fin heat sink). This patented design provides far greater surface area than conventional for increased heat dissipation with a reduced airflow requirement. In practice this means the fan can run far slower and more quietly.

However advanced the drive design, whirring drive platters and clicking heads can be further isolated by enclosing the drive completely in an acoustic sleeve. Carillon's Mo lex Silent Systems foam lined sleeve reduces drive noise by over 90% and includes two aluminum plates that conduct heat into the surrounding air and chassis mounts, and provide earth grounding.

Carillon fits Quantum Fireball plus hard drives as standard. They feature Quantum’s own QDT (Quiet Drive Technology) and produce at least 4dB less noise than the average for comparably specified drives. We also offer the more expensive Fujitsu ‘dynamic pressure bearing’ drives as an option (marginally the quietest at the time of going to press) but find that the Silent Drive enclosure is so effective that, once fitted, the difference between the two brands is negligible.

Inevitably, a first impression of hardware noise is an early topic of conversation, and nearly everyone asks if we've switched it on yet! That really says more than a thousand dB measurements. Simply speaking, while Macs and PCs have always been clearly audible, the Carillon AC-1 is only barely audible - even in the quietest studio environments. But don't take our word for it. These graphs show the relative noise levels for a Dell PC, a Macintosh G4 and our Carillon Audio Computer, measured during busy hard disk activity and while idling.
Carillonfix: Remote Control Technical Support

Although they’ll be properly manned, Carillon does expect the telephone lines to be quiet for a computer music company. But if their on-screen manual doesn’t show you how and they can’t talk you through it, they’ll be down but not out.

Carillonfix is a custom remote control application that lets their support engineers literally take the controls of your computer online. Book a session by phone or in the owners section on their website, launch the application at the arranged time and wait for them to dial in.

If you send a computer back to the supplier to fix a software problem you’re none the wiser when you get it back. Working the Carillon way, you can watch them do repairs on screen (yes, the mouse actually moves) and communicate with their engineer via the onscreen chat window. Discuss the pattern of the problem for example, even ask to see a particular fix again.

In the event of an irreparable software problem Carillonfix gives one final option. When they build your system they burn a hard drive backup onto CD. It is supplied with the computer but in case you’re not confident about re-installation, Carillon also keeps a copy filed with your personal details. With your permission they can reconfigure your entire system online for you to start afresh. Unfortunately though, even Carillon can’t fix your hardware online, but they’re confident enough about their build quality to cover hardware failure with an advance replacement guarantee for components. Alternatively they’ll collect your machine, repair it and send it back to you within three working days.

Loopstation: On-Line Sampling

Carills exclusive On-Line Loopstation Application, searches, previews and downloads from a huge range of studio quality samples free of charge. Each Carillon AC-1 audio computer has the Loopstation search engine pre-installed. Simply click on the Loop icon on your desktop and once the Carillon server recognizes your unique user ID, you’re into the latest library. You’ll soon discover that the sample search engine is by far the most intuitive and exhaustive anywhere. Sounds and loops are logically multi-layer indexed and you can browse a full list of relevant samples, however far you have refined your search. But despite being sophisticated, its remarkably quick, employing hardware style logic for the user interface with absolutely no screen redraws.

- Preview and download are simplicity itself (Carillon has their own dedicated servers and E1 connection guaranteeing the fastest possible transfer), but where Carillon really shines is the quality of the samples - these are definitely not your average coveredisc promos. Thousands of Neve-mixed, Apogee-converted, 24-bit samples as good, or better by category than anything else out there—free of charge.

- In addition to these free of charge sounds the Carillon Loopstation will also carry an increasing range of third party samples, available for Carillon owners to download at a substantial discount. (And remember, you don’t need a software sampler to use samples in your music. The samples are encoded as .WAV files, compatible with all the leading sequencing software.)

- The right sample can make a track - but finding that sound from poorly classified data currently available can take longer than most of us can afford. The ultra flexible engine lets you direct the search. Say you’re working on a disco house track and looking for a drum loop: search ‘loops by style’, select ‘house’, find ‘disco’ and refine by instrument (maybe choosing ‘drums’, then ‘acoustic’), before listing samples.
Complete Systems

There are seven “Off the Shelf” Carillon Core Audio Systems. Each one incorporates their acclaimed heavy-duty, 19” all aluminum steel chassis—engineered for ultra-low noise and featuring Carillon’s unique front panel patching and bays for their unique ‘real controllers’. Every core system also includes:

Bundled Software

Hundreds of dollars worth of killer applications, preinstalled and optimized.

- Steinberg Clean
- Steinberg Wavelab Lite
- Norton Ghost
- VST Plug-in Pack

Ultra-Quiet Components

- Carillon’s own Ultramute Power Supply
- Molex Silent Drive enclosure
- Low-noise CPU cooling fan
- 1.44MB Floppy Disc
- 56Kbps Auto-Detect Modem
- Black Carillon keyboard and mouse

Remote Support

- Carillon Fix literally enables their engineers to take control of your machine online
- Carillon’s How & Help manuals and tutorials
- Carillon Image and Recovery Disk
- 3-Year Warranty

Loopstation Samples

Carillon’s own ultra flexible search engine micro indexes by sound type. A growing library of Neve mixed, Apogee converted 24-bit samples, including 5000 leading edge loops and instruments.

Real Controllers

Carillon optional Real Controllers give you a traditional fingertip control of a variety of software functions and parameters. They connect internally, direct to the motherboard via their own drivers so you don’t tie up valuable MIDI ports.

**RK8 MIDI Controller Panel**

A set of eight mappable MIDI controller knobs for use with virtual synthesizers, samplers, mixers, effects - pretty much anything with knobs or sliders. You can select General Midi, GS and XG or map parameters. We use high quality damped action pots and our own legible pointer knobs

**JS1**

Ideal for audio editing and also transforming the use of sequencers, the JS1 lets you set up to 20 locate points and jump directly to them with one or two button presses, in addition to having dedicated master in/out buttons. Jog/shuttle gives precise control over FF andREW as well as super-detailed scrubbing with unique jog calibration knob.

**RTM 1 Transport Control**

Feel comfortable with traditional transport controls! Then you’ll love the RTM 1. Nikkai illuminating switches provide a reassuringly positive feel, and mimics your sequencer controls exactly. It also incorporates a switchable metronome. It’s visual rather than audible with the metronome light flashing on the beat and the switch flashing on the bar.
SONY

FLAT PANEL LCDs

Sony Flat Panel LCDs are an artistic statement for your home or studio— even when they are turned off! Perfect for songwriters, editors and producers. Superior focus and screen brightness, means sharp images and crisp text. You won’t get flicker-induced headaches and eyestrain, even if you use the displays highest resolution. LCDs also use about half the power of comparable CRTs - a consideration if you run your computer for a good portion of the day.

BENEFITS:

- Reduced Eyestrain - Flicker free performance and minimal screen glare is easy on your eyes
- Space Saving - Ultra-slim styling maximizes desktop space. Plus they’re wall or arm mountable.
- High Brightness - Dynamic, vivid images— especially under harsh lighting
- Energy Saving - Low power consumption and energy bills

Regardless of which technology you choose, size does matter. A larger monitor offers larger viewing area and higher resolutions, making it easier to view text and graphics. More viewing area also means you have the ability to simultaneously open more windows side-by-side.

- 17- and 18” are a good choice if you spend a lot of time in front of your screen
- 19” are the best choice if you use your display all day
- 21” and above are optimal for design and finance professionals who work on detailed graphics and large spreadsheets

Sony’s innovative advances in display technology have revolutionized the user experience. Remarkable picture quality, stylish designs and a variety of convenience features including compatibility with both Mac and Windows operating systems. And this year’s line-up is no exception:

- Sony’s Auto ImageSet and Digital FlexRes technologies maximize display performance by automatically adjusting images at multiple resolutions. Vibrant images are housed in an assortment of ultra-slim, energy saving designs.
- TFT active matrix LCD technology combined with anti-glare coating, provides clear, flicker free images that reduce eyestrain.
- Slim Bezel innovative design combined with integrated power supply and cable management system keeps space-constrained work spaces organized and clutter-free. Adds efficiency and style to the home or office.
- Digital & analog input connections maximizes video performance, dual inputs support simultaneous computer connections
- Automatic and instant adjustment of images at multiple resolutions optimize video performance
- Stereo speakers provide stereo audio for multimedia, music and internet content
- Lower power consumption provides increased savings throughout the life of the product
- Wall mountable, the stand base can be removed to support arm or wall mount applications
You've made the decision to buy a computer system. Or you simply want to upgrade your monitor. Great! Now... which one should you choose?

With so many sizes, features and technologies available, choosing the right display to fit your needs can be confusing. Sony understands that different people have different needs. So they've created a full line of Flat Panel LCDs - a comprehensive variety of models each offering the perfect blend of features and performance.

### StylePro Series

StylePro Flat Panel LCDs combine slim styling and performance at a remarkable value. Enjoy flicker-free, bright and colorful screen images at multiple resolutions using Sony's Automatic Image Adjustments. An adjustable base maximizes desktop space and provides ideal viewing angle for maximum comfort. Upgrade to a Sony LCD today!

### DeluxePro Series

DeluxePro Flat Panel LCDs feature bright color detail, superior video performance, and clear stereo sound - the perfect combination of performance and style. Packed with conveniences for the home or office including digital inputs, Automatic Image Adjustments, integrated power supply, smart cabling and special energy-saving ECO mode.

### PremierPro Series

PremierPro Flat Panel LCDs deliver superior technology to the professional. Slim bezel combined with digital input, super bright and high contrast LCD panel make this display an ideal choice for financial applications. Wall mount design with built-in power supply and cable management system maximizes desktop space.

### Entertainment Series

Driving entertainment beyond the PC, these 16:9 wide screen monitors connect directly to a variety of devices with stereo audio, composite, component, S-Video and PC inputs. They are also HDTV compatible (1080i and 720p) and feature SRS WOW Audio Technology to create a full, wide sound experience with deep, rich bass.

Are you ready for performance beyond your expectations? Whether you're recording, mixing, editing or capturing — no matter the production environment — the Trip2 will reward you with a stress-free storage experience. Since Glyph puts its Oxford 911-based bridge board in the tray with every drive, you are assured that your data integrity and performance will be consistent wherever you take it.

Specifically designed for high-resolution audio, as well as the high-bandwidth requirements of video, Trip2 allocates audio files to multiple drives allowing you to achieve maximum track counts at today's high sample rates. Plus, a single FireWire Hot-Swap Tabletop receiver is included with the Trip2 so you can take your work on the road. Last, the Trip2 is ultra quiet, employing Glyph's QuietMetal which reduces noise from vibration. No matter the audio environment, the Trip2 offers options that go way beyond an off-the-shelf storage system.

**FEATURES**

- The multiple ARM processors embedded in each Oxford 911 chip throughout the system (one processor for each drive), provide better than ever control and peak performance that will improve over time.
- For seamless integration into your studio choose from configurations with six hot-swappable drives, AIT back up, and DVD-RW, or 12 hot-swappable drives for over 2TB. Trip2 makes it easy for you to allocate files and use round robin features of DAW’s to achieve 108 tracks of 192 kHz audio.
- Durable 3RU rack mountable enclosure
- QuietMetal construction for each drive isolates vibration eliminating external noise and enables ultra-quiet operation for your studio environment.
- Silent operation is enhanced by automatic thermal-sensing cooling to limit fan noise, prolong the life of your system, and protect your work.
- High performance 7200 RPM hard drives available in 40, 60 or 120GB capacities.
- Glyph S.M.A.R.T Manager Software to monitor your system and protect your data with predictive failure analysis to warn you of issues with your storage subsystem before it's too late.

**True FireWire Hot-Swappable Hard Drive Technology**

- You can move projects from one room to another; you can track directly to it, or use a different drive for each client's work. You can send a drive home with a customer, or use one drive to back up the data on another one. The possibilities are endless with this receiver and tray design.
- What sets this system apart from all other "Hot-Swap FireWire" products is that the Glyph hot-swap interface operates according to the IEEE 1394 standard. The bridge board is built into the drive/tray. One of the benefits of FireWire is hot-swappability, which means you remove or insert the tray at the FireWire interface level.
- Removing a hot swap drive interrupts the data signal at the FireWire bus rather than on the ATA bus as with other hot swap systems, thus ensuring data integrity and consistency. Glyph's FireWire interconnectivity backplane assures you the best interface to maintain the integrity of your data.

The netDrive FireWire hard drive is a value-priced, sleek portable storage solution for demanding environments. They deliver high performance with a dual port, standard 6-pin FireWire and USB 2.0 interface. Designed in a small, light package, it allows you to move your data files quickly, reliably and easily.

- Up to 180GB (FireWire-only models) or 120GB (FireWire/USB combo models).
- 7,200 rpm, ATA/100 drives with a 2MB cache and Oxford 911 chip for smooth, consistent data transfer.
- Small, durable, polycarbonate case runs quietly, is portable and easy to use anywhere.
Hot-Swap FireWire Tabletop Receiver
With the Trip2 Tabletop, you can move projects from one room to another; can track directly to it, or use a different drive for each client’s work. You can send a drive home with a customer, or use one drive to back up the data on another one. The possibilities are endless with this receiver and tray design. The Trip2 Tabletop accepts the same Glyph drive/tray technology as the Trip2. It includes a built-in power supply and standard dual 6-pin powered FireWire interface. Imagine being able to record in the studio, pull the FireWire drive and take it home to mix the record there.

- Now Glyph’s latest high-tech hotswap and bridging technology, first introduced in the 3U-rack Trip2 is available in the smaller, portable form factor of a tabletop drive
- What sets this system apart from all other “Hot-Swap FireWire” products is that the Glyph hot-swap interface operates according to the IEEE-1394a FireWire standard.
- The bridge board is built into the drive/tray. One of the benefits of FireWire is hot swap-pability, which means you remove or insert the tray at the FireWire interface level.

When you’re recording in the studio, any piece of gear that makes background noise is going to get in the way of your session. That’s why some people try to silence their gear by putting noisy hard drive units in “isolation boxes” to muffle the noise of the drives and fans spinning. Unfortunately, “iso” boxes suffer from heat buildup. Even in the best boxes, it’s nearly impossible to get total acoustic isolation and also get the heat out of the hard drive that’s in the box.

Most of the noise in a hard drive system comes from the hard drive itself, and the fans used to circulate air through the enclosure. Noise is vibration, and it is the vibration of the hard drives and fans that is so objectionable in an audio recording studio.

So Glyph studied the situation, and decided to block the vibration of the hard drive and fan from getting to the chassis, where it could make its way into the studio. The clear place to do this was in the mounting hardware that holds the drives and fans within the chassis.

GLYPH QUIETMETAL (THE SANDWICH OF SILENCE)

QuietMetal Tri-Laminate
Glyph took advantage of advanced composite metals technology, and incorporated a tri-laminate — two layers of metal skin, separated (and bonded) by a viscoelastic polymer core — into their systems to dampen vibration and control noise. The tri-laminate metal actually absorbs vibration before it can get to the unit chassis. Extensive research and testing demonstrated that careful application of QuietMetal would dramatically cut the noise level produced by the hard drives and fans.

Glyph uses QuietMetal for the internal drive frames and rear fan panels, making their products the quietest high-performance storage systems available today. The combination of viscoelastic damping and secure fastenings, along with our use of the latest in quiet drive mechanisms, virtually eliminates vibrational noise. This translates into a storage solution that is significantly quieter than the rest of the gear in your studio — which means your recording is quieter, too.

FIREWIRE FIXED-DRIVE TABLETOP
The FireWire Fixed-Drive Tabletop is the ultimate solution for your project and mobile studio. It includes a built-in power supply and a standard dual 6-pin powered FireWire interface, and it’s built in a sturdy steel case. It features the latest technological advancements from Glyph, including QuietMetal to eliminate noise, and exclusive FireWire bridging technology. This high performance hard drive system is available in capacities up to 180GB so you can record, mix and edit multi-track audio. It will even handle high definition sample rates, and includes Glyph Audio Storage Toolkit formatting and partitioning software.
SCSI DRIVES

The name says it all... For the professional who wants the biggest and the best. Two hot-swappable high-capacity 10,000 or 15,000 RPM hard disk drives for recording, mixing and editing. Also comes equipped with AIT-3 100GB native tape backup and 48X CD-R/RW with Glyph's own Firewire interface technology.

PROJECT TRIP
The Trip for the budget-conscious. Includes an AIT-1 35GB Tape Backup, two 18GB hot-swappable 10,000 RPM hard disk drives and a 48X CD-R/RW with Glyph's own Firewire interface technology.

POWER TRIP
Ideal for high-speed and high-capacity backup. Equipped with a 50GB AIT-2, two 73GB hot-swappable 10,000 RPM hard drives, and a 48X CD-R/RW with Glyph's own Firewire interface technology.

STUDIO TRIP
For efficient management of critical projects, the Studio Trip includes an AIT-1 35GB Tape Backup, two 36GB Removable Cheetahs and a Plextor 48X CD-R/RW.

Naked Trip
This rack-mount enclosure is the ultimate in scalability, with 4 open hot-swap receivers available for drives in trays. We can configure with Naked Trip with Narrow, Ultra Wide or Ultra 160 receivers, it’s your choice.

Note: Naked Enclosures do not include cables or terminators, that’s why they’re called “Naked”.

HOST BUS ADAPTERS

Host bus adapters, or HBAs, are necessary when connecting a peripheral to a computer that doesn’t have native support for that peripheral’s interface. Glyph offers HBAs from ATTO and Adaptec Technology to support all major operating systems, with various connection interfaces and speeds.

ATTO ExpressPCI UL3D: Dual-channel Ultra3 SCSI Host Adapter Call
ATTO ExpressPCI UL3S: Single-channel Ultra3 SCSI Host Adapter Call
Adaptec FireConnect 4300: 3-port, 400 Mbit/sec FireWire/1394 host adapter for PCs and Macs Call

AUDIO STORAGE GUIDE

In multi-track audio there are generally numerous data files for each track, especially with punch-ins and edits. The rotational speed of the platters directly affects the number of audio tracks you can achieve because of the time taken for the drive to find and process the various files. Files are written to the different sectors across the platter, over the course of your project these files become non-contiguous, resulting in drive fragmentation. The heads move back and forth across the platters to write and read the scattered data. Because of the time it takes for the data to pass underneath the heads, drives with slower spindle speeds like 7,200 RPM take longer to access each file than drives with speeds of 10,000 and 15,000 RPM. Audio applications are very demanding on drives since small delays in the delivery of requested files results in playback errors. Faster speeds yield extra audio tracks with more edits. This is also why that bargain price 5,400 RPM drive is useless for your DAW.
Double Space (2RU) Rack Mountable Systems

These are classics. Totally customizable, you can have any two devices configured however you need them. Whether you need dual hot-swappable hard drives, a single hard drive with a tape back up device, or even a single tape back up device with a media storage bay, this is the multi-functional, rack space saving classic.

**Drives**: Glyph-optimized for digital audio and video. Available capacities of 18GB, 36GB, 73GB, 146GB

**Spindle Speeds**: 7,200 rpm, 10,000 rpm, 15,000 rpm

**Interfaces**: SCSI 3, Ultra160

**Compatibility**: Macs and PCs with appropriate host bus adapter cards for your applications.

---

**SCSI Tabletops**

The total package of reliability and performance

Simply put, Glyph's stackable Tabletops deliver big with 10,000 RPM super fast drives that are perfect for hard disk audio recording. Glyph's stylish enclosures are as innovative as they are unusual. Built specifically for use in audio environments, they offer quiet fans, well-insulated drive housings and beefy power supplies to keep your SCSI drive spinning for years to come. Not only do you get reliable operation and loads of space for your precious data, but you also get one of the best names in the business standing behind your recording media.

All of Glyph's Tabletop SCSI hard drives are pre-tested and formatted, and include a high-quality 3' SCSI cable, active terminator and a power cable.

---

**WildFire**

Fast, Reliable FireWire 40x CD Recorder

The WildFire is the ultimate portable, easy-to-use, rewritable CD recorder. Its speed and reliability make it an excellent addition to any studio. WildFire has the features you need to fully master your CDs. It has Disc-At-Once (DAO) technology and a 4MB buffer for smooth transfer of your audio files, and it's Red Book Audio compliant. This FireWire CD-R/RW ships with cable, Mac/PC software and media so you can start burning right away.

- A fast, reliable 3-in-1 CDR/W drive, it writes at 40x, re-writes at 12x, and reads at 40x
- Use as alternative to SCSI for a clean configuration; free up SCSI bus for other devices
- WildFire is a great alternative to a SCSI CD-R/RW. Because it's FireWire, it's simple to use and won't require a PCI card which uses up a PCI slot. FireWire's hot-pluggable dynamic reconfiguration means that you can re-cable your peripheral devices without re-booting.
- Utilizes the Oxford 911 bridging chip which is optimized for CD-R(RW) applications
- Disc At Once (DAO), Red Book Audio compliant so you can fully master your CDs
- 4 MB buffer assures smooth transfer of your audio data
- Burn-Proof technology eliminates buffer underrun errors in fast write modes, allows for multi-tasking
- Flash ROM allows for easy upgrade over the Internet
- Compatible with Macintosh & PCs (your PC may require a host bus adapter and software)
- Comes complete with Toast, FireWire cable, and CD media accessory pack
Why Backup?
Backups and archiving your data is easy and extremely important. When you consider how much time you put into your work, and how large your files can be, regular preventative system maintenance is much less painful than re-creating a session or project. In digital audio and video production, you rely on your system to the point that data loss can be devastating. No matter how well you treat your system, you cannot guarantee your data will be safe if it exists in only one place.

A backup is a copy of your data in a separate place from the original, such as a hard drive, tape, DVD or CD. Many people backup their work to tape at the end of the session or on session breaks. Programs, such as Retrospect or Mezzo, allow you to keep track of what has been backed up, and what hasn't. At a glance you can see when the last backup occurred, and what files were copied. As you continue to record, edit or add new files to your working drive, continue to back up that data by running the backup program again.

You may also consider backing up your data on hot swappable hard drives. The working drive and backup drive can be the same capacity, making it easy to keep your files organized on both drives. Some people use the Trip2 as both working drives and backup drives. Record your 64 tracks of 96K 24bit audio to three drives at a time, then backup to the other three at the end of the session.

Tape is often used for longer term backup because it is more likely to survive an accidental drop than a hard drive. Recovering data from a hard drive is not easy, and is expensive.

Optical media may be the most robust for the long term archiving. Optical media, like CD or DVD, provides you more cost-effective options for restoring your data.

Like tape, hard disk drives are magnetic devices. Just as tape can exhibit dropouts or degaussing, a hard drive can crash or have bad sectors and irrereplaceable data can be lost forever, unless it has been backed up. The best practice is to regularly back up your projects to tape, and over long periods of time archive your data with optical media such as DVD. Optical media offers a longer shelf life than tape and is usually easier to store on your shelves.

Glyph provides fast, large capacity backup and archiving systems with the option of a FireWire or SCSI interface. SCSI AIT3 offers capacities up to 100GB native, and the FireWire AIT1 and AIT2 tape back up is reliable and extremely easy to use.

### AIT Specifications

**AIT-1**
- 35GB per tape
- Available in SCSI and FireWire
- 240M B/min sustained transfer rate
- SCSI version compatible with Retrospect and Mezzo
- FireWire version compatible with Retrospect

**AIT-2**
- 50GB per tape
- Available in SCSI and FireWire
- 360M B/min sustained transfer rate
- SCSI version compatible with Retrospect and Mezzo
- FireWire version compatible with Retrospect

**AIT-3**
- 100GB per tape
- Available in SCSI
- 720M B/min sustained transfer rate
- Compatible with Retrospect and Mezzo
MEDEA AudioRack LP

Low Profile Rack Mountable Storage Systems for Digital Audio Workstations

AudioRack LP (Low-Profile) storage systems from MEDEA are designed to support professional digital audio workstations (DAWs) at a fraction of the cost of competing audio storage systems. AudioRack LP supports high track count sessions in a compact 1U rack mount enclosure.

- Packs up to 300GB of high-performance audio storage in a single 1U enclosure that requires only 1.75-inches of rack space. Stack three AudioRack LPs and over 1TB (1000 GB) of storage can be configured in only 7 inches.
- The 2-drive versions of AudioRack LP support the simultaneous playback of up to 24-tracks of audio. The 4-drive versions support 64-track sessions of 24-bit/96kHz audio and are the ideal storage solution for professional DAWs including Nuendo, Pro Tools and Tascam MX-2424.
- AudioRack LP is optimized with Medea's proprietary AST (Audio Stripe Technology) to support 64-track sessions in a single SCSI ID.
- AST enables independent seeks to the disk drives in AudioRack LP and dynamically distributes audio tracks evenly among the drives. The bottom line is that you can simply record/playback up to 64-tracks to/from a single AudioRack LP and eliminate forever the need to manually manage your audio media by juggling between multiple storage devices.
- AudioRack LP attaches to any DAW equipped with a SCSI host adapter. Simply attach and initialize the system as if it was a single disk drive.
- As your audio storage requirements grow, AudioRack LP systems can be daisy-chained together for storage capacities up to 4.5 TB (4500 GB)—over 65 hours of 64-track, 24-bit/96kHz sessions.
- AudioRack LP is ultra-quiet and won’t interfere with your productions.
- Backed by a 5-year factory warranty

PYRO DV RaidRT

PYRO DV RaidRT is hardware-based FireWire RAID array enclosure designed for DV content designers who edit, create and store large mission-critical video projects. It provides more reliable storage and faster speeds than a single hard drive alone.

PYRO DV RaidRT is a four-bay RAID enclosure that accommodates Ultra ATA 100 hard drives. These drives are converted to FireWire/IEEE 1394 using internal dual channel RAID controllers. PYRO DV RaidRT utilizes an Intel i960 RM RISC Microprocessor and also includes 64 MB SDRAM for cache memory. Once drives are installed, it supports RAID levels 0, 1, 0+1, 3 or 5. Installed drives are hot swappable and one drive can also be used as a hot spare.

- Capture 48 Tracks of 24 BIT Audio
- Add your own IDE Hard Drives or ANY Size
- Fully Integrated HARDWARE RAID, No Software to Install
- Stripe Hard Drives for RAID 0, 0+1, 3 or RAID 5
- 4 Removable Hard Drives, Hot Swappable
- Serial communication port enables array controller operation via PC VT terminal controller
LACIE

PORTABLE HARD DRIVES

Data Bank
Design by F.A. Porsche, the Data Bank is the most compact hard disk ever. Weighing less than 5 oz., the Data Bank is barely larger than a credit card and thinner than a mobile phone (4.4 x 2.5 x 0.5”). A masterpiece of understated elegance, the Data Bank offers 20GB of storage at fast FireWire and USB 2.0 speeds, in a sleek, ingot-shaped magnesium design.

- Hot-pluggable to easily share among cross-platform desktops, it features one FireWire and one USB 2.0 port.
- USB 2.0 standard boasts transfer rates of up to 480Mbps while still maintaining backward compatibility with USB 1.1 devices. The blazing FireWire interface delivers transfer rates of up to 400Mbps.
- Offers true plug and play connectivity, without the need for driver or software installation for Windows XP and Mac OS X users.
- No power supply needed. Simply connect the drive to your computer and use the power supplied by the FireWire or USB cable.

PocketDrive
Designed for today’s traveler, the LaCie PocketDrive family offers an ideal solution for data exchange, backup and archiving on the road. Slender and compact, the drives are easy to carry and feature a silicon bumper for maximum shock protection.
The PocketDrive U&I provides both USB 2.0 and Firewire (IEEE1394) interfaces in one drive. With two Firewire ports and one USB port, you can connect and disconnect any of the PocketDrives while the computer is running with immediate device recognition.

- PocketDrives weigh just 1 1/2 ounces, yet they can easily store heavy graphic, audio and video files, and perform complete backups of most systems.
- PC and Mac compatible, the PocketDrive comes complete with USB 2.0 and Firewire cables, AC power adapter, and LaCie’s Silverlining Pro drive management software.
- For those who don’t require Firewire, the PocketDrive USB 2.0 delivers all the features and performance of the PocketDrive U&I, except Firewire connectivity. This streamlined version allows a more aggressive value without compromising performance.

Mobile Drive
The perfect companion for desktop and notebook computers, the LaCie Mobile Drive delivers up to 40GB storage capacity in a package that fits in your pocket. With a rugged aluminum design to reliably protect your data, and an ultra-thin, portable design to provide complete mobility, the Mobile Drive allows you to move freely and take your data with you wherever you go.

- Plug and play with USB 2.0 interface, this lightweight, portable drive boasts transfer rates of up to 480MB/sec — forty times faster than the previous version — while maintaining convenient backward compatibility with USB 1.1 devices.
- Uses the power supplied by the USB bus—no AC power adapter needed—making it even easier to work when traveling.

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
Mobile & Desktop Hard Drives
LaCie’s d2 series mobile and desktop hard drives are available in a variety of interfaces for easy connection to Macs and PCs. While USB is best-suited for personal backup and data sharing, Wide SCSI and Firewire are ideal for use with high-bandwidth applications, such as video and audio editing. (USB & Firewire drives are Mac OS X and Windows XP compatible).

- The d2 drives feature a sturdy aluminum case designed to enhance portability, durability, and appearance. Made of a metal alloy that dissipates heat and prolongs drive performance, the drives feature a slender, stylish case that allows you to arrange them vertically on the desktop, horizontally stacked in a desk rack, or mounted in 19” racks.
- Available with up to 500GB of storage, a 250GB d2 drive can store the equivalent of a 385 CD-Juke-Box or 50,000 MP3 songs.

**d2 USB 2.0 & Firewire 800 Hard Drive**
- Equipped with the Firewire 800 standard—the fastest-ever, this drive is capable of reaching transfer speeds of up to 800M bits/s for Firewire 800 users and up to 480 M bits/s for USB 2.0 users. The d2’s dual interface, 7200 rpm speed and 8M B buffer make it the fastest-possible storage solution for digital content creators.
- With the appropriate cable, the drives can be connected to any computer equipped with FireWire 800 (9-pin), FireWire 400 (6-pin), USB 2.0 or USB 1.1 ports, making it the most universal drive ever.
- Chained and striped in a FireWire 800 RAID 0 configuration, can reach unprecedented sustained transfer rates of up to 100MB/s, making them ideal for workstation and small-server environments.

**d2 Firewire Hard Drive**
- Drives are hot-pluggable, allowing for connecting and disconnecting while the computer is running
- Up to 250GB of additional storage
- Transfer rates of up to 400M bits/sec
- Automatic plug and play configuration for Mac and PC

**d2 USB 2.0 Hard Drive**
- Spacious storage capacity: up to 200GB of additional storage
- USB 2.0 delivers transfer rates of up to 480M bits/sec
- Automatic plug and play configuration for Mac and PC

**d2 Ultra320 SCSI Hard Drive**
- Fastest SCSI transfer rate: up to 320M B/sec
- Ultimate performance: up to 68M B/s sustained rate per drive
- Use with RAID 0/1 arrays, audio, high-speed servers and workstations
- Backwards compatible with Ultra160, Ultra2 and UltraWide SCSI interfaces. It can even be chained with previous-generation SCSI drives without causing speed limitations.

- Fan-free design ensures quiet operation
- The drives are hot-pluggable, allowing for connecting and disconnecting while the computer is running. They are also compatible with Mac and Windows enabling simple cross-platform data sharing and exchange among workstations.

**d2 Accessories**

- **LaCie Desk Rack**
  Conveniently stack up to four d2 drives in this separate rack and save valuable space on your desk. When holding three drives or less, this sturdy desk rack features an area to neatly store media such as CDs and DVDs ........................................ 49.00

- **LaCie Security Lock**
  Also available for use with the d2 design is a Kensington-type lock to which protect your equipment from theft or damage. This security lock can be quickly and easily installed and features a durable steel cable ............. 19.00

- **LaCie Rackmount Kit**
  Configure your LaCie d2 drives in standard 19” racks with this optional rack-mounting kit. This kit allows for greater organization of storage peripherals and tidy consolidation of hardware. Kit includes two aluminum brackets and one aluminum junction piece .............................................. 39.00

- **Included LaCie Drive Stand**
  LaCie d2 drives ship with a sturdy metal drive stand that provides stability and enables upright desktop use. When positioned vertically, these slender drives occupy less surface area for more efficient use of desktop space.

d2 CD-RW DRIVE

High-Speed, Portable Firewire or USB CD-RW Drives

Quickly creating data, audio, photo and multi-media CDs has never been easier. Enclosed in a lightweight but sturdy aluminum case for complete mobility (AC powered) and reliability, the d2 FireWire or USB-equipped CD-RW drives allow you to quickly and easily record, write and play CDs. Use them to master your own music CDs, or store and archive your important data. They come complete with LaCie CD Utilities including recording software for pre-mastering, digital audio/video archival and storage, and creating backup copies.

- Ships with recording software, so you’ll be able to start burning immediately. The LaCie CD Utilities includes all of the necessary drivers and Toast for the Mac and Easy CD Creator for the PC, allowing you to create custom audio CDs and store files.
- A “plug and play” peripheral, the LaCie CD-RW Drive easily configures to Macs running OS 9.x and 10.x, as well as Windows 98SE, Me, 2000 and XP. No need for device IDs or terminators.
- Hot-pluggable FireWire technology lets you connect and disconnect your drive without shutting down your computer.
- Stackable desktop or rackmount design (optional rackmount kit and desktop rack)

POCKETCD-RW DRIVES

Super-Compact, Portable Firewire or USB CD-RW Drives

Designed for today’s traveller, the LaCie’s portable, lightweight USB or Firewire-equipped PocketCD-RW Drives are engineered with rugged durability, and designed to enable fast CD recording anywhere, anytime.

- Use it to back up your projects while on the road, share information with clients, or shuttle data between home and the office. To guard against the bumps and jolts that come with life on the go, the PocketCD-RW is surrounded by a shock-resistant bumper for reliable data protection.
- True plug and play convenience—no driver or software installation required
- Store large audio and video files, as well as perform complete backup of most systems.
- Ideal match for Macintosh PowerBook or iBook computers equipped with iTunes, the drives enable simple data sharing among Macintosh workstations.
- Weighing only 25 ounces, the PocketCD-RW Drive is designed for travel. In addition there is no external power supply to carry and no AC adapter required.
- To guard against the bumps and jolts that come with life on the go, they are surrounded by a shock-resistant bumper for reliable data protection.
- Burn digital video and data files in less than four minutes for fast archival, backup and data exchange. Use iTunes to quickly compile audio and MP3 CDs.
- Featuring advanced FireWire or USB 2.0 technology, the drives can be connected and disconnected while the computer is running with immediate device recognition.
- Offers extremely fast, reliable performance for users working with digital audio and video. The Firewire PocketCD-RW conveniently utilizes the Firewire cable for both power and data transfer—no external power supply needed.

USB 2.0 Version

- Equipped with the USB 2.0 interface, the USB PocketCD-RW drive delivers transfer rates of up to 480M bits/sec, while conveniently maintaining backward compatibility with USB 1.1 devices.
**d2 DVD-RW**

**USB 2.0/Firewire DVD Rewritable Drive**

Encased in Lacie’s d2 design, this DVD rewritable drive features Firewire and USB 2.0 connections and can be positioned horizontally on the desktop, stacked in a separate desk rack, or mounted in standard racks with the optional rackmount kit.

- Record digital audio, video and data or backup valuable data. Read/write to CD and DVD media. Utilize Easy CD Creator and Toast to make audio and MP3 compilations, create and playback your DVDs.
- Fully hot-pluggable, simply connect the drive and start creating. Drives can be shared between workstations for cost savings.
- Assess the needs of your project and then choose the type of media best suited to your needs. Offering the ability to write to DVD-R/RW and CD-R/RW media, allows for true project control.

---

**DVD INTERNAL RECORDER**

**Internal E-IDE/ATAPI High-Speed DVD Burner**

Edit and author professional, interactive video DVDs, store music files and archive digital photos — all on reliable DVD media. Record data, video and MP3s on DVD general use discs and store up to 4.7GB of data — up to 1,000 songs, more than two hours of MPEG-2 DVD video, or as many as 500,000 documents.

- Store up to 1,000 MP3 files on a single DVD disc
- Buffer under run protection reduces failed burns
- Bundled software incorporates easy-to-use interfaces and a range of professional-grade tools, allowing you to create superior, high-quality DVDs to be used for storage, backup or playback
- Ideal for storage and backup of audio, video and data in consumer and corporate environments.

---

**DVD MultiDrive**

Record, archive and share digital content on durable, reliable CD and DVD media with DVD MultiDrives. Equipped with blazing write speeds, these drives allows you to record data, video and MP3s on DVD general use discs, and archive songs, MPEG-2 DVD video or documents. Large-capacity, double-sided media allows for up to 9.4GB of reliable storage space.

- DVD-RAM functionality provides random-access capabilities, similar to a hard drive, allowing for almost instant retrieval of specific files: an excellent solution for backup and fast data recovery.
- Edit and author video, store digital photos and music files, and archive large amounts of data. The MultiDrive is capable of reading most CD and DVD formats, and is backward compatible with previous generations of DVD-RAM media.
- Bundled with recording software for Mac and Windows including DVD-RAM Utilities, Sonic MyDVD Video Suite for video capture, editing and authoring, Roxio Toast Lite and Easy CD Creator Basic for CD and DVD recording, MusicMatch Jukebox Basic for audio CD compilation, and InterVideo WinDVD for DVD playback.

---

**PocketDVD-RW**

**Mobile DVD Recording**

This lightweight, mobile DVD-RW drive offers enough capacity to store large graphic, audio and video files, as well as perform complete backup of most systems on reliable DVD media. An ideal companion for Apple Power Mac computers and PowerBook laptop computers, LaCie’s PocketDVD-RW Drive delivers a complete, lightweight DVD recording and authoring solution.

- Record digital video, MP3s and data files on DVD general use discs. Offering generous storage capacity of up to 4.7GB, DVD general use discs are capable of storing as many as 1,000 MP3 songs, up to two hours of MPEG-2 DVD video, thousands of digital still images, and as many as 500,000 documents.
- Ships with full-featured DVD authoring software, as well as CD and DVD recording software for Mac. A wealth of professional-quality tools to burn audio or author exciting video DVDs.
- FireWire powered, the PocketDVD-RW Drive can be connected and disconnected while the computer is running with immediate device recognition. An external power supply is not needed.
Pinnacle Systems

Instant Copy

Perfect CD and DVD Duplication for Music

Making copies of your DVDs and CDs for personal use has never been faster or easier. Featuring a friendly interface and revolutionary duplication technology (advanced buffer underrun protection, predefined burning profiles, sophisticated read-error handling), Instant Copy burns perfect copies every time—and at unbeatable speeds!

Burn true 1:1 copies of DVD content, transfer DVD content to Video CD's and make perfect bit-for-bit copies on any CD media. (Doesn't copy CSS-encrypted discs.)

- Burn a 9 GB, dual layer DVD video onto a standard 4.7 GB recordable disc
- Transfer DVD content to VCDs and SVCDs that can be played on most DVD players
- Create perfect bit-for-bit copies of any CD media: audio, data, video and music

Clean & Clean Plus

All-in-One Audio Restoration

The perfect digital tool for archiving and preserving your old vinyl LPs, cassettes, and analog media, CLEAN allows you to record your favorite albums, and automatically apply a number of effects and filters to remove all of the artifacts of age.

Hiss, Crackle, Scratches, Pops. These are the enemy. CLEAN uses advanced audio restoration technologies to scour your recordings and deliver results as crystal clear as the original recordings. CLEAN PLUS adds a specialized pre-amplifier to help you get the highest quality into your PC.

- Removes clicks, pops and background noise from any recording
- Fully automatic process for great results, quickly and easily
- Unique processing presets for LPs, tape and MP3 based music
- Includes CD burning software for easy cataloging on disc
- Complete parameter control over restoration process

MyMP3PRO MP3 Jukebox Software

The ultimate tool for cataloging and controlling your music, myMP3PRO combines high quality MP3 and MP3 Pro encoding with professional level audio editing, mixing, special effects and CD burning capabilities to deliver incredible control over your music library. Capture and store all of your favorite music into custom playlists, add custom EQ processing and other cool effects, then save your mixes to CD, or interface with your portable MP3 player for complete flexibility.

- myMP3PRO delivers everything you need for an amazing audio experience. Encode, edit, mix, alter, reorder and transfer your music. Then upload directly to your hardware M P3 Player, or DJ your own mixes live! Total MP3PRO support gives you the best compression without sacrificing sound clarity. Virtual effect slots allow for incredible sound processing, and integrated Surround-Sound gives you complete control over your music.
- myMP3PRO includes many features found only in high-end audio editing suites. Sophisticated EQ capabilities allow you to create custom playlists specifically for different speaker or headphone setups. Professional waveform editing tools allow you to adjust volume, phase, panning, dynamics and more!
- Packed with features to give you complete command of your audio library. Listen to, organize, burn and convert MP3 files. Fade in, fade out, crossfade, and normalize your tracks. Add audio effects in real time, or even create your own CD labels and covers with the built-in Label Editor. Whether you want to take your favorite music on the road with your MP3 player, or DJ your own parties, there's nothing like myMP3PRO for making and mixing MP3s!
TOAST 5 TITANIUM

CD and DVD-Recording Software for Mac

Toast 5 Titanium is a comprehensive, all-in-one DVD and CD burner software that enables you to create, organize, share and store all of your digital content (music, data, photos, and video) on CDs or DVDs. Turn scratchy LPs and cassettes into crystal clear CDs. Convert MP3s into professional audio CDs or burn them on MP3 discs that hold hours of music. Print custom labels and cases for your new CDs. The perfect companion to iMovie, iTunes, and DVD authoring software—Toast 5 Titanium burns fast, burns clean, burns on more drives, and burns in the background too.

- Automatically converts any QuickTime audio file to CD audio format, including WAV, MP3, and even audio tracks from QuickTime movies.
- Vary the gap time between songs, with a different pause between each song. You can also create MP3 CDs that hold hours of music.
- Design and print expressive CD labels and jewel case inserts with Magic Mouse Discus.
- Included Panic's Audion lets you organize, edit and get the most out of your music collection. Play your MP3 files with rich visualizations, organize them into playlists, or edit them using waveforms to turn your MP3s into personalized compositions.
- CD Spin Doctor turns scratchy records or cassette tapes into high fidelity CDs:
  - Records from any analog source (phonograph, tape, or microphone)
  - Eliminate noise, pops, hisses, and clicks
  - Enhancement filters convert mono to stereo and boost Bass or Treble
  - Wave form display with zoom in/out

Toast With Jam

Toast with Jam is the ultimate studio tool for arranging and mastering pro audio CDs on MacOS X. In addition to the full CD and DVD burning power of Toast, this suite adds the award-winning BIAS Peak LE and Roxio's Jam 5.

Jam 5: Arrange your tracks and build your 100% Red Book-compliant audio CD. Create dynamic crossfades between tracks, edit PQ subcodes, set the gain for each channel of each track, cleanly trim your tracks, and more.

BIAS Peak LE VST: Use lighting-fast, nondestructive waveform editing tools to improve and add special effects to your music. Enhance vocals with concert reverb, soften dynamic peaks and create other effects with included VST plug-ins.

Easy CD & DVD Creator 6

A complete digital media suite, you can rip, play, edit, organize and burn your digital music with AudioCentral. Make DVD movies with professional transitions and animated menus with DVD Builder. Create personalized disc labels with Label Creator. Save large data projects to multiple discs with Creator Classic or copy personal discs with Disc Copier.

- AudioCentral software includes a player, media manager, ripper, tag and sound editor - integrated in a single application. Create greatest hits CDs, preserve your old LPs and cassettes in digital format, enhance your tracks with sound effects and more.
- Drag and drop files for burning to CD or DVD. Disc formatting and burning will happen automatically.
- Back up, share or archive your important files to CD or DVD, or large projects to multiple discs. Easily retrieve files or projects back to the original or new location on your Windows PC with Roxio Retrieve.
- Roxio Label Creator lets you make personalized CD labels, jewel case inserts and DVD case covers. Choose from dozens of professional designs for all occasions!

Digital Multitrack Recording System

SONAR 2.2 is Cakewalk's flagship audio and MIDI production software for Windows Me/2000/XP. SONAR 2.2 offers unlimited MIDI and audio tracks, realtime 32-bit DirectX8 effects and DXi soft synths and powerful Acid-style loop construction all tied together with automated mixing of virtually every parameter. SONAR provides support for 24-bit/96kHz audio hardware using ASIO and Windows WDM drivers, offering latencies as low as 1.5ms. Almost all of SONAR recording, precision editing, mixing and routing functions can be accessed directly from a single window known as the Track View. This elegant and intuitive interface combined with SONAR's extensive built-in control surface support delivers an exceptional level of speed and efficiency that is sure to optimize your creative potential and workflow. SONAR 2.2 ships with a suite of essential DirectX8 effects plug-ins along with three powerful DXi soft synths including: Cyclone, an Acid-compatible Groove Sampler; as well as Virtual Sound Canvas 1.5 and DreamStation 2.0 synthesizers. Also available is SONAR XL 2.2 which adds an advanced DXi drum sampler workstation and 64-bit DirectX 8 audio-mastering effects to the plug-ins already included with SONAR 2.2.

Audio Support

- Simultaneously record multiple audio tracks with support for multiple multi-channel hardware up to 24-bit/96kHz.
- Unlimited audio tracks and real-time effects inserts, 16 auxiliary busses, and up to 64 virtual main outputs.
- WDM and ASIO driver compatibility (Windows 2000/XP) supports latency as low as 1.5ms and provides extremely fast audio processing and mixing including live input monitoring of effects and immediately responsive DXi soft synths.

MIDI Support

- Unlimited MIDI tracks and MIDI I/O ports
- Internal MIDI precision of 960 PPQN for rock-solid synchronization, recording and editing accuracy
- Real-time MIDI FX plug-ins for non-destructive MIDI editing.
- Precise multitrack Piano Roll, Notation, Event List and Drum Grid MIDI editing.

Loop Construction

- Support for beat slicing and import/export of ACIDized Wav file as well as live performance of loops using the included DXi soft Synth Cyclone.

Audio/MIDI Editing

- Non-destructive slip editing (trimming) of audio and MIDI data in the Track View
- Unlimited undo/redo with history for all editing functions.

Included Soft Synths and Effects Plugins

- Includes 3 DXi soft synths (4 in SONAR XL), 16 realtime DirectX audio effects (18 in SONAR XL) and 14 MIDI FX plug-ins.

Control Surface Support

- Direct support for the Mackie Control, CM Labs MotorMix, Tascam US-428 and US-224 as well as the Radikal Technologies SAC-2.2 provide dedicated real-time, hands-on control of your mix, automation, effects, and more.
- A Global Control plug-in features a learn-mode that allows you to quickly integrate other MIDI-compatible control surfaces.

Import/Export Audio

- Import multiple file formats: AIF, ASF, AU, AVI, BUN, MID, M P2, M P3, M PEG, M P3, SND, WAV, W RK
- Individual tracks or entire mixes including automation, plug-ins and DXi soft synths can be bounced to a new track within the current project or exported to disk
- Export as WAV, ACIDized WAV or export audio to AVI, Quicktime or MPEG video.
- Encode audio to MP3 with a 30 day trial version of Fraunhofer MP3 encoder, RealAudio G2, and Windows Media ASF.
- Import/Export of OMFI (Open Media Framework Interchange) and Broadcast Wave files — the film, video and audio industry's standards for saving and transferring digital post-production projects between different workstation platforms.

Synchronization

- Frame-accurate SMPTE synchronization with variable frame rates and auto-detection of incoming timecode
- Able to send/receive MIDI clock, receive M TC (M IDI T IM E CODE) and send MMC (M IDI M achine C ontrol) commands
SONAR’s streamlined Track View is the heart of your recording and editing environment. What’s great about this view is that you can do all of your recording, arranging, mixing, and most (if not all) of your editing in one place. This really maximizes your creative workflow.

A number of tools are available for editing audio and MIDI clips including split, scrubbing, zooming, snap grid settings, etc.

**Audio Track Controls Include:**
- Volume, Pan, Input Trim
- Mute, Solo, Record arm
- Input/output assignment
- Effects inserts (insert, bypass)
- Aux sends (level, pre/post assignment, pan, bypass)
- Polarity invert
- Mono/Stereo assignment
- Input/Output Meter (switchable peak, RMS and peak + RMS with clip indicator and Hold function)

**MIDI Track Controls Include:**
- Volume, Pan
- Velocity + (Velocity trim)
- MIDI input/output channel assignment
- MIDI port assignment
- Bank and Program selection with patch lists provided for all major synths
- MIDI effects inserts (insert)
- General MIDI compatible
- Chorus and Reverb send controls
- Key + (transpose)
- Time + (time offset)

The customizable Toolbar ensures that the functions you need the most (transports, looping, tempo, markers, record mode, synchronization and more) are always a mouse-click away. You can click on any toolbar and drag it to any location on the Track View.

Audio Scale Ruler is a vertical zoom tool for audio clips that allows detailed editing of quiet passages.

The time ruler is switchable between Measures/Beats/Ticks, samples, Hrs/Mins/Secs/Frames. The shaded area represents loop and punch points.

The Clips Pane is where you record and arrange Audio, Groove and MIDI clips.

Automation data including mixing and effects for Audio and Groove clips can be freely drawn and edited with sample accuracy using a choice of 4 shapes - linear, fast and slow curves as well as jump (instantaneous change).

Beat-matched Audio Looping
- Simply click and drag loops (Grooveclips or ACIDized .WAV files) where you want them and make tempo and pitch changes to audio in real-time. Click and drag the left or right edge of a grooveclip to have a loop repeat. You can even combine different loops on the same track.

The Status Bar provides real-time display of the cursor location, whether the audio engine is running, how much disk space is available as well as global Mute, Solo and record status for the project. The CPU and hard disk meters allow you to monitor the status of your system’s available resources.

The zoom tools provide horizontal and vertical zoom down to the ample level allowing detailed audio editing directly from the Track View.

Crossfades can be created automatically between overlapping audio clips using one of 9 available crossfade presets.

Controllers, RPN and NRPN data for MIDI clips can be edited in the Track View can be freely drawn using the same tools available to Audio clips. Controller data edited in the Piano Roll or Event List Views are also displayed with each MIDI clip.

The customizable Toolbar ensures that the functions you need the most (transports, looping, tempo, markers, record mode, synchronization and more) are always a mouse-click away. You can click on any toolbar and drag it to any location on the Track View.

A number of tools are available for editing audio and MIDI clips including split, scrubbing, zooming, snap grid settings, etc.

**Audio Loop Construction Toolkit**
- Use the flexible beat slicing and time stretching/pitch shifting tools in the Loop Construction View and incorporate perfectly beat matched loops alongside your standard audio and MIDI tracks.
- Make tempo and pitch changes to audio in real-time.
- Combine an infinite number of different loops on the same track.
- The Loop Explorer allows you to quickly find, organize, and audition loops in real-time – even during playback.
- Import and export ACIDized WAV files, or create loops from any recorded audio, WAV, MP3, or AIFF file.
- Click and drag to lay down loops when and where you want them.
- Includes hundreds of license free loops.
CAKEWALK

SONAR 2.2 & SONAR XL 2.2

Console View

Although you can control a complete mix directly from the Track View window, the Console View provides an alternative for mixing and automating audio and MIDI tracks using a familiar hardware-style mixing interface.

- Console View channels include audio, MIDI, auxes, virtual mains (master outputs).
- Each audio and MIDI track includes level, pan, mute, solo, record arm and comprehensive metering as well as access to plug-ins, auxes, buses and I/O routing.
- A pull down menu lets you to decide which audio and MIDI channels are to be displayed.
- Automation created in the Console View is automatically reflected as envelope automation in the Track View and vice-versa.
- Remote control of all mixing parameters are available via MIDI.

PLUG-INS

Fully-Automatable DirectX 8 Realtime Audio Effects

- Includes the following fully-editable, fully-automatable 32-bit DSP-FX audio plug-ins designed by Power Technology — StudioVerb, Parametric EQ, Delay, Chorus and Flange
- Automation can occur directly from the effect’s interface, via MIDI or for an even higher level of precision, by drawing vector envelopes in the Track View
- Additional 32-bit, non-automatable effects include: EQ, Expander, Gate, Limiter, Tape Saturation, Pitch Shifting, and more
- Real-time, live input monitoring of effects is possible when using audio hardware that supports WDM drivers

Expand Your Suite Of Audio Processing Tools

- Hundreds of additional DirectX-compatible audio plug-ins are available from industry-leading third party developers including Antares and Waves

Alien Connections - ReValver - Virtual Guitar Amp Systems

- Combining a wide variety of realistic pre-amp models with EQ, power amps and cabinets with post-EQ, and effects that can be routed in virtually any order — provides nearly endless possibilities
- Automatable parameters allow you to switch or morph between different guitar tones within one track
### DXi (DirectX Instruments)
- DXi is the open standard for soft synth plug-ins, based on Microsoft’s DirectX technology.
- DXi synths are CPU efficient with low latency — unlimited DXi synths can be loaded simultaneously (CPU dependent) with full automation and multiple output capabilities.
- Three DXi instruments are included while additional DXi synths are available separately from leading developers including Native Instruments, IK Multimedia and others.

### Audio Simulation – DreamStation 2.0 DXi Polyphonic Analog Synth
- Accurately reproduces analog synth sounds by modeling analog circuits and oscillators.
- Combines subtractive synthesis with FM synthesis.
- 3 oscillators, multimode self oscillating IIR filter, VCA, LFO, user EG for each voice.

### EDIROL – Virtual Sound Canvas 1.5 DXi
- Modeled after one of the world’s most popular sound modules.
- 16-part multi-timbral up to 128-voice polyphony.
- GM2/GS compatible – 902 tones plus 26 drum sets.
- Reverb, chorus and delay effects.

### Synth Rack
- The Synth Rack View allows you to easily insert instruments or ReWire devices into your project. It makes loading and working with synths in your project a snap - host Audio and MIDI tracks with proper I/O assignments are created automatically when an instrument is loaded.
- View all of the loaded DXi synths at a glance along with their current presets.

### Cyclone DXi Groove Sampler
- Cyclone is a 16-part groove sampler, composition tool, and loop editor wrapped up in a single DXi synth - Load up to 16 loops (ACIDized Wav or SONAR Groove Clip) or samples onto the 16 trigger pads and create loop-based compositions in real-time using any MIDI device, MIDI tracks, computer keyboard, or mouse.
- Samples will automatically match the tempo and pitch of your project.
- Rearrange, combine, slice, tweak, and customize samples to create new grooves.
- Control gain, pitch, and pan of individual loop slices.
- Fully adjustable loop points allow you to create unique polyrhythmic textures.
- Supports multiple outputs & key mapping.
- Export combined loops as a Groove clip that can be used in SONAR & other apps.
- Snap to grid with assignable resolution.
- Slice preview.

### ReWire 2.0 Support
- Patch Cakewalk’s own Project5, as well as Propellerhead’s Reason, ReBirth, and other ReWire 1.0 and 2.0 compatible devices right into the Synth Rack.
- Route ReWire channels into audio tracks and process with DirectX effects.
- You can even use MIDI FX, automation, and sequencing capabilities to control Reason.
- Add VST instruments and effects with an optional VST to DX converter.
SONAR 2.2 & SONAR XL 2.2

MIDI Processing and Editing

- Quantize from a whole note to 32nd note triplets with multiple parameters including strength, swing, window and offset
- Groove Quantize functions include importing DNA grooves and extracting timing info from audio files
- Additional MIDI processing functions include transpose, slide, scale velocity and retrograde (reverse)

**Multitrack Event List**
- Provides a list of all selected events occurring in all selected tracks
- A display filter lets you to specify the data type(s) to be viewed and edited (notes, pitch bend, controller, etc...)

**Multitrack Piano Roll**
- The multitrack piano roll is a flexible and intuitive display that lets you select, and edit multiple tracks of MIDI notes and controller data simultaneously with a 64th note grid line resolution
- Includes monophonic and polyphonic Pattern Brush tool that allows you to paint complex MIDI parts

**Drum Grid Editor**
- Paint rhythmic patterns in a single mouse stroke using hundreds of included Smart Loops patterns, or create your own
- Custom drum maps - preview and create kits with real-time remapping across multiple MIDI devices, multiple outputs as well as DXi synths

**Create Scores Fast**
- View and edit MIDI events in standard notation, then print sheet music of complete arrangements or individual parts in sizable fonts
- Print 24 staves per page, along with lyrics, chord grids, percussion notation, dynamic markings, and enharmonic spellings
- Guitar tablature with customizable fretboard display
- A dedicated Lyrics view displays scrolling text during record or playback

**MIDI FX plug-in library**

- Non-destructively edit MIDI tracks with 14 included real-time MIDI FX
- Real-time MIDI plug-ins can be used on input, applied in as track inserts in the Track or Console view, or used as off-line commands

- **Session Drummer** —
  - Create and arrange drum patterns in real-time, selecting from a library of professional MIDI drum performances or your own MIDI drum tracks

- **NTONYX Style Enhancer Micro 2.0 Lite** —
  - Uses performance modeling in real-time to give MIDI recordings a more "human" feel

- **SlicyDrummer Lite** —
  - Instantly create drum loops by mixing and matching prerecorded patterns for each individual drum instrument

- **MusicLab Rhythm’n’Chords 2.0 Lite** —
  - Easily create MIDI rhythm guitar parts – Enter chord symbols, select a rhythm pattern and your guitar part is ready

- **MusicLab VeloMaster Lite** —
  - Real time MIDI dynamics processing of note velocity using an interactive graph.

- **MusicLab Looper** —
  - Create and edit MIDI loops – simply select the section a part of the track you want to loop, and drag it into the Looper window
  - Quickly find and audition loops from your MIDI loop libraries.

- **MusicLab Fixed Length** —
  - Quickly set note lengths for your MIDI tracks – a compressor/expander for note duration

**Plus the following additional plug-ins:**
- Arpeggiator, Quantize, Delay/Echo, MIDI Filter, Transpose, Velocity and Chord Analyzer
SONAR 2.2 & SONAR XL 2.2

SONAR XL
SONAR 2.0 XL provides all the capabilities of SONAR plus two 64-bit, fully-automatable DirectX 8 mastering effects, and an advanced DXi soft synth drum sampler.

- The Timeworks Equalizer is a fully-automatable, 64-bit mastering EQ with an integrated 30-band spectrum analyzer and phase meter. Both clean and vintage EQ algorithms, high and low shelf filters with resonance, 6 bands of bell filters, sweepable filter points, and adjustable Q.
- The Timeworks CompressorX is a pristine sounding, versatile, 64-bit, fully-automatable mastering-quality compressor. It features hard or soft-knee compression, no-clip brick wall limiting, ultra-fast attack/release times, and analog-style metering.
- Support for Digidesign audio hardware, including the Digi 001, 002, M box, and Pro Tools HD products using ASIO drivers under Windows XP.

Pyro 2003 – Complete MP3 and CD Maker
Pyro provides an integrated environment that allows you to play, organize, edit, and restore your digital music, create audio and data CDs and download their music to a portable player. Pyro allows you to make MP3s, burn CDs, digitize and clean old LPs or cassettes, archive important data files and more — all within one centralized user interface.

- Quickly turn your CDs into MP3s, WAV or WMA files
- Quickly locate and organize all the music files on your PC.
- Create unlimited MP3s
- MP3 files open automatically in Pyro's unique preview display waveform within seconds
- Convert LPs and cassettes into CDs, MP3s, WAV, WMA files
- Auto-recorder with timer for recording LPs, cassettes and internet broadcasts.
- Rip individual songs or entire albums
- Split long audio files into multiple tracks
- Fully-integrated 64-bit EQ as well as click and noise removal.
- Integrated audio editor with waveform preview: non-destructive audio editing; edit fades, crossfades & volume visually
- Automatic crossfades and volume normalization between overlapping tracks.
- Instantly download song titles and artist info from Gracenote/CDDB.
- Portable music player support
- CD labeler kit included
- Back up your valuable PC files to data CD
Affordable Audio and MIDI Recording Software

Cakewalk’s Home Studio 2004 and Home Studio XL are simple yet powerful recording tools, for the entry level musician and songwriter, based on Cakewalk’s SONAR next-generation audio and MIDI technology. Home Studio 2004’s intuitive Track View window lets you quickly record, edit, arrange, mix and automate unlimited audio and MIDI tracks in a single window.

Acid style loop creation allows you to create and modify loops to match the tempo and pitch of any music project. A CD featuring an ACIDized loop library is included. Both programs include a number of DirectX audio effects and DXi Soft Synths, as well as MIDI effects with support for third party plug-ins. Both Home Studio 2002 and Home Studio XL are compatible with Windows 98/98SE/Me/2000/XP.

- Record and play back unlimited audio and MIDI tracks.
- Support for 16- and 24-bit audio up to 48kHz
- 960 PPQ MIDI resolution
- Real-time mixing console view
- 16 simultaneous real-time audio effects plus 16 simultaneous real-time MIDI effects
- 2 Auxiliary busses and 1 virtual Main Buss
- DirectX automation support
- Import .Wav, ACIDized .Wav and MP3 files and export to .Wav, MP3 and Real Audio G2
- Loop-based song construction tools with automatic tempo and key matching of Groove-Clips and ACIDized .Wav files
- Non-destructive slip-editing of audio and MIDI clips
- Unlimited number of edit undos
- Audio and MIDI envelope automation of volume, pan, aux sends and MIDI controller data
- Bounce down individual tracks or an entire mix with automation and effects
- Professional MIDI editing including multitrack piano roll view and SysEx editing.
- Integrated DXi Soft Synth Plug-ins include Virtual Sound Canvas and DreamStation with support for third-party plug-ins.
- Includes 6 realtime audio effects including Amp Sim Lite, Reverb, Chorus, Delay, Flange, EQ with support for hundreds of available third-party DirectX plug-ins.
- 5 realtime MIDI effects – Arpeggiator, Quantize, Delay/echo, Change Velocity, MIDI event filter, Session Drummer, NTONYX Syle Enhancer Micro 2.0 Lite and MusicLab VeloMaster Lite.
- Import and synchronize AVI video to music projects
- Compose, edit and print sheet music, along with chord symbols, guitar chord grids, lyrics, dynamic markings
- Remote Control (for MIDI Gear)
- Includes a complete library of ACIDized audio loops as well as Fruityloops Express loop generator.
- Burn CDs and create MP3s with trial version of Pyro.

Home Studio XL Adds—

- FXPansion DR008 SE Drum Sampler
- An extra CD containing over 600 loops from the Smart Loops collections, also including dance and techno loops from PowerFX and X-Mix
- AFX1 - Total Dynamics Processing - A complete home studio mastering suite: Compressor/gate to keep levels similar, a limiter to keep your volumes below a set threshold, and an expander/gate to make loud parts louder and soft parts softer.

CAKEWALK

PROJECT5

Soft Synth Workstation

Project5 is a complete virtual studio that combines a suite of DXi compatible soft synths and samplers with sequencers, audio and MIDI effects and Acid-compatible audio looping tools — all in a single integrated production environment. The Project5 soft synths include a polyphonic analog-modeling synth, multi-format compatible professional sampler, drum synthesizer, sampling drum machine as well as the coveted Cyclone DXi groove sampler. The Project5 sequencers allow real-time and step-recording, as well as piano-roll style editing and step sequencing. Project 5’s live performance audio engine provides you with realtime control over the soft synths and samplers with advanced, user-configurable synth layering and keyboard mapping, as well as the ability to trigger patterns in realtime. Project 5 also allows you to customize and expand your studio’s arsenal with support for additional soft synths, audio and MIDI effects, sample libraries. Everything in Project5 is automatable! That means that you can automate every mix, synth, and effect parameter. Make changes on screen or use learn mode to quickly integrate your favorite hardware surfaces and MIDI devices. Project 5 will work with any WDM, MME, or ASIO-compatible Windows hardware, and also sends MIDI Sync to outboard sequencers. In addition, Project5 instruments and effects will integrate directly into SONAR. Project5 comes packed with nearly 2 CDs of professional samples and ACID-format loops from Q-Up Arts, FXpansion Audio, ProSamples, and Smart Loops.

P-SEQ - Pattern Sequencer
- Easily create and edit music and automation using an intuitive “piano roll” style pattern sequencer that superimposes track automation with note data.
- Record using step and real-time modes
- Pattern preview, auto-looping, and a range of editing tools allow you to tweak each pattern to perfection.
- You can automate track and MIDI data as well as any DXi or audio effect parameter.
- The Pattern Bin lets you browse, organize, and audition multiple patterns. Patterns can be dragged to the Pattern Editor for additional editing.
- All data can be treated as a pattern and automation can be written to pattern independent of note data. Edited patterns can be sent to a track where you can click and drag to repeat patterns for the required duration, and cut and paste patterns to when and where you like.

SYNCHRON32 - Step Sequencer
- Analog hardware-style step-sequencing allows you to quickly generate patterns, trigger synths, and trigger patterns in real-time from DXi devices.
- Provides 32 steps with control over pitch; rhythmic duration with shuffle; tempo sync; per-step flam, legato, bends; polyphonic mode; 32 banks for pattern presets.
- After creating patterns in SYNCHRON32, you can simply right click in the Track View and select from the list of preset patterns. Then click and drag to repeat patterns for the required duration, and cut and paste patterns wherever you like.

ACID-compatible loop integration with automatic beat matching, flexible time stretching/pitch shifting, and support for multiple loops per track. Click and drag to roll out tracks using ACIDized loops that match your projects tempo and pitch.
- Advanced synth layering and keyboard mapping capabilities allow you to perform and record using multiple MIDI controllers routed to multiple instruments, or use multiple, layered instruments or split synths from one MIDI controller.
- The realtime live performance audio engine provides a continuous musical workflow, allowing changes to be made on the fly and never compromises playback.

CAKEWALK

PROJECT5

PSYN — Virtual Analog Synth

• A fully automatable, 64-note polyphony, subtractive synthesizer with multiple filters, oscillators, envelope generators, and LFOs designed to give you access to classic 70s analog and contemporary electronic sounds. Other features include: a modulation matrix that provides tempo sync effects; portamento, ring modulation, FM synthesis and more.

nPulse — Analog Modular Drum Synthesizer

• 12-voice multi-timbral drum synth with one oscillator per voice combines the vintage-style electronic drum voices of classic TR-series drum machines, with the flexibility of modern day soft synths.
• 5 assignable outputs; multiple presets; sync effects; key-mapping.

Velocity — Drum Sampler

• The multi-timbral drum sampler provides 18 polyphonic voices with up to 32 velocity-layered samples and 5 stereo outputs.
• Precise sample editing with effects.
• Supports WAV, AIFF, LM4, and proprietary format sample formats.

DS-864 — Digital Sampler

• Flexible and easy-to-use with support for up to 8 layers, 64 voice polyphony and 8 audio outputs.
• Supports key mapping and velocity zones
• Sample-level editing and effects for creation of new sounds.
• Two resonant filters with key tracking can be configured in series or parallel
• Four 6-stage envelopes with multiple slopes
• Support for Akai S5000/6000, Kurzweil, Sound Fonts 2, WAV, AIFF, and proprietary sample formats.

Automatable Effects

• Access a rack worth of quality automatable DX audio effects including: Envelope/LFO Filter; Stereo Delay/Echo with tempo sync; Exciter; Classic Phaser; Studio Reverb; Stereo Chorus/Flanger, Stereo Graphic and Parametric EQ; and a Compressor/Gate.

Spectral Transformations

• Turn your audio inside out with six unique realtime effects integrated into one plug-in.
• Transposer - real-time pitch shifting produces major tonal changes ranging from high reedy sounds, to richer low sounds.
• Accumulator - glissando, delay, pitch bends and reverberation effects.
• Exaggerator sweeps through the peaks and valleys of spectral frequencies bands.
• Lo-Hi Filter removes frequencies above or below specified frequency levels.
• Tracer allows you to thin the sound until only a ‘trace’ of its former self remains.
• Shifter adds/subtracts the values to various frequency components.

Expand and Customize

• Add DXi or VSTi synths to expand your studio. Use Project5 instruments and effects directly in SONAR.
• Edit and mix using the included audio & MIDI FX. You can also add third party MFX or DX effects as well as VST effects using the included VST/DX adapter.
• Integrate Project5 with a ReWire-compatible host like SONAR 2.x for advanced audio recording, editing, and mixing.
• Works with any WDM, DirectSound, or ASIO compatible Windows hardware.
• Sends MIDI Sync to outboard sequencers.
GUITAR TRACKS PRO & GUITAR TRACKS 2

Multitrack Recording Software For Guitar Players

Guitar Tracks Pro and Guitar Tracks 2 are straightforward digital audio recording and mixing applications for the Windows platform, that combine the ease of use of a portable multitrack cassette recorder with the power and flexibility of your PC. Each software package provides all of the recording, mixing, and editing tools the guitarist or singer/songwriter needs to achieve professional results. Guitar Tracks 2 features two track simultaneous record and eight track playback at 16-bit/48kHz. Guitar Tracks Pro features up to 32 simultaneous record/playback tracks with support for 24-bit/96kHz audio hardware. Both packages also feature guitar amp simulator plug-ins and other high-quality DirectX effects with support for third party plug-ins, a software-based drum loop generators and a chromatic-tuner. Whether you are a seasoned pro that needs a scratchpad for capturing ideas at the drop of a hat, or taking your first step towards computer-based recording, you will find that the no nonsense user interface and transparency of Guitar Tracks 2 and Guitar Tracks Pro will not stand between you and your music.

Guitar Tracks Pro Adds –

- Record and playback up to 32 tracks of digital audio.
- 32-bit mixing and audio effects, and support for up to 24-bit/96kHz audio
- Clip-based envelope mixing
- Dynamics processing including compressor, gate, expander
- ReValver SE guitar amp simulator lets you choose and tweak various pre-amps and power amps, 9-band EQ, Auto-Wah, and Stereo Reverb
- Fruityloops Express drum loop generator provides unlimited beat sequences with a variety of drum kits, audio samples, and drum patterns to use or modify.
- ACIDized audio loop library included

System Requirements

Windows 98, 98 SE, Me, 2000, XP
300 MHz processor; 64 MB RAM; 100 MB free hard disk space, CD-ROM drive and a Windows-compatible sound card

ONE HOUR FREE PARKING
AT 349 W. 34TH STREET (with purchase of $100 or more)
**Music Creation Tool**

FruityLoops is a hybrid loop creation and drum sequencing tool for Windows 2000 PCs, that combines loop generation, synth emulation, and pattern-based sequencing within a user-friendly photo-realistic interface. Features include an integrated BeatSlicer and Sample Browser, CD-quality stereo output, an integrated TS-404 bass line generator, a virtual keyboard, MIDI and DirectSound support, and individual panning/volume/pitch/mix controls. In addition to the built-in effects and sound generators, FruityLoops also provides support for DXi soft synths and DirectX audio effects. You can export samples to WAV, MP3, or MIDI files.

- Standalone and VSTi includes a wide variety of sound generators, sampled sounds, and emulations of vintage gear combined into one easy to use program
- CD quality 16bIt/44kHz stereo output
- Export loops and songs to .WAV, .MP3, and MIDI
- Includes five polyphonic soft synths, over 3000 samples, and 250 loops right out of the box.
- Integrated TS-404 bass line generator
- Unlimited number of tracks and samples
- Pattern-based sequencing with 4 to 64 notes per pattern.
- Piano Roll view with chords, note lengths and slides
- External control from MIDI keyboard or PC keyboard.
- Integrated sample browser
- Control panning, volume, pitch, mix, and tonal characteristics for individual samples
- Playlist view for mixing several patterns
- Peak meters
- Skin support for custom graphics
- BeatSlicer support

**Minimum System Requirements**

Windows 95/98/Me/2000, Pentium class 200MHz processor, 32MB RAM, Windows-compatible audio hardware, CD-ROM drive

---

**DXi Soft Synths**

- Supports DX Instruments (DXi) from Cakewalk and includes the Dreamstation DXi soft synth.
- Additional software synths are available from leading manufacturers like Native Instruments, Edirol and many others.

**Automation**

- You can record movements you make on any wheel or slider in Fruityloops or on your external MIDI controller in realtime.
- Automation of main sliders, volume, effects, oscillators, resonance, cut-off, pan, mute, effects sends, tempo, and more.
- After recording you can edit it all in a handy, graphical event editor. You can also draw in automation data or use an LFO generator to automatically create fluent automation movements.

---

**Create and Mix On The Fly**

Create drum and melodic patterns using Fruityloops instruments and the included Piano Roll view. Then arrange your patterns using the Playlist view to create your own songs and mixes.

**DirectX & VST Plugin Support**

- 16 auxiliary effects channels and one master effects channel is provided for patching DirectX audio effects.
- VST plug-ins are also supported including: 7 Band EQ, Bassboost, Overdrive, Ultrafunk Compressor, Delay, Fast LP, Filter, SmartElectronix Flanger, Free Filter, SmartElectronix Phaser, Ultrafunk Reverb, and more.
M-BOX

2 Channel USB-powered Pro Tools LE-based Micro Studio

M-box is a compact and affordable 2-channel USB-powered audio interface for MacOS 9.1 and up, MacOS X 10.2.3 and up, and Windows XP, that's been specifically engineered to offer the home/project studio and the pro who needs a studio quality digital recording, mixing and editing environment that can be taken virtually anywhere. M-box features a pristine 24-bit input-to-output signal path with two Focusrite designed (Green Range) mic preamps accessible via 1/4˝ TRS / XLR analog inputs; two 1/4˝ analog outputs as well as 1/8˝ and 1/4˝ headphone jacks with a dedicated volume control for monitoring. A 24-bit stereo S/PDIF digital I/O is also provided for transferring data to and from the M-box entirely in the digital domain. Every M-box includes ProTools LE software which features 32 audio tracks and 128 MIDI tracks along with a host of RTAS (Realtime) and AudioSuite (File-based) effects plug-ins.

**Features**

- Two analog inputs featuring two Focusrite mic preamps with variable gain and switchable 48V phantom power.
- XLR, 1/4˝ inputs using Neutrik combo connectors with separate source selection (MIC/LINE/INST) and gain controls with peak LEDs per channel.
- Two analog inserts, using 1/4˝ TRS connectors, allow you to use outboard processors while recording to disk.
- 1/4˝ TRS left and right outputs with 24-bit D-to-A converters.
- Support for 44.1 kHz and 48 kHz sample rates.
- 24-bit signal path from input to output.
- 24-bit coaxial S/PDIF digital I/O allows you to work entirely within the digital domain.
- Zero-latency monitoring.
- Inputs and outputs accept both balanced and unbalanced connections.
- 1/4˝ and 1/8˝ headphone outputs with dedicated volume control.
- 100% USB powered.
- M-box sessions can be migrated to another Pro Tools platform, from Digi 001 to Pro Tools|HD, for further manipulation.
- Includes a USB cable.

**Specifications**

- Mic pre-amp: > -120 dB EIN @ > 40 dB gain
- A/D Dynamic Range: 101 dB (A-weighted)
- Maximum Input: +24 dBu
- D/A Dynamic Range: 103 dB (A-weighted)
- Frequency Response: 20 - 20kHz (±0.5dB)
- Maximum Output: +4.2 dBu

**Software Supplied with System**

- Pro Tools LE Software — 32 audio tracks, 128 MIDI tracks with powerful editing, mixing real-time plug-in support and automation.
- DigiDesign ASIO Driver for Windows XP allows you to use the M-box with a wide range of popular third-party audio apps such as Cakewalk SONAR 2.2, Propellerhead Reason and Ableton Live.

**Digistudio**

Digistudio is featured component of ProTools software that provides a revolutionary way to collaborate with other Pro Tools users via the Internet. Digistudio participants interact from any Net-connected location to exchange Pro Tools session media, from raw audio tracks to MIDI data to plug-in information to automation.
PCI-based Pro Tools LE Music Production System

The Digi 001 is a computer-based 24-bit digital audio workstation system that offers a seamless hardware and software solution, on both the MacOS and Windows platforms, for project studios and production suites. The Digi 001 system combines a rackmountable breakout interface and PCI card that together provide 18 channels of simultaneous analog and digital I/O, including two high-quality mic preamps and MIDI I/O. Also included is the latest version of Digidesign's powerful recording, mixing, automation and editing software, Pro Tools LE, which offers 32 tracks of audio, 128 MIDI tracks as well as real-time (RTAS) plug-in support.

**FEATURES**

- **18 Simultaneous Inputs And Outputs**
  - All inputs and outputs run at a 24-bit resolution at 44.1 or 48 kHz sample rates
  - Eight channels of 1/4" balanced analog inputs and outputs
  - 2 mic preamps, with switchable phantom power, variable and a switchable 26dB pad are provided on the front panel.
  - Eight channels of ADAT optical I/O (located on the PCI card)
  - Coaxial S/PDIF digital I/O
  - One MIDI In and one MIDI out port is provided for accessing an external control surface, keyboard controller, synth, sampler or other MIDI device.
  - A pair of 1/4" TRS stereo monitor outputs with a dedicated volume control run in parallel to the Main outputs (outputs one and two).
  - Headphone output with separate volume control.
  - 1/4" footswitch port for QuickPunch recording control.
  - Rack ears are provided for installing the I/O box in a standard 19" rack.

- **Digi 001 Factory Bundle**
  - With over $2,400 worth of plug-ins from Digidesign and their Development Partners the Digi 001 Factory bundle is an ideal choice for rounding out your home and project studio production environment.
  - Plug-ins include:
    - Digidesign's D-Fi, D-Verb and Maxim combining a unique blend of creative processing plug-ins, high-quality reverb and mastering tools.
    - The classic analog sounds of the 1176, LA-2A compressors and the moogerfooger Lowpass filter from Bomb Factory.
    - Supertap, Metaflanger and Q10 EQ from Waves
    - Native Instruments Dynamo 001 Edition analog synthesizer
    - Also includes the iLok USB Smart Key which provides a portable, convenient way to store software authorizations.
The Digidesign Digi 002 is a 24-bit/96kHz FireWire-based mini studio that combines a touch-sensitive control surface borrowed technology from Digidesign's Control|24; an audio interface with eighteen simultaneous audio ins and outs, including 4 mic preamps; MIDI I/O; along with the latest version of Pro Tools LE software that works with both Windows XP and Mac OS 9.x and Mac OS X 10.2.3 and higher. The Digi 002 delivers seamless integration between hardware and software as each and every adjustment of the control surface is reflected in the Pro Tools LE software interface — and vice versa. Adding even greater flexibility, the Digi 002 can be uncoupled from Pro Tools and used as a stand-alone mode as an 8x4x2 digital mixer with onboard EQ, dynamics, delay and reverb. The Digi 002 comes bundled with over $2200 worth of high-powered plug-ins from Digidesign, IK Multimedia, Native Instruments, and Waves.

**FEATURES**

- Audio, MIDI and control surface information is passed over a single IEEE 1394 FireWire cable.
- All audio is processed at 24-bit resolution with sample rates up to 96 kHz providing a dynamic range greater than 108 dB.

**18 Simultaneous Channels of Inputs and Outputs**

- 8 simultaneous 24-bit/96 kHz analog inputs: eight 1/4˝ TRS inputs and four XLR mic pres with individual gain and high-pass filter; 48V phantom power enabled on channel pairs.
- Eight 1/4˝ TRS analog outputs with 24-bit/96 kHz D-to-A converters
- Left and Right 1/4˝ TRS Monitor outputs (+4 dBu) with dedicated volume control mirror Main outputs 1 and 2.
- 1/4˝ TRS headphone output with dedicated volume control knob
- Unbalanced RCA –10 dBV fixed output
- Eight channels of ADAT optical I/O (up to 48kHz), switchable to 2 channels of optical S/PDIF I/O (up to 96 kHz).
- Two channels of coaxial S/PDIF digital I/O supporting up to 24-bit, 96 kHz audio
- Alternate RCA – 10 dBV inputs for monitoring tape decks, CD players, etc.

**Control Surface**

- The top panel is arranged into four sections: The Fader section includes eight channel strips; The Console/Channel View section provides controls for viewing and controlling inserts, plug-ins and sends; The Transport and Navigation controls access many on-screen navigation features.

**Additional Features**

- One MIDI In port and two MIDI Out ports, providing up to 16 MIDI input channels and 32 MIDI output channels can be used for adding a keyboard controller and/or external synths and samplers, etc.
- 1/4˝ TRS Footswitch for QuickPunch I/O control.

**Included Software**

Includes the latest version of Pro Tools LE software as well as a number of high quality plug-ins, offering more power and flexibility than ever before including up to 32 tracks. The free plug-ins are valued at over $2,250 and include: SampleTank LE and Amplitube by IK Multimedia, D-Fi, D-fx and M axim by Digidesign, PR0-52 by Native Instruments, Renaissance Collection by Waves.

**Stand Alone Mixing**

- The Digi 002 can be used in stand-alone mode, (without your computer) as an 8x4x2 digital mixer with onboard effects (including dynamics processing, EQ, delay and reverb) and snapshots.
- 8 analog inputs including 4 mic preamps, with dedicated volume, pan, solo and mute controls.
- Dedicated three-band EQ available on input channels 1-8
- Dedicated Compressor/Limiter available on input channels 1-4
- Built-in high-quality Reverb and Delay
- Four sends on each input channel: Sends 1-2 dedicated to internal Delay and Reverb effects
- Sends 3-4 can be used for integrating external effects.
- Stereo Main and Monitor 1/4˝ TRS (+4dBu) outputs plus an alternate Main Output pair (~10 dBV) that mirrors the Main Outputs.
- Stereo headphone output with level control
- 10 scribble strips for pan/volume and effects control, send levels, and track names
- Channel metering available using rotary encoder LED rings (in Meter mode)
**Digi 002 Rack — 2U FireWire Interface**

Digi 002 Rack is Digidesign's first rackmount FireWire-based Pro Tools product. Designed with both recording and performing musicians in mind, Digi 002 Rack features analog, digital and MIDI I/O, 24-bit/96 kHz converters, and 32-track Pro Tools LE software to provide you with a creative playground like no other.

- **FireWire connectivity** — A single FireWire/IEEE-1394 cable conveys all digital audio, MIDI data, and Pro Tools data between Digi 002 Rack and your PC or Mac.
- **24-bit/96 kHz fidelity**
- **18 channels of audio I/O**: 8 analog (with 4 mic preamps), 8 ADAT optical, and 2 S/PDIF
- **Integrated MIDI I/O** (16 channels in/32 channels out)
- **32-track Pro Tools LE 6.x software**
- **Headphone output with level control.**
- **Instantly switch between channel views** — EQ, Dynamics, Inserts and Pan/Send.
- **Status indicators display MIDI, FireWire and L/R output activity in realtime as well as the currently selected sample rate**
- **Specialized function keys for Pro Tools software and standalone mode**
- **Navigation buttons can be assigned for fader bank select, zoom in/out and nudge**
- **Eight simultaneously balanced inputs**: four 1/4” TRS line / instrument inputs and four XLR mic inputs (channels 1-4); and four 1/4” TRS line inputs (channels 5-8).
- **Two IEEE-1394 FireWire Ports** — the first port connects the Digi 002 to the “Host” computer while the second port allows you to daisy-chain additional peripherals such as FireWire hard drive.

- **Includes DigiRack plug-ins and the Digi 002pack v2.0**:
  - a cross-platform RTAS, AudioSuite plug-in bundle.

**Digidesign Maxim and DiFi** — World-class peak limiting and sound level maximizing and Analog and retro signal processing in the digital domain.

**IK Multimedia SampleTank SE** — Includes 64 factory preset instruments to enhance your compositions; and AmpliTube with over 1,200 amp configurations as well as stomp box and effects modeling.
Host-Based Music Production Software

Pro Tools LE is the music production software that is bundled with Digidesign’s host-based hardware audio interfaces. Using the host processing capabilities of today’s super fast Mac and Windows computers, Pro Tools LE allows you to record and play up to 32 mono digital audio tracks and up to 128 MIDI tracks with a host of non-linear, random-access, precision editing and mix automation functions all within a non-destructive environment. Pro Tools LE is essentially divided into two main working environments: The Edit window and the Mix window. The Edit Window provides a graphic overview of your song along a timeline that allows you to adjust every aspect of both audio and MIDI data simultaneously and at sample-level resolution. Using the Edit window you can trim (resize) waveforms, reprocess regions of audio, as well as rearrange and automate your song all within one streamlined and elegant interface. The Mix window’s console-style graphic interface displays audio and MIDI channels in the same order that they appear in the Edit window. The Mix window not only provides access to standard volume, pan, mute and solo functions, it allows you to process your audio tracks with realtime (RTAS) effects plug-ins — up to five effects sends and five inserts per track, depending on available CPU resources. Both the Edit and Mix Windows provide a variety of methods for automating your mix to perfection. Audio Tracks can be recorded with selectable 16-bit or 24-bit resolution at sample rates up to 48 kHz for the Mbox and Digi 001 and up to 96 kHz for the Digi 002.

Audio

- Simultaneously record and play back up to 32 tracks of audio at sample rates of up to 48 kHz (96 kHz with the Digi002).
- 24-bit signal path from A-to-D to D-to-A.

MIDI

- Record and play up to 128 MIDI tracks
- MIDI events and sequences can be manipulated right alongside audio regions with sample level accuracy.

Audio Editing

- Most audio editing is non-destructive — whether cutting, pasting, trimming, separating, or clearing regions, you are only performing these functions on a map of the actual audio data. The source audio files remain untouched.

Multiple Undo

- Pro Tools can keep track of up to 16 of the last undo-able operations, allowing you to return to a previous editing state.

Plugins

- A number of high quality realtime (RTAS) and file based (AudioSuite) plug-ins, from dynamics to effects to sound design, are included with Pro Tools and many others are available from third party developers.

- Because of their seamless integration into the Pro Tools application, and their ability to be instantiated onto multiple tracks, software plug-ins often improve upon the capabilities of the hardware counterparts — customized settings are saved with your session and parameters can be automated.

Mix Automation

- Pro Tools LE provides dynamic automation of volume, pan, and mute controls for audio tracks and sends, MIDI tracks, and real-time plug-in parameters.

- You can write automation moves in real time during playback of your session.

- Edit breakpoint automation data, in the Edit Window, with the same techniques you use to edit audio and MIDI data.

Importing Audio

- Pro Tools LE can import the following Audio files types: AIFF; WAV; SD II; SD I
- MP3 import via optional software
- Sound Resource (AIFF—Macintosh only)
- WMA (Windows Media—Windows only)
- On Macintosh systems, you can import tracks from an audio CD — ideal for working with CD-based sample libraries.

Quicktime Video

- You can use Pro Tools to import QuickTime movies and audio, perform audio post tasks, and export the finished product as a new QuickTime movie.

Third Party Apps

- Pro Tools hardware and/or Pro Tools software can be integrated with popular audio production applications allowing you to work in a hybrid environment, if you wish. These applications include MOTU’s Digital Performer, Emagic Logic Platinum (Mac) and Cakewalk’s SONAR 2.2 (Win).
The Edit Window

The Edit window provides a timeline display of audio, as well as MIDI data and mixer automation for recording, editing and arranging tracks. As in the Mix window, each track has controls for record enable, solo, mute and automation mode.

- In normal Non-destructive Record mode, audio is recorded non-destructively, which means that if you record over a track's existing regions, the audio is not erased from your hard drive. Both the new and old audio files remain on your hard drive, available as regions from the Audio Regions List.
- In Destructive Record mode recording over existing regions replaces the original audio permanently.
- Loop Record allows you to record take after take while the same section of audio repeats. This is a convenient technique for quickly recording multiple takes of a part without losing spontaneity.
- QuickPunch allows you to instantaneously punch-in and out on a record-enabled audio track, non-destructively, by clicking the Transport's Record button.
The Mix Window – Integrated Multi-Channel Mixing and Surround Panning

In the Mix window, tracks appear as mixer strips (or channel strips), with controls for inserts, sends, input and output assignments, volume, panning, record-enable, automation mode, and solo/mute. The following section explains each of these track controls.

- **Input and output assignments**
- **Automation Mode**
- **Channel Pan with position display**
- **Solo/Mute buttons**
- **The Mix Groups List allows you to create groups of faders to show or hide.**
- **Peak level indicator and track name**
- **Show/Hide Tracks List**
- **Volume fader and level meter**
- **Mono and Stereo tracks**
- **The triangular AutoMatch indicators show the direction you need to move a fader in order to match the original automation level of that fader.**
- **An active Stereo Master and a 5.1 Master buss running simultaneously (TDM systems only).**
- **Group ID**

**Plug-Ins**

- A number of high quality plug-ins, from dynamics to effects to sound design, are included with Pro Tools and many, many others are available from third party developers.
- Because of their seamless integration into the Pro Tools application, software plug-ins often improve upon the capabilities of the hardware counterparts—you are free to employ presets, customize settings, as well as automate plug-in’s parameters.

**RTAS and AudioSuite Plug-ins**

- RTAS (Real-Time AudioSuite) plug-ins are real-time processing effects that rely on the DPS provided by your computer. They can be assigned to multiple tracks as frequently as you like depending on the available CPU resources.
- AudioSuite plug-ins are non-real time, file-based processors. Once an AudioSuite plug-in is applied to an audio file or region, a new audio file is created, leaving the original unprocessed available as a back-up.
MIDI Functions and Editing

- An integrated MIDI environment, with support for up to 128 MIDI tracks gives you full control over the MIDI components of your projects.
- Full support for Mac OS X’s Core MIDI Services.
- MIDI Time Stamping (MTS) support provides sample-accurate MIDI with Pro Tools-compatible software synths and samplers, eliminating the possibility of compromised sync and drift issues.
- Up to sub-millisecond-accurate MIDI with Digidesign’s MIDI I/O and other supported MTS-capable interfaces, rivals dedicated hardware sequencers.
- Import and export Standard MIDI Files
- A range of precision editing tools are provided for creating and editing MIDI notes and controller events within the ProTools Edit window including: the Pencil tool which can be used for insetting notes at specific pitches as well as adjusting a note’s velocity and duration; as well as the Trimmer and Grabber tools for changing the start and end points of MIDI notes as well as their position along the timeline.
- There are also a number of “MIDI Operations” windows that allow you to transform groups of MIDI notes including: Quantize for correcting timing; Transpose, Change Velocity for making notes louder and softer; and Change Duration.

Mixdown and Mastering

- In addition to providing an ideal recording, editing, and mixing environment, you are able to add the finishing touches to your projects through mastering.
- Editing capabilities and plug-ins used in conjunction with the ProTools software interface enable you to make the necessary fine adjustments to your final mix to achieve the perfect combination of warmth, presence, and balance.
- The real-time “bounce to disk” feature reads all automation information, allows incorporation of various outboard gear, and provides you with mono, stereo, or surround output of your final mix, which can then be handed over to your mastering expert of choice in a variety of digital audio file formats.
- Digidesign’s MasterList CD, a software application specifically designed for mastering tasks, can be used to master a single piece or a collection of work with professional results.

POW-r Dithering

- Dithering is used to reduce quantization noise when mixing or fading low-level audio signals during word size reduction to 16-, 18-, or 20-bits.
- The POW-r Dither plug-in is an advanced type of dither that provides optimized word length reduction. It is designed for final-stage critical mixdown and mastering tasks where the highest possible fidelity is desired when reducing bit depth.
To help you organize larger Pro Tools sessions a file management utility called DigiBase is similar to Mac’s Finder or Windows’ Explorer, enabling you to manage all of the files on your system.

- DigiBase allows you to view complete file information including duration, time stamps, along with two user comments fields.
- Display layouts can be customized to focus exclusively on the information you need.
- You can also audition files and view their waveform thumbnails before importing into Pro Tools, regardless of file format or sample rate.
- When you’ve determined a selection, the one-step drag-and-drop process from DigiBase to your session timeline includes automatic file copy and conversion, guaranteeing compatibility with your project.
- Tasks such as copying, conversion, and fade creation are handled in the background so that you can continue to record and edit without interruption. A new Task Manager feature also enables users to monitor and manage background processes.

ReWire Support

- Support for Propellerhead's ReWire technology provides real-time streaming of 24-bit audio and MIDI between ReWire compatible software synthesizers, samplers, and other host-based instruments, with sample accurate synchronization and common transport functionality. ReWire-enabled instruments can be be directly routed into the Pro Tools mixer where they can be integrated with your session and access additional mixing and processing functions.

Digidesign Core Audio Driver (Mac OS X)

- The Digidesign Core Audio driver allows third-party applications supporting the Apple Core Audio standard to utilize a Pro Tools system for audio input and output. Depending on the hardware and application, you can record and playback multiple channels of 24-bit audio up to 96 kHz.
- A Digidesign MIDI I/O driver is available for users of the Digidesign MIDI I/O.

Digidesign ASIO Driver (Windows XP)

- The Digidesign ASIO Driver is a multi-channel, multimedia sound driver that allows third-party audio programs which support the ASIO standard to record and play back using Windows XP Professional or Home.

Crossfades

- You can quickly and easily create crossfades between two adjacent audio regions to smoothing transitions between regions and prevent pops, clicks, or sudden changes in sound.
- The crossfade duration, position, and shape are all user-definable.
- The Crossfades dialog window allows you to select, view, and manipulate the curves used to perform the crossfade. Different volume curves can be assigned to the fade-out and fade-in portions of crossfades.
- You can also preview audition the crossfade from within the Crossfades dialog.

Strip Silence

- The Strip Silence window allows you to automatically divide a selected audio file or region by removing the areas of silence from a selection. This can be useful for quantizing individual audio events to musical values or cueing sound effects to SMPTE locations.
- Strip Threshold which sets the amplitude threshold for Strip Silence. Audio falling below this threshold is considered silence and removed.
- Minimum Strip Duration Sets the minimum duration (from 0 to 10,000 ms) that the material below the threshold must last to be considered silence.
- Region Start Pad and Region End Pad specifies a time value to be added to the beginning and end of each new region created with Strip Silence. This is useful for preserving nuances that fall below the threshold, such as the breath before a vocal phrase, or a finger slide on a guitar.

Digidesign File Management Utility
**Enhanced Windows XP Features**
- Streamlined new look for the Mix, Edit, and Transport windows, the powerful DigiBase file management utility, enhanced MIDI functionality and Beat Detective features and more.

**Windows Media Audio 9 Encoder**
- Microsoft’s Windows Media Format is the optimal digital media format available for streaming and download-and-play applications on PCs, set-top boxes, and portable devices. Soon, Pro Tools users will be able to take advantage of this powerful format using the new Pro Tools Windows Media Audio Encoder. The Windows Media Audio Encoder allows Pro Tools TDM and LE users to both import and export WMA files in the simple and familiar Pro Tools environment. Visit Microsoft’s booth to see it in action and www.microsoft.com for more information on Windows Media.

**ProTool’s support for Windows Media 9 Series offers:**
- 16-bit 24-bit audio encoding
- 44.1kHz, 48kHz, and 96kHz sampling rates
- 2-channel stereo, 5.1 and 7.1 multichannel configurations
- One-pass and Two-pass encoding
- Support for Windows Media Audio (WMA) 9 Lossless encoding.

**Canopus — DV converter specialized for NLE**

Convert your S-VHS, Hi8 and 8mm analog tapes to DV in one simple step using the ADVC-100. The converted DV streams are transferred to your PC or Mac via IEEE 1394 (i.Link, FireWire) and stored on your hard drive where they can be manipulated using your favorite photo or video editing applications. This device is ideal for all OHCI and DV-only capture cards for Macintosh or PC.

- Uses Canopus's award-winning DV CODEC Technology, which is found in AVID’s Xpress DV software and the full line of Canopus DV capture cards.
- Locked Audio Support allows you to capture long clips w/perfect audio sync.
- Analog output of NTSC color bars for reference signal
- 4-pin DV jack on front; 6-pin FireWire jack on back
- Analog video In/Out: NTSC (525/60), PAL (625/50) S-video and composite
- Analog input connector on front
- Analog output connector on back
- Includes AC adapter, DV cable (6 pin - 4 pin), Video cable (S-video/comp)
High-Definition Audio Production System

Pro Tools|HD is Digidesign's latest and most advanced digital audio workstation ever, with support for up to 24 high resolution audio tracks at 192 kHz sample rate and all of the processing power required for audio recording and playback, mixing, effects and automation being supplied via dedicated HD Process cards that reside in the PCI slots of your computer. Pro Tools|HD is available in three basic configurations, or Core systems, consisting of one to three HD Process cards (HD 1, HD 2, and HD 3), and packaged with the latest versions of Pro Tools TDM software along with a host of effects plug-ins from Digidesign, as well as many third party plugins from Digidesign's development partners. With twice the DSP-based mixing and plug-in processing power as previous Pro Tools systems, Pro Tools|HD delivers a substantial increase in guaranteed track count (up to 128), with up to 96 channels of I/O as well as increased routing and expansion flexibility. Digidesign and its development partners offer a variety of high resolution audio interfaces (at least one interface is required) and other in-demand peripherals, including control surfaces, MIDI and sync interfaces, software plug-ins, as well as support for a total of seven HD Process cards, allowing you to custom configure a fully integrated and professional production solution that suits your specific needs.

Core Systems

Pro Tools|HD 1 features the HD Core card, supporting up to 32 channels of I/O, 96 simultaneous audio tracks, and housing a host of powerful DSPs that provide the dedicated mixing and processing horsepower audio professionals have come to expect from Pro Tools.

Pro Tools|HD 2 includes the HD Core card and an additional HD Process card, offering more than double the mixing and processing power of HD 1 systems, support for 64 channels of I/O, and up to 128 simultaneous audio tracks.

Pro Tools|HD 3 features the HD Core card and two additional HD Process cards, supporting up to 96 channels of I/O and 128 simultaneous audio tracks. This configuration offers the ultimate in power and flexibility, enabling you to complete projects more quickly and efficiently than ever before.

◆ Each Core system requires at least one Pro Tools|HD audio interface — 192 I/O, 192 Digital I/O, or 96 I/O — for handling the input and output (I/O) of audio signals to and from your system.
**TDM-Based Software**

The Pro Tools TDM software included with every Pro Tools|HD system, features all of the recording, editing and mixing functions of the host-based Pro Tools LE software, plus adds a powerful set of additional features implemented to take full advantage of the HD system’s dedicated DSP and enhanced I/O capabilities. For starters, because Pro Tools TDM software relies on the HD process card and the TDM bus and not your computer for processing tasks, you are guaranteed playback of up to 128 audio tracks when using an HD 2 system or higher (96 tracks are guaranteed with an HD 1). In addition, Digidesign’s proprietary TDM plug-in architecture will allow you to instantiate numerous DSP intensive effects without affecting the load on your CPU. Pro Tools TDM software also supports complete surround sound capabilities allowing you to mix in every popular surround format available.

---

**Four Types Of Plug-ins**

- **TDM** plug-ins are exceptionally powerful real-time effects that utilize the DSP power provided by the HD Process cards in your Pro Tools system of TDM technology rather than relying on the limited resources of the host computer. This affords much more processing power for DSP intensive plug-ins such as reverbs and surround processors.

- **HTDM** and **RTAS** plug-ins rely on your host computer’s resources and are designed to run as efficiently as possible to offer the same and different processing options as TDM plug-ins. HTDM was designed as an optimum plug-in architecture for integrating real-time synthesis and sampling plug-ins within the Pro Tools environment.

- **AudioSuite** is Digidesign’s proprietary non-real-time, file-based plug-in format. When an AudioSuite plug-in is applied to an audio region, a new audio file is created with the processing permanently intact while the original audio remains untouched on your disk drive.

---

**Surround Mixing**

- Pro Tools TDM software enables you to mix in every popular surround format — including LCRS, 5.1, 6.1, and 7.1. You can even work in several surround formats simultaneously.

Pro Tools|HD 1 systems provide recording and playback of 24-bit and 16-bit audio files with the following track counts:
- Up to 96 tracks at 44.1 kHz or 48 kHz
- Up to 48 tracks at 88.2 kHz or 96 kHz
- Up to 12 tracks at 176.4 kHz or 192 kHz

Pro Tools|HD 2 and HD 3 systems provide recording and playback of 24-bit and 16-bit audio files with the following track counts:
- Up to 128 tracks at 44.1 kHz or 48 kHz
- Up to 64 tracks at 88.2 kHz or 96 kHz
- Up to 24 tracks at 176.4 kHz or 192 kHz

---

**Beat Detective**

- Beat Detective automatically detects the tempo of a session and conforms an audio track or selection to that tempo by separating it into regions and aligning (quantize) it to the beats.
- Beat Detective lets you extract tempo and groove information, from audio performances, which can be applied to groove templates, called DigiGrooves. Beat Detective allows you to apply the attributes of these templates to other audio selections. DigiGroove templates can also be used with Groove Quantize for MIDI data on all Pro Tools systems.
DIGIDESIGN

192 I/O

World-Class 24-Bit/192 kHz Multi-Channel Audio Interface

The 192 I/O is a 16 channel, high-definition, 24-bit/192 kHz, digital audio interface specifically designed to take full advantage of the increased fidelity and dynamic range capabilities available within the Pro Tools|HD environment. The 192 I/O features support for up to 16 simultaneous channels of inputs and outputs based on a wide range of available analog and digital interfaces including; 8 channels of high-definition, pristine quality analog I/O; 8 channels of AES/EBU; eight channels of TDIF; 16 channels of ADAT; and 2 additional channels of AES/EBU and S/PDIF digital I/O. Aside from its outstanding sonic specs, 192 I/O features the most flexible architecture ever offered in a Digidesign audio interface. With an I/O expansion bay, 192 I/O allows you to expand I/O options with one of three available expansion cards. Whether you want more analog inputs than outputs or more digital I/O, 192 I/O is the best sounding audio interface ever offered by Digidesign, rivaling interfaces costing more than twice its price.

FEATURES

- **Multi-Channel I/O**
  - 16 simultaneous discrete channels of high-definition I/O with Pro Tools|HD derived from 50 possible inputs and outputs.
  - Eight channels of 24-bit A-to-D and D-to-A converters for superior analog input and output at sampling rates of 44.1, 48, 88.2, 96, 176.4, and 192 kHz.
  - Eight channels of 24-bit AES/EBU digital I/O on a DB-25 connector with support for sampling rates of up to 192 kHz.
  - An eight channel TDIF digital I/O port is provided on a DB-25 connector.
  - Sixteen channels of optical I/O via two sets of eight channel ADAT Lightpipe I/O connectors. One optical pair can be switched to two channels of optical S/PDIF I/O.
  - An additional AES/EBU digital I/O, using XLR connectors, is provided with support for sampling rates up to 96 kHz.
  - 24-bit-capable coaxial S/PDIF digital I/O supporting sample rates of up to 96 kHz.
  - Switchable, real-time sample rate conversion on the multi-channel digital inputs allows easy streaming of digital signals at any sample rate.
  - Word Clock input and output for synchronizing 192 I/O with external Word Clock or 256x (Slave Clock) devices.

- **Metering**
  - 4-segment LED Meters to monitor input and output on each of the 16 channels.

- **Expansion**
  - Simultaneous use of up to eight 192 I/O units is supported, for a maximum of 96 channels of I/O at 96 kHz.
  - An DigiLink Expansion Port is provided for direct connection of an additional 192 I/O or 96 I/O.
  - Optional addition of cards to expand analog or digital I/O.
  - A Legacy Port is included for Digidesign MIX-series audio interfaces.

- **Soft Clip Limiting**
  - When using the A-to-D converters, a switchable Soft-Clip Limiter algorithm allows you to achieve higher signal levels to disk helping eliminate clipping transients that can cause digital distortion while the same time offering the warmth and compression characteristics of analog tape saturation.
  - With Soft Clip enabled, the 192 I/O supports an additional 4 dB of headroom by rounding off the top 4 dB to the clip point.

- **DigiLink Cables**
  - A 1.5´ DigiLink cable and 1.5´ BNC cable is included with each interface.

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
The 192 Digital I/O is a high-definition audio interface designed for those of you using a digital mixer or third party A-to-D converters with ProTools|HD. The 192 Digital I/O provides you with up to 16 channels of AES/EBU, TDIF, and ADAT I/O via digital I/O cards. The 192 Digital I/O employs the same comprehensive front panel status and metering capabilities, realtime sample rate conversion, expansion ports and additional 2 channel AES/EBU I/O (XLR), coaxial S/PDIF I/O and ADAT I/O that are available on the 192 I/O. And with two multi-channel expansion bays still available, you are able to add more I/O down the road.

### Same features as the 192 I/O EXCEPT —

**Multi-Channel I/O**

- 16 discrete channels of digital input and output
- 16 channels of 24-bit AES/EBU I/O at sampling rates of up to 96 kHz in single-wire mode; or 8 channels at sampling rates of up to 192 kHz in dual-wire mode
- 16 channels of 24-bit TDIF I/O at sampling rates of up to 48 kHz
- 16 channels of 24-bit Optical (ADAT) I/O at sampling rates of up to 48 kHz

DIGIDESIGN

96 I/O

High-Quality, 24-Bit/96 kHz Multi-Channel Audio Interface

The 96 I/O offers Pro Tools users a high-resolution, multi-channel audio interface with excellent sonic performance. An affordable 16-channel audio interface for Pro Tools|HD, 96 I/O features a wealth of I/O options, including 8 channels of high-definition analog I/O, 8 channels of ADAT optical I/O, 2 channels of AES/EBU and S/PDIF I/O, and Word Clock I/O. Over the past few years, Pro Tools|24 MIX systems have offered professionals a comprehensive and completely flexible, proven solution for music, post production, broadcast and multimedia applications. Now, Digidesign has topped Pro Tools|24 MIX systems on every level with Pro Tools|HD: the new, high-definition Pro Tools digital audio workstation. With Pro Tools|HD, Digidesign brings professionals the best sound quality ever in a Pro Tools system, along with twice the power of previous MIX systems, increased expandability options and much more. Among the new audio interface options available for Pro Tools|HD, 96 I/O offers a high definition, multi-channel audio interface at a low price point.

FEATURES

- Eight channels of 24-bit analog inputs and outputs using balanced 1/4˝ TRS connectors
- Eight channels of ADAT optical I/O switchable to a optical S/PDIF pair
- Stereo AES/EBU (XLR) and stereo S/PDIF (coaxial) digital I/O as well as Word Clock I/O (BNC)
- Support for 96, 88.2, 48 and 44.1 kHz sample rates conforming with the latest standards of professional digital audio production.
- All channels can be configured on a per pair basis allowing you to select up to 16 channels of simultaneous I/O from the 20 available I/O channels.
- The Expansion Port on the rear panel allows you to use the supplied DigiLink cable to connect another 96 I/O for 16 more channels of high-definition input and output.
- Legacy Peripheral port supports connection of 888|24 I/O, 882|20 I/O, 1622 I/O, or 24-Bit ADAT Bridge I/O at sample rates up to 48kHz

HD Process Cards

Boosting the DSP power and I/O capacity of your Pro Tools|HD system can be achieved by adding additional HD Process cards. Up to six cards may be added to an HD Core system (a total of 7 cards), each providing 32 more channels of I/O capacity (up to 96 channels total), and dramatically increasing the system’s mixing and plug-in processing power.

DigiSnake Cables - Customized Audio Cabling for HD Systems

Digidesign offers an array of quality cabling options to ensure the fidelity of audio signals as they travel between the I/O components of your Pro Tools system. Uniquely designed for Digidesign gear, DigiSnakes are custom colored and labeled, feature a lifetime warranty, and are comprised of 110 ohm “digital grade” cable to accommodate either digital or analog signals. DigiSnakes make connecting your gear a quick, easy process, freeing you to spend your valuable time on your audio projects rather than the wires they travel across.

DigiSnakes are available in 4’, 12’ and 25’ options:

- **DB25-DB25 DigiSnake, 12’** ................................................ 70.00
- **DB25-DB25 DigiSnake, 25’** ................................................ 95.00

- **DigiLink Cable 50’** ......................................................... 150.00

* 100’ DigiLink supports up to 96 kHz sample rates
Control Surface and Analog Front End for Pro Tools TDM

Control|24 is a dedicated control surface, co-developed by Digidesign and Focusrite, that offers hands-on access to nearly every recording, mixing, automation and editing function in Pro Tools. Features include 24 channel strips, each featuring a dedicated rotary data encoder and touch-sensitive motorized fader, along with 16 premium microphone preamps, a comprehensive transport control and control room monitoring sections, and a line submixer. This flexible range of audio routing features make Control|24 an ideal “front-end” for tracking, monitoring or mixing. Control|24 connects to your Pro Tools system via a standard Ethernet connection which delivers maximum responsiveness and resolution. Whether you are new to Pro Tools or a seasoned pro, the extensive features and affordable price of Control|24 make for an extremely cost-effective, and powerful environment for recording, editing, and mixing audio and MIDI.

**FEATURES**

24 Channel Control Strips
- Each channel has a motorized, touch-sensitive fader and a multi-function knob (which defaults to pan)
- Dedicated EQ and Dynamics switches on every channel
- Dedicated illuminated switches for Mute, Solo, Record Arm, Channel Selects, and Automation Mode on every channel.

Recording Mix Automation
- Control|24 provides touch-sensitive access to the dynamic automation of faders, pans, fader mutes, send levels, send mutes and plug-in Parameters available to Pro Tools.
- MIDI volume and pan, as well as channel mute, can also be automated for additional mix capability.
- Control|24 replicates Pro Tools on-screen automation features, with channel-based and session-wide automation controls.
- AUTO switches found in each channel strip allow you to select the desired channel automation mode (Read, Write, Trim, Latch, Touch, and Off). The current automation state is indicated using the LED labels to the right of each AUTO switch.

16 Focusrite Class A Mic Preamps
- 16 high-quality preamplifiers accessible via XLR mic, 1/4” line connectors, make an ideal analog front end for your Pro Tools system. Inputs 1 and two also feature D.I. (direct inject) inputs for plugging in your bass or guitar.
- The mic pre design, based on the same preamps found in the Platinum line of analog processors from Focusrite, delivers smooth sound across a wide frequency bandwidth and dynamic range with extremely low noise and distortion.
- The gain range for mic level signals is from 0 to +60 dBu (Mic). A 12 dB/octave high-pass filter at 75 Hz is also provided.
- Phantom power is switchable in two groups of eight channels from the rear panel.
- The Preamps are output interface easily with your Pro Tools interface via two streamlined 8 channel DB25 connectors.

24 stereo, 14-segment LED meters provide global pre-fader or postfader levels of individual channels.

Choose your input source, arm tracks, control input gain and the 12 dB/octave high-pass filter at 75 Hz for each input channel.

26, four-character scribble strips provide system feedback such as channel names and plug-in parameters.
The integrated submixer consists of eight stereo inputs that can serve a wide variety of purposes including: submixing returns from MIDI's, routing synthesizers, samplers, or drum machines, or returning aux busses. You can also use the submixer to bring multiple input channels down to a stereo pair, to be routed into a pair of Pro Tools audio interface inputs.

The Scrub/Shuttle wheel can be used for scrubbing and shuttling, to help define regions, and other edit operations.

The Numeric Keypad mimics keypad operation in Pro Tools and is used for memory location store and recall, data entry of counter values or numerics, for completing an editing operation (using the ENTER key), and for Pro Tools Transport and Shuttle modes.

Navigation and Zoom functions: The UP, NEXT, DOWN, and PREVIOUS arrow buttons provide roughly the same functionality as the arrow keys on your computer keyboard as well as some additional features. In Zoom mode, the quadrant buttons are used to zoom in and out and adjust the perceived amplitude of the waveform display in the Edit window on-screen.

| Connection Type | Ethernet | Ethernet | MIDI |

DigiSnake Kits for Control|24

DigiDesign offers two optional, complete DigiSnake Kits for Control24 that include seven custom-labeled, custom color-coded cable snakes — one with D-Sub to XLR/TRS connectors, and one with D-Sub to TRS connectors — allowing you to quickly and easily connect this versatile control surface to your Pro Tools system.

**Control|24 TRS DigiSnake Kit** (Complete, TRS-only)

**Control|24 XLR/TRS DigiSnake Kit** (Complete Custom Cable Kit Package for Control|24) .................................................. 695.00

(D-Sub to XLR-TRS, or D-Sub to TRS)
ProControl is Digidesign’s most comprehensive control surface that adds a high-quality tactile mixing and editing controls to Pro Tools TDM systems. ProControl has the look and feel of a high-end mixing console, with dedicated channel strips, transport controls and a mains section that will allow you to exploit the extensive recording, editing, mixing, DSP processing and automation capabilities that Pro Tools has to offer. ProControl’s eight channel strips are centered around exceptionally smooth DigiFaders: Digidesign’s patented 100mm motorized digital faders which can be configured to control volume and send levels for mono, stereo and surround channels. ProControl also features a comprehensive analog monitoring section that supports stereo and surround sound monitoring with audio fed from your ProTools interfaces directly into ProControl’s analog I/O section. ProControl’s flexible, modular design allows you to integrate up to 48 physical faders using additional eight channel Fader Packs while the optional Edit Pack provides tactile surround mixing via two motorized DigiPanners as well as a color-coded QWERTY keyboard.

**FEATURES**

- The most comprehensive tactile access to all of Pro Tools editing, mixing and automation parameters.
- Eight bank-switchable channel strips expandable to a total of 48 channel strips with optional Fader Packs.
- The DSP Edit/Assign section allows you to view and edit plugins, sends, and inserts, or perform surround panning, using an intuitive array of rotary encoders and displays.
- Dedicated stereo and surround sound control room monitoring and routing section with onboard analog I/O for routing monitor signals between ProControl and ProTools|HD interfaces.
- Automation Switch Group lets you effortlessly switch between Write, Touch, Latch, Trim, and Read modes for fader levels, pans, sends, mutes, plug-in parameters, and more.
- High-quality, illuminated transport control switches, weighted Scrub/Shuttle Wheel.
- Connectivity to Pro Tools TDM systems via high-speed Ethernet.
- Cross platform for Mac OS and Windows TDM systems.

**Faders and Channel Controls**

- There are a total of eight, bank-switchable channel strips each with dedicated fader, multi-function rotary encoder and a variety of illuminated switches. The flexible mixing environment of Pro Tools lets you customize any channel strip for mono, stereo, or surround operation.
- 100 mm. touch-sensitive DigiFaders for controlling channel volume or send level.
- Data encoder with 15-LED indicator rings for pan, send and I/O control.
- Large, illuminated Solo and Mute buttons.
- Illuminated Channel Select buttons for I/O assignment, automation, grouping and other channel-specific edit functions.
- Dedicated, illuminated switches for EQ and Dynamics editing/bypass control, insert assignment/bypass and record-ready states.
- Each channel strip also features an 8-segment LED scribble strip for displaying channel name and headroom.
- Another 8-segment LED dot-style scribble strip displays parameter values of the data encoder data.

**DigiFader Touch-Sensitive Moving Faders**

- The patented DigiFader is a true digital fader that incorporates a sealed encoder, servo-controlled motor, and “flex-circuit.” This unique design provides the feel, performance, and reliability of moving faders found on other high-end mixing consoles.
- Each 100mm DigiFader provides 10-bits of resolution or 1024 steps; Pro Tools then provides 24-bit interpolation of these values, to ensure accurate reproduction of fader moves.
- The use of advanced touch-sensitive circuitry allows you to means all you have to override servo control by merely touching the fader.

**Meter Section**

- Eight LED meters for Input/Track level indication.
- Time Counter Display.
- Six LED meters for master output level.
**Main Section**

- The Main section features standard transport controls; and a Scrub/Shuttle wheel, as well as Audition Mode switches that allow you to quickly listen to the selection start or end, with or without pre- and post-roll.
- Dedicated Window switches provide direct access to the desired Pro Tools window.
- Fourteen dedicated edit buttons are provided for accessing Pro Tools various editing Modes, Tools and Functions. Dedicated save and undo switches are also provided.
- The Channel Matrix is a multi-purpose channel status and navigation control section, consisting of 32 primary switches, that provides a number of unique capabilities to Pro Tools including: Bank and channel navigation; Shortcuts, commands, text, and data entry; Channel Solo, Mute, Record, and Select status; Plug-in parameter page selection; and Group selection, creation, and editing.
- An integrated Trackpad is provided for times that you require mouse-like control on the Pro Tools graphical user interface.
- Two Bank Select switches along with a Nudge function switch allow you to easily scroll through banks of eight channels or select adjacent channels.
- Four Zoom/Select switches — labeled up, down, previous next — provide the same functionality as the arrow keys on your computer keyboard for zooming in on audio and MIDI regions as well as navigating through and selecting various functions.
- A Numeric Keypad is also provided for memory location store/recall, data entry of counter values and any other function that is available to your computer's keyboard.

**Analog Monitor and Control Room Sections**

- To harness the powerful and flexible routing capabilities of ProTools, ProControl provides a number of analog I/O connectors that can be connected directly to your ProTools|HD I/O interfaces and controlled via the dedicated monitoring section.
- Two eight-channel DB25 input connectors supply ProControl with Pro Tools audio interface output signals, and external signal busses.
- An eight-channel DB25 output connector supplies ProControl monitor outputs for main speakers, alternate speakers, cue mix systems, mastering decks, and other destinations.
- The Control Room Monitoring section supports stereo and surround monitoring with volume control, source and speaker selection, mute, dim, mono, talkback, listenback, and signal routing options.

**Fader Pack**

- Fader Pack features everything found on the fader section of the ProControl Main Unit.
- Up to five Fader Packs can be added to ProControl, offering simultaneous access to a total of 48 channel strips.

**DSP Edit/Assign Area**

The DSP Edit/Assign section is dedicated to tapping into Pro Tools’ powerful DSP processing environment, by offering intuitive editing and total recall of all plug-in parameters. This area provides 26 illuminated switches plus eight data encoders and scribble strips for assigning and editing plug-ins.

**Edit Pack - Dedicated Editing and Surround Mixing Unit for ProControl**

- Two DigiPanners — motorized, touch-sensitive panning joysticks based on patented DigiFader technology
- Twenty dedicated dual-function switches
- Eight high-resolution, 40-segment, dualchroma meters
- Three eight-character, seven-segment numeric displays for region or selection Start, End and Length values
- Color-coded, QWERTY keyboard with support for USB, ADB and PS-2 connections
- Ergonomic, two-button 1.5” trackball
- Comprehensive Machine Control section with eight track-arming switches and complete Edit Mode control
- Host computer and ProControl connection via high-speed Ethernet

Digidesign also offers an optional, complete cable kit for ProControl that includes 3 custom-labeled, color-coded cable snakes — allowing you to quickly and easily connect this world-class control surface to your Pro Tools system.
Motor Mix

Compact, Expandable Control Surface For Pro Tools TDM and Pro Tools LE Systems

Motor Mix is a compact and low-cost control surface that offers real-time, hands-on control of any Pro Tools system including transport control, track arming, motorized faders, mute/solo switches, pan/send control, plug-in editing and more for Pro Tools and other computer-based digital workstations. Each unit features eight 100mm motorized faders, and eight rotary encoder knobs for controlling panning, EQ, auxiliary send levels, Plug-In settings and more. Nearly every aspect of a mix is accessible using Motor Mix including automation functions. A 2 line, 40 character LCD display reflects the Motor Mix’s current operating status including rotary pot settings and effects parameters; channel assignments, levels and pan settings etc... Up to four Motor Mix units can be linked together, providing a total of 32 simultaneous faders. Motor Mix’s small footprint, comprehensive feature set and expandability makes it a cost effective solution for smaller editing suites, home project studios and hybrid audio/video environments.

FEATURES

Eight Channel Strips
- Each of the eight channel strips incorporates a 100mm long-life Motion Sensing motorized fader as well as a high-quality, continuously variable rotary pot for control of panning, aux sends, dynamics, plug-ins and more. A detented rotary selector with push button, accompanied by a dual 7-segment LED display, provides control over the rotary pot functionality.
- Each channel also features dedicated, backlit Channel Select, Solo and Mute buttons.
- Four View buttons provide access to an unlimited number of mixer channels. Channels can be switched in banks of 8 channels or via group assignments up to 8 channels.
- Eight Multi Switches, with green LED status indicator, provide access to eight different channel functions including channel EQ, dynamics, delay and more.
- Eight “Burn” Switches with red LED status indicator can be assigned to control channel audio recording, automation enables, or other commands you can embed into project files.

Transport Controls and Function Switches
- Eight System Keys, flanking the left side of the unit provide access to a number of functions including: automation enable and mode selection; group creation; plug-in assignment, control and compare; insert control; Pro Tools window navigation; edit tool selection; as well as Save and Undo and more.
- The Eight System Keys on the right side of the unit provide access to a full range of transport controls including Play, Stop, Fast Forward and Rewind; input/output assignments; locate functions; monitor and audition functions for pre/post roll and in/out punch points; as well as enter and escape functions and more.
- A highly visible 40x2 dot LCD display provides a readout for channel assignments and rotary pot settings such as PAN, Aux Send Level, effect parameters, input/output assignments, channel level meter, and soft key control.
- MIDI In and Out connectors provide bi-directional communication between Motor Mix and your computer’s MIDI interface.
- Expandable - link up to four units for a total of 32 fader tracks with Pro Tools. Motor Mix intelligently switches in banks up to 24 channels wide when using an expanded system.
- Small footprint (10¼” wide x 12¼” deep) allows Motor Mix to fit in space-limited project studios.
- An attractive dual slope chassis design provides easy viewing with an ergonomic feel.

This USB computer keyboard features all of the Pro Tools key commands and shortcuts printed directly on its color-coded key caps, along with all the conventional QWERTY keyboard letters and symbols.
Remote Controllable, World-Class 8-Channel Mic Preamp

PRE is an eight channel, remote controllable microphone preamplifier designed to complement the 192 kHz capabilities and world-class converters available to Pro Tools|HD systems. Featuring 8 discrete, matched-transistor, hybrid mic-preamp circuits, PRE can accept nearly any input signal, easily accommodating mic, line, and direct instrument (DI) level inputs on all eight channels. PRE’s MIDI In, Out and Thru ports allow you to control PRE’s front panel functions remotely via the Pro Tools software interface or Digidesign control surfaces. This allows you to place PRE anywhere in your studio (closer to the mic source) as well as instantly recall settings with your session. All of PRE’s function are also available in stand-alone mode, making the same high-end sonic quality available for non-Pro Tools applications and all standard MIDI controllers.

**Features**

**Inputs and Outputs**
- Eight high-performance, discrete matched transistor hybrid microphone pre-amplification circuits can accommodate nearly any input source.
- Each channel features support for XLR mic as well as 1/4” direct instrument (DI) and line level inputs on the rear panel. Two of the 1/4” line/inst inputs are also duplicated on the front panel for easy access.
- Input gain for each channel is variable from 0 dB to +69 dB, in approx. 3 dB steps.
- Switchable 75 Hz @ 18 dB/octave high pass filter, phase (polarity) reverse, 48 V (phantom power) and an 18 dB pad for each channel.
- Selectable impedance matching for optimizing mic, line or instrument inputs
- Separate 1/4” send and return insert points are provided for each inputs allowing you to access your favorite outboard processor.
- All eight channels are output via DB25 connector. This allows easy, uncluttered interfacing between PRE and your Pro Tools interface or other mixer/recorder.

**Remote Control**
- MIDI In/Out/Thru ports accommodate remote operation via Pro Tools software and Digidesign control surfaces.
- Remote control via Pro Tools allows you to instantly recall all settings on a session by session basis and create mix templates with all routing and control.
- Remote operation also allows you to keep PRE near the audio source and away from the computer environment.

**Additional Features**
- A built in oscillator, with a 1/4” output connector offers a convenient way of calibrating to other peripherals, such as the 96 I/O and 192 I/O audio interfaces.
- All features are also supported in stand-alone mode, including remote control via MIDI, making PRE an ideal analog front end for any recording system.
- Up to nine PREs are supported through software for up to 72 channels of remote-controlled Mic Preamp channels.

**Specs**

**Input Stage**
- Circuit Topology: Discrete Matched Transistor Hybrid
- Input Gain: -18 to +66 dB in 1 dB steps
- Mic E.I.N (unweighted): -127 dB (60dB gain) 150Ω source
- THD +N (@ 1 kHz): 0.003% @ +10 dBu 0 dB gain
- CMRR: > 80 dB @ 60 Hz, > 72 dB @ 10 kHz
- Crosstalk: < -100 dB @ 40 dB gain, 1 kHz
- Frequency Response: (-3 dB) 5 Hz – 1 MHz
- Frequency Response: ±0.5 dB @ 40 dB gain 10 Hz – 100 kHz
- Max: Input Level: (any type) +45 dBu
- Input Impedance: Mic 1.5 k; Line 10 k, Inst/D.I. 1.5Mohms

**Output Stage**
- Max Output: +26 dBu, balanced 600 Ω, DC coupled
- Output Impedance: -50 ohms
- Nominal Level: +4 dBu
- Trim level: -10 dB

COMPUTER AUDIO

925
SYNC I/O is a multi-purpose synchronization device that supports all industry-standard clock sources and time code formats. Accommodating the high sample rates intrinsic to Pro Tools|HD with the utmost accuracy, SYNC I/O features near sample-accurate lock to time code or bi-phase/tach signals and a 192 kHz capable, high-fidelity, low-jitter Word Clock. AES/EBU clock I/O, video reference in/thru, video program in/out, and a host of other features make SYNC I/O the most consistent, dependable solution for Pro Tools|HD installations in commercial music and post production facilities.

**Features**

- High-fidelity, low-jitter clock design provides maximum audio fidelity, even when locked to varying external timing sources (such as when generating Word Clock from free-running SMPTE time code).
- Extremely fast lock up time while maintaining near sample-accurate lock at sample rates up to 192 kHz.
- Time code formats supported include LTC, VITC, bi-phase, and MTC out.
- Clock sources supported include video reference (blackburst), video signal, LTC resolve, AES, word, bi-phase, and internal.
- While locked to clock or positional reference formats, SYNC I/O simultaneously generates LTC, VITC, MTC, Super Clock, Word Clock and AES Null Clock.
- Supports direct translation of bi-phase and tach pulses to the various output formats, allowing time code/clock generation from mag machines and flatbed editors. The reference lock point for the signals can be set either from the front panel or from the SYNC I/O Setup application.
- Supports industry-standard pull-up/pull-down rates for film/video.
- Two 9-pin ports allow dual device control when using Machine Control option in master or remote slave mode.
- Large, bright, and easy-to-read 7-segment time code display along with source and status lights, allowing quick and easy access to reader/generator functionality.

**Local and Remote Modes**

- Local Mode allows front panel control of all parameters, including clock references and time code reading or generation.
- Remote Mode allows you to control SYNC I/O’s parameters via Pro Tools or the SYNC I/O Setup application. SYNC I/O switches to Remote Mode automatically when either of these applications are launched.
- Using auto-configuration, all settings can be saved and instantly recalled with each session.
- Add visual time code window burn to video signals passed through the video I/O. Positioning and placement of the window burn can be controlled from Pro Tools or SYNC I/O setup software.

**DigiDrive FireWire 80—Pro Tools-compatible 80GB FireWire Hard Drive**

Process, store and retrieve more information more affordably than ever before. The 80 GB DigiDrive FireWire 80 supports 24 tracks of 24-bit/44.1 kHz audio per drive—and may be connected to a second drive for a total of 48 tracks. It’s as easy as hooking up a FireWire cable.

- Rapid throughput via FireWire connectivity
- Certified compatibility with Pro Tools (Mac OS and Windows)
- Designed for both removable rack-mounting (with optional rackmount kit) and interlocked stacking, the self-contained DigiDrive enclosure lets you choose the configuration that best fits your system. Plug & play makes setup simple, and FireWire drives can be hot-swapped without rebooting the host computer.
- Digidesign's exclusive QuietDrive technology dramatically reduces drive noise by up to 20 dB to a whisper. DigiDrive also keeps your data cool and safe with advanced thermal sensing circuitry that enhances cooling efficiency by controlling fan speed. There's even a built-in heat detection/indicator circuit to alert you to potential problems before either the drive or your critical data are threatened.
Storage Systems for Pro Tools

In a world crowded with generic hard drives, DigiDrives takes the guesswork out of finding the perfect mate for your Digidesign system. Optimized for certified compatibility with Pro Tools, DigiDrives deliver the speed, capacity, versatility and reliability to handle your most demanding projects. And, you can be sure that your investment in a DigiDrive will be a safe one. Dealing directly with Digidesign customer support including guaranteed next business day replacement in most locations will help to keep your sessions on track.

DigiDrive 36|10k and 73|10k

Designed for both removable rack-mounting and interlocked stacking, the fully self-contained DigiDrive enclosure allows you to choose the configuration that fits your system best. It also features Digidesign/Avid's exclusive QuietDrive technology, which dramatically reduces drive noise to a whisper (reduces drive noise by up to 20 dB), so you can listen to your audio instead of your gear.

- Fast 10,000 RPM hard drives (36 and 73 GB capacities) offer transfer rates of up to 160 MB/second, and super-fast seek time of 5.1 ms read and 5.2 ms write.
- The 36GB drive stores 6,800 track minutes of 16-bit/44.1kHz (Red Book) audio, which gives 280 minutes of 16-track recording. At 24-bit resolution, handles 4,400 track minutes, enough for 180 minutes of 24-track recording. (The 73GB doubles all of this).
- Certified compatibility with Pro Tools (Mac OS and Windows). DigiDrive Tuner application optimizes drives for Pro Tools.
- Support Fast/Wide, LVD and Ultra160 SCSI standards.
- Quick-Release rack-mount or interlocking vertical stacking.
- Non-proprietary docking means audio-anywhere portability.
- Built-in heat detection/indicator circuit alerts you to potential problems before the drive or data are threatened.
- Advanced thermal sensing circuitry protects data integrity and also keep your data cool and safe by controlling fan speed.

DigiDrive MediaDock II

Maximize the efficiency and versatility of your Pro Tools production environment with the DigiDrive MediaDock line — a removable storage system for post-production, professional and project studios. MediaDock provides an optimal solution for data transfer, portability, and backup, streamlining workflow while protecting your work. Products include MediaDock Shuttle|36, MediaDock Shuttle|73 and MediaDock II chassis.

- Incorporating high-performance LVD technology, MediaDock II's compact 2U chassis provides two bays that support DigiDrive MediaDock Shuttles as well as legacy and current LVD shuttles. Both bays have their own SCSI bus with two 68-pin connectors and front-mounted SCSI ID selection switches.
- Front-panel LEDs monitor power, temperature and shuttle functions, while a variable-speed, temperature-sensing fan and an internal auto-ranging power supply ensure that your projects stay up and running. Along with the included rack-mount kit, DigiDrive MediaDock II ships with either two 36 GB or two 73 GB DigiDrive MediaDock Shuttles.

SCSI|128 Kit

SCSI solution for Pro Tools|HD

- SCSI|128 offers 128 tracks of record and playback with Pro Tools|HD on both Mac and Windows when used with LVD drives.
- Built-in LVD support results in improved data integrity, and allows for cable lengths up to 12.5 meters per bus accommodating strategic placement of your LVD-supported SCSI drives.
- Includes ATTO UL3D Dual Channel Ultra3 SCSI Host Adapter and two cables, pre-tuned for optimal performance with Pro Tools|HD.
- UL3D’s two external channels handle throughput up to 160 MB/second per channel.
- The SCSI|128 kit also supports up to 64 audio tracks on Pro Tools|24 M|X and d24 systems on both Mac and Windows.

DigiDrive RackMount Kit

- The 2RU DigiDrive RackMount Kit allows you to quickly and easily slide in or remove up to 2 DigiDrive hard drive units, making it easier than ever for you to transfer your sessions back and forth between different Pro Tools systems.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
Professional Multi-Port MIDI Interface

The MIDI I/O is a multi-port MIDI interface designed by Digidesign to deliver a completely robust and powerful MIDI solution for all Pro Tools systems. Equipped with ten MIDI input and output ports for a total of 160 channels, MIDI I/O connects to the computer and is powered via USB. MIDI I/O is housed in a rugged metal 19” chassis making it simple to plug and unplug cables when the unit is rack mounted. If you’re looking for a way to bring unity to all your racks of synthesizers, samplers and other MIDI gear, MIDI I/O is the interface you’ve been waiting for.

- Ten simultaneous MIDI I/O ports supporting a total of 160 MIDI channels
- Up to four MIDI I/Os can be connected to your Pro Tools system simultaneously for a total of 40 I/O ports, providing access to a total of 640 MIDI channels.
- Programmable hardware thru mode patches any inputs to any combination of outputs
- Full OMS compatibility
- Connects to the computer via USB, providing an accurate and stable way of transferring multiple channels of MIDI data. The MIDI I/O also draws its power from the USB port – no wall wart, and no need to add another power strip just to plug in one more power cable.

CD Mastering Software

MasterList CD 2.4 provides the final link between your digital audio workstation and professional CD masters. With MasterList CD 2.4, your Digidesign digital audio workstation is transformed into a cost-effective, professional CD mastering solution — all in one integrated system. Running stand-alone on any compatible Power Mac—no Digidesign hardware required—MasterList CD lets you easily produce Red-Book standard, CD-DA masters.

- Supports the full feature set of many SCSI-based CD recorders
- Supports 1x, 2x, 4x, 6x, 8x and 12x write speeds
- File support includes Sound Designer II and AIFF 16- and 24-bit, mono and stereo files, as well as split-stereo files from Pro Tools (24-bit files are dithered to 16-bits during disc writing).
- Make seamless transitions between tracks using editable, non-destructive, RAM-based crossfades.
- Up to 100 auto-locate points for auditioning between tracks
- Independent channel level adjustment from 96 dB to +12 dB in 0.1 dB steps.
- Easy level matching across the entire CD, provides location and level details of the audio peak within a selection
- Supports the full set of PQ subcodes, allowing the CD to be precisely defined as desired, whatever your needs.
- Individual track level cut and boost
- Definable crossfades between MasterList items
- Create up to 99 tracks per CD, with up to 100 index points per track. Index points can be manually entered or set using Sound Designer II markers or region boundaries from Sound Designer II and Pro Tools.
- Created CDs can be used to directly make the glass CD master during CD production, eliminating the additional expense and potential errors associated with conventional tape transfer and manual PQ subcode entry.
Integrated Machine Control Option for Pro Tools

Available for Mac and Windows-based systems, Machine Control enables easy integration and control of external audio/video equipment within the Pro Tools workstation environment. Machine Control lets you be more productive by allowing you to control external devices using quick, intuitive key commands directly from your computer keyboard. Features that you would expect to find in hardware-based systems, such as FF, REW, jog/shuttle, and so on, are easily accessible via the Pro Tools graphical interface.

- Slave TDM-equipped Pro Tools systems to external controllers via 9-pin Remote Mode for the trigger of playback, recording, and track arming from a remote machine.
- When used with Pro Tools 4.3 and higher, Machine Control also offers track arming with insert and assemble recording.
- Control your audio or video machine’s transport operations within the Pro Tools environment: jog shuttle, FF, REW, etc.
- Transport counter keeps you informed of the machine’s position at all times.
- Status indication in the transport window provides user feedback for the various control modes. Even displays the difference between Shuttle mode and FF/REW modes.
- Scrub audio and video simultaneously from within ProTools. Check your audio and picture sync quickly and efficiently using the scrub-to-picture feature of Machine Control.
- Supports compatible non-linear video recorders/players.
- Auto-detects many commonly used transports and presents the appropriate track configuration to the user for intuitive, integrated lay-backs to master tapes.
- Alerts Pro Tools if a machine’s local/remote mode has been changed from its front panel, eliminating communication problems that may otherwise occur.

PostConform

EDL Import/Autoconform Software

PostConform is an EDL (Edit Decision List) import/autoconform software for Pro Tools systems that enables automatic capture and spotting of audio elements to picture. With PostConform, the time-consuming process of loading and conforming field audio and other audio elements can be accomplished automatically, greatly increasing productivity. PostConform automates the process of assembling an EDL into a Pro Tools session file, first by importing and sorting the EDL. Then, the user can select all or only certain source elements for loading and can specify additional record handles for future editing flexibility. At this point, the autoconform process begins. PostConform prompts the user to load successive source reels into a remotely controlled deck. Using Digidesign’s optional Machine Control, PostConform automatically locates and records the sound elements selected by the user and assembles these elements into their proper position in the program — as specified by the EDL. If the picture editor makes changes to the program, PostConform can re-conform the loaded sound elements to a new EDL.

- Sources can be recorded and conformed to a new Pro Tools session or placed into the currently-open session via Apple Events.
- Adjustable “checkerboard” feature allows you to organize assembled elements and to manage overlapping events.
- Flexible sorting of EDL elements by Source In, Record In, or Reel Name.
- Includes 9-pin serial machine control cable, but also requires Sync I/O or LTC-to-MTC converter (not included).
- Supports 9-pin and V-LAN compatible external video and audio transports and TimeLine Lynx I or II synchronizers for additional transports.
- Supports CMX 3400-and 3600-series EDLs.
OMIC Interchange Utility for Pro Tools

To facilitate the seamless exchange of sound and picture elements, Avid developed OMF (Open Media Framework Interchange). Dozens of manufacturers support OMF, and hundreds of Pro Tools customers rely on OMF every day for file interchange with other workstations, such as Avid's Media Composer.

DigiTranslator 2.0 takes OMF Interchange to the next level by offering rock solid reliability and more control over the conversion process than ever before, all within the Pro Tools environment.

Packed with sophisticated conversion options, DigiTranslator 2.0 allows translation of clip-based volume data, a choice between rendered audio effects or untreated sources, and options for media copying and consolidation. The online tool tips provide constant feedback at every step of the conversion process. With DigiTranslator 2.0 fully integrated into Pro Tools, a previously unattainable degree of efficiency is now available to post professionals. Without launching a separate application, you can take advantage of DigiTranslator 2.0's many features directly, including the import and export of OMF media files and sequences. And, with DigiTranslator's thorough reporting of any translation errors, you always know what to tell the picture editor if a problem arises.

- Supports import and export of OMF media files and sequences directly into Pro Tools without launching a separate application.
- Translation of both clip-based and keyframe volume data into Pro Tools breakpoint automation playlists.
- Reads and writes Broadcast WAV (.WAV) files, as well as AIFF and Sound Designer II OMF audio files.
- Choice of importing either rendered audio effects or their untreated source files.
- Integrated frame rate, sample rate and bit-depth conversion.
- Embedded-media OMF sequences play back without time-consuming extractions.
- Creates sample-accurate exports of Pro Tools audio and session files for Avid and other OMF 2.0-capable systems.
- Supports import/export of 24-bit OMF files.
- Engineered and tested to deliver reliable interchange with Avid picture workstations.
- Simultaneously converts audio and/or video media data.
- Pro Tools requires A/V Option or A/V Option|XL for import and playback of AVID video media.

Advanced Authoring Format (AAF) Support

Pro Tools 6.1 adds support for Advanced Authoring Format (AAF) via the DigiTranslator option. AAF is a media interchange file format that enables content creators to easily exchange sequence information, digital media, and metadata across platforms and between systems and applications. AAF simplifies project management, saves time, and preserves valuable metadata that in the past was typically lost when transferring program material between applications.

Digidesign will be the first audio company to bring this new level of interchange to the market. Additionally, Avid, a founding member of the AAF Association, will now support AAF interchange across the entire Avid and Digidesign product line.

DOLBY SURROUND TOOLS

Surround Encoding/Decoding TDM Plug-ins

Dolby Surround Tools makes surround mixing very efficient for Pro Tools users. D-A and A-D conversions are no longer needed due to the Dolby Surround Tools' encoding and decoding processes matching those of the industry standard Dolby Model SEU4 and SDU4 units. In addition, Dolby Surround Tools also supports the Pro Tools multi-channel mixer and sample rates up to 96 kHz.

While Dolby Surround Tools is not designed for the final mixing of matrix-encoded theatrical film soundtracks, it can be used to preview the results of the process (4-2-4 monitoring) on the discrete four-channel audio tracks (L, C, R, S) that will subsequently be combined with other elements during the final mixing of film soundtracks. This is a vital asset for any facility that regularly supplies four-channel sound effects and music recordings for theatrical film productions. (Dolby Laboratories continues to supply producers with dedicated film sound encoder systems for final film mastering.)
Multiband EQ and Compressor (TDM, RTAS & AudioSuite)

Modeled after their respective Red Range hardware counterparts, the Focusrite D2/D3 bundle brings high quality equalization and professional dynamic control to Pro Tools.

Designed by Rupert Neve, the 24-bit D2 is for the professional who requires the highest levels of performance and maximum versatility in a software-based EQ providing multiple modular configurations. With superior resolution, intuitive graphics, dynamic automation and save/copy/paste options, the D2 takes full advantage of the power and capabilities of the Pro Tools TDM environment.

The D3 provides flexibility and versatility through separate insert configurations in addition to its highly impressive sonic characteristics. The D3 also functions in AudioSuite, providing file-based processing and conservation of DSP resources. Like the D2, the D3 takes full advantage of the power and capabilities of Pro Tools to offer dynamic automation, multiple inserts and save/copy/paste options.

Both the D2 and D3 interfaces closely emulate their respective sibling Red Range hardware units, with their red brushed-aluminum panel graphics, illuminated push buttons and rotary control knobs. A floating editor window supplies instant access to the various modules of the D2 - six band, four band, or dual/single band - or, in the case of the D3, one-button access to both compressor and limiter modules. A numeric display area is located below each rotary knob for continuous feedback and also allows numeric entry from the keyboard, if desired. For precise processing, independent input and output level controls and high-resolution plasma-type meters are also provided. With the D2, offset level adjustment is accommodated by use of the left, right and link controls.

Red Range 2 Dual EQ

- Provides three different mono or stereo modules: six band, four band, and dual/single band. These versatile configurations allow DSP power to be used where it is needed most. Any band type (or types) can be accessed up to the available DSP power in the system.
- Includes high- and low-pass filters, high and low shelving filters and high-mid and low-mid peaking filters.
- Analog-style overload indicators track clipping and a highly accurate Cartesian graph displays EQ settings as they are being adjusted. When an offset exists for the left and right channels, the graph will display both channels simultaneously.

Red Range 3 Compressor/Limiter

- Provides two mono or stereo configurations.
- The Compressor+Limiter supplies both compression and limiting at all times. Also allows users to select compression or limiting, conserving DSP power for other operations as necessary.
- One D3 plug-in can be used multiple times simultaneously, limited only by DSP capacity.
- Pro Tools supports side-chain processing with D3, accepting post-fader input from any track or bus to control dynamics parameters.
- All settings are automatically restored and recalled with the Pro Tools session.

Don't forget that, like other TDM Plug-Ins, you can run multiple D2 and D3 plug-ins up to the limits of your available DSP power. This means that, for the price of one plug-in bundle, you'll have access to multiple Focusrite processors, making this extremely cost effective.
DIGIDESIGN

MAXIM

Peak Limiting and Sound Level Maximizer

Create professional-sounding master tracks for your Pro Tools sessions with Maxim. More than just a world-class peak limiter, Maxim optimizes the overall level of the audio input while preserving the integrity of the original sound. Its proprietary sound level maximizing technique distinguishes it from analog limiters and digital versions of them, which often add unwanted distortion or coloration to the audio. The result is transparent, or perfect, peak limiting.

Maxim also offers built-in dithering, on-line help, and a full-color Histogram, making it an indispensable plug-in for mixing and mastering in the Pro Tools TDM-, RTAS or AudioSuite environments.

- Rather than clipping peaks, Maxim uses an advanced proprietary technique that takes advantage of the Pro Tools non-linear environment to intelligently process the signal.
- It looks ahead to anticipate peaks in the audio file and then reduces them — relative to the track's lower level audio — without changing the overall sound quality. The result is perfect peak limiting that preserves the sonic characteristics of the audio in a way not possible with any other limiters.
- In addition, Maxim automatically adjusts the over-all gain of the audio to meet the ceiling as limiting is applied. In other words, it combines advanced peak limiting (without clipping) and normalization.
- Flexible enough to be used as a dynamics processor on any a channel or across an entire mix.
- 16-, 18- or 20-bit Dithering improves audio performance and reduces quantization noise when mixing or fading low-level audio signals.
- Color Histogram helps you determine where the energy resides in a song, and provides valuable visual feedback for precise threshold adjustment. Maxim always provides a full graph reading, whether the playback period is 10 seconds or 10 minutes long.
- Display also includes plasma-type input and output meters, a threshold slider, output ceiling, and attenuation meter.
- Compatible with Mac OS, Windows 98, and Windows NT-based Pro Tools systems.

In addition to TDM, RTAS, and AudioSuite compatibility, Maxim, D-Verb and D-Fi all offer realtime, dynamic automation of virtually every parameter.

D-VERB High-Quality Reverb

D-Verb brings professional-quality reverb or ambience processing to your Windows or Mac-based Pro Tools session. From spacious halls to intimate rooms, D-Verb provides you with several different high-quality reverb algorithms to apply to single or multiple tracks of your session. Delivering real-time processing with automation of every parameter, D-Verb can be run on single or multiple tracks, auxiliary inputs and group masters, and in mono, stereo, or mono-to-stereo to create a stereo image from a monotrack.

With an attractive interface, easy on-screen editing, superb audio quality, the ability to do the work of multiple stand-alone reverb processors, and your choice of TDM, RTAS or AudioSuite processing, D-Verb is the perfect addition to any Pro Tools system.

- D-Verb has seven reverb algorithm (Hall, Church, Plate, Room 1, Room 2, Ambience and Non-Linear) and has control over room size, diffusion, decay and pre-delay.
- Separate low-pass and high-cut filters make it easy to tailor the reverb sound to your needs. Reverb presets may be saved or recalled from disk for added flexibility.
- Multiple reverbs may be run simultaneously.
- All-digital signal and mixing path.
- Save, Copy, and Paste settings.

For Any Inquiries Regarding Your Order, Call Our Customer Service:

**Analog and Retro Processing in the Digital Domain**

Retro instruments and processors are often used to create certain sonic signatures in contemporary music. D-Fi is a unique family of four (Lo-Fi, Sci-Fi, Recti-Fi and Vari-Fi) plug-ins that can provide similar sound design tools to Pro Tools users, without having to re-sample the audio files through an 8-bit sampler or run a file through a modular analog synth. While Lo-Fi provides bit-reduction for retro sound processing without the expense of retro equipment, Sci-Fi adds analog synth-type ring modulation, frequency modulation, and variable frequency resonators. Recti-Fi provides super- and sub-harmonic synthesis, and Vari-Fi allows processing of disk files to create the effect of audio changing speed to or from a complete stop.

While Pro Tools offers extremely high quality signal paths with extremely low distortion and noise artifacts, the D-Fi plug-ins alter this in the name of creativity. Lo-Fi diminishes the audio quality through bit-rate reduction, and pure unadulterated noise and distortion. Sci-Fi contorts the audio signals through ring modulators and resonators. Recti-Fi warps the signal through waveform rectification. Vari-Fi simulates turntables starting-up or slowing-down while playing back audio. All support MultiShell II for DSP sharing on TDM systems.

**Digidesign and Digidesign Development Partners make a wide range of plug-ins for four different Digidesign Plug-In formats — Pro Tools|HD professional systems supports all four.**

**TDM**
Digidesign’s Time Division Multiplexing (TDM) technology is the foundation of the Pro Tools professional environment, providing 24-bit mixing and real-time digital signal processing (DSP) capabilities. TDM plug-ins use the dedicated hardware of TDM systems, which offer easy expandability — add as many TDM plug-ins as you want — up to the DSP capacity of your system, no matter how many edits or how much automation you have in a session. If you need more DSP, simply add another HD Process card.

**Real-Time AudioSuite (RTAS)**
Real-Time AudioSuite Plug-Ins are host-based processors, using the computer’s processing power to do their job. Functionally, RTAS plug-ins offer many of the real-time benefits of TDM plug-ins. They are fully automatable, their parameters can change in real time, and their effects are not permanently written to the audio file. Since they are host-based, RTAS plug-ins require trade-offs between track and plug-in count, edit density and amount of mix automation in a session.

**HTDM**
Host Time Division Multiplexing (HTDM) represent a hybrid of TDM and RTAS technologies. HTDM plug-ins provide all the logistical functionality of standard TDM plug-ins, but, like RTAS plug-ins, they allow for all the processing to be done on the host. In so doing, HTDM plug-ins offer two primary benefits: The resources of the Pro Tools|HD Core and/or Process card remain available for other tasks; and, despite running on the host, HTDM plug-ins can be instantiated on any track, a characteristic previously confined to TDM plug-ins only.

**AudioSuite**
AudioSuite plug-ins provide file-based processing, meaning they process or alter the sound file and create a new file with the processed sound. The resulting effect is applied to the entire file. AudioSuite plug-ins are great for conserving DSP power and certain types of processing where there is no real-time benefit or application, such as normalization and noise reduction.
Cross-Synthesis Plug-In Duo for TDM Systems

Take your audio into creative new realms of sound with Bruno and Reso, two TDM plug-ins for Pro Tools. Both use a cross-synthesis technique to synthesize any existing audio in real-time to create some very unique and interesting results. Both plug-ins can be played interactively via MIDI using an external controller. Play a chord progression or a scale on your keyboard, and Bruno or Reso will apply the performance to your audio. In addition, an on-screen keyboard allows you to latch the keys to create chords or play a scale right on the screen.

Bruno & Reso is a seriously advanced piece of software, but it isn’t rocket science to use. Just grab the knobs, start dialing and have fun. In the process, you’ll take your audio to amazing new place.

- With up to 24 voices, Bruno & Reso allow you to create a deep layer of adjustable resonant tones. Shaping and modulation parameters can be adjusted with a wide selection of on-screen control knobs.
- Timbre, amplitude, pitch, stereo spread, low-pass filter, Q and follower characteristics can be fully automated. In addition, velocity and pitch bend parameters can be controlled by your keyboard. MIDI clock capabilities and an envelope follower let Bruno/Reso match the groove of the source material.

Bruno

Bruno uses time-slicing, a technique whereby timbres are extracted from the source audio during playback and crossfaded together. Crossfade lengths between these sections can be adjusted and a switch function produces additional textural changes. Switch can be triggered by threshold, MIDI beat clock or keyed to an external track. Further shaping and modulation is achieved through a wide variety of timbre, amplitude, pitch, voice and stereo spread parameters.

Ruso

Reso has similar features as Bruno, but uses a resonance generator to add harmonic overtones. Damping and other processing knobs help shape the sound. An all/odd harmonics toggle can be triggered from an external keyboard in the same manner as Bruno’s switch control. At the end of the chain, a resonant filter modulates low-pass frequency sweeps with adjustable Q and follower knobs.

DPP-1

Pitch Processor for TDM Systems

The DPP-1 brings high-quality 24-bit pitch change and delay processing to the Pro Tools TDM environment. The DPP-1 can operate in mono or stereo modes, and supplies up to 4 octaves of high-quality stereo pitch transposition on single or multiple mixer channels. With easy on-screen editing and program storage, and the ability to run multiple pitch processors for the price of one plug-in, the DPP-1 can do the work of multiple standalone pitch processors – at a far lower cost.
The DPP-1 supplies an intuitive user interface that utilizes musical staff notes and octave switches for up to 4 octaves of stereo pitch change, adjustable in semi-tones or cents. Clicking on a musical note value on the on-screen staff allows quick navigation to new pitches. In addition to pitch change, the DPP-1 supplies an additional delay line with up to 125 ms. of delay per channel, with positive or negative feedback. Signal presence and internal clipping metering is provided.

- Internal 24-bit processing and high-quality deglitching pitch change algorithm provides excellent sound quality
- Easy-to-use software interface makes operation straightforward
- Pro Tools TDM systems supply a versatile mixing and processing environment, letting you use the DPP-1 Pitch Processor on single or multiple channels, which can come from any input source: disk playback, live input, TDM-equipped SampleCell II Plus, etc.

- Libraries of parameter settings can be saved and loaded by using the Pro Tools Plug-In Librarian. With the additional DSP power available, you can run multiple DPP-1 Pitch Processors simultaneously.
- Independent processing control over left and right channels
- 4-octave pitch range
- Delay processing with feedback
- Automation features, including dynamic TDM Plug-In automation

**REVERB ONE**

**World-Class Reverb Processing for TDM Systems**

If you're looking for a reverberation processor of uncompromising sonic quality that's also easy to use, look no further than the Reverb One. A TDM plug-in, Reverb One is a reverb processor built from the ground up by Digidesign to satisfy demanding audio professionals. At every step in its development, Reverb One was subjected to critical listening tests, resulting in a TDM plug-in that can compete with any software or hardware reverb processor on the market today.

Reverb One gives you complete control of the reverberant characteristics of your mix, and is equally at home in music, post production and sound design applications that require the utmost in clarity and precision.

- In addition to the exceptional quality of its reverberation, Reverb One provides a unique set of shaping tools that let you modify the details of a sonic space. You'll find standard controls for room reflections settings and decay time, as well as for multi-band equalization, reverb dynamics (for long tails or gated characters) and chorusing. With Reverb One, you get everything you need to control all aspects of reverb in a single plug-in window — and editing reverb characteristics is straightforward with its intuitive, editable graphic displays.

- For all the versatility of Reverb One, it is remarkably easy to use. Its interface conveys reverberation character at a glance, and a wealth of carefully designed presets gives you everything you need to get started. From natural-sounding halls, to vintage plates or that classic digital reverb setting, Reverb One allows you to customize your creative soundscape to anything you can imagine.

- As with any TDM plug-in, you can take advantage of the ability to automate any Reverb One parameter in real-time, and to recall all plug-in settings in Pro Tools. With its extraordinary sound quality and versatility, it's hard to believe that Reverb One only takes up a single DSP chip.

- Independently controllable reverb settings, including Level, Decay Time, Attack, Spread, Room Size, Diffusion, Pre-Delay
- Extensive library of reverb presets
- Early reflection controls, including Level, Delay, Spread, plus early reflection room presets
- Dynamics and Chorus sections for shaping reverb decay and optimizing reverb effects
- Multiband EQ with adjustable crossover points for shaping tone spectrum of both early reflections and reverb tail
- Reverb color controls allow independent adjustment of harmonic content and decay times over different frequency ranges
- Interactive early reflection and reverberation contour display
**DINR**

**Intelligent Noise Reduction (TDM & AudioSuite)**

DINR (Digidesign Intelligent Noise Reduction) is an award-winning plug-in for real-time, high-quality broadband noise reduction and hum removal. A software-based, digital signal processing module, DINR is designed to reduce the full spectrum of unwanted noise, from air-conditioner rumble to tape hiss to guitar-amp buzz, for more professional results.

- DINR reduces noise by intelligently subtracting the noise from the digital audio file. First, the noise signature is created by selecting and analyzing an example of the noise within the source material. Once the noise is analyzed, an on-screen slider can be used to apply from 0.1 dB to an infinite amount of noise reduction.
- Other parameter settings can also be adjusted on-the-fly to achieve maximum noise reduction while minimizing signal loss and artifact generation.
- And since DINR analyzes and subtracts noise entirely within the digital realm, the results can be virtually free of side-effects such as distortion, dynamic modulation and the undesired fluctuations in frequency response associated with conventional noise reduction systems.
- Parameter settings can be saved and recalled for use on other source audio files affected with similar noise. Plus, the noise signature of any device can be kept and used with other source material the device may affect.
- All noise signatures and parameter settings are automatically stored with your Pro Tools session for instant recall.
- High fidelity, real-time processing with TDM and file-based processing with AudioSuite.
- Automation features including dynamic TDM plug-in automation.
- Compatible with Pro Tools systems (4.1.1 or higher) running on Mac or Windows NT.

**SurroundScope**

**Surround Metering (TDM & RTAS)**

Now you can visualize the surround capabilities of Pro Tools with DigiDesign’s SurroundScope plug-in. With its intuitive interface, you can accurately see what your listeners will hear — right from within Pro Tools. SurroundScope provides a graphical display of the signal level for each audio channel within the multi-channel sound field in a Pro Tools mix. The phase meter shows coherency of your signal across the full spectrum, from perfect mono to completely out of phase. In addition to its surround and phase displays, SurroundScope features a multi-channel level meter that supports up to eight channel tracks.

- Real-time, accurate display of stereo or multi-channel phase information and levels.
- Support for all standard multi-channel formats: stereo, LCR, LCRS, Quad, 5.0, 5.1, 6.0, 6.1, 7.0 and 7.1.
- Auto detection of a track’s channel format.
- Multi-dimensional display shows position of the audio signal within the multichannel track or surround mix.
- Full-featured center-zero and Lissajous phase meter display.
- Highly accurate level meters for each channel of a multi-channel.
AudioSuite Plug-In Package

The D-fx family of AudioSuite plug-ins offers a great selection of time-domain effects all in one affordable package and is a perfect addition to any system running Pro Tools software. D-fx includes several effects including Chorus, Flanger, Multi-Tap Delay and Ping-Pong Delay. D-fx also includes D-Verb for use in both RTAS and AudioSuite environments.

- The perfect addition to any system running Pro Tools, D-fx offers a great selection of time-domain effects in one affordable package.
- Each D-fx plug-in is designed for intuitive use, with a consistent graphic interface for every effect. All parameters are displayed on one screen allowing instant adjustments.
- Since D-fx is completely integrated into the Pro Tools software, there's no transition time lost switching between effects processing and editing.
- In "stereo" mode, all D-fx plug-ins allow processing of two channels as left and right; or, combine the two input signals for a mono in/stereo out effect.
- Use with Pro Tools systems for file-based effects processing.
- Save and recall settings, using Pro Tools Plug-in Librarian and Settings pop-up menus.

Sound Replacer

Drum Hit & Sound Replacement (AudioSuite)

SoundReplacer is definitely one of the most unique and innovative plug-ins on the market today. As a Drum Hit and Sound Replacement tool for Pro Tools, SoundReplacer allows you to replace or blend up to three different samples to three independent adjustable amplitude threshold zones with your existing audio file. For more than just repairing weak mixes, this AudioSuite plug-in has enormous creative potential for sound design and post production applications.

- SoundReplacer is a unique AudioSuite Plug-In that lets you replace or mix an audio event with new samples from your sound library or hard drive. It is the perfect solution for that all-too-familiar situation of the imperfect drum track. SoundReplacer allows you to retain the feel of the original performance by automatically adjusting the dynamics of the replacement sound to match the changing levels within the performance.
- What's more, SoundReplacer lets you replace or blend up to three different samples to three different adjustable amplitude threshold zones in the audio file. Variations in amplitude within the performance determine which sample is triggered at a given time. Performances can be further adjusted with a mix slider, dynamics slider and a peak align feature.
- Although perfect for repairing weak mixes, SoundReplacer also has enormous creative potential for sound design and post production applications. Sound effects designers can morph three different characteristics to a single source file, thereby adding a sense of realism to an audio track.

- Load your favorite samples from your sound library, hard drive, etc.
- Trigger up to three samples, each set to a customizable threshold zone
- Crossfade or hard shift between samples
- Set the amount of sample replacement using the adjustable mix slider
- Expand or contract a performance's dynamic range
- Ensure phase-accurate alignment using the Peak Align option.
**DIGIDESIGN**

**ACCESS VIRUS**

**World-Class DSP-based Synthesizer for Pro Tools TDM**

Based on the highly acclaimed and successful Access Virus hardware synthesizer, Access Virus is a TDM-based synthesizer plug-in that transforms your Pro Tools system into a luscious 20-voice synth at 48k and 10-voice synth at 96k on Pro Tools|HD – with up to eight different sounds per DSP chip.

In addition to offering incredible warmth and quality, this “virtual analog” synthesizer also features perfect Pro Tools integration, extensive automation and total recall capabilities. MIDI and audio connections are a breeze to set up, allowing you to start playing Virus in seconds. It is also offers several user interface pages for different sets of parameters, so every single control can receive a dedicated knob or switch. Gone are the headaches associated with glaring at tiny LCD displays.

- Access Virus features three oscillators, two filters, three LFOs and two envelopes for every voice. It also provides built-in effects like chorus and delay for creating stunning pads, screaming leads, punchy bass sounds or whatever you might have in your mind.
- Includes more than 500 extremely variable and useful sounds - everything from Moog basses to analog drumkits
- Fully automated with frame accuracy for over 150 parameters

- Direct Pro Tools integration allows easy MIDI/audio routing and takes advantage of the powerful mixing features in Pro Tools
- Use input mode to modify single tracks or entire mixes with powerful resonant filters. Enable the vocoder and add the robotic sound to your recording using other tracks.
- Built-in arpeggiator syncs to MIDI beat clock and follows your song tempo at any time. (Ultra low latency for extremely fast MIDI-to-audio timing).
- Loads patches directly from the original Access Virus hardware— no need to reprogram all your existing sounds
- Runs on a dedicated DSP for true power-on-demand, up to eight multi-timbral synthesizers per DSP
- Up to 80 voices on a Pro Tools|24 MIXplus system
- Pro Tools plug-in library function allows easy patch management and exchange

**APHEX BIG BOTTOM PRO/AURAL EXCITER**

**Bass and Harmonic-Generating, Detail Enhancing Bundle**

Want to enhance the bass frequencies in your Pro Tools sessions? Aphex Systems’ Big Bottom Pro is a powerful TDM plug-in for Pro Tools that will add all the excitement and punch you need to the lower frequencies in your mix. And Big Bottom Pro comes bundled with Aural Exciter giving you the same unique ability to increase presence and restore natural brightness and detail, without significant EQ. The Aural Exciter/Big Bottom Pro plug-in bundle supports Mac and Windows-based Pro Tools|HD systems at sample rates up to 192 kHz.

The Big Bottom circuit works on the bass end frequencies and adds low-end presence and punch without adding peak level. This lets you pack more bass into your sound without overloading recorders or blowing up speakers. The Big Bottom Pro plug-in is an enhanced, pro version of this powerful circuit. Used together with Aural Exciter, Big Bottom Pro completes the enhancement of the entire audio spectrum.

The hardware version of Aphex Aural Exciter, its patented circuitry helps recorded or amplified audio get closer to the natural acoustic sound — clean, open, present and detailed. The effect is achieved by adding musically and dynamically related harmonics to the input signal. This effect has been used on thousands of recordings, movies, commercials, broadcasts and live concerts.

- Brings instruments and vocals up "out of the mix"
- Patented Harmonic Generation Process can actually increase bandwidth without increasing level
- Increases presence, clarity, speech intelligibility, and detail without significantly increasing peak output
- Total flexibility in "tuning" the Aural Exciter to your needs
High Quality, Multi-Band Dynamics for Pro Tools TDM

The Drawmer Dynamics plug-in provides premium quality gating, compression and limiting to Pro Tools TDM users. Drawing on 20 years of experience in innovative signal processing, the Drawmer Dynamics plug-in offers the performance attributes as well as the look and feel of world-renowned Drawmer analog units.

- Based on Drawmer's legendary DS201 Noise Gate, the Gate/Compressor/Limiter plug-in is the ultimate processing tool for percussive and highly transient material.
- The Side-Chain Trigger can be set to key the gate from any audio track you choose, providing limitless processing possibilities. Key filters “tune” the gate to the required frequency to assist triggering, while the ultra-fast attack time adds punch. Audio is further enhanced by the compressor and is kept under precise control by the limiter.
- For less percussive signals like vocals, guitar, and piano, Drawmer’s Program Adaptive Circuits can intelligently shape and enhance the signal, breathing life into dull tracks and gently controlling excessively dynamic passages.

- The Expander/Compressor/Limiter plug-in is based on the Drawmer DL241 Auto Compressor and DL251 Limiter. Auto gain adjusts the gain of the compressor when the threshold or ratio controls are adjusted.
- Drawmer Dynamics takes full advantage of the latest Pro Tools functionality including dynamic automation, total save and recall of all parameters and mapping to external control surfaces.

LEXICON LEXIVERB
Reverb Plug-in for Pro Tools TDM

LexiVerb combines world-class Lexicon reverb with a simple, yet powerful interface to create an indispensable tool for your Pro Tools system. Pro Tools automation is supported and LexiVerb parameter groupings, giving you total control over multiple parameters with a single fader. LexiVerb provides over 100 presets built from four powerful algorithms. With the award-winning LexiVerb TDM Plug-In, no additional hardware is necessary to obtain the legendary Lexicon Sound — the sound that's heard on more than 80% of the world’s most successful albums and soundtrack
Line 6 — Amp Farm

Guitar Recording TDM Plug-In

The ultimate solution for guitarists and Pro Tools TDM users, Amp Farm features Line 6's TubeTone technology, to bring you physical models of specific, sought-after classic amplifiers. Process live guitar inputs or tweak the amp setup for pre-recorded tracks. Amp Farm lets you adjust your amp tone right up to the final mix, with full automation of all controls, including Amp Model selection. No special pickups are required — just record your guitar output directly into Pro Tools and say goodbye to the hassles of working with traditional amplifiers (the hauling, the buzzing, the special miking techniques, etc.)

- Controls are simple and intuitive, making Amp Farm extremely easy to use.
- Your Amp Farm amp set-up can be changed at any time, even after tracks are recorded, with full automation. You can even switch amps on the fly, and everything is stored right in your Pro Tools session. A library of presets is also included.
- Line 6's TubeTone uses a 100% digital software technology to physically model the sonic properties of tubes and emulate the tone generating circuitry of classic amplifiers — add a whole collection of classic guitar amps to your studio — all programmable and automatable.
- Models based on the following effects units:
  - 1994 Mesa Boogie Dual Rectifier Trem-verb combo, 1995 Mesa Boogie Dual Rectifier head

Line 6 — Echo Farm

Vintage Echo TDM Plug-In

Line 6's Amp Farm revolutionized the way guitar is recorded. Now, the same patented modeling technology is available in the Echo Farm TDM plug-in. Echo Farm brings the sound of vintage echo effects units to your Pro Tools system — no need to wrestle with cantankerous vintage hardware to get classic tape echo, old school analog delay or filter-swept echo-phonics. Echo Farm perfectly emulates the sonic properties of tubes, tape, and vintage echo unit electronics.

- Easy to use as a classic stomp box, with control of tape wow and flutter, filter-swept modulation, bit resolution, and more
- Just pull up Echo Farm to get these classic vintage tones with all the modern advantages, including extended delay time, bpm/note value delay time setting, tap tempo and complete automation.
- Echo Farm isn't limited to just guitar processing. Put any audio signal through it — vocals, synths, drum tracks — and add the classic sound of vintage echo to your mix.
- Add a whole collection of classic echo units to your studio — all programmable and automatable
- Set delay times by knob, milliseconds, or bpm/note value — or just click your mouse a few times on the tap tempo button.
- Defeatable Time Ramp gives smooth tape-style delay time changes complete with pitch smear
- Use Echo Farm as a guitar stomp box in front of Amp Farm, or as a processor for all your other audio track
- Digital Delay with Modulation, Ping Pong, Reverse (xirdneH imij ekil tsuj), and Auto-Volume Echo.

- Models based on the following effects units:
  - Maestro EP-1 Tube and EP-3 Echoplex
  - Roland RE-101 Space Echo
  - Boss DM-2 Analog Delay
  - Electro-Harmonix Deluxe Memoryman
  - Dynamic Delay (ala TC Electronics 2290)
  - Lo Res Delay (variable from 24 to 6 bits)
  - Sweep Echo (filter-sweep delay)
SONIC SOLUTIONS — NoNOISE

Powerful Noise Reduction/Audio Restoration Plug-in Suite

Real-time Vocoder and Software Synthesizer (RTAS)

Sonic Solutions' Emmy Award-winning NoNOISE is the premier tool for restoring audio recordings. Its advanced processes isolate and eliminate audio artifacts such as hiss, scratches, hum, mechanical and impulsive noise, ambient and background noise — while preserving the integrity of the original recording. NoNOISE is not a single process or software module, but a set of powerful tools to remove bothersome noise without damage to the program material. Use it to restore old recordings, remove unwanted noises from field recordings, and repair audio materials that have suffered damage. Since its introduction over 15 years ago, Sonic's NoNOISE technology has been used to restore hundreds of thousands of music, film, video recordings, as well as forensic recordings used by intelligence and police organizations around the world.

NoNOISE is comprised of a set of powerful tools that address the full spectrum of noise issues, as well as offering both automatic and manual means of analysis and repair without damage to program material.

- Ideal not only in the mastering and re-mastering stages of audio production, but also for many other audio treatments needed to restore, clean, or enhance recorded material.
- A variety of high-resolution filters (also implemented as TDM plug-ins) is included: Presence, Notch, High and Low Shelf, High and Low Pass, DC-Removal, Emphasis, De-emphasis and RIAA/No RIAA.
- While NoNOISE for Pro Tools does not include all of the application features found in the SonicStudio version, it is designed to strike an ideal balance between the workflows of both experienced Pro Tools users and SonicStudio users.
Audio Alignment for Music and Post Production (AudioSuite)

VocALign is an amazing tool which reduces the time taken to re-record dialog or vocals — saving money by drastically reducing production and studio time. Artists can now concentrate on performance and not sync during overdubbing sessions. VocALign's unique ability to align two signals enables it to be used creatively to take guide or even "live" tracks and create performances with perfectly aligned overdubs.

This AudioSuite plug-in gives Pro Tools users perfectly aligned double-tracked vocals, tight backing vocals, easy re-grooving of recorded vocals for remixing and shorter overdub sessions. Users also have the ability to choose the best rhythm and pace for a specific vocal, or even lay down the required tempo pattern for the artist. For postproduction, VocALign will automatically edit a line of replacement dialog so that it aligns with the dialog recorded with the original film or video. The artist can concentrate on performance and the result is perfectly lip-sync'd dialog, or more convincing foreign language dubs and reduced studio time re-recording the dialog.

Applications Include:

- Takes just seconds to automatically align two audio signals so that the timing of one matches the other
- Sophisticated pattern matching techniques reject guide track noise and work with different speakers, singers, words, instruments and sounds
- User interface allows adjustment of selected audio regions for processing, and the scrolling, scalable display allows visual confirmation of sync
- User-adjustable processing presets ensure optimal performance
- Pitch of aligned audio is unchanged
- Artists can now concentrate on performance and not sync during overdubbing sessions
- Align a vocal or instrumental performance to a previous take
- Re-create a "live" vocal's timing in the overdub session
- Tighten up backing singers with one another or with the lead
- Tighten two instrumental performances
- Lock double tracked vocals together
- Remixer: completely change the timing of a vocal performance
- ADR: Lip-sync replacement dialog automatically

ToolBelt: High Speed Tools for Efficient Audio Production

A stand-alone program that both captures audio from Pro Tools and returns it with single keystrokes, ToolBelt provides five high-quality, non-real-time processes (Audio Generator, TimeMod, Power Looping, Reversing, Inverting) in a time-saving, production-efficient interface. In fact, many of these processes and features are simply not available in any other products. ToolBelt's processes can be used separately or in combination. ToolBelt also provides keystrokes for auditioning selected processes or changes to signals before they are returned to Pro Tools.

Applications Include:

- Sound Effects: Create altered sounds and atmosphere loops quickly and easily
- Repair Work: Correct timing errors and channel inversion
- Dialog Editing: Make lengths fit; make background fills quickly; create special vocal effects
- Music Editing: Create precise musical loops and special effects; change tempos without pitch change
TITAN is a must-have application designed for Pro Tools editors involved in audio post-production for film or video, who spend long hours manually making sync adjustments after conforming or processing audio, or have to recut and rename regions in continuous audio tracks that have been transferred into a Pro Tools session from another system.

TITAN is a multi-function program that creates new Pro Tools sessions in a fraction of the time normally required. This powerful application aids and speeds up the autoconforming process, creates sessions from EDL-based change lists, automatically performing many of the tedious and repetitive tasks normally associated with the conforming of audio.

TITAN is a stand-alone application that provides separate functions for processing a Pro Tools session file. An efficient user interface provides easy access to functions, track selection and processing options. The Flash Conform function instantly conforms soundtracks from an EDL and pre-loaded soundfiles, and can conform or reconform entire sessions in seconds— a big time saver.

**Fix Sync Function**

The Fix Sync function automatically corrects the position of audio that is out of sync by up to ±1.3 second to sample level accuracy. Similarly, it can correct the sync of audio that has passed through signal processing devices and has been delayed by unknown amounts. TITAN virtually eliminates the need to adjust sync manually while listening or visually comparing waveforms with a worktrack.

- Can process 400 to 500 regions in a session in ten minutes. Manually, the same job could take up to a day
- Stereo regions are adjusted together to keep phase relationships intact
- Display shows size and number of sync errors
- Autonaming of processed sessions, tracks, and regions

**Flash Cutter Function**

Flash Cutter eliminates the need to manually recut and rename edits in situations when tape is used to transfer audio from any editing system to a Pro Tools system and an OMF transfer is not a practical option. Once the audio on tape has been transferred into continuous tracks in a Pro Tools session, Flash Cutter uses a standard EDL from the first editing system to recreate and name the audio regions automatically.

- Automatically cuts and names hundreds of regions in seconds
- Regions, sessions, and tracks automatically named with user-selected information from EDL
- Handle adjustments allow extending edits if required
Tape Saturation and Tape Emulation for TDM Systems

Now, in one bundle, you can get analog tape and real-valve sound, with their classic warmth, within the digital domain, and with characteristics and control impossible to achieve in conventional tape recorders or valve systems.

DaD Valve is a revolutionary approach to the simulation of the classical valve sound for digital audio systems. It features the most popular types of valves — triode, tetrode, and pentode — with a full range of biasing and operating levels. It features optimized responses for the 38 most common families of acoustic and electronic musical instruments. Also suitable for the processing of any kind of sound: music, effects and voices.

DaD Tape is a revolutionary approach to the simulation of the analog tape sound for digital audio systems. It features physical modeling of the four most representative tape recorders on the market: an old vintage machine with valve circuitry, a transistor based machine of the late 60’s, an operational-amplifier based machine of the 70’s and a machine of the latest generation. It also offers simulation of the three most common noise reduction systems, plus a proprietary noiseless-tape mode. Ideal for music, film soundtracks, audio post-production, mastering, broadcast and multimedia.

DaD Tape
- Especially suitable for percussive sounds, mastering of complete mixes.
- Round off peak transients and add warmth to electronic and acoustic instruments, either individually or by sections or sub-mixes.
- Independent input/output sliders and meter
- Switchable tape speed (7-1/2 /15/30 ips) for maximum control—even permits unusual combinations of tape recorders and speeds.
- User adjustable operating level
- Easy and intuitive user interface

DaD Valve
- Proprietary system based on physical modeling providing absolute and independent control over both spectral and dynamic responses, with a total of 1600 different configurations—ideal for voices and sound effects, mastering of complete mixes.
- Easy and intuitive user interface, easily updateable and expandable
- High signal to noise ratio due to high-quality internal resolution
- Processing of all kind of electronic and acoustic instruments, either individually or by sections or sub-mixes
- Suitable for all styles. It adds even harmonics to cold electronic sounds and restores the lost warmth to acoustic instruments

DUY EverPack
The Final Touch for RTAS-based Studios

The perfect solution for any M-Box or Digi001 user, the EverPack includes five excellent plug-ins for RTAS and Audiosuite: DUY Z-Room reverb, DaD Valve, DUY Shape, DUY Wide and Max DUY.

(The same as above except that it is compatible with RTAS, DUY DaD Valve is the valve emulation that gives you total control over the dynamic and spectral response of 1600 modeled combinations of sounds, introducing the typical non-linearities of tubes, and enabling you to warm up any of your sounds.)
**DUY Shape**

Perfect for defining individual sounds of mastering entire mixes. Suitable for processing of any kind of sound: music, musical instruments, voices or effects. Processing of independent tracks or mastering of final mixes. Processing possibilities include dynamic enhancing, smooth equalizing, waveshaping compression, frequency enhancing, sound "revitalizer" for old mixes, user defined harmonic redistribution.

- **FDWS (Frequency Dependent WaveShaping) algorithm processing**
- Adjusted 3-band smooth filter with full audio range continuous crossover points
- High quality analog sound filters using modeling technology
- Three independent user-defined Shapers with virtually infinite resolution and accuracy. Each shaper has:
  - Eight different Shaper curve types including Linear, Log and Cosine functions.
  - Linear expand function to optimize dynamics
  - A set of 5 factory presets for typical applications
  - Simultaneous input and output plasma-style meters
  - Mix switch for Low, Mid, Hi Shape or all (default) which allows easy independent adjustments

**DUY Wide**

- Spatial enhancing and widening of stereo image.
- Sound placement outside of physical stereo speaker locations.
- Individual per channel phase inverter
- Mono compatible.
- Doesn’t add unwanted color to the signal
- Range of effect from subtle to dramatic
- High signal to noise ratio due to an internal resolution of 48 bits.
- Spatial enhancing of existing mixes, both independent stereo tracks and final mixes.
- Remastering, rebalancing and spatial enhancing of stereo and multichannel mixes.
- Complex spatial processing of pairs of channels in multichannel mixes.

**MAX Duy**

- Exclusive ILO (Intelligent Level Optimization) algorithm provides:
  - Seamless level maximizing.
  - Zero harmonic distortion even at low frequencies.
  - Unnecessary level scaling and limiting thus improving signal to noise ratio
  - Release free operation avoiding unwanted pumping effect.
  - Overall improvement in signal to noise ratio.
- Easy and intuitive user interface
- Maximum resolution peak level meters with hold and shift function.
- High signal to noise ratio due to an internal resolution of 48 bits.
- Sound level optimization for music, film soundtracks, broadcast and multimedia.
- Suitable for the processing of any kind of sound: music, musical instruments, voices or effects, for both individual tracks and final mixes.
- CD mastering

**DUY Z-Room**

Z-Room is a high-quality reverb, it features excellent density and diffusion that provide an unparalleled sound quality. DUY Shape is a sound enhancer featuring 3-band smooth filters with full audio range continuous crossover points and three independent user-defined shapers with virtually infinite resolution accuracy. DUY Wide is a stereo and multichannel spatial enhancer, which allows widening of the stereo image, as well as sound placement outside the physical speaker locations. DUY Wide is mono-compatible. Max DUY is a sound level maximizer based on DUY’s exclusive ILO algorithm, featuring seamless level maximizing, zero harmonic distortion even at low frequencies, and release-free operation.
"The Plug-in Creator"

DSPider is a modular plug-in creator for TDM that consists of 40 modules that can be linked by the user in countless different ways, providing a unique and revolutionary approach to the creation of user-defined processors. DSPider allows the development of virtually any type of existing processing device, and provides a preset library with over 220 loadable and modifiable presets such as compressors, reverbs, equalizers, limiters, synths, noise reduction systems, 3D effects, de-essers, sound effects generators, etc. Applications include the whole spectrum of the audio world: post-production, music, broadcast, mastering, multimedia, education, research, etc.

- DSPider allows users to “build” their own plug-ins. As a result, a huge range of unique and exciting effects and processors can be created with just one plug-in.
- Instant assistance is provided by help balloons and “talking help”. Electronic instructions for patches enable easy and intuitive use.
- 3rd party developers can create or modify patches, allowing the development of virtually any type of existing processing device, including those that don’t currently exist in the marketplace. This makes possible the creation of a vast range of unique proprietary processors and signature sounds. A “Locked Patch” option allows developers to maintain the secrecy of their algorithms.
- Advanced Mode provides a large working surface and enables you to edit and run patches, whereas the Reader Mode has a reduced screen and is designed especially for users to run patches.
- Patch Manager lets users switch between patches automatically, allowing the optimization of DSP resources and a previously unavailable degree of control and flexibility.

The Modules:

DSPider’s 40-module list ranges from simple operators such as addition, subtraction, multiplication, shift, etc., to multi-functional modules like filters, oscillators, waveshapers, filters, multiple delays, envelope followers, pitch trackers, ramp generators, sample-and-hold, spectral shapers, etc. A flexible multi-reflexion chamber and multiple delay modules allow the creation of complex user-defined reverbs. By providing modules previously only available in modular synthesizers, DSPider permits exclusive processing capabilities and the creation of entirely new audio processors. Graphic modules like sliders, numeric readouts, plasma meter readers, scopes, etc., allow the creation of complex graphics. All modules can be easily programmed and patched with a simple “drag and drop” procedure.

DUY — ReDSPider

Plug-in Library for TDM

Based on the great success of DSPider, DUY’s ReDSPider is the first plug-in library for the Digidesign TDM Bus. ReDSPider features over 220 plug-ins which include compressors, limiters, reverbs, noise gates, expanders, equalizers, 3D effects, synth sounds, sound enhancers, de-noisers and many more. You don’t need DSPider to use ReDSPider! Supports sample rates up to 96 kHz.
Creating Sounds and FX

A modular TDM synthesizer software, SynthSpider links the 40 supplied modules, allowing you to create your own sounds and sequences. The high quality of DUY’s algorithms is reflected in the power of the modules, which include filters, envelope followers, wave generators, and even a built-in analog-like sequencer, plus a “scanwave generator” that allows you to use external audio. Unlike other TDM synthesizers, SynthSpider’s modularity makes it the most versatile tool of its kind. MIDI-compatible, SynthSpider includes the most powerful tools to make your sounds be totally unique. The perfect tool for sound designers, composers or sound effects creators, SynthSpider’s applications include the whole spectrum of the audio world: post-production, music, broadcast, multimedia, education, research, etc.

FEATURES

◆ A large library of presets is provided with SynthSpider. A “normal” synthesizer would just include variations of an identical setup, but due to the modularity of SynthSpider, all these presets have a different internal structure and open a whole range of possibilities for the user, who can modify any of the given presets and save them as proprietary.

◆ The “Locked Patch” option allows developers to maintain the secrecy of their algorithms.

◆ Users can create or modify presets, allowing the development of virtually any type of sound, that doesn’t currently exist in the marketplace. This makes possible the creation of a vast range of unique proprietary sounds.

◆ The Advanced Mode provides a large working surface and enables you to edit and run patches, whereas the Reader Mode has a reduced screen and is designed especially for users to run presets.

◆ The exclusive Patch Manager feature provides users the possibility to switch between presets automatically, allowing the optimization of DSP resources and a previously unavailable degree of control and flexibility.

◆ Instant assistance is provided by help balloons and “talking help”. Electronic instructions for patches enable easy and intuitive use.

DUY GLOBAL TDM BUNDLE

The Perfect Software Package for any TDM Studio

DUY’s Global Bundle contains six high-quality TDM plug-ins that will become the best solution for your ProTools-based studio:

DaD Valve & Tape (“DUY Analog Bundle”): analog tube and tape saturation and compression emulation

DUY ReDSPider: a package of over 200 different TDM plug-ins including compressors, reverbs, EQs, special effects and distortion.

DUY Shape: an adjustable 3-band waveshaper that will become the only tool you will ever want to use for high-precision sound definition. You can modify the curves to achieve expansion/compression of the signal levels. Perfect for defining individual sounds of mastering entire mixes.

Max DUY: Sound level maximizer, featuring DUY’s exclusive ILO algorithm for the optimization of the level of the signal, the ease of use combines with the sound quality. Max DUY can also be used as a limiter.

DUY Wide: Spatial stereo enhancer. Features frequency compensation and includes a high-resolution phase meter.
Music Production Software For The Mac

Emagic’s Logic 6 Series consists of a choice of three levels of digital audio and MIDI production software applications for the Mac OS—Logic Audio, Logic Gold and Logic Platinum. Each version of Logic has a virtually identical feature set combining support for high resolution 24-bit / 96kHz audio files (192kHz with Logic Platinum), and unlimited MIDI tracks along with a plethora of virtual plug-in effects and instruments along with powerful sample-accurate automation capabilities of just about every parameter. All versions include a myriad of editing capabilities for audio and MIDI as well as scoring. Support for a wide range of third party hardware and plug-ins as well as Logic’s own plug-ins are just part of Emagic’s commitment to providing their customers with cutting edge production tools. Logic Audio allows you work with up to 48 stereo or mono audio tracks, Logic Audio Gold provides 64 stereo or mono audio tracks and Logic Audio Platinum 5 provides 96 stereo or mono audio tracks. Whether you’re a beginner, project studio or professional, there’s a version of Logic with the right feature set and functionality to suit your needs.

They All Feature

- Optimized for Apple’s G4 Velocity Engine including dual processor models.
- 960 ppq timing resolution (1/3840 Note)
- Tempo resolution accurate to 1/100,000 bpm from 0.05 to 9,999 bpm
- Multiple undo/redo

Audio
- Ultra-precise 32-bit internal processing with support for 16 and 24-bit audio files up to a sample rate of 96kHz (192kHz with Logic Platinum)
- Support for MacAV, ASIO, Direct I/O, and Audiowork under OS 9.x and Core Audio under OSX.
- The built-in Sample editor allows sample accurate non-destructive and DSP-based editing of mono and stereo audio files
- Entire mixes complete including live inputs, effects and automation can be bounced to disk in realtime
- The transparent POW-r dithering process assures that high resolution recordings retain their true sonic character even at 16bit/44.1kHz CD resolution.
- Hardware independent audio scrubbing
- Hardware independent realtime sample-rate conversion.

MIDI
- Virtually unlimited MIDI tracks
- Non-destructive, realtime quantization, transposition, velocity, track delay, gating and more
- Multiple MIDI editing environments: Matrix Editor, Event List, Hyper Editor, Score Editor and Transform Window
- Ultra-precise MIDI timing using Emagic’s AMT8 and Unitor8 MIDI interfaces
- OMS, MTP (OS9) & CoreMIDI (OSX) support
- A wide range of synchronization options including MTC, MMC and SMPTE ensures that Logic connects easily to both the digital and analog worlds

Effects and Virtual Synths
- Includes a wide variety of high end effect plug-ins as well as three soft synths
- Support is provided for Emagic’s line of virtual instruments as well as third party VST2.0 plugins and virtual instruments under OS9 and Audio Units under OSX

Track-based Automation
- Track-based, sample-accurate automation is provided, with 32 Bit data resolution, for virtually every parameter including effect plug-ins and Audio Instruments

Logic Control Support
- Logic Control is a hardware control surface, co-designed by Emagic and Mackie Designs, that offers complete hands-on control over hundreds of MIDI and audio functions, including Logic’s 32-Bit track automation system.

Screensets and Key Commands
- Instantly switch between 90 screensets, containing customized window configurations including window size, position and zoom settings, using your computer’s keyboard numeric keypad you are able to
- The most important program functions and navigational macros can be quickly accessed by 100s of user-definable Key Commands and MIDI commands

Environment
- Provides extensive control and customization of your external MIDI set-up, audio routing, mixing and real-time effects
- Assign Logic’s software-based processing devices (faders, arpeggiators, delays and more) to create unique controllers for your MIDI gear and audio tracks.
- Create a different environment for your MIDI instruments, audio tracks, audio instruments, etc... and store a Screenset for each one
Arrange Window - Logic's Primary Workspace with an Emphasis on Realtime Composition

- Transport controls
  - Cycle record/playback
  - Punch in/out recording
  - Track solo
  - Metronome and Sync options
  - Tempo and time signature

- Individual Sequence parameters include realtime non-destructive control over quantization, transposition, velocity, dynamics (velocity compression), gate time, delay (by note value or ms) as well as loop on and off

- The Tool Palette includes a pointer, pencil, eraser, scissor, glue, crossfade and other tools for editing audio regions and MIDI sequences - hit your keyboard’s esc key and the Tool Palette will appear at your cursor position

- Track Information
  - Track number, Mute and Record buttons
  - Track icon and name
  - Current automation parameter, meter and mode

- Markers allow you to quickly “jump” to any location in your songs

- Click and drag your mouse from left to right along the timeline to select the desired bars for cycle record/playback

- Click and drag your mouse from left to right along the timeline to select the desired bars for cycle record/playback

- Zoom in and out of the Arrange window (horizontally and vertically) using the telescope tools

- Color-coded automation data is displayed directly in the Arrange window as envelopes with break points that can be freely drawn, edited and scaled

- Automation curves are freely adjustable between convex, concave, s-form or linear shapes

- Because automation is track-based, it can be copied and moved independently of their associated MIDI sequences and audio regions

- MIDI sequences and audio regions can be recorded, arranged and edited in a virtually identical fashion.

File Formats and Compatibility

- Mono, interleaved stereo and split (L/R) stereo audio files can be recorded, imported and exported using Sound Designer II, Aiff and Wave file formats

- REX2 (recycle) files can be imported into the arrange window and in the optional EXS24 mk2 software sampler

- The audio output of ReWire compatible software instruments, such as Propellerhead’s Rebirth and Reason, can be streamed into Logic’s mixer where they have full access to Logic’s extensive array of effects and mixing facilities.

- Built-in Quicktime movie support allows you to efficiently view and synchronize video within your project. An ideal for scoring to picture without the need to synchronize to an external VTR.

- Each editing window features a Catch and Link button that when activated allow multiple windows to interactively follow the currently active window's event selection as well as any movement along the timeline - Notice that the bass region selected in the arrange window is also highlighted in the Audio and Event List windows

- Audio Window
  - Audio files and their associated audio regions, recorded (or imported) into your session, are automatically listed in the Audio window where they are easily organized. Audio files and regions can be auditioned here and then dragged onto the desired track in the arrange window. Double clicking on an audio file or region will launch the selection in Logic's built-in Sample Editor

- Access up to 90 customized Screensets like this one with a single keystroke

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

Adaptive Track Mixer

The Adaptive Track Mixer reflects the track layout of audio and MIDI channels shown in the Arrange window.

Effects inserts and effect sends are available for each input and output object, audio track and audio instrument channel.

Choose the types of mixer objects you want to see – MIDI, Input, Track, Instrument, Aux, Bus and Output.

Easily assign inputs and outputs.

All mixer channel and plug-in parameter movements can easily be recorded using the following automation modes – Write, Touch and Latch and then reproduced using Read mode. Automation can be graphically edited in the Arrange window.

Channel EQ (up to 4 bands with Logic Audio and 8 bands with Gold and Platinum) is provided for each channel.

Select whether a channel is mono or stereo and arm input audio tracks for recording.

Channel fader, pan, mute and solo controls with comprehensive metering.

Customizable Audio Objects

- Audio Track Objects are used for record and playback of audio files.
- Audio Input Objects allow you to monitor live audio inputs with effects. Logic Gold and Platinum add the ability of pre-processing (recording) Input Objects with effects.
- Audio Instrument objects can be created for accessing virtual instruments.
- Bus objects (mono/stereo) are available for use as effects returns and for creating sub mix groups.
- Aux Input Objects (mono/stereo) are available for creating multiple outputs for virtual instruments and for adding functionality to the busses.

Support of More Audio Formats (OS X only)

- Logic 6 can import and export MP3 files. In addition, QuickTime audio formats can be imported and exported including: AAC, Qdesign Music 2, Qualcomm PureVoice, Law, Alaw and IMA formats.

POW-r Word Length Reduction

- POW-r is a high-end dithering algorithm designed by the POW-r consortium — a team of digital audio designers who come together to create one of the audio industry’s most transparent and dynamically stable methods of Word Length Reduction.
- POW-r #1: uses a special dithering curve to minimize quantization noise.
- POW-r #2: (Noise Shaping): uses additional noise shaping over a wide frequency range which can extend the dynamic range by 5-10 dB.
- POW-r #3: (Noise Shaping): uses additional, optimized noise shaping which can extend the dynamic range by 20 dB within the 2-4kHz range - the range the human ear is most sensitive to.
Dozens of effects plug-ins are included covering a wide range of precision and creative processing tools from the standard dynamics, reverb delays and EQs, to unique sound sculpting tools and mastering processors.

All plug-ins operate at 32-Bit resolution, and support sample rates from 11kHz to 200kHz, ensuring outstanding audio quality and making signal overloads virtually impossible.

Third party support is also provided for VST/VST2 (OS9 only) and Audio Units under OSX.

Plug-ins can be accessed in a number of ways including: Inserted directly on to live input channels; audio playback tracks; or virtual audio instruments; they can also be inserted on busses and aux channels and accessed via direct channel routing or via channel sends.

The Plug-In I/O (Platinum only) allows you to insert the signals of an external processor into any audio object channel. A pop-up menu provides access to the I/O available in your audio hardware.

Effects can be assigned to live input channels for monitoring purposes or for pre-processing.

---

**Virtual Audio Instruments**

- Soft synths and samplers including Emagic’s optional ES1, ES2, EXS24, EVP88, EVD6 and EVB3 can be inserted into Audio Instrument channels and seamlessly integrated into Logic’s mixer with access to effects and automation.
- Third party support is provided for VST 2 under OS9 instruments and Audio Units under OSX.
- Playback timing for all audio instruments is sample accurate.
- Logic Audio supports up to 16 audio instruments, Logic Audio Gold supports up to 32 and Logic Audio Platinum supports up to 64.
- Multiple Outputs for virtual instruments is also supported.

---

**Integrated Synthesizers**

Logic 5 incorporates three powerful subtractive analog software synths as standard – The ES M monophonic bass synthesizer, the ES P for the creation of polyphonic sounds and the ES E for ensemble sounds.

---

The Sample Editor provides a wide range of sample accurate waveform editing capabilities from creating regions to performing DSP functions including Normalize, Trim, Silence, Reverse, Fade In/Out, Remove DC Offset, Time compression/expansion and formant corrected pitch shifting using Time Factory II and much more.

The enhanced TimeMachine II time compression and expansion, available in Logic Gold and Platinum, provides five algorithms designed to work with specific source material - Monophonic, Pads, Beats, Version 5 and the default Any Material.

MIDI Editor Windows

Logic's linked editors provide the power to fine-tune your music at any level. View a composition in its entirety or select and make changes to the smallest detail with the Matrix, Event List, Score or Hyper Editors.

The Matrix Editor is a piano roll style editor that offers an intuitive approach to editing the pitch, placement and duration of MIDI events using a vertical piano keyboard and horizontal timeline axis.

The velocity of each MIDI note is represented by the intensity of the events color (blue = 0, red = 127). A velocity tool allows you to adjust the velocity of selected notes.

Use Hyper draw to automate MIDI controller data.

A filter allows you to choose the specific type of data you would like to edit.

The Event List Editor can be used to view and edit the position, track and length of sequences and audio regions in the arrange window as well as let you view and edit individual events (notes, controller data, pitch bend, program change) within MIDI sequences.

The Score Editor is a MIDI editor that displays traditional music notation. It also provides layout functions which make it possible to create professional score printouts quickly and easily.

The Hyper Editor is the ideal Step Sequencer. You can insert and edit note and controller data quickly and easily using only a few simple tools. Event values are represented by vertical bars. Use the pencil tool to insert single events such as program changes or draw sweeping curves to control filter cutoff etc.

LOGIC 6 SERIES continued

DOT - DSP Optimization Technology

- Native support is provided for the latest Apple G4 Velocity Engine-equipped computers including multi-processor models. In some cases, these optimizations can increase the total number of tracks, effects and audio instruments that are available for simultaneous use.
- DOT can effectively double the amount of available CPU power, when DOT optimized plug-in modules are used in Logic. A number of Logic plug-ins are specifically optimized for the latest G4 processors.

Rock Solid MIDI Timing and Synchronization with AMT (Active MID Transmission)

The Logic Series incorporates a proprietary Emagic technology called AMT (Active MID Transmission). Using Emagic's Unitor8 or AMT8 MIDI interfaces with Logic ensures that MIDI timing is precise across all ports, even in the largest of MIDI systems. Literally hundreds of MIDI ports can be addressed, with MIDI data arriving simultaneously at each, no matter how dense the MIDI arrangement. If you need to synchronize with external sources, the entire Logic Series will send and receive MIDI Clock, MTC, MMC and word clock signals, making it ideal for film, TV and post-production facilities.

XSKey Expandable System Key - Copy Protection System

This programmable hardware key for the USB port includes the license for Logic 5, and temporary licenses for all Emagic software instruments. Following the initial launch of Logic 5, you can try out all Emagic software instruments for a period of one month without any functional restrictions.

*Requires PTHD extension
Emagic has released version 6 of the Logic Series. This update provides a new level of processor efficiency and extensive enhancements to the Arrange window that offers more editing and mixing power than ever before. In addition, Logic 6 debuts two new setup and file management solutions — the Setup Assistant and the Project Manager. Users will also benefit from an improved feature set for film scoring, a newly-developed superior sounding EQ and MP3 import/export functionality. Further optimization of the automation system round out this update.

**Logic 6 Arrange and Adaptive Track Mixer Window Features**

- **The Arrange Channel Strip**
  You can view and edit a tracks channel strip from within the Arrange window. Selecting the desired track in the Arrange window will display the corresponding channel strip in the parameter section. This allows you to edit and mix a track without ever leaving the Arrange window.

- **The Channel EQ**
  The Channel EQ is an intuitive 8-band EQ (4-band in Logic Audio) with fixed modes: a highpass filter, a low shelving EQ, four parametric EQ bands, a high shelving EQ and a lowpass filter. Each band is fully parametric. Each channel EQ has an optional “high resolution analyzer” graphic display mode that can be applied pre/post the EQ allowing you to analyze the signal before and after the EQ.

- **Sample accurate display resolution in the Arrange window.**
- **The Marquee Tool is an arrange window tool that allows region and sequence-independent selection and editing of data.**
- **The Video Thumbnail track (Logic Platinum only) displays single frames of QuickTime video, horizontally in the Arrange Window. The higher the zoom resolution, the higher the number of thumbnails will be displayed. A DV-formatted QuickTime movie can be output via FireWire to a standard DV camera or FireWire conversion box allowing you to view the video on a standard TV or video monitor.**
  (Logic Platinum only) Each channel can now be assigned to one or more of 32 available Groups. Each group can be a mix group, an edit group, or both. This feature improves Logic Platinum’s fundamental automation engine while at the same time accelerates workflow and affords users improved live editing possibilities. Such as, improved vocal editing, assigning level meters to a group, or muting drum sets.

- **The “Freeze” button is a CPU resource maximizing feature available to all audio and audio instrument tracks. Activating the “Freeze” button automatically creates an offline bounce of an audio or audio instrument track and disables any of the plug-ins associated with that track. The unprocessed track is then replaced with the processed (or bounced) track thus freeing-up potentially very large amounts of CPU-power which can be used for other purposes. Tracks can be unfrozen at any time for further editing.**

- **Logic 6 also supports Time Stretching directly in the Arrange window. This allows the length of an audio file or a loop to be quickly adapted to the chosen bar.**

- **Sample accurate display resolution in the Arrange window.**
- **The Marquee Tool is an arrange window tool that allows region and sequence-independent selection and editing of data.**
- **The Video Thumbnail track (Logic Platinum only) displays single frames of QuickTime video, horizontally in the Arrange Window. The higher the zoom resolution, the higher the number of thumbnails will be displayed. A DV-formatted QuickTime movie can be output via FireWire to a standard DV camera or FireWire conversion box allowing you to view the video on a standard TV or video monitor.**
  (Logic Platinum only) Each channel can now be assigned to one or more of 32 available Groups. Each group can be a mix group, an edit group, or both. This feature improves Logic Platinum’s fundamental automation engine while at the same time accelerates workflow and affords users improved live editing possibilities. Such as, improved vocal editing, assigning level meters to a group, or muting drum sets.

- **The Offline Bounce feature allows users to bounce tracks faster than real-time or to bounce songs that would otherwise cause system overloads.**

**Expanded Control Surface Support**

Logic 6 can be controlled by the following third-party hardware controller units: CM Automation Motormix, Mackie HUI and Baby HUI, Radikal Technologies SAC-2k and SAC 2.2, Yamaha DM2000, 02R96 and 01V96. These hardware controllers can be used in combination with each other or as part of an expandable Logic Control and Logic Control XT system.
EMAGIC
LOGIC 6 SERIES continued

Quick Automation Access
◆ The integrated One Fader Automation facility allows the selected automation parameter to be controlled by any controller such as a Mod Wheel.

Improved Time Machine
◆ The Time Machine in Logic 6 features a new algorithm that provides enhanced sound quality and more accurate time stretching and pitch shifting.

The Setup Assistant (OSX Only)
◆ The Setup Assistant Starting allows the initial setup of Logic to be quicker and easier than ever.
◆ The Setup Assistant is an unique tool that guides users step-by-step — even the extreme novice — through the process of setting up and configuring Logic. In a simple and interactive Q&A session users learn how to easily create preferences, configure key settings and create their first template song in Logic.

Save As Project
◆ All media files can be saved in a new “project” file format, making archiving and transport of projects created in Logic both efficient and easy.

LOGIC PLATINUM ADDS –
Intelligent Project Manager
◆ The Project Manager consolidates all media files on local volumes by recognizing the dependencies between audio files, sampler instruments, settings and movies.
◆ The Project Manager allows you to rename files, add or edit comments and change references to one, or multiple song files.
◆ Extensive search facilities further enhance the usefulness of this tool which can be accessed directly from the arrange window.

Surround Sound
◆ Surround mixing is available in any of 12 formats (up to 7.1) for audio channels, busses and instruments. Individual formats can be assigned for each track, bus or instrument.
◆ Import and export of OMF (Avid/ProTools) files

Multiple Undo with History
◆ Easy to use multiple undo/redo system with a user definable number of maximum undo/redo steps
◆ The undo/redo history window gives access to a complete script of the song’s evolutionary progress, allowing any step to be selected, and all steps up to that point to be reconstructed. This history can be stored, and reactivated the next time the song is launched.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
Emagic Xtreme Sampler 24-bit

The ESX-24 MKII is a professional 64-voice software sampler whose integration into Logic's mixing, sequencing and sample editing environments makes it an essential component for all Logic users. The ESX-24 MKII provides sample-accurate playback timing, stunning audio quality up to 24-bit/96kHz and is fully accessible to all of the effects and automation capabilities available within your version of Logic. The ESX24MKII's Instrument Editor provides an ergonomic user interface that allows you to quickly and easily assign and edit individual samples for designing simple single sample instrument or complex multi-sample, multi-layered sample instrument. The advanced synthesis engine features an awesome sounding multimode filter section, fast envelopes and three tempo-syncable LFOs as well as an extensive range of modulation routing possibilities.

**Features**

- Multiple instances of EXS 24, each with up to 64 simultaneous voices, are supported within each version of Logic at extremely low processor loads.
- Assign samples to up to 5 stereo pairs and 6 individual mono outputs per instance of the EXS-24mkII.
- The amount of available sample time is limited only to the amount of available RAM in your computer or by available hard disk space when using VSM (Virtual Sample Memory).
- User-defined hierarchical menu structure and intelligent Sample Instrument search facility with naming filter.

**Perfect Integration With Logic**

- Each EXS-24 instance is loaded as an Audio Instrument in Logic's 32-bit internal mixer where it has full access to all effects plug-ins and automation functions.
- Individual samples can be launched directly into Logic's Sample Editor for fine tuning sample and loop start and end points and for applying DSP processing.
- All Sample Instruments and their settings are automatically saved and loaded with your song.

**Sample Format Compatibility**

- Reads AIFF, WAV and SDII in 8 to 24 Bit depths and up to 96 kHz
- Converts AKAI S1000/S3000, SampleCell and SoundFont2 as well as Gigasampler format samples and programs
- Import ReCycled (.REX) files
- The imported samples can be in any bit resolution from 8 to 24 Bits
- A CD ROM with over 500MB of high quality sounds will be shipped to you after registering

**Computer Audio**

ONE HOUR FREE PARKING
AT 349 W. 34th STREET (with purchase of $100 or more)
The Plug-in window gives you access to all of the sampler’s synthesizer parameters such as filters, LFOs, envelopes and more.

The pitch of the Sample Instrument can be tuned ±2 octaves in semitone increments. Pitchbend has a selectable range of ±36 semitones. Glide and Pitch sliders allow you to control portamento time. Random detune simulates the tuning drift of analog synthesizers.

“Hold” lets you define the modulation source assigned to control sustain. “Xfade” allows you to crossfade between layered sample Zones with adjacent “Select Range” settings.

The Modulation Matrix supports up to 10 modulation routing configurations each with an independent source and destination. A fader lets you set the modulation depth with a positive or negative value. A second source can be added allowing you to manipulate the strength of the original source via an external controller (i.e. key velocity can be used to control LFO speed which in turn is controlling the filter’s cutoff). Individual routings can be bypassed.

The Amplitude Envelope features control over attack, sustain, and release. A dedicated ADSR envelope is provided for controlling the filter’s cutoff frequency. The attack parameter is controllable via velocity. The decay time of the filter and amplitude envelopes can be shortened for higher notes to emulate the decay time response of acoustic instruments. A convex or concave response curve can be applied to the filter and amplitude envelopes attack slope.

Three LFOs can each be assigned as a mod source in the Modulation Matrix. The Rate for each LFO can oscillate freely between 0 and 35 Hz, or can be tempo synchronized in values between 32 bars and 1/128 triplets. LFO one and two provide a choice of Triangle, rising and falling Sawtooth, Square up and Square down, a random stepped and smoothed random waveforms. LFO three always uses a triangular waveform. LFO one is a polyphonic LFO with key sync. This means that it is triggered individually for each note. An envelope generator lets you control the decay or delay of LFO one. LFO two and three are monophonic and runs continuously.

The Multimode Filter features a cutoff frequency, resonance, drive (distortion) and key follow controls. A choice of three filter types: 12dB/oct High Pass and Band Pass filters as well as a Low Pass filter with four steepness curves — 12dB/oct, 18dB/oct, 24dB/oct classic. When using the Low Pass Filter, a Fat switch helps preserve the strong bass even with higher resonance settings. The filter section can be turned off to conserve polyphony.

The pitch of the Sample Instrument can be tuned ±2 octaves in semitone increments. Pitchbend has a selectable range of ±36 semitones. Glide and Pitch sliders allow you to control portamento time. Random detune simulates the tuning drift of analog synthesizers.

The EXSP24 sample player runs on host applications capable of supporting VST 2.0 Instruments. It includes the intuitive user interface and many of the features which made the Emagic Xtreme Sampler 24 Bit (EXS24) so successful. As with the EXS24, the EXSP24 can play samples ranging from 8 to 24 Bit depths, any sample rate from 11 to 96kHz, in any combination. Sample import facilities will include support for WAV, AIFF, SDII and SoundFont2 across platforms. Parameter changes, such as enveloping, filtering and modulation can be saved as a preset. Samples will automatically load as part of saved song files. To edit samples and instruments, Logic Audio and an EXS24 are required.
Logic Control is an ergonomic, expandable remote control surface, co-developed by Emagic and Mackie Designs, that provides the most comprehensive tactile control support available for the Logic 5 Series line of music production workstations. Logic Control offers real-time control over hundreds of editing, mixing, and automation functions for MIDI and audio tracks, plug-ins, and software instruments. Eight full-featured channel strips with 1024 step, ultra-fast motorized, touch-sensitive faders, infinitely variable Rotary V-Pots, and dedicated channel function keys have direct access to any of Logic’s channels using the onboard Bank Switching functions. Other features include dedicated transport controls, a Jog/Scrub wheel, navigational cursor keys, a myriad of automation and function buttons, and a large backlit LCD display that allows all work together to ensure seamless interaction between Logic software and Logic Control and you. The Logic Control System can be extended to incorporate an unlimited number of physical channels by adding multiple 8 channel Logic Control XT expansion modules.

FEATURES

- Bi-directional communication—every change in Logic Control is reflected in Logic and vice-versa
- Convenient hands-on control of Logic 5’s 32-bit track-based automation
- Total recall of faders and displays with song loading
- 100mm Penny & Giles ultra-fast 1024 step motorized faders (8 channel and 1 master) follow value changes immediately
- Each of the 8 channels also features an infinite stepped rotary V-Pot encoder with circular LED graphs and push button; Solo, Mute, Record and track Select buttons; and a signal present LED for audio or MIDI
- Large transport controls with status LEDs as well as a Scrub/Jog wheel and Scrub key with status LED
- 41 function keys with 23 status LEDs plus 8 additional, freely assignable function keys
- 2 x 55 character multifunctional backlit LCD displays parameter changes in real-time—level meters for all channels can be activated, vertical or horizontal including overload display
- Control parameters such as volumes, EQs, MIDI, busses, plug-ins, slot selection, sends, Screensets and more
- Select, launch, and edit sends, EQs, plugins, and audio instruments (Emagic’s as well as third party), without stopping the sequence

Fundamental Operation Modes

- Choose between Track View and Global View to decide whether the channel order in Logic Control reflects the track order in the Arrange window or, if Logic Control’s display will reflect a specific type of channel (MIDI tracks, audio tracks, instruments, aux, busses, ins and outs)
- There are two additional modes selectable from within the Track and Global Views: In Multi Channel View, a specific parameter, such as panning, is displayed for all tracks. This parameter will be shown in the LCD and can be adjusted via the V-Pot. In Channel Strip View mode you can control a complete function group, such as EQ, for a selected channel.
- Each operating mode is immediately accessible with a single key stroke.
- Flip mode exchanges the functions of the motorized faders with the V-Pots allowing you to, for example, control EQ gain using the motorized faders.

Customizable

- Faders, knobs and switches are all easily assignable to any Logic function accessible as a Key Command using standard drag and drop methods within Logic’s elegant Controller Assignment window

The Rear Panel

- MIDI in and out provides communication between Logic Control and Logic with true plug & play installation and allows future firmware updates
- Two assignable foot switch inputs can control, for example, Start/Stop and Punch In/Out and one assignable controller input for use as a volume or wah pedal
- International (100-250V) external power supply for standard power cords

Construction

- High-quality, durable components including a sturdy 1mm steel chassis and case

Third Party Compatibility

- The Logic Control System can control every OM S-compatible Mac OS 9 audio and MIDI application, that offers support of the Mackie Control or the Mackie HUI including Pro Tools (including Pro Tools LE and Pro Tools Free), Digital Performer and Nuendo. This is ideal if you need to switch between different host programs, and want a dedicated control surface at the heart of all of them.

www.bhphotovideo.com
**Logic Control XT - Extension Unit For Logic Control**

- Adds eight complete physical channel strips and an LCD to your Logic Control system using the same high-quality key components as the Logic Control.
- Practically unlimited number can be added to your system allowing greater customization and extending the number of simultaneously adjustable parameters.
- Each Logic Control/XT combination forms a Control Surface Group (CSG). Each CSG can control different parameters; e.g. one group controls volume/pan and the second one controls an audio instrument.

**Why MIDI and not Ethernet?**

Each Logic Control or XT unit requires a discrete MIDI in and out connection. MIDI, as a protocol, was designed for realtime performances. It has, for many years now, proven to be accurate enough for that most timing-sensitive of MIDI events – note information. By comparison, the timing of controller events is far less critical. To move a fader to a target value, an amount of data equivalent to a single note event is all that is required. In conjunction with the fast Penny & Giles motorized fader units, there is more than enough head-room in MIDI's bandwidth to deal with the most complex mixes. MIDI, in comparison with Ethernet, provides simple connectivity and proven, stable low-latency performance.
24-bit / 96kHz Multi-channel USB Audio Interfaces

The EMI 2I6 and EMI 6|2m are portable USB audio solutions providing professional 24 Bit audio quality at 44.1, 48 and 96 kHz sample rates. The EMI 2I6 features two analog inputs, six analog outputs and S/PDIF I/O while the provides EMI 6|2m six analog recording and two analog playback channels and two cinch sockets, which can be used as either S/PDIF digital I/O, or as MIDI in and outputs. Both units are extremely lightweight and compact — approximately the size of a video cassette, and are powered directly via your computer's USB port — ideal for mobile recording with notebook computers. Both units also employ Emagic's low latency technology which guarantee monitoring of audio input signals with no perceptible delay as well as realtime performance of software synths. Both interfaces are compatible with Core Audio under Mac OS X as well as SoundManager and ASIO using Mac OS 9.1 and higher.

FEATURES

They Both Feature

◆ 24 bit A-to-D and D-to-A converters
◆ Support is provided for 16 or 24 Bit audio resolutions at 44.1, 48 and 96 kHz sampling rates

EMI 2|6 Inputs and Outputs

◆ The EMI-2|6 features two analog inputs, six analog outputs using unbalanced RCA (phono) connectors – compatible with -10 dBV and +4 dBu audio levels
◆ Coaxial stereo S/PDIF digital I/O is also provided
◆ Also includes a stereo headphone jack, with independent volume control

EMI 6|2m Inputs and Outputs

◆ The EMI-6|2m features six analog inputs with and two analog outputs using unbalanced RCA (phono) connectors – compatible with -10 dBV and +4 dBu audio levels
◆ 2 cinch sockets can be used as either a coaxial S/PDIF digital I/O or as a 16 channel MIDI In/Out port

Visual Monitoring

◆ Status LEDs for all interface modes
◆ Signal presence LEDs for all inputs and outputs

Zero Latency Monitoring

◆ Latency-free hardware monitoring allows you to monitor the audio recording channels with no audible delay. The stereo monitor signal can be routed to the analog, digital or integrated headphone outputs.

Ideal for Virtual Instruments

◆ Emagic's advanced Low Latency technology that ensures that software-based virtual instruments such as Emagic's EVP88, EXS24, ES1 and VST2.0-compatible instruments can be played in real-time.

The USB Advantage

◆ The unit is automatically recognized by the computer, making installation simple and painless
◆ Because power is supplied via USB there is no need for additional cabling (an optional power supply is also available from emagic)
◆ Integrated USB HUB provides two additional USB ports
◆ Doesn't require any free PCI or other card slots — no need to open up your computer
◆ Hot plug capability means that the interface can be connected and disconnected without turning off the computer

The EMI 2|6 - An Ideal Surround Sound Solution

The EMI 2I6 provides an affordable surround mixing hardware solution via suitable audio software, such as Logic Audio Platinum. All Surround formats up to, and including 5.1, are supported. This makes the EMI 2I6 the ideal companion for the production of surround sound audio mixes for DVD or film distribution.

System Requirements

Free USB port; CD-ROM or DVD drive

MACINTOSH:

Minimum: Mac OS 9.1
Recommended: Mac OS X 10.2.2 or higher
Compatible with Core Audio (Mac OS X), SoundManager, ASIO (Mac OS 9)

WINDOWS:

Minimum: Pentium or compatible with 233MHz and 64 MB of RAM (under Windows 98 SE 3)
Recommended: Windows XP with Service Pack 1 (SP1)
Compatible with DirectSound, MME, ASIO and EASI applications
The ideal MIDI interface for USB-equipped laptop computers, or for smaller desktop installations.

- Two MIDI in ports and four MIDI out ports provide you with 32 input and 64 output MIDI channels.
- USB connection provides both superior MIDI timing and power. An LED confirms USB activity.
- Minimum size and weight
- Two slip-resistant rubber inserts bind the housing providing extra stability
- MIDI activity on each port is indicated by a dedicated LED.
- Software configurable Patch Mode allows the MT4 to be used as a MIDI patch bay with up to 32 patches that can be saved and recalled.
- Directly supported by Logic Audio and MicroLogic AV Version 4.01 and up and by SoundDiver 2.07 upwards
- Supplied drivers provide compatibility with OMS-compatible software

AMT8 Features
- 8 MIDI In and outs with Activity LEDs
- Networkable (up to 8 units)
- Mac compatible (AMT, MTP emulation and OMS)
- Windows 95/98, Windows NT 4.0, Windows 2000 and Windows XP compatible (AMT, MME)
- MME compatible multi-client MIDI driver (multiple midi programs can use different MIDI ports simultaneously)
- Stand Alone Operation with 32 Patches
- Panic/Patch button
- USB connection (PC/Mac) as well as RS-422 for Macintosh and RS-232 for PC
- Directly supported by Logic Audio and MicroLogic AV Version 4.01 and up and by SoundDiver 2.07 upwards
- Supplied drivers provide compatibility with OMS-compatible software

Unitor8 MkII Adds
- LTC Generator and Reader with 1/4” I/O jacks and read/write status LEDs
- LTC Sync at 12-100% original tape speed - forward and rewind
- VITC Generator and Reader with S-Video connectors and read/write status LEDs
- VITC-Sync during single frame advance forward/back
- Timecode Video Burn-In - also during LTC Sync
- Timecode Refresh function, adjustable Freewheeling, Jam Sync function, Adjustable MTC Full Frame Message
- Click input allows an audio trigger signal or foot switch to be the synchronization source
- Operating system can be updated via SysEx

Active MIDI Transmission
A segment of the sequencing engine of AMT compatible software, (e.g. Logic Audio), is put into the MIDI interface, (AMT8 or Unitor8 MkII), where it takes care of sending the MIDI events to the individual outputs with the highest possible timing accuracy. At the same time, the transfer of data from the computer to the interface is optimized with extreme efficiency by sending notes in parcels during the pauses between the musical events. These parcels are then unpacked in the interface and sent to the individual outputs at precisely the required time.

Sound Management

- SoundDiver creates collections of SysEx data called Libraries, which can contain programs, sounds, combinations, multi’s, effects, or other data independently of how they are managed in the respective hardware devices. This simplifies the task of sound management by allowing you to organize data in using a consistent methodology within the software.
- Libraries can contain compilations of sounds from different devices or can be specific to each device.
- All data can be sorted freely or automatically by name, module, data type, date, or comment.
- The library functions allow you to quickly find the right sounds, for example, by searching a specific sound category such as “pads” within your entire system. A new library can then be created from this result, with all the dependencies between source libraries intelligently managed.

Hardware Controllers

- Remotely control every MIDI device in your studio using a central hardware control surface, such as the Logic Control.
- Free Controller Assignments currently allow virtually every parameter of every editor to be controlled by any MIDI message – an ideal solution for editing, or accessing the live performance potential, of your MIDI instruments and effects devices such as delays, filter banks, reverbs.
- MIDI controllers with the appropriate support will display the current parameter assignments. If equipped with motorized faders, they will even follow every move you make on screen.

AutoLink

- AutoLink is an active connection between Logic and SoundDiver that allows you, for example, to display patches by name rather than as a list of program numbers.
- Opening a song transfers all included sounds and patches to your MIDI devices.
- Edits and parameter changes made in SoundDiver can be recorded in Logic.
- Screenset switching is synchronized between Logic and SoundDiver, making the two applications behave like a single program with all the inherent advantages.

Includes editors and librarians for almost 600 MIDI devices

Once launched, SoundDiver automatically scans and identifies your devices and displays them onscreen, along with their parameters.

The attractive 3-D look with photorealistic device icons and clearly laid-out user-interface allows you to easily edit every aspect of your setup with just a few mouse clicks.

Access all the potential of your synthesizers and MIDI devices.

Virtually unlimited undo and redo steps

Create randomly generated sounds, copy or paste complete function blocks or all adjustments of a complex envelope.

Freely definable key and MIDI commands and screensets help to speed up your work allowing you to be more productive and create sounds faster and easier.

Refined help system offers context sensitive help and ToolTips.

Universal Sound Editor

SoundDiver 3.0 is a complete and up-to-date MIDI Editor/Librarian that allows you to conveniently edit every parameter, and catalog, store and organize the patches for almost 600 different MIDI devices. SoundDiver’s slick user interface features graphic representations of all editing parameters with switchable editing depths as well as photorealistic representations of your MIDI devices.

A user definable Key and/or remote MIDI command is available for almost every SoundDiver function. AutoLink offers advanced communication with Logic Audio that allows you to display proper patch names within Logic as well as synchronized the switching of screensets. External hardware control surface support allows you to edit and control devices remotely via MIDI.
Professional Red Book Audio-CD Mastering and Burning Software

WaveBurner Pro is Emagic's professional, award winning Red Book audio-CD mastering and burning software for the Mac OS. WaveBurner Pro allows you to quickly and intuitively assemble a playlist of tracks using non-destructive editing of regions and crossfades, plus the creation of break, track and index markers. WaveBurner Pro's comprehensive plug-in support, audio material can be further refined and processed in WaveBurner Pro. A host of mastering plug-ins from the Logic Series is included for applying to individual regions or to the final mix. Third Party VST plug-ins are also supported. Waveburner Pro is compatible with a wide range of internal ATAPI and external FireWire and SCSI CD burners with support for write speeds up to 32x.

FEATURES

- Create Red-Book-compatible CDs with support for full PQ editing from a variety of audio file formats
- CDTEXT support
- Supports Copy Prohibit, Pre-Emphasis, ISRC number and UPC/EAN code
- Recording Function
  - All processing is done at an internal 32-bit floating point resolution until the final mastering stage where the signal is converted to the 16-bit audio CD standard using the acclaimed 'POW-r' (Psychoacoustically Optimized Wordlength Reduction), dithering algorithm which uniquely reduces word length without adding noise or tonal coloration developed by the POW-R Consortium LLC
  - Real-time conversion to 44.1kHz from high definition audio files up to 24 Bit/96 kHz
- Editing
  - Non-destructive editing within the Waveform Window of Tracks, Pauses, Indices, Level, Fades and Crossfades
  - Create multiple tracks from one audio file or a single track from multiple audio files
  - Crossfade support, including S-shape curves, allows you to make silky smooth transitions between audio regions
  - Audio in track pauses
  - First track number larger than 1 possible

Integrated Mastering Plug-Ins

- A suite of precision mastering plug-ins are provided for taking on critical mastering tasks. These include:
  - Fat EQ
  - Compressor/limiter
  - Multi-band compressor
  - StereoSpread
- A number of audio restoration tools are also provided for removing undesirable noise artifacts from cassette or vinyl recordings without destroying the top or bottom end of an audio file
- A virtually unlimited number of plug-ins can be inserted at one time, the total number depends on CPU performance
- Compatible with third party VST plug-ins

Supported Data Formats

- Direct loading of WAV, AIFF, SDII (also split stereo) files is supported
- MP3 file import and conversion to CD audio is also supported
- Disc image export/import
- Export the Tracklist as text file

Supported Audio Hardware

- Audiowerk2 or Audiowerk8
- SoundM anager, ASIO, Direct I/O

System Requirements

- PPC 604e/200 M Hz, Mac OS 8.6 or higher, 96 MB RAM, QuickTime 4.x for MP3
- Supports all internal CD burner drives from Apple, and all SCSI or FireWire devices which support the Multi Media Command Standard (M M C) or SCSI-3
- Support is also available for many legacy SCSI CD recorders (independent of M M C)
Analog Modeling Synthesizer for Logic

The ES1 was Emagic's first native virtual instrument and since its release in 1999, it has become the staple analog modeling synthesizer for Logic users seeking the classic sounds of vintage subtractive synthesizers. Emagic's Synthesizer One features all of the essential elements that have given analog synthesizers such a lasting presence in modern music production - rich sounding oscillators, fat filters, flexible modulation possibilities and extremely fast envelopes. Playback timing for the ES1, as with all other virtual synths, is sample-accurate and the 32-bit sound engine ensures exceptional sound quality. The ES1 integrates seamlessly into Logic's digital mixing environment where it can be further processed by adding plug-ins. And what's more, every parameter can be fully automated. Includes dozens of preset instruments from bone rattling basses to lush pads and from scorching leads to exotic effects and percussion - all easily accessible using Logic's hierarchal menu system.
Emagic Synthesizer 2 – Advanced Hybrid Modeling Synthesizer for Logic

The ES2 is a unique and powerful software instrument for Logic 5 users, that combines the warmth of subtractive synthesis found in classic analog synths and digital synthesis techniques such as Vector Synthesis, Wavetable Scanning and Frequency Modulation (FM) with a myriad of in-demand synthesis techniques. Each ES2 can be assigned up to 32 voices, each offering three especially flexible oscillators, two filters, extensive modulation possibilities. The Unison function allows you to create massive layered textures up to 32 voices deep. All of these features and more have been wrapped up in an innovative ergonomic user interface to provide you with a seemingly endless realm of sonic possibilities. Includes over 400 sounds created by renowned sound designers that will immediately unlock the awesome potential of the ES2 right out of the gate.
Professional Vocoders and Formant Filter Bank for Logic

The EVOC 20 package contains a suite of three software plug-ins that model a variety of analog vocoders that allow the sonic characteristic of the analysis signal to be printed to the synthesis signal. The first plug-in is the evoc20-PS. It uses a 16 voice, polyphonic synthesizer, playable in realtime over MIDI to emulate classic vocoder effects. The second plug-in, the evoc20-TO, uses a monophonic oscillator to track the pitch of the analysis (input) signal. Each plug-in supports up to 20 bands of filtering, formant stretch and shift high and low knobs that allow you to determine the part of the signal to effected. The third unit is a formant filterbank that uses volume faders for controlling up to 20 filter bands available for the two filters. The elegant and intuitive graphical user interface of each plug-in begs to be tweaked and guarantees instant gratification.

**EVOC20 PS - Polyphonic Synthesizer**

- Combines a vocoder with a polyphonic synthesizer, playable in realtime via MIDI.
- Utilizes a 16 voice dual oscillator polyphonic synthesizer with 50 special waveforms, FM capabilities and colored noise whose signal can be articulated by any input signal, giving you classic vocoder sounds like talking robots, singing strings, percussive choirs and more.
- Up to 20 filter bands can be used for the articulation process
- The Resonance control adjusts the vocoder's sound characteristic
- Formants can be stretched and shifted or modulated by the syncable LFO
- The Unvoiced/Voiced Detector increases speech intelligibility by adjusting the reaction speed to sound changes in the analysis signal.
- The Freeze button holds the latest sound characteristic of the analysis signal
- The Ensemble effect provides that familiar warm, swirling sound.
- Stereo spread control enhances the width of processed signals.

**EVOC20 TO - Tracking Oscillator**

- Similar architecture in most respects to the evoc20-PS (up to 20 filter bands, modulatable formants, controllable filter resonance for sharp or soft vocoder sounds, Freeze, adjustable reaction times and the U/V Detection circuit) except that the evoc20-TO uses a monophonic pitch tracking oscillator, instead of a polyphonic synthesizer to follow the pitch of the analysis signal.
- The oscillator's waveform can be switched between sawtooth and 2 oscillator FM.
- Pitch tracking that can be limited to any musical scale
- Many surprising sounds can be attained when polyphonic input signals or drums are used as the input signal

**EVOC20 FB - Filter Bank**

- The input signal is run through two distinct, fully adjustable analog-style filter banks in parallel
- Up to 20 filter bands per filter can be blended manually or via a syncable LFO.
- Each discrete filter band features independent level controls with the option to dampen frequencies up to 100%, enabling precise and drastic sound sculpting.
- Filter resonance, adjustable filter slopes, and optional distortion provide an expansive range of tone colorings.
- A second LFO, syncable to song tempo, can be used to modulate the formants through the movement of filter bands. Formant movements can also be manually achieved.
Emagic Vintage Piano 88

The EVP-88 is a virtual software instrument that digitally reproduces the unique feel, warm tones and expressiveness of vintage Fender Rhodes, Wurlitzer and Hohner electric pianos with stunning accuracy. These highly sought after electric pianos include the Fender Rhodes Mark I of the Suitcase and Mark I & II of the Stage series, the Wurlitzer Electric Piano 200A and the Hohner Electra Piano, as well as many tasteful variations – there are 12 models in all. Emagic’s native realtime tone generation ensures that each piano responds to every nuance of a player’s performance with impressive realism. The EVP-88 also features a variety of authentic effects including EQ, Distortion, Phaser, Chorus and Tremolo. A group of realtime model parameters are also provided allowing you to adjust stretch tuning, control the volume of the bell and damper as well as control the decay and release time for the tines.

- Emagic’s native tone generation captures the essence of 12 different vintage electro mechanical piano models
- Playable with full polyphony over a range of 88 notes, with 88 voices (CPU dependent).
- Integrates directly into Logic’s digital mixer with sample accurate timing, access to all plug-in effects and automation with total recall.
- Tonal characteristics are easily modified using the variable Decay and Release EG, as well as volume controls for emphasizing Bell and Damper noise.
- Stretched Tuning Curve and Warmth controls add even more realism to the sound.
- Stereo spread can also be quickly modified.

**Effects**

- Two band (bass and treble) EQ controls based on Emagic’s Fat EQ
- Drive (distortion) circuit with gain and tone controls allows you to add just the right amount of bite.
- The variable intensity Chorus adds a final high-quality shimmer
- The four step Phaser with color control and controls and the Tremolo with variable rate and intensity controls recreate classic effects that add movement to your mix. The Phaser and Tremolo also feature an adjustable stereophase control allowing you to add even greater width and depth to the effects.

EVP73 - Emagic Vintage Piano 73

- VST plug-in modeled after the Fender Rhodes Stage Piano Mk II electric piano
- Compatible with any host application capable of running VST 2.0 Instruments
- Provides seamless integration into the host application’s mixer.
- 73-note polyphony and the same core engine, great sound and retro styling of the EVP-88.
- The realtime native tone generation system allows harmonic interaction of generated notes in response to the users playing style.
- Includes the same decay and release envelope generator, bell and damper controls, stereo width and tremolo controls as the EVP-88
Emagic Vintage B3

The EVB3 is an optional software instrument for Logic 5 that not only emulates the sound of the legendary Hammond with stunning authenticity, using Emagic's Component Modeling Technology, but improves upon it by offering an even broader range of musical and creative possibilities. Every nuance of the original, from the tone wheels and the drawbars to the range of Leslie speaker simulations, and other effects, have been faithfully captured and are easily controllable with a graphical user interface that replicates the layout of the original B3. Whether you’re a jazz, gospel or rock organist, or a remixer/producer, you will find the responsiveness and seemingly limitless sonic palette of the EVB3 an indispensable component in your virtual instrument arsenal.

**FEATURES**

**General**
- 32 Bit Engine
- Up to 195 Voices of polyphony per EVB3
- (CPU dependent)
- Sample-accurate playback timing
- Fully automatable and supported by Logic Control

**Tone Generation**
- The very best organs and Leslie speaker cabinets were analyzed to provide Logic 5 users an authentic, realtime emulation of the electro mechanical tone generation of the Hammond B3 Tonewheel Organ including control over key click noises and tone wheel crosstalk attributed to the artifacts and colorations inherent in aged components. Other events such as the loudness robbing and tapering which typified the B3 can also be easily simulated.
- Each tone wheel is synthesized by Emagic’s Component Modeling Technology.
- Rotor cabinet simulation allows you to choose between different cabinet types and horn combinations
- The virtual microphone for the horn can be freely placed at any distance or angle.

**Intuitive User Interface**
- Laid out like the original Hammond B3 organ, with two (Upper and Lower) keyboard manuals and a Bass pedal board.
- Both keyboards provide instant access to different drawbar combinations via 24 preset buttons, available to each manual.
- An additional octave above and below the five octaves of the original, allowing screaming highs and really fat bass sounds
- High-resolution drawbar control system provides over 250 million possible combinations
- The Upper and Lower Manual feature two sets of 9 drawbars each with 8 values.
- The Bass Pedal features 2 drawbars each with 8 values
- Percussion Decay, volume, upper manual level
- Envelope for bass pedals, upper and lower manuals
- You can morph between presets via MIDI
- All parameter modifications can be stored as Settings.

**Effects**
- Leslie Cabinet emulation with Chorale, Brake and Tremolo modes. Can be modulated via aftertouch, sustain pedal or modulation wheel
- 6 Types of Scanned Vibrato with adjustable Rate and Chorus controls.
- 3 band EQ based on Logic’s Fat EQ and Reverb
- A Wah Wah effect with 6 classic filter types can be controlled via any MIDI controller. Even the peak can easily controlled via foot controller
- Realistic tube distortion with tone warp controls and 3 distortion types
- It is also possible to determine the order of the effects in the signal path

**Effects Plugins**
- The Leslie, Vibrato and Distortion effects are also included as separate plug-ins allowing audio tracks to be run through the effects in any order

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
**Emagic Virtual D6 Clavinet**

The EVD6 is a software instrument for Logic 5, which uses Emagic's component modeling technology, powered by a 32-bit floating point processing engine, to flawlessly recreate the classic sounds of the ultra-funky Hohner D6 clavinet. The EVD6 sports a stylish retro-look and an intuitive graphic user interface that is packed with several enhancements that deliver sound creation and modulation possibilities that far exceed those available to the original stringed instruments. Each instance of the EVD6 provides up to 73 note polyphony depending on CPU resources. And like the other Emagic software instruments available to the Logic 5 series, the EVD6 provides sample-accurate playback timing; can be fully automated and is supported by Logic Control.

**FEATURES**

**Tone Generation**
- Authentic, realtime emulation of multiple clavinet models including the Hohner D6 with its characteristic overstrung design as well as a number of exotic stringed instrument sounds are represented in the included presets.
- Component modeling delivers a flawless simulation of the electro mechanical mechanism of the original instruments.
- Key Click on key down/up with Intensity, Random and Velocity parameters emulates key strike and release noises caused by the aging of the strikers in the original.
- As with the original D6, the combination of pick-ups can be freely selected from 4 configurations. The position of the pick-ups can also be changed in realtime or automated to create phaser-like sounds.
- Rocker switches are provided for the Filter section with Brilliant, Treble, Medium and Soft settings. An enhancement of the EVD6, not available on the original D6 is the ability to turn the filter section off.
- Sounds can be easily modified via high-resolution controls that allow precise adjustment of string Decay, Release, Damping, Tension Modulation, Stiffness, Inharmonicity and Pitch Fall.
- Discrete Exciter with Shape and Brilliance controls.
- Stereo Spread control for Pickup or Key.
- Damper wheel control.
- All parameter modifications can be stored as Settings.

**Three Foot Pedal Effects**
- Three integrated foot pedal effects include; Phaser with adjustable Rate and Intensity controls, Distortion with adjustable Tone and Gain controls, as well as a Wah effect with 6 classic vintage Wah Wah filter models.
- The routing order of the effects in the signal path is freely configurable.
- The Wah effect has adjustable Width and Depth controls for creating autowah effects or you can control the wah effect’s cutoff frequency via a MIDI footpedal (or any other MIDI controller).

**Wah Effect Plug-in**
- A Wah Wah / distortion effect is also available as an independent plug-in that can be applied to other sound sources in Logic 5.

**Emagic’s Software Synthesizer Technology**
- Emagic's broad range of software instruments were developed to take full advantage of the capabilities of native sound synthesis and processing.
- Each instrument delivers outstanding sonic quality with minimal latency and ergonomically designed user interfaces.
- Each software instrument integrates seamlessly within Logic's internal digital mixer, where they can access additional plug-in effects as well as the 32-bit automation engine.
- The direct connection of software instruments within Logic's sequencing engine guarantees unsurpassed precision with sample-accurate timing that is superior to any external MIDI synthesizer.
- Another advantage of software instruments is that all effects, mix settings, instrument patches and edits are saved with your song file where and are instantly recalled with your song.
- Software instrument parameters can be easily controlled using external control surfaces including Emagic's Logic Control.
EMAGIC

SOFTWARE BUNDLES

EMI 6|2 m Production Kit: The All-In-One Recording Solution

The EMI 6|2 m Production Kit is a bundle of six complete Emagic products in one package: the EMI 6|2 m USB/Hub/MIDI interface; the latest version of the award-winning Logic Gold recording software; and the Emagic instruments EVB3, EVP88 and the EXSP24 bundled with the Xtreme Digital Sample Library. The EMI 6|2 m is a USB interface that provides six 24 Bit analog inputs and two analog outputs, at sample rates up to 96 kHz, MIDI I/O, a stereo headphone jack and stereo S/PDIF digital I/O, with the latter doubling for MIDI I/O duties. The Logic Gold professional music production software delivers up to 64 tracks of 24 bit/96 kHz audio, 32 bit floating point internal processing, unlimited MIDI tracks and 34 integrated plug-ins with support for third party Audio Unit (Mac OS X) and VST 2.0 (Mac OS 9) plug-ins. The EVB3 is a software-based B3 that uncannily captures the essence of the original with unmatched realism. The EVP88 captures the sound of the legendary Fender Rhodes, Wurlitzer and Hohner electric pianos. The EXSP24 sample player is also included along with the Xtreme Digital sample collection.

Logic Audio Big Box

The Logic Audio Big Box includes Logic Audio 5 audio and MIDI production software, the critically acclaimed EVP73 Emagic Vintage Piano, the astoundingly fat ES1 Emagic Synthesizer, plus the super versatile, ultra low-latency EXSP24 Sample Player, which includes over 600 M B of high-quality samples ready to play. To sweeten the pot, the Big Box also comes with the in-demand Xtreme Analog sample CD containing over 200 fat sounds sampled from classic analog synths. With five individual world-beating Emagic products in one box, this jackpot is no gamble.

Emagic Vintage Collection: Analog Legends for The Digital World

The Emagic Vintage Collection includes the successful, multiple award-winning EVP88, the EVD6 and the EVB3, all for a special price. With the Emagic Vintage Collection, the vintage myths of the Fender Rhodes, Wurlitzer and Hohner electric pianos, Hohner Clavinet and the legendary B3 comes to life in today's computers. Uniquely, these vintage software instruments do not just statically recreate an instrument's tonal characteristics, as would be the case with samples. Rather, they expressively react to the player's every nuance with impressive realism. The use of the Emagic Vintage Collection requires an installed copy of Logic Audio 5.3 (or higher) for Macintosh.

Emagic Synth Collection: A Fine Selection of Synthesis Techniques

The Emagic Synth Collection includes three multiple award-winning software synthesizers for Logic Users: the ES2, the EVO C20 and the ES1 — all in one premium, specially priced package. The ES2 is a brilliant and powerful sounding soft synth with a unique ergonomic user interface that draws from the past to redefine the future. Its combines an extraordinary synthesis engine that delivers exceptional tonal quality in all registers with a complex voice architecture that provides extensive sonic possibilities. Able to combine the full-bodied energy of analog systems with the shimmering detail of glistening digital tone generation, the ES2 owes its enormous sonic wealth to an unsurpassed palette of in-demand synthesis techniques. The EVO C20 package provides Logic users with three powerful tools for sound design: A classic polyphonic vocoder with built-in synthesizer, a formant filter bank, and a pitch tracking vocoder. Each plug-in provides maximum flexibility and features pristine 32 Bit sound quality. As a real synthesizer, the ES1 offers extremely flexible tone generation that puts the entire palette of analog sounds at your disposal: earth-shaking basses, rich pads and textures, screaming leads, ultra-sharp percussion and exotic effects.

For Any Inquiries Regarding Your Order, Call Our Customer Service:

TDM Collection

The TDM Collection combines three sought-after Emagic software products in one specially priced package: ESB TDM, Host TDM Enabler and PTHD Extension. Emagic's ProTools HD Extension (PTHD | Ext) for Logic Platinum (Mac) provides compatibility with Digidesign's ProTools HD system including the latest TDM II architecture, with support for sampling rates up to 192 kHz. The Emagic System Bridge TDM (ESB TDM) is the ideal link between the DSP world of the TDM system and the computer's native CPU processing. The ESB TDM allows you to incorporate native audio tracks, Logic's and VST plug-ins and Audio Instruments into Logic's TDM mixer. The ESB TDM also allows you to use the EXS24 mkII directly in the Aux channels of Logic Audio Platinum's TDM mixer. The Host TDM Enabler allows you to insert the Emagic software instruments ES1, ES2, EVP88, EVB3 and EVD6 – available separately – into aux channels of the TDM mixer, including TDM-compatible hosts other than Logic Platinum, where their audio signals can be further processed with any of the TDM plug-ins. The TDM Collection requires an installed copy of Logic Platinum 5.5 (or higher) for Mac OS 9, apart from the Host TDM Enabler, which can also be used with other TDM-compatible host software.

EXS24 AND EXSP24 FORMAT CD ROMS

Xtreme Analog

The Xtreme Analog CD-ROM contains a vast array of expertly compiled multisampled analog synthesizer waveforms, many of which were generated in stacked or unison mode for maximum impact. These fat, rich analog oscillator waveforms and layers are used as the initial sound source and then shaped using the EXS24 mkII's extensive range of powerful synthesis capabilities including PWM, Sync, FM, cross modulation, filters, envelopes and LFOs. The user-friendly interface of the EXS24 positively invites the intuitive editing of sounds with both individual waveforms and complete Instruments, further enhancing the creative potential of the Xtreme Analog sound library. The velocity-controllable sample start point modulation function of the EXS has been utilized to create a number of dramatic and extremely vivid sound structures. And for the traditionalists, you can check out the exceptionally authentic core sounds of several legendary synthesizers, including the Jupiter 8, Matrix 12 and Oberheim Xpander.

Xtreme Digital

As with Xtreme Analog, the most important goal with Xtreme Digital, was to create the fattest, deepest sounds possible, covering stacked sounds and complex sound variations. Xtreme Digital provides sounds of unparalleled richness, as most of the stereo multisamples equate to a sound comprised of four single sounds from an expensive digital synthesizer or workstation. The complexity and depth of the samples makes many of the sounds on the CD-ROM surprisingly light on RAM, while maintaining the highest possible quality. To create individual sounds from scratch, you will find basic waveforms in the Sampler Instrument/Initial Waveforms folder. A special Highlight of the CD are the 12 Chromatic Kits. These are percussive, metallic synthesizer sounds that have been sampled chromatically. As you'd expect in a multisampled drum kit, each key in the 5 octave range features a different sound. In most cases, these sounds have a atonal characteristic, making them well-suited for drums and percussion.

Xtreme HipHop

With Xtreme HipHop, Emagic and King Tech have compiled the most comprehensive resource available for the types of sounds, loops and performances demanded by the most discerning HipHop, R&B, and Pop producer. Xtreme HipHop contains hard hitting, street-ready sounds from some of Hip Hop's most noted producers and artists. In addition to the traditional rough and nasty street kicks, snares and hihats you would expect from these contributors, Xtreme HipHop offers a huge bank of bonus instrument files and sound bites including: Rhodes phrases, pads, scratches, turntable noises, wah guitars, vinyl hits and more. Every sample on the CD was hand picked and meticulously edited for maximum impact. They deliver fat sounds that have been processed under the advice of some of today's hottest mixers, producers, and engineers. Of course, by using the superb filtering, envelopes, and multi-layering capabilities of the EXS24 or EXSP24 you can contour the samples found on the Xtreme HipHop CDs even further.
Audio Workstation Software with MIDI Sequencing for MacOS

An integrated digital audio and MIDI sequencing production system, Digital Performer provides a comprehensive environment for editing, arranging, mixing, processing and mastering multitrack audio projects for a wide variety of applications. Digital Performer allows you to simultaneously record and playback multiple tracks of digital audio and MIDI data in a totally integrated, creative environment. It features dozens of real-time DSP-effects with easy to use graphical controls, complete automation and supports multiple processor computers. Extensive audio file editing is also included, from the usual cut, paste and copy tools to MOTU’s PureDSP functions, providing independent control over the duration and pitch of audio files with exceptional sound quality. This allows for tempo-conforming drum loops, adding vocal harmonies or even gender-bending vocal tracks. Digital Performer’s award-winning multitrack sequencer design, combined with non-destructive digital audio editing capabilities, provide you with unprecedented flexibility and control over the audio you create. And now, version 4 takes full advantage of OS X’s MIDI and audio services, providing 100% compatibility and interoperability with OS X and all CoreMIDI- and CoreAudio-compatible software and hardware.

Features

Audio

- Unlimited audio tracks (as many tracks as your CPU and hardware will allow) with support for high resolution 24-bit audio up to sample rates of 192kHz.
- Direct support is provided for MOTU’s range of professional audio interfaces, such as the 2408MKIII, as well as a wide range of third party audio hardware using Core Audio drivers. ProTools HD support is expected in the near future as a free update.
- Audio tracks can be mono, stereo and surround (n-channel) tracks.
- The Bounce to Disk feature allows you to combine an unlimited number of audio tracks, along with effects and realtime automation, into a single mono, stereo or surround track. Need to hear 100 audio tracks at one time? Just bounce them down. Original tracks are always preserved, so you can go back and tweak them if needed.

MIDI

- Record and playback an unlimited number of MIDI tracks simultaneously.
- MIDI can be edited with a resolution of 1/10,000,000 PPQ (pulses per quarter).
- MIDI timing resolution is accurate within a single MIDI byte (under 1/3 of a ms) when used with a MOTU USB MIDI interface.
- Individually zoomable tracks, flexible window arrangement, and navigation tools allow for trouble-free manipulation within even the largest projects.

Effects

- Dozens of real-time 32-bit and 64-bit DSP-effects are provided with DP to meet the demands of today’s audio production including EQ’s, dynamics processors, reverbs, modulation effects, delay, filters, preamp simulators, mastering plug-ins and more

Automation

- Everything is automatable, including effects parameters with five advanced automation modes and sample accurate editing of automation data
- Support for control surfaces including Mackie Control, Mackie HUI, CM Labs MotorMIX, Radikal Technologies SAC-2.2
- Save your fully automated mixdown for instant recall at any time, and then create an unlimited number of alternate mixdowns
- Virtually every parameter can be immediately accessed via customized key commands or MIDI controller. You can even save your key command settings and import them into a DP session at another studio.

Audio Editing

- View and edit all of your digital audio tracks in a single, intuitive window
- Audio editing is accurate to a single sample
- Everything from simple dialog editing to complex restructuring of large compositions is as easy as playing with Lego blocks

How Many Audio Tracks?

The maximum number of tracks you can play back at a time depends primarily on your CPU speed, how fast your hard drive is and how much RAM you have. Based on a Dual 1.2Ghz G4 w/512M RAM you can expect to get approximately 140-150 independent tracks of audio with 8-band EQ and dynamics on every track.

For Any Inquiries Regarding Your Order, Call Our Customer Service:
(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
Sequence Editor
Side-by-side display of MIDI and audio tracks — The Sequence Editor window provides combined viewing and editing of MIDI notes, audio soundbites (audio regions), audio automation and MIDI controller data in one window along a single timeline.

This expanded MIDI track uses a graphical Piano Roll style editor to display MIDI events and controller data using 'audio style' breakpoint automation.

Record and insert volume and pan effects.

Zoom in to work on fine details or zoom out for a wide overview.

Soundbites Window

◆ "Drag and drop" audio regions from the soundbites window to any editing window for intuitive placement.

◆ Sort by any parameter (length, bit depth etc.) Trace the genealogy of the soundbite by viewing it's family tree.

Movie track - a QuickTime movie track displays movie frames side by side with MIDI and audio data. DP intelligently displays more frames as you zoom in and fewer frames when you zoom out, so that frames are never obscured by overlapping one another.

Open the various MIDI and audio editors and other windows with a single mouse click.

Movie track

Independant vertical zooming - Both MIDI and audio tracks can be independently resized vertically. Many zoom shortcuts are provided, including the ability to enlarge one track and automatically scale all other tracks to fit in the window.

Scale individual audio track sizes as well as adjust the waveform height within each track.

Non-Destructive Audio Editing
Copy and paste regions to repeat verses or sound effects.
Graphically draw volume and pan automation curves.

Waveform Editor

The Tool Palette includes: arrow cursor, pencil, waveform tool, waveform selector, rhythm brush (for painting percussive patterns in the Drum Editor), magnifying glass, loop insert, and scrub. These tools operate consistently across all applicable windows. If a tool does not apply to the currently active window, it grays out.

◆ The fully-integrated waveform editor provides all of the tools you'd expect from a premium editor including:
  - View and Edit mono and stereo audio files and create soundbite boundaries with single sample accuracy
  - Use the pencil tool for removing clicks
  - A loop tool lets you create perfect loops for your sampler as well as mute and scissor tools

◆ Many navigation tools are provided to help you work more efficiently like scrubbing, jumping to selection or loop boundaries, as well as user-definable zoom levels.

Crossfades help you eliminate unwanted clicks and pops when overlapping soundbites and allow you to perform fade-ins and fade-outs of soundbites. Crossfades (of any length you specify) can also be set to be automatically applied any time you cut, copy, paste, splice and otherwise edit your audio files.

Re-size soundbites by dragging their edges. Split and trim soundbites to work with smaller regions.
**MOTU DIGITAL PERFORMER continued**

**DP’s Mixing Board - a virtual mixing console on your computer screen**

- More flexible than even the most expensive hardware consoles ever made
- Instantly create customized board layouts: drag track strips anywhere you like, and show or hide any combination of tracks - or even mixer sections (like the inserts section) - with a mouse click.
- Save and recall any number of custom Mixing Board configurations
- Assign tracks to plug-ins and MIDI effects processors for real-time output processing
- Faders can respond to control surfaces or any MIDI controller such as a volume slider or pedal, mod wheel or any data slider.
- View your MIDI and audio tracks in a single, unified mixer

- Save multiple effect presets as a single clipping and then drag and drop them onto any track in any mix
- Use Aux tracks to combine hardware instruments and virtual instruments into one mix

**32-Bit and 64-Bit Fully Automatable Realtime DSP Effects**

- 32-bit and 64-Bit realtime effects with easy to use intuitive graphical controls
- Effects can be inserted on a single channel or on a bus and accessed via a channel send
- Effects can be easily organized into folders
- Multiple plug-in windows and surround panners can be opened simultaneously
- Up to 20 effects can be inserted pre or post fader per channel
- The number of simultaneous effects is limited only to the speed of your computer
- Multi-processor support of MOTU’s and third party plug-ins provides nearly twice as much processing power with dual processor CPUs
- Compatible with effects supporting mono, stereo or surround inputs and mono, stereo or surround outputs
- Sidechain inputs allow you to control an effect parameter from any audio signal in mixing environment by busing the audio to the sidechain input.

---

**Included Effects**

- 2, 4 and 8 band EQ
- PreAmp-1 tube-simulation and distortion plug-in
- 3 reverbs
- 2 noise gates including the MasterWorks Gate with real time look ahead gating
- 2 compressors
- A synth-style multimode filter
- Echo & delay effects including a surround delay
- Modulation effects including chorus, phaser, flanger, the Sonic Modulator and more
**Automation**
- Everything in the mixing environment can be automated in real time, including effects parameters, track mutes/solos, effects bypassing, send levels, send mutes.
- Automation can be recorded during playback, or you can draw and edit parameters in the audio graphical editor.
- Support for three types of automation data: ramps, step-step, one-shot (such as waveform type - sine, square, etc.).
- Automation data is always displayed using real-world values such as decibels and milliseconds.
- Mute and Solo automation allows you to bring tracks in and out of the mix in real time as you listen.
- Save your fully automated mixdown for instant recall at any time, and then create an unlimited number of alternate mixdowns.
- Using beat/tempo based automation you can control plug-in effects to move in perfect time with your music, from LFO synchronization to filter sweeps that land on downbeats to multitrack delays that create syncopated rhythms.
- Sample-accurate 32-bit floating ramp automation insures smooth automation movements without unwanted artifacts or zipper noise.
- Five advanced automation modes allow you to: Modify automation data you've already recorded; Scale values up or down while maintaining its current contour; Overwrite automation that's already there - but only after you punch in.
- Effects automation can be controlled in real-time via MIDI allowing you to add seemingly complex sound design elements, such as sequenced filtering effects in minutes.
- Effortlessly create fader automation groups with any fader as the master.
- Support for control surfaces including Mackie Control, Mackie HUI, CM Labs MotMIX, Radikal Technologies SAC-2.2 and more.

**Automatic Audio Conversion**
- DP can automatically convert audio data wherever necessary to conform to the current project's sample rate, sample format and tempo. This greatly streamlines the process of importing audio quickly into your projects.
- Automatic conversion options include:
  - Automatic sample format and sample rate conversion when importing audio.
  - Automatic time-stretching of audio when placing soundbites into a track.
  - Automatic time-stretching of audio when the tempo is changed.
  - Automatic placement of imported audio files in a pre-designated folder, regardless of if format conversion took place or not.

**Acid File Import**
- Acid WAV files can be imported using standard drag and drop. If the Acid file has a tempo and automatic tempo conversion is enabled, it will automatically conform to the sequence tempo when placed in a track.
- REX 2 file import allows you to conform Recycled audio files to your DP sessions tempo.
- ReWire support allows you to integrate outputs from Propellerheads' ReBirth and Reason applications into DP.
- Import and export SDII, AIFF and .Wav files.

**Time Compression/Expansion**
- PureDSP (time compression/expansion) functions provide high quality, independent control over the duration and pitch of audio files allowing you to conform the tempo of drum loops to your project and add vocal harmonies or gender-bend effects to vocal tracks.
- Both PureDSP and off-line audio processing occurs in the background so you can continue working.
- The graphic time-stretching function allows you to grab the edge of a soundbite with the hand cursor and stretch it longer or shorter.

**Sampler Integration**
- The Samplers window lets you transfer samples between your project, supported sampler and the Mac’s desktop (hard drive) via SCSI using simple drag and drop.
- Imported samples are automatically converted into Sound Designer II files and back to the sampler’s format when exported.
- Using the integrated waveform editor, you can define a region of audio from your project, edit it, trim the edges with sample level precision, specify loop points, normalize, fade in & fade out and send it to your sampler - without ever leaving DP.

**POLAR**
- POLAR is a unique, interactive, RAM-based loop recording environment that allows you to layer multiple passes of audio (limited only to the amount of available RAM) without having to stop recording.
- Use POLAR to layer vocal harmonies; generate mesmerizing polyrhythms; build an entire song or just plain jam.
- When going for that ‘perfect take’ POLAR can mute the previous take for you automatically so you can concentrate on the music not on playing engineer.
- Because POLAR records audio directly to RAM, you can overdub on the fly without affecting your disk tracks.
Adjustable PPQ
The display resolution can be adjusted to 480, 960, 1920 or any number from 2 to 10,000 PPQ and each tick value can be displayed with up to four decimal places. For example, if you normally edit MIDI data at 480 PPQ, you can set your edit resolution to 480,000 for 1000 times more precision. With the resolution at its maximum value of 10000.0000, you can nudge a MIDI event by as little as one one-hundred millionth of a quarter note.

Non-Destructive MIDI Effects Plug-ins
- A variety of MIDI processing plug-ins can be inserted into the mixing board window and applied to your MIDI tracks non-destructively in real time.
- Bundled MIDI plug-ins include: Arpeggiator; Echo; Remove Duplicates (gets rid of duplicate events on the same tick); Transpose and Shift can all be applied non-destructively and in real-time.
- Plug-in settings can be saved and recalled for use on other tracks or in other sessions.
- Realtime MIDI Effects can be 'printed', (destructively applied) to the track. This allows you to add effects to certain portions of a track, instead of the entire track.

QuickScibe Notation Window
- Print the whole score or individual parts
- Continuous scrolling moves the music under the wiper which stays fixed to the center of the window.
- Support for five different clefs: treble, bass, grand staff, alto and tenor clefs.
- You can choose a specific instrument transposition as well as a score transposition for each instrument.
DIGITAL PERFORMER 4.0 AND MAC OS X SUPPORT

- Universal compatibility and interoperability with Mac OS X and all CoreAudio- and CoreMIDI-compatible software and hardware. No special drivers or wrappers — just install your software, plug in your hardware, and go.
- Operate multiple audio hardware systems simultaneously with Digital Performer — use your MOTU 828 FireWire audio interface together with your MOTU 2408mk3 PCI audio interface - or use any combination of CoreAudio-compatible interfaces.
- Mac OS X's Audio MIDI Setup utility delivers universal MIDI system management. DP4 shares a common studio setup with all of your Mac OS X MIDI applications.
- Easy device remapping from FreeMIDI to CoreMIDI when you open a project created in an earlier version of Digital Performer.
- Mac OS X's MIDI device patch lists and drum note names allow you to view the sounds in your MIDI synthesizers by name in Digital Performer's patch lists. Build drum kits with instrument names like “808 kick” and “sizzling hat” rather than note numbers. All of FreeMIDI's of patch lists have been ported to Mac OS X, where they can be used by any CoreMIDI-compatible software.
- Support for interapplication MIDI - Digital Performer can publish an unlimited number of MIDI inputs and outputs, allowing it to transmit and receive a virtually unlimited number of MIDI data streams to and from other CoreMIDI-compatible software.
- Mac OS X's MIDI Time Stamping achieves a 12th of a millisecond MIDI timing accuracy on input and a 3rd of a millisecond on output when used with a MIDI Time Stamping compatible hardware including MOTU's rack-mount MIDI interfaces.

DIGITAL PERFORMER continued

Surround Sound

- Panning movements are fully automatable.
- MacOS Input Sprockets support allows you to connect a compatible USB joystick to your Power Macintosh and use it to control any MOTU or third-party surround panner.
- Record, edit and apply effects to multichannel tracks as easily as mono and stereo tracks - master the multichannel mix using a wide range of channel effects, including the MasterWorks Limiter and bounce the surround submix to disk or record the output of a multichannel mic setup or print a multichannel rever.
- The included Auralizer effect is a room simulator that allows you to localize a sound in space using psychoacoustic cues - design the size and absorptive characteristics of the space you wish to place your audio, then place a sound precisely in that space.
- A complete environment is available for creating surround recordings from start to finish including support for quad, LCRS, 5.1, 6.1, 7.1 and 10.2 surround formats.
- Four panner plug-ins are provided including a localizing room simulator - support is also provided for third party panners.
- Each audio track can be assigned to any surround sound format and have its own, independent surround panner.
- The desired surround panner can be controlled with the panning dish available for each track's channel strip in the Mixing Board. Panners can also be opened as separate windows (just like a plug-in).
- Support for interapplication MIDI - Digital Performer can publish an unlimited number of MIDI inputs and outputs, allowing it to transmit and receive a virtually unlimited number of MIDI data streams to and from other CoreMIDI-compatible software.
- Mac OS X's MIDI Time Stamping achieves a 12th of a millisecond MIDI timing accuracy on input and a 3rd of a millisecond on output when used with a MIDI Time Stamping compatible hardware including MOTU's rack-mount MIDI interfaces.

Digital Performer Version 4 features that are on the way - to be supplied as a free update soon:

- Support for Audio Units plug-ins for effects and virtual instrument.
- Support for Pro Tools hardware running under the Digidesign Audio Engine (DAE) including ProTools HD hardware.
- ReWire 2.0 support provides compatibility with Propellerhead Reason 2.0, Rebirth and all other ReWire applications. Direct MIDI I/O support allows you to sequence MIDI tracks in Digital Performer using your ReWire instruments as virtual synths.
- Enhanced QuickScribe notation transcription engine - display and print unquantized MIDI tracks as beautifully engraved music scores, instrument parts and lead sheets.
PCI-based Audio Workstation

A cost-effective solution for recording and editing digital audio without sacrificing the power and flexibility needed in today's project and commercial studio environments, the 2408MK3 has everything you need to turn your computer into a powerful 24-bit/96kHz digital audio workstation.

The 2408MK3 provides 8 channels of pristine 96kHz analog recording and playback, combined with 24 channels of ADAT and Tascam digital I/O - the most ever offered in a single rack space audio interface. Connect up to four interfaces to the PCI-424 card and you have a system capable of 96 simultaneous active input and output connections at 96kHz.

The 2408MK3 is ideal for both the computer-based studio with no mixing board and more elaborate studios built around a digital mixer of any size. For the computer-based studio, the bundled PCI-424 card also features CueMix DSP, a flexible DSP-driven mixing and monitoring matrix that eliminates the need for an external mixer or patch-bay. Connect all your studio gear, including synths, keyboards, and even effects processors. Then control it all from the desktop with no audible monitoring latency and no processor drain on your computer. With 24 channels of digital I/O, the 2408 is ideal for connecting your computer to a digital mixer. Both ADAT and TDIF digital connections are supported at up to 96kHz. And with built-in video and SMPTE synch, you can slave your entire workstation directly to video or SMPTE time code with sub-frame accuracy - without a dedicated synchronizer. The 2408MK3 is cross-platform compatibility with Mac, Windows 98SE/Me/2K/XP and most audio software and host-based effects via WDM/ASIO/Sound Manager drivers. Or use the included AudioDesk workstation software for Mac, with 24-bit recording/editing and 32-bit mixing/processing/mastering.

Inputs/Outputs

- The rear panel of the 2408MK3 rack-mount interface provides eight 1/4” balanced TRS analog inputs and outputs, an extra pair of main analog outs (1/4” TRS), three banks of 8-channel ADAT optical “lightpipe”, three banks of 8-channel Tascam TDIF, RCA S/PDIF (with an extra S/PDIF output), Audio Wire and BNC word clock I/O.
- The extra stereo output has front panel volume control so you can plug powered monitors directly into the 2408MK3.
- You can choose any three banks (up to 24 channels) to be active at one time. This means you can hook up three ADATs, three DA-88s, and eight analog devices all at the same time and access any three banks in any combination of formats. And you can freely switch formats at any time.

Expansion Capability

- A core 2408MK3 system provides 24 inputs and outputs, but it also offers the most expansion ever offered in a single PCI card. Up to four interfaces can be connected to the PCI-424 for up to 96 channels of simultaneous input and output at sample rates up to 96kHz. Think about the possibilities: you could connect twelve 8-channel ADAT or TDIF compatible devices including MDMs, digital mixers, and A-to-D converters to your computer, along with 32 channels of analog I/O, and simultaneously record and play as many tracks of audio as your computer allows.
- All four audio formats (analog, optical, TDIF and S/PDIF) support operation at 44.1, 48, 88.2 or 96 kHz. Each 2408MK3 provides up to 24 channels of simultaneous I/O at 44.1 or 48kHz or up to 12 channels - three 4-channel banks- of digital I/O at 88.2 or 96kHz.
S/PDIF Input/Output

- The 2408mk3 provides S/PDIF digital I/O so you can exchange digital audio with a wide variety of other devices. But the 2408mk3 takes S/PDIF one step further than other systems by providing an extra S/PDIF stereo output of the main mix. You can use this extra stereo digital output for whatever you want. For example, you can leave it connected to a DAT machine so that at any time you can record a stereo mix of the project you are working on - without having to swap cables with another S/PDIF device that may be connected.

- Legacy interfaces can also take full advantage of the PCI-424’s CueMix DSP near-zero latency monitoring.

SMPTE & Word Clock

- The 2408mk3 is the first audio interface to provide on-board video and SMPTE time code synchronization features. This allows you to slave your 2408mk3 system to video, SMPTE time code or both - without a dedicated synchronizer. The PCI-424 card provides a DSP-driven phase-lock engine with sophisticated filtering that provides fast lockup times and sub-frame accuracy.

- S/PDIF jacks (RCA) on the rear panel can be switched via software to become a dedicated SMPTE LTC timecode I/O. However, because the 2408mk3’s sync features are driven by the PCI-424’s DSP, any analog input can be chosen for SMPTE input, and any active channel, digital or analog, can be chosen as a SMPTE time code output.

- Supplied software also provides a complete set of tools to generate SMPTE time code directly within DP’s mixing environment.

- The PCI-424 is expandable to 96 active channels. It supports sample rates up to 192kHz and provides DSP-driven monitoring across 96 inputs without any zero host buffer latency.

- The PCI-424 resolves directly to SMPTE time code via any available analog input with sub-frame accuracy. No separate SMPTE synchronizer required. Also provides word clock and ADAT Sync to achieve sample-accurate digital transfers between digital recorders and the computer.

- Includes a setup wizard for both Mac and Windows platforms to optimize performance for both platforms.

Legacy I/O Support

- Users who already own a 2408mk1II or other PCI-based MOTU recording system can connect their legacy MOTU hardware to the PCI-424 card of a 2408mk3 system.

- All legacy PCI-based MOTU interfaces are supported, including the original 2408, 2408mk1II, 1296, 1224, 24I and 308. Users can mix and match legacy interfaces with the new 2408mk3 card as they please.

- Legacy interfaces can also take full advantage of the PCI-424’s CueMix DSP near-zero latency monitoring.

PCI-424 Card & CueMix DSP

For the computer-based studio, the PCI-424 card features CueMix DSP, a flexible DSP-driven mixing and monitoring matrix that provides the same near-zero monitoring latency as today’s latest digital mixers. CueMix DSP allows you to connect keyboards, synth modules, drum machines, and even effects processors and then monitor these live inputs with an audible delay and no processor drain on the host CPU.

The CueMix DSP engine resides on the PCI-424 card, so it works across all interfaces connected to the card. The CueMix Console software provides an on-screen mixer that gives users hands-on control of their monitor mix, regardless of what audio software they prefer to use. Digital Performer users have the additional option of controlling CueMix DSP directly within DP’s mixing environment.

- The PCI-424 is expandable to 96 active inputs/outputs. It supports sample rates up to 192kHz and provides DSP-driven monitoring across 96 inputs without any zero host buffer latency.

- The PCI-424 resolves directly to SMPTE time code via any available analog input with sub-frame accuracy. No separate SMPTE synchronizer required. Also provides word clock and ADAT Sync to achieve sample-accurate digital transfers between digital recorders and the computer.

- Includes a setup wizard for both Mac and Windows platforms to optimize performance for both platforms.

- Separate front-panel volume knobs provide independent volume control for the front-panel headphone jack and the rear-panel main outputs.

- Across-the-board software compatibility — the 2408mk3 ships with a complete set of drivers for Windows 98SE/M e/2K/XP and Macintosh and is compatible with virtually all audio software on both platforms.

- Core 2408mk3 system all includes AudioDesk, MOTU’s sample-accurate workstation software for Macintosh with 24-bit recording/editing and 32-bit automated mixing, processing and mastering.

Additional Features

- Includes a setup wizard for both Mac and Windows platforms to optimize performance for both platforms.

- Separate front-panel volume knobs provide independent volume control for the front-panel headphone jack and the rear-panel main outputs.

- Across-the-board software compatibility — the 2408mk3 ships with a complete set of drivers for Windows 98SE/M e/2K/XP and Macintosh and is compatible with virtually all audio software on both platforms.

- Core 2408mk3 system all includes AudioDesk, MOTU’s sample-accurate workstation software for Macintosh with 24-bit recording/editing and 32-bit automated mixing, processing and mastering.
The 24I/O is a single rack-space 96kHz audio interface for Macintosh and Windows systems that fulfills the promise of host-based hard disk recording: to record, edit, mix process, and master multitrack recording projects entirely inside your computer. It provides 24 balanced 1/4” (TRS) 96kHz analog inputs and outputs in a single rack-space enclosure, allowing you to connect and record from 24 simultaneous analog sources. Like the 2408MK3, a 24i/o core system includes MOTU’s next generation PCI-424 card, which provides expansion up to 96 inputs/outputs, DSP-driven mixing and monitoring, legacy I/O support, on-board SMPTE synchronization and AudioDesk workstation software for Macintosh.

The 24I/O rack interface which is also available separately as an expansion I/O for 24i/o or 2408mk3 systems provides 5-segment front-panel meters for every input and output and software-switchable (-10/+4) analog input levels.

**Metering**

The 24I/O’s front panel is essentially a dedicated meter bridge for your hard disk recording system. Audio activity for every input and output is represented by its own five-segment LED bar graph.

**Front Panel Power Switch**

Useful in the unlikely event you wish to turn off your 24I/O. An interesting fact about MOTU Audio interfaces is that they are hot swappable. This means you can power off, plug-in, add and remove interfaces without turning your computer off or restarting. In fact, if you already have a 2408MK3 or other PCI-424 system, adding a 24I/O is as easy as plugging in an AudioWire cable.

**24-bit analog TRS I/O**

The 24 analog inputs and outputs are professional-grade 1/4” TRS (balanced/unbalanced) connectors operating at either -10dB or +4dB. The input level can be switched via software in banks of eight inputs. In addition, CumixDSP provides continuously variable input trim with up to 12dB boost per channel.

**Word Clock I/O**

The 24I/O audio interface provides industry standard word clock sync on a single BNC connector that can be programmed for input or output via software. When operating as a word clock input, the word connector allows the 24I/O to synchronize smoothly with today’s digital audio studio. When operating as a word clock output, the word connector can be used as a master clock to drive other digital devices in your studio, such as a digital mixer.

**AudioWire**

Uses the second generation AudioWire introduced with the 2408MK3. It is a high-bandwidth digital audio format capable of carrying up to 24 channels of 96 kHz digital audio in and out of the computer at the same time. AudioWire can readily handle the 24 simultaneous inputs and outputs of the 24I/O audio interface.

**Power Supply**

Comes with an internal power supply and standard detachable IEC power cable. No wall warts or line lumps.
High-Definition 192kHz Audio Interface for Mac and PC

Designed for those who demand the very best audio quality available, the HD192 is equipped with the latest generation 24-bit, enhanced multi-bit 128x oversampling 192kHz converters to achieve a remarkable A-weighted signal-to-noise ratio of 120 dB with balanced XLR connectors throughout. Ideal for surround applications, the HD192’s 12 inputs and 12 outputs can support two simultaneous 5.1 mixes. And the HD192 is full of advanced features, like AES/EBU I/O with sample rate conversion both in and out.

The PCI-424 card introduced with the 2408mk3 is 192-kHz ready. Just connect the HD192 expansion interface to record 192-kHz audio. The HD192 can be purchased as an expander for an existing PCI-424-based MOTU Audio System, or as a core system which includes the PCI-424 card and Audiodesk workstation software.

Front Panel Power Switch
- Useful in the unlikely event you wish to turn off your HD192. An interesting fact about MOTU Audio interfaces is that they are hot swappable. This means you can power off, plug-in, add and remove interfaces without turning your computer off or restarting.

Inputs/Outputs
- All 12 XLR inputs and outputs on the HD192 rear panel support operation at 44.1, 48, 88.2, 96, 176.4 and 192 kHz and use professional-grade XLR connectors operating at +4 dB.

AES/EBU
- The HD192 features stereo AES/EBU digital I/O with built in sample rate conversion. This gives you the ability to integrate external digital audio sources, no matter what the sample rate, while recording audio at higher sample rates on the analog I/O of the HD192. For example, you can still take advantage of the 96-kHz digital I/O on your favorite outboard reverb, while recording audio at 192-kHz.

Word Clock I/O
- An industry-standard word clock input and output allow the HD192 to synchronize smoothly with today’s digital audio studio. The word clock output can be used as a master clock to drive other digital devices in your studio, such as a digital mixer. The AES digital I/O can be driven separately via a dedicated word clock input. You can even slave to a 48kHz clock source, even when the HD192 is operating at 192-kHz.

Audio Wire
- The HD192 uses the same second generation Audio Wire as the 2408mk3. It is a high-bandwidth digital audio format capable of carrying up to 24 channels of 96-kHz or 12 channels of 192-kHz digital audio in and out of the computer at the same time.

Power Supply
- Like all MOTU hardware products, the HD192 comes with an internal power supply and standard detachable IEC power cable. No wall warts or line lumps.
MOTU

828MKII

Firewire Audio Interface with ADAT Digital I/O, Mic Preamps and Sync

An affordable, FireWire-based digital audio hard disk recording system for Mac (OS 9, OS X) and Windows (ME, 2000, XP), the 828MKII takes professional audio recording a leap forward in portability and plug-and-play operation. With a total of 20 simultaneous inputs and 22 outputs, two built-in mic pre-amps, zero latency monitoring, and the ability to synchronize to anything via ADAT sync, the 828 provides a complete studio in a box. Also included with the 828MKII is the acclaimed AudioDesk workstation software for Macintosh as well as ASIO, CoreAudio, Sound Manager, GSIF, and WDM drivers for compatibility with your favorite software.

FEATURES

- Eight 1/4˝ TRS bal/unbal analog inputs and outputs using 24-bit / 96kHz converters. Input level can be switched between +4/-10 for each input via software.
- Two 24-bit 96kHz analog inputs, on the front panel, using 1/4˝ / XLR combo Neutrik connectors, accept either high impedance quarter-inch inputs or low impedance XLR microphone inputs. The microphone preamplifiers provide plenty of gain and individually switchable phantom power and variable trim.
- Dual 1/4˝ Sends allow you to insert a compressor or effects processor into the two front panel input channels.
- Dedicated 1/4˝ TRS main outputs can be connected directly to your powered monitor system.
- Front panel 1/4˝ headphone jack
- A dual function knob on the front panel provides separate volume control over main outputs and headphones.
- Eight channels of 24-bit ADAT lightpipe I/O (4 channels at 96kHz) — switchable to stereo optical S/PDIF.
- Stereo 24-bit / 96kHz coaxial S/PDIF I/O
- Dual FireWire ports – one to connect the 828mkII to your computer and a second port to daisy-chain more devices, including additional 828, 828mkII and 896 interfaces without the need for a FireWire hub.
- The CueMix DSP mixer controls, on the front panel, allow you to create up to four stereo monitor mixes with 20 inputs each. Mix to any four output pairs you wish. Because the mixing takes place in the 828mkII itself, your computer’s processor is free for other tasks.
- The backlit LCD display provides an intuitive interface to configure your entire system. It even allows you to use the 828mkII as a stand-alone mixer.
- Front panel signal present LEDs for the analog, S/PDIF and optical I/O, as well as tach, lock status and clock rate.
- ADAT 9-pin sync input jack allows sample accurate audio transfers with Alesis ADATs, or any device that supports ADAT sync.
- MIDI I/O is provided for accessing a control surface or synth.
- The dedicated 1/4˝ SMPTE I/O allows the 828mkII to resolve directly to an external analog tape deck or video source.
- Word clock input and output (BNC) provides synchronization with a wide variety of digital devices or a centralized word clock source.
- A pedal input allows you to plug-in a footswitch for hands-free punch-in recording (software auto-senses pedal polarity for easy setup)
- A built in international power supply uses a standard IEC cable. No noisy wall warts or line lumps to keep track of.

Bundled Software

Drivers
Includes drivers (ASIO, WDM, GSIF, CoreAudio, Sound Manager) for all popular Mac and Windows audio software.

AudioDesk
AudioDesk gives you all the advanced features you need to record, edit, mix, process and master an audio project in your Macintosh. It even includes MOTU’s ground-breaking PureDSP time-stretching and pitch-shifting technology and dozens of real-time, 32-bit effects plug-ins.

CueMix Plus - Monitoring Control Panel
The 828 gives you the ability to select an input via software and mix it with the main outputs inside the 828mkII to create a no latency monitor mix. Because the mix does not have to travel back to the computer, the result is delay-less patch-thru. This mix is sent out the independent main+monitor outs and headphones. You can adjust the patch thru volume relative to the main mix with the convenient front panel monitor level knob.

www.bhphotovideo.com
96kHz Firewire Audio Interface

The 896 is a 96kHz Firewire audio interface for Macintosh and Windows. It provides everything you need to make great recordings, all in a durable 2U rack mountable package. The 896 is expandable. Should your needs grow in the future, simply add additional 896 or 828 interfaces for more I/O. The 896 is the perfect companion for your laptop computer. With eight built-in mic pre-amps with individually switchable phantom power and no-latency CueMix Plus monitoring, you don’t need a mixer for portable recording. Included with the 896 is the acclaimed AudioDesk workstation software for Macintosh. Of course, the 896 ships with Sound Manager, ASIO, GSIF and WDM drivers for compatibility with your favorite software.

**AES/EBU Digital I/O**
- AES/EBU digital in/out provides digital I/O at any supported sample rate up to 96kHz. Sample rate conversion is supplied on either input or output. For example, it can convert 44.1 kHz audio input to 96 kHz or it can convert 96 kHz audio to 48 kHz.
- In addition, the AES/EBU OUT can resolve to the AES/EBU input while converting, with the input serving as a clock source only (not as an input source).

**Analog Inputs**
- Each input is equipped with a 24-bit 64x oversampling A/D converter, built-in pre-amp, front-panel trim knob, front-panel 48 volt phantom power switch and a rear-panel 3-way input level switch with three settings: MIC, LINE and +4/FIXED.
- The MIC and LINE settings provide front-panel trim, while the +4/FIXED setting bypasses the trim circuit for unattenuated signals up to approximately +18dBu.
- Together, the MIC and LINE settings provide a trim range of approximately 55dB with some overlap. The LINE setting can accommodate a -10 or +4 input signal.
- MIC setting can be used for mics or unamplified instrument pickups (guitars, etc.).

**Firewire Interface**
- Up to four interfaces can be daisy-chained (connected one to another) on a single FireWire bus (without a hub), providing 72 channels of I/O at 44.1 or 48 kHz. At high sample rates (88.2 or 96 kHz), the ADAT optical channels are disabled and two or three interfaces can supply analog and AES/EBU I/O for 20 to 30 channels of I/O, respectively (depending on system performance).
- A MOTU 828 FireWire audio interface can also be connected to the second FireWire jack of a MOTU 896. In addition, multiple 828s can be mixed and matched with multiple 896s using standard FireWire hubs.

**Analog Outputs**
- Eight analog outputs on XLR connectors, each equipped with 24-bit 128x “enhanced multibit” D/A converters and their own switch for either +4/-10dB operation.

**Main Outputs**
- These two extra XLR outputs can be connected directly to a set of powered monitors. A front panel volume knob is provided for convenient hands-on volume control.
- The main outputs mirror the signal on outputs 1 and 2. In addition, they sum these signals with up to two channels of live input from a pair of inputs via the 896’s no-latency monitoring bus. You may choose any two analog or AES/EBU inputs (via software) as the monitor inputs. A separate knob is provided on the front panel for convenient hands-on adjustment of the live input level, relative to the main mix.

**Word Clock I/O**
- I/O allows the 896 to resolve word clock via a standard synchronizer such as the MOTU M1 Di Timepiece AV. Lock to SMPTE time code, blackburst, video or other external clock sources. Slave to word clock at half- or double speed. Send word clock at half speed when running at 88.2 or 96 kHz.

**Additional Features**
- Front panel volume control of monitor input level on main outs
- Front panel headphone jack with independent volume control
- Extensive multi-segment front panel metering for all I/O and clock modes
- Software-configurable peak and clip hold times
- Trim controls for all inputs on front panel
- Front panel footswitch/punch jack
Multitrack Audio Recording Software — Bundled with all MOTU Audio Interfaces

AudioDesk is a full-featured audio workstation software package for Mac. This is not a watered-down “recording-only” version of another company's software. Instead, the software provides all of the high-end features you'd expect in a serious workstation application, like 24-bit recording and real-time, 32-bit effects processing.

The software includes multi-track waveform editing, sample-accurate placement of audio, a complete virtual mixing environment with up to 64 stereo busses, automated mixing, graphic editing of mix automation, scrubbing, trimming, spotting, crossfades, support for third-party effects plug-ins (in the MOTU Audio System and Adobe Premiere formats), unlimited digital track bouncing (including effects and automation), and much more.

**Effects**

- Real-time effects all of which are processed with 32-bit, floating-point calculations.
- Because the effects are host-based, the faster your Mac, the more simultaneous effects you can use.
- An entire rack of outboard effects gear right on your Mac —
  - Up to 40 bands of parametric EQ per track
  - Dynamics Processing (expander, compressor, limiter, gate)
  - eVerb reverb plug-in (includes acoustic modeling)
  - PreAmp-1 tube pre-amp simulator (simulates tube warmth and presence, as well as wild distortion effects)
  - Chorus
  - Echo
  - Flange
  - Autopan
  - Tremolo, and more
- More real-time effects are available from 3rd party companies including AnaTares, Kind Of Loud, Waves, TC Works, Native Instruments. The Adobe Premiere plug-in format is also supported

**Non-Destructive Editing**

- View and edit all of your digital audio tracks in a single, intuitive window
- Graphically draw volume automation curves and pan sounds from left to right
- Select only the tracks you want to see or show them all. Zoom in to work on fine details or zoom out for a wide overview
- Everything from simple dialog editing to structuring complex musical arrangements is as easy as playing with Lego blocks
- Re-size soundbites (audio regions) by dragging their edges
- Scrub digital audio to find exact start and end points for edits
- Split and trim soundbites to work with smaller regions
- Strip Silence works just like a noise gate with adjustable threshold, attack & release
- Crossfade lets you create seamless transitions between overlapping soundbites — eliminating unwanted clicks and pops
- Copy and paste regions to repeat verses or sound effects
- “Drag and drop” audio regions from the soundbites window to any editing window for intuitive placement
- Even import material from your favorite sample CD-ROMs, then use any of AudioDesk's editing functions to customize them for your music
Automation

- Mixing Board window gives you a virtual mixing console on your computer screen.
- Ride faders and knobs during playback to record automated mixes.
- Create snapshots of the entire mixer - or any portion of it - anywhere in your sequence with the click of a button.
- Save your fully automated mixdown for instant recall at any time, and then create an unlimited number of alternate mixdowns - all available from this menu for instant recall.
- Easily create fader automation groups with any fader as the master.
- Each track has its own solo, mute and automation enable/disable buttons.
- Instantly create customized board layouts — drag track strips anywhere you like, and show or hide any combination of tracks - or even mixer sections (like the inserts section) - with a mouse click.
- Any number of custom Mixing Board configurations can be saved and recalled at any time.
- Assign tracks to plug-ins for real-time output processing.
- Faders can respond to any MIDI controller such as a volume slider or pedal, modulation wheel or any data slider.

Transport/MMC

- Control any MMC-compatible (MIDI Machine Control) recorder including Tascam DTRS, Alesis ADAT and others.
- MMC devices will chase AudioDesk’s transports with frame-accurate timing. Set auto punch-in and preroll times.

OMF Export To Pro Tools

- Built in OMF integration tools allow you to seamlessly export your project to a ProTools environment.
- Besides copying audio data the OMF Export translates critical information such as session offset, audio region placement, and crossfades (either rendered as audio regions or transferred as editable crossfades) is preserved.

Audio Region Layering

- The Audio Layering feature lets you record into a track as many times as you want and then have complete, intuitive graphic control over all of the separate takes to build the perfect performance.
- What you see in the Audio Graphic Editor is always exactly what you will hear.
- Soundbite layering commands give you all the control you need to manage even the most complex multilayered tracks.

Drag And Drop Ease

- AudioDesk provides drag-and-drop consistency and ease throughout.
- Add markers to identify SMPTE hit points — grab a marker from the marker well in the main tracks window and drop it right on the time ruler.
- Add a sound effect or other bit of audio by dragging it from the Soundbites list and dropping it in the main waveform display.
- Quickly build a playlist of audio regions by dropping them in an event list.

AudioDesk is bundled free with all MOTU Audio Interfaces
MOTU manufactures a wide range of MIDI interfaces for both Mac and Windows compatible computers to meet the requirements of any MIDI Setup. Whether you are looking for a basic 2x2 interface or the ability to integrate video, hard disk and tape based recording systems, MOTU has got you covered. And now, MOTU’s award-winning line of MIDI interfaces are available for those of you with USB equipped Macs and soon PC’s. Featuring easy to use plug-n-play setup as well as hot swap capabilities that allow you to plug and unplug your interface even when your computer is turned on. For even greater flexibility, you can mix and match any interfaces and even use multiple interfaces connected to a standard USB hub. From the affordable FastLane to the top of the line MIDI Timepiece AV, MOTU has a USB interface for every application and price range.

**FastLane USB**

2x2 MIDI Interface for Mac & Windows

A professional MIDI interface for the home studio, FastLane installs in seconds and opens your computer to a world of music software. And FastLane’s unique advantage: a MIDI thru button allows you to play to your gear even when your computer is turned off—without having to disconnect cables. No other USB interface offers this feature for this price.

FastLane takes full advantage of USB, giving you increased MIDI throughput, better timing accuracy, support for “hot-swapping” and plug-and-play expansion. Need to connect another sound module or synth? No problem. Just add another FastLane via a standard USB hub. Or mix and match FastLane with another multi-port USB interface. FastLane is specially engineered to operate with multiple USB devices, so your software will never lose contact with it, regardless of how many times you restart your computer or how many other USB devices you connect.

- Two 16 channel MIDI I/O ports provide 32 simultaneous channels of MIDI inputs and outputs for USB-equipped Mac and Windows 98/ME computers.
- USB allows hot swapping and plug-and-play expansion — add another FastLane to a standard USB hub or mix and match interfaces to suite your needs.
- Connects any MIDI (Musical Instrument Digital Interface) device, such as a synth or sampler, to the computer via USB.
- MIDI Thru button splits MIDI signals from each input to both outputs simultaneously allowing you to play a MIDI sound module from a MIDI keyboard or other controller even when the computer is turned off.
- Powered by its connection to USB — no power supply or batteries are needed.
- Four status LEDs indicate MIDI activity.
- Compatible with both FreeMIDI and OMS on the Mac.
- Available in graphite, charcoal, indigo, red and sage.
- Includes a USB cable and easy-to-install software drivers on CD-ROM.
Single 2x4 MIDI/SMPTE Interface

This 2 in, 4 out 32-channel MIDI/SMPTe interface works with either your Macintosh or Windows computer at a great price. Installs in seconds and opens your computer to a world of music software. Fully independent, paired outputs provide 32 separate MIDI channels. And the Pocket Express’s unique advantage in its price range: a computer bypass button allows you to play your MIDI gear even when the computer is turned off.

Compatible with all Mac and Windows MIDI software. Includes full SMPTe synchronization capabilities in all formats, including jam-sync for trouble-free synchronization. And another Pocket Express unique advantage at its price: front panel SMPTe controls for fast, convenient striping and lockup.

MIDI EXPRESS XT
8-in/8-out MIDI/SMPTE Interface/Patchbay/Merger

The MIDI Express XT USB is a multiport MIDI interface and SMPTe synchronizer for Mac and Windows. Featuring 128 channels, the Express XT is ideal for medium-sized MIDI setups and essential tasks such as MIDI sequencing, multimedia production, and sound management with patch/editor librarian software.

- 8 MIDI inputs and 9 MIDI outputs provide 128 MIDI channels via USB
- Sixteen convenient one-touch front-panel presets (8 factory and 8 user programmable) with memory backup for plug and play performance.
- Converts LTC to MIDI Time Code (MTC) allowing you to sync your computer or any other devices to SMPTe time code.
- Converts and stripes SMPTe in all formats (24, 25, 29.97 drop/non-drop, and 30 fps). SMPTe jam sync with adjustable freewheeling for drop-out free sync.
- Full support for MIDI Machine Control—serves as either an MMC master or slave; distributes transport commands to all other MMC devices.
- Pedal input for momentary foot switch or audio click-to-MIDI conversion.
- Internal power supply (no wall-warts)
- 8x8 MIDI merge matrix works as a standalone MIDI patchbay/merger processor. Bundled software console provides comprehensive routing, merging, and muting on your Mac or PC.
- Route any inputs to any outputs
- Merge any inputs to any outputs
- Mute any MIDI data on any cable
- Re-channelize on input and output
- Recalls setups via MIDI patch change

Micro EXPRESS
4-in/6-out MIDI Interface w/Sync

The Micro Express is a mini version of the MIDI Express XT. It has all of the same features as the Express XT - except that it is smaller and even more affordable. The Micro Express is a half-rack unit with 4 inputs and 6 outputs for 96 MIDI channels.
Combine MIDI with ADATs, ProTools, or video. The MIDI Timepiece AV takes the world-renowned MIDI Express XT and adds synchronization that you really need, like video genlock, ADAT sync, and word clock sync. Even Digidesign superclock! Slave ADATs, Digidesign hardware or word-clock compatible devices to SMTPE and video. Drive your ADATs from your sequencer without an Alesis BRC. Or control everything from an MMC controller like JL Cooper's CuePoint. The MTP AV pulls it all together for stable, centralized, hassle-free synchronization and MIDI networking. For Macintosh, Windows, and stand-alone setups.

The MTP AV is also an 8x8 merger and router. You can merge any combinations of the eight inputs simultaneously to any combination of the eight outputs. Because the MTP AV’s internal memory can be programmed from the front panel, the MTP AV is the perfect choice for live performance applications where fast and flexible MIDI patching is essential. You can take the MTP AV on the road because it can operate with or without a computer. The MTP AV can be set to change scenes in response to patch changes, allowing remote control from any MIDI controller.

Takes full advantage of USB, giving you increased MIDI throughput, better timing accuracy, support for “hot-swapping” and plug-and-play expansion. Need to connect another sound module or synth? No problem. Just add another MIDI interface via a standard USB hub.

### FEATURES
- 8 MIDI inputs, 8 MIDI outputs (128 MIDI channels)
- Networking offers up to 512 MIDI channels
- Support for Mac and Windows in one unit - it can even network Mac & PC to each other
- Video sync input - genlocks to video or blackburst
- ADAT sync output - drives ADATs without a BRC
- Word clock sync output
- Digidesign “superclock” output - drives Pro Tools
- MIDI Machine Control - controls everything, even ADATs, from an MMC sequencer or LRC
- Stripes frame-locked LTC onto video
- Syncs ADAT with Pro Tools
- Slaves ADAT, Pro Tools and your computer to video
- Provides 0.1% pullup/pulldown for digital audio with video

### MIDI EXPRESS 128
8-in/8-out MIDI Interface

Built from the same technology found in MOTU’s flagship MIDI Timepiece, the MIDI Express 128 is a professional MIDI interface that provides plug-and-play connectivity to any USB-equipped Mac or Windows computer. Taking full advantage of USB, MIDI Express 128 gives you high-speed MIDI throughput, sub-millisecond timing accuracy, support for “hot-swapping” and plug-and-play expansion. Need to connect another sound module or synth? No problem. Just add another MOTU USB MIDI interface via any available USB port.

- Eight independent MIDI inputs and outputs for a total of 128 MIDI channels.
- Expansion is simple. Add additional MIDI ports by plugging in another MOTU MIDI interface.
- Includes drivers for Mac OS9, Mac OS X and Windows Me/2000/XP.
- Bus-powered from USB connection. No additional power necessary, and no wall wart or AC plug.
Digital Synchronization Hub

The Digital Timepiece synchronizes digital audio equipment with knife-edge precision: MOTU 2408MK3, Digidesign ProTools systems (without a VSD or SDD), Alesis ADAT (without a BRC), Tascam DA-88 (without an SY-88 or RC-848), ADAT and DA-88 compatibles, SONY 9-pin video decks, word clock, S/PDIF DAT decks, Digidesign Audiomedia II & III, NTSC/PAL video (all formats), computer software and digital audio workstations - including support for SMPTe time code, VITC, MIDI Time Code and MIDI Machine Control.

Until now, phase-locked synchronization between these systems has been difficult or impossible. The Digital Timepiece is the first synchronizer to lock them all together with a stable, high-resolution time base - with no dithering, rounding, or software delays. Choose any one device as the master; all the rest slave precisely and reliably. And drive everything from a MMC controller, computer sequencer or digital audio workstation.

- Universal synchronizer for SMPTe, digital audio, and video systems
- Supplies all components necessary for accurate, stable synchronization: address (SMPTe time code location and audio sample number), time base (word clock), and machine control (transport and cueing)
- Choose any source as the time base master, and the Digital Timepiece continuously and simultaneously generates all other synchronization formats to drive all connected devices in perfect phase lock
- Sample accurate phase-lock during playback for all word clock devices, including ProTools
- Sample accurate locating for all devices that support it, including ADATs, DA-88s and ADAT/DA-88 compatibles
- Front panel selection of any time base includes ADAT, DA-88, MTC, SM PTE (LTC), Video (VITC), word clock (1x), Digidesign “superclock” (Word Word 256x), S/PDIF, Control Track, or Internal
- Generates extremely stable, high-resolution time base with custom-designed VLSI technology and a proprietary high-frequency phase engine
- Fast lock-up time
- No dithering, rounding, or software delays for pristine sound
- Eliminates the need for expensive synchronization add-on equipment, such as the Digidesign SMPTe Slave Driver, Video Slave Driver, Alesis BRC, Tascam SY-88 card, and more
- Supports MIDI Machine Control - serves as either an MMC master or slave, distributes MMC transport commands from a sequencer, or any MMC transport controller to all other devices, including SONY 9-pin VCRs, ADAT and DA-88
- Proprietary control track sync format provides address, time base, and machine control - allows multiple DTP's to be synchronized together, also allows support for future devices
- 44.1 or 48 kHz samples rates with 0.1% pull-up

Video Features
- Supports SONY 9-pin
- Video sync generator
- Reads and writes VITC
- SMPTe burn-in and status display
- Sequencer-triggered streamers with full-screen punch
- 0.1% pull-up/pull-down at either 44.1 or 48 KHz for drop-frame conversion

Supported Devices
- Alesis ADAT or any other ADAT-sync compatible device (without Alesis BRC)
- Tascam DA-88 and DA-38 (without an SY-88 sync card or RC-848 controller)
- Digidesign hard disk recording systems such as Pro Tools III and Pro Tools Project (without a SMPTe Slave Driver or Video Slave Driver)
- Any digital audio recording system that can slave to (and, optionally, generate) standard word clock
- S/PDIF-compatible audio devices, such as DAT decks and hard disk recording cards like Digidesign’s Audiomedia III - includes S/PDIF thru button on front panel
- SONY 9-pin compatible video decks
- MIDI Machine Control (MMC) devices
- Computer software or any hardware system that can slave (or generate) SMPTe Time Code (LTC or VITC in all formats, including 29.97 drop and non-drop)
- Video (VITC and Video Black)
- Any devices that slave to (or generate) MIDI Time Code (MTC)
MIDI Device Editor/Librarian

The industry's most popular editor/librarian, Unisyn provides the most comprehensive sound management features available on the Macintosh and Windows, including seamless integration with Performer. You can modify a sound in Unisyn using graphic envelope controls and faders, while getting instant feedback within the context of your music as Performer plays the sequence.

Generate entire banks of new sounds with a click of the mouse using Blend, Randomize, and Copy/Paste Parameter features. Unisyn can even share bank names with Performer and other FreeMIDI-compatible software for accurate pop-up sound lists. Unisyn can store thousands of sounds at your fingertips and recall them instantly using database-style search criteria, such as “plucked electric bass” with “bright stereo flange”. Frustrated because you can’t recreate the settings in your gear for last month’s project? Unisyn can do it with a few clicks of the mouse.

Features

- Includes over 40 new devices such as the Korg Triton series, Proteus 2000/2500, Waldorf synths and Roland modules like the powerful XV-5080.
- Digital Performer users will feel right at home with Unisyn’s new interface. Editors have been updated to provide a clearer, more easy to use layout of parameters.
- Unlimited undo allows you to concentrate on your editing, not on the software.
- Intelligently manages removable media
- Nearly everything is remembered between sessions. You automatically pickup right where you left off.
- 26 window sets provide a quick and flexible way to manage window layouts.
- Maintains links from parent files (for example, performances) with their associated ‘children’ (for example, patches) to make managing your data a breeze.
- ‘Compare’ feature displays which parameters have changed and what the different values are. Compare is “live,” keeping track of your changes as you edit a patch.
- Most profiles use a modular bank upload/download system - which speeds up your workflow by only downloading the data that is required.
- Existing profiles have been updated to take advantage of Unisyn improvements such as parent/child relationships, card/cartridge management and hierarchical patch editor structure.
- Unisyn’s blend & mingle and randomize features are combined into a full-blown patch generator that generates hundreds of patches at the click of a button (unrestricted by the bank size of the device)
- Snapshots group together all the individual elements that used by your devices so everything can be restored perfectly, even if your MIDI setup changes. All the required data resides inside a snapshot.
- Improved pasting options allow you to paste sections or groups of data from one patch to another to greatly speed sound design.
- All-purpose documents (formerly known as libraries) can contain a mixed combination of patches, banks and snapshots, consisting of any type of data. The number of items in the document is unlimited.
- Unisyn allows you to assign any number of keywords to a patch so you can locate patches quickly and easily.

FreeMIDI

FreeMIDI is a complete MIDI operating system for Macintosh. It ships free and is automatically installed with all MOTU audio software products. FreeMIDI is also supported by many third party developers. (FreeMIDI developer kits can be downloaded from MOTU’s website).

FreeMIDI automatically detects what type of MIDI interface is connected to the Mac’s serial or USB ports, automatically detects what MIDI devices are connected to interface (it “knows” over 200 types of devices), and provides a graphical representation of their MIDI studio. FreeMIDI also provides pop-up sound lists for over 100 popular MIDI synthesizers as well as generic support for any General MIDI device. It even includes advanced features such as inter-application communication and multiple application real-time synchronization.
Trackless Sequencing and Instant Notation Printing Software

A trackless sequencer with instant music notation, Freestyle is powerful, yet easy to use so you have the freedom to concentrate on what is most important—your music. Create compositions intuitively using ensembles, players, takes and arrangements. Get inspired with Freestyle's dozens of drum riffs. Notate your performances as you play. See your music on screen exactly as it will print. Get started quickly with built-in support for dozens of popular MIDI instruments, including any General MIDI device. Freestyle provides both tape recorder and drum machine style composing.

FEATURES

- Event List window displays any type of MIDI data, from notes to system exclusive data to Registered and Non-Registered Parameter Numbers. Show or hide any combination of MIDI data; Edit any data parameter numerically; Scrub over the list of data with the playback wiper; Fly through consecutive edits with the arrow keys.
- Sense Tempo feature lets you sit down in front of your keyboard and just start playing. No robotic metronome clicks. No countoff. Just you and your inspiration. Freestyle records your every nuance—both the notes you play and the tempos at which you play them—at the highest resolution available today in any sequencer.
- Freestyle also has a host of beat adjustment features to produce optimum transcription and musical editing.
  - With the Identify Beats feature, just click on notes that occur on downbeats in the graphic editor or notation window.
  - Adjust Beats feature lets you drag barlines and beats in Freestyle's graphic editor to match the notes below, scrubbing the music as you drag so you can easily zero in on the correct downbeat.
  - With Record Beats you can simply tap along with your rubato performance to tell Freestyle where the beats are.
  - After using any combination of these beat adjustment features, you can choose to listen to your music with its original tempo and feel, or you can temporarily switch to "Constant" tempo mode to hear it at a perfectly straight tempo.
- Change meter and key signature anywhere in your music. If you're in a hurry, just click on a barline to insert a meter or key change there. If you want to map out a whole section, use the Change Meter or Change Key windows.
- Draw, record and edit as many tempo changes as you like.
- Add, duplicate, name and delete as many different tempo maps as you wish for a section—lets you freely experiment with different tempos.
- "% Variable" tempo mode: Speed up and slow down your music with the tempo slider, even if it already has an elaborate tempo map.
- Create tempo changes by moving the tempo slider.
- Assign more than one sound to a player—play in any key and have Freestyle transpose what you play on the fly.
- Change key and key signature anywhere.
- Tweak Notes (velocity, duration, scaling) feature lets you make notes longer, shorter, louder, faster—and other effects—in one convenient step, while the music plays.
- Switch Staff command moves notes from one staff to another on a grand staff in one easy step.
- Change a player's sound in mid-performance—even to an entirely different MIDI instrument.
- Support for QuickTime Musical Instruments allows you to play music on your Mac without a MIDI instrument.
- MIDI Monitor window tells you what's going on with your MIDI gear—and with Freestyle's MIDI output—at one glance.
- Visual Step Record lets you rapidly enter and visually verify note data.
- Choose Notes command lets you select and deselecet notes based on their location, pitch, duration and velocity.
- Name-able takes helps you keep track of multiple takes for a player.
- Note spelling algorithms give you improved automated transcription so you spend less time fiddling with accidentals, while manual note spelling adjustment gives you complete control over note spellings.
- Score transposition—display a player in any key you wish in your scores.
- Recording transposition—choose any transposition you wish while recording a player—play in any key and have Freestyle transpose what you play on the fly.
- SMPTE synchronization lets you slave Freestyle to your tape deck and record vocals and other audio tracks in perfect sync. Or lock Freestyle to film or video. All frame rates are supported. Freestyle also transmits MIDI Time Code (MTC), which allows you to synchronize it with popular hard disk recorders.
MOTU

MachFive

Universal Sampler Plug-In

A universal sampler plug-in for Mac and Windows, MachFive supports all major plug-in formats on both platforms (MAS, VST, RTAS, HTDM, Audio Units and DXi) and imports all major audio file, sample and soundbank formats including AKAI, Kurzwel, Roland, EMU, SampleCell, GIGA, EXS24, HALion, Creamware, WAV, ACID, AIFF, SDII, REX and more. MachFive also offers many advanced sampling features, including support for 192kHz and the ability to import and playback multi-channel samples in surround.

MachFive operates inside application such as Digital Performer, Pro Tools, Logic Audio, Cubase, Sonar and virtually any major application for Mac and Windows. This allows MachFive to be employed as a flexible, state-of-the-art sound source directly within their projects and then save all MachFive settings with the project for instant and total recall. Since all MachFive settings are saved with their host application session, you enjoy the highest degree of convenience and speed because there is no separate application or associated documents to manage.

FEATURES

As a plug-in, MachFive displays all editing and performance parameters in one window, showing users everything in one glance, without the need to flip through different pages or dig through menus.

With unprecedented compatibility and interoperability, MachFive is a truly universal software sampler. It supports every major production platform on Mac and Windows (MAS, VST, Audio Units, HTDM, RTAS and DXi), so you can effortlessly move from one platform to another — or collaborate with those who use different audio software.

For example, a user might compose and track a project in Digital Performer or Logic and then move to Pro Tools for mixing. The user would simply save a MachFive performance (a snapshot of all MachFive settings) in DP or Logic and then load it into MachFive running in Pro Tools. All settings are exactly preserved, and MachFive is ready to go.

Compatible with all Sample Libraries

- MachFive includes UVI-Xtract, an import utility that allows users to audition and load programs and samples from every major sampler format, including Akai, Roland, Kurzwel, SampleCell, HALion, EXS24, Gigasampler and others.
- UVI-Extract even allows users to insert sample content CD-ROMs from Roland, EMU, AKAI and other formats into their computer — discs that otherwise cannot be mounted on their computer desktop — and then convert programs (or even the entire disc) in just a few clicks.
- MachFive helps users consolidate their current sound libraries into a unified MachFive library, instantly accessible from within their host application.

Flexible Multi-Timbral Performance

- Open as many MachFive plug-ins as the host CPU permits. Each plug-in instance of MachFive provides 16 parts (separate instruments). Each part has its own unique audio output assignment, volume, pan, etc. Each part can receive MIDI data from any channel and send its output to unique audio outputs (depending on the host audio software).
- Simple stacks can be created by assigning two or more parts to the same MIDI channel. However, MachFive also provides Expert Mode, which lets you create complex layers and splits that can be dynamically triggered and modified on the fly. Expert Mode was designed for demanding live performance situations.
Intelligent File Management
The most critical feature users need from a sampler is easy access to their sounds. MachFive offers unprecedented sound bank management, helping users concentrate on their music — not file handling chores on their hard disk. MachFive always remembers where sounds are located, and it has been optimized for browsing and loading libraries. Even multi-gigabyte libraries are quickly and efficiently scanned.

Powerful Synthesis Engine
The central section of the MachFive window shows the filter, three envelopes and every modulation tool. Six filter algorithms are provided and everything can be controlled and automated by MIDI. Modulation options are provided at every stage of the synth section. The award-winning UVI-Engine that powers MachFive delivers unlimited polyphony and ultra-low latency.

Multichannel Waveform Editor
MachFive accepts audio samples in all formats from mono to 5.1 surround. The waveform display allows truncating, normalizing, fading and many other destructive DSP audio manipulations — all in real time. Users can even set the crossfade of a loop in real time while listening to their full mix.

24-bit 192kHz Audio
MachFive takes advantage of high definition audio interfaces like the MOTU HD192, allowing users to build their sound libraries at any sample rate up to 192kHz. MachFive also provides on-the-fly downsampling, allowing users to build a high-resolution sample library and use it at any sample rate that their current project calls for, without the need for lengthy sample rate conversion operations.

Surround-capable Sampler
MachFive is a true surround sampler. Users can play and transpose 5.1 audio files in real time, add multi-channel effects and route multi-channel presets to their host software's mixer with multiple outputs (if the host software supports these surround features).

Drag & Drop Import of Samples
Users can simply drag samples from their computer desktop or host application to the MachFive keyboard. Users can even drag multiple samples in one step to map into layers or splits, chromatically, on white keys only, according to their name, or even according to their pitch, which MachFive can determine automatically. Users can also audition samples when importing them, listening to each note as they stretch the sample over a range of keys.

Integrated Multi-Effects
Each multi-timbral part can have up to four unique effects, for up to 64 effects per performance with instant recall, including reverb, tempo-synced delay, tremolo, chorus (and other modulation effects), filter, BitCrusher, and others. All effects settings are saved for total recall. Users can also save effects with each preset for permanent storage in their sound library. The effect section allows users to leave a part's effects in place while they audition other parts.

Analyze and Tune
MachFive is a one-stop sound design factory, with tools such as a graphic spectrum analyzer and a built-in tuner with graphic display. When importing samples, you can even ask it to analyze the sample, determine its pitch and assign it to the appropriate keymap pitch.

Modulation and Tempo Sync
Four LFOs are available per preset: two that can be applied across a preset's entire keygroup, plus two additional LFOs that can be applied individually to each sample. Each LFO can be routed to an assortment of destinations including filter frequency, filter resonance, drive, pitch, pan and amplitude. MachFive can sync both the LFO and effects parameters to sequence tempo.

Professional Music Creation and Production Software

The Cubase legacy continues with Cubase SL and Cubase SX — the most advanced and powerful versions of Steinberg’s renowned Virtual Recording Studio software to date. Designed from the ground up to take advantage of the latest breakthroughs in processor and operating systems technologies including Windows XP and Mac OSX, both Cubase SL and Cubase SX provide the potential for recording and playing back an unlimited number of audio tracks (up to 96kHz) and MIDI tracks, and feature a comprehensive suite of advanced editing facilities, real-time effects, mixing and automation facilities. Both applications support real-time VST 2.0 effects plug-ins and virtual instruments, and low-latency, multi-channel ASIO 2.0 compatible audio hardware allowing you to outfit your computer-based recording studio to suit your specific requirements. VST System Link functionality allows several computers to be linked together and actually perform as one fully integrated system. Cubase SX adds comprehensive 5.1 surround sound support, complete score layout features and a wider range of automation modes.

They Both Feature

Audio
- Native audio – no expensive additional outboard equipment is required to record and playback audio. Plus ASIO soundcard support for low latencies.
- Up to 200 or more simultaneous playback of Audio Channels (cpu dependent)
- Recording multiple channels of audio simultaneously.
- Support for 16-Bit, 24-Bit and 32-Bit float audio files at sample rates of 44.1kHz, 48 kHz, 88.2 kHz, and 96 kHz.
- Record of AIFF, WAVE and Broadcast WAVE files, (Sound Designer II for Mac)
- Non-destructive Part Editor
- Destructive rendering of virtual effect processors into parts from the Project Window (with process history).
- Very quick and efficient parts bouncing
- Simple ‘Drag-and-Drop’ functionality means allows objects to be moved quickly, not just within projects, but also between multiple projects.

Mixing and Automation
- Adaptive and configurable track mixer selectable (wide/narrow) views.
- Up to 64 Group Channels with access to the same audio effects and EQ as normal audio tracks.
- Sample accurate automation with automation tracks for every audio, group track and plug-in.

VST Effects and Instruments
- Includes a wide range of professional real-time VST effects and (VSTi) virtual instruments.
- Supports virtual instruments with multiple outputs (VST 2.0 standard)

Sample Editing
- Destructive Sample Editor with offline process history.
- Sample accurate zoom and in-place editing of audio directly in the Project window.
- Automatic tempo matching of audio loops with integrated Slice and Stretch functions.

MIDI
- Unlimited MIDI tracks and multiple MIDI recording modes: Cycle, Mix, Overdub, Step, Punch.
- Sample-accurate timing for MIDI events. For ease of use the displayed musical resolution is set to 480ppq. If you need a higher resolution for your editing needs you can simply switch to sample resolution.
- A wide range of MIDI editors are provided including: Key (piano keyboard); Drum; Event List; SysEx and Logical. Cubase SX adds professional Score editing.
- Supports high-precision MIDI timing when using an LTB compatible MIDI interface such as Steinberg’s Midex 8.
- A Tempo Track allows you to control song tempo using a graphic editing interface.
- Sends MIDI clock and send/receive MIDI timecode (M TC).
- Extensive control surface support including Steinberg’s own Houston, Mackie Control, Yamaha Digital Mixers, Radikal Technologies SAC-2.2 and more.
**The Project Window**

The Project Window provides an overview of the entire project area and allows real-time recording, playback placement, editing, and automation of audio and MIDI. You can move, nudge, fade in, fade out, change volume, or crossfade parts directly from the Project Window with great ease and efficiency.

**Project Overview**

Provides quick and easy access to any location within the project window - the smart cursor allows you to click and drag on the bottom of the overview to navigate to the specific area of the project you want to access or click and drag at the top of the overview to zoom select a new zoom value of the project window.

**Track Inspector**

Provides instant access to any parameter of the currently selected audio or MIDI track.

Each component of a channel’s mixer is displayed as a folder that can be expanded to reveal that component’s parameters – add insert-effects, adjust aux sends, pan and volume and more, without calling up the mixer.

**Timeline Ruler**

Option Positions and lengths displayed as:
- Bars + Beats – Bars|beats|sixteenth notes and ticks (120 per 1/16 note)
- Seconds – Hours, minutes, seconds and milliseconds
- SMPTE Frame (Hours, minutes, seconds & frames) – 24, 25, 29.97, 30 fps as well as 29.97 and 30 dfps
- Samples – Samples

**Non-destructive, editable crossfades**

**Supported Audio Formats**

- Import of AIFF, AIFC, WAVE, Broadcast WAVE, WMA, MP3, REX files as well as SDII on Mac.
- Export audio to MP3, RealAudio G2, AIFF, Broadcast Wave and WAVE, as well as Windows Media Audio and Real Audio V5 on PC and SDII on Mac.
- Import/export files with sample rates of up to 96kHz depending on format.

**Supported Video Formats**

- MOV, QT, AVI, MPG, MPEG

**Video Functions**

As working in sync with the picture is an essential demand for film scoring, Cubase does not only allow playback of video files within a video window, it also provides you with a thumbnail video track for fast and easy composing to the picture and placing musical events at takes and frames.

**Unlimited Undo/Redo with Offline Process History**

Off-line processing of individual audio files allows effects to be ‘stamped’ onto them layer after layer. The off-line process history allows you to jump back to any individual process such as the reverb and edit it, remove it or replace it with another effect.
The extended view adds a top zone to the standard size mixer that adds an upper zone where you can switch between views for EQ and aux-send or insert effects per channel or globally.

The Master Section features 8 insert slots plus dithering using Apogee's UV-22 HR algorithm.

Select the type of channels you want to view in the mixing console – audio, group, virtual instrument, ReWire and MIDI channels.

Complete channel setups can be copied and pasted between channels or even saved to disk and loaded into new projects - a great way to create a custom library of multiple effects or virtual instruments with effects.

EQ, Insert, Aux sections of Channel strip can be bypassed fast and individually.

Each channel within the mixer has 4-bands of parametric EQ, 8 insert points for plug-in effects and 8 aux sends.

Any combination of mixer channels can be freely grouped or sent to one (or more) of up to 64 sub group channels.

The response time of the meters is adjustable (fast/slow/hold).

Hardware Control Surface Support

- Of course, Cubase is fully compatible with Steinberg’s Houston controller surface which allows you to grab hold of the virtual world of Cubase with physical knobs, buttons and faders.
- Features such as transport control, scrub, fast forward, rewind, track muting, track arming, control over plug-in parameters and full moving-fader control over your mix are just a few of the possibilities.
- A wide number of 3rd Party remote controllers are supported including devices made by Mackie, JL Cooper, CM Automation, Radikal Technologies, Roland, Tascam, and Yamaha.

Channel Settings Window

- 4-band fully parametric EQ with variable frequency (20 to 20kHz), gain (±24db) and Q per band.
- Bands 1 and 4 are switchable between Shelf, HPF, LPF and Bell.
- Bands 2 and 3 has a Bell curve.
- These 8 Aux Sends can be routed to the FX rack, Groups or Bus outs.

Pan control

Mute/Solo

Read/Write Automation

Ultra-smooth volume faders with 15-bit resolution and 2 decimal precision.

Up to 8 effects inserts are available for each audio channel.

Save and load EQ presets.
VSTi (VST Instruments)

- Steinberg's Virtual Studio Technology (VST) interface allows the seamless integration of virtual effect processors and instruments into your digital audio environment. These processors run the gamut from software emulations of classic hardware effect units and instruments to never-heard-before creative processors. All functions of a VST effect processor or instrument are directly controllable and automatable.
- A complete suite of Steinberg VST effect processors is included with Cubase SL and SX and because VST is an open standard, new virtual effect processors and virtual instruments are constantly being developed by Steinberg as well as numerous third party companies including Antares, Waves, Waldorf, Native Instruments, IK Multimedia and many more.
- DirectX plug-in support is also available on the PC.

Included VST Instruments

Three VST instruments are included and numerous others can be purchased separately from Steinberg and third party manufacturers.

- A1 – Analog Synthesizer Unit developed by Waldorf
- VB1 – Bass Emulation Unit
- LM7 – 24-Bit Drum Sampler Unit

Included VST Effects Processors

- Classic Delay
- Dynamics
- DeEsser by SPL
- Overdrive
- Quadrature
- Chopper
- datube

- Multitap Delay
- Classic Delay
- Dynamics
- DeEsser by SPL
- Overdrive
- Quadrature
- Chopper
- datube

VST Realtime Effects Processors

- Steinberg's Virtual Studio Technology (VST) interface allows the seamless integration of virtual effect processors and instruments into your digital audio environment. These processors run the gamut from software emulations of classic hardware effect units and instruments to never-heard-before creative processors. All functions of a VST effect processor or instrument are directly controllable and automatable.
- A complete suite of Steinberg VST effect processors is included with Cubase SL and SX and because VST is an open standard, new virtual effect processors and virtual instruments are constantly being developed by Steinberg as well as numerous third party companies including Antares, Waves, Waldorf, Native Instruments, IK Multimedia and many more.
- DirectX plug-in support is also available on the PC.

Included VST Effects Processors

- Multitap Delay
- Classic Delay
- Dynamics
- DeEsser by SPL
- Overdrive
- Quadrature
- Chopper
- datube

- Flanger
- Phaser
- Reverb
- Vocoder
- Chorus
- Phatsync
- Metalizer
- Bitcrusher
- Transformer
- Ring modulation
- Gruentalizer
- SMPTE Generator
- Symphonic
- 6 to 2 Mixer

ReWire 2.0 Support

Stream up to 64 audio channels between ReWire compatible applications, such as Propellerhead's Reason and Rebirth, and Cubase with sample accurate synchronization. Audio outputs from the ReWire compatible application are connected via Rewire to the VST mixer, allowing VST Effects, EQ and Dynamics to be applied in real time. MIDI-streaming between applications - the ReWire application shows up in Cubase as a MIDI out port, ready to trigger. Use Cubase to control the ReWire apps transports.

A number of realtime MIDI effect plug-ins are included for transforming and generating MIDI events in a variety of ways.
- MIDI effects can be applied in real time to the MIDI data played back from the track or can be inserted while playing live on your MIDI keyboard - an inspiring performance tool.
- Just like any other parameter in the Cubase mixer, MIDI plug-ins can also be fully automated.
- MIDI Plug-ins Effects Include: Arpache (Arpeggiator), AutoPan, Chorder (create chords from single keys), MIDI Echo, Microtuner, Quantize, Step Designer (step sequencer), MIDI Compressor, and many more.
Sample Editor

Even though you can do most of your editing directly within the Project window, an integrated Sample Editor is included for editing mono and stereo audio files. The Sample Editor allows viewing and manipulating of audio data at the Audio Clip level. Functions such as cutting and pasting, removing or drawing audio data is fully "non-destructive", in the sense that you can undo changes or revert to the original versions at any point, using the Offline Process History. Any audio clip can be permanently edited and changed with full backup, plus multi-level undo and redo. A number of integrated non-destructive audio processes are provided for optimizing and even resynthesizing audio files: Acoustic Stamp, Crossfade, Envelope, Fade-Ins and Outs, Gain Change, Normalize, Phase Reverse, Pitch Shift and Timestretch, DC Offset removal, Reverse and Stereo Flip.

The Thumbnail display provides an overview of the whole Clip.

The Info Line shows all relevant information about the edited Audio Clip.

The Loop Editor allows you to automatically match the of an audio phrase or loop to your song's tempo by applying time compression and expansion to short audio-segments contained with the audio file.

Audio segments can be created automatically or by manually — the phrase or loop is analyzed and then segments are generated using the audio file's transients as markers.

You can then make tempo changes to your song in real-time and your audio playback will follow.

Use odd meters and loops of unlimited length when mixing.

You can combine a number of loops with different feels and tempi and conform them to your song's tempo.

Match the groove of MIDI tracks to looped audio or vice versa. Quantize the groove of looped audio.

Re-arrange grooves by exchanging single samples inside your loop.

The Loop Editor is also provides an easy auto cutting and match quantizing of single words from vocals takes.
MIDI Editing

Key Editor
- The Key Editor/Piano-roll Editor features many standard functions for manipulating MIDI note and event data. You can Draw, Move, Copy, Delete, Mute, Size, Transpose and change Velocity for note-events.
- The Multi-Lane Controller Editing functions allow simultaneous editing of various controller data sets at the same time.
- The Mathematical Curve Function (such as parabola, sine, triangle, square) allows you to draw precise Controller data curves quickly and easily.
- Step Recording allows recording events offline by inputting notes via MIDI-in at the start position and automatically stepping these to the next Grid point (e.g. 1/16th). This allows the easy creation of musical lines that are difficult or impossible to play.

Drum Editor
- The Drum Editor features standard editing functions (Draw, Move, Copy, Delete, Mute, Size, Transpose note-events, Velocity and Controllers) as well as Drum Map support allowing you to assign sound names (e.g. kick, snare) to notes.
- Each sound or notepitch can have its own settings for Quantize, Output and Channel.
- The Drum Editor also provides access to the same Multi Lane Controller Editing, Mathematical Curve and Step Recording functions found in the Key editor.

Logical Editor
- The Logical Editor allows you to find certain MIDI events, based on defined criteria and conditions. You can then manage and edit this data using the list of available actions.
- Applications range from simple MIDI event filtering to complex tasks such as changing the scale of a piece of music from minor to arabian.

List Editor
- The List Editor allows all data (MIDI, Audio events, Automation, etc.) to be edited numerically.
- It provides an overview of the whole project so that you can easily browse through all of the project’s tracks. This allows very precise control when adjusting the ‘fine detail’ like sample-accurate positioning of multiple data types.
- The event display shows the events graphically while the value display shows the “value” of each event, allowing for easy viewing and graphical editing.
- The information available in the List Editor includes: Event Type; Start and End position; Length; Data 1 and Data 2 (e.g. pitch and modulation); Channel and Comment.
- Single and multiple events can be muted and unmuted using the dedicated Mute Tool.

Steinberg Technology

ASIO
- ASIO (Audio Stream Input/Output) is a high performance, low latency audio driver architecture that forms the backbone of Steinberg's Virtual Studio Technology. ASIO was developed to deliver a truly professional audio recording solution — one that supports variable bit depths and sample rates, multi-channel I/O and synchronization — all within a native computer environment.
- ASIO is a supported standard by many leading audio hardware manufacturers including MOTU, M-Audio, Tascam, Edirol, Steinberg and many more.

VST System Link
- VST System Link is a platform independent communication protocol that provides sample accurate networking of several computers running VST System Link-compatible host applications including Cubase SX, Cubase SL and Nuendo. It enables synchronization, transport control and audio data between two or more workstations over standard digital audio cabling systems such as ADAT, TDIF, AES/EBU or SPDIF.
- Expandability, Flexibility and connectivity for your virtual studio — exploit the DSP resources of multiple computers within a single project.

Accurate MIDI Timing with LTB
- LTB (Linear Time Base) is a multi-channel communication protocol which offers sub-millisecond MIDI timing accuracy.
- LTB is a MIDI Time Stamping technique that bypasses the computer’s operating system and thus significantly reduces latency.
- LTB is utilized by the MIDEX series of hardware MIDI USB interfaces to offer the lowest latency of any MIDI interface available.
- Supported by Cubase SL and SX as well as Nuendo.
**Cubase SX Adds:**

**TrueTape Recording Technology Tape Saturation**
- While digital audio recording has a number of benefits, some may perceive digital sound to be somewhat “sterile” and “cold” compared to high quality analog recordings. The TrueTape algorithm remedies this by recreating the desirable warmth and compression sounds of analog tape saturation at the recording stage using Cubase’s high resolution 32-bit floating point format.
- The Drive control allows you to adjust the amount of tape saturation effect to your liking.

**Surround Sound**
- Cubase SX supports up to six-channel surround sound with a configurable speaker set-up - allowing the user to adjust to his specific studio configuration.
- Supported surround formats in the Master Setup include: Stereo; Quadro; LRCS; Standard 3/2; and 5.1.

**Advanced Time Stretching**
- There are five different Quality modes available for time stretch: Quick, Standard, High, MPEX, and Drum.
- The MPEX Quality mode is based on Prosoniq’s (Minimum Perceived Loss Time Compression/Expansion) algorithm which uses an artificial neural network for time series prediction in the scale space domain to achieve high end time and pitch scaling.
- Drum mode is a special algorithm developed by Spectral Design, optimized for processing rhythmic material.

**Apogee UV22HR Dithering**
- The UV22 HR is a high quality dithering plug-in based on an advanced word length reduction algorithm developed by Apogee.
- You can use the UV22 HR plug-in whenever you need to take your audio from the 32-bit float resolution within Cubase to lower bit resolution, especially when exporting/converting to 16-bit resolution for audio CD burning.

**Complete Scoring**
- Cubase SX includes all of the scoring and playback features of Cubase Score VST, which for many years has been one of the industry standard software applications used for film soundtrack production and music education. This is because of its perfect integration of score writing, sequencing and music production.
- 32 staves per page
- 8 voice polyphonic
- Page layout and editing
- Drum notation & guitar tablature
- Over 100 symbols

**Spectrum Analyzer**
- The Spectrum Analyzer function analyzes the selected audio, computes the average level distribution over the frequency range and displays this as a two-dimensional graph, with frequency on the x-axis and level on the y-axis.

*CPU dependent
Motorized Control Surface for Cubase and Nuendo

A MIDI/USB remote controller designed specifically for the VST audio engine, Houston provides access to potentially every parameter available in VST windows. It features a total of nine 100mm touch sensitive motorized faders, eight rotary encoders with LED position indicators and a matrix of buttons bringing total hands-on mixing within Nuendo or Cubase, without having to use the mouse or PC keyboard. Additionally it offers a large LCD display, transport controls, and a jog & scrub wheel. A numeric keypad is available for entering values and for selecting setups and marker positions.

The ultimate controller for Steinberg’s virtual studio, Houston is also extremely fast and flexible with all basic parameters displayed at the push of a single button.

FEATURES

- Houston uses an all-for-one or one-for-all layout meaning that both the display and related rotary encoders are showing the same parameter for all eight channels or eight related parameters for one channel.
- Parameters for VST audio effects and VST Instruments can be displayed, edited and automated from the Houston’s controls.
- A compact desktop unit (same width as a standard PC keyboard), Houston connects to the host computer via MIDI or USB.

What are the differences between Cubase SX and Nuendo?

Cubase SX is clearly a music creation and production program, with audio and MIDI features specifically designed for these activities such as the Drum Editor, Score Editor and a newly designed Audio Loop Editor. Multi-lane Controller Editing is provided offering complete control over the playback characteristics of all MIDI and VST-I equipment used. MIDI plug-ins and enhanced MIDI processing functions are now standard and we have built in the support for loading up to 16 Virtual Studio Instruments simultaneously. Extensive groove and swing functions are designed specifically for easy handling of rhythmic musical elements and excellent automation control is built in so you can create the perfect final mix.

Nuendo, on the other hand is designed as a media-production system. It can handle post-production, DVD authoring, music recording and many other types of specialist production tasks. It features tools such as Sony 9-pin support, OMF Import, replace audio in video file, get audio from video file, Premiere EDL import and independent project pools, to name just a few. Other features are the Matrix Encoder/Decoder plug-in as well as support for Dolby and DTS Encoders.

- Illuminated function matrix clearly indicates the current display and all basic VST parameters. If a set of related parameters require more than a set of eight controls, the page up and page down buttons let you jump to the additional parameters. And since you always stay in the context of the selected function group, it isn’t necessary to repeatedly press buttons to scroll through all available parameters. With two button pushes you gain access to virtually all VST function groups.

- Houston supports the mixer views and windows sets of both Cubase and Nuendo. It is possible to open and close windows completely remotely, and to change the currently addressed set of eight channels—and these can be any of the VST audio channels regardless of whether they are audio, group or synthesizer channels.
- Song and edit buttons to easily save a song or revert to the last version, undo/redo the last action, confirm, cancel and deny actions in open dialogs and windows.
- Number pad for general purposes plus buttons for quickly accessing windows sets, marker positions, etc. For even greater comfort, the ZAP button lets you toggle between the two last functions.
- Fader section with nine motorized faders. A number of option buttons let you switch between the different target faders within the host application and select fader sets. You can also jump back and forth between the available sets of eight channels each.
- Transport Controls and Jog Dial for full and easy navigation within your song.
- Rear panel with MIDI trio and USB port. Houston lets you freely choose whether it should communicate with your host application via MIDI or USB.
Today's complex operating systems and computer configuration can lead to small timing inaccuracies in MIDI event sends—making precise MIDI timing difficult. This can be up to 5 ms in extreme cases—small but audible. Depending on musical taste or the user's individual expectations, these inaccuracies can compromise the quality of songs.

The solution is Steinberg's LTB technology, a high-speed MIDI protocol which gets around an operating system's limitations in a simple yet elegant way. With LTB, every MIDI event is sent to the MIDI interface ahead of time, together with information describing the exact point of time when it is to be sent out from the interface. Here it is stored and released from every Midiex port to the respective sound generator at precisely the right time. This guarantees a timing accuracy for single MIDI events of under one millisecond—on every port. This is made possible by a micro sequencer built into all Midex devices. LTB offers timing accuracy which was previously only possible when working with old analog or hardware MIDI sequencers. LTB is incorporated into all Steinberg Midiex series MIDI interfaces as well as Nuendo and the latest versions of Cubase.

### USB MIDI Interface with LTB Technology

The Midex 3 and Midex 8 are hardware MIDI solutions for those who place emphasis on absolutely accurate timing. Designed for VST-based studios who use external sound generators to supplement their range of virtual instruments, the portable Midex 3 has one MIDI in and three for 48 MIDI channels, while the Midex 8 with its eight MIDI inputs and eight MIDI outputs allow up to 128 MIDI channels to be addressed. Both don't need an external power supply, as their interface's power is supplied by the USB bus.

Midex 8's comprehensive range of functions is rounded off by the relay-controlled MIDI Thru function as well as an integrated cable tester. Several Midex 3s or Midex 8s can be combined to build larger MIDI systems.

Media Production System

Nuendo 2.0 is a high-end digital audio workstation and media production system designed specifically for the demands of modern multimedia productions. Regardless of whether you are working on a music or post production project, in broadcasting or video—Nuendo 2.0 offers a solution which will perform to the highest expectations—and more cost-effective than any other system.

Created to handle any kind of job within the media industry, all recording, editing and mixing functions were developed from scratch, allowing Nuendo to offer the most advanced studio technology. And Nuendo’s extensive interface, import and export functions guarantee perfect integration into every studio environment regardless of genre—composition, film, broadcast, music, postproduction, surround, games and multimedia.

For starters, Nuendo is a 200-track recording facility complete with a 200-channel audio mixer including all you’ll need for fully professional recording, editing and automated mixing.

As Nuendo supports mono, stereo or surround format (up to eight discrete channels deep) your creativity is never inhibited. From input to final mix, Nuendo 2.0 is all about surround, with multi-channel architecture through the entire signal path. Every input, audio track, effect, group and output now offers up to 12 discrete channels, ready for full-scale 5.1, 7.1, or even 10.2 productions. To make routing in the project even more transparent, you can customize multichannel input/output configurations and switch between them with a single keystroke. Several input and output buses can be utilized at the same time, with any type of configuration possible - mono, stereo or any of a wide range of surround formats - and any track can be routed to and from any of these buses. Nuendo 2.0 even allows switching between multiple monitoring configurations (speaker arrangements) and can simulate a wide variety of end user monitoring environments.
Nuendo 2.0 offers complete flexibility in mixing and signal routing. Its 32-bit floating point mixer features multiple multichannel input and output buses. This allows for recording in either split or interleaved surround audio file formats and makes managing a surround project easier than ever before - Nuendo always keeps track of which part of the signal chain is multichannel and which is simply stereo or mono. When routing signals, Nuendo even adds effect return channels that allow effects to be added to the input signal while recording, as well as full delay compensation throughout the signal path.

Of course, Nuendo incorporates VST System Link — Steinberg's revolutionary technology that allows users to increase the realtime processing and mixing power for any project by simply adding as many Macs, PCs, desktops or laptops to the system as are needed. But Nuendo 2.0 doesn't stop there. An array of powerful new networking capabilities allows the transferring of tracks and events in a network over TCP/IP LAN. Each user in a network gets his user ID and read/write permissions for each TCP/IP project. The standard network access built into Nuendo 2.0 supports recording to, as well as copying and playing back from dedicated servers or other workstations: all that's needed is TCP/IP LAN. Combining separate Nuendo 2.0 projects is no problem, either - a Merge Project function fuses tracks from one project into another.

Nuendo 2.0 also allows the flawless import of Cubase SX projects, and support is provided for a huge range of export formats in order to exchange projects with systems from other manufacturers. Nuendo 2.0 can also import numerous file formats such as AES31, Open TL 3.0 and OMF. Finally, Nuendo 2.0 allows you to set up a project the way you want it. If there is no need for MIDI functions in a particular mix, for example, all MIDI controls can be hidden for each track to suit your personal way of working. You can hide functions you don’t use from Nuendo's menus - making for a better overview and faster response - and you can even define which buttons and controls you want to see on your tracks, and in which order.

Set up a project the way you want it. All program menus are user-configurable, enabling you to hide features you don't currently need for a specific kind of production. For example, if you don’t need MIDI functions for a 10.2 surround mix, you can hide all MIDI menu entries, disable the corresponding key commands and assign these preferences to a template. Do you really need to have video-related menu entries if you are using Nuendo for music production? Simply hide them and design the interface that you need yourself. All hidden features are still waiting in the background in case you will need them in the future.

But Nuendo does not stop there. You can also configure the controls for each track to suit your personal way of working. If, for example, you are engaged in audio recordings, Nuendo can instantly be adapted as a pure audio tracker with only a record and a monitoring button on each track. After finishing your recordings you can “unhide” additional functionality as it is needed or switch to a template which immediately gives you access to all track controls again.

User Presets
Nuendo 2.0 allows for the storing and recall of user preferences presets. This allows you to recall different system settings for various working situations but also take your preferred settings with you and apply them to another system when you are working on a Nuendo system at another location.

Define Your Project
Nuendo 2.0 offers a wide range of timeline formats for just about any situation in audio production, including samples, beats/bars, seconds, feet/frame rates of 16mm and 35mm as well as a freely definable frame rate. Using multiple ruler tracks with various timeline formats, you have the correct position in overview for any of your audio, video or MIDI events. Also, the new mixer allows you to show or hide track classes and channel strip sections to adapt to your visual needs.
**NUENDO 2.0 continued**

### Recording
- Pristine 32-bit audio quality with sample rates of up to 192 kHz will capture every nuance of your source audio. Processing audio internally at 32-bit floating point gives you a theoretical headroom of several hundred dB, making it practically impossible to introduce digital clipping.
- Offers a choice of a variety of record formats, including Wave, Broadcast Wave, AIFF and Wave64, for long duration recordings.
- A variety of record modes suit any approach, with the stacked record mode allowing the compiling of takes directly in the Project Window.
- Innovative multi-channel architecture lets you record not only in mono, stereo and 5.1 but in all common surround formats up to 10.2. Record your surround material either as individual files or interleaved as one file, in the destination folder of your choice.
- Recording to timecode is easy. The online recording function puts Nuendo in record mode as soon as a valid timecode signal is received.

### MIDI Features

**MIDI Features**

Extensive capabilities, making it easy to set up and configure MIDI devices for use with Nuendo.
- The large range of MIDI editors (Drum, Logical, SysEx and List) make editing MIDI information more intuitive than ever before.
- MIDI plug-ins such as Quantizer, MIDI Echo and Compressor ensure more creative possibilities and flexibility, and are all directly reachable from the Project Window.
- The Nuendo automation system also extends to all MIDI parameters, letting you draw MIDI automation data with any of the mathematical shape tools. Multiple controller lanes within the editors give you a clear oversight over your MIDI data, as all data can now be displayed on the same page.
- From input to final mix, Nuendo 2.0 is all about surround, with multichannel architecture through the entire signal path. Every input, audio track, effect, group and output offers up to 12 discrete channels, ready for full-scale 5.1, 7.1, or even 10.2 productions. To make routing in the project even more transparent, you can customize multichannel input/output configurations and switch between them with a single keystroke.
- Several input and output busses can also be utilized at the same time, with any type of configuration possible - mono, stereo or any of a wide range of surround formats - and any track can be routed to and from any of these busses. You can even switch between multiple monitoring configurations (speaker arrangements) and simulate a wide variety of end user monitoring environments.
- The mixer itself is user-configurable, so you can choose between a variety of display options. Above the normal mixer with the fader section you can display either insert effects, effect sends, EQs or an additional view with input and output settings including gain change and phase shift per channel. The mixer is also available in a narrow view for simultaneous display of many channels.
- Nuendo 2.0 offers the most flexible mixing experience in digital media production. Its 32-bit floating point mixer features multiple multichannel input and output busses. This allows for recording in either split or interleaved surround audio file formats and makes managing a surround project easier than ever before — and Nuendo keeps track of which part of the signal chain is multichannel and which is simply stereo or mono.
- Provides complete flexibility in signal routing to and from virtual effects for each and every track. It even adds effect return channels which feature the full parameter set of regular channels and of course the complete mixer has full delay compensation throughout the complete signal path.

### Networking

With VST System Link and the option to integrate IP network collaboration, Nuendo 2.0 features a huge range of functions dedicated to maximize computer processing potential and manpower for your project. Using any of the two technologies alone or combining them has can vastly increase efficiency in your project workflow.

— With VST System Link, not only can CPU intensive tasks of larger projects like effect processing, video or virtual instruments playback be outsourced to selected exclusive computers, but large projects can be allocated to various computers as well. This permits simultaneous playback of hundreds of audio and MIDI tracks from a range of different computers in sample-accurate synchronization.

— Unique TCP/IP functionality allows true networking on any kind of project, from post-production to music, from multimedia to game sound design. This networking technology supports the full range of editing tools over a network, on projects, audio, MIDI and even video tracks. It allows users to connect multiple Nuendo workstation computers via standard LAN network cards. An entire project or just selected tracks can be opened on multiple computers for other members of the network to access and edit.
Supersonic Editing

Nuendo 2.0 has one of the most powerful editing engines around, with unlimited undo/redo as standard. Not only can you undo cuts, fades or other basic edits, but also bouncing, offline processing and removal of complete tracks can be undone. The Edit History window lists all actions made on your project down to every single event, ready to undo or redo to the point where you want to work from.

Every single audio file shown in the pool or used in the project window has its own offline process history. All processing carried out on a file can be removed, changed or replaced by another process or plug-in, no matter how much processing has taken place in the meantime. All later processes will be reprocessed automatically for you in the blink of an eye.

Supports various kinds of editing styles, depending on your work style. Traditional cuts, nudging, trims and fades can be made using a variety of tools: object based, range based or using a jog wheel from any of the supported remote controllers. Mouse, keyboard or remote control can be used separately or combined for optimal workflow speed.

Surround Sound

Offers everything needed for modern surround productions. Every input channel, audio track, effect, group track and output section of Nuendo offers up to 12 discrete channels, ready for full-scale 5.1, 7.1, or even 10.2 productions. To finalize your production, optional encoders for Dolby Digital and DTS are available. Nuendo lets you simulate a wide variety of end user monitoring environments before you start encoding to these industry standards, to ensure that your mix is always delivered with the highest compatibility to all kinds of end formats.

Plug-Ins

To help you get the best out of your project, a huge array of virtual effects, ranging from standard dynamic processing and filtering to creative modulation effects or restoration processors, is supplied. To help you get the best out of your project, a huge array of virtual effects, ranging from standard dynamic processing and filtering to creative modulation effects or restoration processors, is supplied.

Or choose from a wide range of third-party VST or DirectX plug-ins. All plug-ins can be used both online or offline, and as many instances can be loaded as your computer can handle.

If you are using MIDI, Nuendo also offers the latest Steinberg technology to create sounds hitherto unheard of. Arpeggiators, chord processors and many other plug-ins are included that manipulate the dynamics, pitch and time elements of MIDI events, as well as three unique virtual instruments to create warm analogue layers or play back powerful drum samples. The integration of the VST interface opens Nuendo up for additional software samplers like the award-winning HALion Sampler, synthesizers or many other virtual instruments.

Applications

Multimedia: The creative process for music and sound design is supported by integrated sound modules and many features for automatic creation of impressive audio collages. The large set of tools to synthesize and match sound to any kind of visual make Nuendo a real time-saver when creating audio for your project. The integrated video player supports all important multimedia files and lets you keep the focus on your product while you are adding audio information.

Radio Broadcast: Design expressive commercials or jingles, create radio news stories or work on multi-part radio. Nuendo is equipped for all the above and more. The Nuendo project concept means that both pitch and time elements of your projects can freely be manipulated, and guarantees intuitive, single-layer editing, fast browsing of sound archives and concise arranging of content.
**Export Formats**

- Mixdown to AIFF, Broadcast Wave, Wave, Wave 64, MP3, P3 Pro, RealAudio G2, Windows Media, SD2 (Mac), Ogg Vorbis, Dolby Digital AC-3 and DTS (optional encoder)

- Supported export sampling frequencies up to 32-bit/384 kHz (Broadcast Wave, Wave, AIFF)

- Audio mixdown to a mono or multi-channel file up to 12 channels

- AES31 • Open TL 3.0 • MIDI File

- OMF 1 & 2, embedded audio or file references.

- Track sheet printing, smart track sheet functions for better overview

- Real-time mixdown option

- Nuendo tracks including media files, mixer channel settings & automation

**General**

- Nuendo tracks including media files, mixer

- Extract audio from video file

- MPEG, AVI, DV AVI, WMV/WMV Pro (PC only) and QT movies video import

- Audio: import of AIFF, AIFC, Wave, Broadcast Wave, Wave 64, MPEG-2 and 3, Dolby Digital AC-3 (with optional Nuendo Encoder) and Ogg Vorbis, WMA, WMA Pro, WM V, WM V Pro (PC only), REX I & II files, SD2, up to 384 kHz depending on the file format

- AES31 • Cubase SX project • Open TL 3.0

- OM F 1 & 2, embedded audio or file references.

- Premiere Generic EDL

- Ability to convert interleaved multichannel file into multiple mono files on import

- CD audio grabbing (selection inside track possible)

- MIDI File import

- MPEG, AVI, DV AVI, WM V/WMV Pro (PC only) and QT movies video import

- Extract audio from video file

- Nuendo tracks including media files, mixer channel settings & automation

**Synchronization**

- VST System Link for sample accurate sync, audio and MIDI transport between multiple Nuendo systems

- Sync to MTC, ASIO Positioning Protocol or send MTC and MIDI clock

- Send 9-pin & MMC machine control

- SM PTE Generator plug-in

- Fast locate and sync lock up

- Sample accurate sync with ASIO 2.0

- MMC slave with track arming support

**Import Formats**

- Audio: import of AIFF, AIFC, Wave, Broadcast Wave, Wave 64, MPEG-2 and 3, Dolby Digital AC-3 (with optional Nuendo Encoder) and Ogg Vorbis, WMA, WMA Pro, WM V, WM V Pro (PC only), REX I & II files, SD2, up to 384 kHz depending on the file format

- AES31 • Cubase SX project • Open TL 3.0

- OM F 1 & 2, embedded audio or file references.

- Premiere Generic EDL

- Ability to convert interleaved multichannel file into multiple mono files on import

- CD audio grabbing (selection inside track possible)

- MIDI File import

- MPEG, AVI, DV AVI, WM V/WMV Pro (PC only) and QT movies video import

- Extract audio from video file

- Nuendo tracks including media files, mixer channel settings & automation

**Recording/Playback**

- Record 16/24/32-bit at up to 192 kHz depending on the audio card

- Recording of multiple channels of audio simultaneously per track, split or interleaved

- Record of AIFF, Wave, Broadcast Wave and Wave 64 for long duration recordings.

- Jog and scrub of the complete project

- Project shutting with fixed speeds, custom editable key commands, and lock to zoom

- Linear Record modes: Normal, Merge, Replace

- Cycle record modes: Mix (MIDI), Overwrite (MIDI), Keep Last, Stacked lanes

- Online recording: record starts when a valid timecode signal is received

- Separate pre roll / post roll settings and separate activity displays in transport

- Multiple user-definable record destinations

**File Management**

- Pool with logical structure and extensive file information

- Import and export of pool files

- Advanced search field with preview option

- Advanced file converter

- Offline processing from the pool

- Minimize function to delete silence & unused material from audio files

- Archive and backup functions

- Libraries can be created including files, file references, regions, subfolders and sync points

**Editing**

- Real-time non-destructive crossfades

- Advanced crossfade editor with pre & post roll

- Auto-fade and auto-crossfades with definable fade times for smooth transitions

- Sample editor with region list and sync point editing. Drag and drop regions from the sample editor to the project window

- Unlimited undo/redo with edit history list (includes zoom undo/redo)

- Visible second tracklist with fixed tracks

- Timestretch tool allows fast snap-based stretching of material

- Preset curve tools for automation editing

- Various options to lock events in size, fade-length, position and others

- Folder tracks for group-based overview

- Vertical view option for recording takes in the project; browser view allows all data (events, automation, etc.) to be edited numerically

- Edit mode for syncing events & fades to the picture

- Sync points available in events and regions, s-points scrub the audio

- Detect & strip silence

- Hit point detection for loop editing and cue splitting

- Autoselect event under cursor on selected track(s)

- Zoom presets in the project window and part editor

- Analysis: statistics, FFT based spectral analyzer

- Automation data move with the audio events

- Range selection drawn on playback
Mixing
• Configurable mixer, showing selected channels and channel strip sections at wish
• Up to 4 mixers available at the same time, for more overview for groups, VSTi’s etc.
• Unlimited amount of channels, inputs and outputs, effect returns, VSTi & group channels (depending on your hardware)
• VST Connection window: ASIO & master bus routing with preset management
• Up to 12 speaker channels available for inputs, audio tracks, effects, groups and outputs
• Multiple output configurations for mono, stereo and surround formats at the same time
• Plug-in delay compensation throughout the complete signal path
• Interleaved surround recording and playback
• Switchable dual mono panner, combined panner or stereo balance on stereo tracks
• Flexible effect or dry recording from any physical input to any audio track
• 8 inserts on inputs channels, audio channels, effect return channels, group channels, VSTi, ReWire and output channels with global and individual soft-bypass
• 8 auxiliary sends per input, audio, VSTi and group channel with up to 12 channels
• Phase invert and gain on all channels
• Access to internal effect plug-ins or external effects patched via the audio hardware
• Automation tracks for each audio track, group channel and for plug-ins
• Waveform display visible on automation background
• Automation modes Touch, Autolatch and X-Over for all parameters, Overwrite and Trim for volume
• Copy and save/load channel settings is possible

Remote Control
• Steinberg Houston, JL Cooper MCS-3000 and CS-10, Mackie Control, HUI and Baby HUI, Roland MCR-8, Yamaha 01V, DM 2000, 02R96, CM Automatisation Motor Mix, Radikal SAC-2K, Tascam US-428 and US-224

Video
• Video track with thumbnail preview
• Video playback with QuickTime, DirectShow, DirectX or Video for Windows
• Audio extraction from video files, replace audio in video files
• Full screen video option

Processing
• Integrated processes: Acoustic Stamp, Envelope, Fade In/Out, Gain, Merge Clipboard, Noise Gate, Normalize, Phase Reverse, Pitch-shift, Remove DC Offset, Reverse, Silence, Stereo Flip, Time Stretch, Resampling
• Process history with the ability to modify, disable/enable or replace previous processes. Offline history can be saved as a batch process
• VST and DX plug-ins can be processed offline

Plugins
• Real-time support for VST and DirectX plug-ins (may also be applied offline)
• Bundled stereo plug-ins include: Flanger, Phaser, Overdrive, Chorus, Symphonic, Reverb A/B, QuadraFuzz, SPL DeEsser, Double Delay, ModDelay, Dynamics, Magneto, DaTube, Chopper, Transformer, Metalizer, Rotary, Vocoder, StepFilter, Bitcruisher, Ringmodulator, Grungelizer, MIDI Gate, UV22 HR (Apogee), MultibandCompressor, Test Generator, DeNoiser, DeClicker, Q, Nuendo EQ2
• Surround plug-ins include: SurroundPAN, MatrixEncoder/Decoder, Mix8To2, Mix6To2, MultiScope, MixxerDelay (distance compensation)

Surround
• Mixer is fully multi-channel based, in every aspect, up to 12 speaker channels
• Plug-in based surround panning
• Surround encoding: downmix plug-in for fast monitoring in other multi-channel formats
• Submixer and distance compensation plug-in
• Matrix encoder/decoder for LCRS or 3/2 encoding
• Optional Dolby Digital/DTS encoding/decoding

Network
• VST System Link for sample accurate sync, audio and MIDI transport between systems
• Peer to peer collaboration with track-locking over TCP/IP LAN
• Hierarchical sharing of complete projects down to single tracks using TCP/IP
• Standard network access allows Nuendo to record, play back and copy files from dedicated servers, other workstations or library servers. A regular TCP/IP LAN is sufficient

MIDI/Music
• Tempo-lock option is available on tracks to allow events to maintain their relative bar and beat position as the tempo changes
• MIDI Device Manager for naming and hiding MIDI devices
• 64 VST instrument slots
• MIDI, ReWire and VSTi channels available in the mixer
• User definable PPQ display resolution
• Key / List / Logical / Drum editors
• MIDI step recording
• Multiple controller lanes in MIDI editors
• Beat calculator • Rewire 2
• Audio & MIDI metronome

System Requirements

Macintosh - Minimum
• Power Mac G4, 366 MB RAM, Mac OS X
• USB port required
• Supports ASIO 2 specification for high-end multichannel audio
• Supports Mac OS X specifications for compatible soundcards

Macintosh - Recommended
• Power Mac G4 733 MHz or faster, 512 MB RAM, Mac OS X, v10.2

PC - Minimum
• Pentium III/400 MHz, 256 MB RAM
• USB port required
• Supports ASIO 2 specification for high-end multichannel audio
• Supports Windows MME / DirectSound specification for standard soundcards

PC - Recommended
• Pentium/ Athlon 1 GHz or faster, 512 MB RAM

STEINBERG

NUENDO 96/52 DSP

24-Bit/96kHz I/O Audio Card for PC and Mac

Representing the perfect blend of hardware design and ASIO driver implementation, the Nuendo 96/52 DSP delivers an incredible 26 audio inputs/outputs from a single slot PCI card at up to 24-bit/96kHz resolution (12 channel 24-bit/96kHz record/playback on ADAT optical) with unparalleled connectivity (with other digital audio components), complete synchronization possibilities, zero latency monitoring and reduced CPU load. ASIO-poured in hardware means that performance levels previously only achievable with very heavy CPU loading are now possible without exhausting processor power just to get multi-channel audio in and out of the computer in a timely fashion. DSP processing allows freely scalable level meters, peak and RMS calculation in hardware. Card features 3 x ADAT optical I/O, ADAT-Sync In, S/PDIF I/O, word clock I/O, 2 MIDI I/Os and TotalMix, a DSP-based real-time mixer/router.

FEATURES

High Performance
Normally it is the audio software drivers that allow audio hardware for the PCI bus to work with all applications that are using the PC for audio I/O. However, all driver actions are CPU actions, resulting in lost performance that could be better used by the host application. When the Nuendo 96/52 DSP is used with its ASIO driver, the complete data transfer is performed by the smart custom programmed logic of the audio card to the PCI bus. The CPU is simply not used.

Super Fast
The 96/52DSP card is a PCI bus-master device that works exclusively in 32-bit transfer mode. The card moves audio data directly to and from the ASIO host application's memory using the fastest PCI bursts. Nothing could be more efficient. There are no DMA transfers taking place, no multiple 16-bit data movements, and no data bit shuffling.

Auto Sync
With AutoSync activated, the card continuously searches for a valid input signal to lock to. This produces an instantaneous 'record on the fly' performance without having to wait to resynchronize to the input signal. Systems of up to 3 cards are supported and maintaining sync between them is as simple as connecting them all to a common device.

TotalMix Mixer
Any input and output can be routed and mixed to any output. Limited only by the available outputs of the I/O-box, up to 14 independent submixes are available. Internally, the mixer works with 40 bit wordlength. For level alterations there are 65536 steps that allow for a virtually continuous change between 6 dB gain and maximum attenuation. In unity gain setting, the mixer is even bit-transparent and can pass the input signal unaltered.

Unique Features
- Working with multiple digital sources brings its own problems. All devices must be synced precisely or otherwise dropouts and crackles can occur. Ensuring that a system is correctly synchronized is made more transparent with the SyncCheck feature. The card can check all its inputs simultaneously and give an exact read out of the sync quality in the settings dialog.
- SyncAlign features guarantees absolute data alignment across all channels. It cannot scramble channel assignments, and ensures that all ports are started with precise sample alignment. SyncAlign also compensates for any time differences when starting recording while playing.
- Secure BIOS Technology allows to perform hardware updates via software/driver without any risk. And thanks to its unique 'Zero CPU Load' technology, guarantees highest performance and lowest latency on both notebooks and desktops!
- Change latency on the fly. No manual reset, no re-boot - simply continue when using Cubase or Nuendo.
- Zero Latency Monitoring (ZLM ) brings real tape machine feeling to the PC. At Punch-in the corresponding track is switched into bypass directly in the hardware, at Punch-out it switches back to playback. Thus the PC behaves exactly like a 'normal' tape machine.

TotalMix not only leads to perfect and complete ASIO direct monitoring, but is also useful without ASIO. Thanks to a proprietary mixer surface, submix and Zero Latency Monitoring it can be used with all audio applications. An external mixer thus becomes unnecessary many cases.
Versatile 24-bit/96kHz Audio Interface Components

Developed from the technology originally created for the Nuendo 96/52 card, the Nuendo AudioLink 96 Series (consisting of two interface cards, two breakout boxes and the TotalMix software) offers the same low latency, AISO performance and high channel counts that has made the Nuendo 96/52 the audio card of choice for professionals. However, the increased flexibility which the components in the AudioLink 96 series offer, enable users to build a system which meets the specific demands of their current working environment. Studio or location, laptop or desktop, Mac or PC, there is a combination of card, interface box and driver to fit all needs.

Like the Nuendo 96/52, Nuendo AudioLink 96 components will shape a system that supplies 24-bit/96kHz audio; multi-channel digital and analog I/O; ADAT optical, S/PDIF, ADAT Sync and Word Clock inputs; and latencies down to 1.5ms. But they also add MIDI I/O and Total Mix software, making the system especially valuable to the user on the move who now has one less box to carry around with them.

And Nuendo AudioLink 96 isn’t just a self-contained construction kit for audio interfacing. The ADAT connectors on the Nuendo Digiset and Multiset I/O boxes enable you to hook up to all existing Nuendo converter racks.

### Components

<table>
<thead>
<tr>
<th>Nuendo AudioLink 96 PCI</th>
<th>Nuendo AudioLink 96 Mobile</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Nuendo AudioLink 96 PCI is a more traditional PCI card for Mac and Window computers with the same functionality as the AudioLink 96 Mobile. Connects to the Nuendo AudioLink 96 Digiset or Multiset via a special 15-ft break out cable and features the low latency and Zero CPU performance of the Nuendo 96/52 DSP card.</td>
<td>This is an exclusive PCMCIA type II card that fits into all laptop computers for the most compact and powerful Nuendo system on the move. Connects to the Nuendo AudioLink 96 Digiset or Multiset via a special 15-ft break out cable. Features the low latency and Zero CPU performance of the Nuendo 96/52 DSP card.</td>
</tr>
</tbody>
</table>

<table>

<tbody>
<tr>
<td>This 9.5” breakout box gives you all the connectivity of the Nuendo 96/52 DSP PCI card (3 x ADAT optical I/O for 24 channels each way, S/PDIF coaxial for stereo I/O, ADAT-sync input for sample accurate synchronization, and Word Clock I/O) plus stereo line out for monitoring and two MIDI inputs and outputs. Ideal for those who want to do editing and/or MIDI recording on the move, but then needs to connect into 24 channels of ADAT I/O on returning to the studio for audio recording/mixdown.</td>
<td>Used in conjunction with the AudioLink 96 PCI or Mobile cards, this breakout box connects to external equipment with 8 analog inputs/outputs (balanced, 24-bit/96 kHz), one ADAT optical I/O for 8 additional channels each way, S/PDIF I/O, Word Clock I/O and ADAT-sync input. Plus, there is one MIDI I/O and a separate analog line output. Perfect for those who to do 8-channel recording as well as MIDI/audio editing on the move, but then connect into an additional 8 channels of ADAT I/O on returning to their project studio for recording/mixdown.</td>
</tr>
</tbody>
</table>
Perfect for those working at the cutting-edge of audio recording for formats like DVD-Audio, the Nuendo 8•I/O 96k uses the very latest 24-bit converters with 128x over-sampling to attain a real dynamic range of over 110dB at a sampling rate of up to 96k. The analog input circuitry uses a fully servo-balanced and completely symmetrical audio path. The flexible gain architecture allows input sensitivities of low gain, -10 dBV and +4 dBu and output sensitivities of high gain, +4 dBu and -10dBV.

With its intelligent clock control an internal clock is provided in 44.1 up to 96 kHz, but you also can use an external clock. And to ensure a perfect synchronization the Nuendo 8 I/O Sync Check immediately shows sync conflicts in your system and the Nuendo 8 I/O SyncAlign guarantees absolute data alignment across all digital outputs.

**FEATURES**

- 96k converters feature 8 channels of A/D conversion that can be output via both 24-bit ADAT optical and TDIF-1 interfaces and 8 channels of D/A conversion driven from either the 24-bit ADAT or the TDIF-1 interfaces, all in a single rack space.
- To make the best of the excellent dynamic range of the A/D converters, the input level switch steps through the AD8-I/O’s three input sensitivities: Low Gain, +4dBu, or -10dBV. Similarly, the output level can be independently selected from High Gain, +4dBu, or -10dBV.
- Inputs can be accurately calibrated to the audio source using the signal present & signal clip indicators provided. Each analog output has its own ‘Signal Present’ LED that works in an analog way (brighter at higher levels). Pushing OUTPUT LEVEL switches between High Gain, +4dBu or -10dBV as the selected analog output level.
- Nuendo SyncAlign guarantees absolute data alignment across all channels. It ensures that all ports are started with precise sample alignment, and it also compensates for any time differences when starting recording while playing.
- All digital inputs/outputs operate over the full 24-bit range, and the Nuendo 84/0 96k can also be used as a a digital patch bay and format converter.
- Intelligent Clock Control (ICC) provides functionality not found on any other converter. For example, the AD converter clock can be derived from the internal clock at 44.1,48 or 96kHz or externally from the BNC connector or from any of the digital inputs. The DA have the same range of options.
- The larger the system, the greater the chance sync isn't maintained across all digital and word clock inputs. And if all devices aren't synced precisely, dropouts and crackles can occur. To ensure that a system is is correctly synchronized and working at the best possible audio fidelity, the 84/0 96k incorporates SyncCheck to check all its inputs simultaneously and give to give an exact read out of the sync quality in the settings dialog.

**Nuendo Studio System One 96k — The Complete Audio Production Solution**

Nuendo Studio System One is a complete production solution designed for the audio production process, whether for music, post production or Surround Sound authoring for film, TV and DVD projects. Available for Mac or PC, the bundle includes Nuendo 2.0 software, the Nuendo Surround Edition, Nuendo PCI 96/52DSP card and the Nuendo 84/0.
Digital Format and Rate Converter

The Nuendo DD 8 converter is a compact 1U 19” rack-mounting device featuring digital interfaces in the following formats: AES/EBU, ADAT, TDIF. With its 8 channels of AES/EBU input and output it serves as a perfect AES/EBU front end for Nuendo users. The DD8 can also be employed as a digital patchbay for splitting digital signals and as a sample rate/digital format converter. Because it offers several combinations of the basic functionalities it can be a real lifesaver in studio environments, where many problems related to digital signals have to be solved every day.

- Switchable 24-bit sample rate converters (SRC) allow for both highest quality sample rate conversion and clock unlinking of all AES/EBU inputs.
- All of the Nuendo DD8's digital I/Os support 96kHz/24-bit. As ADAT optical and TDIF are usually restricted to 48kHz, the unique DS mode (double speed) allows two channels to be used for the transmission of one channel's data. The algorithm used is compatible to S/MUX and Double Wide, and is implemented in the Nuendo 96/52 DSP audio card. (Makes the Nuendo DD8 ideal when Nuendo 96/52 DSP owners need real time AES digital conversion).
- The Nuendo DD8 is a reference quality 8 channel format converter featuring exceptional features like Intelligent Clock Control (ICC), SyncCheck, SyncAlign, Bitclock PLL, digital patchbay functions, and active jitter reduction through SD-PLL and 96kHz/24bit sample rate conversion.
- AES/EBU to ADAT/TDIF and ADAT/TDIF to AES/EBU work both entirely independently and intelligently coupled.
- Dedicated LEDs display the state of the incoming and outgoing signals and all operations running inside the device.
- 8 channel AES/EBU (4 x stereo, XLR) to ADAT optical/TDIF-1 converter
- Sample rate conversion 96 kHz/24 bit switchable for the AES/EBU inputs
- 8 channel ADAT optical/TDIF to AES/EBU (4 x stereo, XLR) converter
- ADAT optical inputs, 24 bit, using bitclock PLL for sample accurate lock
- Clock unlinking (re-synch) by SRC
- ADAT optical outputs, 24 bit, fully compatible with all devices using this interface
- TDIF-1 interface, 24 bit, low jitter PLL, Emphasis support, DA-38, DA-88, DA-98 compatible
- Copy Mode for copying data to an output of the same format (ADAT to ADAT) etc.
- Active jitter reduction by Serial Double PLL and SRC
- Digital patchbay for copying, duplicating and distributing the digital input signals
- SyncCheck, unequalled technology for checking clock synchronicity
- S/PDIF mode switchable for the second ADAT optical output

New! ID — Remote Control for Nuendo

Designed and handcrafted by a team of audio professionals to meet the demand for total control of Nuendo with a familiar “console”-like feeling and much more, Steinberg’s ID (Input Device) is far more than another generic controller device. ID consists of 4 logical sections dedicated to various aspects of recording, editing, mixing and control room monitoring:

- Fader-section offers 24-channels for direct access. LCDs show track names and status of channel parameters: solo, cut, track-arming, direct channel-strip access and automation-status. 24 touch sensitive motorized faders and encoders control levels.
- Encoder-section features a complete channel strip layout with 24 endless encoders, 24 two line displays and 24 level indicators for direct access to any channel parameter.
- Controlling VST Plug-ins is supported by 24 endless encoders in conjunction with 48 lines of display and 12 additional Favorite-User-Function encoders with displays.
- Edit-Section's integrated Matrix ASCII keyboard and the trackball allow computer and software operation without mouse and keyboard. Also has switches and status displays for nearly every important edit function.
**NUENDEO TIME BASE**

**VST System Synchronizer**

Nuendo Time Base is the first synchronizer supporting Steinberg’s VST System Link technology. This makes it the perfect solution for sample accurate cueing of tape-based audio and video machines from Nuendo audio production systems. All functions can be controlled and edited from within the Nuendo software. The outstanding feature set of Nuendo Time Base makes it the most versatile and precise synchronizer available today. Nuendo Time Base can also be used as a standalone unit. Any Nuendo system can be used as a 9-pin slave — just hit “Start” and Nuendo will immediately follow every command with the Virtual Machine Option.

### FEATURES

- Synchronization of digital audio and video systems (hard disk recorders, mixers, etc.) via house sync (Blackburst), AES-EBU, LTC, VITC, with analog/digital audio and video tape machines, sequencers, etc. with separate inputs for video sync and VITC R/W
- Read, generate and regenerate timecode (LTC, VITC, MTC and VST System Link)
- Burn visible timecode readout into video picture (2 different sizes, 4 display styles, freely positionable)
- Supports all sample rates from 16 to 192 kHz incl. NTSC Pull up/down
- 9-pin interface provides integration of machine control for decks like Betacam, Tascam DA98, etc.
- Ergonomic practical operation using 4 key pads and text display to show all functions and conditions plus software control, guarantees the user a full overview and intuitive usability
- Optional: Virtual 9-pin Machine. Emulation of 4 different 9-pin machines, allows use of Nuendo as a slave machine on professional 9-pin editors and (console integrated) controllers.

### PRACTICAL SETUPS:

1. House sync for all digital devices: with its 4 WordClock outputs, 1 AES/EBU output and one of the best clocks available it is the perfect clock master in any studio with sample rates up to 192 kHz.
2. The Time Base can lock to a Blackburst signal. WordClock, AES/EBU and the timecode generator are video locked.
3. System Link generator: any timecode source - LTC, VITC, 9-pin - will be converted to system link data. By connecting the Nuendo audio card to the AES/EBU connections on the Time Base, Nuendo systems will slave sample accurate to the incoming timecode and machine control. Time Base can be run as a Virtual Machine and outputs the necessary System Link information (+ LTC, VITC inserter) to the connected Nuendo system(s), by running the virtual machine. The whole system including the timecode generator is video locked as long as Blackburst is fed to the Time Base.
4. The 9-pin Machine or the Virtual Machine can be controlled via MMC in parallel to the controls from the Nuendo system.*
5. By using the optional Virtual 9-pin Machine option (VTB), Nuendo – using VST System Link – behaves like a 9-pin Machine to the controlling system. Four different 9-pin emulations are available. (BVW 75, DVW500, 3348, TM). Depending on the chosen emulation, up to 64 tracks (track ready) commands will be supported.*
6. Separate from the video sync loop thru connectors, the Time Base offers a video in-/output which is used to read VITC, insert a VITC signal from the internal VITC generator and a switchable burn-in window. The video signal can be fed to the Time Base for timecode insertion on video playback.
7. NTSC Pull up/down: the Time Base can provide slower or faster clock signals (approx. 0.1%) for NTSC pull up/downs. All devices will receive the changed clock speed.
8. Additionally, the GPI port assures that standard GPI devices used in the studio are controlled by Nuendo via the Time Base, like red-light.
Ultra-Low Latency ASIO Audio Card for Playing VST Instrument Live

The VSL-2020 provides 32 ADAT channels for pristine transmission of audio and MIDI data in 24-bit/96kHz quality to and from the other computers in your VST System Link network. Flawless support of ASIO 2.0 ensures stable, low-latency multi-channel network operation with other computers running Nuendo or Cubase. The VSL-2020 card is bundled with V-STACK (see below) so you can increase the available music-making power in your studio.

With the VSL-2020 card and V-STACK software you can turn your PC into a live virtual instrument station. The VSL-2020's ultra low latency architecture guarantees dynamic, live play of VST instruments at latencies as low as 32 samples (less than 1ms). V-STACK software hosts up to 16 VST instruments, and provides 8 send effects, 5 insert effect slots and 4 master bus effects for your VSTi sounds. All this in immaculate 32-bit audio quality.

- 32 ADAT channels - 2 optical ADAT I/O with S/MUX support
- S/PDIF I/O - supports AES/EBU and consumer S/PDIF
- Analog I/O - unbalanced (-10dBV) Stereo RCA I/O
- SuperClock (FS 256) and WordClock I/O with BNC connector
- Standard MIDI 5-pole I/O
- 24-bit with 32, 44.1, 48, 88.2 or 96 kHz
- Bundled with V-STACK VST System Link software

V-STACK
VST System Link/Live Performance Software

Since Steinberg introduced the VST 2.0 plug-in format a few years ago, there has been a rapid development of VST Instruments - software synthesizers and other sound sources played and controlled from within a host application. There is now a huge number of VST Instruments available, ranging from simple synthesizers and drum machines to exact software replicas of vintage synths and extremely advanced sound modules with no equivalent in hardware. VST Instruments can often be more flexible than hardware synthesizers, allowing for total recall and full automation of all parameters, patching and mixing in the digital domain, graphic interfaces and solutions that wouldn't be possible in hardware, etc. However, any computer can only play so many VST Instruments at a time - and typically, the more advanced a VST Instrument is, the more processing power it requires. Enter Steinberg's VST System Link. . .

This revolutionary system makes it possible to have several computers working together as one large system, with no other requirements than ASIO compatible audio interfaces with digital audio connections. Computers connected via VST System Link will freely exchange audio and MIDI data, all in perfect sync, creating a digital audio network system. This provides an excellent solution to the problem of CPU-hungry VST Instruments: let one computer play audio and MIDI tracks and dedicate another computer to running VST Instruments only, taking full advantage of all available processor power!

V-STACK is the perfect application for this: a stand-alone VST Instrument host, supporting up to 16 VST Instruments with full mixing capabilities and VST effect support. The VST Instruments are controlled via MIDI over VST System Link or from a regular MIDI interface (e.g. for live use) and the audio can be freely routed to any outputs on your audio interface. Since there is no transport, editing, event handling, etc. all processing power can be focused on VST Instruments and effects!
NUENDO SURROUND ENCODING

Until recently, the only way to encode audio for surround sound was by using expensive hardware systems which required lots of effort to get the audio in the right form to play into the encoding hardware and then to pass on the encoded audio to the authoring stage of the project. However, with Nuendo the whole process of encoding 5.1 Surround Sound—via DTS or Dolby Digital—can now be integrated into computer-based production systems where the processed files are ready for use in the authoring process.

**Nuendo Dolby Digital (AC-3) Encoder**

The Nuendo Dolby Digital Encoder software plug-in allows Nuendo projects to be encoded into Dolby Digital—the number one choice for delivering surround sound to millions of home theater system around the world. The multi-channel audio format for DVD discs, Dolby Digital (also known as AC-3) is based on an algorithm that takes advantage of auditory masking and both intra- and inter-channel redundancy. This technique guarantees both outstanding audio quality and bandwidth efficiency. Licensed by Dolby Laboratories, the Nuendo Dolby Digital Encoder comprises the full functionality of the original Dolby hardware. Imagine the sheer convenience of having the encoding system on the same platform as the program which is used to create and process the audio.

**Nuendo DTS Encoder**

A rival format to Dolby Digital, DTS (Digital Theater Systems) provides a similarly epic sonic experience in DVDs as well as DVD-Audio and SACDs where the increased fidelity of the rear speaker pair means that full bandwidth can be placed in all speakers in the surround field. Specifically licensed by Steinberg to allow Nuendo users access to the next stage in the surround sound production process, the implementation is simplicity itself with the smart integration of the DTS file format in Nuendo’s export dialogue. The necessary routines are all automated so that the user merely needs to define which 6 files should be DTS encoded and the resulting encoded files are placed on the desktop ready for use in the authoring stage.

**Urban Atmospheres Surround Library**

This new surround library provides urban acoustic 5.1 environments recorded in immaculate quality. Spanning 95 scenes on 9 DVDs, Urban Atmospheres are constructed to ensure maximum versatility in building urban soundscapes for film, TV, radio, theater or music.

Urban Atmospheres are a collection of high-end sound environments professionally recorded in 5.1 surround that offer unequalled spatial characteristics and pristine sound quality. The SPL Atmos System was used to record 25 indoor and outdoor locations, spanning 95 scenes. These astoundingly authentic recordings were compiled onto 9 DVDs in AIFF format, ready for immediate use in any pro audio system (Windows or Macintosh).

Urban Atmospheres are perfectly suited for any use in sound-tracking or dubbing, be it for film, TV, theater, music or radio plays, or anywhere you need to create a spatially realistic acoustic environment. And because the unique construction kits containing background atmospheric recordings with no conspicuous audio events are combinable with the included foreground events, you can mold the material to suit any requirements or even build your own, even more complex acoustic environments with no additional software required.
The native version of the highly regarded TC-quality reverb expanded to fill the 5.1 space with dense and entirely convincing studio quality reverb, TC Surround Reverb is the ultimate surround reverb for use with Nuendo—and is indispensable to anyone mixing for film, home theater or DVD.

Nuendo Surround Edition—Eight-channel Real-time Surround Tools

The Nuendo Surround Edition is a collection of 6 surround real-time effect plug-ins designed for daily use in media production work. Offering up to eight channels of compression, equalization, loudness maximization, reverberation, and LFE management, the Surround Edition is the perfect choice for anyone with multi-channel mixing needs. Since the requirements of a surround environment differ quite significantly from the classic two channel world, Steinberg Spectral Design has developed this collection specifically as a tool for the specialist fields of film, theater, DVD and modern music production. In fact these state-of-the-art plug-ins provide all the processing and “finishing” tools needed to produce mixes for both 5.1 and 7.1 productions.

OctoQ: A 7-band EQ with 3 parametric variable-Q mid bands and low and high shelving and cut filters which works at double the selected sample rate

OctoMaxx: A soft/hard gain maximizer with up to 4 linking groups, input/output level meters for each channel and Possible Gain and Achieved Gain meters

Octoverb: A reverb/ambiance plug-in with two independent room models and intelligent adjustment of the reverb tail according to the room size. Also features independent Level, PreDelay, High and Low Damp controls for each channel

TC Surround Reverb

The graphic user interface provides intuitive control of all the main parameters for reverb design covering room shape and size through to diffusion and separate controls for early reflections and reverb tail. There are three independent tail controls for low, mid and high band with a sweepable band crossover and an additional EQ stage with low and high shelf filters, giving an unprecedented sonic flexibility and realism to surround productions.

As Nuendo already takes care of positioning tracks in the 5.1 surround field, TC Surround Verb receives the signal already panned, so instead of it’s own panner, it has an innovative surround metering which allows you to keep track of the audio’s position in the virtual room. Dry and wet signals are displayed in two different colors, providing maximum visual feedback as to what is happening to the source signals and the effected components.

In the Space Editor you can set up size and shape of the room. This is the first aspect of any reverbation characteristic, where the early reflections from walls, floors and ceilings make a large contribution to the overall sound. The Time Editor allows you to process the reverb tail in three distinct frequency ranges, the PreDelays are separately definable for early reflections and tail, and the Filter Section gives an individual tone for both early reflections and tail with high shelving filters.
STEINBERG

WAVELAB 4.0

The Standard in Digital Audio Editing

Professional audio editing and mastering software for Windows, WaveLab 4.0 can handle almost any audio editing task—be it sound design, high-quality mastering, internet audio, multimedia applications, and preparing audio for broadcasting or computer telephony. Combining easy-to-use stereo editors with a wealth of mastering features, WaveLab 4.0 offers powerful editing tools and an array of new, high-quality virtual effect processors.

With its unique Audio Montage window, WaveLab 4.0 offers a revolutionary, non-destructive editing concept whose flexibility and performance no other software solution can match. Create Audio Montages and carry out precision edits in real-time. Use fades, crossfades, volume envelopes or effects without having to wait. The full implementation of multitasking allows editing and processing in the background during playback. You can even save or record while working on a different file. WaveLab 4.0 also features drag & drop and a customizable user interface, and you can freely scale all windows with a mouse. Comprehensive CD burning capabilities, real-time audio file analysis and batch processors further add to the functional depth of WaveLab 4.0. Plus, Steinberg’s latest version also supports samplers, ASIO, WDM, a vast range of file formats as well as file resolutions of up to 32-bit IEEE/192 kHz, and real-time input and output monitoring.

FEATURES

Highest Quality Sound
WaveLab 4.0 offers outstanding sound quality. The internal 32-bit floating processing depth with a sample rate of up to 192 kHz offers superb audio clarity. Apogee’s renowned professional UV22HR dithering algorithm converts your audio into other bit rates at the very last step in the mastering process.

Powerful Real-Time Analysis Tools
WaveLab 4.0 features a broad palette of professional analysis tools. Thanks to newly developed high-precision level indicators, you can visually monitor playback audio input and even each single sample position - in real-time, of course. Also included are a new version of the Peak/VU Meter (now free-floating), a 60-band spectrum analyzer and Phasescope, a correlation meter with integrated goniometer. With the FFT meter, you can also, for example, test rooms or PA systems.

Audio Montage
The Audio Montage window is the heart of WaveLab 4.0. Here, audio files and sections of audio are defined, arranged and edited. Open as many clips on as many tracks as you want simultaneously in the audio montage and place, move, cut, fade or crossfade them any way you like. Crossfades, panorama, volume edits and effect send levels are calculated in real-time. You can change the “rubber band” curves with the mouse: hear and see the changes you make straight away - without creating fade files that have to be calculated first. The Audio Montage is absolutely non-destructive, as the clips are only references to the original audio files. This gives you the flexibility of being able to move, cut or delete clips. Each clip can be processed using up to ten VST effects. The sum of all the tracks then passes through the Master Section, where another eight real-time effects (VST, WaveLab, DirectX) are available. Unlimited undo/redo lets you take back any edits or changes you have made.

Integrated Mastering Studio
WaveLab 4.0 offers everything you need to give your audio the finishing touches it deserves: a graphic, editable, fully parametric equalizer, a top level reverb algorithm, comprehensive dynamics section as well as special high-end loudness optimization algorithms. Also built-in are two plugins for restoration of audio recordings, Declicker and Denoiser. Using virtual effect processors in the Master Section couldn’t be easier - you can drag & drop the plug-ins around and place them into the desired position in the processing chain. To help you compare results of different effect combinations easily, you can open several instances of WaveLab 4.0 at the same time.
Multimedia

Import and export MP3 files, while intelligent functions prepare your files for multimedia applications. These include the audio database and the batch processor. WaveLab 4.0 also features integrated dithering to word lengths between 8 and 24 Bits as well as sample rate conversion (5 to 192 kHz).

Sound Design for Samplers

Communicating directly using MIDI or SCSI, sample editing is a joy. Sound processing with internal EQs, dynamics and effects, volume optimization, distortion control, high quality time stretching and pitch shifting with pitch detection, auto-split functions and professional loop creation features. All supported by crossfade-looper and wave EQ.

Burn Your CDs

WaveLab 4.0 makes burning CD masters easy. You can set track and index markers directly in the waveform, including extremely accurate settings for codes and pauses. The integrated Label Editor lets you make your own CD labels and covers. The backup tool lets you archive your audio files to hard drives, CDs and JAZ. Also features audio-in-pause function for creating hidden tracks, 1:1 CD copying, ISO import and export, PQ sheet import, export and printing.

Transparent File Management

With its integrated audio database and batch processors, WaveLab 4.0 takes care of routine tasks. Organizing sound archives or databases is simple. These versatile tools can edit and convert audio files automatically. Using them couldn’t be simpler - just select your audio files, choose the editing functions and set your destination folder. Meta Leveler can be used during batch processing to compensate undesired volume fluctuations.

Audio file formats

Supported file formats include WAV, AIFF, Ensoniq Paris 24-bit, RAW (8/16/20/24 bit), AU, Sound Designer II, ulaw, MP3, Sun/Java and many more...

Additional Functions

• ASIO, W DM and M M E driver support
• Analyze audio signals in real-time: Level/Pan, Phase, Spectrum Analyzer, FFT Meter, Wave Meter, Bit Meter
• Full real-time input and output monitoring
• High-quality virtual effect processors Q (parametric 4-band mastering EQ), Multiband Compressor, Spectralizer (Enhancer), Denoiser, Declicker, Voice Attenuator, 192 kHz Resampler
• Backup function, data CD burning, CD copy, CD label creation
• OSQ (Original Sound Quality) - lossless audio file compression
• Save several audio files in the background while you continue working
• Apogee UV22HR Dithering
• Automatic pitch recognition and pitch adjustment
• Autosplit function splits audio files into segments with a range of different criteria

Applications

Mastering

WaveLab 4.0 offers a range of features which are indispensable for mastering: editing, arranging CD tracks, sound processing with internal EQs, dynamics and effects, automatic volume adjustment, UV22HR dithering and noise shaping, CD R writing, tools for problem analysis and comparing files, and a raft of real-time analysis tools (FFT, VU/Pan, Bit, Spectrum etc.)

Broadcast

Ideally suited for use in everyday broadcast audio, WaveLab includes a variety of solutions, such as: easy-to-use speech cutting tools, simple, graphic arrangement of audio files for radio, automatic ducking and automatic real-time crossfades.

WaveLab ESSENTIAL

Digital Audio Editing For Project Studios

WaveLab Essential offers a range of indispensable digital audio editing features, from superior CD writing functions to comprehensive mastering possibilities. Based on award-winning WaveLab 4.0 technology, WaveLab Essential delivers outstanding quality for your project studio - and all this performance at an unbeatable price.

The Complete VST Mastering Solution

Every recording deserves to be mastered. Without mastering, a mix can sound dull and lifeless. Single tracks sometimes do not fit together with other tracks because of differences in the dynamics or the frequency characteristics.

Designed to meet today's ever-increasing demands in music production, the Steinberg Mastering Edition is a set of six high-quality plug-ins specially designed to help you achieve the most efficient and effective results. Compatible with a wide range of host-based audio applications, together they will satisfy all your mastering needs. So whatever the situation, the Steinberg Mastering Edition gives you the tools needed - in the quality you expect of Steinberg audio software.

The ME Loudness Maximizer sets the standard in loudness optimization. It is the first dynamic processor whose algorithms were modeled with the express purpose of achieving the optimal effective loudness. Even with a mix where the loudness has already been pushed to the limit, the ME Loudness Maximizer can increase the subjective loudness of the audio material without losing "punch" or causing distortion. The intelligent algorithm analyzes the audio material and automatically adjusts all parameters accordingly. The preset functions allow definition of standard working situations, making this high-quality tool very user-friendly. The ideal tool for complex applications such as mixing, mastering, post-production, or broadcasting, the ME Loudness Maximizer guarantees outstanding results—no pumping, no clicks, and no unwanted artifacts or other side effects.

The ME Compressor is a multiband compressor, which divides the audio signal into five independent frequency bands. A line showing compression characteristics is available for each band. This allows highly flexible compression of varying frequency ranges, music signals and even single instruments, within the final mix. The compression characteristics are displayed on a logarithmic scale, making editing more intuitive and allowing highly delicate adjustments. The solo function allows monitoring and adjustment of each band individually. Has two modes:

- Classic mode - Standard compressor with fixed Attack and Release times
- Complex mode - A new approach to audio compression. Adaptive control produces a cleanly compressed signal without the "pumping" produced by many other compressors. The softclip function gives the output signal that certain sharpness.

The ME FreeFilter is a linear phase real-time 1/3 octave equalizer, whose up to 30 bands of equalization allow very delicate adjustments of critical frequencies. The uniqueness of ME FreeFilter lies in its ability to conduct an extremely detailed analysis of audio sequences and use this data in a completely new way. The ME FreeFilter can "learn" the frequency spectrum of a piece of music and "copy" it to another. The Morph function allows real-time scalable mixing between the two frequency spectra. This means that different music tracks can quickly and easily be made to sound more alike. A large display shows the frequencies of both "learned" audio signals (and the differences between them) with pinpoint accuracy.

**VoiceMachine**

**Real-time Vocal Pitch Transformer**

Consisting of two real-time voice effect tools, VoiceMachine is the ultimate application for redesigning the voice—whether by creating completely new sound files or altering the pitch leaving the natural character untouched. The VM Generator allows you to manipulate a vocal track as if it were an instrument. You can control the pitch and formant characteristics of up to 4 additional voices in realtime, simply by triggering them via MIDI. This lets you create lush vocal arrangements from a single lead vocal track. The VM Processor lets you change the melody or correct and smooth the intonation of a voice while maintaining its natural character. Their VST 2.0 interface allows all parameters to be addressed via definable MIDI controllers.

**VM Generator**

- Up to 4 voice harmonies can be triggered via MIDI in realtime allowing you to create a backing choir from a single voice in minutes, reducing recording time to a minimum
- Each voice features independent control of pitch change and voice character as well as:
  - An LFO that provides vibrato simulation with a choice of three waveforms (Sine, Saw and Triangle) as well as adjustable Rate, Depth and Delay parameters
  - Adjustable Gain, Pan, Formant and Fine Tune sliders

**VM Processor**

- The VM Processor features an intonation correcting algorithm that allows you to fix any tuning problems in your vocal recordings
- The portamento control can be used to smooth the transition between notes as well as create interesting effects at more extreme settings
- The VM Processor allows you to either change the melody or simply correct the intonation by changing the pitch of a voice without changing the voices original character
- Independent realtime control of pitch change and formant shifting voice character delivers natural sound pitch shifting
- Pitch/Character link function for “classic” pitch shift effects
- Independent controls are provided for the pitch shift and character profile to allow natural pitch shifting or used interactively to create a range of effects such as simulating other singing voices, and even imprinting the character of the male voice onto a female vocalist.
- Real-time natural pitch shifting (no ‘singing rodent’ effect)
- Independent control of pitch change and voice character
- LFO with different waveforms and delay for vibrato simulation
- Smoothing intonation problems in vocal recordings

The ME PhaseScope and ME SpectroGraph round off the Steinberg Mastering Edition with two display-components indispensable for mastering work. The ME PhaseScope is a Goniometer with integrated correlation meter. The ME SpectroGraph displays a spectral plot as a real-time sonogram, which gives precise verifications of even the smallest detail in the recording.

**ME PhaseScope**

**ME SpectroGraph**

and

The ME PhaseScope and ME SpectroGraph round off the Steinberg Mastering Edition with two display-components indispensable for mastering work. The ME PhaseScope is a Goniometer with integrated correlation meter. The ME SpectroGraph displays a spectral plot as a real-time sonogram, which gives precise verifications of even the smallest detail in the recording.
GRM Tools is collection of eight unique plug-ins for VST by the Musicial Research Group (GRM) at the Institute National de l’Audiovisuel in Paris. Famous for their research into sound processing tools, the possibilities offered by the GRM Tools collection goes far beyond ordinary filter, auto paning or chorus effects. High quality algorithms offer unprecedented flexibility and open up new dimensions in audio manipulation.

All 8 Plug-Ins offer the same interactive integrated preset handling which allows settings to be assigned to one button in order to be reselected with a single click. The key lies in the delay parameter which defines the time frame in milliseconds during which the settings from the one preset blend over into the other. Complex parameter mixes allowing sensational sound movements are created in no time at all!

GRM Tools are indispensable for sound design, dance, electronic and experimental music creation, film and TV, even jingles and radio effects.

◆ Parameter interpolation and settings management
◆ Slight to extreme manipulation of the audio source
◆ Time relevant parameters can be synced to tempo (VST 2.0 compatible host software)

**Volume 1**

**Shuffling**
Shuffling is a random micro-splicing and shuffling algorithm. Depending on the selected memory sizes and density, Shuffling introduces bouncing of signal fragments at definable points in the signal’s actual timing, whilst preserving the overall continuity of its time sequence. This leads to spectacular panning, panorama width and stereo movement effects.

**Comb Filters**
Comb Filters is a bank of 5 comb filters with resonance up to self-oscillation. The comb filter amplifies the signal at a given frequency and at all harmonic frequencies (integer multiples of the fundamental) of that frequency. Harmless drum loops grow into exciting new groove happenings by emphasizing certain frequencies or morphing classical instruments into abstract fx tunes.

**Pitch Accum**
PitchAccum is an algorithm which combines two transposers with their feedback delay device. Transposition is switchable on a periodic or random basis. Harmonizer effects and spectacular pitch related creations can be generated in seconds thanks to the interactive window.

**Band Pass**
Band Pass consists of a combination of two filters: a high-pass filter and a low-pass filter which together form a variable width band-pass or band-reject filter. The cut-off frequencies can be set individually. This allows creations ranging from “telephone”-effects to filter blends of all kinds - even separately for each channel in the stereo version!

**Volume 2**

**Freeze**
Freeze lets you select a 3-second sample from an audio source and create up to 32 loops within that 3-second sample. Treat your loops as you wish.

**Reson**
Reson consists of up to 128 resonant high-pass, low-pass or band-reject filters, each of which resonates a single frequency and produces an ensemble of very soft resonances in an input signal.

**Delays**
Delays features a group of up to 128 variable delays, each controlled in its amplitude and timing.

**Doppler**
Doppler simulates the effect of a sound moving towards or away from you, similar to an ambulance passing by.
Virtual Guitar Amp Collection

Imagine a big guitar sound with all its pure emotion and raw energy. Most guitarists envision the classic guitar setup - usually involving glowing valves and a wall of cabinets. Now you can get that sound on your computer.

Warp VST, Steinberg is a VST 2.0 guitar amp simulator plug-in that allows you to combine one of three legendary amp models with any one of three speaker cabinet models. The sound characteristics of amps and three speaker cabinets have been authentically recreated in software, using Hughes & Kettner’s groundbreaking DSM (Dynamic Sector Modeling) technology. When combined with an ASIO I/O solution, Warp VST is practically latency-free allowing you to lay down your guitar in real-time processed with your favorite classic guitar amp combination.

Three Virtual Amps
- The legendary Jazz Chorus clean sound
- The dynamics of a 60s Plexi Tube Head
- The modern HiGain Chunk-Sound of the Rectifier Era
- Each amp model has the exact gain structure and EQ controls as the originals

Three Virtual Speaker Cabinets
- Combo (12” speaker, open housing)
- British (4x12” speakers from the 80s)
- Greenback (4x12” speakers that support those powerful riffs)

Dynamic Sector Modeling (DSM)
- Developed by Hughes & Kettner, DSM represents a breakthrough in amplifier technology that allows an exact recreation of the components and materials of three of the most sought after guitar amplifiers
- Each amp offers its own individual dynamics and distinctive characteristics, selectable with a single mouse click.
- Combines the user friendliness and flexibility of digital technology with the sound quality of a leading analog amplifier.

Guitars and Computers
Please note when recording a guitar: Although an electric guitar has a large dynamic range, the output is relatively weak. And since standard soundcards don't have a high-ohm guitar input, you don't get good-sounding results when connecting a guitar directly to a soundcard.

To get the best sound possible, you need to convert the guitar signal in high quality. This can be done with a preamp which brings the guitar signal up to “line in” strength. You can also use an effect pedal that is switched to bypass mode. Some I/O solutions also have instrument inputs with which you can get very good results, such as MindPrint EnVoice, Aardvark Interfaces, Edirol USB interfaces. Important: The guitar signal has to be recorded in your computer as cleanly as possible. Please adjust your recording level accordingly to avoid distortion.
32-bit Virtual VST Sampler

What’s your dream sampler? A sampler that is seamlessly integrated into your computer. No rack space, no MIDI or audio cabling mess, no set up problems. Total recall inside each song you do. Up to 16 instruments at a time, assignable to 4 stereo, 4 mono and 5.1 surround outputs – giving you a total of 18 outputs. Easiest handling thanks to drag & drop. Pristine sound quality achieved through 32-bit/96kHz support. Advanced memory management, handling sounds of up to 20GB on any computer system and sample libraries in any popular format including AKAI, EMU, E-magic ESX-24 and Tascam GigaStudio. So stop dreaming— it’s here and it’s called HALion 2.0— never before has a software sampler been more intuitive and productive.

FEATURES

- Automation and control effects via MIDI controller data or simply tuning the samples to the right key
- Waveloop editor shows how a modern software sampler should perform. A sophisticated crossfade function helps to set the optimum loop
- Zero crossings are automatically identified and the non-destructive editing saves faulty edit steps. Samples can be pitched, modulated or reversed.
- Creating complete programs and layers in the keyzone window is fast and easy with HALion 2.0's intuitive editing facilities
- Global presets for all envelopes and modulation settings for quick loading of individual settings for each program
- Loading samples into HALion 2.0 is a simple drag and drop-job directly to the keyzone window. The samples appear graphically on the screen. Via resizing and moving the keyzones, velocity and layers are set.
- 18 freely assignable outputs per instance (4x stereo/ 4x mono, 5.1 Surround)
- Pristine sound quality is achieved through • 8-/16-/24-/32-bit file support
- Various filter types (Notch/Hi-Pass/Lo-Pass/Band-Pass) with selectable 12 dB or 24 dB slopes as well as new Waldorf filters and "fatness" function provides opportunities for breathtaking sound experiences.
- Filter and settings can be made individually for each sample (and/or globally for the whole program)
- 16-way multi-timbral with an individual editor for program selection, 128 programs per instance, unlimited layers per program
- 256 Voices per instance, several instances loadable simultaneously
- Full individual parameter set for each sample, ideal for drum sounds
- Extensive, chainable modulation routing capabilities
- 2 synchronizable envelopes with up to 32 freely editable points and 2 LFO’s
- Virtual keyboard for auditioning samples
- WAV, AIFF, AKAI (S1000, S2000, S3000), Roland, and EMU (3/3X, ESI/4/4K, E64/E6400, ESynth and Ultra) import functionality, plus SoundFonts 2.x, GIGA, LM4, LM4+ MarkII script import, SDII (Mac only) and REX file formats, ensures HALion 2.0 is optimally equipped for the world of sampling CDs.

Seamless integration within your VST 2.0 compatible host application including; sample-accurate playback timing, complete automation capabilities and extremely low latency thanks to Steinberg’s industry standard ASIO technology. All this makes HALion 2.0 the perfect sampler for optimizing your workflow within the VST system.
HALion 2.0

• Streaming of samples from disc: GBs of sounds independent of RAM limitations
• MegaTrigg function to activate samples via controllers or keys and trigger them with NoteOff or Pedal command for perfect GIGA import
• Unprecedented navigation system (diagonal using a virtual “Navigation-ball”) and drag and drop makes working with your samples faster and easier than ever.
• HALion 2.0 includes 4 CDs with over 1.6GB of sample content by sample experts Wizoo and E-Lab:
  ➞ XXL Acoustic Piano,
  ➞ XXL Nylon Guitar • XXL Bass
  ➞ XXL Drums & Percussion
  ➞ Clavinets ➞ Clean Guitar
  ➞ Electric Pianos ➞ Electronic Drums
  ➞ Synth Basses ➞ Analog Chords
  ➞ Digital Decays ➞ Pads
  ➞ House Organ ➞ Osc Toolbox
  ➞ Erazor FX ➞ Organs
  ➞ DrumTools
  ➞ LoopTools 65 bpm - 170 bpm
  ➞ MusicLoops 90 bpm - 170 bpm
  ➞ SoundTools Samples
  ➞ SoundToolsVox

HALion STRING EDITION Vol. 1
Symphonic String Orchestra Instrument And Library

The ultimate symphonic strings collection for computer-based music production, the 5GB HALion String Edition Vol. 1 gives you a top quality orchestral string section (8 double basses, 10 cellos, 12 violas and 16 violins), with outstanding playability, a unique, warm character and a natural ambience. A specially-developed VST- and DirectX-compatible player is bundled to provides a direct connection to production systems like Cubase SX/SL and Nuendo. Musician and composer, Claudius Bruese, who helped in the development of the legendary VST piano, THE GRAND, also played a significant part in the production of the HALion String Edition. This software gives the precision in reproducing acoustic instruments, the superior sound quality and clarity, as well as the playing characteristics users around the world have come to expect of products bearing his name.

• 8 CDs with over 5 GBs of sampled string instruments of superior sound
• Complete orchestral strings - 8 double basses, 10 cellos, 12 violas and 16 violins
• Suits all musical styles from classical to contemporary; playing styles such as legato, tremolo, pizzicato or spiccato
• Expressiveness, full dynamic range, up and down bowing
• Natural concert hall ambience, true key release action
• Each section is provided in two versions you can combine freely with other sections.
• Top recording techniques with unobtrusive, natural ambience deliver outstanding sound quality with a warm character, well defined tones and balanced bow sounds
• A multitude of presets make arranging and combining sections a breeze.
• Specially developed VST- and DXi-compatible HALion String Player allows full control over articulations such as crescendo, bowing or portamento.
• Additional HALion programs allow creative editing and limitless combination with other sounds in HALion.
THE GRAND
Virtual Concert Grand Piano

The challenge was to develop a virtual concert piano equal in quality to an original acoustic piano, even including the “unmatchable” playing characteristics. The result, The Grand - a top-quality virtual concert piano with a breathtakingly rich and realistic sound, whose tonal precision and outstanding dynamic qualities rival those of a real, quality acoustic concert grand piano.

The Grand is not a digital piano, nor is it a ROM player that reels off piano sounds. Rather it is a perfectly simulated grand concert piano based on the sounds from a top-flight acoustic grand piano— guaranteeing you powerful bass, crystal clear mid-range and brilliant treble. Easily record The Grand in the highest quality without the hassle of tuning and miking— and with perfect integration into the VST system.

- Reproduces the thrilling experience that is a large, grand piano. There are no loops or audio compression. Absolutely realistic, authentic sound based on an intelligent VSTi engine optimized for a concert piano
- Playable with any MIDI keyboard
- Authentic functionality of sustain and sostenuto pedals
- Complex variation of different sound characteristics such as dynamic response, dying out of notes, hammer action and string resonance
- Free variation of acoustic ambiance thanks to complete separation of piano and room
- The Grand allows you tailor it perfectly to your needs: freely programmable velocity curves, four master tembres (Natural, Soft, Bright, Hard), and well tempered or concert grand tuning.

THE GRAND

Classical Virtual Analog Synthesizer

The legendary analog sounds — without the restrictions of a hardware synth. Load the Model E into your VST-compatible host application and put 16 synths at your disposal. Create sounds that combine the best qualities of analog sound synthesis with amazing timing accuracy, deep basses, sweeping filters, three heavy-duty oscillators. Model E is triggered through MIDI tracks, allowing you to automate every parameter without MIDI cables or hardware interfaces. The virtual outputs appear directly in the Cubase VST Mixer, so you can treat its sounds with virtual effects and EQs.

◆ Exclusive sound banks created by synth gurus Hubertus Maab and Wolfram Franke
◆ Make your own sound banks. Model E sounds richly analog, but offers sample accurate timing for dynamite precision.
◆ Up to 64 Voices per instance
◆ 8 outputs per instrument
◆ 128 memory slots per instrument
◆ 16 multi-timbral parts
◆ All Model E settings are automatically saved with your song files and the final mix can be streamed to an audio file.

PLEX Restructuring Synthesizer by Wolfgang Palm

PLEX is a synthesizer based on an absolutely novel synthesizing process. This process offers you almost limitless possibilities in varying and creating sounds. The original sound is split into four components, lower spectrum, higher spectrum, filter characteristics and amplitude envelope, using a new audio analysis technique. Each component can then be replaced and combined with other elements. An example would be combining the sounds of a trombone and a sitar with the envelope of gong. Just drag the Base part onto the trombone, the Top part onto the sitar and the Filter part on the gong. Doesn’t just sound great, it’s also surprisingly simple. It’s not only the sounds you can create with PLEX that are revolutionary, the innovative and clearly structured user interface also sets new standards in intuitiveness and ease-of-use.

◆ Developed by synth legend Wolfgang Palm in cooperation with Steinberg, PLEX is based on a new synthesizing technique that gives musicians almost limitless possibilities in varying and creating unique new sounds.
◆ Independent manipulation of four integrated sound components: upper and lower frequency spectra, filter characteristics and amplitude envelope, while the information contained in each of the components is strictly separated from that contained in other components.
◆ Each component can then be replaced and combined with components from other original sounds. This means that, for example, the lower spectrum, or “Base” component contains neither amplitude envelope information nor filter characteristics. Replace any component you wish and still produce a “natural”-sounding result.
◆ Real-time swapping between components of 33 sound sources
◆ Up to 64 voices, 300 presets included
◆ 97 special pre-analyzed sound sources - acoustic, synthetic and filter characteristics
◆ Modulation section with stereo delay and flanger effects
◆ 3 ADSRs, Global Pitch LFO as well as 3 LFOs that can be synchronized (besides presets such as sine, square, sawtooth and random, Plex also allows you to create 16-step sequences)
◆ All parameters are MIDI controllable
In the 80s, the PPG synthesizers and their wavetable synthesis technology could be heard on countless records. Their distinctive sound was an important influence in many music styles. With the PPG Wave 2.V, Waldorf and Steinberg offer an authentic recreation of the legendary PPG Wave 2.3 synthesizer as a VST instrument. That classy PPG sound is now more affordable than ever and can be seamlessly integrated into today's computer-based production environments. The photo-realistic recreation of the original PPG look is combined with a modern audio engine with superb audio qualities, simple user interface and full MIDI automation.

- Using wavetable synthesis is easy because it isn't much different from normal subtractive synthesis. Creating new sounds is as easy as replacing one wavetable with another. No other form of synthesis offers such a simple way of creating entirely new sounds.
- Almost 2000 waveforms (32 wavetables each with 64 waveforms) recreate the exclusive sound of this classic synthesizer—with all the advantages that an integrated software production environment such as Cubase VST and Nuendo have to offer.

Continually setting new standards in sound quality and functional extras, Waldorf has had a decisive influence over the development of electronic music instruments, and created new sounds which have in turn, helped shape modern music. For over 20 years now, Waldorf has been developing innovative instruments such as microWAVE, Q, the avant-garde WAVE and the classic analog Pulse, allowing you to realize your musical ideas without any limitations.

### VST Percussion Synthesizer

A true percussion synthesizer, Attack seamlessly integrates the classic visceral 80s analog sounds and the electronic club drums of the 90s into the VST environment of the 21st century. Attack has 24 sounds available per percussion set, spread over two octaves. It requires neither MIDI nor audio cabling, however, all parameters are addressable via MIDI controller, and it offers absolutely sample accurate timing. Treat your ideas to the Attack's sublime sounds. Your groove deserves it.

- Two oscillators, each with nine waveforms (triangle, sine, square, sawtooth, sample and hold, noise, hihat closed, hihat opened, crash), represent the sources.
- Two integrated and synchronizable Modulation Delays for the stereo outs
- All parameters addressable via MIDI controller
- Percussive bass and lead sound-polyphonic playable
- Eight audio outputs (2 stereo, 4 mono)
- Twelve sounds of a drum set can be played melodically. With this you can create tom fills, conga grooves or other percussions in no time. You can even play bass, melody or sequencer lines.
- FM and Ring Modulation expand the sound spectrum with a metallic component and FX sounds:
  - 'Crack'-module for authentic analog hand claps
  - 6 filter types with resonance up to self-oscillation and overdrive up +52dB
  - 2 envelopes for pitch, FM amount, filter cutoff and loudness
VST Rhythm Guitarist

It's always the same problem: Try calling a professional guitarist in the middle of the night when you need a slick 12 string accompaniment for a ballad or a hard metal groove for an advert soundtrack. Introducing Virtual Guitarist - a perfect rhythm guitarist who plays both acoustic and electric guitar, including all keys and difficult chords, never gets impatient, follows the tempo of your song, sounds better, always plays 100% tight, and is always completely in tune. Of course, the Virtual Guitarist doesn't need to set up his equipment or be miked up, and integrates perfectly into your VST system.

- Acoustic and electric guitar performances by 27 different players with 8 parts per player
- Includes a variety of popular guitar sounds, phrasing and styles including Spanish, Steel String, Resonator, Clean Strat, Wah, power chords and ultra metal
- Intelligent fret noise for 100% authentic guitar sound
- Follows the tempo of your song
- Variable playing - shuffle, dynamics, timing, syncopation, long chords
- Stereo width, track doubling and other sound shaping options
- Flexible real-time variation (sound, phrasing) with keyboard, mod wheel, Aftertouch, Velocity
- Variable playing - Shuffle (groove), dynamic, timing (tight/loose), long chords, syncopated rhythms
- Acoustic and electric guitar performances by 27 different players with 8 parts per player
- Includes a variety of popular guitar sounds, phrasing and styles including Spanish, Steel String, Resonator, Clean Strat, Wah, power chords and ultra metal
- Intelligent fret noise for 100% authentic guitar sound
- Follows the tempo of your song
- Variable playing - shuffle, dynamics, timing, syncopation, long chords
- Stereo width, track doubling and other sound shaping options
- Flexible real-time variation (sound, phrasing) with keyboard, mod wheel, Aftertouch, Velocity
- Variable playing - Shuffle (groove), dynamic, timing (tight/loose), long chords, syncopated rhythms

Virtual Guitarist “Electric Edition”

Virtual Guitarist “Electric Edition” is the perfect rhythm guitarist for anyone needing electric guitar tracks. This VST instrument is based on real recordings, yet is as flexible as a synthesizer. Featuring 29 new all electric players from the 50s to the present day (recorded by top guitarist Thomas Blug), Virtual Guitarist “Electric Edition” oozes authentic sound character while offering unrivaled playability and outstanding tempo flexibility. Also includes a fully featured multi-effect board, useable both as a separate plug-in that you can use on any audio signal or integrated in the VSTi. Select a player, some chords and it plays perfect tracks. Liven songs up with options like syncopation, phrasing variations or long chords. Change shuffle or dynamics, use track doubling or be creative with the supplied effects.

- Vast range of electric guitar styles for all kinds of music
- Variable playing - shuffle, dynamics, timing, syncopation, long chords
- Stereo width, track doubling and other sound shaping options
- Flexible real-time variation (keyboard, mod-wheel, aftertouch, velocity)
- Effects integrated into VSTi or separately usable as VST plug-in
- Effects: Wah, AutoFilter, Chorus, Flanger, Phaser, Delay, Reverb
VST Virtual Drummer

Groove Agent is a stunning VSTi that provides you with ready-to-go drum rhythms in only a few mouse clicks. Groove Agent can play the hottest, most popular and influential styles from the past 50 years of music history - inside your VST host application. Based on quality drum samples most of which were recorded especially to analog tape, Groove Agent puts a top studio drummer at your fingertips.

Creating your own drum track couldn’t be easier - just choose a music style, a drum kit and you’re off. Set the amount of drum room ambience, play fills and half-time breaks. Groove Agent can play at over two dozen different complexity levels, so you can create the right mood with your rhythm track simply by moving a slider. Adjust volume, ambience, decay, tuning and velocity response individually for each instrument.

- Over 50 musical styles (each with their own drum style patterns), programmed by top Swedish musicians
- Combine any style with any drum kit - instantly
- Four unique drum kits plus percussion and numerous electronic drum sounds
- Separate dry and wet (ambience) samples and 4 stereo outputs for total flexibility
- User-configurable drum kits, including tweaking of sounds
- 24-bit drum sounds, most of them recorded via analog tape
- Up to two dozen complexity levels in each style, including fills and half tempo feel variations
- Combine any musical style with any preset kit
- Fine-tune the overall feel with the Shuffle and Humanize controls
- Save snapshots of your tweaks for easy recall
- Anyone who can’t do without their own drum sounds but wants Groove Agent to play their “live” drums for them can simply record the MIDI output to a GM-compatible drum track and then use their drum sample player of choice.

D’cota
Multiple Synthesis VST Instrument

Imagine the best synthesizer you can and then multiply that by three. Why? D’cota combines the power of three types of sound synthesis in the compact editing environment of one synthesizer. All this in an unprecedented sound quality for all three synthesis types, thanks to the aliasing-free sound engine. Each of the three synthesis types offered by D’cota has access to an arsenal of four freely assignable ADSR envelopes and two assignable LFO’s. The LFOs can also be synchronized to the song tempo. The effect section adds the simultaneous power of delays, distortion units and modulation effects. This exceptional synthesizer opens new possibilities to create extraordinary sounds.

- 3 different synthesis: Advanced Analog, Spectrum and Wave Impulse
- 8 times multi timbral with up to 128 voices, 4 stereo outputs
- Advanced Random Mode
- Superb sound quality (aliasing free oscillators)
- Multi FX unit with Distortion, Modulation and Delay section
- Ready to start sound preset included
VST Phrase Synthesizer

Designed for computer-based musicians, arrangers and sound designers, Xphraze brings together two worlds that have been separated for too long: powerful sound shaping and real-time polyphonic phrase creation. Easy to use, Xphraze lets you create rave chords, complex polyphonic soundscapes, bass and lead riffs, sweeping pads and tempo-synced sound effects. Simply drag a phrase from the pool, tweak the groove and sound, play a note or a chord and listen as Xphraze textures kick in and move perfectly in sync with the song. You can even drag in your own samples and let Xphraze do it's magic to them.

But don't stop there -- you can also use real-time controllers and other sound-mangling tools to change the phrasing or sonic character in ways that were previously unimaginable.

At the heart of this sample-based instrument is a flexible multi-timbral synthesizer engine, offering extensive sound-shaping and real-time modulation possibilities. Powered by an integrated polyphonic phrase generator, Xphraze is capable of conjuring up any kind of rhythmical phrases like polyphonic chord patterns, drum grooves, bass lines and even tempo-synced synth textures ranging from pads to arpeggios.

FEATURES

- 4-part multi-timbral polyphonic phrase synthesizer, full loop and tempo-sync capability (phrase oscillators, envelopes and LFOs).
- Each Timbre consists of: Phrase Oscillator (32 cells) with individual note resolution, amp section and multimode filter (low-pass, high-pass, band-pass and notch filters with 12-72 dB slopes) with freeform loopable envelopes, two additional freeform loopable auxiliary envelopes, two freeform LFOs, arpeggiator, unison mode.
- Each Phrase Oscillator contains individual waveform per cell, plus a maximum of six assignable cell parameters, such as pitch, cutoff, resonance, pan, level and more. Cell parameter curves are freely mouse-editable.
- Unlimited, freely assignable modulation potential with full morph capability (one controller controls multiple parameters at a time, which can be adjusted individually).
- Phrase playback can be fully adjusted for each timbre: play and loop range (start/end) can be adjusted on-screen, switchable trigger/mute per cell, adjustable cell crossfade/duration.
- Performance controllable stereo insert effects for each timbre from 24 effect types, plus two master effects from six types.
- Sample-accurate audio engine with 32-bit floating-point resolution, 192kHz sample rate, and 1024 voices/notes (256 per timbre).
- Four assignable stereo outputs with vector synthesis -- output mix can be controlled via any assignable modulation source.
- Supports VST Instruments, DXi and Audio Units; compatible with Windows (98 and higher), Mac OS 9 / OS X.
- Includes a pool of 256 preset phrases and 256 user phrases.
- 500 MB Wave ROM with more than 200 waveforms.
- Imports AIFF and Wave samples, automap function for multisamples.
- Integrated mouse-controllable keyboard and wheels.

BPM Force

A software bundled designed for dance producers, BPM Force includes Cubase SL with three Waldorf instruments and filters to offer everything dance music producers need to make those crowd move.

Cubase SL includes the A1 synth for hammering bass lines. Attack delivers the beats - this percussion synthesizer integrates the analog drum sounds of the 80s and the massive club drums of the 90s in your VST System. PPG Wave 2.V, the second coming of a synth legend as a VST instrument, offers everything from luscious synth pads to manic techno sounds. Last but not least is D-Pole, with its 5 filter types that can morph any run-of-the-mill acoustic drum loop into a heavy-duty dance groove. Available for PC and Mac OS X/9.
Cool Breeze Systems

Cool School Interactus CD-ROMs

Software and Hardware Media Systems for the Creative Mind

Cool Breeze's CSI (Cool School Interactus) series of CD-ROMs provide an easy-to-use and intuitive learning environment. The structure of the CSI CD-ROMs allows the user to go at his own pace. A flexible interface encourages each user to customize his learning path depending on his personal needs and desires. The novice through the veteran will find great benefit in using these CDs. Made up of system designers, engineers, acousticians, programmers, musicians, composers and graphic artists, Cool Breeze offers over 20 years of combined experience in digital audio operations, training, sluggin' brews and systems design.

Vol. 1.1 Pro Tools Basics

Provides Pro Tools basics and a broad fundamental education on the operation of Digidesign digital audio workstations. It's beneficial to anyone from the complete novice to the partially educated, to the old-school linear pro. This CD features many Digidesign products, and covers hardware/software installation procedures and detailed system configuration options. Content covers basic concepts, operation and functionality of Pro Tools, Sound Designer II, and SampleCell II, also sound fundamentals, computer basics, MIDI, and digital audio. Further education includes modules on System Upkeep and Synchronization.

Vol. 2.1 Pro Tools Tips and Plug-ins

Features Pro Tools 4 software from Digidesign and selected 3rd-party Development Partners. It includes screen element definitions with click-state pop-up simulations for Pro Tools 4 and plug-ins from Antares, Digidesign, Focusrite, and Waves. There is a massive glossary of DAW related terms, including DAE errors and over 50 movie tutorials that include basic functionality, production techniques, special short cuts, key commands, and before and after audio examples. Over 150 quick keys and shortcuts are covered. No special hardware needed, just a compatible Mac/Windows machine. Pro Tools and CSI can be open at the same time.

Vol. 3 Desktop Audio

A powerful guide covering the basics of sound production on a computer, whether you're into music, post-production or multimedia. Learn the many concepts, elements, products and possibilities - and gain the knowledge to put together the system that's right for you. Topics covered: goals (where the authors help you state your mission, and explain & categorize the different types of software and hardware), sound, computers & operating systems from the audio perspective, MIDI, digital audio, DAWs, plug-ins, synchronization, system set-up & upkeep, even studio furniture, and much, much more. Includes a searchable glossary of over 1,200 digital audio related terms, and is packed with swingin' music, top-notch graphics, excellent interactive examples, flow charts, pictures, animations, before and after audio examples, video, diagrams, and info-packed movie tutorials!

Vol. 4 Logic Audio Training

Whether you're driving with Silver, Gold or Platinum, this multimedia CD demystifies and opens up the vast capabilities, power and flexibility of Logic Audio 4. Get hip to the basic concepts, operational ins & outs, and new features. Vol. 4 combines the Cool Breeze vibe with the practical expertise of Logic Audio pros. CSI's tutorials include basic functionality, and real-world production techniques. Topics covered: Logic Audio applications, system requirements, hardware & software configurations & set-up, concepts of Logic Song, Audio Objects, Instruments, Ports, Screen sets and much more. Includes a searchable glossary of over 1,200 digital audio related terms, over 40 movie tutorials, loads of graphics, music, flowcharts, video, before-and-after audio examples, and effective interactive examples (software simulations with pop-up and clickstate definitions).

Additionally, Vol. 1.1 and 2.1 include the "CSI AutoPlay" which launches CSI into an “autopilot” mode. Sit back, crack open a cold one, and impress your friends as you soak in the info. The “AutoPlayer” can be disengaged and resumed at any time.

For any inquiries regarding your order, call our customer service:

COOL BREEZE SYSTEMS

COOL SCHOOL INTERACTUS CD-ROMs

Vol. 5 Pro Tools 5

Whether you’re driving Pro Tools FREE, Mbox, Digi001, Digi003, or a big bad phat TDM rig, this CD will help you get the most out of your Pro Tools system. Sit down with a DAW pro and learn about the new features available in Pro Tools 5. This CD includes screen element definitions with click-state pop-up simulations for the Edit Window, Mix Window, Transport and Menus. There is a massive glossary of DAW related terms, including DAE errors and over 50 movie tutorials which include not only basic functionality, but production techniques, special short cuts, key commands, and before and after audio examples. Movie Tutorials include the Smart Tool, Beat Detective, MIDI Controls, Loop Record and more.

Vol. 6 Digital Performer V3

This Digital Performer training CD-ROM covers the core operations of DP version 3. Sit down with a DAW pro and learn concepts, production techniques and the latest features from Digital Performer 3. This CD-ROM includes screen element definitions with click-state pop-up simulations for the Transport, Mixer, Sequence Editor, MIDI Graphic Editor and Menus. There is a massive glossary of DAW related terms, and over 40 movie tutorials. The Getting Started topic will take you through set-up, first record, edit and mix. The CSi movie tutorials are designed to include not only basic functionality, but production techniques, special short cuts, key commands, and before and after audio examples.

Vol. 7 Cubase SX

Covers key operational techniques and the cool features of Cubase. If you prefer the "Show me" style of learning, then CSi is for you. Sit down with a DAW pro and learn concepts, production techniques and the new options available in Cubase SX. This CD-ROM is for Mac and Windows users, and covers the Project Window, Transport Panel, Key Editor, Drum Editor, Track Mixer, Sample Editor, Pool, and Menus. The Getting Started topic will take you through set-up, first record, edit and mix. The CSi movie tutorials are designed to include not only basic functionality, but production techniques, special short cuts, key commands, and before and after audio examples. No special hardware needed, just a compatible Mac/Windows computer.

Vol. 8 - Pro Tools 6

Covers key operational techniques and the cool features of Pro Tools 6. Sit down with a DAW pro and learn concepts, production techniques and the new options (Digilive, new MIDI options, Beat Detective, Digigroove templates, and importing session data are just of the few) available in Pro Tools 6. The Introduction topic will take you through set-up, first record, edit and mix. The tutorials are designed to include not only basic functionality, but production techniques, special short cuts, key commands, and before and after audio examples. No special hardware needed, just a compatible Mac/Windows computer. This CD adds to the information covered on Pro Tools Basics, Pro Tools Tips and Plug-ins and Pro Tools 5.

For Vol. 5 and 6, no special hardware needed, just a compatible Mac/Windows machine. If you own a Pro Tools setup or Digital Performer rig, CSi can be open at the same time. View a movie tutorial in CSi then instantly go to the software and try it yourself. Additionally, Vol. 5 and 6 includes the “CSI AutoPlayer” which launches CSi into an “autopilot” mode. Sit back, relax, drive with no hands and impress your friends as you soak in the info. The “AutoPlayer” can be disengaged and resumed at any time.

In addition to the hours of movie tutorials, Vol. 7 and 8 include a massive DAW related glossary and utilize the CSi Movie Tutorial interface to provide an easy to use and intuitive learning environment. Plus, the new CSi MT interface includes a title bar that allows you to easily position the interface on your screen. If you’re lucky enough to have a big fat monitor or maybe two, you can smoothly switch between Cubase SX or Pro Tools 6 and the CSi tutorials.

LIVE 2

Audio Sequencer and Multi-Track Recorder

Live 2 is an audio sequencer that you can play like an instrument. Whether on its own or with other musicians or DJs, live on stage or when remixing in the studio, all you need is Live 2 and a Mac (OS 9.1 or OS X 1.5 or higher) or Windows PC (98/2000/XP). Live 2 allows you to bring together audio material from various sources. All the samples used are adjusted to the tempo of the song in real time and without changing the pitch. Even long pieces with tempo variations play in perfect sync. Samples can be played back and new ones can be recorded using the mouse, computer keyboard or MIDI notes. Drag-and-drop can be used to put together any sequences of effects for sound editing - all this while the music continues to play. Everything you do during the session is recorded and can be post-edited in detail, including all the automation of the mixer and effects.

FEATURES

Truly Elastic Tempo and Pitch Manipulation
- Record, import and arrange multiple audio loops into complete songs — all in real time — regardless of pitch or tempo.
- Synchronize loops and recordings of any length at any time.
- Time stretching can be applied to loops or to any audio material using time stretching algorithms optimized for rhythmic and melodic material.
- Live also allows key (pitch) changes independent of tempo throughout the production process — match the key of a bassline to a vocal without losing sync.
- Audio phrases, loops and performances can be quantized in real-time

MIDI Control
- Sample clips can be assigned to MIDI notes and controller messages using any of the four selectable clip launch modes: Trigger, Gate, Toggler or Repeat.
- The mixer and effect controls can be assigned arbitrary MIDI notes. Support is provided for the common standards for incremental controllers and MIDI devices with motorized faders.

Audio Interfaces
- Tracks can be individually routed to the outputs of any ASIO or CoreAudio compliant device and inputs can be routed to any Live track. DirectX for PCs and Sound Manager for Macs are also supported.

Seamless ReWire Integration
- As a ReWire client, you can route the outputs of Live into your DAW software (Logic, Cubase, Sonar, Digital Performer and Pro Tools).
- As a host, the outputs of programs such as Reason can be routed into Live's mixer.

Tempo Control
- You can set or tap the tempo of audio recordings completely independent of pitch at any time during recording, performance or playback.
- You can also record and edit tempo as a continuous curve.

Elegant, Powerful and Simple
- Combining audio from diverse sources is a simple matter of drag-and-drop and/or real-time recording.
- Full-screen mode allows you to take advantage of all available screen real estate.

Synchronization
- Slaves to MIDI clock or MIDI time-code. This means, when the drum machine slows down, Live also slows audio files slower. It does this without altering the pitch or the groove. Live can also be a MIDI clock source.

www.bhphotovideo.com
**SESSION VIEW**

Start your loops and sessions at any tempo, then change tempo later – even as playback continues. The music never stops as you play, record, re-sample and process your music.

Tap Tempo to sync Live to musicians or the DJ.

Browse your hard drive for samples, Live's built-in effects and VST plug-ins.

Drag & Drop audio clips into your session while the music keeps playing – from short loops to complete songs. All audio automatically stretches to play in sync with the current song tempo. Audition clips from your hard disk via the private headphone send.

Real-time quantization insures that loops are always triggered in sync. Transpose and detune clips without affecting their tempo.

Choose among Live's real-time stretching modes for “clean” stretching of all types of audio.

**ARRANGE VIEW**

Set, tap or change tempo before, during or after recording. All clips automatically play in sync with the current project tempo.

Live comes with a range of high-impact effects such as: reverb, filter delay, ping pong delay, erosion, gate, grain delay, EQ and many more.

Drag & Drop internal and VST effects into chains for tracks, sends and master in real-time. All effect and mixer parameters are fully automated.

Live captures your jam. Improvise with total freedom, then edit to perfection later.

Launch clips using the mouse, the keyboard or MIDI notes. Operate all effect and mixer parameters via any MIDI controller.

Each row of clips is a scene. Launch all clips in a scene at once or start them independently.

Control up to 4 effect send channels for each track.

Change the playback region of one-shots, loop position, length and downbeat of looping clips – all while the music keeps playing.

Your entire arrangement is displayed in an overview for quick navigation.

Live can capture every one of your actions in a timeline arrange. Record unlimited takes on unlimited tracks. Edit clips and breakpoint-envelopes, add and remove materials. Render your work after it's finished.

Scale tempo over time to conform scores to film and TV.
PLAYING AND RECORDING SAMPLES

- Live 2 lets you compile live sets from any audio clips, i.e. loops, phrases, entire tracks. All the clips play in sync with each other, irrespective of the original tempo. You can "fire off" clips live, using the mouse, assignable computer keys, or MIDI Notes. Real-time quantization can be used to prevent rhythmical error. Any clip can play at any time - you are not constrained to a fixed arrangement.
- Since audio is played directly from disk, there is space enough even for large live sets.
- Recording new clips is as easy as playing existing ones: Play a MIDI note to start the recording; play the note again to jump to playback mode - without any interruption. This way, you can capture loops or phrases from external sources and directly work them into your performance, without stopping the music. Thanks to the real-time quantization, you will always get perfectly cut loops.
- Live can also use it's own Master output as a signal source for recording, allowing you to resample your session while it's going on.

BROWSING SAMPLES AND EFFECTS

- Samples can be sought in Live's built-in browser, and privately auditioned by headphone, without the public or other musicians hearing them. There are three browsers for samples and Live Sets, one for the Live effects, and one for VST plug-ins.

ARRANGING PIECES

- Every action carried out in a session can be recorded. The session's protocol is graphically displayed in Live's Arranger view and can be edited, down to the smallest detail. Every movement of the controls is displayed and edited as an envelope curve. Just click on a control to view and edit its automation.
- Editing audio is extremely fast. Snap to Grid does away with having to zoom in on wave patterns to find musical counting intervals.
- Live offers you the ability to improvise arrangements, and to develop improvisations into pieces later on. And should you decide the previous version was better after all, you can undo as many edit steps as you like.

WARPING TIME

- Live's Time-Warping-Engine stretches and shrinks audio clips as they're being read from the hard disk. The pitch remains unaltered and can be adjusted independently. All clips are automatically synchronized to your session-tempo or to an external sync-source.
- The Time-Warping-Engine is controlled by "warp markers", which can be positioned freely. A "warp-marker" attaches a position in a sample to a particular time in the song. During play-back, the Warping-Engine stretches and shrinks audio clips so that each marker is reached at a precise moment, irrespective of the song-tempo or whether Live is being driven by external synchronization.
- If you only use short loops you won't need warp markers. If, however, you want to work a ten-minute piece into a set, then just position a few markers to line-up the rhythms. The more tempo irregularities there are in the take, the more markers you'll need. With warp markers, you can get even the sloppiest recordings to jive perfectly.
**Emulation of the Moog Modular System 3C**

Arturia’s Modular system is based on a set of algorithms created by Arturia’s sound engineers and gathered under the name TAE - True Analog Emulation. TAE avoids aliasing; it also emulates the typical instability of hardware oscillators and brings the warm sound of the vintage synths. In addition to the replication of all the functions of the original, the Arturia’s Modular system comes loaded with more than 400 presets made by a selection of sound designers.

- Stereo synthesizer
- 9 oscillators (921 M g series)
- 2 dedicated LFOs
- 3 filter slots can be chosen among classic Moog 904 series (low-pass 24 dB, high-pass 24 dB, filter coupler), and an additional 20 dB multimode filter (7 modes)
- 1 noise generator (white and pink — 923 Moog module)
- 6 ADSR auxiliary envelopes based on the 911 Moog module
- 2 VCAs each with their own envelopes, and a panorama knob for natural stereo effects
- 16 auxiliary VCAs with modulation inputs
- Sequencer based on the 960 Moog module with 3x8 steps
- One filter bank (14 bands with their own bandwidth)
- One stereo delay and one chorus
- Mono/polyphonic (up to 64 voices)
- 96 kHz sampling rate support
- Can be used stand-alone or as a virtual instrument in VST, DXi, MAS, RTAS (Windows, Mac OS 9/X), and HTDM (Mac OS 9/X) formats.

**STORM 2 Music Creation Software for Mac and Windows**

Storm 2 is an all-in-on software package for music composition that accurately emulates the components of an entire recording studio. Storm 2 is comprised of a plethora of modular and realtime sequencers, synthesizers, sample players, drum machines, mixers and effects processors that can be selected and then incorporated into a studio right before your eyes. Once the studio has been created, you can create musical pieces in a fast, easy and extremely efficient manner.

Storm permits the import and export of all popular music file formats including MP3, AIFF and WAV, and it supports MIDI.

### Composition
- Program up to 64 patterns for each module
- Songs can be up to 400 bars long
- Record automation moves using the onscreen knobs. Effects sends and returns can be automated.
- Real time synthesis and EFFECTS, a user-friendly interface and a fully automated studio provide you with an unprecedented comfort and facility of composition.

### Customize Your Studio
- Choose from 13 virtual instruments: Arsenic, BaaS52, Equinoxe, EZTrack, H3O+, Hork, Meteor, Orpheus, Psion, Puma, Scratch, Shadow and Tsunami
- 10 different effects modules including: Chorus, Compressor, Distortion, Dual Delays, Flanger, LPFilter, Reverb, Ring Mod, Seq Filter and Vocoder
- Storm 2 allows you to select the specific virtual instruments and effects you wish to use
- Simply drag and drop modules and in a few seconds your studio is ready

**The Hall: Share The Experience**

The HALL is a set of interactive tools that allows on-line collaboration with others. The Hall offers file sharing and downloading, chat rooms, newswires, tips and tutorials.
ANTARES

MICROPHONE MODELER

Using Antares' patented Spectral Shaping Tool technology, the Microphone Modeler can create precise digital models of a wide variety of classic and modern microphones. Simply tell it what microphone you are actually using and what microphone you’d like it to sound like. The models not only reproduce the sonic characteristics of each microphone but also gives you control of each mic’s specific options including Low Cut Filter settings, windscreen on or off and proximity effect. Available as a plug-in for VST, MAS and RTAS on the Mac, DirectX for PC and TDM.

◆ Proprietary DSP-based acoustic modeling transforms any reasonable quality mic to sound like any of a ever-growing list of desirable mics
◆ Mic Models even reproduce the effect of each mic’s specific options - windscreen (on/off), Low-Cut Filters, polar pattern and proximity effects
◆ Create hybrid mics that combine the bass response of one mic with the treble response of another
◆ Variable classic tube saturation distortion control
◆ Completely automatable when used with compatible host applications
◆ Use during mixdown to change the mic on an already recorded track
◆ Not to be underestimated are the limitless creative possibilities made available - select a Source Mic that doesn’t match your physical mic, overdrive the Tube Saturation, over-emphasize proximity effect, etc...
◆ Incredibly simple to use - simply select the mic you’re using and the mic you want it to sound like
◆ An extensive collection of digital models of are included and additional models can be downloaded from Antares’ web site

Signal Flow Of Mic Modeler
◆ The Input Gain fader and Level Meter are used for setting the input level of the audio to be processed
◆ The Source Mic section lets you select the mic that was actually used to record the audio (with or without windscreen) as well as the state of its various parameters — Low Cut Filter, Polar Pattern and Proximity
◆ The Modeled Mic section allows you to select the mic whose sound you would like to model (with or without windscreen) as well as the state of its various parameters — Low Cut Filter, Polar Pattern and Proximity
◆ The Preserve Source controls let you create hybrid mics that combine the bass characteristics of one mic and the treble characteristics of another. Incoming audio is split into its bass and treble ranges, one of the two frequency ranges can then be assigned to the Source Mic while the other can be assigned to any of the available mic models
◆ Tube Saturation adds a model of analog tube saturation (distortion) often found in high-quality tube mic preamps
◆ The Output Gain fader allows you to attenuate the output signal if necessary

Tube Classic Analog Tube Modeling Plug-in

Antares Tube is an affordable multi-format plug-in designed to model a wide range of analog tube effects, based on technology from Antares multi-award-winning Microphone Modeler plug-in. Tube is designed to be extremely easy to use and is so DSP efficient that even a modest native system will support dozens of instances. Tube provides two basic tube models. The blue tube adds the warmth of a classic tube preamp to vocals, acoustic guitar, horns, strings, synths pads, in fact pretty much anything. The orange tube provides the deep, warm distortion of an overdriven tube amplifier. It can be used in moderation to impart a subtle effect to almost any track, or cranked up on electric guitar, bass, synths, even voice for more dramatic distortion effects. Tube also includes a unique OmniTube function that inserts a compressor into the signal path before the tube model. This compressor is set to compress the signal and then apply sufficient makeup gain to ensure that Tube’s Drive control can drive the entire signal above the clipping level. After the tube effect is applied to the entire signal, an inverse gain function restores the signal’s original dynamics.

Available for RTAS (Mac OS 9 and OS X and PC), VST (Mac OS 9 and OS X and PC), DirectX and MAS (Mac OS 9 and OS X).
**Intonation Correcting Plug-In**

Auto-Tune is the multi-platform pitch detection and correction plug-in for Mac and PC considered to be the “Holy Grail of recording” by Recording magazine. Auto-Tune allows you to correct pitch and intonation problems on voice and solo instruments without distortion or artifacts. Auto-Tune is 88.2/96kHz compatible and works not only on mono sound files but also provides phase-coherent processing of stereo files. Two modes of operation include Automatic where pitch is continuously compared to a user selected scale and Graphical mode offering more precise control allows you to draw specific target pitches. Available for TDM/AudioSuite, VST, MAS, RTAS or as a stand alone application on the Mac and DirectX on the PC.

- In Automatic Mode the input pitch is continuously compared to a user-selected Scale and then corrected to the Scale note closest to the detected input pitch
- Graphical Mode displays the pitch envelope of the audio to be corrected along with a selection of graphical tools that allow precise manipulation of the performance's pitch

**Automatic Mode**

- Select any key and scale - minor, major or chromatic as well as 26 historical and microtonal scales
- The Retune knob controls how rapidly (in milliseconds) the pitch correction is applied to the incoming sound
- The Tracking knob controls how much variation in the incoming waveform is allowed — useful with difficult to track sounds, such as a breathy or growling voice
- Individual notes can be removed from a scale or bypassed. Bypassed notes passed along without correction. You can apply pitch correction to a single note in a scale by bypassing all of the notes in the scale except for the problem note
- Scales can be de-tuned to any desired pitch
- The Vibrato section allows you to control the depth, rate and onset delay of a performance
- The Change meter shows how much the pitch is being changed, measured in cents (100 cents = one semitone)
- The Learn Scale From MIDI button allows Auto-Tune to track pitch in real-time via a MIDI keyboard or sequencer track
- The Learn Scale From MIDI function allows you to play a line from a MIDI keyboard or sequencer and let Auto-Tune 3 construct a custom scale containing only those notes that appear in the line

**Graphical Mode**

- Graphic mode begins with Tracking mode where an amplitude waveform overview and a pitch graph referenced to the scale selected in Automatic Mode are created across a timeline delegated by the length of the sound file. Once tracking is completed and Tracking mode is disengaged, an amplitude waveform and a detected pitch are displayed
- The next step is Correct Pitch mode which provides a number of graphic tools that allow you to actually draw your target pitches across the zoomable timeline. After editing, play the sound file and Auto-Tune will recognize the changes
- Horizontal line and curve tools are provided as well as cut, copy, paste and undo functions
- Includes Retune and Tracking functions identical to that in Automatic mode
- A memory (RAM) buffer allows you to allocate the necessary amount of time to process the sound file in realtime
- Auto-Curve function creates an editable curve directly over the detected pitch curve. This allows very precise pitch correction without having to draw each line and curve freehand.

Audio Controlled Synthesizer
From the company that revolutionized vocal intonation processing comes Kantos, a software-based synthesizer that liberates you from the tyranny of MIDI, keyboards, controllers, or anything that stands between you and the music you hear in your mind. Whether you are looking for an alternative to conventional controllers, or are looking to produce electronic music with a level of dynamic expression that wasn't possible till now, Kantos will literally change the way you make music. Designed to be patched as an insert plug-in within your digital audio software, Kantos uses the pitch, harmonic content and formant characteristics of an incoming audio signal—instead of using a MIDI keyboard to control synthesis.

FEATURES

Audio Controlled Synthesis
◆ The pitch, dynamics, harmonic content and formant characteristics of the incoming audio is analyzed and then extracted – live and in real time
◆ This information is then used to control the sound engine in unique ways never before possible with a conventional MIDI synth
◆ For reliable pitch detection, a pitched monophonic audio source such as the human voice or a musical instrument should be used – unison sections can also be used
◆ A lot of interesting results can be had with polyphonic audio signals (particularly with rhythmic input) except that you won't get predictable pitches from unpitched input.
◆ You are able to generate harmonies with predictable pitch control by processing or instantiating the software for each individual note in the harmony

Sound Engine
◆ The sound engine includes a combination of traditional synthesizer functions as well as many unique functions to for controlling the audio including: Wavetable oscillators, Pitch constraint and quantization control, Noise source, Resonant multimode filter, Timbral articulator, Envelope generators, LFOs, Modulation matrix, Gate generator, Delay line and a Mixer.

Gate Generator
◆ The Gate Generator gives you control over the triggering and duration of the envelopes as well as (optionally) retriggering the oscillators’ wavetables
◆ A real time display of the input signal’s amplitude helps you set the independent Gate On and Gate Off levels as well the minimum Gate Hold time
◆ A variable-threshold noise gate is also provided to help clean up any unwanted noise in the control audio

Wavetables Oscillators
◆ 2 flexible wavetable oscillators are provided each with its own independent multimode resonant filter and chorus generator
◆ A pitch constrain keyboard, for each wavetable allows you to limit the notes that the oscillator can play
◆ Includes a variety of traditional - and not so traditional - wavetables (more can be downloaded). You can also create your own custom wavetables using an audio or sample editor

Delay and Tempo Control
◆ A delay line with variable feedback is included for generating rhythmic effects – delay time can be set in absolute time or, via the Tap Tempo function in BPM.

Articulator
◆ The heart of Kantos, the Articulator module, takes (with great precision) the harmonic content and formant information from the input signal, and dynamically applies it to the output of the oscillators and noise generator. In addition, you can warp and mutate the audio signal in a variety of ways:

— The X/Y-axis Amount and Q (resonance) controls defines the amount and character of the harmonic processing
— Formant Offset parameter shifts the inputs detected formants up or down in frequency
— The Emphasis section lets you tailor the sounds overall harmonic balance
**Modulation Matrix**

- A flexible modulation matrix provides an almost limitless variety of dynamic effects.
- Any source can control multiple destinations and any destination can be controlled by multiple sources. Almost every variable parameter is available as a destination.
- Two multi-waveform LFOs, with manual and Tap Tempo rate control, as well as two ADSR Envelope Generators are available as additional modulation sources.

**Mixers**

- A Submixer controls the internal sound sources. In addition to the wavetable oscillators and noise generator, two additional sine wave oscillators track the fundamental frequencies of their respective wavetable oscillators.
- The Main Mixer offers control over the main synth output, the delay line return, as well as the original unprocessed input audio and if instantiated as a mono in/stereo out plug-in, each of the main mixer inputs also include a pan control.

---

**INFINITY DSP Sample Looping Tools for Mac**

Imagine taking a raw sample, and then, with just a few mouse clicks, creating a loop so perfect that you can’t tell when it started or where it repeats. Imagine doing that with sounds that are impossible to loop smoothly using your current sample editor, like string orchestras, choirs, fat analog synths, chorused guitars, and so on. Infinity lets you do it, quickly and easily. Infinity is a powerful Mac-based DSP tool kit designed to be used in conjunction with your current sample editor. It uses unique DSP technologies to automate and improve the looping process, taking sample editing to a new level of quality, speed, and simplicity. It allows you to loop everything from solo woodwinds to huge synth stacks with dramatic improvements in quality and speed. This means that you don’t have to put up with rhythmic pulsing or lifeless sustains any longer. Infinity preserves the “liveness” of your samples because it has a looping tool appropriate for every type of sound. Using Infinity’s unique DSP technologies, beginners can get results which are superior to professionals using normal sample editors. For professionals, Infinity provides a level of quality, speed, and simplicity far beyond what’s possible with conventional sample editing tools.

- Full support for 24 bit files
- Support for 88.2 kHz and 96 kHz playback via the Sound Manager
- Full 32-bit floating point audio processing
- Edit functions: Cut, Copy, Paste, Clear, Unselected, Clear, Mix, Invert, Reverse, Silence, Create/Delete Loop Points, Select Loop Points, Select All, Set MIDI Note, Auto Zero, Show Clipboard
- Unlimited Undo/Redo nesting
- Special Edit functions: Real Time Loop Adjust, Variable Edit Blend Time and Taper, Switchable Window Modes, Enable/Disable Clipboard, Enable/Disable Undo
- Real Time Loop Adjust lets you move the loop points during real-time playback, so you can locate the best loop points by ear.
- Support for the AIFF file format.
- Rotated Sums Looper lets you randomly layer multiple copies of the loop data to “homogenize” the sound while preserving your original loop points. Perfect for improving those problem loops on CD-ROMs and for special effects.
- Crossfade Looper with Smart Auto-Scan is an enhanced crossfade tool with an intelligent loop point scanner that lets you find the best loop point automatically.
- SPR Looper automatically creates seamless loops in chorused and ensemble sounds while preserving the exact sound color and stereo image of your sample. The resulting loop data can be automatically merged with the attack portion of your sample.
- Synthesis Looper lets you control the frequency domain sidelobe energy of the loop, and selectively smooth out lumpy sounding frequencies in chorused and ensemble sounds. The new sound is more stable and loop repetitions are less noticeable.
- Freeze Looper creates perfect loops in sounds like winds, brass, and other solo sounds that have a clear harmonic series.
DSP Plug-In Processors For Pro Tools TDM

The JVP (Voice Processor) and MDT (Multiband Dynamics Tool) are high resolution DSP plug-in processors designed for music production, mastering, post production and broadcast applications within the Pro Tools TDM environment. JVP provides four essential processors for achieving the highest degree of sonic detail and richness from vocals and solo instruments, sound effects, stereo mixes — you name it. MDT can be used to emulate just about any existing dynamics processor and can also be customized to bring out unique sonic characteristics from your audio. The buttons, sliders and settings menus for both plug-ins are completely automatable under Pro Tools 4.0 or later and are compatible with all Pro Tools TDM hardware running on a Power PC computer.

**JVP**

**Four Function Voice Processor**

- 4 of the most useful signal processing functions in one easy to use plug-in running simultaneously on a single DSP chip — de-esser, compressor with a downward expanding gate, parametric EQ, and multi-tap delay
- Brings out detail and adds sparkle to vocals, instruments, sound effects, even entire mixes
- Processors can be used alone or together in any combination
- Simple to use single window interface with Bypass and Display toggle switches for each of the 4 processors
- High resolution In/Out level meters with 1 sample over clipping indicators
- 24-bit I/O and 56-bit internal accumulator processing resolution

**De-Esser**

- Gain reduction meter
- Threshold control with post-filter level meter
- Variable high pass filter
- Compressor with variable ratio, attack and release

**Compressor/Expander/Gate**

- Gain Reduction meter
- Expander/Gate with variable threshold and ratio
- Compressor with variable threshold, ratio, attack release and hard to soft knee settings

**Parametric EQ**

- 3 fully parametric EQ points with selectable HP, BP, LP, shelving filters
- 10Hz to 20kHz frequency, ±24 dB gain and .1 to 4.0 oct bandwidth controls
- 140 dB dynamic range

**Multi-Tap Delay**

- Up to 6 delay taps with L-R pan control for each tap
- Dedicated delay and feedback gain control
- Variable low pass filter and FX/Dry mix
- DSP card dependent delay time and feedback

**MDT Multiband Dynamics Tools**

- Provides one, three or five individually adjustable spectral bands of dynamics
- Easy to use graphic interface
- Not only emulates a wide variety of existing compressors, limiters, expanders and gates including dynamic EQs, de-essers and spectral enhancers but also allows you to create your own unique single and multiband processors
- Clip Sentry is a high-speed digital limiter designed to reduce gain only when clipping is about to occur
- “Look ahead” peak averaging scans up to 1024 samples of audio data before it is processed, compares it to currently processed data and then, uses both numbers to derive the final output
- In Multiband mode, Continuously Variable Offset updates the input levels for each spectral band continuously, ensuring that tonal balance will be achieved and that the same amount of gain reduction will be applied to each input
- 24-bit I/O and 56-bit internal processing resolution
- Greater than 144 dB dynamic range with imperceptible passband coloration
The Visual Synthesize for Musicians

If you’re familiar with traditional multimedia think of ArKaos VJ as the first real-time multimedia program offering an innovative way to edit and manipulate a visual performance as it’s running. If you’re musically oriented think of ArKaos VJ as a ‘synthesizer for pictures’ – a program that brings to pictures and movies the same fresh attitude that samplers brought to audio.

Why just play music when you can immerse your audience in complete audio-visual experiences? ArKaos VJ does for images and video what samplers and synths do for music— and it does it in real time. That means that DJs, VJs, performing musicians and multimedia producers now have the ability to easily create and project dazzling interactive imagery to take live performances, dance events, videos and other media productions to new levels of creative expression.

Animate Your Presentations:
Displaying, projecting and recording dazzling visuals to accompany your music is just the beginning. With ArKaos VJ you can play live video sessions, record your own visual performance files and synchronize digital imaging automatically. And VJ 2.2 takes the concept even farther enabling you to create multimedia presentations using slide-show images and QuickTime movies, triggered by notes that can play music or audio samples like voice-overs. Animation can be synced automatically to MIDI Time Clock or to audio via advanced beat-matching technology, or you simply press the appropriate keys on the keyboard and you can play any part of your creation at any time and in any order. Program your show in advance, run live or just let ArKaos VJ generate the whole visual show.

FEATURES

• Adds dimension to concerts, dance clubs, raves, music videos and more
• JPEG, BMP, PICT still image support
• QuickTime™, AVI and Flash SWF video and animation support
• More than 60 customizable real-time visual effects
• Visuals sync to audio via powerful automatic beat-matching technology
• Allows any MIDI keyboard or device to control imagery and effects
• Integrates with any MIDI sequencer
• Supports multi-layering and chaining of effects
• Built-in visual recorder to create videos and visual remixes
• Multiple keyboard mapping to trigger images and effects
• Enables full-screen and multiple screen usage for performance events
• Import QuickTime movies, flash animations and still images, or grab live video
• Drag and drop images, clips onto keys of the virtual computer and/or MIDI keyboard
• Free ArKaos Visualizer software brings visuals to MP3 players

Here’s how it works...
1. Import images, QuickTime movies or grab live signal.
2. Drag and drop the item onto the virtual computer or MIDI keyboard.
3. Select the required visual effects from the window.
4. Drag and drop the effect onto the keyboard
5. Record live performances, or let the beat matching artificial intelligence take care of it for you
BIAS

PEAK 4

Audio Editing/Processing/Mastering Software for Mac OS X

Peak 4 is an award-winning digital audio editing application that is fully “carbonized” (OS X native). Sporting a streamlined “Aquafied” user interface, and many other enhancements Peak 4 also runs just fine under Mac OS 8.6 through 9.2.

It takes full advantage of OS X’s advanced capabilities, including protected memory space for enhanced system stability; the ultra-streamlined, elegant “Aqua” user interface; and CoreAudio, the audio I/O component of OS X that supports multichannel, multi-client hardware, and beyond 24-bit/96kHz resolution.

Peak 4 supports your Mac's built-in audio as well as a broad range of third-party hardware via Sound Manager or the powerful CoreAudio standard. (Translation: it works perfectly with all of the best-sounding audio hardware.)

Version 4.0 features include VXT plug-in management via a fully integrated version of BIAS vbox— the most advanced plug-in matrix control environment available. The Cursor Palette with an integrated tempo calculator, plus the ability to sort markers by time or name in the expandable contents window. Also includes dozens of free plug-ins, including BIAS Freq—a mastering-quality 4-band paragraphic EQ.

FEATURES

- Fastest and most intuitive waveform editing available on any platform
- Displays multiple document windows simultaneously
- Unlimited Undo/Redo with graphic history
- User definable display size and color
- Record audio directly or import all QuickTime compatible audio formats
- Supports built-in Mac audio I/O, plus most ASIO-, Sound Manager- and CoreAudio-compatible audio hardware
- Full DSP toolset, including Fade In/Out, Normalize, Gain Envelope, Reverse, Invert, Rappify, ultra-accurate Pow-r dithering, Convolve, Reverse Boomerang, Change Sample Rate, Mix, Change Pitch, Panner, Amplitude Fit, Find Peak, & more
- Playlist with automated Redbook (Disk-at-one/DAO) CD burning
- Easily create, edit, read & write region, loop & reference markers
- Sophisticated playlist featuring advanced crossfades & DSP
- Advanced looping tools — including the highly acclaimed Loop Surfer, LoopTuner, Crossfade Loop, & Guess Tempo
- 32-bit; sample rates up to 10M Hz
- Realtime VST effects support
- Advanced VST effects routing matrix via integrated Vbox support (includes Vbox SE)
- Automated Repair Clicks & Remove DC Offset
- Convolve function - instantly apply recorded room ambiance to any audio document
- Read/write multiple file formats — even MP3 (has exceptionally fast, high-quality, on-board M P3 encoding)
- Full featured batch processing options — including Export Regions & much more
- Change Duration DSP function allows high quality time compression/expansion without affecting pitch
- Threshold function automatically divides files into discrete regions based on amplitude
- Fully customizable toolbar and keyboard shortcuts
- Trigger playback and cueing of up to 10 audio documents using Mac keyboard
- Recording notepad and timer
- Advanced QuickTime movie and DV clip support features better-than-frame accurate synchronization of audio and movie playback, even during selection and scrubbing
- Supports all SM D1 hardware samplers
- Supports DV standard (16-bit/48kHz) without additional hardware
- Includes BIAS Freq, a mastering-quality 4-band paragraphic EQ that's fully native for OS X (also OS 8.6 and up). BIAS Freq brings high-end audio equalization to Peak, with -18dB to +18dB gain values, 0.1 to 10 Q values, sweepable 20Hz to 20kHz frequency values, high- and low-cut filters, individual band bypass buttons, 24dB stereo input/output meters, and a super-fast Carbon Event driven interface. (For more demanding applications, plus more extensive filtering and bandwidth control options, the 10-band BIAS SuperFreq is an advanced VST plug-in, available as a download-only purchase from the BIAS Web site.
- Bundled with more than 25 VST plug-ins including Reverb, Compressor, Limiter, DeEsser, Dynamics, Distortion, Stereo Imager, Degrader, Overdrive, Resonant Filter, Stereo Simulator, Sub Bass Synthesizer, Delay, Leslie Simulator, Pitch Tracker and Vocoder
- Also bundled with Roxio Toast Lite— the industry-standard CD burning software, and Waves AudioTrack, a multi-processor plug-in with 4-band fully paragraphic EQ, compressor/expander and gate.

www.bhphotovideo.com
Includes BIAS Freq—a mastering-quality 4-band paragraphic. Since Peak supports real-time VST plug-ins (like Freq), you can tweak and audition audio effects "live" without having to process files first.

Peak's DSP menu contains great features such as change pitch, change duration, convolve, repair clicks, change sample rate, fade-in/out, crossfade loop, normalize, mix, dither, reverse and much more.

The cursor palette includes a selection cursor, pencil tool, magnifying glass, blend on/off. It also displays selection duration in seconds, SMPTE/EBU frames, bars/beat, etc. Shows X/Y coordinates, BPM and DTR (distance to nearest reference marker).

Import QuickTime movies and digital video (DV) clips for audio sweetening: Movies appear in a sizable window, and if you wish, the movie's audio can open a standard Peak audio document. Peak maintains better-than-frame-accurate sync, letting you play the movie while making audio selections or while scrubbing the audio file.

Edit window can be sized so your monitor can accommodate many files at once—or zoomed to show enormous waveforms. Edit windows can be stacked, tiled, and custom-colorized.

Save hours using Peak's batch processor to perform repetitive tasks in the background, while you do something else. Virtually any action, including plug-in signal processing, can be applied to dozens, hundreds, or even thousands of files with only a few mouse-clicks.

**Also Available...**

**Peak LE:**
Provides pro-caliber editing, processing and power at a price anyone can afford. Whether burning audio directly to CD-R, or encoding mp3 audio files for the Internet, Peak LE is a great way to discover Peak power basics. Has many of Peak’s essential features including playlist direct CD burning, and real-time VST plug-in support. And when you're ready, you can upgrade to the full version of Peak.

**Peak TDM:**
Offering a powerful mastering environment for your TDM plug-ins, Peak TDM takes full advantage of the processing power of the Pro Tools system, lets you chain multiple TDM plug-ins together, adding countless effects in real-time to your stereo mix.

**Peak DV:**
This special edition of BIAS Peak is optimized for users of Final Cut Pro, iMovie, iDVD, Premiere, DVD Studio Pro, and other video or DVD authoring applications. Peak DV has everything you need to edit audio for your video projects, including lightning-fast audio editing and processing, support for 16-bit/48kHz files, VST plug-in support, QuickTime movie support with full chase lock - even during audio selection, advanced marker and region implementation, batch file processing, unlimited undo/redo with edit histories, built-in DSP processing including a high-quality time compress/expand algorithm, gain envelope, multiple simultaneous audio document display, and more! Peak DV also supports Core Audio, Sound Manger and ASIO.
BIAS

DECK 3.5

Advanced Digital Audio Workstation

Looking for a high-performance multitrack digital audio workstation? Nothing else touches Deck 3.5’s combination of features, speed, compatibility, and value—it even supports Mac OS X and OMF file importing—making it more compelling than ever. Deck 3.5 has a huge feature set, with virtually everything you’d expect in a professional DAW, at a fraction of the cost. For less than you might spend on one competing system, you could equip an entire team with Deck 3.5 workstations—including hardware and computers—without sacrificing quality or capabilities.

Perfect for video editing, audio post-production, and DVD authoring studios, as well as radio stations, music studios, and sound designers. This makes it a great complement to Final Cut Pro, DVD Studio Pro, iDVD, Avid Express, Premiere, and other video editing or DVD authoring systems.

Deck 3.5 imports, exports, and accurately syncs to QuickTime movies. Scrubbing and spotting audio events is astoundingly easy and fast. Unlike budget versions of other audio tools, you get true timecode synchronization plus a SMPTE/EBU timescale display. Deck 3.5 is also fully surround-sound capable, with built-in 5.1 surround panning.

**FEATURES**

- Record, mix, play back, & process up to 64 simultaneous tracks
- Up to 999 virtual tracks
- Realtime mixing console, with dedicated faders, pans, & other controls
- Automated level mixing with high-resolution moving faders
- “Rubberband-style” breakpoint automation
- Mixer states “snapshot-style” scene automation
- Clip-based automation: Copy, Paste, Drag & Drop automation envelopes follow audio regions as they are moved
- Advanced realtime signal processing with VST plug-in support
- Built-in realtime DSP effects including Chorus, EQ, Delay, & Multitap
- Super-fast spotting of audio clips to picture
- Supports up to 16-bit/48kHz audio (with compatible 48kHz hardware)
- SMPTE/EBU timecode-fluent for editing, spotting, external chase-lock synchronization
- Slaves with subframe accuracy to external video tape recorders & other transports—ideal for layback & other assembly
- Import QT movies & synchronize audio-to-picture with better-than-frame accuracy
- Scrub QT movie with full audio chase
- ADR (automated dialog replacement) capable
- Monitor previously recorded tracks while recording new tracks (optionally in sync to a QuickTime movie)
- Discontiguous clip selection
- Clip nudging & trimming — with better-than-subframe accuracy
- Master fader with stereo effects bus
- Sync to external MIDI sequencers (via third-party CoreMIDI drivers)
- Non-destructive punch-in & punch-out
- Supports most ASIO (OS 9), Sound Manager, and CoreAudio (OS X) compatible audio hardware
- Supports multiple file formats including AIFF, SDII, WAV, SND, & QuickTime
- Export sessions as QuickTime movie with multiple format options
- Allows external waveform editor such as Peak to be launched from session
- Library window keeps track of all the audio documents used in each session. Clean sessions of unused files, locate files on your hard drive, or view where files occur in session. Quickly and easily drag and drop files from the library into desired track/time in the tracks window.
- Master output offers a master stereo fader and precision metering. It also features eight mono (four left and four right) and four stereo effects inserts for applying mastering effects and other processors to an entire mix.
- Includes over 25 free VST audio effect plug-ins (same ones bundled with Peak), including Freq 4-band paragraphic EQ, Vbox SE, Bias Peak LE, and Roxio Toast Lite CD burning software.

DECK LE

Very powerful with all of Deck’s essential tools, Deck LE gives you everything you need for quick, easy, pro quality multitrack recording and editing, all at an incredibly affordable price. Record, edit, and play back up to 8 tracks of audio.

Deck LE supports ASIO-compatible audio cards, offering a greater choice of hardware options than any other competing product. Deck still offers direct support for the Korg 1212 I/O card, as well as any Sound Manager-compatible card. You can use Deck LE with your Mac’s built-in audio connections, with no extra hardware needed. Deck LE also integrates with the Tascam US-428 DAW Controller, with full MIDI Map support.
Deck 3.5 supports discontiguous clip selection – a real time-saving feature that lets you select individual regions in different tracks as a group.

In addition to moving fader and breakpoint automation, Deck 3.5 offers "snapshot" Mixer State automation—for instant scene recall.

The tracks window is used for arranging and editing audio clips and crossfades, using up to 64 simultaneous tracks for recording and playback (or up to 999 virtual tracks). You can also individually mute, solo, name, and arm-for-record each track within this window, without having to use the mixer.

In addition to moving fader and breakpoint automation, Deck 3.5 supports discontiguous clip selection – a real time-saving feature that lets you select individual regions in different tracks as a group.

Each channel supports up to four VST effects inserts—or a virtually unlimited number of effects using Vbox SE (included).

CPU meter keeps track of all system resources, including CPU, RAM and hard disk usage and availability.

Deck 3.5 gives you advanced moving fader automation—to store and recall all your moves with smooth-sounding precision. You can also update or overwrite automation on the fly, just by grabbing a fader (using your mouse or external control surface).

The tracks window is used for arranging and editing audio clips and crossfades, using up to 64 simultaneous tracks for recording and playback (or up to 999 virtual tracks). You can also individually mute, solo, name, and arm-for-record each track within this window, without having to use the mixer.

Import QuickTime movies and DV clips, then sync them to your session with better-than-frame accuracy. You can scrub frame-by-frame through a movie with full audio chase. Alternately, once you select and audio region, you can easily spot it to a picture by scrubbing the movie, releasing the mouse button, and you're done.

In addition to moving fader and breakpoint automation, Deck 3.5 offers "snapshot" Mixer State automation—for instant scene recall.

CPU meter keeps track of all system resources, including CPU, RAM and hard disk usage and availability.

Deck 3.5 gives you advanced moving fader automation—to store and recall all your moves with smooth-sounding precision. You can also update or overwrite automation on the fly, just by grabbing a fader (using your mouse or external control surface).

Advanced Audio-for-Picture Tool

Deck 3.5 is a must-have for film, video, video game, Web, and other media applications. In addition to import/export QuickTime movies, with better-than-frame-accurate synchronization, Deck 3.5 supports importing OMF sessions from video editing and authoring applications such as Final Cut Pro, Avid, and others. Sessions from OMF-capable DAWs—including Pro Tools, Digital Performer and Nuendo can also be imported. Deck is also ideal for spotting effects, editing dialogue, processing soundtracks, and recording ADR voiceovers.

Multi-effects Control Environment for VST Plug-ins (Mac OS 9/OS X or Windows)

Plug-ins changed signal processing forever, bringing advanced effects to the desktop. Now, Vbox is changing plug-ins as you know them, bringing unprecedented creative command over all your signal processing options — and unleashing a universe of yet-to-be discovered sounds.

Vbox is the ultimate multi-effects control environment for VST plug-ins, operating under Mac OS 9/X or Windows. It works either free-standing or integrated into any VST host program — including BIAS Peak and Deck, Steinberg Cubase, Emagic Logic, and others — where you can process and save any audio file or even record, process, and save a live feed.

Unique effects matrix lets you combine, route, and mix up to hundreds of plug-ins per channel. The result is literally millions of sonic combinations — and unrivaled creative potential.

FEATUR ES

- Create, manage, store & recall a virtually unlimited number of VST plug-ins — all in a fast, intuitive, fun workspace
- Unique effects matrix lets you combine, route & mix multiple individual effects in parallel, series & series-parallel combinations — for millions of sonic permutations
- Hot-swap plug-ins instantly
- Comes with dozens of free VST plug-ins and works with the hundreds of VST 1.x compatible plug-ins already on the market
- Integrates seamlessly into VST host apps
- Use it as a stand-alone signal processor for AIFF, SDII, & .WAV audio files
- Process & record live feeds or CD playback — perfect for DJ's & live performance
- Easy muting, soloing, & bypassing of any individual plug-in — plus full control of input & output gain of each plug-in — directly in the Vbox environment
- Accurate stereo metering at each stage
- Works with Sound Manager, ASIO (OS 9), & CoreAudio (OS X), compatible hardware
- Plug-in parameters for any plug-in in the Vbox matrix can be accessed by clicking the edit button on each active plug-in module — instantly revealing all the standard parameter controls and user interface of each individual plug-in.
- Parameters for multiple plug-ins can be opened simultaneously (only one plug-in at a time with Vbox SE.) All parameters can be adjusted and auditioned in real-time without stopping audio playback.
- Master wet/dry mix control adjusts the relative balance between processed and unprocessed signals.
- Toggle back and forth between settings with the A/B compare switch — a great decision-making tool. You can also store and recall a virtually unlimited number of effects combinations or individual effects settings.
- Each plug-in assigned in the effects matrix has its own independent input/output faders, precision meters, Solo/Mute/Bypass/Edit buttons, and a signal flow indicator. You have unparalleled control over your sound.
- Keep an eye on your computer's CPU usage with the CPU meter — so you'll always know how many plug-ins may be assigned.

Convenient master input and output faders - plus high-precision meters at both input and output stages - gives you complete control over master levels.

Vbox's unique effects matrix lets you assign and arrange a virtually unlimited number of VST plug-ins. The matrix default size is 5"x 5", but you can custom-size it to suit your liking.
SOUND SOAP Audio Cleaning Software

Sound Soap is an easy-to-use, professional-quality noise reduction software designed for videographers, multimedia & web developers, music & audio enthusiasts & others. By simply adjusting just two knobs, anyone can remove unwanted hiss, room noise, rumble, electrical hum, and other background noise from almost any digital media file. These include digital video (DV), PowerPoint, Flash and digital audio workstation tracks, as well as cassette or other analog tape recordings that have been transferred to a computer.

Sound Soap works by removing “broadband” noise (such as room noise, tape hiss, road noise from a moving vehicle, or noise from air conditioners). It also removes low-frequency rumble, as well as hum - the 50 and 60Hz electrical “buzzing” sound common in many audio recordings. It can even learn the difference between the noise and the desired audio - achieving amazingly effective results. With moderate or subtle noise problems, Sound Soap can make the difference between a project that sounds amateurish and one that sounds professional. Sound Soap can even salvage otherwise unusable audio files.

◆ Use as a standalone application — works with any QuickTime compatible audio or video file (AVI, DV, .WAV, SDII, AIFF, MP3, MP4 & many more) or as a fully integrated plug-in with any compatible DirectX or VST host program — including BIAS Peak, Vegas Video, Cubase & others.

◆ Remove hiss, hum & buzzing, rumble & most other noise — without harming the audio you want to preserve. Hum removal is optimized for 50 or 60Hz.

◆ One-step Learn Noise button automatically reduces noise (in under three seconds, SoundSoap will profile any noise in your signal and adjust the Noise Tuner and Noise Reduction knobs to their ideal settings), or fine tune the intuitive controls for even more professional results — in just seconds.

◆ Wash Window lets you listen and watch. The left side of the display shows the unprocessed signal, while the right side shows it after it's been cleaned.

◆ Preserve voice button helps remove noise (and other audio) outside of the range of the human voice.

◆ Noise Only mode lets you listen only to the noise being removed — and is ideal for fine-tuning SoundSoap's controls.

◆ Noise Tuner control helps you “tune in” the hiss and other background noise you want to remove — rather like tuning in a radio station (but one you don’t want to hear).
Digital Sampler

With the Unity DS-1 you can turn your computer into a full featured digital sampler, allowing you to recreate the sounds of acoustic instruments or any other audio source. All of the features of dedicated hardware samplers are here—16 part multi-timbrality, 64 voice polyphony, a complete synth engine and the ability to create layers and splits—all with full MIDI control. Compatible with Akai, SampleCell, .WAV and .AIFF and CD audio files that can all be edited using the integrated audio editor. Import more of your sample libraries and load them faster than anything else. Unity DS-1 was the first on the scene with the G4 and Dual Processor support for an unequaled 256 possible stereo voices. No other sampler even comes close. An on-board digital audio editor, two stereo effects processors, and the ability to play huge samples from RAM or stream from disk within Performer, ProTools, Logic, or Cubase give you flexibility for all your gigs.

**FEATURES**

**General**
- Sampling synthesizer in software, no additional hardware required
- Outstanding 32-bit/96kHz sound quality
- Up to 256 note polyphony
- Stereo signal path throughout
- FreeMIDI, PC300, OMS, & CoreMIDI compatible
- MAS, VST, RTAS, DirectConnect, & ReWire support, ProTools HD compatible
- Over 1GB of content included

**User Interface**
- 100 percent programmable
- Drag and drop sample importing, exporting & keymap placement
- Selectable graphic or slider views for envelope modulators
- Parameter values displayed in hertz, db, or milliseconds where appropriate

**Sampling**
- Imports 24-bit Sound Designer I & II, .AIFF, .CD-Audio, and .WAVE files
- Imports and maps SampleCell II instruments, DLS, and SoundFont 2.0 automatically
- Option to automatically split samples
- Selectable interpolation: Linear, Quadratic, Lagrange or none
- Built-in digital audio editor includes stereo record function with level controls
- DSP functions include Normalize, Gain, Fade, Reverse, Crossfade Loop, EQ & more

**Multisamples**
- Up to 128 samples per MIDI note selectable via velocity or controller cross-switching
- Per-sample volume, tune, pan, sample start, FX send, envelope and mute grouping

**Effects**
- Two stereo insert effects processors per program
- Two additional stereo global (parallel) effects processors
- Parametric and shelf equalizers
- Multiple stereo reverb and reflection algorithms
- Stereo delays, chorus, phaser, and flange
- Overdrive, distortion, and degrade effects
- Delay times can be synced to MIDI clock

**MIDI**
- Control of layers, splits, and arpeggiator
- 16 simultaneous MIDI channel multitimbral
- Real-time control of all parameters simultaneously via NRPN’s
- On-screen keyboard, no MIDI controller required
- Full simultaneous MIDI application compatibility
- Mac version includes QuickTime, OMS, FreeMIDI drivers, & native Logic support

**Output**
- Supports output directly to digital audio file on disk in 8, 16, or 24-bit format
- Audio output: SoundManger, DirectSound, MAS 2.0, ASIO, & Digidesign DirectConnect & Direct I/O (Mac only)
Digital Software Synthesizer

The moment you hear the warm, fat analog sounds of Unity AS-1 you'll know that this is no ordinary analog synthesizer. With over 1,500 different sounds that range from deep bass to deep space, Unity AS-1 blends the very best features of vintage analog synthesis and the latest computer DSP algorithms. Practically unlimited modulation routings and LFO’s make it easy to bring vintage patches back to life. It’s easier than ever to create amazing new soundscapes of your own with stunning 32-bit, 96kHz sound quality.

Play the Unity AS-1 “live”, just like any other synthesizer with layers, splits and full MIDI continuous control, or use it as a multitimbral synth running alongside your favorite MIDI application. Extensive MIDI implementation allows real-time control of almost every parameter and easy integration into existing MIDI setups. The Unity AS-1 comes with over 100 editable parameters, 3 oscillators, 2 filters, 2 insert and 2 global effects, ring modulator, plus dozens of LFO’s and envelopes. You can even record your performances as audio files for use in your favorite digital audio applications. Play AS-1 with just a laptop, or plug it into Performer, ProTools, Logic and Cubase.

**FEATURES**

**General Features**
- Compatible with Mac OS 8.6 through 9.2 and 10.1 or higher
- No additional hardware required
- Outstanding 32-bit/96kHz sound quality
- Up to 128 note polyphony (CPU dependent)
- True phased locked stereo signal path throughout
- Realtime MIDI input/performance
- Includes over 1500 classic analog sounds
- Record and save performances as AIFF or WAV
- FreeMIDI, PC300, OMS, & CoreMIDI compatible
- MAS, VST, RTAS, DirectConnect, & ReWire support, ProTools HD compatible
- Graphical editing of configuration

**MIDI Plug-Ins**
- Arpeggiator Chord, Arpeggiator Played, Channelize, Chord, Key & Transpose
- Full control of layers, splits and arpeggiator
- 128 simultaneous MIDI channel multitimbral
- Tempo control and note division
- Programmable note input & chords listing

**Effects Plug-Ins**
- Two insert (serial) effect processors per voice
- Two additional stereo global (parallel) effects processors
- Delay times can be synchronized to MIDI clock
- Full parametric and shelf EQs
- Effect algorithms include: Chorus, Compressor, Degrade, Dual Chorus, Dual Delay, Dynamic Filter, Flange, Overdrive, Parametric EQ, Phaser, Pitch Bend, Pitch Shift, Quad Delay, Reflection, Reverb, Shelf EQ, Single Delay, Stereo Chorus, Stereo Compressor, Stereo Delay, Stereo Flange, Stereo Phaser & Stereo Pitch Shift

**AS-1 & DS-1 BOTH FEATURE**

**Modulation**
- Modulators and routings limited only by CPU power
- Most parameters available as a modulation source and/or destination
- 6-stage envelope modulators (delay, attack, decay, sustain, sustain decay, release)
- Selectable linear or exponential curves for envelopes
- Six low frequency oscillator (“LFO”) waveform shapes
- LFO’s can be synchronized to MIDI clock
- Four continuous MIDI controller modulation sources are available simultaneously

**Filters**
- Two assignable stereo filters per voice
- 13 filter types, including 4-pole resonant lowpass, highpass, bandpass, allpass, notch & state-variable
- Multiple inputs allow parallel and/or serial filtering
- Per-filter cutoff, resonance, cutoff modulation source/amount and overdrive controls
Sampler, Synthesizer and Physical Modeling with Integrated Mixer

Unity Session combines the functionality of hardware samplers, analog synthesizers, and physically modeled instruments into one fully integrated environment. The program brings together Unity DS-1 and Unity AS-1 by allowing both programs to be supported within the same mixer and editor applications.

All of the libraries, banks and programs are now selected and assigned within the same mixer application. The Unity Editor will allow the user to create and/or edit DS-1 and AS-1 banks, as well as opening and converting GigaSampler, Unity 2, Retro 2, Sound Font 2.0, Sample Cell II and DLS files. In addition to the sample formats available for editing through the mixer, Akai S-1000/S-3000 and Roland S-760/S-770 formatted samples can easily be converted and brought into Unity Session.

Also included in Unity Session, is a module for physical modeling. There are four physical models including Clarinet, Flute, Hammered String and Bowed String. The user can go in and physically modify the characteristics of the instrument. Finally, all of the components of the program can be combined to create an instrument. The newly created instruments are then saved in a standard bank and can be selected within an application just like any program.

### Features

#### General Features
- Compatible with Mac OS 8.6 through 9.2 and 10.1 or higher
- Outstanding 32-bit, 96 Khz sound quality
- Up to 256 note polyphony (CPU dependent)
- FreeMIDI, PC300, OMS, & OSX CoreMIDI compatible
- MAS, VST, RTAS, DirectConnect, & ReWire support, Pro Tools HD compatible
- Assign 2 MIDI and 2 Audio FX per channel
- Assign 2 Send FX and 2 Global FX on Master outs

#### Synthesis
- 3 stereo oscillators per voice
- 2 stereo filters per voice
- 8-octave range per oscillator
- Frequency modulation from any oscillator to filter

#### Physical Models
- Clarinet, Flute, Hammered String and Bowed String

#### Sampling
- True stereo signal path
- Selectable interpolation: Linear, Quadratic and Lagrange
- Option to automatically split samples (for Audio CD’s)
- Built-in sample editor which includes stereo record function with level controls
- DSP functions include Normalize, Gain, EQ and more

#### Multisamples
- Up to 128 samples per MIDI note selectable via velocity or controller cross-switching
- Per-sample volume, tune, pan, sample start, FX send, envelope and mute grouping

#### Effects
- 2 assignable MIDI effects per program
- 2 assignable Audio effects per program

#### Instruments
- Play samplers, synthesizers and physical models at the same time in user defined ‘Splits & Layers’

#### Content Included
- Over 2GBs of content including Black & Whites pianos, Pop Drums, and new Orchestral Strings library, 1500 analog synth patches, and Osmosis for converting Roland and AKAI libraries.

#### Filters
- 2 assignable stereo filters per voice
- 13 filter types, including 4-pole resonant lowpass, highpass, bandpass, allpass, notch & state-variable

#### FileTypes
- Plays 24-bit Gigasampler, Retro AS-1, Unity DS-1, Sound Designer II, AIFF, Sample Cell II, DLS, SoundFont 2.0 and WAVE files
Unity Topaz Kits

Unity Topaz Kits is a collection of multisampled drums based on the SonicEmulations GigaSampler format. These Topaz Studio Kits each come from a single sampled drum kit, with various types of sticks and brushes. Each kit was created by a well-known session drummer, using either Yamaha or Gretsch acoustic drum sets. The result is a spectacular collection of high-quality drum samples that can be used independently with the Unity Player engine or within your favorite sequencer.

Unity Studio Drums

Unity Studio Drums are a collection of multisampled drum kits based on the SonicEmulations GigaSampler format. Each kit includes samples of various types of sticks and brushes, providing an array of realism and variation. The kits were created by well-known session drummers, using either Yamaha or Gretsch acoustic drum sets.

Ultimate Acoustics

Ultimate Acoustics is a collection of vintage acoustic guitar and bass samples performed by Bryan Blumer and produced by David Das. All samples were recorded in 24-bit, 44.1 kHz resolution, and in some mono and some stereo, to achieve the highest fidelity. Each guitar’s folder contains a variety of playing styles, including singles containing single notes, open and fretted notes, and chords containing strummed major and minor chords. Each program is mapped out from C3 to B4 and broken down into a down-strum and an up-strum for a realistic sounding rhythm guitar. Extras banks contain extra useful samples such as mutes, harmonics, and harmonic chords for each guitar.

Black & Whites

Black & Whites is a software piano module for your Mac or PC. It brings the legendary 7’ and 9’ Steinway pianos to your computer. Based on technology developed for the award-winning Unity DS-1 Sampler, Black & Whites uses the same playback engine to reproduce the professional quality sound found in Unity DS-1. Over 330 MB of samples are included, with instrument sizes ranging from 3 MB to 44 MB in size. Over 1400 individual programs cover everything from sonic purity to pure insanity. Black & Whites was sampled in stereo and many of the models utilize 4 velocity layers. There are also Rhodes Electric Piano samples with many variations. If you’ve been waiting for sampled pianos that can stand on their own three legs, listen to Black & Whites.

Tempo Tantrum

Tempo Tantrum is a loop and beat module that delivers over 240 MB of breakbeats, drum loops, and bass lines straight to your computer. Using amazing Unity DS-1 Oscillator Stretch technology, you can instantly adjust the tempo of these beats. With Tempo Tantrum, any drum loop or bass line can be instantly matched with any other loop in the collection. This flexibility allows you to get the most out of this sample library, since you can easily create new combinations of loops, tempos, and effects as needed.
Pop Drums Vol. 1
Contemporary Drum Loops

Pop Drums Vol. 1 is the answer to any musician out there looking for a wide range of quality sounding drum loops and bass lines. With over 270 MB of content, you'll be sure to find just what you are looking for from Latin and Soul to Rock and the Blues. Over 270 MB of drum loops and bass lines that can be sped up or slowed down in realtime without changing pitch. Several different programs per bank for different tempos, effects, and pitch-shifting. You can also use the Pop Drums content in Phrazer.

Steve Reid’s Global Percussion
Percussion Module

World-renowned percussionist, Steve Reid, combines the high-quality samples of his vast percussion instrument collection with the powerful Unity DS-1 Digital Sampler Engine. Steve Reid’s Global Percussion contains pristine samples of exotic percussion instruments from all over the world. No additional hardware is required to play these sounds. The instruments are sampled in the Unity DS-1 format, as well as in Voodoo format.

Harry Sharpe Guitars
Guitar Loop Module

This collection contains over 420 MB of multisampled and multilayered Fender Telecaster libraries & loops to choose from including Rock, Funk, Blues, and even a few Country styles. Add studio recorded rhythms, leads, and riffs to your songs without ever setting up an amplifier. Three different pick-up settings give you distorted, clean, and licks in between. Several different programs per bank for different tempos, effects, and pitch-shifting. Loops are also compatible with Phrazer.

Miroslav Vitous MINI
Symphonic Orchestral Samples

The Miroslav Mini is a collection of world class symphonic orchestra samples in native Unity DS-1 format. The library is a compilation of orchestral instruments and ensembles from the larger Miroslav Master Set. The Mini Library comes complete with over 25 individual instruments representing the strings, brass, and woodwinds families. The realism and expression of these instruments is unparalleled among orchestral sample libraries, and recreates the symphonic experience with stunning clarity and depth.

Unity Synth Expander 1

Comprised of six plug-ins, Unity Synth Expander 1 contains 500 sounds that can be used in the as a plug-in or in stand-alone mode. The synthesis package can be brought into Unity Session, Unity DS-1, Unity AS-1, or other sequencers. Includes full editing capabilities as well as plug-in support for Pro Tools, Digital Performer, Cubase and Logic. Unity Expander 1 includes the following:

- FM-1: 8 operator FM synthesis
- BR-1: Brass physical model
- EP-1: Electric Piano physical model
- GL-1: Glottal/Vocal physical model
- VS-1: Vector synth
- WS-1: Wave sequencer synth

Tubes, Tines & Transistors
Vintage Keyboard Module

“Tubes, Tines & Transistors” is a dynamic collection of organ, electric piano, analog synthesizer, and related keyboard instrument sounds that can be played directly from your Mac or PC.s

Using amazing Unity DS-1 sampling technology, you get instant access to over 110 banks and 3,500 instrument programs! The sounds of actual vintage organs and classic analog synths such as Arps, Moogs, Sequentials, and Oberheims have been digitally captured and brought to your desktop.
Software Synthesizer

Using DSP technology, Retro AS-1 is a full-featured software synthesizer which can recreate the sounds of many of the classic analog synthesizers of the past, or create amazing new soundscapes from scratch, with full programmability. Retro AS-1 is fully polyphonic and multi-timbral, with fast response time. Extensive MIDI implementation allows real-time control of all parameters and easy integration into existing MIDI setups. Sounds can be played live just like any other musical instrument with layers, splits, and full MIDI continuous control. Or used as a multi-timbral sound module running behind another MIDI application (such as a sequencer) on the same computer. A full-featured arpeggiator can generate analog-style sequences. Additionally, you can have Retro AS-1 write the synthesizer’s complete multi-timbral stereo output to disk, and stored as an audio file for use in another digital audio application.

- 24-bit, 96 kHz sound quality
- 9 waveform: Saw, Pulse, Triangle, Sine, Sine squared, Glottal, Noise (white, pink, red)
- 13 filter types: Includes 4-pole resonant lowpass, highpass, bandpass, allpass, notch, and state-variable
- Up to 3 oscillators per voice not including low frequency oscillators
- 8-octave range per oscillator
- Syncs any oscillator to any other oscillator or filter
- Multiple inputs allow parallel and/or serial filtering and filters can be modulated by oscillators (“poly mod”)
- Frequency modulation from any oscillator or filter
- Over 100 parameters per program
- On-screen keyboard
- No MIDI controller needed to trigger sound
- Supports output directly to digital audio file on disk in 8, 16, or 24-bit format
- Automatic publishing of OMS and FreeMIDI names

VOODOO Digital Drum Machine

Voodoo turns your computer into a programmable “beat box” that plays samples and standard MIDI files. It contains over 20 different “Themes” so you can customize the program to your liking. All functionality is accomplished within one window where you can drag the samples you want from your hard disk onto the drum pads. By clicking on the drum pad you can then view its individual control parameters and its sample waveform. When your finished making the adjustments that you want, exporting the samples is as simple as dragging to your hard disk. So when you’re ready to lock down a groove, Voodoo gives you both the simplicity and flexibility to do what’s most important: Make music.

- Outstanding 24-bit, 96 kHz sound quality
- Up to 64 note polyphony (CPU dependent)
- Drag and drop sample importing and Standard MIDI file importing
- On-screen keyboard
- Parameter values displayed in hertz or ms
- Use standalone or play Voodoo from your MIDI sequencer

Sampling
- Imports AIFF, Unity DS-1 and SDII files.
- DSP functions include Gain, Shelf EQ, Parametric EQ, Reverse, Flange and Delay
- Up to 4 samples per “pad” selectable via velocity or controller switching
- Per-sample volume, tune, pan, sample start, FX send, envelope and mute grouping

Oscillators
- Single stereo oscillator per pad
- 8-octave range per oscillator
- Course and fine tuning

Filters, Effects & LFO
- Single filters per pad with variable cutoff, resonance, and Overdrive controls
- Filter types: lowpass, highpass, and bandpass
- Envelope and velocity control of filter cutoff
- Effects: Delay, Reverb, Reflection
- The LFO is routable to pitch, filter, or amplitude and has access to four waveforms, as well as delay, ramp, and speed controls

Patterns
- Event list editing, quantize, shift, pad note, velocity and length edit functions.
- Each pattern has # repeats, tempo, pan, volume and FX 1/2 offsets
- Import and arrange multiple patterns

Output
- Supports output directly to digital audio file on disk in 8,16, or 24-bit format
- ReWire support for Cubase, Digidesign, Direct I/O, ASIO and MAS support
- MIDI
- Real-time control of all parameters via MIDI
- OMS, FreeMIDI, Logic & serial port support
- Sync to MIDI clock

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008

Loop Composition Software

Take loop composition to the next level. Powerful pitch and tempo matching algorithms, built-in sample editing, mixing, and on-board digital effects provide total control of your sound. Integrate the power of multi-track digital audio and MIDI into one of the most comprehensive and easy to use loop-based production systems ever.

Phrazer is a powerful loop-based music production studio that makes it easy to take audio loops of different tempo and pitch and combine them to easily create music. Phrazer includes built-in effects and an audio waveform editor. It imports Acid loops and songs, as well as WAV, AIFF and MP3 files with the ability to automatically detect the “hit points” or transients in the waveform and insert markers at those points which allow for Phrazer’s tempo adjustments. Phrazer also has real-time MIDI performance features - you can assign a MIDI note number to each of the Phrazer audio tracks and then gate that track on or off using the MIDI keyboard. You can also assign QWERTY keys to each of the tracks for the true portable DJ set-up!

FEATURES

- Over 900 MB loops included
- Ability to create a master project folder that contains not only the sequence, but duplicates all samples used
- Compatible with most standard sequencers including ProTools, Digital Performer, Logic and Cubase
- Powerful pitch and tempo matching algorithms easily match up different audio loops
- Multitrack audio editing and playback
- Built-in sample editor with DSP for fine tuning audio files and customizing loops for changing tempo without changing pitch
- Roland PC 300 MIDI keyboard support
- Tempo calculation to set tempo based on sample length
- Assign multiple loops and DSP effects to each track. This makes it easy to keep track of your song since you can have all of your drum loops on one track, all of your bass loops on another track etc. Then you can drop insert effects right onto your track and automate them along with pan, volume and more.
- One shot tracks retrigger a sample each time a key is pressed for stuttering or scratch effects.
- Optimization for Apple’s G4 for maximum performance
- Stream audio from hard disk or load audio into RAM
- Use ASIO, DirectConnect, Direct I/O, MAS 2.0, ReWire or Sound Manager for output
- Sync to MIDI clock for integration with studio hardware and software
- Unlimited tracks available (CPU and RAM dependent)
- QuickTime movie support
- Two send effects available per track including: Phrase, Flange, Chorus, Degrade, Distortion, Filter, Dynamic filter, Compressor, Delay with MIDI sync, Shelf/Parametric EQ and Reverb
- Hide editor view in main window
- Plug-in effects processor
- 24-bit support for sequencer rendering and record to disk

An alternative to Phrazer, the LE version is perfect for a beginner, or for those who don’t need all of the features that come with the full version. Users have the ability to create a soundtrack to a home movie, use it live as part of your rig or make full songs using built-in FX, advanced editing features and the 500 MB of loops included! Three primary differences between the LE and full version:

- Amount of content (500 MB vs. 900 MB with full version)
- Sequencer support only in full version • LE version is limited to 8 tracks
- One shot tracks retrigger a sample each time a key is pressed for stuttering or scratch effects.
- Optimization for Apple’s G4 for maximum performance
- Stream audio from hard disk or load audio into RAM
- Use ASIO, DirectConnect, Direct I/O, MAS 2.0, ReWire or Sound Manager for output
- Sync to MIDI clock for integration with studio hardware and software
- Unlimited tracks available (CPU and RAM dependent)
- QuickTime movie support
- Two send effects available per track including: Phrase, Flange, Chorus, Degrade, Distortion, Filter, Dynamic filter, Compressor, Delay with MIDI sync, Shelf/Parametric EQ and Reverb
- Hide editor view in main window
- Plug-in effects processor
- 24-bit support for sequencer rendering and record to disk
Phrazer Discrete Drums Studio Drum Loops

This content CD contains 280 MB of Phrazerized drum loops taken from the Discrete Drums Pro Series Rock/Alternative collection. Phrazer Discrete Drums provides both 16-bit stereo and 24-bit mono loops. The stereo loops contain the entire drum kit for those of you don't want to fuss with balancing the individual mics. The result is 24 Phrazer Discrete Drums songs broken down into Verse, Chorus, Fills, etc. But if you want to break it down even further, the other half of the content CD provides the 24-bit mono loops. Here in the Phrazer Discrete Drums "Parts folder", you can adjust the amount of Overhead and Room to your liking.

AfroCuban Percussion Tropical Rhythm Module

AfroCuban Percussion contains 130 MB of quality sounding Caribbean-style instruments and rhythms. You will find Mambo, Merengue, and many other loops in this tropical library. The loops are "Phrazerized" so all you have to do is bring them into Phrazer and your on your way to creating a fantastic island beat.

Underground Beatz Vol. 1

The library is a "best of" collection of the Cologne Cyclez I and II and the Hamburg Loopz 2 libraries from Wizoo. A must-have for those into the techno, electronic sounds of the European underground, Cologne Cyclez provides classic 133 bpm loops—perfect for the electronic DJ. The Hamburg Loopz 2 content contain many unusual and experimental patterns shaped by effects, distortion and analog synths.

Underground Beatz Vol. 2

Over 300 MB of quality sounding loop taken from Wizoo's Rude Loopz and Loji Junkiez 2 content titles. Loji Junkiez presents you with electronic cologne funk, Trip hop, Hip hop & Breakbeat drum loops from the European underground scene. You will surely be inspired by the loops brought to you by Cologne underground DJ's, with special guest, Craig Anderton.

The Rude Loopz content features a drummer recorded live to analog tape using vintage tube and solid state equipment. All of the loops in this folder have two 2-bar loops, each played and processed differently.

Phrazer Smart Loops

AfroCuban Percussion

These three Phrazer titles come to you courtesy of Smart Loops. All of the original loops were created specifically for use as loops, which allows you to mix and match them up freely. The three "phrazerized" titles based on the Smart Loops versions including Bass Guitars, Drums & Percussion, and Electric Guitars. You can mix and match the three titles as needed and bring them into Phrazer, Phrazer LE, Unity DS-1, Unity Session, or any of your favorite sequencers! No additional hardware required. Free demo version of Unity Session included with each title.

- Bass Guitars
  - Over 950 "phrazerized" loops
  - A variety of styles including Rock, Pop, Funk, Blues and Heavy Rock
  - Includes 4-string finger and pick, 4-string slap, 5-string with finger, 5-string slap and Fretless Bass
  - Most bass loops recorded without any effects, giving you complete flexibility

- Drums & Percussion
  - 670 "phrazerized" loops in a variety of styles including Afro Cuban, Latin, Rock, Pop, Funk, Blues and Heavy Rock
  - Create your own unique 2 and 4 bar riffs
  - Instruments including Congas, Bongos, Triangles, Wood blocks, and many more
  - Most loops recorded without any effects, giving you complete flexibility

- Electric Guitars
  - Over 950 "phrazerized" loops
  - A variety of styles including Rock, Pop, Funk, Blues and Heavy Rock
  - Includes Guitar (clean), Guitar (Wah pedal) and Guitar (Heavy distortion)
  - Most loops recorded without any effects, so you can easily add your own
Bomb Factory makes photo-realistic plug-ins modeled after analog devices built by other manufacturers. One look at Bomb Factory's software and you'll see the difference. There aren't any little sliders to click on. And no long columns of numbers to type in. Instead you get photorealistic representations or professional studio equipment.

The plug-ins are developed with the cooperation and direct involvement of these manufacturers and other recording engineers to ensure the plug-ins are true to the original devices. For instance, Bob Moog was involved in creating the Moogerfooger Lowpass Filter and Ring Modulator plug-ins. (They even have his signature).

**Classic Compressors**

Bomb Factory’s Classic Compressors look, sound, and work just like the real thing. Whether you’re just learning to use compression or a seasoned pro polishing a final mix, you’ll love these time proven designs.

**Teletronics LA-2A / Urei 1176**

Meticulously crafted digital versions of the Teletronics LA-2A tube compressor/limiter and the Urei 1176—the most popular vintage compressors used in top pro studios—Bomb Factory’s proprietary modeling technology captures every tube, transformer and transistor of the originals! Plus the software adds sidechain support and perfect stereo tracking—two features not available in the “vintage” domain.

**JOEMEEK SC2 Compressor**

Legendary producer Joe Meek used to say: “If it sounds right, it is right.” Nowhere is this more apparent than in Joe Meek’s masterful use of non-linear, sometimes severe compression in his productions. Designed purely as an effects compressor, the JOEMEEK SC2 change the way the ear perceives sound. It changes the clarity, balance and even rhythmic feel of music. And by offering sounds no other compressor would dare, give your tracks an undeniable edge. In use by top producers the world over, JOEMEEK Compression is the secret weapon that gives your sound the character and excitement it deserves.

**JOEMEEK VC5 Meequalizer**

Picture this: drums in the spare bedroom. Microphones, cables, and recording gear strewn about the living room. A familiar scene, especially to legendary producer Joe Meek in 1962 as he prepared to record yet another chart-topping hit. Among countless other achievements, Joe Meek built custom gear to get the sounds in his head onto tape. One device was a treble and bass circuit with a sweepable mid control.

The JOEMEEK Meequalizer re-creates the exact circuit used by Joe Meek. A great-sounding, easy to use equalizer. Try it on mono or stereo tracks! Don’t forget, it was designed by a studio legend.
moogerfooger

Authentic analog designs from electronic music legend Bob Moog, built with amazing Bomb Factory digital technology! Moogerfoogers combine the best features of audio effects and vintage synth modules, opening new frontiers for sonic exploration. All are available separately, or together in a specially-priced bundle.

Lowpass Filter
The moogerfooger Lowpass Filter features a 2-pole/4-pole variable resonance filter with envelope follower. Use it to achieve classic ’60s and ’70s sounds on bass and electric guitar, or dial in warm, fat analog resonance on any instrument.

Analog Delay
The moogerfooger Analog Delay is simply the coolest (and warmest sounding) delay in the digital domain. Due to component shortages, fewer than 1,000 “real world” units will be made. Bomb Factory snagged serial #1 and meticulously modeled every detail of Dr. Moog’s classic analog design. Wait until you hear it!

Ring Modulator
The moogerfooger Ring Modulator provides a wide-range carrier oscillator and dual sine/square waveform LFO. Add motion to rhythm tracks and achieve radical lo-fidelity textures — you set the limits!

12-Stage Phaser
The moogerfooger 12-Stage Phaser combines a switchable 6- or 12-stage phaser with a wide-ranging variable LFO. Start with subtle tremolo or radical modulation effects, then crank the distortion and resonant filters for unbelievable new tones — all featuring classic MOOG sound.

Who is Bomb Factory?
Assemble a team with a proven history of developing award-winning, legendary audio products. More than 100 years combined experience designing real-world equipment. Add in a range of recording studio experience. People who've produced, engineered, and performed on countless recordings. The result? Digital audio tools that don’t sound like they limped out of some computer programmer’s cubicle. Analog meters with proper ballistics. Faders with correct logarithmic tapers. Flters that sweep, resonate and oscillate. And knobs that actually turn in the direction you want them to go. Combine that core competence with some of the best creative thinking in the industry. Computer models which incorporate physical simulations of motors and pulleys. Distortion that grows the right way when you crank it up. On-screen control with scratches and dents, casting shadows that move as you turn the knob. Bomb Factory doesn’t make "plug-ins". They make tools that let you get the job done. They sound great, look great, and work the way you’d expect a professional piece of gear to behave.
Fairchild 660 Compressor
Designed in the early 1950s, the Fairchild 660 is a variable-mu tube limiter. It features an unusual form of vacuum tube that is capable of changing its gain dynamically. The result? In addition to featuring a tube audio stage like an LA-2A, the Fairchild actually achieves gain reduction through the use of tubes! Bomb Factory's no-compromise replica captures every detail of this legendary piece of studio gear. But unlike the original, Bomb Factory's version is affordable enough that real musicians can afford to own one. Run a dozen or more at once — even in stereo — using any Pro Tools or MOTU system.

Pultec EQP-1A Equalizer
The Pultec EQP-1A provides smooth, sweet EQ and an extremely high-quality tube audio signal path. And like most studio classics, it's incredibly easy to use. Grab a knob, give it a twist, and it just sounds great. Every time. Bomb Factory's award-winning digital modeling expertise — combined with pro studio engineering chops — delivers the sounds you know and love. Use it anywhere you'd use the original: on individual tracks, critical vocals, or even across a stereo mix for mastering applications.

Tel-Ray Variable Delay
In the 1960s, a small company experimented with electronics and technology. When they came up with something great, they would Tell Ray (the boss). One invention involved a tuna can, a motor, and a few tablespoons of cancer-causing oil. A technology, they were sure, that would be of great interest to companies like IBM and NASA. Though it never made it to the moon, the killer technology that gives Tel-Ray its unique sound was licensed by most every major guitar amp manufacturer! Ad-N-Echo to any voice or instrument using the Tel-Ray Variable Delay. It provides lush delay, amazing echo, and warms up your tracks and mixes.

Voce Spin
From Voce, classic effects that sound great on any instrument. Voce Spin provides the most accurate simulation of the well-loved rotating speaker. It's a favorite of producers, guitarists, and, of course, organ players. Fifteen classic recording setups feature different speaker cabinets, varying microphone placement — even the "Memphis" sound with the lower drum's slow motor unplugged! No belts to tighten, no tubes to wear out — just choose a preset and get the sound of a professionally-miked rotating speaker; instantly. Or customize exactly the sound you want using over a dozen fully automatic parameters. Voce Chorus/Vibrato recreates the B-3 Organ's mechanical scanner vibrato. Three settings of Chorus and three settings of Vibrato on one cool knob. Fun and easy to use, it's a classic effect used for over sixty years. Talk about vintage!

SansAmp PSA-1
The SansAmp PSA-1 provides the widest range of amplifier, harmonic generation, cabinet simulation and equalization tone shaping options available. It appears on literally thousands of recordings, used on everything from guitar and bass to drums and harmonica! All 49 original SansAmp presets — featuring Marshall, Mesa Boogie, Hiwatt, Fender Lead, Rhythm and Bass; and Ampeg SVT sounds — are faithfully and authentically recreated. Explore dozens of new presets contributed by well-known artists and producers, then create your own unique tone!
BF Essentials
A full suite of time-saving, trouble-solving studio essentials—under $100.

BF Meter Bridge
The BF Essential Meter Bridge provides Bomb Factory’s best-of-breed analog metering on any channel, using minimal DSP resources. Avoid flickering green lines and blinky false LEDs, and enjoy the ease of use afforded by a needle, a big meter, and the only company that bothers to pay attention to the decades-old standard for meter ballistics. Select RMS or Peak metering, and calibrate instantly for useful viewing at any signal level, just like a pro tape machine.

BF Essential Tuner
Until now, plug-ins could emulate every guitar amp and speaker cabinet known to man, but couldn’t tune a guitar. Problem solved with the BF Essential Tuner. The BF Essential Tuner uses the power of TDM and modern host CPU’s to track better and tune faster than any of those battery-eating handheld gizmos. It works great on bass, electric guitar, vintage synthesizers—name it.

BF Essential Noise Meter
The BF Essential Noise Meter is three meters in one:
- Set to “A” it’s an A-weighted noise meter
- Set to “R-D” it’s a Robinson-Dadson equal-loudness meter
- Set to “None” it’s a VU meter with 100dB of visual range!
- Mono and stereo versions included.

Funk Logic Mastererizer
A mastering tool of unprecedented quality for MOTU Digital Performer, Digi 001, Pro Tools MIX, and Pro Tools HD users. Developed in partnership with Funk Logic, the Mastererizer high-quality potentiometers — constant impedance audiophile-grade components produce no crackles or noise. Hard knee or soft knee? It’s a tough question to answer. The Funk Logic Mastererizer solves the problem by not having a compression section at all. It’s fully automatic and simply “does the right thing.”

- The Mastererizer delivers Bass Authority, which allows it to go from subsonic woofer-shaking to bass tones without adjustments in gain on the track.
- Mastering-quality UV Meters: Superfast slew rates offer the benefit of Peak Metering with the convenience of RMS math. Plus you can calibrate -12, -18, or -24 equal to -0dBSPF.
- Hundreds of presets for every type of music: Finding the sound you want is easy, as nearly every possible combination of knob settings has been replicated in the preset menu.
Melodyne offers a completely new approach to the handling of audio material. It analyzes the pitch and time of monophonic audio files (for example, from singers, wind or string instruments) and offers the opportunity to change whole melodies in a way only previously possible at MIDI-Level. Melodyne is able to change the musical parameters of voices or instruments without any actual influence on the character of the recording. Melodyne extracts the pitch and the rhythm, and provides an area in which to play with the audio material. Any change in this material is interpreted by the software in a musically intelligent manner and the result will always sound natural. Working with Melodyne is as easy as editing notes with MIDI.

- Melodyne detects the melody of any mono audio recording and extracts its notes. The tempo, pitch, formant, quantization and time position of these notes, can all be edited as easily as if it were MIDI data.
- Pitch Shifting and Time Stretching are automatically treated as completely independent parameters.
- Detected notes can be moved arbitrarily with the mouse in pitch or time, or can snap to any musical scale.
- The tempo of an arrangement can be changed arbitrarily while playing, in a tempo range of ±50% changes without any noticeable artifacts.
- You can create new melodies and correct intonation problems with a mouse click — Pitch shifting and formant correction by more than an octave can be achieved without affecting sound character and velocity.
- Control over formant (resonance volume) allows you to transform a trombone into a trumpet or a tenor into a soprano voice — important for preserving the quality of an audio file that is being pitch-shifted.
- Copy and paste a melody numerous times to create lush harmonies and use formant correction to give each harmony the appropriate timber for its range.
- A new melody can be derived from single notes or a new arrangement can be created from single tracks via copy and paste. Differences in beat will be corrected automatically.
- Variations in intonation can be achieved by an increase or decrease in phrasing or vibrato.
- The rhythm of an audio file is recognized, as each given note “knows” its place within a beat. Notes can be quantized automatically, and they can also be synchronized to a reference melody with a mouse click.
- When applying pitch changes to notes, even with extreme pitch changes, the internal phrasing of a note, e.g. vibrato, and the transition between notes will retain its musical musically intact. So between the notes of a melody it will hardly be perceived that the melody was not played that way originally. Melodies can be rearranged by copying and pasting notes, or multiple voicings can be realized by copying a melody to new tracks.
- Flexible time-stretching allows acceleration and deceleration of a single note or of a whole arrangement through the concept of local sound. There are no limits to deceleration, and a standing sound will be the ultimate result when velocity is zero.
- Supports up to 24 tracks in real time.
- Single tracks can be recorded within Melodyne, or can be imported from other recording programs.
- VST2 and Audio Unit plug-ins can be loaded, plus single tracks can be routed to an external mixer via ASIO or CoreAudio.
- The mixer section features an EQ section with support for submixing-groups.
- MIDI integration allows you to use a MIDI keyboard or controller to edit and mix.
- Audio can be routed to your DAW software via ReWire or you can save tracks as single audio files for processing in other recording programs.
- The detected melodies can be exported as a MIDI-File to be viewed in a notation program or to be used in a sequencer software.

- A new melody can be derived from single notes or a new arrangement can be created from single tracks via copy and paste. Differences in beat will be corrected automatically.
- Variations in intonation can be achieved by an increase or decrease in phrasing or vibrato.
- The rhythm of an audio file is recognized, as each given note “knows” its place within a beat. Notes can be quantized automatically, and they can also be synchronized to a reference melody with a mouse click.
- When applying pitch changes to notes, even with extreme pitch changes, the internal phrasing of a note, e.g. vibrato, and the transition between notes will retain its musical musically intact. So between the notes of a melody it will hardly be perceived that the melody was not played that way originally. Melodies can be rearranged by copying and pasting notes, or multiple voicings can be realized by copying a melody to new tracks.
- Flexible time-stretching allows acceleration and deceleration of a single note or of a whole arrangement through the concept of local sound. There are no limits to deceleration, and a standing sound will be the ultimate result when velocity is zero.

System Requirements:
- PowerMac, Mac OS 9 or X and 128 MB free RAM (256 or more recommended)
- Windows 98, ME, 2000 and XP with P1400 class processor and 128 MB of free RAM (1GHz and 256 MB recommended).
- Supports DirectX, SoundManger, ASIO2, and CoreAudio for sound I/O and many audio formats (WAV, AIFF, SD2, SND, AU).
Universal Sample Convertor For Mac and PC

Translator is an easy to use sample format convertor that will take almost any major professional disk and file formats and allow you to translate between them. That means reading, interpreting, and writing between different systems. Translator uses an intuitive “Windows Explorer-style” interface and conventional drag and drop methods to translate between just about every professional sampler format available. A wave player allows you to audition individual samples. Translator converts samples and their associated programs quickly and accurately with a minimum of fuss. You can even create disk images, based on proprietary sample formats, and burn them to CD using your CD burning software. Whether you are working in multiple sampler formats or migrating from a hardware to software based sampling, Translator offers you a flexible and hassle-free solution.

FEATURES

Reads and Writes ALL Popular Sample Formats
- Convert one Sample, one Preset, one Bank, or an entire CD-ROM from any professional format into any other.
- Translator allows your computer to mount your sampler’s proprietary formatted ATAPI, SCSI and USB drives, including fixed, CD-ROM and removable drives.
- Program parameter information is translated as well as the samples and structure - wavedata, keymaps, looping, effects etc...
- Supports 8-bit, 12-bit, 13-bit, 16-bit, 24-bit, and 32-bit files

Unique Two-Way Interface
- Translator’s exclusive “Windows’s Explorer-style” Two-Way Interface makes sample conversion simple: Select what you want to translate on the right; Drag it over to the left; Decide what you want to translate to and you’re done (In fact, you can pre-select the destination format.
- You can drag and drop any level of file - a single sample; a program, instrument, or preset; banks, volumes, or whole directories; or even entire disks.

Wave Player
- The built-in Wave Player allows you to audition individual samples from within Translator. This works on samples from any format and any disk.
- The full sample is displayed along with the loop area (if there is one).

Virtual Drives
- Translator allows you to make Virtual Drives, which are essentially large single files, or data images, that appear as SCSI-ATAPI Drives formatted with whatever proprietary format you want (Akai, Roland, Ensoniq, Emu).
- You can use a Virtual Drive to compile a disc image in any proprietary format and then burn it onto a CD-ROM, using any CD Burning program that will recognize raw disc images (most do).

Translation Special Editions
- If you only need to translate samples and programs into only one specific format, you might want to consider the Special Edition of Translator, which will translate from all available sources to one specific destination.
- Each Special Edition version is dual-platform - for one price you can use the program either on Windows or Mac.
Symphonic Orchestra was recorded where orchestral instruments sound their best - in a concert hall. Listen to the beauty of the critically-acclaimed Symphonic Orchestra and state-of-the-art $125 million concert hall that were captured, using custom built recording equipment, by audio legend - Prof. Keith O. Johnson - recipient of two Grammys, plus eight additional Grammy nominations for his 90-plus classical recordings. Available in four versions (Strings, Woodwinds, Brass and Percussion, or as a complete collection), these are the first 24-bit orchestral sample libraries to include three simultaneous stereo mic setups (close, stage and hall), so users can mix together any combination of mic positions to control tonality and ambience. A major benefit of this recording philosophy is the tonal control the three simultaneous stereo tracks provide. Users can literally alter the tone and ambience of any instrument or section by incrementally moving out from the close mics, to the stage mics, to the hall mics (an audio zoom) in real-time!

- The “Virtual repositioning of the listener” in a concert hall environment offers a surprising amount of tonal control, virtually eliminating the need for EQ; and the ambient control, using any combination of the three stereo tracks (the close, stage and hall mic setups), eliminates the need for artificial reverb - which usually sounds artificial.

- Create the sound “you” want. With other orchestral libraries, you get what they give you, and apart from adding reverb and EQ, you have virtually no control over the sound of the instruments. The control of tonality and ambience in the Symphonic Orchestras enable each user to “design” the sound of the orchestra to suit the work that is being created— no other collection offers this!

- Say goodbye to lifeless, dry studio recordings. Use the stage mics for a typical big Hollywood sound; boost certain instruments by adding a hint of the close mics; add in the hall surround mics to create a surround sound mix, or to add natural hall reverb.

- In addition to this unprecedented control of tonality and ambience, the real ambience of the hall, combined with the automatic sample switching of up and down strokes that is built into the Native Instruments audio engine and interface (supplied with each volume of the library), eliminates the “machine gun” effect when playing fast repetitions.

- All of the players were recorded in position. All of the instruments and sections were chromatically sampled, with multiple dynamics, with extremely dynamic and expressive articulations, and although the library is huge, it has been programmed to be “extremely easy to use”.

- Each virtual instrument combines intuitive handling with excellent sound quality, and functions as a plug-in instrument, without the need for a sampler, in hosts such as Cubase VST, Digital Performer, Logic, Nuendo, Pro-Tools, Sonar etc.

- Many sound shaping tools are built in to the interface. Powerful multi-mode filters, envelopes, and LFOs give a wealth of creative possibilities. Integrated high-quality reverb, chorus, and delay effects are also provided.

- Direct from Disk playback easily handles large samples beyond available RAM (which is assignable).

- Professional sound quality with advanced 32-bit processing; eight-part multitimbrality and 256 voice polyphony allow for lush arrangements. The clean and intuitive interface never lets the technology get in the way of your creativity. All important instrument parameters can be immediately adjusted without the need to page, scroll, or fumble through a manual.

- Supports VST 2.0, DXi, Soundmanager, ASIO, FreeMIDI, OMS, Audio Units, Core Audio, RTAS. Sound libraries can also be loaded into other Native Instruments samplers and KONTAKT (v1.3 and up) for more flexibility and more options for working with the material.
Stormdrum features 4 world-class percussionists and a lunatic producer with enough taiko drums to fill an 18 wheeler. Recorded at the Record Plant, Studio A, this library contains an amazing 4.5 GBs of loops and multi-samples. There are 1000's of completely original, evolving drum beds, featuring some of the largest and most impressive drums on the planet. Multi-sampled drum kits and percussion with up to 20-way velocity-switching, organic tech percussion, metal shop, big hits.

◆ Stormdrum includes intense multi-sampled acoustic drumkits. Each drum has up to 24-way velocity switching, with left and right hand samples. There are subtle ambient versions and huge sounding versions as well.

◆ There are 18 snares. These have left and right hand samples from the inside and outside of the drum, as well as rimshots. A typical hi-hat contains 200 samples. There are 20 kick drums, 10 cymbals and 8 tom sets.

◆ Includes amazing new tech drums based on acoustic samples that have been manipulated and programmed with 8-way velocity switching for an organic-tech feel. There are also 100 metal shop samples and a large collection of monstrous hits.

◆ Also includes a breathtaking set of action toms for film work.

◆ Has an impressive collection of multi-sampled percussion. Typically, one drum is comprised of over 100 samples. The drums are, taikos, turkish bass drums, chilean bass drum, darubuka with rattle, cuban bongos, large african djembe, lion drum, belly drum, 2 talking drums, large bodhran, dumbek, shakers, talking coconut, chun-mo and frog.

Stormdrum Loops

As an example: Centrifuse contains 15 different 4 bar loops, including an intro, ending and remix.

Action Beds
Centrifuse, Chain Reaction, Daredevils, Grand Theft, Kingspin, Manhunt, Prowler, Speed Freak, The Getaway, Violence

Big Beats
Basilica, Big Trouble, Bigshot, Conquest, Coot in the Shoot, Martyred Revolutionary, Red Leppelin, Righteous Hombre, Skywalker, Slippery Sam, Sloppy Jose, Spin It, Thrillsport, Up River

Ethnic Chase
Bazzar Chase, Camel Racing, Caravan, Carnival, Dark Towers, Horses, Imperial Alajah, Kvrumpaniil, Meca, Ongo Bongo, Opium Market, Panaang, Turbo Turban

Fastbreaks
Blackjack, Diamond Dog, Digital Bandito, Dingo, Dr. Schwarzbaum, Fastrack, Gauntlet, Gravy Train, H 763, Harry Nipfuls, Hornet, Knobby, Marge Da Barge, Momentum, Throarize, Through the Ringer

Film Tech
Aang Djun, Admiral Synapse, Avalanche, Breeders, Countdown, Dark Ringer, Footsteps, Gobstopper, Graveyard Saviour, Green Goblin, Leppelin Island, Machine Chant, Magic Descent, Mean Machine, Mogaete, Petroglyph, Smack, Wall People

Thunderous
12 Shooter, Ape City, Around the Island, Assassins, Black Horse, Chariots, Clone Army, Deep Space, Dragon Beat, M In City, No Way Out, Pharoah, Pit of Fire, Re-entry, Sandstorm, Scottish War Drums, Seismic Cannon, Stormfront, Warhammer, Witness

No Sampler Required!
Like the Symphonic Orchestra (previous page) the Stormdrum library includes NI’s (Native Instruments’) stunning state-of-the-art plug-in audio engine/interface specifically designed for rhythmic loop playback, manipulation, and mayhem.

The convenient one-screen interface is based on (and provides all the sound manipulation tools of) NI’s INTAKT sampler, and features tremendous sound shaping abilities without disrupting the creative flow, including a first-class multimode filter, an envelope follower, two LFOs, effects, and more.

The loops have been set up so that they can be automatically synced to tempo, either via the Beat Machine or the Time Machine.

The Beat Machine has loops divided into their individual hits (slices) which means they can be played at a wide range of tempos without any change in pitch. It also allows the user to give each hit individual settings for pitch, playback direction, pitch envelope, amp envelope, distortion, delay, and more; a MIDI file of each loop can be easily exported so that groove, accent, and feel can be manipulated in any host sequence. Time Machine time-stretches or compresses loops in real time.

Not only can you sync, stretch, and pitch the loops, but also filter, effect and modulate them as well! A powerful sound-shaping filter, flexible envelopes, syncable LFOs, and distortion, syncable delay, and lo-fi effects can inject even more energy and individuality into the loops. Supports VST 2.0, DXI, Soundmanager, ASIO, FreeMIDI, OMS, Audio Units, Core Audio, RTAS. Sound libraries can also be loaded into other Native Instruments samplers and KONTAKT (v1.3 and up) for more flexibility and more options for working with the material.
Nu Jointz

Nu Jointz is the long awaited sample library by Vinnie Zummo who created the multi-key award-winning NY Cutz series. This New York City joint is filled with 64 thumpin' construction kitz, over 200 drum loopz in every tip including tiny-fi, mid-fi, lo-fi & hi-fi akoustik drumz, strait ahead hip hop MPC groovez, slamming R&B, funk, & strait and wak drum machine loopz.

There are hundreds of new fonky buttah loopz including fuzz bass, akoustik bass, stank piano, frequency loopz, old recordz, lounge recordz, over 60 introz & breakz, over 90 individual drum samplez, over 90 skank guitar lix, over 60 fonky trombone lix, muted trumpet lix, a brand new tip, the totally madd Bass In Da' Room Next Door (just what it soundz like!) plus lotz more insanity in that bitin' NY Cutz flavah than we have room to mention here. Over 150 minutes of new flavah. If you're tired of those lame ass kokonut loopz that are out there and want your trax to be keepin' it tite, check out Nu Jointz. and bring some NYC stylin' to your next track.

Other contents:

Over 300 loops and samples, comprising more than 600 M Bs of sounds. The rhythm loops range from frenetic West African Kpalogo, to pulsating Afro-latin grooves.

All loops are classified by region, tempo in BPM and key, if a melodic instrument. Most of the ‘studio’ loops start with a full versions of the loop and are then broken down into individual elements or ‘construction kits’.

Afrolatin Slam

This library is a “must have” for sound designers, music producers, musicians and DJs, who would like to inject an authentic Afrolatin feel into their projects. Over a period of two years, Francis and M akende, together with some very special friends, have put together this eclectic selection of rhythms, loops and hits. Most of the rhythms were recorded at Sultan Sound studio in London, but some were recorded in the field, in Africa and South America, preserving the original local ambience.

Instruments included are: Djembes, Congas, Bongos, Tam Tam, Dondo (talking drum) Timba, Surdo, Rebole, Cuica, Pandero, Berimbão, Timbaes, Tongue Drum, Sanza, Cavaquinho, Repico, Tamborim, bells, Shakers and many other more obscure instruments.

Contents:

African Section:
Sounds from the Congo, Côte D’Ivoire, Ghana, Nigeria and more, including Afrobeat, Afrofunk, Juju, Afrolatin Fusion, Afrobossa and more.

South American Section:
Batucada, Berimbão, Caixi, Candomblé, Choro, Forró, Frevo, Makumba, Maracatu, Pandero, Salsa, Samba, Carribean soca.

Instruments & Individual Hits Section:
African Percussion, Balafon, Brazilian Percussion, Kalimba, Molo, Toy Percussion.

Misc Loops & Hits Section:
Classic Break Beats, Funky Dread Drums, Vintage Breakbeat, Funky Jazz Breaks, Garage beats, Dark Drum'n Bass, Vintage Drum n’ Bass, and more!
**The Operating Table**

A stunning and amazingly flexible library of breaks with irresistible feel and compelling usability, from Emre Ramazanoglu (Return To The Planet OF The Breaks). All the breaks derive their feel and sonic basis from live drumming technique (though some are creatively processed), and were performed by one of four featured drummers (Emre Ramazanoglu or Dave Westlake, with contributions from Jack Yglesias and Steve Ashmore). The recordings were made in London at Metropolis, Padded Cell, Walworth Cage, Triangle, and Line of Flight.

‘The Operating Table’ was conceived as an alternative to genre-based sample CD’s, offering sample-accurate live drum loops with an equal emphasis on diversity of sound and quality of performance. The emphasis has been on creating unique-sounding breaks through extremely creative processing techniques, but with the real feel of a performance to them.

The performances range from four bars to extremely long, and each changes and evolves, providing multiple loop variations. Real kits are the foundation of the sound of each break, although some incorporate additional live triggered analog drum machines or software triggered sounds. Each bar of each break has been designed to loop perfectly as a 1 bar break (sample accurate BPM), or as part of the whole evolving sequence.

**Percussive Adventures 2**

Producers Kurt Wortman and Tony Humecke have gone all out to offer the maximum flexibility. For example, multiple alternate mixes of each loop are presented to enable users to customize the loops to work with their track, or use as building-blocks for new compositions. Includes 5.3 GBs of multi-layered percussion compositions for multi-media productions. Large percussive soundscapes are included covering most styles of music.

**Wired**

Wired is a massive and exclusive sound archive from Zero-G that provides every constituent you need to make the perfect trance track. This huge collection includes just about every 4/4 percussion combination that you can imagine. There are also great acid lines, full of energy and vibe, and easy to edit. The pads, pad loops, synth lines and bass loops will help you muster your last ounce of euphoria. There are also loads of effect stabs and snare rolls plus a huge selection of vital drumkit sounds.

**Hardcore Bass**

From Quantum Leap producers Nick Phoenix and Pierre Martin, Hardcore Bass includes 2.2 GBs of mix dominating, teeth shattering, hardcore electric bass recorded through massive ampeg bass rigs with the volume turned up to 11! All samples are taken from musicman stingray & lakland 5594 5 string basses using different pick-up and amp settings. Every conceivable articulation of picked and fingered, muted, open, scraped, and mutilated bass - 6,600 multi-samples!

- Advanced programming includes keyswitching, release samples, automatic alternation of up and down picking, chromatic slides, legatos, effects and stacato stopping.
- No sampler required. Includes a custom high-performance Native Instruments audio engine and interface for Mac and PC.
  - The audio engine functions as a plug-in instrument, without the need for a sampler, in Cubase, Digital Performer, Logic, Nuendo, Pro-Tools, Sonar etc.
  - Powerful multi-mode filters, envelopes, and LFOs give a wealth of creative possibilities. Integrated high-quality reverb, chorus, and delay effects are also provided.
- Direct from Disk playback easily handles large samples beyond available RAM (which is assignable).
- Advanced 32-bit processing; eight-part multitimbrality and 256 voice polyphony allow for lush arrangements. Parameters can be immediately adjusted without having to page, scroll, or fumble through a manual.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
The Stomp-box module offers the emulation of 5 effects including Wah-Wah, Delay, Flanger, Chorus and Overdrive modeled after some of the great classic guitar effects.

AmpliTube is a guitar amp modeling plug-in for VST and Pro Tools (RTAS and HTDM) users (Mac or Windows). AmpliTube comprises three separate modules — an Amp module, a Stomp Boxes module and a Post FX module. The Amp module offers you numerous models of both modern and vintage PreAmps, EQs, power amps and speaker cabinets as well as mic emulation to produce a whopping 1260 amp combinations. The Post FX module includes 3 stereo post-effects with 3-band parametric EQ, Stereo Delay and Stereo Reverb, bringing to 10 the number of different effects included in AmpliTube.

The heart of the software, the Amp module has been designed using sophisticated modeling techniques, based on vintage and modern must-have amps including Marshall, Fender, Vox, Mesa/Boogie and many more. Its 32-bit floating point processing ensures for the most accurate amp emulations and offers an incredible realism ranging from solid state to true tube amps modeling. Mic modeling (condenser/dynamic), position and distance, as well as Tremolo and Spring Reverb are also included.

AmpliTube comes with 200 presets for all the classic amp and guitarist sounds you’ve ever wanted. Fully editable. Craft your sound, save it and get it back with a single click! No more hours wasted trying to remember how you created that once-in-a-lifetime sound!

Play it live! Using low latency card AmpliTube can be played live with the same feeling of having a big stack one foot away!

AmpliTube offers the best sounds of and hardware or software amp simulator on the market. A-B comparisons show a realism and a dynamic which cannot be found anywhere else - plus an unmatched frequency response. It will be just like recording the real thing!

Play AmpliTube live with full MIDI control (on Windows-ASIO cards). Simply download the free RT Player LE (by DSound) and you'll be able open AmpliTube VST and control it using a standard MIDI foot controller, including the possibility of switching presets!
All-in-One Analog Modeled Plug-in
Dedicated to Mastering

If you record music with digital gear, you know how challenging it can be to get that warm, broad, analog sound. T-RackS has everything you need to create superb, tube-toned masters on your desktop. Its rich, warm sound starts with algorithms based on true analog circuitry. Its familiar interface makes it easy to control five powerful processors: a state-of-the-art EQ, a classic tube modeled compressor, a multi-band master limiter, soft-clipping output stage, and a complete mastering suite. Enhances mix frequencies, stereo images, dynamic range and gives your audio a seamless, top notch sound. With separate processors, astonishing warmth and ease-of-use, you'll be putting a polish on your tracks you may have never thought possible. All this, while adding the beautiful warmth and space of the tube devices it emulates. No other plug-in offers this kind of dedicated environment. Also available as a standalone mastering suite (T-RackS 24).

FEATURES

Equalizer
- State-of-the-art six band parametric EQ modeled on classic top quality analog gear
- 4th order parametric, High and Low pass filters
- Parametric Low-shelving control
- Parametric Lo-mid control with Low or High "Q"
- Parametric Hi-mid control with Low or High "Q"
- Parametric High-shelving control

Compressor
- Classic tube stereo compressor/leveler designed for mastering
- Vintage-style compression unit
- Classic warm "in-your-face" sound of old tube mastering levelers
- Very-soft knee compression with no threshold point
- Stereo-image width control
- Mastering-oriented variable time constants
- Comprehensive and accurate gain-reduction VU
- Ratio control

Soft-Clipping Stage
- Astoundingly musical and smooth performance
- Variable clipping shape (from hard clip to ultra-soft) for complete control and precision
- Easily increase gain with no compression or limiting artifacts
- Create warm, saturated mastering effects

Limiter
- Multiband master stereo limiter
- Ultra fast peak detection
- Overload for accurate control of limiting and saturation
- Soft clipping feature for warm analog emulation
- Comprehensive gain reduction VU
- Very accurate peak LED indicators at the outputs

Professional Metering and Monitoring
- Responsive analog VU's
- Ultra-fast and accurate pop-up digital peak meter with hardware-like performance
- x10 switch on the peak meter makes very easy to evaluate the level in the "critical zone"
- "Over" LED precisely shows when the master has "overs"
- Mono, stereo and difference monitoring to check the master for monocompatibility and stereo image coherence, like in high-end consoles

Additional Features
- High quality real time preview and processing
- Supports 24-bit AIFF, Wav and SDII files for importing and exporting.
- High Order 32-bit internal resolution: with 32-Bit floating point resolution, T-RackS uses the best possible method to physically model analog components, resulting in an amazingly real tube sound. Only without the noise!
- 32-bit floating point internal processing for amazing audio resolution and true analog simulation
- Analog modeled animated interface
- Time-line markers to facilitate the immediate recall/play of mixes
- Control snapshots to recall entire set-ups with just one click
- Graphical built-in help, extensive manual and tutorial
- Presets included
- Drag-and-drop text parameter list can easily change the default architecture of T-RackS to achieve the finest special settings
- Compatible with all popular audio cards
- 8 amazing "vintage" skins
- Fade-in/fade out, loop and scrollable preview
Virtual Synth Arpeggiator

A virtual synth arpeggiator is included to give your performance that rave impact! With 128 arpeggio presets and 150 expandable synth sounds and “smart note” indicators, it’s the easiest way to play along GrooveMaker grooves. Up to 99 arpeggios can be marked and recalled on-the-fly with a single click.

V-MIX

GrooveMaker also contains a virtual DJ offering the quickest way to produce not only a groove but a complete remix album with just one click! V-MIX instantly assembles 4 random mixes with a simple click -that’s it! Every time you click, another random song set is generated. Get hours and hours of instant remixes and never hear the same thing twice. When you hear something you particularly like, save and edit it in the GrooveMaker - or just let it groove all night long.

GrooveMaker

GrooveMaker makes it simple to create instant high-quality dance music. You can play, mix and randomize your own grooves on the fly, with instantaneous control over 8 stereo loop tracks. Manipulate the instrumental loops in real-time! Separate volume, pan, solo and mute controls are at your disposal, giving you an intuitive environment to create stunning grooves.

You can even add your own samples! Shift the tempos (+/- 40%) just like a DJ spinning live. With the randomization feature, you'll discover endless loop combinations and keep your sound fresh. Every combination you hear can be saved on the fly, or marked for instant recall.

Assemble your marked grooves in the GrooveSequencer to create full-length remixes! Compose visually thanks to the visual pattern-based composition system integrated within GrooveMaker. This make the composition as easy as drag and drop always with immediate editing possibilities.

Loop Remixing Software

GrooveMaker is revolutionary music software for creating hypnotic, non-stop electronic dance tracks, in real-time, with professional results. With GrooveMaker you have access to a completely new way of making music with loops. And “random mix generator” technology lets you automatically remix the included loops in virtually limitless ways.

Import and match any audio file instantaneously (including WAV, AIFF, MP3) and export your mix using many different audio formats ranging from hi-quality CD to internet publishing, including MP3!

GrooveMaker comes with hundreds of professional drum grooves, synth pads, sound effects and ambient loops that keep the music going all night. Experiment with million possible groove combinations in every style. Whatever style turns you on (Techno, Jungle, Progressive, Dub, Acid, Ambient, Eurohouse, Drum 'n' Bass, etc.) it’s all possible with thanks to the huge range of add-on professional loop CDs available.

LoopMaker

With LoopMaker you can load and resync virtually any audio file (including WAV, AIFF, MP3, QDesign, µLaw, aLaw) with full control over duration, speed, loop-in/loop-out point and offset.

Everything is made in real time and modification are immediately applied while the music is playing in order to immediately resync any loop. It’s even easier importing loop from sampling CDs! Make professional remixes in a snap or exchange audio material within different library styles to produce astonishing hybrid mixes adding your personal touch. An unlimited number of loops can now be imported within each of GrooveMaker song putting no limits to your creativity. You can also record loops directly into your computer's audio input using your microphone or any other external devices. Recorded loops can be manipulated the same way of imported loops having them immediately playing within your groove session.
TRANCE GRID
Trance Loop Library

Trance Grid pushes serious groovemaking to the limit. 2 mega-songs, of more than 120 loops each and with separate loops elements (BDs, snares and hi-hats), are able to produce a zillion numbers of trance grooves with the most complex and intricate rhythmic joints. The right fuel for your lead track.

STREET VOICES
Hip-Hop/Rap/R’N’B/Soul Loop Library

Maximum vocals, hip-hop and rap. An explosive collection dedicated to the voices of the street. Groove to the interaction of extremes, from the ultimate urban styles to the smoothest R’n’B. These loud and luscious sounds combine in an explosion of 250 key and tempo-tuned, mixable loops, pre-grouped into 4 songs.

HOUSE PARTY
House Loop Library

Pure house of the latest trend that will shake your speakers. Dynamite sounds and exploding drum loops to explore the latest dance floor contamination. Over 250 loops, pre-grouped in 4 songs. Basses, BDs, Effects, Loops, Synth Lines, Pads and Percussion all made with massive state-of-the-art gear. BPM range 120-127.

AXE'
Brazilian Percussion Loop Library

Capture the allure and mystique of Brazilian rhythms with this special library of all the "batucada" instruments, mixable in millions of complex, pure carioca rhythmic textures. Over 250 loops, totally recombinable. 10 percussion banks. BPM range 120.

TEKNOSTORM
Techno Loop Library

The raw energy of early techno, the monobeats of yore with a touch of eerie cyberfunk. It will hypnotize you. Over 250 loops, pre-grouped in 4 songs. Basses, BDs, Effects, Loops, Synth Lines, Pads and Percussion, all made with massive state-of-the-art gear. BPM range 140-180.

DRUMBASSTIC
Drum ‘N’ Bass Loop Library

CONTAMINATED
Ambient/Dub Loop Library

EARTH BEAT
Percussion Loops

Percussive loops from around the world. African, Asian and Latin percussions tempo-matched and fully recombinable.

STUN (Ilio Entertainments)
Hardcore/Techno Loop Library

SampleTank 2

Professional Plug-in Sound Module

A professional software sound module plug-in that integrates seamlessly into your favorite VST, RTAS or M AS compatible host application, SampleTank 2 combines a powerful sample-based synth engine with hundreds of top-class multi-sampled instruments. SampleTank 2 offers near-instant access to entire instruments each with up to four realtime effects and four sound shaping tools specifically tailored to enhance each instrument. Each instance of the plug-in is capable of producing 16 multitimbral parts and multiple instances of the plug-in can be loaded into your sequencer. Additional features include the ability to convert AKAI sound libraries as well as access to an ever growing range of Sampletank sound libraries. A unique search engine ensures that you’ll find the sounds you’re looking for quickly and easily while the RAM doubling capability allows you to load twice as many samples into memory than other hardware or software based samplers. Sampletank 2 is available in two versions:

SampleTank 2 XL with more than 650 top-quality sounds on six CDs and SampleTank 2 L with 200 sounds on 2 CDs.

FEATURES

- 32-bit floating point processing with an ultra-accurate resampling algorithm make SampleTank 2 the best sounding sample-based module ever.
- Perfect integration within your sequencing environment with sample accurate timing, one-click project recall and digital track bounce—no hardware or driver problems and need to have an extra application running simultaneously.
- Uncomparable sound organization and super-fast sound loading lets you surf hundreds of high-quality sounds and play them in a fraction of the usual time. The intuitive layout of the sounds in categorized, alphabetical folders (which reflects the folder organization you have on your HD) lets you get the sound you want instantly.
- Each module (instance of the plug-in) allows you to access up to 16 multitimbral parts with up to 128 note polyphony and 4 stereo (8 mono) outputs
- Compatible with the AKAI S1000/S3000 sound library—the world’s biggest. Using the included converter with full sound-program conversion and parameters link SampleTank 2 can easily import those sounds.
- Multiple SampleTank 2 modules can be instantiated per session, with support for a total of 64 separate outputs, limited only to your host software application’s capacity and available CPU resources.
- 4 specifically tailored dynamic sound parameters and 4 effects with up to 5 parameters per effect, are automatically loaded with each instrument.
- Multi-effects include:
  - Compressor, Equalizer, Reverb, Ambience, Reverb Delay, Delay, Filter, Wah-Wah, Chorus, Flanger, Autopan, Tremolo, Rotary Speaker, Lo-Fi, Distortion, Phonograph, Slicer, AM and FM modulation.

RAM Doubling

- SampleTank 2 uses an exclusive method called 2Pack, which allows the playing of huge sample banks using only half the amount of RAM normally required. The result is huge sound capacity. You will hear more realistic sounds, programmed using more notes and full natural decays.

Sounds

- They include an extra-large, ready to play collection of sounds, comparable to top-class sound libraries. Superb acoustic grand pianos, guitars, basses, strings, vocals, orchestral sounds, brass sections, woods, winds, drums, percussions and loops, etc. - all made with the finest samples and accurately programmed.

Sequencer Compatibility

- Cubase VST (PC version 3.7.2 or Mac version 4.1.1 or later)
- Logic Audio (PC and Mac version 4.5 or later)
- MOTU Digital Performer 3.01 or later with MOTU Audio System 2.33 or later
- Cakewalk SONAR (using VST-DX Adapter from) plus any other sequencer (including n-Track, Orion, FruityLoops) compatible with VST/MAS instruments

4 years of work and hundreds of superb musicians and instruments were required to produce the astonishing sounds included in SampleTank 2. Recordings have been made around the world: russian strings, perfectly tuned german grand-pianos, Italian cathedral organs, tons of vintage electric instruments including electric pianos and organs, rare guitars, basses and drums. Accurately edited, programmed and digitally crafted in thousands of studio hours to obtain a realism and playability you thought it was not possible. Plus, a variety you won’t find in any comparable product.
SampleTank 2 XL Include:

- 22 acoustic and electric basses
- 25 brasses including sax, trombone, trumpet, brass solo and section
- 53 drum kits, acoustic and electronic
- 39 acoustic and electric guitar
- 10 ethnic instruments
- 24 loop banks of D'n'B, House, Techno, Trance in construction kits with more than 500 loops
- 20 full orchestra sounds including string sections
- 15 acoustic and electric organs including B3, church, cathedral
- 29 percussion kits including Brazilian, Latin, African, Asian
- 20 pianos including concert grand, electric, electronic
- 148 synth sounds including bass, drums, lead, pad, percussions
- 31 strings including violins, violas, cellos, basses solo and sections
- 13 vocals including male and female choirs
- 4 woodwinds including bassoon, clarinet, flute, oboe
- Expand your sound arsenal with an additional 15 Sampletank native libraries

STRETCH Virtual Synth Engine

- STRETCH is a new technology that uses a technique called Time Resynthesis to play adjacent samples in tune without changing the tempo. This provides full control over the tempo and pitch of the samples.
- Traditional samplers or sample-based sound modules produce adjacent notes by "resampling" the sample contained in the key note. To stay in tune, this old-style technology plays samples faster or slower, which is the reason many natural instruments lose their realism when played by a sampler or a sample-based sound module.
- Plus STRETCH expands sonic capabilities with full-control of an instrument's basic frequency distribution to tailor tone and push the limits of creative sound designing to an entire new level.
- Sync any loop tempo to a sequencer's tempo with one click. Full control over the loop's tempo and pitch make it easy to create the ultimate groove.
- Create rich harmonic parts and soaring choirs in a snap from a single looped phrase or drop in a sample of your singer and instantly turn it into a choir part.
SampleTank 2

Plug-in Sound Modules
The range of SampleTank 2 sound modules combines a stadium full of world-class samples from the finest soundware houses, with SampleTank LE software for easy, affordable access to the world’s most powerful virtual sound modules. A fully working SampleTank with 4-part multitimbral (instead of 16), 4 effects per voice selectable among 20 DSP effects and single stereo output, SampleTank LE works both as plug-in for VST/MAS/RTAS or SampleTank add-on sounds.

Loop Soup!
Multisamples
The ultimate dance loop library, this double CD set contains the loops from ‘Skip To My Loops’ by Norman Cook, ‘Remix!’ by Megabass, ‘Kleptomaniac!’ by Coldcut, and ‘Pascal Gabriel’s Dance Samples’ plus all the loops from Now 1 and Now 2 by loads of the other AMG producers. All loops are tempo-grouped for easy sampling. Ideal set for anyone getting into sampling for the first time.

Brit Horns
Multisamples
Chromatically sampled Horn Sections and solo instruments from the legendary Thoms, Barnacle & Brooks brass section! This horn CD features trumpet, sax, and trombone - full sections in different combinations plus solos - all performed by three of England’s finest horn players.

Earth Beat
Ethnic Percussion Loops
Percussive loops from around the world. African, Asian and Latin percussions tempo-matched and fully recombinable.

Trance Grid
Dance Loops
A very energetic trance loops library in construction kits with separate rhythmic elements which can be played as single instruments, including Basses, BDs, Snares, Hi-Hats, Effects, Synth lines and many more, or combined together. With 8 different sound and loop banks (over 250 MB of samples), it generates zillion of trance grooves with the most intricate rhythmic combinations.

Tony Mason Drum Loops
Specially recorded ‘black’ grooves with attitude recorded in the UK and Caribbean. Tony Mason has produced a CD full of freshly recorded dance grooves with a classic feel. Many of the loops are presented in a number of variations for more flexibility when sampling. The whole CD was made using classic analog processing and recording equipment.
Features all the grooves sampled for easy loading plus ‘chopped up’ versions that come with associated MIDI Files and allow easy editing of tempos and patterns, switching sounds, editing beats, or removing elements. In all there are 382 associated MIDI files. (A MIDI File disk is available in DOS or Mac format free with purchase.)

AXE’ Brazilian Percussion Loops
With over 550 MB of sounds and loops, AXE’ captures the allure and mystique of typical Brazilian rhythms and sound, containing all the instruments of the Batucada set such as Surdo, Tamborim, Pandeiro, Berimbau, Repinique, Guiro, Agogo and many others.
AXE’ is available in construction kits, a powerful tool to combine all sounds and loops, share the same tempo among them, and create in real time thousands of different grooves. Recycled files are included for maximum control and easy editing, giving you the ability to change tempo without pitch variation, or to quantize the resulting grooves, achieving a huge amount of different possibilities for every requirement.
Masterbits

Vintage Voltage ST

A great collection of analog synth sounds, 180 ready to play ST sound sets including Leads, Bases, Pads, SFX etc. taken from famous vintage synthesizers. Includes accurately sampled sounds from Roland Jupiter 8, Roland MKS 70, Planet S, Oberheim Xpander, Studio Electronics SE 1, Roland Juno 60 and 106, Oscar, Deep Base Nine, Moog Prodigy, Yamaha CS 15, Teisco 60F, Roland SH 101, Wasp, Roland M KS 80, Oberheim Matrix 12, Korg Polysix, Monopoly, Korg Delta, Kawai SX 350.

Guitar Collection

A fantastic selection of both acoustic & electric guitars including nylon & steel string acoustics, 12 string and Dobros as well as Pedal Steel, Ebowed Guitars, Clean and Distorted Electric Guitars, Overdriven & Rotary Guitars plus many others. Perfect for a wide variety of musical styles from Rock to Jazz to Country & Blues, the Guitar Collection is a must for anyone looking to play realistic multisampled guitar tones!

Phil Gould on Drums

This massive collection of fresh beats includes a vast range of feels and styles - from recordings made as far back as 1984 right up to the present day! Ex-Level 42 drummer Phil Gould includes hundreds of specially recorded loops and excellent D&B loops. Loops range from 70 bpm right up to 165 bpm plus there’s a selection of high quality single hits too.

Sample Messiah

This rapturous collection of dance samples in the classic format has everything you need for House, Electro, Detroit, Experimental, Techno, Trance and many more dance genres! DJ Harsh, The Notzel Brothers, Ars Larsen & Lars Boske pool their vast sample resources to create the ultimate, modern Euro dance sample CD. Capturing the essence of the classic dance sample collections with the sounds of today - this collection is a unique resource for anyone making modern music.

Masterbits MelloZone ST

This collection of Mellotron sounds, is based on over 800 carefully selected single recordings in half tone steps, produced by Mellotron specialist Klaus Hoffmann-Hook. Just like the original, the 26 "FRAM ES" were converted into ready to play Sampletank sets. Each frame set contains 23/35 multi samples, which means one sample per loop to completely avoid unwanted side effects and to secure an absolutely authentic Mellotron sound. The center are the legendary choir sounds with 10 ST-Instruments and the well known string sounds that have reappeared as hits in the charts. Includes classics like various flute & brass sound sets as well.

Piano Collection

A fine selection of Sonic Reality's acoustic and electric pianos featuring both Yamaha and Steinway concert grands as well as uprights and baby grands too.

With acoustic pianos ranging from 32 to over 90 megs in size, the Piano Collection’s value is hard to beat. In addition, there are extremely realistic classic Rhodes and Wurly EPs as well as FM pianos, Clav D6 and more.

Symphony Strings

Ideal for classical music and film soundtracks, as well as pop, rock, jazz and dance. Its organic quality makes it possible to add depth and realism for MIDI orchestration. Since it is made up of playable instruments only (no phrases or loops) it is a library that can be used over and over in unlimited musical situations. A Euphonix board and special outboard gear along with Neuman mics were used to capture the silky sound of strings in a medium ambient room. The engineers worked with artists such as David Bowie and Elton John to name a few.

Special Collection!

Sound Modules Series

A complete collection of 9 titles from the best soundware houses at a killer price. Includes AMG’s Brit Horns and Loop Soup, IK’S AXE’ and Trance Grid, Masterbits Mellozone and Vintage Voltage, Sonic Reality Piano Collection, Symphony Strings, and OmniSynth
IK MULTIMEDIA

SONIC SYNTH by SONIC REALITY

Designed for a wide variety of musicians from beginners to professional keyboard players, Sonic Synth is a workstation-like sound module packed with one of the most diverse collections of high-quality playable instruments available anywhere, at any price. A unique tool, Sonic Synth offers a huge range of immediate playable instruments, suitable for many musical styles such as rock, pop, jazz, classical, dance, R&B, hip hop, country, film soundtracks and more.

Sonic Synth features stunning acoustic and electric pianos and other staple sounds for songwriting and producing. For moody pads, vocal textures and orchestral soundscapes Sonic Synth also provides a vast selection of inspirational content.

Whether you mainly play pianos and organs or do full orchestrations, funky guitar, bass and drum tracks or ambient music with the need for a touch of the ethereal, Sonic Synth has a great selection of inspiring sound content to choose from FAST!

Sonic Synth excels in depth and realism. These virtual instruments were designed to easily sit in the mix without the need for much external processing. Very convincing virtual band tracks can be made using the deep basses, punchy drums, liquid guitars and classic keyboards with loads of character.

A patch in Sonic Synth could have its origins from Three Dog Night’s Oberheim 4 voice, Larry Carlton’s Arp Quadra or Joni Mitchell’s Mellotron Mk 5, the Beach Boy’s B3 organ (with a white Leslie 122 cabinet), Pink Floyd’s Prophet 10 with patches that were used for The Wall, Mellotrons and Chamberlins that belong to Tom Waits, Neil Finn/Crowded House, Tom Petty and more.

The combination of great studio rooms, experienced engineers, top notch recording gear and select choice instruments makes Sonic Synth a unique product packed with highly usable sounds.

And, more importantly, all Sonic Synth ST content was programmed in native Sampltank format and designed to take advantage of all of Sampltank’s special features from scratch, including internal effects programming, knob assignments, search functions and the loads of great internal synth programming and processing. This gives the Sampltank user a lot more expression over just importing basic multi-samples from AKAI format CD ROMS.

Sonic Synth’s sound set is over 2GBs which allows for less compromises in workstation-type sounds such as pianos, strings, organs, guitars and drums.

Sonic Synth includes 532 sounds organized by 13 categories in 3 CDs:
- SR Pianos 22
- SR Guitars 34
- SR Chromatic 22
- SR Strings 20
- SR Organs 34
- SR Voices 5
- SR Bass 21
- SR Drums 50
- SR Synths Pads 119
- SR Ethnic 35
- SR Brass-Winds 40
- SR Synths Leads & Basses 54
- SR Synths Misc Keys & FX 76

The Acoustic Drum
Sonic Reality’s I-Map acoustic drum kits were recorded in some of LA’s best studios. Featuring multisampled hits from Ludwig, Gretch, Yamaha, DW and Pearl kits, this collection will add the depth and realism of live studio drums to your sequences!

The Bass Collection
Sonic Reality’s Bass Collection features Fender P and J Basses, Rickenbacker 4001 Bass, Hofner Beatle Bass, Lakeland Fretless Bass, Upright and Acoustic Basses and more. All multisampled playable instruments with finger, picked, harmonics, slaps, pulls, taps, slides and more!

Coming in 3rd Quarter 2003...

The eXXential Series
The eXXential Series is a new collection of SampleTank 2 sounds from IK Multimedia. These top-quality libraries offer instrument-dedicated series, which enter into the deep and distinctive characteristics of each instrument with a huge collection of sounds.

**eXXential Drums** - A powerful kit of both vintage and modern drums recorded at 24-bit/96kHz with a pure, unprocessed amazing ambience

**eXXential Pianos** - A collection of chromatically sampled Steinway and Fender Rhodes offer incredible realism and playability

**eXXential Bass** - One of the best and most complete collections of electric bass around. Sampled at 24-bit/96kHz with tons of variations

**eXXential Strings** - A pristine collection of 16 violins, 8 violas, 4 cellos and 4 basses in ensemble and solo, with multiple variations including pizzicato, staccato, vibrato chromatically sampled. Performed with passion by the Moscow Session Orchestra.
UAD-1 POWERED PLUG-INS

Powered Plug-Ins For Your Native DAW

Powered Plug-Ins are a suite of professional, DSP-intensive plug-ins “powered” by the UAD-1 — a revolutionary PCI card that brings ultra-high computational processing to host-based systems utilizing a single proprietary high-speed DSP processor. The end result is a quantum leap in performance giving native workstation users the experience of using professional quality plug-ins with multiple instances unencumbered by the limitations of the host processor. The Powered Plug-Ins bundle feature Universal Audio’s high quality stereo reverbs, Dreamverb and RealVerb Pro; the CS-1 Channel Strip which includes the EX-1 EQ/Compressor, DM-1 modulated delay module, and RS-1 Room Simulator as well as dead-on emulations of the legendary 1176LN and LA-2A Vintage Compressors and Pultec EQP-1A EQ. Also included is Nigel — a powerful amp/cabinet modeler and multi-effect guitar processor.

FEATURES

- The UAD-1 Powered Plug-Ins package includes the UAD-1 DSP card and a comprehensive package of ultra high quality plug-ins, including RealVerb Pro, the 1176LN and Teletronix LA-2A Vintage Compressors, the Nigel Guitar Processor, and the CS-1 Channel Strip.
- Compatible with your native DAW system using VST, MAS, Direct X architectures – combine the advantages of Powered Plug-ins with using the dedicated UAD-1 DSP card while continuing to use your favorite native plug-ins.
- Supports up to 32-bit / 192KHz audio
- Running intensive processors such as reverb and compression on the UAD-1 provides your host processor with additional capacity for more tracks and more instances of your favorite native plug-ins
- UltraDither (proprietary hardware dithering process) provides maximum signal quality at every step with no impact on processing capacity
- Artifact free smoothing allows you to adjust parameters in real-time with no zipper noise, pops, or clicks.
- Every parameter of every plug-in can be automated.
- Multi-card support allows you to use multiple UAD-1 cards in your system.
- 32-bit floating point processor matches the data format of the host application for a distortion free, ultra high-resolution signal path with maximum efficiency
- Non-partitioned DSP chip gives each plug-in the total capacity of the system when needed, giving the plug-ins a quality and complexity not available on native systems.

CS-1 Channel Strip

Plugin Modules

EX-1 EQ/Compressor:
- Five parametric bands with individual bypass switch, Hi/Lo shelving, peak/notch or high/low pass settings.
- Ultra-smooth compression with variable ratio, threshold, attack and release controls as well as gain reduction metering.

DM-1 Delay Modulator (mono or stereo):
- Up to 300ms maximum delay per channel
- Selectable modulation waveforms with adjustable phase, including quadrature, in-phase and out of phase
- Mode selector providing popular forms of Chorus, Flanging, and Echo in one plug-in

DM-1L: Same as DM-1 plus up to 2400ms delay and link button for enhanced control

RS-1 Reflection Engine:
- Multiple room shapes
- Adjustable room size from 1 to 99 meters
- Forward and reverse gates
- Echo, ping-pong, and multi-tap delay
**The Teletronix LA-2A Leveling Amplifier**
- A digital copy of the original opto-electrical attenuator circuit responsible for the incredibly rich and magic sound found on countless classic recordings
- Upholds all the classic, analog characteristics of the original with unprecedented clarity and sound quality - including how each and every component interacts under a full range of studio conditions
- Identical look, controls, and operation of its analog cousin
- Lag-free, distortion-free optical attenuator emulation
- Frequency-dependent compression behavior
- Input gain and peak reduction adjustment knobs
- Limit/Compress function switch
- +4, -10, or gain reduction metering
- Mono or stereo operation

**The 1176LN Limiting Amplifier**
- The classic analog processor originally designed and built during the 1960's is now available as a plug-in for your DAW
- The first processor to use a field effect transistor (FET) as a voltage controlled variable resistor - the key to the processor's unique "warm" character
- Ultra-fast attack time
- Supports the popular "All Buttons Mode", just like the original
- Input & output gain adjustment knobs with adjustable attack and release settings
- Adjustable program-dependent compression behavior
- Custom output transformer emulation design
- Mono or stereo operation
- Flexible VU metering modes
- Detailed, precise screen shot provides a realistic analog look and feel

**Legendary Pultec EQ**
- The Pultec EQP-1A Program Equalizer plug-in is a faithful electronic reproduction of the classic hardware equalizer. The Pultec EQ has long been a choice of recording and mastering engineers for its ability to bring out individual frequency ranges without significantly altering other frequencies. In addition, the Pultec EQ has several key characteristics.
- **Legendary Pultec Program EQ**
- **Unique simultaneous boost and cut**
- **Smooth, sweet top end**
- **Dial in dangerous amounts of boost with incredibly musical results**
- **Modeled after a highly prized "golden" Pultec**
- **Models accurate to within unit-to-unit variation**
- **Mod Filter capable of wah, auto-wah, and envelope follower effects, modeled after the Mutron III and other popular filters**
- **Tremolo with Classic, Shimmer, VariTrem, and Fade modes**
- **Fade-in for swells and reverse tape effects**
- **Modulated Delay capable of chorus, flange and vibrato**
- **Echo Delay up to 1200ms**
- **24-bit, 96kHz support**
- **Unlimited presets for total recall**
- **Each of Nigel's component plug-ins can be loaded individually**

**Nigel — Guitar Effects**
- The latest generation of guitar processing technology integrated into a complete multi-effects plug-in
- Uses an exclusive component modeling technology and intuitive design to deliver a complete pallet of guitar tones along with most every effect a guitar player might need, all with minimal latency and no load on your host computer's CPU
- The Preflex advanced guitar amp modeling technology delivers a wide range of highly playable classic amp tones from the "Clean & Warm" California tube sound to more metal soaked "British" tones as well as a number of original timbres not possible on any other guitar system
- PreFlex modeling also offers continuously variable morphing between any two amp presets bringing creative guitar processing to an even higher level
- Gate/Compressor for noise and dynamics control
- Phasor capable of modern and classic sounds such as those produced by the Mutron Bi-Phase, Small Stone and MXR series of phasers
- Mod Filter capable of wah, auto-wah, and envelope follower effects, modeled after the Mutron III and other popular filters
- Tremolo with Classic, Shimmer, VariTrem, and Fade modes
- Fade-in for swells and reverse tape effects
- Modulated Delay capable of chorus, flange and vibrato
- Echo Delay up to 1200ms
- 24-bit, 96kHz support
- Unlimited presets for total recall
- Each of Nigel's component plug-ins can be loaded individually
The Cambridge EQ features five bands of fully parametric EQ, as well as high and low cut filters with a wide variety of filter types and curves, and switchable shelving filters for each EQ band.

- Complex lattice filters and a special algorithm deliver a warm analog sound without oversampling.
- A/B function allows for quick comparison of two different settings.
- A graphic display of the EQ curve provides "edit handles" for click and drag control of the EQ parameters, plus editable text displays for parameter values.

RealVerb Pro

- Unique set of algorithms let you design the perfect room just as you hear it with a graphic menu of room shapes, and adjustable settings for wall material as well.
- Provides the trademark, distortion-free, smoothing diffusion control and ultra-long reverb tail.
- Morph between different presets

Dreamverb – Flagship Stereo Reverb

- Drawing on the flexibility of RealVerb Pro, its intuitive and powerful interface allows you to create an acoustic space from an extensive list of different materials and room shapes. These acoustic spaces can be customized to great detail by blending or "morphing" different room shapes and surface materials, adjusting the effect of the room materials on the sound space, and even varying the density of the air to simulate different ambient situations.
- Dreamverb also features a flexible 5-band active EQ and unique level ramping for the early and late reflections for sounds ranging from ultra-realistic dynamic room simulations to lush reverb effects.

Cambridge EQ (Available Separately)

UAD version 3.0 supports the use of up to four UAD-1 cards inside a single PC, so you can purchase an additional card and add I/O capabilities at the same time.

NEW! UAD-8 I/O
UAD-1 Card with ADAT I/O

Combining the dedicated DSP capabilities of the UAD-1 card with an ADAT optical I/O, the UAD-8 allows you to interface directly with external devices which support ADAT I/O without the need to purchase a separate PCI card for your PC.

- Supports sample rates ranging from 44.1kHz to 192kHz.
- A stand-alone host application is included which allows you to turn an ordinary PC into a standalone digital effects processor, capable of 192kHz sampling rates and able to run ultra-low latency effects for any digital interface using the ADAT optical interface.

FilterBank is high-end EQ/Filter plug-in designed to emulate the sound of vintage and modern equalizers/filters. But FilterBank isn’t just another great sounding EQ - it’s every EQ ever made in one plug-in. FilterBank does this through its unique design philosophy: give the user maximum control. All critical equalizer and filter design parameters are totally user adjustable. FilterBank can emulate any EQ: tube driven or solid-state, vintage or modern, fat or thin. Or create a distinct custom EQ. FilterBank is 20 plug-ins consisting of 2, 4, and 6 band configurations of EQs and filters, in mono and stereo versions.

FEATURES

Total Control Over All Critical EQ and Filter Design Parameters

- High and Low Shelving EQ: Independent control of frequency, gain, peak, slope, and dip. No other EQ gives you so much control and flexibility of shelving equalization.
- Parametric EQ: Frequency control range that covers nearly the entire audible spectrum (20 - 21000 Hz). The parametric bell is up to 5 octaves wide! Gain is +/- 12 dB. Constant-Q technology closely models analog parametric responses.
- Low and High Pass Filters: Adjustable slope and resonant peak greater than 24 dB.
- Band Pass and Band Reject Filters: Frequency control range that covers nearly the entire audible spectrum (20Hz-21kHz). The Q range is 0.2 - 12.0.

Additional Features

- Double precision arithmetic keeps the noise floor at the -138 dB level one would expect from the 24-bit TDM bus.
- Analog saturation modeling is provided in each EQ/filter band to prevent digital clipping.

P-S-D (Peak-Slope-Dip) Control

P-S-D control allows you to adjust the critical response characteristics of low and high shelving EQ. These parameters replicate the sound of nearly every shelving EQ ever made.

Peak: The peak control adjusts the amount of added punch in the shelved portion of the response. The peak in the shelved portion of the response gives the shelving equalizer additional brightness or emphasis near the shelved band frequency. The effective gain at the shelved band frequency can exceed the range of the gain control when used at its maximum setting. Peak and dip controls are interactive - as the peak control is increased, the overall dip in the shelved response is decreased, and vice versa.

Slope: The slope control adjusts the gradient (slope) of the shelved response. The more gentle the transition between the shelved and non-shelved bands, the smoother the equalizer sounds. Steeper slopes can give the shelving equalizer more definition and clarity.

Dip: Adjusts the amount of warmth added in the non-shelved portion of the response. The dip in the non-shelved response reduces the amplitude of signals whose frequencies are just outside of the shelved portion of the response. Dip and peak controls are interactive.
**The Complete Compressor**

CompressorBank gives the user complete control of dynamic compression. Common controls such as Output (make-up gain), Threshold, Compression (Ratio), Attack, and Release are provided. Non-standard Knee and Bite controls allow unique and unprecedented articulation of compression characteristics. Multiple peak detection circuit types provide flexibility only previously achieved by owning different compression units. Side chain support, side chain or in-line pre-filtering, and a static/dynamic EQ section (post compression) round out the signal processing capabilities of an already very capable compressor. CompressorBank is 8 plug-ins: basic compression (CB1), compression with pre-filtering (CB2), and compression with pre-filtering and static/dynamic EQ (CB3), and modeled compression (CB4) - all in mono and stereo versions.

---

**Side Chain Support**

Provided in all CompressorBank configurations. Side chain pre-filtering (high/low pass, and band pass, and parametric EQ) is also available. The pre-filter can also be placed in-line and applied to the compressed signal.

**Compression Curve Modeling**

In addition to the standard Threshold and Compression (Ratio) controls, the actual shape and response of the compression curve can be adjusted with the Knee and Bite controls. Knee softens the compression curve, creating a smoother response. Bite gives the compressor the ability to allow signal transients to pass uncompressed, while the overall compression response is unchanged. These controls allow the user to emulate responses of their favorite vintage gear.

**Processing Specifications:**

- Double precision arithmetic for 48-bit processing at side chain pre-filter, compression and active EQ stages
- Analog saturation modeling on each band prevents digital clipping.

**Dynamic EQ**

Using the same technology as FilterBank (including analog saturation modeling), this static/dynamic parametric EQ section can be applied to the compressor output, making possible effects such as signal enhancement, noise reduction, and harmonic distortion.

---

**Multiple Peak Detection Circuits**

Every compressor uses a model to detect and track signal peaks and then apply dynamic compression. Variation of basic models are available in CompressorBank:

- Type1: pure peak detection
- Type2: pure peak detection combined with adaptive release times, plus a secondary release control
- Auto: signal levels are automatically tracked

---

**Compatibility**

ProControl, Control 24, and HUI compliant; control automation (PT 4.0 or higher); TDM, AudioSuite, and RTAS versions; supports d|24, M|X, HD, and host-based ProTools systems.

---

**The Classics**

McDSP has developed emulations of the Teletronix LA2A, the dbx 165, the Neve 2254E/33609, the UREI 1176LN (blackface, including the ‘44’ setting), and other classic high-end compressors and limiters.

---

**Performance:**

Up to 18 mono (or 14 stereo) channels of compression on a single HD dsp. Up to 15 mono (or 12 stereo) channels of compression on a M|X dsp (any type - SRAM, DRAM, no RAM). d|24 systems can run up to 8 mono (or 5 stereo) channels of compression on a single dsp.

---

**MC2000**

**The Complete Multi-band Compressor**

The MC2000 gives the user complete control of multi-band dynamic compression. Common controls such as Output (make-up gain), Threshold, Compression (Ratio), Attack, and Release are provided. Non-standard Knee and Bite controls allow unique and unprecedented articulation of compression characteristics. Multiple peak detection circuit types provide flexibility only previously achieved by owning different compression units. Steep 24 dB/oct crossover filters, taken from the award-winning FilterBank plug-in, minimize signal leakage into adjacent compression bands.
The Complete Analog Experience

When the sound of digital won’t cut it, Analog Channel transforms mixes into analog heaven. The most sought after high-end tape machines and analog consoles on the planet are an insert away. Analog Channel comes with several settings files based on a variety of tape machines and consoles, including emulations of the most popular playback heads used on the best analog ‘reproducers’ in the world. Plus, you can create your own distinct custom analog system. Analog Channel includes two devices: the AC1 for emulating analog mixing console channels, and the AC2, which emulates tape and tape machines.

**AC1 - Analog Console Emulation**

Pure digital tracks can suffer from harsh digital clipping. AC1 acts as a ‘digital pre-amp’ allowing even excessive amounts of gain without digital distortion. A drive control determines where the audio ‘sits’ in the saturation/compression region, and even the attack and release times of the distortion character are adjustable. And AC1 is the most efficient McDSP plug-in ever - up to 24 mono channels or 16 stereo channels on a single MIX dsp chip. Place it across the entire mix to create a custom analog console.

**AC2 - Analog Tape Machine Emulation**

Includes standard tape deck parameters such as bias, playback speed, and IEC1/2 equalization, plus controls that are well beyond the limits of ‘real-world’ devices, like adjustable low frequency roll off and head bump - independent of playback speed. Select from several playback head types, and even control the rate at which tape saturation is disengaged. Modern and vintage tape formulations are available. And instead of frequency sweeps and test tones, the playback head and tape saturation responses are displayed in realtime - updated with every change.

**FEATURES**

**Power and Flexibility**

Four different configurations are available - Analog Channel Emulation (mono and stereo), and Analog Tape Emulation (mono and stereo). AC1 - control drive, attack, and release of amplifier characteristics; AC2 - control every aspect of analog tape ‘reproducers’, as well as parameters not found in the original devices.

**Performance**

- **AC1**: Up to 28 mono (17 stereo) channels on a single HD dsp. Up to 24 mono (15 stereo) channels on a single MIX dsp chip.
- **AC2**: Up to 9 mono (4 stereo) on a single HD dsp. Up to 8 mono (4 stereo) on a single MIX dsp chip.
- Analog Channel can run on any MIX system dsp type (SRAM, DRAM, no RAM).

**AC1 – ANALOG CONSOLE EMULATION**

- Input: +/- 24 dB, with phase control
- Drive: +/- 12 dB
- Adjustable saturation region
- Attack: 0.01 msec to 10 msec
- Release: 10.0 msec to 1000 msec
- Output: +/- 24 dB
- Auto Output Control, L/R Input and Output link
- Simultaneous input/output metering

**AC2 – ANALOG TAPE MACHINE EMULATION**

- Input: +/- 24 dB, w/ phase control
- Roll Off Frequency: 20 - 100 Hz
- Bass Bump: 0 - 100 % (up to 6 dB maximum)
- Selectable playback head types
- Bias: +/- 12 dB
- Release: 10.0 msec to 1000 msec
- Output: +/- 24 dB
- Vintage and Modern tape formulation modes
- Auto Output Control, L/R Input and Output link
- Simultaneous input/output metering
- Playback head and tape saturation response display

**Compatibility**

ProControl, Control 24, and HUI compliant; control automation (PT 4.0 or higher); TDM, AudioSuite, and RTAS versions; supports d/24, MIX, HD, and host-based ProTools systems.

Instead of frequency sweeps and test tones, the setup of the AC2 playback head response and tape response are updated with every control change. Time consuming calibration and maintenance are no longer required.

The AC1 plug-in allows the user to design channel amplifiers such as those found on ‘classic’ analog mixing consoles. Parameters can be saved in a preset or as part of a session, and are completely automatable.

The AC1 plug-in is efficient - up to 24 mono channels or 16 stereo channels on a single MIX dsp chip. Place it across the entire mix to create a custom analog console.

Instead of frequency sweeps and test tones, the setup of the AC2 playback head response and tape response are updated with every control change. Time consuming calibration and maintenance are no longer required.
High-end Software Synth

Synthesizer One combines many sound creation techniques into a single software plug-in including wavetable, FM, AM, Ring modulation, additive and subtractive synthesis methods. External audio can be processed and combined with synthesized sounds. Oscillator, filter, LFO, and envelope signals can be routed to multiple modulation targets. Two wavetable oscillators (three waves per voice) allow unprecedented manipulation of waveform data. Two multi-mode filters simultaneously output high pass, low pass, band pass, and band stop filtered signals. Three LFOs per voice with dedicated multi-mode ASR envelopes. The LFOs can use the same waves as the OSCs for the ultimate modulations. The LFOs can be synced to MIDI beat clock or internal clock. Multiple LFO loop modes are available, as well as key tracking. Three ADSTAR envelopes can be used as a source for any modulation target. The second attack (post key up) can be enabled or disabled. Effects include wave shaping, EQ (high pass, low shelf, high shelf), and a modulatable delay line capable of chorus, flange, vibrato, pitch warping, doubling, and echo effects.

Features

**Wave Editing**
- The vast Synthesizer One sound palette starts with its editable wavetables. This allows you to create unique waveforms. The waveform editing facilities are built into the Synthesizer One interface and Wave Edit control page. Several waveform functions, filters, and edit modes catalyze the creative process. Mouse-drawn waveforms and functions can be created. Up to 8 edited wavetables can be saved per setting file for an unlimited range of sounds.
- A modular design allows oscillator, filter, LFO, envelope, and audio signals to be routed to a variety of modulation targets. Any synthesis parameters have a dedicated menu of modulation sources on each control page for optimal editing speed. A 4-point modulation matrix is provided for additional modulation routing.
- A set of Quick Pages gives access to basic parameters, while the complete set of controls are available on the Synth Pages. MIDI controller assignment is programmable and saved as a preference inside the Synthesizer One. 4-point MIDI controller modulation matrix is available per patch.

**Two Wavetable Oscillators**
- 3 wave sources with independent waveform, level, phase, octave, PW and PWM control (note PWM available for ANY waveform - the only synth on the planet to offer this feature)
- Any preset waveforms and up to 8 editable waves are available per wave source
- FM and FM velocity controls for each oscillator
- Separate Ring Oscillator with selectable inputs (OSC, LFO, ADSTAR envelopes, etc.)
- Separate noise source

**3 Low Frequency Oscillators**
- Use same waves as available to oscillators
- Syncable to MIDI beat clock
- Multi-mode ASR envelope per LFO

**Additional Features**
- 3 ADSTAR Envelopes: Attack, Decay, Sustain, Time, Attack2, Release
- Every modulation target (PWM, VCF, FM, etc.) can select from a popup menu of available modulation sources (LFO, ADSTAR envelope, OSC, etc.)
- User definable arpeggiations and sequences saved per preset
- Audio can be mixed, processed, and used as modulation source
- Double precision arithmetic for 48-bit processing
- Analog saturation modeling
- Requires MIX or HD TDM system
- Page table support for ProControl, Control 24, and other control surfaces
World-Class Audio Engineering Tools

As the name implies, ChannelStrip replicates the audio processing section of a digital console - powerful dynamics and EQ integrated in a single, fully automatable plug-in for ProTools and MAS audio environments. Developed as a way to marry the sound and feel of a world-class mixing console with the flexibility of digital audio workstations, it offers exceptional audio quality, along with incredible DSP and CPU efficiency. The comprehensive user interface allows you to work with your DAW as efficiently and interactively as you would with a dedicated mixing console.

Also available with the same high-resolution algorithms but with a slightly scaled-down feature set. This means that ChannelStrip|SP will use less DSP and run more efficiently.

**FEATURES**

Transform your digital audio workstation into a world class mixing console. ChannelStrip provides all of the critical channel processing features you would expect to find on a top-of-the-line mixing console in a single mono or stereo plug-in. Processing functions include:

- Input level control
- Expander/Gate with filtered sidechain
- Compressor with filtered sidechain
- 6 band Parametric EQ
- Phase Invert
- Channel delay
- Advanced metering

Visual Audio Monitoring System

SpectraFoo provides standards-based level metering, high-speed, high-resolution spectral analysis, the unique Phase Torch, correlation metering, triggerable waveform display, power balancing and a variety of power, envelope and spectral histories and phase analysis on any number of input or output channels. Create as many copies of each type of instrument as you like. Every copy is independently assignable, movable, sizeable and configurable. This allows you to create the exact metering set (or sets) you need.

Both absolutely essential for broadcast and critical mixing and mastering, the SpectraFoo Complete steps up with a Transfer function, signal generator, 24-bit audio capture function and three sample code metering tools (a bit-range meter, bit-matrix meter and bit-scope) to the fundamental set of software-based metering and analysis instruments.

FEATURES

- The software automatically maintains a snapshot of the current system state, so every time you start working with the system it is configured exactly as you left it. It also provides a variety of sophisticated configuration management features to maximize your effectiveness while minimizing the time you spend tweaking the controls.
- Provides a complete parameter storage and retrieval library mechanism for all instruments in the system.
- Create named configurations for each of the various instruments and instantly recall them with a single mouse click.
- Modifications of parameter libraries can be saved over the originals or cloned to create new libraries.
- Comprehensive set of instrument presets.
- Create a complete snapshot (meter positions, visibility, configuration, channel routing, etc.) of the entire state of the system and save it as a preset document. Or assign it to a hot key for instant recall to link various metering configurations.
- Flexible linking system lets you keep all of the parameters associated with a group of instruments linked. Use to link the setting on a stereo pair (or surround group) of instruments as well as synchronizing the settings of different types of meters that are all on the same channel.

SpectraFoo

- Lissajous phase scopes (X-Y, vectorscope and stereo field display modes)
- Full featured audio frequency oscilloscopes
- Power balance meters
- Full featured level meters with physical unit calibration
- Full featured audio spectrum analyzers
- Spectrogram spectral history meters
- Correlation meters
- Correlation history meters
- Phase Torch frequency-sensitive phase meters
- Envelope history meters
- Band Limited history meters

SpectraFoo Complete— Step-up Features

If your only use of the software is for metering your mix, then SpectraFoo will give what you need. However, if you want to be able to measure your acoustic environment or verify the behavior of your external digital devices, then you need SpectraFoo Complete.

More Instruments:

- Three different kinds of bit meters for monitoring the low level audio bitstreams

Transfer Function Measurement System

- Allows direct measurement of both acoustic and equipment transfer functions (both frequency and phase)
- Use for equipment verification and test
- Can be used to “shoot” your control room for acoustic and electronic correction
- Provides full featured impulse and time-delay measurement tools for time aligning the transfer-function measurements
- Time-delay tools can be used for time aligning multiple audio tracks

World-class Signal Generator:

- Provides high resolution 24-bit distortion free signal generation
- Up to 9 simultaneous sine sweeps
- Pink and White noise generation
- Burst Generation
- FFT synchronized sine generation
- Direct generation to audio I/O, captures and files

Capture and Static Analysis system

- Allows you to record directly into SpectraFoo
- Provides loop playback
- Allows you to open soundbites in SpectraFoo for detailed analysis
Multi-Channel IEEE1394 Audio Interfaces

Designed to fit under a laptop (or rackmounted) the Mobile I/O 2882 is an affordable, portable high-quality, multi-format audio I/O for professional and multimedia applications.

Connecting to your computer via IEEE1394 (Firewire), the Mobile I/O 2882 line has 8 channels of analog input and output, 8 channels of ADAT lightpipe I/O, as well as AES/EBU and S/PDIF digital I/O with SRC. It supports all of the standard professional and multimedia sound driver APIs for both Mac and Windows including ASIO, Sound Manager, and Wave Drivers. Each input channel has individual phantom power, and all are fully matrixable.

Includes powerful multitrack recording and mixing software. Exactly the same, the Mobile I/O +DSP has an extra DSP chip onboard to capitalize on the additional processing power of Metric Halo software and third party plug-ins.

Analog I/O
- Eight balanced analog inputs with high quality 24-bit/96kHz converters:
  - Four XLR mic inputs with discrete mic preamps
  - Four 1/4” TRS line level inputs
- Eight 1/4” TRS analog outputs using high quality 24 bit/96kHz D-to-A converters
- High quality 24 bit/96kHz 1/4” stereo headphone/monitor output from DSP

Digital I/O
- 8 channels of ADAT optical I/O
- Stereo switchable AES/EBU (XLR) and S/PDIF (RCA) I/O with Sample Rate Conversion from 48 to 96 kHz on the fly.
- Word Clock I/O (2x BNC), switchable between 1x & 256x Clock, allows professional synchronization of multiple boxes to external studio clock.

Additional Features
- Built in matrix/routing mixer for low-latency foldback, monitoring, and routing
- Full cross-point routing between any two channels on any number of boxes

Also Available
ULN-2 Ultra Low Noise I/O
- The ULN-2 is a two channel interface that delivers the power, portability and sheer sound quality of Mobile I/O in an even smaller, lighter package.
- Mobile I/O ULN-2 supports simultaneous input and output of analog balanced & unbalanced (Mic, Line and Instrument), S/PDIF, AES, and IEEE 1394.
- Balanced analog inserts are also provided for each input.

Mobile I/O 2882 and ULN-2 are both Macintosh OS 9 and X; ASIO and CoreAudio compatible.
The lively and punchy FM sounds were a breakthrough in sound synthesis when they were first introduced in the early 80's. Today, their special aesthetics are still highly appreciated by musicians and producers worldwide. FM sounds complement the sounds of analog and virtual analog synthesizers very well.

The FM7 not on reproduces the sounds of these machines exactly—right down to the smallest detail, but takes the legendary sound of FM synthesis to a new level. The FM7 reads the complete sound library of the classic DX synths (DX7, DX7-II, DX11, TX81Z, DX21, DX27, DX100, TX802, plus adds distortion and filter operators, extensive modulation capabilities, a comprehensive effects section, audio input and much more to the traditional FM architecture. The user interface of the FM7 makes it comfortable and easy to explore the fascinating new possibilities of FM—Native style.

**FEATURES**

- The FM7 is more than an emulation. Enjoy the authenticity of the classic presets, and then transform them into something completely new. For example, each of the operators of the FM7 offers many waveforms besides sine.
- Additionally, a distortion operator with noise and an analog filter operator complement the waveform operators and increase the sonic range of the FM7, far beyond classic FM synthesis. Unlike the classic, FM routing can be set freely—you are not limited to preset algorithms. The effect section offers high quality stereo chorus, flanging and delay effects.
- Advanced graphical editors offer intuitive access to FM synthesis including a powerful analog-style Easy Edit page.
- While retaining compatibility to DX-Serie instruments, it expands the sound repertoire and vastly improves the ease of use.
- With hardware synthesizers you have to choose between rackmount or keyboard version—now you get both plus a full graphical editor—at the press of a button.
- Includes a library of 256 top quality presets putting a wide selection of standard and unique new sounds at your fingertips. Go straight to making music without having to program any sounds.
- To make programming easier, the FM7 has a page of dedicated analog-style controllers. Here, one knob can change the sound in drastic ways.

![Diagram of FM7 features]
The Pro-53 is an incredibly faithful reproduction—in both sound and look—of one of the most popular analog synthesizers of the 80’s. A virtual instrument fashioned after the Sequential Circuits Prophet -5, the Pro-53 combines the sonic properties of the unique originals with the practical requirements of the present day.

But the Pro-53 also adds 21st century technology to the immortal sound of the analog era—no fixed limit to the number of voices, many times more preset memories, velocity sensitivity, MIDI automation of all available parameters and the option to run several Pro-53’s in parallel. And with the PRO-53, the third generation of the virtual analog classic is here. The synthesizer emulation has been vastly improved by a new oscillator technology that offers an even warmer and more brilliant sound. In addition the sonic possibilities have been expanded even further with new features like a high-pass filter mode and an invertible filter envelope. The control surface was also reworked and now shines in a whole new light.

**FEATURES**

- Complete analog voice architecture with comprehensive sound shaping facilities
- Accurately recreates the unique sound, panel design and synthesis architecture of the original:
  - 2 oscillators per voice
  - Choice of pulse, triangle and saw-tooth waveforms
  - Oscillator detune and synchronization
  - 24dB low-pass filter with resonance and self oscillation, plus high-pass filter mode
  - ADSR envelopes for amplitude and filter, invertible filter envelope
  - Low Frequency Oscillator with numerous modulation options, LFO-envelope retrigger function
- Almost 600 classic and modern analog sounds cover any eventuality, 64 of which were specially programmed by the legendary John Bowen, one of the creators of the Prophet-5 synthesizer.
- An optional 64 new sounds can be downloaded direct from NI for under $20. The sound set was created by Peter Krischker and contains sequencer sounds, pads, sweeps, effects, basses and lead sounds. It is suitable for musical styles like Trance, Electro, Techno, Ambient and Pop.
- 512 preset memories are available where you can store your own sound creations. The Pro-52 displays a name for each of the presets, unlike the original which only displayed the preset number.
- Has an audio input for processing external audio signals through its filters and effects.
- Adjust the amount of inaccuracy and detuning inherent in the sound circuitry
- Integrates perfectly into any computer-based virtual studio. Supports VST, DXi, MAS and DirectConnect interfaces. Can be used as a sequencer plug-in or as a stand-alone synthesizer.
- The Pro-53 can import Prophet-5 SysEx sound data, which means it can read and accurately reproduce all the existing sound libraries made for the original. The subtle deviations from perfect behavior which are typical of analog circuits and crucial to the sound, can now be fine-tuned.
- A built-in effects unit adds multi-echo and ultra-fat chorus and flanging effects. This makes the sound of the Pro-53 ‘complete’ for both live performance and studio production. The included preset sounds make extensive use of the effects.
- Realtime control and automation of all parameters using MIDI controllers. Plus the MIDI-implementation is much more versatile. With MIDI-learn the control elements can be operated by hand by assigning them to the desired controllers, for example the knobs and sliders on a MIDI controller box. The set-up connections can be saved in a controller-map. Several pre-configured controller-maps come with the software and can be loaded directly into the PRO-53.
The B4 is a complete virtual tonewheel organ, capable of reproducing in authentic detail the sound of the legendary B3 organ and rotating speaker cabinet. A state-of-the-art MIDI-automatable audio engine transparently operating behind the photo-realistic graphics, the B4 can be used as a stand-alone application using ASIO or VST 2.0, MAS, Direct Connect or DXi plug-in. The B4 also adds flexibility in sound generation and seamlessly integrates into the recording environment, making it possibly the best organ since the original. Native Instruments carried out a painstaking analysis of the electro-mechanical sound generation and tube circuitry of the best organ and speaker cabinet combinations. The resulting software model, based on the same NSP-technology as NI’s award-winning Reaktor system, produces sound virtually indistinguishable from the original hardware.

**Features**

- Unlike sample-based instruments, the B4 accurately models subtle details such as harmonic foldback, drawbar crosstalk and loudness robbing. The result is a warm and powerful sound over the entire range of the keyboard, complete with the subtle tonal shades that improve playability and musicality.

- Capable of all the variations one expects from this type of organ, and is suitable for any flavor of music, be it rock, jazz or house.

- A set of knobs on the “rear panel” gives access to numerous adjustment parameters, which allow the sound to be tailored for particular applications.

- You can even use the B4 to process other sounds. Just plug it in as a VST Insert Effect and apply any combination of Scanner Vibrato, Tube Overdrive and Rotating Speaker effect to your tracks.

- Full MIDI control and automation—each and every parameter is mapped to MIDI controllers so that all settings and their changes can be easily automated and manipulated in realtime.

- The B4 has two views, one of which shows the two manuals, the bass pedals and other knobs relevant for playing. The second view skips the manuals and pedals but gives access to extended settings.

- With the optional B4 Tonewheel Set Vintage Collection you can replace the B3-modelled tonewheels with those of a Vox Continental, a Farfisa Compact, or a Harmonium to give your B4 a totally new character. These also permit the master-tuning to be altered, and to “age” the sound in six different levels, from “well matured” to “far beyond repair.”

- Patented Scanner Chorus/Vibrato effect can be switched on and off separately for the two manuals. The rotary switch chooses one of 10 Banks of Presets, containing the famous music sounds.

- 12 inverse colored keys are used to select presets not only for the Drawbars but to give total recall for all settings affecting the organ, amplifier and rotating speaker.

- Nine drawbars per manual, another six drawbars for the bass pedal channel. The drawbars allow a huge number of different timbres to be selected.

- Percussion Circuit can be activated to amplify one of the Upper Drawer tones and lets it decay over time—essential for jazz and other styles. Any of the nine drawbars can be selected for the effect, and speed of decay and percussion volume are adjustable.

- Rotating speaker speeds can be realistically sped up and slowed down. The rotation speeds can be adjusted with complete flexibility on the virtual rear panel.

- The built-in Tube Amplifier can be operated in clean or overdrive mode. The rotating speaker simulation provides that lush, swirling spatial sound experience. The amount of both effects can be adjusted.
Vocoding in a New Dimension

Vokator provides a revolutionary suite of vocoding tools with unrivaled flexibility and outstanding sound quality. Powered by an extremely high-resolution FFT spectral engine, Vokator sets the standard for vocoding transparency, detail, and smoothness. In addition to an exceptional vocoder, Vokator boasts a sophisticated synthesizer and a granular sampler: a virtual sound-fusion laboratory. With advanced features and multiple modes of operation, Vokator opens vast new worlds of sound-design possibilities. In addition to external audio sources, you can also use internally-generated signals from the synthesized/sampler and the audio file player. So Vokator places both an effects plug-in and a vocoder-based synthesizer at your disposal. Each input section has a delay unit, a dynamic processor and several special effects in the spectral domain.

- Vokator’s FFT spectral engine is a milestone in vocoder development. Previous vocoders used eight, sixteen, twenty, or even thirty-two frequency bands – the more frequency bands, the smoother and creamier the effect. Unlike its predecessors, Vokator’s advanced engine uses 1024 bands. In addition to its stunningly transparent, full-resolution operation, Vokator’s bands can even be grouped together for a convincing vintage-vocoder emulation. To ensure optimal dynamic range across the frequency spectrum, an integrated frequency-domain compressor balances the levels of all bands.

- A pair of vocoding channels can either be spectrally combined or played independently. Channel A can be switched between an integrated file player or external input A, while Channel B can be set to a full featured synthesizer, a time-stretching granular sampler, or external input B. For a traditional vocoder effect, the frequency spectrum of the external input would be controlled by the synthesizer, but Vokator’s capabilities are much more advanced.

- Vokator is both an effect plug-in and a vocoder-based synthesizer. Its synthesizer features an advanced dual-oscillator design with dynamic preset morphing controlled by the modulation wheel. Vokator’s granular sampler can independently control a sample’s pitch and time. A full range of modulators - step sequencers, envelope followers, LFOs, and more - can be easily routed to nearly any of Vokator’s parameters.

Each input section has a delay unit, a dynamic processor, and several special modulation effects in the spectral domain.

The graphic displays show the spectral composition of the audio signals. The main display also serves as a graphic EQ for drawing in precise filter curves for the output signal.

- LFOs, envelope followers, voiced/unvoiced detectors, and step sequencers can modulate nearly any parameters. The yellow ring around a knob indicates the value of the respective modulation.

- The morph function opens a new sonic dimension by allowing smooth transitions between synthesizer presets. The morphing is controllable in real-time by the modulation wheel.

- The integrated arpeggiator provides different styles, directions and articulations to trigger the synth section.

- A MIDI-controllable audio file player, with loop function and waveform display, can stream large audio files from the hard disk.

- Editing is straightforward with graphic display of envelopes, and waveforms. The synth’s two oscillators can be replaced with a re-synthesizing granular sampler which allows start, loop, pitch, and speed modulation.

- The integrated arpeggiator provides different styles, directions and articulations to trigger the synth section.
Effects Software

Spektral Delay differs from other effects in that it uses real-time FFT (Fast Fourier Transformation) to split up each channel of a stereo signal in up to 160 separately modifiable frequency bands (even up to 1024 bands internally). The level, delay time and feedback amount for each of this bands can be set separately. Additionally, various modulation effects can be applied to the signal in the frequency domain, which allows for even further sound manipulation.

And while Spektral Delay offers exceptionally great possibilities for creative sound design—from subtle corrections and rich effects to the total alienation of the input signal—it is still easy to use since all parameters are controlled intuitively and comfortably from the graphical user interface.

Stand-alone or as a plug-in, it offers professional sound quality and can be fully controlled by MIDI.

Intuitive Edit Graphs let you design delay times and feedback levels for each frequency band: each of the up to 160 bands per side can be delayed and fed back separately.

Delay times can be aligned with the rhythm via a selectable tempo grid. With up to 12-seconds delay, Spektral’s range covers everything from subtle coloring to rhythmic flowing of the partial tones to dense, atmospheric sound textures.

Modulation effects (expandable by plug-ins) are applied in the frequency domain of the signal and offer many unusual processing options—such as rotation of the frequency bands or reverb simulation by ‘smearing’ the amplitude courses of the bands—a big factor in Spektral’s unique sound possibilities.

The amplitudes of the bands are also controlled intuitively by drawing in the Edit Graph with the mouse. Unlike conventional filters, the filter curves resulting from this can have any shape—design any filter response imaginable, from extreme settings to smooth sweeps. The filter curves can be drawn commonly or separately for the two channels of a stereo signal.

All parameters such as filter, delay and feedback settings can be modulated with an integrated LFO or via MIDI. This makes it possible to create very organic and lively effects which can easily be played live.

Includes many presets for different applications (e.g. guitar, vocals, drums, ambiances, reverberations, special effects). Runs stand-alone (Mac/Win) with MME, Direct Sound, Sound Manager and ASIO or as a plug-in with a VST or DirectX-compatible host.
REAKTOR 4

Generate the Future of Sound

REAKTOR 4 is a complete sound design studio with almost endless possibilities for producing and performing music. Use it as a synthesizer, sampler, effects processor, groovebox, and much more. High quality signal processing algorithms and the 32-bit floating point precision of the audio engine guarantees sound quality that meets the highest demands. The steadily growing REAKTOR libraries contain hundreds of different instruments with thousands of presets for a wide range of sound generation and audio processing applications. All instruments can be modified freely, and even building your own instruments from scratch is possible. Runs stand-alone or as a plug-in for Windows and Mac with minimal latency and very precise MIDI timing.

Features

The Library
REAKTOR 4 offers a huge and growing library with staggering instruments, music machines and effect tools. Explore analog modeled, additive, FM, and unique synthesizers. Groove with real-time time compression and expansion. Mix with compressors, EQs, pitch shifters, filtered delays, distortion, and up to sixteen channels of surround. Everything is immediately at your fingertips, from authentic emulations of classic gear to creations never heard before.

The REAKTOR Principle
REAKTOR 4 offers over 200 basic modules which are the source material for creating any sound generator or effect-processor you can think of: Numerous “analog” and sampling oscillators, various filters and envelopes, shapers, delays, sequencers and much more. You can interconnect all the modules freely in the structure window. Macros are used as “shortcuts” to quickly recall a set of modules or structures and allows a more clear and organized layout to your designs. You can even have macros within macros. First-time users can be designing their own creations in no time.

Instruments are the next level up consisting mainly of macros, but also modules as well. It has its own MIDI parameters, program memory, and a separate panel window for the controllers. Several instruments can be combined together in a “multi-timbral” like environment giving you the power to create entire songs with REAKTOR 4.

Newest Modules
REAKTOR 4’s latest modules cover everything from analog-modelled filters to innovative graphical control elements, from multi-tap delays to hard disk recorders and players, from granular synthesis to matrix mixers.

XY Control and Realtime Display
The multifaceted XY objects turn REAKTOR 4 into a powerhouse for musical and visual performance. Visualize your sound or plug in oscillators just to see what patterns emerge. The XY objects can be resized as big as you like. By moving the mouse within the XY control area, you can control two parameters at once, while an oscilloscope, waveform, or pattern is displayed underneath.

Audio- and Event-Array
Draw your own envelopes, sequences, waveforms, and more. The Audio Array can import any sound file and cycle through it at any frequency. Create oscillators out of audio files. The Event array can be used to draw in envelopes with an unlimited number of curves.

Analog Modeled Filters
Taken straight from the acclaimed Pro-52, the Pro-52 filter module gives you the warmest analog sound, but under complete control. The Ladder filter module is an authentic emulation of the classic Moog filter.

Grain-Cloud
The Grain Cloud module gives you the power of granular synthesis with the ease of use, sound quality, and control that REAKTOR is famous for. Built-in randomized jitter lets you create delicate clouds of sound or complete sample shredding. Coupled with the advanced control elements that REAKTOR 4 offers, this module is a monster.

Hard Disk-Recording and Playback
Record your inspiration directly to hard disk, or stream files of unlimited length through REAKTOR 4 with the tape deck modules.

8-Tap-Delay and 8-Channel-Scanning-Mixer
The 8-Tap Delay module lets you create surround delays and reverber early reflections. In combination with the Scanning Mixer you can make effects like the classic Scanner Vibrato as used in the B4. The Scanning Mixer module takes a floating point input between 0 and 8 to route audio dynamically from its eight inputs with crossfading. The Multi Tap Delay lets you set eight individual delay times and send each delay tap out of its own output. It’s possible to create surround reverb delays of incredible realism and complexity.
**User Interface**

User interface features drag & drop functionality, professional metering, enhanced toolbar, the floating inspector, visual samplers and analog modelled filters. All knobs, sliders, buttons, and toolbar offer great clarity. REAKTOR 4 also lets you customize your environment by choosing any color for the Panel background and the Selection color.

**Drag & Drop**

Drag & Drop functionality makes it easy to get audio files, instruments, and macros into REAKTOR 4. Download some new macros from the Internet, drag them into REAKTOR 4, then start to make music. You also have the ability to insert multiple audio files into a sampler module. Getting ready for a live performance? Drag 128 audio files into a Beat Loop module and you’re ready to roll in seconds.

**Professional Metering**

Level Meters have two resolution modes (coarse and fine) and are as accurate and as fast any any digital metering. All Level Meters can also have a value readout to accurately monitor your audio levels, or to act as numerical displays for any object.

**Enhanced Toolbar**

Toolbar provides very accurate input and output metering, and can also be undocked and used as a floating palette. Toolbar lets you select sample rates up to 96 kHz, type in a tempo, and assign MIDI controllers to any panel element. It also displays CPU load, manages snapshots, polyphony, and more.

**Floating Inspector**

All parameters in REAKTOR 4 are set with the floating Properties Inspector. You can modify several modules one after the other, even if they are not related.

**Visual Sampler and AKAI Import**

All Sampler Modules can display their audio data in the Panel Window. Any compatible sound file can be dragged and dropped into the sampler’s Properties Inspector for instant use, and AKAI sample data can be imported from AKAI-formatted CDs.

The main views of REAKTOR 4 are the panel and the property windows, and they are separated to make it easy to design, build, and perform. Convert your computer into a synthesizer, sampler, groovebox and effects processor. Build your own instruments and discover the treasures in the huge instrument libraries.

The panel is the user interface for an instrument. It can be freely designed. So it is possible to exchange knobs for faders, change the size and position of panel elements and add new buttons, knobs, lamps and more. All panel elements can be assigned to any MIDI controller. Property windows give access to the specific parameters of instruments, macros or panel control elements. A panel elements look, range of values, MIDI controller information and more can be set by double-clicking on the element.

Control elements such as faders, knobs, buttons, and switches are used to control the instruments. Filter curves, envelope displays, level meters and oscilloscopes show you what is going on.

Snapshots are saved settings. Since the positions of all parameters in an instrument are saved in a snapshot, it’s possible to save a sound, an effect setting, or even a drum or sequence pattern.

Toolbars show the most important parameters of REAKTOR 4 and give access to frequently used functions (input/output levels, MIDI activity and CPU load are also monitored here). Snapshots can be stored, modified or recalled from the toolbars.

Macro encapsulate a combination of modules, their wiring and the associated panel controls. Macros make it possible to organize instruments in a hierarchical way. REAKTOR 4 offers a comprehensive library with premade macros to quickly build up new instruments.

Modules represent the elementary processing functions and panel elements. REAKTOR 4 comes with more than 200 modules: oscillators, samplers, filters, envelopes, shapers, delays, step sequencers and much more.

The structure shows the internal machinery of an instrument. Here, macro and modules—filters, oscillators, LFOs, envelopes, etc.—can be placed and connected together.
REAKTOR SESSION

Access to the Future of Sound

REAKTOR SESSION is your key to a world of exceptional software instruments. A vast library of synthesizers and resynthesizers, samplers and beat-loopers, groove and drum machines, surround and innovative effects, and sequencers can be instantly integrated into your studio. Each instrument includes a wide range of preset sounds for instant use, while convenient patch management lets you create and save your own sounds.

REAKTOR SESSION lets you freely design your own studio from pre-built instruments. Multiple instruments can easily be connected together in the streamlined structure editor. Mix sequencers, synthesizers, samplers, and effects. It lets you effortlessly realize your studio ideas with its intuitive user interface. A built-in instrument/sample browser and convenient features such as prelisten, replace, and insert make the selection, and addition of instruments easy.

Features

◆ The highly-optimized DSP algorithms of the 32-bit engine and up to 192 kHz sample rate support ensures unsurpassed sound quality with very little CPU usage.

◆ All user interface objects can be fully controlled over MIDI via the MIDI learn function. After the activation of MIDI learn for the desired parameter, move any hardware controller, such as a knob on a MIDI controller, and that hardware control will automatically be assigned to the desired parameter. Naturally, all MIDI settings are saved with the instrument.

◆ Runs on Mac and Windows with minimal latency and excellent timing, and smoothly integrates into the virtual studio as a VST 2.0 or DXi plug-in. Even the most complex REAKTOR creations appear as one plug-in under VST and DXi, and multiple instances can be opened simultaneously. As a stand-alone application, supports ASIO, DirectConnect, and MAS.

REAKTOR Instruments in Your Studio

In the Studio Panel you can control the instruments you have loaded. You can select, change, and create sounds, effects settings, and sequencer patterns. You can add and remove instruments, or simply rearrange their order. The instrument info display show MIDI activity and allows you to recall and save presets, mute and solo the instrument, select the MIDI channel, and choose general instrument settings.

Synthesizers

The REAKTOR SESSION library offers a world-renowned collection of synthesizers from analog-modeling to FM, from wavetable to additive. Each synthesizer includes many presets for an astonishing range of sounds right out of the box. High quality oscillators, filters, and envelopes produce warmly authentic “analog” bass, lead, and string sounds. FM, ring-modulation, and hard-sync synthesizers produce a broad scope of organically complex and metallic sounds.

Samplers and Transformers

Included sampler and transformer machines enable everything from quick and convenient sampling to a full granular workout. Samples can even be used as waveforms, or as the basis of FM synthesis and waveshaping. Several resynthesis instruments in the library allow you to vary speed and pitch independent of another, and even to freeze the sound in time. Realtime timestretching and pitch shifting let you perform live intuitively and quickly. A built-in loop recorded lets you easily create new loops to use in your sequencer program, or to put back through REAKTOR SESSION’s samplers and effects.

Sequencers, Drum & Loop Machines

Many instruments in the library combine synthesis and sampling with sequencing for a variety of sequenced synths, beat boxes, and loop manipulators. A global tempo control ensures that multiple sequencers and even loop playback will always run in sync. Graphical note editors and random pattern generators create inspired tools which can be used for the creation of new loops, or can be played live.

Effects

SESSION can be used as an extremely flexible effects processor. Process sounds in VST or DXi, from the audio inputs, or from the internal instruments. The effect library covers a full range of delay, reverb and modulation effects, filters, distortions, and dynamics processors, panning and surround effects, and granular pitch and vocoder effects. All effects can be combined for the creation of completely new real-time processing chains.

Mixer

A comprehensive selection of mixers and routers allow you to mix the input signals and instruments together, and to combine insert and send effects into the signal flow.
The benchmark for soft-synths, the powerful semi-modular architecture and clean interface of ABSYNTH make it easy to sculpt everything from organic textures to rhythmic madness to vintage sounds. ABSYNTH’s unique strengths lie in its multiple synthesis techniques combined with the most flexible envelope control ever. Forget everything you know about modulation - with ABSYNTH you can create everything from timbrally morphing percussive loops to physical modeling textures to time-evolving soundscapes. Any parameter adjusted in ABSYNTH is immediately heard without clicks or glitches. To taste ABSYNTH’s power, draw the shape of your LFO with the mouse while twelve 68-point rhythmic envelopes twist your sound as you perform on a keyboard or MIDI sliderbox.

**Patching and Waveforms**
Flexible patching scheme makes it easy to combine subtractive, FM, AM, ring modulation, and waveshaping. Offers 6 oscillators, 4 filters, 3 ring modulators, a waveshaper and a delay processor per voice along with unprecedented graphical modulation capabilities. Start creating sounds immediately in the Patch Window - no need to create your own structures. Model your own waveforms. Draw waves directly or use the spectrum mode to trim individual harmonics. Mix, modulate, filter or fractalize waves and hear the results while you edit.

**Envelopes and LFOs**
Over a dozen graphical envelopes with up to 68 breakpoints each. Create rhythmical envelopes with an integrated tempo-based function generator. Control almost any parameter with an envelope and edit multiple envelopes at the same time. LFOs can modulate pitch, amplitude, filter, FM depth, pan, and delay time.

**Effects, MIDI, and Recording**
Modulated delay effects can be tightly integrated into each patch. Delay times can be as short as one sample and as long as 10 seconds. And nearly every parameter in ABSYNTH can be modulated by MIDI continuous controllers, after touch, velocity, and note number.

**Sounds**
Comes with over 700 sounds - from classic resonances to acoustic emulations, from poignant pads to powerful percussion.

**Plug It In**
Run up to eight instances of ABSYNTH in any VST 2.0 compatible host. Create massive rhythm ensembles or ambient textures with hundreds of oscillators. ABSYNTH also supports MAS, ASIO and DirectConnect to fit into any system.
BATTERY

Drum Sampler
Breathe life into your drum samples. BATTERY boasts separate sound parameters for 54 instruments, powerful modulation capabilities and unbeatable ease of use. It fulfills even the highest demands regarding precision, sound quality and flexibility, plus it is fast, effective, intelligent and convenient. It has sample-accurate timing, internal 32-bit resolution, up to 128 velocity layers per instrument and can play samples at any pitch.

BATTERY has access to all the biggest sound libraries because it is compatible with AKAI, SF2, LM4, AIFF, WAV and MAP formats. It also comes with 30 high quality soundsets.

BATTERY runs either stand-alone or as a VST plug-in on Mac and Windows. It can be played and modulated via MIDI, offers full VST automation and supports all other common interfaces as well. Up to 32 outputs are available which can be configured flexibly as mono or stereo outs.

Instruments and Samples
- BATTERY can play 54 instruments at a time. The matrix and it's intuitive drag & drop functionality are a big time saver when arranging samples. Sounds from different soundsets can be easily compared and combined into new soundsets without the hassle of readjusting any parameters.
- Each instrument offers a complete set of sound parameters and can use up to 128 velocity-switchable sample layers. Samples may be loaded into the matrix from the desktop or using a dialog box with automatic sample preview function. BATTERY accepts samples of any resolution from 8 to 32 bits, and reads AKAI, SF2, AIFF, WAV and MAP formats. Up to three banks in LM4 format can be imported and used at a time, AKAI sounds can be read directly from CD.

Sound Shaping
Each of the 54 instruments offers a volume envelope (AHDSR), a pitch envelope (DBD), a bit reduction effect and a shaper for controlling the dynamics. All parameter adjustments are calculated and visualized in the wave display in realtime. Each instrument receives MIDI data on a selected MIDI channel and the pitch can be transposed according to the MIDI notes if desired - useful for basses, for example. Every instrument boasts six modulation inputs for which many useful and drum-oriented settings have already been configured as presets.

Samples can be selected either across rows and columns or independently. In addition, individual sounds can be grouped and controlled together. When grouped, all slot settings can be changed simultaneously.

Tuning, shaping, quantizing will warp the sound to make it stick out from the mix or blend it in perfectly.

Every Cell can be routed to an individual output. Battery offers up to 32 outputs, to allow a studio-like workflow.

All parameter adjustments, such as tuning, bit-reduction, waveshaping, volume envelope and pitch envelope are calculated in realtime and immediately shown in the wave display.

Every cell offers six modulators that can be routed to many parameters simultaneously. Twist a sample from mild to wild. The included presets give many examples of modulations that can be applied to a wide variety of sample material.

Each instrument has an FX Loop that can be activated to repeat a chosen area of the sample a given number of times. This is very useful for creating modern and innovative rhythmic sound effects, akin to extreme time stretching or granular synthesis. Create everything from repeated syncopation to machine-gun effects.
Advanced Software Sampler

One of the most powerful sampler ever created, KONTAKT fuses an innovative design with an advanced sampling engine. The result is an inspiring fast and intuitively flexible sampler with exceptional sound quality. In addition to supporting all the standard sample playback and manipulation abilities of its hardware and software predecessors, KONTAKT adds several technologies to give sampling a new dimension. Realtime time-stretching and resynthesis, graphical breakpoint envelopes, an integrated loop editor, analog-modelled filters, visually displayed modulation, and breathtaking efficiency create a sampler with the power to realize the most ingenious ideas. An outstanding sample library containing more than three gbs of sounds in various styles and categories is also included.

**FEATURES**

- Advanced design and dynamic resource allocation ensure that the audio engine always runs at optimal efficiency, for up to 256 stereo voices per instance on a standard computer. Filters, effects, and modulations can easily be added with one click.
- Has two special playback modes: Time-Machine mode allows for independent manipulation of length, pitch, and formant of each sample in realtime. Tone-Machine mode imprints a playable pitch onto the sample, regardless of the original pitch (or lack thereof).
- Offers 14 filters from analog lowpass and highpass to exotic sound design filters.
- A broad range of insert and send effects, including EQs, distortion, delays, and reverbs is also at your disposal.
- Nearly all parameters can be dynamically modulated by LFOs, breakpoint envelopes, step-modulators, or via MIDI. Time-based modulation can be synced to song tempo. Dynamic modulation means each parameter displays both current and set position.
- A drag and drop file-browser makes it quick to set up multisamples. Samples can be trimmed and looped within the main sampler window. The built-in graphical loop editor features seamless looping.
- KONTAKT can import all popular sample formats, plus it comes with 3GB of top-quality samples, including percussion, acoustic pianos, basses, guitars and vintage instruments. The library makes extensive use of KONTAKT’s dynamic modulation abilities for patches that sound truly alive.

Supporting drag and drop of multiple samples, the built-in file browser includes a Favorites function for quick access to commonly used folders. Samples can be played back normally or with an advanced granular resynthesis algorithm for independent control over length, pitch, and formant. Quickly and visually set sample start, end, and loop points with the integrated loop editor. The loop editor supports up to eight loop points for evolving sounds.

In addition to the filter section, each sound can have an insert effect, including EQ, wave-shaper, lowfi, stereo enhancer, distortion, or any of KONTAKT’s seventeen filters. A variety of send effects are also available, including stereo chorus, delay, flanger, phase, and reverb. Each plug-in instance supports up to 32 outputs in supporting host applications, for a nearly limitless number of virtual outputs. The standalone version also supports up to 32 hardware outputs with an appropriate soundcard.

Nearly all of KONTAKT’s parameters can be modulated with LFOs, 32-stage breakpoint envelopes, step-modulators, envelope followers, and more. All time-based modulators can be synced to tempo.
INTAKT

Shuffle the Groove

Intakt is a state-of-the-art sampler specifically designed for rhythmic loop playback, manipulation, and mayhem. Intakt's convenient one-screen interface offers tremendous sound shaping abilities without disrupting the creative flow. Using multiple algorithms, Intakt automatically syncs to tempo, and an outstanding library of loops from Zero-G and East West provides ample source material for any musical style. Intakt also provides a wealth of sound shaping options, including a first-class multimode filter, an envelope follower, two LFOs, effects, and more.

Intakt features three sample playback algorithms to ensure maximum sound quality for a variety of source material.

Using an advanced peak-detection algorithm, the Beat Machine divides the imported audio into individual hits. Each hit can have individual settings for pitch, playback direction, pitch envelope, amp envelope, distortion, delay, and more. A MIDI file can be easily exported so that groove, accent, and feel can be manipulated in any host sequencer. The Beat Machine can directly open REX files which already contain marker information.

Time Machine stretches or compresses the sound in real time. By first analyzing the source sound, Time Machine dynamically adapts itself to a wide variety of source sounds, from sustained vocals to polyphonic percussion.

Sampler mode plays back the source sound like a standard sampler, by linking pitch with time. Intakt uses a sophisticated interpolation to ensure the highest sound quality, even with extreme pitch shifts.

Intakt syncs, stretches, pitches, filters, effects and modulates as well. A powerful sound-shaping filter, flexible envelopes, syncable LFOs, and distortion, delay, and lo-fi effects inject energy and life into any loop.

Even though Intakt ships with enough loops to produce hundreds of killer tracks, it also imports WAV, AIFF, REX1 and REX2 files, Gigasampler, AKAI, HALion, EXS, Battery, and Kontakt instruments.

FEATURES

- Supports Drag and Drop of samples, instruments. Also includes a Favorites function for quick access to commonly used folders.

- Intakt easily syncs loops to any tempo. The groove can also be modified with a Shuffle/Swing function.

- Beat Machine analyzes the audio and divides it into distinct hits. Time Machine dynamically time-stretches or compresses the sound, while Sampler links pitch and time.

- The pitch, volume, pan, modulation, and effects setting of each slice can be adjusted independently.

- The keyboard displays the actual sample mapping layout and makes it easy to audition sounds without a MIDI keyboard. The Input Quantize function ensures that live playing is always intakt.

- A filter with 6 different types (2 pole LP, 4 pole LP, 6 pole LP, 2 pole HP, 2 pole band reject, and 2 pole BP), lo-fi, distortion and tempo-synced delay can be flexibly routed.

- The Master Filter with lowpass, highpass, bandpass or 3-band EQ puts the finishing touches on the master output.

- The keyboard displays the actual sample mapping layout and makes it easy to audition sounds without a MIDI keyboard. The Input Quantize function ensures that live playing is always intakt.

- High-end filters and effects

FEATURES

Affordable Software Sampler

KOMPAKT is a streamlined, professional-quality sampler that provides access to literally thousands of sample-based instruments and libraries. Powered by the efficient KONTAKT engine, KOMPAKT combines intuitive handling and a capable architecture with excellent sound quality. The factory library contains hundreds of detailed and convincing pianos, basses, loops, drums, guitars, strings, and more from the outstanding East West and Zero-G libraries. KOMPAKT is the quickest way to build a production-ready instrument collection, and it can also import KONTAKT, GigaSampler, HALion, EXS, Akai, and other common formats.

Professional Sound Shaping

KOMPAKT makes no compromises playing and performing sample-based instruments. Powerful multi-mode filters, envelopes, and LFOs give a wealth of creative possibilities. Integrated high-quality reverb, chorus, and delay effects give each sample life and depth. KOMPAKT offers professional details allowing for convincing realism of acoustic samples. Direct from Disk (with free downloadable extension) playback lets samples be as large as available hard drive space. Eight-part multitimbrality and 256 voice polyphony allow lush arrangements for top productions.

Outstanding Library

KOMPAKT features an exceptional selection of sounds. Shipping on three CDs, the 2GB library includes acoustic and electric pianos, basses, drums, loops, and guitars. A wide range of orchestral strings and solo instruments mix perfectly with choirs, brass, and percussion. Synths are covered with vintage leads, pads, basses, and much more.

Power and Simplicity

KOMPAKT’s clean and intuitive interface doesn’t let technology get in the way of creativity. An integrated browser with full drag and drop support makes it easy to find the perfect sound. All important instrument parameters can be immediately adjusted without the need to page, scroll, or fumble through a manual. KOMPAKT puts the world’s finest sample-based instruments at your fingertips.

TRAKTOR DJ Studio 2.0

TRAKTOR DJ Studio 2.0 brings professional DJ mixing to the digital domain, unifying listening, interaction, mixing and composition. The modular concept of TRAKTOR DJ Studio 2.0 integrates two high-quality players with a convenient playlist section, DJ mixer, beat matcher, digital scratcher, cue section and filters. The innovative parametric control of the software makes it possible to record all control movements and export a mix in a dedicated file format. Five cue points for setting loops or triggering the next track can be set and saved for each audio file. The unique interactive waveform display, full MIDI control, mix automation and audio file export make TRAKTOR DJ Studio 2.0 a superior music player.

**FEATURES**

- All user interactions during a TRAKTOR session can be recorded with sample accurate precision. You can generate a mix as a pure control file without replicating the audio material. Interrupt and resume mixing at any point or edit parts of a mix in a second pass for additional effects. TRAKTOR files contain all information needed to identify the tracks used in the mix and reduce hours of performance to a size perfect for sharing mixes over the internet.

- Realtime waveform displays on both decks allow inspection of the audio ahead of time, graphically showing cue points and detected beat events. The waveform can be manually dragged with the mouse for precise positioning of cue points. For turntablists, TRAKTOR DJ STUDIO 2.0 offers scratching in a most realistic way.

- Up to 10 cue points per track, assignable to trigger special mixing actions

- Up to 10 loops per track including a wide variety of loop setting

- Over 400 TRAKTOR actions and functions can be assigned to keyboard shortcuts or controlled via MIDI

- Powerful database with fast search engine processing ten thousands of tracks in fractions of a second

- DJ STUDIO 2.0 boasts a unique beat recognition and aligning feature. Tempo and phase of two tracks can be automatically matched, allowing the DJ to focus on the artistic aspects of mixing. Phase shift is displayed for easy manual beat matching. Plus, the beat detector makes it possible to set tempo accurate loops on the fly.

- Non-destructive automation file recording (Mixfile) with multiple undo function, fast export to WAV or AIFF

- Has a crossfader with selectable sensitivity and a convenient auto-fade feature as well as punch-in, boost and mute buttons.

- A 3-band EQ with 100% kill switches per band for each deck. There is a powerful 3-band limiter for the master signal.

- On top of that an awesome 8-pole bandpass/notch filter allows you to totally impose your own sound on the mix.
Virtual Software Studio with Analog Synths, Samplers, Drum Machines, Sequencers and Effects

Finally a software synth that is harder than hardware. Reason is a complete studio package with synths, samplers, drum machines, loop players, a sequencer, mixing, effects and much much more. Reason is more than a program — it's a creative revolution. It's changing the way people approach modern computer-based music, blurring the boundaries between music genres. More than an infinitely expandable studio on a CD-ROM, more than analog synths, samplers, drum machines, loop players, effects, and pattern sequencers, Reason is the beginning of a new era of electronic music:

— A self-contained synth studio system, Reason provides an infinite number of great sounding devices with a fast and flexible sequencer.
— As a sub-system synced to your audio sequencer, you can process Reason's audio output with plug-in effects and mix it with your hard disk tracks.
— As a virtual synth rack with your MIDI sequencer, Reason's devices function exactly as their hardware counterparts. All of Reason's devices have the look and feel of the real thing, but more importantly they have the sound, performance and attitude to rival any hardware out there. Reason hooks up to your MIDI keyboard, giving you MIDI control of all devices, knobs, faders and parameters. So whether you're a producer or a bedroom DJ, a pro or a beginner, sounding this good has never been so easy. All the tools you need to create, edit and mix your music, all within the comfort of your computer.

FEATURES

- Reason is completely native. All sound is generated by your computer's CPU. No special hardware is needed, just an audio output. And ASIO, MME, DirectX and SoundManager support means that Reason is compatible with just about every sound card on the planet.
- AIFF and Wave export
- 32-bit floating point audio; 24-bit playback
- Sample rates up to 96kHz
- 64 audio outputs
- Each unit in Reason's virtual rack is edited from its own on-screen front panel. All the sliders, knobs, buttons and functions of the equivalent hardware are there.
- Choose what you need from the Create menu, and it appears in your rack, logically patched into the signal chain. If you ever wished you had eleven samplers, Reason is definitely for you. And if you run out of mixer channels, just create another mixer.
- When you save your music, your whole studio setup is stored with along with it. Include actual samples, loops and drum kits in the Reason file, for web publishing or e-mail distribution to other users.
- Comprehensive MIDI remote control
- Full synchronization with other MIDI equipment
- Full automation of all fader and control movements
- Zero latency when using Reason with a modern sound card with an effective ASIO driver
- 500MB of high quality samples, REX-files, kits and patches from e-Lab and Dunlab
- Included ReFill Packer utility lets you create your own ReFill sound banks including samples, kits and patches
- Includes a "database" for all types of files (samples, loops, drum kits, synth patches etc.), complete with its own Browser. Finding, auditioning, handling and organizing files has never been easier. A Reason Song file can contain all kinds of music files in a single chunk. Package sounds, loops and patches along with your music, publish the file on the web, and any Reason user in the world can enjoy your music exactly the way you intended it to sound.

A single keypress will turn Reason's rack around, and there you are, in patch cord heaven. Most audio connectors are made automatically. When a new device is created, it appears immediately below the currently selected device, and Reason patches it into the system in the most logical way. Repatch by dragging the patch cord plug to the desired connector, or just make a pop-up menu choice.
.MIDI In Device/64-Channel Audio Interface
The hardware interface routes the audio output channels either to your sound card, or to ReWire channels in another program like Cubase and Nuendo, Logic and Digital Performer. The MIDI in device routes 64 channels of incoming MIDI to Reason's devices. With ReWire, you can process Reason's output with plug-in effects and filters and use it exactly like a hardware synth rack.

Mixer
Reason's mixer features 14 channels, each with four Aux sends. Insert effects are handled by patching the effect between the device's output and the mixer channel. If you're running out of channels, simply create another mixer. Chaining is more or less automatic, including sends. The equalizer is simple but effective. For more detail use the Parametric EQ effect.

Effects
Reverb, Delay, Phaser, Chorus/Flanger, Compressor, Parametric EQ, Envelope Filter and Distortion. All are high quality processors with personality, attitude and great sound, featuring parameters that can be modulated via Control Voltage (CV) or MIDI.

Subtractor Polyphonic Synthesizer
A two-oscillator analog synth in the classic mold, Subtractor matches the best hardware on the market. Phase modulation lets you replicate pulse width modulation effects as well as create all-new timbres. FM, ring modulation and two fat, resonant filters are included. Use the Gate and CV ins to connect it to the Matrix pattern sequencer for instant loop satisfaction, complex envelopes and cool LFO effects.

NN19 Digital Sampler
Powerful and easy-to-use, the NN19 does the job fast with top-notch audio quality. Map your own multi-samples with point-and-click ease. Or use one of the multi-samples from Dublab. Includes over 250 different sampler patches, and powerful synth functions provide all you need for creative sound design.

Dr. Rex Rex Player
Based on Propellerhead's groundbreaking ReCycle software, it allows you to do wondrous things to sampled loops. Change the tempo without transposing or timestretching. Pitch and pan individual samples or replace a single sound within a loop. Built-in filtering and modulation functions lets you turn any loop inside out and upside down.

Matrix Pattern Sequencer
A classic monophonic pattern sequencer, just the thing for hypnotic synth loops. Just click in notes and gate levels in the front-panel window, and hit Play. The Gate and twin CV outs can be hooked up to most Reason devices, often in several ways. This, combined with the fact that you can use as many as your computer can run, makes Matrix the ultimate power tool for loop sequencing.

Redrum Drum Machine
Redrum is a recreation of an old-school drum machine with 909-style step-time programming and classic features like shuffle, accent and flam. But there is more. Drum kits are included, but each sound can be replaced. Use Redrum as a passive sound module. Build basic patterns with Redrum's on-board programmer and fills with the Reason sequencer. Or convert Redrum patterns to sequencer data.

Rebirth Input Machine
This device lets you stream 18 channels of audio from ReBirth, right into Reason's mixer and effects.

The Reason Sequencer
Edit songs by drag and drop and copy and paste. You can even cut, copy and paste individual sequence events direct from the arrange view. The Group system lets you handle chunks of music graphically in a flexible, intuitive way. Select a track, and the rack will scroll to the relevant instrument. Move a knob on a device, and the movement will be recorded. Device-specific editors addresses every parameter by name. No need to keep track of anonymous controller numbers. All important features are there: quantize with swing and groove, REX-files as quantize templates, variable time signature, cycle recording, graphic editors, etc. And because Reason knows what instrument is played for each track, the correct editor is automatically selected when entering the edit view. Key, drum, rex, velocity and controller editors are all included, providing full control over every detail of your MIDI recordings. Change the note length by dragging, draw in controller data or cut, copy and delete. There is even an editor for pattern changes in Redrum and the Matrix sequencer. And all sequencing is done in real-time.
The Ultimate Tool for Sampled Grooves
Loopists, groovists, samplists! A new world is about to open up before your very ears! ReCycle solves all your groove related problems – and lets you get truly creative in the process. Loops, grooves and breakbeats: Powerful sonic building blocks, and great inspirational triggers. No matter what style of music you're into, you can be sure there's a loop out there that can spice your track up a little, or lift it to completely new heights. But handling loops and grooves used to mean hard work. Hours of pitching and stretching just to get a loop to fit your song's tempo and timing. And if you need to change the key, you're in for even more work. In the end, your loops are controlling you. ReCycle changes all that. The ultimate tool for sampled grooves, ReCycle gives you full creative control over your looped material.

What Does ReCycle Do?
ReCycle does more than just solve groove problems and clean up loops – it's a highly creative tool that helps you make the most of your grooves. Simply, ReCycle lets you do with sampled loops what you can do with beats programmed from individual drum sounds - like alter the tempo, or replace sounds and process them individually.

How is it Done?
Start out with a regular audio file or a sample in your sampler, preferably one of a groovy nature. Load the groove into ReCycle, and the program will "look" at the groove, analyze it, and break it up into its rhythmic components. Each part is called a "slice". The process itself is fully automated, but once the slices are there, they are yours to move, monitor or delete, using the on-screen tools and controls. Other tools allow you to set the length, attack and decay of the slices, and to change your grooves' overall tempo or pitch, without one affecting the other.

Then What?
Bring your improved groove into a song. Depending on your equipment and working method, you can either use ReCycle simply as a problem solver for loops (load a drum loop into ReCycle, set a new tempo or pitch, and save the results as a new file), or load up any groove, and use ReCycle's on-screen signal processors: Compressor, EQ and Transient Designer, to give it some punch and distinction. Anything you choose to do can be applied to your loop, and saved as a new file.

To use your loop directly in Propellerhead Reason, Cubase , Logic or other programs supporting REX 2 files, all you need to do is save your sliced-up loop as a REX 2 file and import it onto an Audio Track in your sequencer. The imported loop will play back like the original, but you can change the tempo freely, and you will have full control over the original slices! Silence, move or replace individual hits, change volume and panning – your loop has come to life!

If you're using a sampler (AKAI, SampleCell, EMU etc.), ReCycle creates a soundbank containing the samples/slices, and transmits it to your sampler. ReCycle then creates a MIDI file based on the timing of the original groove. Import the MIDI file into your sequencer, and it will trigger the slices in your sampler, playing back the groove you started out with. Only this time – you make the rules. Quantize it, change the tempo, retune or replace the sounds - total loop control!

REX 2: ReCycle Export Format
REX 2 is a file format that allows your audio sequencer to play and manipulate ReCycled audio files as if they were MIDI parts. All you need to do is save your sliced-up, imported groove as a REX 2 file and import it onto an audio track in your sequencer or the Dr. REX Player in Reason. Your groove will play back just like the original, but this time, you can change the tempo freely, rearrange the individual sounds, or apply realtime effects to any or all parts of the groove—couldn't be easier or more flexible.
ReBirth is a stunningly accurate reproduction of the bare essentials of techno music making. Silver boxes, blinking LED’s, a myriad of knobs - and a sound like nothing else on this planet. A software reincarnation of two analog bassline synths (TB-303), and two classic drum machines (TR-808 and the TR-909), ReBirth also offers a digital delay, a quad-input distortion unit, a compressor and an analog filter emulation unit, the PCF (Pattern Controlled Filter). All the quirks and subtle qualities of analog, combined with the convenience of modern computers (a minimum of cables, integration with your sequencer software, complete front panel automation, real-time audio streaming and much more).

Here’s how they did it: Instead of sampling the sound, they “sampled” the actual synth hardware. It was a question of analyzing the mysterious inner workings of the analog design, and then creating a mathematical model of it, incorporating practically every nuance. Then they converted this theoretical model into lightning fast computer code. So fast that it runs on the computer you already have. No customized cards, DSP chips or other expensive accessories are required.

Just as important as the sound, is the way the sequencer controls the sound. To get the unique character you need access to all programming functions of the analog original: Accent and Slide on the bass lines, Snappy, Decay and Tone on the drums. The subtle shift in character from beat to beat. ReBirth, integrates a vintage sequencer section and knob-loaded front panel into the machinery.

- All control work in realtime and in the same way as on the real machines
- Pattern and song editing functions like copy and paste, transpose, shift, random
- Export songs as AIFF or .WAV files
- MIDI clock sync to external hardware or sequencer software plus MIDI control of all front panel knobs
- User modifications for the program are your chance to get seriously creative: Dig right into the code and change the graphics, exchange the drum sounds — even create your personalized ReBirth.

- Total integration with Reason, Logic, Digital Performer and Cubase/Nuendo via ReWire. Full sync and realtime streaming of up to 18 individual audio channels for post-processing through effect plug-ins.
ProSessions is a fresh new collection of affordable top-quality samples created by some of today's top musicians, composers and producers. The ProSessions library delivers inspiration across a wide variety of genres and styles including hip-hop, dance, pop, Latin, R&B, rap, drum & bass, techno, world beat and more. Designed with songwriters, producers and remixers in mind, each ProSessions sample features a top-quality recording, meticulously edited by hand for rock-solid professional timing and easy integration into other grooves. Each CD delivers over 400MB of world-class samples in multiple formats for today's hottest Mac and PC software—AIFF, WAV, REX2 and Acidized WAV. The initial CD-ROM titles in the ProSessions Sound Library include:

**Alex Tinsley Electro Crash:** Mixed blend of big-hair 80s attitude remixed with today's hot sounds

**Bobby Wilks Vector Field:** Dangerous synths meet melodic outcries, twisted nature and psychoacoustics

**Chris Falsom Worldbeat Café:** Full- and partial-mix grooves drawing from popular Latin percussion styles

**Chris Falsom These Drums Are Loud:** Natural pop/rock drums recorded and edited in sections with songwriting in mind

**Discrete Drums World Rock & Percussion:** Solid rock song sections from starmaker producers and engineers

**Discrete Drums R&B Drums & Percussion:** Great collection of laid-back funky grooves presented in song sections

**DJ Logickal Sounds Logickal:** A deviant library of raw, experimental abused synths and samples

**Diavola Mechanically Separated:** Reality is stranger than fiction with this edgy, moody industrial aberration

**James Galvez Latin Street:** Deep funky vibe packed out with pure Latin hip-hop and R&B nastiness

**James Galvez Latin Element:** Sizzling Latin loops of authentic instruments and rhythms

**Neldome St. Hydrosonix Disc 1:** Incredibly diverse CD featuring a progressive mix of hip-hop, trip-hop and R&B

**Neldome St. Hydrosonix Disc 2:** Dives even deeper into the world of trippin', hoppin' and skippin'

**3RDeedree Productions Hella Bumps Disc 1:** Fresh booty from the best of the hip-hop and rap skools

**3RDeedree Productions Hella Bumps Disc 2:** Who says you can get too much of good thing?
Realtime Resynthesis/Sound Manipulation Plug-in (VST Mac)

Magenta is an audio effects plug that uses any VST track or the live input as basic waveform that can be tweaked using the incredible power of realtime resynthesis—the most versatile and powerful synthesis technology available. Prosoniq’s proprietary Multikernel Spectrum Resynthesis Engine (MSRE) reproduces any sound by resynthesizing it in real time, giving you utmost control over all aspects of the recorded instrument or music track. Design your own sounds without the limitations of traditional sound synthesis techniques.

Play and control multi-voiced musically monophonic and polyphonic instruments directly from any MIDI keyboard in real time while adding a wealth of spectral effects that are fully automatable and can be dynamically controlled. Produce vocal doubling, to create additional voices or melodic choruses from single vocal lines. Tweak sounds to create alien atmospheres, clusters or textures that have nothing in common with the original sound.

- Real time resynthesis for extensive sound processing
- Works on any input signal in real time
- Use as software synthesizer with live audio input
- Pitch shifting and versatile spectrum filtering capabilities
- LFO control over all important parameters
- 2D graphic control over filtering and spectral manipulations
- All key parameters can be controlled over definable MIDI controllers
- Formant preservation during pitch shift
- Over 10 spectral macro filters for all sound design situations
- Directly playable over MIDI keyboard
- Free pitch, pitch quantize and pitch lock capabilities to correct the input pitch or to create mouth tube or vocoder fx
- Built-in reverb effect
- Create vocal accompaniments by playing harmonies on your MIDI keyboard
- Change the timbre of any sound
- Create mouth tube and vocoder fx
- Pitch shift musically monophonic and polyphonic sounds
- Create yet unheard effects by tweaking the harmonic developments of sounds
- Use any VST track as oscillator for an incredibly versatile synthesizer!

ORANGE VOCODER

Realtime Vocoder (VST Mac and PC)

Perhaps the fastest, most flexible and most transparent sounding simulation of an analog vocoder effect as a VST plug-in. Following the long tradition of German Vocoder manufacturers, Prosoniq offers you an all-digital simulation of a realistic analog vocoder effect that is fully customizable and comes with an 8-voice virtual analog synthesizer unit, Freeform EQ and Filterbank Reverb, all in one plug-in.

- Realtime Vocoder effect usable in either the Master or Track Effect Racks
- Uses either any input source/VST audio track or the built in oscillator as carrier signal, and any VST audio track as modulator
- Full MIDI controllable through the VST standard
- Post-Vocoder Filterbank Reverb Effect with Mix, Decay and Density
- Fully customizable Freeform EQ with max. 12 nodes, ranging from 20Hz to 20kHz and resolving from +30 to -30 dB FS
- Input Channel flip exchanges carrier and modulator signals without re-routing tracks
- Integrated 8-voice virtual analog synthesizer with 2 oscillators per voice featuring 10 basic waveforms and 7 sampled sounds, voice detune, pitch LFO, 4-pole Lowpass filter with cutoff and resonance, oscillator hard sync and ring modulator.
TimeFactory is a powerful tool dedicated to performing high quality, near-lossless time and pitch shifting on your final mix or other audio material. Using the latest in DSP technology, TimeFactory achieves time scaling amounts of up to one third the original length, corresponding to a time stretching factor of 133% and more (or pitch scaling of up to 5 semitones) without audible loss in quality. This is as much as slowing down a complete music piece from 120 BPM to 90 BPM, or vice-versa. Conventional methods used in other software either suffer from unpleasant harmonic distortion, timing inconsistencies and echoes even at small time scaling ratios, or introduce severe smearing or reverberation that makes the results unacceptable for professional audio purposes when applied to complete musical pieces. With TimeFactory, you are free to choose the tempo of your recording at a result that is indistinguishable from the original within a large range of scaling ratios, without endlessly tweaking dozens of parameters. Whether you wish to time scale individual sound files of a recording session or the final mixdown, whether you are processing classical or ‘drum & bass’ style music, TimeFactory is a simple click-and-go application for Mac and PC with straightforward user interface and easy to use batch processing capabilities.

- Accepts sound files in AIFF, SDII (Mac only) and WAVE file formats of any word length and sample rate, even 24-bit/96kHz or split stereo files are no problem.
- Works with any material of any genre, be it classic, pop, rock, techno or other
- Proprietary timbre Wizard algorithm allows for natural pitch shifts
- No more worrying about the outcome of time consuming parameter tweaking sessions, just set the desired time scaling ratio and click to process your audio files within minutes.
- No timing inconsistencies
- Input speed in new length, BPM or %
- Double click to edit any soundfile in your favorite editing program
- Transcribe Mode for crystal clear 200% time scaling of complete songs
- Pitch Shifting including formant correction
- Batch Processing
- High quality resampling with anti-aliasing for pitch shifting
- No sound coloration, no phasing with stereo files
- MPEX Time Scaling technology for best results at the first mouse click
- Mac and PC version in a single box - no worrying about switching platforms. Also includes SonicWORX Essential audio editing software (for Mac).

PROSONIQ VST BUNDLE

The Prosoniq VST plug-in bundle combines many advanced sound design tools with professional plug in products for mastering and post production, all in one package. Whether you are processing individual tracks like vocals, guitar or synth or are looking for professional tools to improve your final mix, the Prosoniq VST plug-in bundle leaves nothing to desire. In fact, once you’ve used it, none of your tracks will ever go unprocessed!

- Ambisone places your tracks in virtual 3D sound space without requiring costly encoders or playback equipment.
- VoxCiter adds the warmth and clarity of an analog recording to your vocal or instrumental tracks.
- Includes Roomulator, a powerful reverb toolkit with 5 distinct reverb algorithms well suited for all studio application
- Dynasone with its powerful Maximizer/Multiband Compressor gives your mix that final touch and turns any music track into a CD-ready master.
- PiWarp is an indispensable tool if you’re after special effects that are both unique and make your tracks easily recognizable.
**Ambisone: 3D Positioning**

Mix your VST tracks in full 3D stereo. This includes placing sound sources outside or above the speakers to provide your mix with a previously unthinkable width and depth. Ambisonic’s Virtual Scenery Modeling approach allows for 3D placement when monitoring the mix through headphones as well as through speakers. Includes modulation sources to automate 3D placement allowing for sound sources that rotate around your head on a single mouse click. The flexible and intuitive interface lets you adjust the different parameters while monitoring both position and elevation in real time.

**Roomulator: Reverb Kit**

Optimized for different size ambiances, the Roomulator toolkit provides highly flexible, natural sounding reverb which meets the highest requirements of today’s studio standard. Dense Hall Reverb with canyon-like decay times as well as simulating narrow spaces or closeup situations in utmost quality and brilliance are provided to all your recordings with this all-in-one reverb effects kit. The intuitive 2D manipulation capabilities let you easily adjust the overall timbre while listening to the results in real time. No matter whether you are recording guitar, acoustic instruments or vocals, this powerful tool will place your instruments to pleasantly integrate in a clear and brilliant mixdown.

**VoxCiter: Vocal/Single Instrument Track Toolkit**

Add natural brilliance to vocal recordings, refreshing and even restoring the quality and fidelity of any kind of instrumental or vocal material. It is great for finalizing vocal recordings or any instrumental track and will bring old recordings back to life again. Use it to add that ‘pro’ sound to your vocal recordings and give your audio tracks a touch of life that got lost during the process of sampling and intense post-processing.

- Flexible Noise Gate with Attack, Hold and Release
- Dual Vocal parametric EQ (Low Pass, High Pass, Band Pass and Band Reject selectable)
- Realtime Neural Automatic de-esser circuitry
- Vocal Compressor/Expander with Attack/Release/Auto features
- Independently equalizable Sidechain feed for Compressor/Expander
- Vocal Refresh
- Vocal Saturation (simulates tube distortion to add warmth)
- On-board Bypass switch for instant comparison without having to switch windows

**PiWarp: Frequency Warping**

Create interesting special effects and atmospheres. Used with strings and sustained sounds it creates dense ambient atmospheres reminiscent of alien worlds or space ship ambiances that let you create sonic landscapes for film or TV in an instant. Used with dry vocal and drum sounds it creates interesting counter-melodies and alien voice effects that are unique and useful for a wide variety of experimental and contemporary music.

- Warp Factor parameter sets the frequency warping amount
- Tune Factor sets the basic pitch of the output
- Filter parameter filters the output with a 6dB/Oct. Low Pass Filter
- Reverb Amount and Room Size parameters included
- True stereo processing

**Dynasone: Mastering/Post Production Tools**

Powerful processing functions provide your final mixdown with that special ‘pro’ sound. Neural Automix function adjusts the overall sound of your mix to sound both transparent and have an optimal frequency response. Dynasone analyzes your work and proposes a setting for optimum results.

Different templates let you adjust your overall sound to match any desired musical style, from Classic to Dancefloor. What’s more, you can even choose an optimization scheme for your final release medium. Select ‘Vinyl’, ‘Tape’, ‘CD’ or ‘Linear’. Multiband maximizer and peakstop limiting functions optimize the loudness of your mix to match any desired dynamic range and for optimum punch and brilliance. Subsonic and Refresh functions add new spectral contents allowing for restoring and optimizing older recordings.
Pitch 'n Time 2

Time Stretching and Pitch Shifting

Pitch 'n Time 2 is a high quality time stretching and pitch-shifting AudioSuite software plug-in that will work with all versions of Pro Tools on the Mac and PC, from Pro Tools free to Pro Tools HD.

Traditionally pitch/time manipulating application used math to either remove or add samples, or change sample rates to achieve the desired result. Some program material would respond well, while others had artifacts introduced— rendering the processed files useless. Serato's decided that the output of the process must sound the same as the input, just faster or slower. In other words the problem isn't about waveforms or kilohertz - it's all about hearing. So Serato developed a sophisticated model of the human auditory system that “listens” to the music, performing a sophisticated auditory scene analysis and deciding how best to treat the source material. The ranges of transformation within Pitch 'n Time 2 are 50% to 200% for time compression / expansion, and ± 12 semitones for pitch shifting. Both functions each have three interchangeable panels, ranging from simple fixed ratios to complex tempo and pitch alterations that vary over time.

FEATURES

- Modify tempo from 50% to 200% of original and simultaneously pitch shift by ±12 semitones:
  - Time stretch by tempo change, length change, target length, or target BPM
  - Pitch shift by frequency change or semitone shift.
  - Preview changes in real time
- Integrates perfectly with Pro Tools (Mac and Windows) as well as other DAWs and applications that support AudioSuite.
- Works with all bit depths, and sample rates and audio file formats available within an AudioSuite compatible application — can even be used to change the sample rate of your sample without losing quality.
- Preserves sample accurate timing while at the same time maintaining sonic integrity
- Works as well on solo instruments and drums as it does on a complete mix.
- Process stereo tracks without phasing
- Multi-Channel Mode - allows you to process up to 48 tracks together while maintaining their original phase coherency.
- Time-Morph allows you to drop a marker at an event and move it anywhere; the audio flexes before and after to allow you to stretch out a single note, or even change the timing of a loop.
- Variable Pitch Mapping lets you pitch-correct individual notes, remove or create pitch slides, or even make a realistic record scratch sound.
- Supports all SMPTE time code formats: 30 fps, 29.97 fps (Drop/Non-Drop Frame), 25 fps (EBU) and 24 fps. Just select your desired end time position time code, and it calculates the required time stretch.
- Time Stretching from one Time Code frame rate to another.
- A quick and easy BPM calculator for loops determines the tempo of a selection against the number of bars and beats selected.

Draw the tempo map you require directly on the screen

Quickly set a tempo change numerically, with the slider or using the BPM calculator

Drop a marker at an event, and move it anywhere; the audio flexes before and after, letting you stretch out a single note, or even change the timing of a loop.

Classic pitch panel for when you need straight, high quality transposition

Pitch-correct individual notes, remove or create pitch slides, even make a realistic record scratch sound

Whatever the tempo does, the pitch follows. Create an accurate tape stop, or even use it as the best resampler around.
Serato Scratch - studio edition RTAS & HTDM Scratch any digital sample or sound file in Pro Tools using your existing turntables or mouse as the controller. Serato Scratch is a software plug-in from the company that brought you the multi award winning plug-in, Serato Pitch 'n Time. Serato Scratch - studio edition brings DJ scratching directly into your studio like never before. Scratch allows you to scratch any digital sample or sound file on your computer using your existing turntables or mouse as the controller. Special vinyl included with Scratch contains a control signal that allows your computer to track the motion of the record, simulating the same movement within the digital sample. The result is a feel and sound that is indistinguishable from scratching vinyl. No more record burn and no more dub plates!

- Scratch any digital sample or sound file on your computer using your existing turntables or mouse as the controller
- Record mic input and scratch on the fly
- A full compliment of standard turntable controls are provided, including reverse play and pitch control
- Available as a MAS plug-in on the Mac and as RTAS and HTDM plug-ins for Pro Tools TDM including HD, and Pro Tools LE - Mac OS & Windows

**Scratch – Live**

Serato Scratch Live is a stand alone version of the ground-breaking software plug-in Scratch SE that allows you to scratch and mix your mp3’s and digital sound files using your existing turntables and mixer as the controller.

- A special vinyl record included with Scratch contains a control signal that allows your computer to track the motion of the record, simulating the same movement within the digital sample
- The control signal output from the turntables are routed into the software by plugging them directly into your audio interface
- The selected audio sample is then routed to the DJ mixer for cross fading, cutting etc
- Audio from the DJ mixer then goes to your speakers, or back to the computer for recording
- Feels and sounds just as though you are scratching a real record – latency is limited primarily by your I/O hardware’s buffer size, converter latency, and session sample rate. For example, a Pro Tools system configured with a 128 sample buffer results in a total latency of 9ms when operating at a 44.1 kHz sample rate
- The package includes two vinyl control records and the software CD.
- Replacement records are available for $10

- A stand alone version of Scratch SE for Mac OS 9 & X and Windows XP.
- Requires a Mac or PC computer, up to two turntables and a DJ mixer.
- The package includes and two vinyl control records, software CD and a USB interface to connect your turntables to your computer.
- Scratch and mix mp3, aif, wav, ogg and CD sound files using your existing turntables and mixer as the controller.
- A ‘feel’ and sound that is virtually indistinguishable from scratching vinyl.
- The package includes two vinyl control records, a compact portable USB interface for 2 turntables and a microphone input.
- Record mic input and scratch live audio on the fly.
- Mix multiple tracks live from the same CD.
- Needle dropping - cue the way you are used to.
SONIC FOUNDRY

SOUND FORGE 6.0

Professional Digital Audio Recording, Editing and Mastering Software for Windows

The industry-standard for audio recording, editing, effects processing and streaming media creation, Sound Forge is used worldwide for production in leading recording studios, post-production houses, broadcast facilities, radio stations and home studios. It includes over 35 realtime audio effects and processes with more than 200 presets for manipulating audio, and supports a wide range of audio and video file formats, including Windows Media, RealMedia, QuickTime and MPEG 1&2. Version 6.0 expands on a decade of leadership by adding features that make it faster and more powerful than ever.

From non-destructive editing to new formats for import and rendering, Sound Forge 6.0 provides the most intuitive and efficient digital audio editing environment available for media professionals worldwide. Features include realtime non-destructive editing, modeless audio plug-in chainer, multitask background rendering, 32-bit/64-bit float/192kHz file support, enhanced time zoom, fully customizable tool bars, tabbed docking windows and DirectX plug-in manager.

FEATURES

Fast, Powerful Audio Editing
Sound Forge provides the power and flexibility you need to create a clean, professional final product—cut, paste, and delete audio with extreme speed and accuracy — down to the sample level. Sound Forge 6.0 combines fast and powerful non-destructive editing with simple drag and drop operation, allowing you to focus on your project and not time. And a fully customizable interface allows you to build projects the way you want. Also supports standard Windows keyboard commands and mouse shortcuts.

◆ Edit, record, process, and encode audio on your PC
◆ Cut, paste, move, mix, delete, mute, reverse, fade, and cross fade audio
◆ Drop markers during playback or while editing. Create custom marker names and use them for creating regions and loops.
◆ Edit files down to the sample level. Sound Forge has a 24:1 zoom ratio, allowing you to perform more precise, sample accurate editing. View, select, edit, and snap to sample selections. You have more control over your audio editing than ever before.
◆ Import and save 32-bit files (record them if your hardware supports 32-bit recording)
◆ Multitask background rendering lets you work on one file while Sound Forge processes another—saving you valuable production time. Open, play, preview, cut, copy, paste, and delete files while other project files render in the background.
◆ Customize your toolbars to create the interface you want for quick access to commonly used functions.
◆ Dock floating windows, including, regions list, playlist, keyboard, play meters, and time display, individually or on top of each other.
◆ Customize your toolbars to create the interface you want for quick access to commonly used functions.
◆ Use an unlimited number of undos/redos to restore a file to any previously edited state.
◆ Synchronize audio and video, frame by frame for streaming media productions and multimedia presentations.
◆ Create and edit ACID loops. Permanently assign root notes, number of beats, and tempo to ACIDize new loops.
◆ Trigger audio playback via MIDI commands from any MIDI software or hardware device.
◆ Use the Spectrum Analysis tool to analyze waveforms by frequency and help identify noise problems.
◆ Use the Preset Manager to back up, transfer, and organize your favorite presets (even ACID presets). Save time in accessing most commonly used settings.

Audio Effects and Processing
◆ Choose from 35 audio effects (including Amplitude Modulation, Chorus, Dynamics, Delay/Echo, Flange/Wah-Wah, Distortion, Envelopes, Gapper/ Snipper, Noise Gate, Pitch Bend/Shift, Reverb, Vibrato and more) and processes with over 200 presets, including 18 DirectXAudio Plug-Ins from Sonic Foundry's XFX1, 2 and 3 series.
◆ Use the Audio Plug-In Chainer to chain multiple plug-ins together and hear the results immediately.
◆ Use the DirectX Plug-In Manager to customize folders and rename audio plug-ins.
◆ Apply acoustic responses of real environments such as concert halls, caves and stairways with the Acoustic Mirror plug-in.
◆ WaveHammer mastering tool limits dynamic range, adds punch to recordings, and boosts signal levels without clipping
◆ Audition effects before applying them and make "before and after" comparisons
◆ Use Time Compress/Expand to easily turn 33 seconds of narration into a 30-second spot without altering the pitch.
◆ Use the Spectrum Analysis tool to perform precise FFT analysis, and display resulting data in two graphical formats. Use the Spectral Graph to monitor input or playback in real-time.
Protected Work Environment

Sound Forge includes crash recovery tools, which allow you to recover lost work after a power failure or system crash. Also includes a powerful undo/redo history feature, which allows you to see your entire work history at a glance and undo edits.

Powerful Encoding Tools

- Encode your audio files for the Internet in RealAudio, Windows Media, and MP3 formats. You can even encode video, insert metadata command markers, launch websites, display captions, and embed URL flips into your audio and video streams.
- Render audio to just about any file format including WAV, ASF, RM, MP3, WMA, and AVI, eliminating the need for another program to perform file conversions.
- Sonic Foundry's Batch Converter 5.0 utility allows you to apply the same process across multiple files automatically.

CD Features

- Rip audio from CDs, transferring music to your hard drive, and save files in MP3, WAV, and WMA formats.
- Create your own audio CDs. Sound Forge includes track-at-once CD burning, allowing you to take your audio projects with you and share them with the world.

Video Features

- Video render options include fast video resizing, source video resampling, and video stretching.
- Sync audio with video at sub-frame accuracy. With external monitor previewing through IEEE1394 devices and more render options than ever, Sound Forge is the perfect companion to your video editor.
- If you’re new to the world of digital video, Sonic Foundry's bundled Vegas Video LE 3.x provides the perfect introduction to professional DV and audio production.
- A professional digital video and audio multitrack editor, Vegas Video LE 3.x lets you add up to eight tracks of video, apply effects and transitions, and time-stretch audio and video. Perform edits in real-time and hear the results immediately.

Sound Forge Studio

Incorporating much of the award-winning technology found in Sound Forge, this streamlined version makes it easy to record, edit, and process audio using your PC. Record from a CD, microphone, LP, cassette, or musical instrument, and then edit your recording using a wide range of tools and effects. Liven up presentations, recordings, and music using over 30 digital audio effects and processes, including 1001 Sound Effects. Create your own “Best Of” audio CDs using track-at-once CD burning.

- Edit files in real-time and hear the changes immediately. Sound Forge Studio includes dozens of editing tools including: cut, paste, move, delete, mute, reverse, crossfade, trim, normalize, fade, resample, pan, enhance, insert silence, and more.
- Sound Forge Studio includes a 10-band EQ, reverb, delay, distortion, mute, reverse, fades, crossfade, pan, volume, normalize, and more.
- Free sound effects library lets you enhance your audio with over 1,000 professional-quality sound clips - from explosions and flying saucers to animals and spooky noises. This royalty-free library is perfect for presentations, PowerPoint productions, and web sites.
ACID PRO 4.0

Loop-Based Music Creation Tool for Windows

ACID PRO is the often-imitated original loop-based music creation tool for the PC. This powerful award-winning tool allows you to create and produce royalty-free music for audio production, multimedia projects, broadcast music beds, Web sites, Flash animations and DV scoring. Bundled with over 600 music loops, you'll be creating royalty-free music in minutes. Though incredibly easy to use, ACID PRO takes no shortcuts when it comes to providing the depth that advanced users require. From unlimited tracks of audio and MIDI events, DirectX plug-in support, CD ripping/burning, streaming media creation, and support for 10 popular audio formats, no program is better than ACID at matching the tempos and keys of ACIDized WAV files and songs for loop-based music construction.

FEATURES

Edit multiple tracks at once with ripple editing
Select time signatures anywhere from 2/4 to 9/8, or customize your own settings anywhere from 1/1 to 99/32. Set tempo, key, and time signature markers in your projects, and make adjustments to the beat ruler during playback. Use the included odd-timed loops or create your own. Explore and expand syncopated beats and odd times used in Jazz, Latin, and other music styles.

Create custom remixes of your favorite songs using the Beatmapper. A remixer's dream, Beatmapper helps you add tempo information to song-length files so you create your own remixes and combine music loops with songs. It's simple. Just import a song, add some beats and give it a powerful new edge. You can even change the tempo of your song without affecting the pitch.

Time stretch and pitch shift Beatmapped tracks more efficiently with minimal echo or artifacts. ACID PRO 4.0 improves the playback of your time-stretched tracks with less stuttering, and provides you with much more detail in your Beatmapped projects.

Drop markers in real-time along the timeline
Modify volume, effects, and panning at the sub-group level using the new bus tracks in ACID PRO 4.0. Use these new bus envelopes to set track effect parameters, volume, and panning for your entire ACID project.

Produce amazing drum fills, stutters, and DJ-style effects with the Chopper. This amazing tool allows you to select a portion of an audio loop and place it on a track as an event. Simply create a "chopped" event, place it on the timeline, and let your imagination run wild. All "chopped" events play in sync with your music.

Score original music alongside your video to create the ultimate video production. With ACID's seamless ability to match pitch and tempo, scoring video has never been easier.

Synchronize audio and video files at the frame level
Select time signatures anywhere from 2/4 to 9/8, or customize your own settings anywhere from 1/1 to 99/32. Set tempo, key, and time signature markers in your projects, and make adjustments to the beat ruler during playback. Use the included odd-timed loops or create your own. Explore and expand syncopated beats and odd times used in Jazz, Latin, and other music styles.

5.1 Surround Mixing and Panning Automation

ACID PRO 4.0 makes it easy to set up and mix 5.1-channel surround project files for audio and DVD productions. Use the new Surround Panner dialog to easily set channel positions. Automate your surround mix using fully keyframable panning.

After creating your mix, export your project files and render output using any supported third-party 5.1 encoding software to provide your audience with the ultimate surround experience.

www.bhphotovideo.com
**MIDI**
- Perform MIDI recording, editing, and playback
- Use unlimited tracks of MIDI
- Record MIDI tracks directly into ACID using a MIDI controller
- Combine MIDI tracks with audio tracks
- Generate MIDI Time Code and synchronize with external devices
- Play MIDI files using external or internal MIDI sound sources
- Time stretch MIDI tracks
- Quickly view, filter, and edit MIDI events using ACID PRO's new MIDI list editor. Edit, add, or delete MIDI parameters including velocity, duration, and pitch.
- Align MIDI notes with beats using quantizing. Each MIDI command is listed in a sequence, allowing you to see exactly what notes and parameters are being changed at each point in your mix.
- Use step recording to add events to your project without having to use an external MIDI controller. Gain complete control all of the MIDI parameters you use including interval, duration, attacks, and release.
- Create and edit MIDI tracks in a piano roll format, just like a sequencer. The MIDI piano roll editor allows you to draw new notes, and makes it easier to graphically edit MIDI parameters.
- Use MIDI Quantizing to align your notes with beats based on the parameters you specify, including start times, and note durations. Select any quantize resolution between whole notes and 64th notes.
- Supports a wide variety VSTi plug-ins. VST instruments allow you play back your MIDI tracks through virtual synthesizers, filters, and effects. Software Instruments can be played live or in the studio in real-time via MIDI keyboards and other MIDI controllers.
- Use VST instruments and DLS soft synths. Now you can route any track to a new soft synth bus in the mixer window. Each bus controls its own DLS set, rather than being tied to individual tracks. The soft synth works as a Sound Module that allows you to choose which DLS set or VSTi you want to use with your MIDI tracks.

**Video and CD Features**
- Open and use WMA or WMV files in your projects along with loops, one-shots, and MIDI tracks. Its easy to render out your mix and create streaming media for the web.
- Two options for rendering projects containing video: Stretch to fill frame and Fast video resizing. The video preview window has an option to display square pixels.
- Perform Loop Cloning using the Chopper
- Apply VST instruments and DLS soft synths

**Bundled Software**
ACID PRO 4.0 comes bundled with Sonic Foundry's XFX 1, XFX 2 and XFX 3, Sound Forge XP Studio and VegasAudio LE. Also includes a music content CD containing more than 600 music loops and dozens of projects from Sonic Foundry's Loops for ACID collection. This huge assortment will get you on your way to creating royalty-free music in minutes. Genres include: Dance, Hip-Hop, Techno, Industrial, Pop, Rock, Jazz, Ambient, Orchestral and more.
ACID DJ Expander Pack
A complete construction kit that delivers more of the same kinds of beats, basses, scratches and synths that make ACID DJ 3.0 the ultimate loops-and-software combination package for Breakbeat, Downtempo, Jungle, Hard House, and Tech House tracks. For the best in modern dance music from Europe to Detroit. 586 (450MB) original loops.

SOLADJEP ........................................................... 38.95

George Pendergast: alt.rockdrums
Forty years of rock has seen drummers come and go, and the back beats still rule. This assortment of unique groove comes with all the right breaks and fills you need to make complete tracks. Each groove comes in two variations: clean and dry, and also with full-on production. 662 (498MB) original loops.

SOLAPARD ........................................................... 38.95

ACID Techno Expander Pack
Companion kit to ACID Techno 3.0. It gives you more materials in the exact proportions needed to make stunning electronica with superb sonic balance and fidelity. Make your tracks today, play them at the club tonight, and then publish your slammin’, royalty-free, license-free mix tomorrow. The best value in adrenaline-pumping dance loops. 575 (460MB) original loops.

SOLATEP ........................................................... 38.95

Ambient Realms
Create innovative audio atmospheres and explore new musical environments with this collection of high-quality sound loops. You’ll work with a broad spectrum of highly unusual textures, effects, noises, and beds, organized in easy-to-reference categories. Take an out-of-the-box approach to your next multimedia project or original composition. 121 (234MB) original loops.

SOLAAAR ........................................................... 38.95

The Bill Laswell Collection
The first four loop libraries in the Bill Laswell Collection. Laswell supplies fuel for ACID users who are redefining music just as Laswell does — with total disregard for genre boundary restrictions and obsolete conventions in making, listening to, even conceptualizing, modern music and sound. Includes three libraries, plus a bonus library only available in the box set — Covert Diaspora, a 2 CD collection with superior 24-Bit sound.

SOLABL3LL ........................................................ 149.95

Volume I: False Encryptions
Bill Laswell reveals secret codes from the underground, breaks them and restructures them into new transmissions for broadcast within your own music communication networks. 664 (451MB) original loops.

SOLABLIJE ......................................................... 38.95

Volume II: Undocument
Realizations achieved in Bill Laswell’s domain are decontextualized and prepared for the world of chaos and chance. Source materials are freely co-opted by end-users who incorporate ACID smear tactics in their tireless campaigns against conventional music. 675 (450MB) original loops.

SOLABL2U ......................................................... 38.95

Volume III: Letter of Law
The basic principals of Bill Laswell’s production genius are delivered intact, but those with the most musical intelligence will now redefine their interpretation. 662 (450MB) original loops.

SOLABL3LL ...................................................... 38.95

The Bill Laswell Collection
Volume IV: Covert Diaspora
Dissemination of five strains of music virus via CD-ROM. There is currently no vaccine available. Develop mutations and upload them — we believe in your ability to infect and eliminate generic music forms. Retain your anonymity if desired. Join the flow. 656 (683MB) original, license-free loops.

SOLABL4L ......................................................... 38.95

ACID Rock
More than 800 loops from a variety of great players, including drummers Siggi Baldursson and Dave Abbruzzese, killer guitar loops from blues master Paul Black and industrial shredder William Tucker. The collection is rounded out with a fine assortment of even more acoustic and electric guitar loops, plus bass, piano, clarinet, synth, and sax loops. 877 (498MB) original loops.

SOLAR .............................................................. 38.95

Alex Spurkel: Electro-World Percussion
Traditional Middle Eastern rhythms in a series of performances that are energetic, technically accurate, and well-recorded. Addresses every major rhythm with traditional instruments such as doumbek, djembe, riq, frame drum, bendir, and wide assortment of hand percussion. Also includes programmed rhythmic counterparts for electronica— ideal for trance, jungle, and drum ‘n’ bass tracks.

SOLAAEWP ...................................................... 38.95

American Piano
Doug Colosio’s (performance credits with Willie Nelson, Merle Haggard, Charlie Pride, Jewell, and many others), American Piano offers solo piano phrases that breathe pure American spirit. From traditional country blues, swing, and stride riffing to country rock and ballad figures that are edited to perfection, enjoy the sounds of smooth, natural, hand-played piano performances in ACID.

SOLAAP ........................................................... 38.95
BASS-X
A collection of floor shakin' bass loops by Groove Addicts, the world-renowned L.A. music production and sound design house. A collection of intros, choruses, bridges, plucks, clicks, muffs, and song patterns. BASS-X gives up the big bottom you need to anchor your rock, pop, alternative, dance, hip-hop and rap tracks. 686 (419MB) original loops.
SOLABA ..................................................38.95

Classic Drum Machines: SNTonic Generator
An eclectic array of high-quality sounds for the ultra-discriminating loop user. This disc includes hundreds of cutting-edge drum and synth loops for killer mixes—house, techno, dance, jungle, and industrial. 191 (267MB) original loops. Classic Drum Machines — the gear you need to mix. DANGER ..................................................38.95

Ambient Grooves: Bill Laswell's Sample Material
This stunning array of loop-based tracks ranges from the world of techno to the beat of the street and features many exotic instruments from different continents. Blend or destroy musical boundaries with a new level of experimentation and expression, using some of the most compelling music on the planet, from a truly original artist.
SOLABL ..................................................38.95

DJ Puzzle: Scratch Tactics
The DJ rules on Scratch Tactics, the first Loops for ACID library to give it up completely to the decks. This collection is proof that the turntable is a 'legit' musical instrument in a class by itself, and can supply nearly all the beats, breaks, riffs, and FX you need to make grooving, fully-produced tracks. Includes folders full of basses and textures. 515 (457MB) original loops.
SOLADJST ..................................................38.95

Brian Daly: Metarock Visions
Metarock Visions is the brainchild of Brian Daly, one of the world's most accomplished loop library producers. Here is a perfectly-proportioned modern rock construction kit with a collection of guitars, basses, drums, and synths. Brian's massive experience in every aspect of loop library creation culminates here. 765 (546MB) original, license-free loops.

**SONIC FOUNDRY**

**LOOPS FOR ACID**

**Pandora’s Toolbox**
Add a degree of strange to your production with the dark side of sampling — Dark Ambient Soundscapes. This collection comes from the mind of David Torn and was created for the soul who requires unusual sounds—creepy, kooky, edgy, and weird loops. Make your next project a little twisted with this collection of textural mayhem. 54 (308M B) original loops.

**David Torn’s SPLaTTeRCeLL:**
Textures for Electronica and Film Music
Master guitarist and sound sculptor, David Torn, delivers a brilliant library of abstract guitar performances and studio effects to generate massive soundscapes and twisted sonic implants. Depend on this rich collection to provide the sounds that have made Torn famous for his originality. 173 (545M B) original loops.

**Drum Tools**
Percussion-based loops that will make your next musical project a snap, a kick, and a ride you won’t forget. All tracks were recorded live with the creative team from Roxette, the Swedish Top 40 group. Includes hundreds of infectious and irresistible percussion loops in a variety of styles. A must-have musical resource for pop and rock enthusiasts. 1215 (519MB) original loops.

**Electronic Point-Blank**
Presented by Mark Pistel, founder of Consolidated, this unparalleled construction kit is aimed squarely at the underground techno / dance music scene. A solid construction kit of synths, drums, and FX — to make your remix shine, or come on with fully-produced tracks — license-free and royalty-free in ACID. 494 (452M B) original loops.

**Discrete Drums Volume 2**
Meticulously crafted and affordable beat crafting tools. Customizable rock/pop acoustic kit drum and percussion grooves. At the macro level, each volume contains three fully-mixed foundation beats, with all the fills and variations for creating complete, seamless drum tracks instantly. At the micro level, get everything from multitrack session files to isolated one shots.

**Elektronica Grooves: Cyclotron Resonator**
House, dance, techno, electronica, pop, acid, noise, and many other styles, all with the composer and producer in mind. DJs to radio producers can easily create thumpin’ funkin’ tracks. Every loop resonates with creativity and flexibility for the ease-of-use of the composer/producer. 258 (261M B) original loops.

**Euro Techno: Ground Loops**
A collection of rave-ready beats, percussion, synths, pads, and arpeggios that reflect the energy and intensity of today’s European dance scene. Create an unlimited supply of richly textured, distinctive tracks that will capture the dub vibe— from bleepy experiments to raging, four-on-the-floor techno excursions. 600 (460M B) original loops.

**Ethnicity**
Imagine a tabla from India or an Indonesian anklung in your musical palette. With Ethnicity, imagination becomes reality. Add soulful, global sounds with hundreds of traditional rhythms. Explore new sounds and create audio experiences that have a unique cultural feel, using ready-to-use loops of percussion instruments from around the world. 324 (233M B) original, loops.

**Electrocutation Big Beat / Darkside Construction Kit**
The best of electro-hop, darkside, big beat and intelligent industrial music. Aaron Mellinger delivers a generous supply of all the sonic elements you need. Beats range from slamming to ethereal, and an excellent assortment of bases, synths and textures roll from grooving to disquieting. 462 (507M B) original loops.

**Essential Sounds II**
Pick up where the ACID PRO 2.0 (Essential Sounds I) leave off. With Essential Sounds II, you receive even more “bread and butter” loops. Essential Sounds II features a huge variety of instrument types and styles—from super-funky electric bass to tasty sax licks and everything in between. Get every sound you need to make great music! 630 (459M B) original loops.

**Grooves:**
- **Euro Hip-Hop: Mac Money**
  Deliver the sounds of the hottest Top 40 hip-hop and R&B tracks on the charts. The complete package of beats, basses, keys, guitars, and more, including the sweetest vocal harmonies, speech, and scratchin’ you’ve ever heard. Whether you’re an experienced producer or just getting started with ACID, these are hit-making sounds. 421 (475M B) original loops.
**Extremely Abrasive Beats**

Extremely Abrasive Beats (EAB) is an unrelentingly harsh collection of fried beats and severe accents made for launching multiple rhythmic sorties on every industrial, postrock, crunchy downtempo, abstract hip-hop, and sheer noise frontier on the map. Pain-inducing, speaker-shredding, and highly toxic, EAB transforms ACID into a piece of sonic ordnance that will effortlessly incapacitate the enemy and render it harmless. Use it without mercy.

OLAEAB .......................... 38.95

**George Pendergast:**

**Essential Percussion**

Packed with inspiring patterns played on custom kits, and a wide variety of hand percussion, including congas, bongos, djembe, doumbek, slit drums, timbales, bells, cymbals, shakers, tambourines, and more. In addition to patterns, an included extensive one shot collection allows you to customize your tracks and achieve unique results.

SOLAPARD .......................... 38.95

**Essential Sounds III**

All the sound-building components needed to complete a variety of projects. In the music department, you'll find acoustic and electronic drum grooves, wicked guitar and keyboard loops, funky bass grooves, and more. Elsewhere on the disc, you'll find game-sound elements and sound effects, Foley effects, soundscapes, menu wipes, and more! An invaluable tool for composers, producers, and sound designers alike.

SOLAES3 .......................... 38.95

**Fluid Dynamics:**

**Computational Drum 'n' Bass**

Complicated packets of rhythmic information can be painted across your screen to create smooth, high bpm rhythm beds which can be edited at the microscopic level to achieve all precarious twists and turns that make drum 'n' bass exciting. 607 (452MB) original loops.

SOLARMFD .......................... 38.95

**Fast Breaks**

Fast Breaks delivers speedy drum 'n' bass grooves on a budget. With all the beats and basses on this disc, you'll take a permanent vacation from long hours of recycling and editing loops. With Fast Breaks, you will enjoy the fun process and creative satisfaction of working with beats and basses.

328 (224MB) original loops.............................. Call

**Headstrong Grooves**

Contains most current beats and basslines. Paint your grooves into ACID and then adorn them with grungy synth leads, futuristic analog effects, filter sweeps, scratches, and more. Has everything you need to make drum music in the garage and 2-step styles. Add an MC or some diva samples, and achieve complete control. 634 (527MB) original loops.

SOLAHG .......................... 38.95

**Industrial Toolkit:**

**Methods of Mayhem**

Create sonic disturbances with this organized catalog of strange and deranged loops. Space vibes, metal on metal hits, and short synth stabs are just the beginning. The disc also includes hundreds of aggressive samples, from twisted guitar riffs and distorted synth loops to feedback rhythms and mouthbox beats. 1090 (554MB) original loops.

SOLAMOM .......................... 38.95

**Intelligent Dance Music:**

**Twine Components**

Intelligent Dance Music is an exclusive view of electronica from the stratosphere of sound design. Create harsh, twisted beats or lush ambience using an assortment of electronic rhythms, melodies, bass lines, electro-acoustic treatments, digital breakdowns, and evocative sonic environments. 350 (449MB) original loops.

SOLAI DM .......................... 38.95

**Junkyard Rhythms**

Superstar percussionist Joe Vitale and producer Joe Vitale Jr. spent countless hours pounding away at a junkyard, in search of metallic objects that would yield maximum klang. What they found will amaze you! So, if you need some percussion that'll make people say, "What was that?" look no further than Junkyard Percussion. 686 (470MB) original loops.

SOLAJYR .......................... 38.95

**Infinite Soul Volumes 1 and 2**

The best in R&B construction kits. Both Infinite Soul volumes are perfect for variety, balance, and fidelity and provide an unbeatable rhythm section for holding down your lyrics, raps, and jams. They also contain complementary ACID starter projects made by the MAC MONEY team.

Vol. 1 300 (369MB) loops. Vol. 2 296 (266MB) loops.

SOLSKIS1 ............... 18.95  SOLSKIS2 ............... 18.95

**Hydroponic Hip-Hop**

There's some super phat hip-hop hydro budding in Brian Daly's digital hothouse, and it's all bumpin' to the beat. Brian's hydro is the best, and Hydroponic Hip-Hop is one killer harvest of mad blunted loops for ACID. Get your mic under control, open your ACID, put the hydro on the track, and click-slide on the perfect grooves. 428 (534MB) original loops.

Orchestral Series
The Orchestral series is a four volume collection of **Classical**, **Modern**, **Cinematic** and **Rock & Pop** loops and compositions. An international team of gifted composers and producers produced this astounding variety of authentic original music, presented as inspiring collections of royalty-free sounds. Precisely edited to provide you with the loops you need to conduct your own virtual symphony. 2334 (2169M B) original loops.

**Orchestral Series 1: Classical**
Composers and musicians steeped in the history of European music pay tribute to the most beloved Baroque and Romantic period composers. Create a genuine and complete orchestral experience. 589 (536M B) original loops.

**Orchestral Series 2: Modern**
An astounding collection of harmonically rich and impressionistic spaces, as well as the propulsive, kinetic energy of formal minimalism. 720 (544M B) original loops.

**Orchestral Series 3: Cinematic**
Evoke a sense of time and place, or underscore mood and atmosphere. Complete orchestral pieces provide instant soundtracks. Includes individual instrument and solo section loops. 412 (529M B) original loops.

**Orchestral Series 4: Rock & Pop**
String, brass, woodwind, and percussion loops edited to provide intros and transitions, follow chord changes, and add more sparkle to your tracks. 635 (561M B) original loops.

Jazz Solos and Sections
**Vince Andrews Horns & Woodwinds**
Traditional and effected sounds including silky and sparkling brass and woodwind riffs as well as counterpart files created by Sonic Foundry's sound design crew. Make a solo statement on your jazz track, or add a blue note or a blaring distress call to your next composition with these 529 essential jazz loops. (409M B).

**On the Jazz Tip**
Bring in the swing, the sting, and genuine jazz thing with this virtual band-in-a-box that contains an assortment of red hot-'n'-blue horn licks, beat crazy drum fills, hot electric piano licks, and much more. You'll get hundreds of drum sounds and instrumental tracks, including sax squeals and bass grooves. Juice up your musical palette with On the Jazz Tip. 1010 (557M B) original loops.

**Knutrix**
The beats and textures that define drum 'n' bass are sophisticated and positive. Integrating with virtually every genre, flexible drum 'n' bass soundbeds permeate clubs, TV commercials, and multimedia presentations. Drum 'n' Bass is an articulated, super-smooth construction kit that provides all the instrumentation needed for creating complete compositions.

**James Johnson: Slow Silhouette**
A double disc collection of long, sparse music segments designed for sustained, non-looping musical passages. Used alone, each segment exists in a single, simple, highly refined sound space. Layering these sounds will allow you to create an infinite number of stunning buildups, transitions, or even complete long form pieces of flowing, seamlessly composed music.

**Ilona! Universal Female Vocals**
Take three full octaves of 'ooh' and 'aah' vocal samples, with long and short durations provided for each note. Then, add the production candy: separate, stereo Lexicon 480 reverb tracks, with your choice of decay times - for each and every note. Create a conventional mix, or experiment with unique combinations of sung notes and reverb for starting vocal effects. Includes an assortment of royalty-free diva samples.

**Jade Hill: Rock/Pop Guitars**
A beautifully crafted collection of guitar loops designed specifically as tools for chartbound singers and songwriters. Choose from a variety of jangly, bluesy, funky, and hard rock chord structures, and modify these in ACID to suit your arrangements. Then, personalize your creations with guitar solos that range from clean and melodic to chunky and shredded. Over 600 loops.

**Latin Percussion**
Latin Percussion is a collection of sizzling Latin rhythms from straightforward to exotic. Whether it's a simple shaker, hypnotic clave, driving conga, or intense ensemble, these meticulously tight and dynamic performances will lend movement and energy to any track. Turn up the heat on your next audio masterpiece. 600 (452M B) original loops.

**Sound Genius Studios: Jazz Trap Kit**
Get ready to enjoy a rainbow of styles: swing, smooth, 3/4, 5/4, sambas, waltzes, marches, and more! Customize your jazz rhythm beds with brushwork, isolated hi-hat and cymbal patterns, rolls and licks, and a comprehensive selection of one shots. Includes some bongo, conga, and dundjeb patterns to add some extra cool to your mix.

Psychedelic Guitar
The Serpentine Magic of Harvey Mandel
Harvey Mandel is one of the pioneers of psychedelic music, with a style that changed the world of rock guitar. Psychedelic Guitar includes his signature soaring leads saturated with effects, supple rock rhythms, special effects, and mountains of tone and sustain—with the feel of an improvised live performance. 269 (405 MB) loops.

R&B Drums: Groove Spectrum
R&B Drums: Groove Spectrum is the funky drum groove encyclopedia. This is a virtual history of R&B, from its cold sweat beginnings to the machine-driven grooves of today's smoothest R&B hits. R&B Drums includes classic acoustic kit drums, congas, and one-shots as well as modern machine grooves. 588 (410 MB) original loops.

Rapoon: Sci-Fi Tribal
The spaces between Rapoon's mesmerizing loop points are filled with strange combinations of ethnic instruments, assorted noisemakers, found objects, obscure sound bites, and severe processing. Sci-Fi Tribal is a gateway to moods and atmospheres that will make lasting impressions. 462 (510 MB) original loops.

Stylus Pressure
Apply the Pressure and enjoy the strange fruits of years spent diligently cataloging and preparing fine soundz, distilled by Stylus Pressure down to thirty-seven construction kits that effuse pure urban magik—trippin' grooves and freaky sonic collages that flow into ACID as quickly as you can act and react with the paintbrush tool. 462 (510 MB) original loops.

Sounds of Asia: Opium
Capture the spirit of the Orient in a collection of truly original audio loops. Opium contains unique tracks that encompass a variety of traditional Asian instruments. Weave mesmerizing musical spells from the Far East, add instruments like the dizu flute, the pip, and the yangchin. Give your next musical composition a touch of the exotic. 241 (229 MB) original loops.

Spektral Minimalism
Sonic Foundry together with ambient minimalist composer James Johnson present a Loops for ACID library filled with shifting, amorphous atmospheres, long drifting soundscapes, elegant piano passages, and textures that span the entire aural spectrum. Here is a collection of sounds made to dance in and out of the listener's consciousness. 123 (526 MB) original loops.

Ambient Atmospheres & Rhythms
Robert Rich's Liquid Planet
An organic and synthetic world filled with compelling sounds. Populate your songs with a generous array of rhythms, melodies, and atmospheres. Choose from flutes, drones, and textual soundscapes, and impart to your music hypnotic, nuanced minimalism. 482 (569 MB) original loops.

R&B Drums: Spectrum
R&B Drums: Spectrum is the funk drum groove encyclopedia. This is a virtual history of R&B, from its cold sweat beginnings to the machine-driven grooves of today's smoothest R&B hits. R&B Drums includes classic acoustic kit drums, congas, and one-shots as well as modern machine grooves. 588 (410 MB) original loops.

Street Beats
Offering incredibly funky drum loops, this practical disc delivers everything from hardcore hip-hop, jungle, and house to traditional R&B and soul beats. Authentic raw sounds, live, studio, and even true street sounds—recorded all over the world—are included. Street Beats delivers the real deal... beats that you want to use, sounds that you want to hear. 147 (34 MB) original loops.
**SOLA TNRG**

Component loops and their one shot counterparts. Dive in and start from scratch with minimal beat structures for making quick tracks on demand, or scratches. Pick loops with complex, full-bodied Synthetic Sound Effects. 269 (221MB) original loops.

**SOLA VU**

Vocal weirdness to vintage FX noises. Let your creativity explore strange, uncharted territory with sounds that defy imagination and categorization, from earth, the sky, the wind, and the rain—indigenous music with vocals and flute passages from exquisite soloises, and more. Add hard-core techno beats, machine beat loops, cool vintage rhythm box patterns, and stylized grooves, or create your own grooves with kick bass, hi-hat, and tom loops. 211 (298MB) original loops.

**SOLAPBG**

Experience an alchemical fusion of electronic and acoustic elements that constitute a truly unique perspective of music and sound. From hip-hop to techno, basslines to beats, this disc has it all—the definitive collection of all that moves and grooves. 886 (536MB) original loops.

SOLAWP .................................................................38.95

Vintage Analog Synths: Vortexual Amplitude
The ultimate analog loop sampling disc. Hundreds of loops from great synthesizers such as the ARP 2500, Odyssey, EM L. Electromcomp 101, CAT SRM, Roland SH-1, Sequential Circuits Pro One, MultiMoog, and Memory Moog. Great for analog heads, DJ’s, radio producers, or anyone wanting to add classic synth sound. 119 (131MB) original loops.
SOLAV .................................................................38.95

Processed Drumkits: Zero-Gravity Beats
Futuristic, processed drum loops from Siggi Baldursson using a range of unusual and slightly outrageous recording techniques and effects processing. Intensely creative drumming adds flair and builds rhythmic foundations for trip-hop, jungle, dub, techno, space rock, trance, and other ultra-modern musical styles. 765 (543MB) original loops.
SOLAZGB .................................................................38.95

Professional Red Book Audio CD Mastering
Produce professional audio CDs to Red Book specification with CD Architect 5.0 — the most precise audio CD mastering and burning tools available. Arrange your CD Architect project using simple drag-and-drop operations. Produce complex crossfades and DJ-style megamixes. Generate multiple takes of a song to use in your project before burning. Create live-style CDs with audio in the time between tracks, apply volume envelopes and event ASR envelopes - even create hidden tracks. Perform full PQ code editing, trim events from full-length media and add as new tracks, import regions from Sound Forge as tracks, master audio by applying over 20 real-time DirectX effects to events and the master output, and perform disc-at-once CD burning.

* 32-bit, 192kHz source audio support
* Greater than 1:1 zoom *Ripple editing
* High-quality resampling and dithering *Audio layering to create complex crossfades
* Trimmer window *Real-time pitch shift/time stretch
* Undo/redo history list *Unlimited volume envelope points
* Multiple file format support *Expanded drive support including USB and FireWire devices
* Media file previewing
* Tabbed/docking windows
### Drum Pack
Drummers fear this bundle. An infinite number of potential hit singles are hidden in this amazing collection of killer drum and percussion loops. 4142 (2159MB) original, license-free loops.

**Kit contains:**
- Drum Tools is the arbiter of clean, simple rock and pop beats, and the 'Laid-back' section has the drum loops you need for your slow songs and ballads.
- R&B Drums: Groove Spectrum is a drum groove timeline that documents decades of the genre, while Drum Components: RADs allows you to go in and build great drum tracks from the kick drum on up.
- Latin Percussion is the work of megahit percussionist Joe Vitale, and Processed Drumkits: Zero-Gravity Beats is there when you need something a bit more on the startling side.

### Dance Pack
Make your own club scene with this brilliant mix of Electronica and Techno loop libraries. 2499 (1863MB) original loops.

**Kit contains:**
- New York Dance supplies the basic materials needed to create music that spans House, Electro, Jungle and more.
- Futuristic Drum 'n' Bass gives you even more fine beats and synth elements.
- Techno Club Grooves 1: Funky streams I and Vintage Analog Synths: Vortexual Amplitude add character by giving you access to rare and vintage gear.
- Processed Drumkits: Zero-Gravity Beats adds something completely unique and original - acoustic drum performances by former Sugarcube Siggó Bæltnes, tweaked and processed into pulverizing grooves, made to order for intense dance music.

### Ambient Pack
Explore new dimensions in sound with this carefully constructed pack. Each library brings something different to your ambient creations. A sonic adventure through uncharted musical frontiers. 1510 (2522MB) original, license-free loops.

**Kit contains:**
- Master guitarist and sound sculptor David Torn delivers a wide range of abstract sounds in SPLATteRCeLL: Textures for Electronica and Film Music.
- Robin Story's Rapoon: Sci-Fi Tribal offers found sounds and other objects de musique concrete.
- Journey through space music with Maja Le: Saturn and Elsewhere.
- Manipulate the latest in electronica from Twine: Build.
- Vir Unis: Infusion provides shapeshifting loops and noisescapes that will ensure your music remains unique.

### Guitar Pack
Two pure guitar libraries and three guitar-heavy construction kits comprise this genre-spanning bundle. 3059 (2290MB) original loops.

**Kit contains:**
- Psychedelic Guitar
- Blues Guitar:
  - Paul Black's Whiskey, Cigarettes & Gumbo
- Industrial Toolkit: Methods of Mayhem
- Classic Country
- Essential Sounds II

### Producer's Pack
This bundle supplies you with Sonic Foundry's finest assortment of textural elements for creating atmospheres and sound-tracks. 2468 (2276MB) original loops.

**Kit contains:**
- Universal Groove Elements and World Pop provide a generous assortment of beats and rhythmic elements.
- Textures & Soundscapes: Robin Story's Rapoon, Ambient Atmospheres & Rhythms: Robert Rich's Liquid Planet, and Ambient Realms serve up the atmospheres and textural details you need to create musical narratives that will leave a lasting impression.

### World Pack
Travel the globe and beyond with a group of libraries that explores traditional world music and cross-cultural musical hybrids. 2386 (1937MB) original loops.

**Kit contains:**
- Sounds of Asia: Opium and Ethnicity are full of Asian treasures performed on ancient instruments.
- Latin Percussion features the driving rhythms of session star Joe Vitale.
- World Pop combines Indian and pop elements into something completely contemporary
- Ambient Grooves: Bill Lawell's Sample Material is a large sample of the genius that defines Lawell as the most significant catalyst of world music working today.

### Scoring Pack
ACID is fast becoming filmmakers' scoring tool of choice, and this pack shows why. Creating and composing an original score for your production has never been easier. 1460 (2588MB) original, license-free loops.

**Kit contains:**
- Emotional Peak Sounds provides tension, stabs, and other sonic devices.
- Create soundscapes and moods with Spektral Minimalism.
- Robert Rich's Liquid Planet supplies atmospheric rhythms and melodies.
- Put a symphony to work on your score with Orchestral Series 3: Cinematic.
- Drop in stingers, stages, and music beds from Cinematix 1.

### Scoring Pack II: The Sequel
Scoring Pack was a hit, so Sonic Foundry followed Hollywood tradition by releasing a sequel!

**Kit contains:**
- Cinematix Volume II provides film-grade stingers, effects and more.
- Orchestral Series Volume II: Modern brings 20th Century composition to your mix.
- Ugly Remnants, Volume II adds unique, otherworldly sonic elements.
- Aural E: Electro Electronica injects processed sounds and manipulated media.
- Finally, UILONA!: Universal Female Vocal Toolkit offers three octaves of female vocal samples to bring a human touch to your score.
STYLUS - Vinyl Groove Module

World’s First Groove Control Instrument

Stylus is an innovative software plug-in instrument that integrates a massive core library of thousands of cutting-edge groove elements, loops and samples, with a powerful user interface for creating your own grooves. Stylus can be used as a native plug-in instrument in hosts like Logic, Digital Performer, Cubase, Nuendo and Pro Tools—no sampler is necessary!

The huge 3 GB core library of Stylus includes over 1000 brand-new loops, featuring insane new breakbeat remix loops with a cutting-edge vinyl attitude, from award-winning producer Eric Persing. The grooves are inspiration generators for application in a huge variety of remix genres including R&B, 2-step, Trip-Hop, Chemical, Epic House, Underground Hip-Hop, UK Garage, Downtempo Dub, Nu-skool, Acid Jazz, Trance, Funk, Alternative, Progressive, Rap, Abstract, Urban Neo-Soul, Big Beat, Slo-Jamz, Drum ‘N Bass, and many others.

Each groove is presented in the widely-acclaimed Groove Control activated versions which allow you to change the pitch, tempo, feel and pattern independently...without using any DSP! Since every groove can be mixed and matched at any tempo or feel, there are literally endless combination possibilities. You can also program your own grooves from scratch with thousands of edgy drum samples. In addition, the inspiring Groove Menus let you remix loops in real-time at every tempo from 50-180 BPM in both straight and swing feels. It’s as simple as selecting a patch and playing your keyboard!

Includes over a thousand wild turntable FX and DJ tricks as well as a killer live percussion loop section including congas, bongos, djembe, shakers, triangles, agogos and tambourines, all of which can be mixed into any groove separately! But it is its powerful interface and synthesis engine that make Stylus a monster creative tool. Perform techniques with Groove Control like randomizing the accents of a loop, turning a conga loop into a melodic part, radical filter sequencing, tweaking the tuning of just the snare, or filtering just the kicks, panning each slice in a different part of the stereo field, each all inside the loop! This is possible because the Stylus custom interface goes way beyond any of the current conventional samplers - each sample and slice has its own adjustable synth parameters, and selecting the samples is as simple as playing the sample from your keyboard. The possibilities for creative manipulation are truly amazing...and yet it is so easy to use.

- Massive 3 GB core library
- Insane new remix grooves and samples by Eric Persing
- Over a thousand turntable tricks, skips, stops, beat-juggling and scratch FX
- Killer live percussion loops can be added to any groove
- Elastic Tempo, Pitch, Pattern and Feel with Groove Control
- Built-in Groove auditioning system
- Real-time groove jamming at any tempo with Groove Menus
- Lightning-fast load times
- 1000 Kicks, 1000 Snares, 500 Hi-hats for creating your own grooves
- Built-in patch management system
- Sample-accurate timing
- Fully programmable
- Total recall with your sequence
- Multimode resonant Filters for each sample, plus Master Filters
- Three envelopes for Pitch, Filter and Amplitude
- Matrix-style modulation routing, two LFOs
- Unique interface allows independent parameter control of each sample, and Groove control automation.
- Powered by custom 32-bit UVI Engine
- Cross platform, plug-in compatibility
**World’s Most Massive Synth**

Atmosphere is a software plug-in instrument that integrates a massive 3GB core library of more than one thousand unique sounds and layer elements, with a powerful and intuitive interface for shaping new textures. Atmosphere works as a native plug-in instrument in hosts like Logic, Digital Performer, Cubase, Nuendo and ProTools. Designed from the ground up by acclaimed synthesist Eric Persing (famous for his sound design of classic Roland synthesizers and award-winning sample libraries) and his team of sound designers, Atmosphere’s core library was developed using over a hundred sound design devices and nearly every conceivable synthesis method including Granular, Additive, Wavescanning, Graintable, Neural Processing, Vintage Analog, Vector, Virtual Analog, FM, Plug-In manipulations, and unusual Acoustic sources as well. It is the custom core library that gives Atmosphere its unprecedented variety of tonal textures, especially when compared to standard soft-synths.

The range of sounds this instrument is capable of is astonishing, from lush ethereal pads, to powerful leads, crystalline glass swells to dark brooding atonal clouds, unusual synth basses, evocative ambiances, deep drones, complex textures, vintage analog sounds, disturbing noise FX, europhasers, gorgeous ambient string ensembles, thick trance/techno sounds, wavetable sweeps, vocoded choirs, dense vocal washes, transparent evolutions, and shimmering prisms of harmonic convergence. Puts even the best hardware synths to shame!

Stellar sound quality is this instrument's number one feature. The scope of sounds it can produce is very broad, making it extremely versatile in a wide variety of musical situations. This is made possible because there has never been a programmable synth released with such a massive, high resolution core wavetable to work with... completely dedicated to sound design elements (no stock pianos or oboes!)

The core library of a thousand powerful sounds is just the starting point for your own creations. The beauty of Atmosphere is in its “dual-layer” concept. You can immediately mix and match the layers of any of the 1,000 patches, and tweak each layer fully independently. That’s over a million possible combinations! Each layer has its own multimode resonant filters, four LFOs, three envelopes and matrix modulation. There is also an additional master filter for quick tone shaping. The possibilities for creative manipulation are phenomenal... and yet it is so easy to use.

- 3.7GB core library offers vast array of textures to explore
- 1,000 patches by award-winning sound designer Eric Persing
- Dynamic layering of sounds for over 1,000,000 mix combinations
- Powerful interface and synthesis capabilities
- Built-in patch management system
- Multimode resonant Filters for each layer, plus Master Filters
- Three envelopes per layer for Pitch, Filter and Amplitude
- Fully programmable
- Total recall with your sequence
- Matrix-style modulation routing, four LFOs
- Powered by custom 32 bit UVI engine
- Cross platform plug-in compatibility
**SPECTRASONICS**

**TRILOGY - TOTAL BASS MODULE**

**Electric, Acoustic and Synth Bass Instrument**

Serious about Bass? This is the instrument! Trilogy is a programmable, sample-based sound module plug-in, that integrates a massive 3GB core library of hundreds of remarkable Bass sounds, with a powerful user interface for creating your own unique patches. Trilogy's power lies within its layering concept. Beyond the core library of incredible Basses, every patch in Trilogy has two layers that you can tweak individually. You can also immediately mix and match any of the layers in the core library together, and edit each one independently. Imagine the power of combining the sound of a real Minimoog with a Fretless bass, or a Virus with a TB-303, or even adding a Juno sub-oscillator to an Upright Bass! There are thousands of earthshaking combinations, and you'll never run out of options.

Acoustic Upright Bass is one of the highlights of this instrument. Because of Trilogy's unique interface, you can get a wide variety of gorgeous tones from this Bass. This is made possible because the interface has separate control of the Neumann U-47 Tube Microphone signal and the Direct Pickup signal, which was sampled through a vintage Neve 1083 Console. This stunning sounding acoustic is chromatically sampled, with multi-dynamic velocity switching. The hardest velocity in every Bass patch in Trilogy brings in real bass glisses, similar in concept to the idea Spectrasonics pioneered on the Hans Zimmer Guitar libraries. An acoustic Martin Dreadnought Bass Guitar is also available in the Acoustic section - perfect for those “unplugged” sessions!

**Electric Bass**

The huge selection of electric basses feature classic 4, 5 and 6 string models, performed in Fingered, Picked, Muted, Rock & Roll, Slapping, Ballad, Fretless and R&B techniques through rare, custom-made tube preamps. Special variations are presented including Harmonics, Glisses, Fuzz, Trills, FX and thousands of slides! Both modern and vintage “Old School” electrics are available, providing an array of tones for different musical settings. All the patches are mapped the same way, so that one sequence will work with any bass you select.

There are thousands of samples used in these instruments, mapped with multiple dynamics for amazing expression. You don’t have to “assemble” Bass parts with Trilogy, it’s extremely playable as a highly expressive real-time instrument too!

Finally, every Acoustic and Electric Bass in Trilogy has a special “Finger Noise” release layer with release triggering, that gives these basses amazing realism - perfectly simulating the fretboard response of the real bass. When a note is released, the Finger Noise layer triggers an appropriate noise sample from among hundreds of tiny fret noises, subtle string scrapes, squeaks, x-notes, taps and mutes, which add a user controllable “human” imperfection element to your performance.

**Synth Bass**

Trilogy is one of the most awesome Bass Synthesizers ever made! Have you ever struggled with trying to fit your synth bass sounds to sit in a track properly? The sound of Trilogy is not only ultra-fat, but it sits great in a mix. High-resolution core samples were created from legendary analog bass synths like the Minimoog, Roland Juno 60, Roland TB-303 and SH-101, Oberheim SEM, Moog Taurus, OSCar, Virus, Yamaha CS-80, Arp Odyssey and 2600, Studio Electronics SE-1, Omega and ATC Tone Chameleon, Sequential Circuits Pro One, the mighty Moog Voyager and many others! Trilogy’s multimode resonant filters allow you total control over the sound, while still retaining the original character and power of the classic analog instruments.

Each fully programmable layer has its own multimode resonant filters, four LFOs, three envelopes, adjustable sample start and matrix modulation. There’s also an additional master filter for quick tone shaping. Trilogy also has a smooth analog synth-style Legato triggering and Glide that software samplers lack. This allows for Synth Bass sounds that truly play like a vintage analog synth—and can also be used with any of the Electric or Acoustic Basses, for unique hybrid Bass sounds that you’ve never heard before.

Complete Multitrack Recording Studio for Windows

More powerful than ever, Cool Edit Pro offers PC users powerful features such as real-time effects and track EQ, disk-at-once CD burning, MIDI and video playback support, MTC master generation, DSP effects, loop-based music composition, and a compressed loop file format—yet retains the ease of use that has won them thousands of users worldwide. Extremely affordable, Cool Edit Pro is ideal for everyone from the studio professional to the audio hobbyist. And with enough professional effects and tools to fill a room full of effects racks, Cool Edit Pro has everything needed for recording, editing, and mixing up to 128 high-quality stereo tracks with just about any sound card.

**FEATURES**

- 32-bit processing, 24-bit/192kHz and higher sampling
- Powerful wave editing with multi-level instant undo and redo
- Multichannel encoder with WMA and WAV 5.1 file output
- More than 45 DSP effects to bring new life to your dry tracks with a depth and clarity previously obtainable in only the best studios around the world...now in your PC!
- Stretch loops using resample, time-scale, or beat splicing methods.
- Placement option allows the master fader to either control the levels before they go through the busses and the bus effects, or to serve as an output level control at the end of the signal chain.
- Move tracks in multitrack by right clicking and dragging on track controls
- Real-time effects:
  - Track effects rack for each track
  - Busses for track grouping with real-time effects on each bus
  - Automation of some parameters over time (e.g., dynamic EQ and dynamic delay)
  - Dedicated real-time EQ on each track with quick A/B comparisons
  - Supports Red Rover as well as the Mackie Control, Tascam US-224, and Event EZbus
- Spectral Decay option makes possible much larger reductions in noise without adding unwanted artifacts.
- Loop-based song creation, including session tempo and key matching
- Customizable interface and look including dockable/sizeable windows
- Organizer window with tabs for open files, effects and favorites
- Dual monitor support
- Envelope control of Volume, pan, effects mix and some effects parameters
- Cue/Play lists, with auto-cue features
- Wave properties including labels, loop info, EBU extensions and sampler info
- Metronome
- Data Analysis, including Spectral View, Frequency Analysis, Phase Analysis, Statistic and Histogram
- Enhanced SMPTE/MTC master and slave accuracy
- MIDI trigger support for program control
- Supports over 20 file formats, Direct-X plug-in support
- High quality sample rate conversion; batch-processing and file conversion

For even greater functionality and ease of use, the optional Red Rover provides a fully featured dedicated remote control device (up to 10` away) that operates seamlessly with the software.

Compatible with any sound card, Red Rover is a small USB device designed with ergonomic and space-saving functionality in mind. It features standard multitrack transport controls that seamlessly interact with and control Cool Edit Pro’s on-screen displays. In addition, it provides unlimited access to all 128 tracks of possible audio on Cool Edit Pro.

Red Rover shows you all the key information you need to record and even do basic mixing right on its LCD panel. When you’re done recording, take Red Rover back to the computer to use its transports while you mix and master. Once you start using Red Rover, you will wonder how you ever got along with out it.
Hard Disk Sampling Workstations

The incredible GigaStudio is the world’s most powerful sampling tool — period. A complete Windows-based sample playback system for creating fully-realized audio productions with mixing and effects, GigaStudio is based on TASCAM’s famous GigaSampler and its Endless Wave technology which allows samples to be streamed off a hard drive instead of being limited to RAM like other samplers. Instead of relatively small sample sizes that need to be looped, the Giga platform lets you work with HUGE sample sizes...up to 4.3GB! The resulting detail and realism must be heard to be appreciated. Plus, these enormous samples may be triggered with extremely low latency on all voices using approved GSIF interfaces, allowing for tight performances with truly musical feel. Features include dedicated MIDI input for real-time effects, high-quality 32-bit effects, and GigaStudio’s DSP Station Mixing Console for professional quality mixing, eliminating the need for additional plug-ins or hardware.

Three versions of GigaStudio are available, from the economical GigaStudio 32 to the powerful GigaStudio 96 to the sophisticated GigaStudio 160, which is capable of streaming 160 simultaneous voices of audio. GigaStudio’s advanced features make it ideal for professional scoring composers, engineers and producers, while the easy-to-use interface makes it a great choice for musicians and songwriters. GigaStudio is compatible with Windows 98/ME/XP/2000, and can be set up to play samples triggered from a sequencer like any hardware sampler.
GIGA-PCI

PCI-822 Interface Card with GigaStudio 96 Bundle

Combining Tascam's PCI-822 computer digital audio/MIDI interface card with the GigaStudio 96 software results in an complete package with software and computer interfacing that's ready straight out of the box. The PCI-822 offers compatibility with GigaStudio via its GSIF drivers, and is an ideal computer interface for those who use digital mixers and recorders with TDIF or S/PDIF digital interfaces. With the Giga-PCI package, you get the power of a full version of GigaStudio 96 along with computer interfacing for about the same cost of the card alone.

The PCI-822 is a PCI-based interface card with everything you need to send digital audio and MIDI signals to your computer for recording and sequencing. The 8-channel DTRS compatible TDIF interface and stereo S/PDIF interface supports 16-, 20- and 24-bit audio as well as 44.1 and 48kHz sampling rates. The two 16-channel MIDI ports provide 32 channels of MIDI I/O for keyboards, synth modules and mixer automation. The PCI-822 ships with GigaSampler LE — a powerful software-based digital sampler. The PCI-822 also includes ASIO and MME drivers which provide compatibility with most digital audio and sequencing software applications.

- 8-channel TDIF digital input & output
- S/PDIF digital input & output (RCA coax)
- 2x2 MIDI Interface (32 MIDI channel I/O)
- 16, 20, 24 bit resolution
- Supports 44.1 and 48 kHz sample rates (internal) as well as input tracking from 39-51 kHz
- 75-ohm BNC Word Clock output for sample rate synchronization
- The PCI-822 has a software control panel for digital audio input status, sample rate selection, and clock source control.
- ASIO driver provides low-latency performance when adjusting parameters and monitoring inputs with applications such as Cubase. The PCI-822 also has a direct GigaSampler Interface (GSIF) driver.
- Includes a breakout cable for S/PDIF, MIDI and word clock connectors

Includes GigaSampler LE
- Multi-Gigabyte, 44.1k Sampler Playback
- GigaSampler Instrument Editor
- 32-bit Audio Signal Processing
- Resonant HP/LP/BP/BR filters with Dynamic Resonance
- Advanced Release Triggered Sampling

QuickSound Realtime Interactive Sound Database

For busy professional musicians, sound designers and recording facilities, GigaStudio's unique QuickSound technology enables instant location and previewing of samples, waves, and instruments in real-time via an intuitive, database-assisted technology for cataloging instruments and sound samples using plain language.

Just type in the type of sound you need — piano, drums, french horn and so on — and QuickSound will pull up all the samples that fit the description. GigaStudio literally makes terabytes of sound content instantly accessible and playable.

By instantly mapping the dozens of sound objects matching any search criteria to a MIDI control surface, automatically coupling these sound objects to an advanced audio streaming and DSP processing engine, and making each event audible in less than 10 one-thousandths of a second, QuickSound affords unrivaled power to scoring professionals.

Professional Features

With additional professional features like capture-to-wave (records entire performances, including effects, faders, pan, and MIDI automation directly to disk), support for 24bit/96kHz hardware, embedded help tools, an advanced instrument editor featuring synthesis tools like multi-mode resonant filters (low-pass, band-pass, high-pass, notch), multiple envelopes and LFO's, drag and drop sample assignment, and up to 32 samples per key — GigaStudio is the must-have tool for any serious composer or sound designer.
Sample and Loop Libraries Optimized for GigaStudio

Taking advantage of GigaStudio's powerful architecture, Giga-compatible sound libraries offer more than most sample sets. Since only a small portion of the sample is saved in RAM, GigaStudio sound libraries don't need to be looped and compressed to work in playback. In fact, may Giga libraries, from acoustic pianos to strings, guitars and many more have no looping at all.....just masterfully-captured full recordings of instruments the way they were meant to sound.

You'll find GigaStudio libraries for virtually any genre of music. For the most up-to-date complete list of Giga libraries, please visit the B&H website.

Garritan Orchestral Strings
One of the most detailed sound libraries ever developed for any sampler. Featuring masterful 24-bit recordings of the very finest string instruments (including Stradivarius, Guarneri, Montagnana, Testore, Gagliano and more) performed by distinguished virtuosos Lincoln Center, this 16 CD-ROM set features over 8,500 captivating sampled string sounds with over 500 different instrument patches & combinations. This extensive library offers a myriad of playing techniques, complete coverage of the entire range of the sections, multiple dynamics and much more. It also adds extra touches like MaestroTools Auto-Alternator (an exclusive feature that alternates automatically between up & down bows or alternative samples), MaestroTools Legato Mode to help achieve more realistic legato phrasing, expression control, vibrato control and warmth control using multi-velocity cross-fading between samples

Garritan Orchestral Strings “Lite”
Garritan's world-renowned orchestral string library is also available in a more economical package. This 3 CD-ROM library includes two dynamic levels, with basic articulations and bowing including sustain vibrato, sordino, trills, détache and more. GOS Lite offers the same excellent quality level from the advanced GOS version, and comes with a free edition of Chicken Systems' Translator software.

Denny Jaeger Master Violin Library
The acknowledged standard in sampled violins. Sections of 14 violins available in every dynamic level. Includes looped sustains, pizzicato, tremolo, half and whole step trills, slides and calegno. Patching allows control over tuning and bow strokes. Original comprehensive 3 disc and one disc CD-ROM sets

Sonic Implants Symphonic String Collection
Symphonic String Collection is a 20 CD-ROM (3 DVD) box set that enables composers to evoke the true essence of an ensemble string orchestra with unsurpassed clarity and ease. Recorded within the exquisite acoustic confines of Sonic Temple Studio Roslindale, MA by Emmy and RIAA award-winning engineers Antonio Oliart and John Bono, this stunning collection showcases world-class musicians from both the Boston Symphony and Boston Ballet Orchestras. Rich, multi-dynamic instruments with down and up-bow samples, gbs of articulations, convenient switching and cross-fade parameters, and release samples which preserve each note's native resonant string decay make this an eminently playable and expressive tool. Great care was taken to preserve the aural integrity of each sample with a minimum of applied processing. The result is a collection which is truly an instrument unto itself and an essential vehicle for any composer who values their creative medium as much as their craft.

Dan Dean Solo Strings
Dan Dean Solo Strings is a culmination of many months of recording and editing. Solo Violin, Solo Viola and Solo Cello were recorded in stereo in various articulations (arco/vibrato, pizzicato, half-step and whole-step trills, spiccato and tremolo). Each note of each instrument was recorded in each articulation. There is no pitch-shifting or unnatural transposition artifacts commonly found in other libraries. Also, since each and every note of the instruments appears unaltered by pitch shifting, the bow and instrument body resonances as well as the overtones characteristically generated, are true throughout the entire range of all of the instruments. This creates a smoother, more "organic" sounding bank with even note-to-note transitions. Instruments and banks on this collection include violin, viola and cello with arco/vibrato, staccato, pizzicato, tremolo, and half-step and whole-step trills.

Symphonic Fields Forever
Beautifully evocative solo and small section orchestral instruments. For use in pop and classical orchestration as well as acoustic textures. Features superbly recorded, multi-samples of Celli, Violins, Choir, Silver Flute, Saxophone, Double Reed, Bassoon, Trombone, Tubas, Double Basses, Clarinet & Bass Clarinet, plus ensembles of these instruments.

www.bhphotovideo.com
GIGASTUDIO SOUND LIBRARIES — BRASS/WOODWIND

Dan Dean Solo Brass

10 CD set with up to 8 layers per note (ppp, pp, p, mp, mf, f, ff and fff).
All notes chromatically sampled.
Articulations include NV, Portato, Staccato, Straight Mute, fp, fp, long/medium and short crescendo.
Vibrato on Trumpet and Piccolo Trumpet.
Advanced programming features include "ensemble" presets, full keyswitching, mod wheel switching implementation.
Select between 2 light versions: LT1 retains all layers with less notes. LT2 retains all notes with less layers.
Source captured in 24-bit stereo, UV-22 bit-reduced to 16-bit.

straight mutes on the Bass Trombone, Trombone and Trumpet.

Bigga Orchestral Brass: French Horn
302 MB of French Horn. All wavs Full envelope/no loops. Two separate versions of every Instrument Preset allow unique, true Doubling Presets to be included. You get two separate Multi-Velocity Fr Horns and their Doubler Presets, plus separate Presets of each velocity layer (Piano, Mezzoforte, Forte) & Doubled Presets of each velocity type. In addition to multi-velocity main instruments, there are single velocity (Mezzoforte) versions of special attacks. Includes 2-Staccato, 2-Sordini, 2-stopped, 2-Tongued variants & Doubled Presets of these variants. Also includes short & long crescendo presets + some "gliss" attacks.

Bigga Orchestral Brass: Trombone
440 MB of Trombone. All wavs Full envelope/no loops. Two separate versions of every Instrument Preset allow unique, true Doubling Presets to be included. You get two separate Multi-Velocity Trombones and their Doubler Presets, plus separate Presets of each velocity layer (Piano, Mezzoforte, Forte) & Doubled Presets of each velocity type. In addition to multi-velocity main instruments, there are single velocity (Mezzoforte) versions of special attacks. Includes 2-Staccato, 2-Sordini & 2-Tongued variants & Doubled Presets of these variants. Also includes short & long crescendo presets and some special "gliss" attacks.

Bigga Orchestral Brass: Tuba
341 MB of Tuba. 441 MB of Trombone, 302 MB of French Horn, 348 MB of Trumpet. All wavs Full envelope/no loops. Two separate versions of every instrument preset allow unique, true doubling presets to be included. Get two separate Multi-Velocity lead Trumpets, Fr Horns, Trombones, Tubas and their Doubler Presets, plus separate Presets of each velocity layer (Piano, Mezzoforte, Forte) & Doubled Presets of each velocity type. In addition to multi-velocity main instruments, there are single velocity (Mezzoforte) versions of special attacks. Includes Staccato, Tongued variants & Doubled Presets of these variants. Also includes short & long crescendo presets + some "gliss" attacks.

Bigga Orchestral Brass: Trumpet
348 MB of Trumpet. All wavs Full envelope/no loops. Two separate versions of every Instrument Preset allow unique, true Doubling Presets to be included. Get two separate Multi-Velocity Trumpets and their Doubler Presets, plus separate Presets of each velocity layer (Piano, Mezzoforte, Forte) & Doubled Presets of each velocity type. Additionally, there are single velocity (Mezzoforte) versions of special attacks. Includes 2-Staccato, 2-Sordini & 2-Tongued variants & Doubled Presets of these variants. Also includes short & long crescendo presets and some special "gliss" attacks.

ORDER & INFO. (212) 444-5088 • FAX: (212) 239-7770 (800) 947-7008 1-800-875-6951 • www.bhphotovideo.com
Post Piano Suite V1
The main instrument is a Steinway D Concert Grand (the largest size Steinway makes) sampled with multiple velocity layers and sustain pedal sampled individually. Patented disk acceleration technique allow this 1.2 GB piano to fit on a single CD and there are 12 preset choices for special voicings in addition to the Full preset. (A Light preset allows a smaller version of the piano to load on less powerful systems.) Not stopping at this, Michiel Post added a unique section of Orchestral percussion instruments including Glockenspiel, Hackbrett, Marimba and Vibes. The samples are from the orchestra pit of the renowned Concertgebouw in Amsterdam, whose natural hall ambience adds a charming realism. Also includes a set of Electric Piano instruments, and a “Simple Piano” section with multiple preset choices such as Pianissimo Only, F/F Only etc. A must for the accomplished pianist or sequencing musician.

The Holy Grail Piano
Finally, a sample piano that you can actually use in many different situations. Using a proprietary method of sampling called Virtual Model Sampling, this new approach offers you more realism than you’ve heard using samples. Every aspect of the piano including note let-offs, pedals and sympathetic strings are all controllable. The notes decay more slowly, and sustain longer. The samples are more resonant because more of the sympathetic resonances are supported. They’ve captured the actual change in harmonic content of each note over time.
- Set up for use in surround environments
- A real time V.M.S. Modeled Sustain component, identical to a real piano
- Controllable pedal/hammer action, resonant harp, and note on and off
- Multiple layers and multiple versions to fit any need
- Two different miking perspectives offered

Grandioso Steinway D
Recorded on the best grand found—a Steinway model D3 built in 1965 and fully refurbished by Steinway Hamburg in 1999. This piano served the Rotterdam “DOELEN” concert hall for several decades, where hundreds of famous musicians, from Claudio Arrau to the Rolling Stones, performed for live audiences and broadcast concerts. Captured with up to 6 articulations (PPP, PP, P, M, F, F, FF and FFF) for sustain pedal up, sustain pedal down and 4 articulations for the release triggered samples. Samples were recorded using Prism Sound, a 24-bit ProTools TDM Mix+ system and Waves processing. Mapped up to 16 levels of velocity, true multiple velocity release layers, ultimate staccato, and sustained pedal down samples with a carefully chosen amount of resonance. The library has 5 GB of samples. The end result was tested by several concert pianists, who helped develop a sampled instrument to meet their highest expectations.

FortePiano
Play the same type of piano as Haydn and the other fathers of classical music. This Gigasampler instrument has multiple velocity layers/pedal down/pedal up AND separate Modifier layer, as well as True Key-Release samples. Listen to the MP3 demos and hear the actual key mechanisms just like the real thing. The largest, most ambitious sample version of FortePiano ever.

Estonia Acoustic Grand Piano
Estonia Grand pianos have been praised by the top pianists in the world. Now a Giga sample version with 4 velocity layers Pedal Down & Pedal Up plus 4 velocity levels of Release samples for extra expressiveness. Recorded by Grammy-winning engineer, Larry Seyer, this is the piano that everyone is raving about, and is bundled with the full version of GigaSampler.

GigaPiano
Over a GB of rich, stereo samples result in the most realistic sampled grand piano available anywhere. GigaPiano encompasses multiple velocities, rich soundboard resonance for damped staccato, as well as undamped pedal down samples for unparalleled playability. Recorded by Grammy-winning engineer, Larry Seyer, this is the piano that everyone is raving about, and is bundled with the full version of GigaSampler.

Rain Piano
Sometimes a Grand Piano is simply too much or lacks personality. Rain Piano is professionally detuned to add character while staying in tune with your other instruments. A true 8 velocity X2 (pedal Up / pedal Down) The extra velocities provide smooth response from softest to loudest timbres. Recorded at Studio Kulig, Sweden using only the finest gear and mastered in 24-bit stereo.

Studio Grand 88
A huge sample instrument with ultra realism from true 8 Velocity X2 (Pedal Up / Pedal Down) which provides extra responsive velocity layering, smooth transition from softest to loudest timbres. Malmö Concert Grand Piano. Recorded at Studio Kulig, Sweden. All samples 44.1khz. Stereo originally mastered in 24-bit depth for ultra-low noise. 6 User Preset Voicings included.

Equipment Leasing Available
Ultimate Yamaha C7 Grand Piano Library

The result of almost a year of hard work and dedication from Vintaudio, the Ultimate Yamaha C7 Grand Piano Library is the world’s largest grand piano library ever created. Vintaudio sampled the Best Yamaha C7 Conservatory Grand Piano they could get their hands on. They were so dedicated to getting just the perfect sound that the whole process was redone 3 times until we found the Ultimate Yamaha C7 Grand Piano. The concept was simple, often times composers and producers need a certain type of Grand Piano sound and the Piano libraries they have at their disposal are either too “wet” or too “dry”. We decided to offer our costumers the works. With our library you get three 2.5 Gig sized Instruments: Close Miked, Ambient and Player Perspective. All 3 instruments were sampled at 6 Velocities Pedal Up and 6 Velocities Pedal Down with a Release Layer and modwheel controlled filter modulation for either a very bright sound to a really dark tone. All samples were recorded in 24 bits using only the very best audio equipment available today (Avalon, Millenia preamps and B&K Microphones). The results are simply incredible, all the range of expression from this beautiful instrument has been captured in stunning detail to offer what we believe to be the most complete Grand Piano Library ever assembled. Whatever style of Piano your project requires, you can achieve with this library. Pop, Jazz, classical, this library gives it all to you in one comprehensive library. At Vintaudio, we strive for excellence, innovation and most important of all, a reasonable price point that all musicians can afford.

Giga Upright Piano Collection

Vintaudio’s Giga Upright Piano Collection is the largest Upright Piano library in existence today. Two wonderful uprights were captured, first a Brand new Steinway Boston Upright was sampled and then a 1908 Clinton Upright for that old school blues and ragtime sound. Each instrument is 2 gigs in size and was sampled at 4 velocities pedal up and down. A release layer was also created to enhance the realism of this wonderful library. The Steinway sounded so good that no processing or Eq was needed to make this piano sound as beautiful as it does.

Conexant GM150 & GM500 General MIDI Kits

A general MIDI collection that gives you 128 baseline GM instruments, plus a drum kit for one low price. Pianos, Fender Rhodes, string ensembles, bases, French horn, pads, and ethnic instruments - everything you need to complete your arrangements, fully realized with the expressive potential of EndlessWave. The libraries come in two formats: the GM 150 (150MB) for general use and the GM 500 (500MB) for professionals.

GM 150: TAGM 150 .................................................. 69.95
GM 500: TAGM 500 ............................................... 124.95

Gary Garritan’s GigaHarp

The instrument of heaven and angels, every string of a Salvi Pedal Harp has been sampled in stereo with four attacks/velocities per string, two harmonics per string and hand-dampening and muffling. Each pluck was recorded in 24-bit resolution using Neumann mics and Neve preamps, capturing the full duration of each string’s natural decay. This library features 300 stereo samples totaling over a GB of harp sounds.

Giga_module vsound

Offers a multitude of elaborate 3D instruments using hundreds of samples to achieve mixes of unprecedented sonic quality. The vsound_giga_module is the beginning of a line of virtual reality instruments for the GigaStudio platform. It offers a variety of patches for immediate music composition and production. Instruments include: Rock drums, Funk drums, 4 pianos, 3 Fender Rhodes, various 3D synthpads, dirty electric bass, 88 key conga, timpani, small string ensemble, and more.

TAGIGAHARP ...................................................................... 134.95

tavrmodule ................................................................. 109.95

**Sune's L100 Hammond Organ**

This is the new standard for sampled organs. Every note of every Drawbar setting recorded in extremely long looped samples averaging over 15 seconds BEFORE the loop begins...Fully controllable Virtual Drawbars screen in Gigasudio. This instrument is exclusively in Gigasudio Type 2 Format and extremely demanding on system resources. Best with a fast computer and at least 120 MB of RAM.

**Post Harpsicords Vol. 1 and 2**

Two antique harpsichords captured in detail using world-class mics and mastered in 24-bit audio directly into Pro-Tools. Perfect for keyboard purists seeking to reproduce the great early keyboard compositions for which they were written. One Flemish and one French harpsichord are covered in all their voicings including true “release” samples and even special voicings such as the “Lute” settings. All samples are full-envelope and the total library runs to over 700 MB compressed with easy install instructions.

Vol. 2 of Post Harpsicords contains 517 MB of Gigasampler format dedicated to capturing a “Virginals” keyboard in every aspect. Like Vol. 1, this library uses true “release” samples and is the most comprehensive coverage available for this historically important instrument.

**Post Harpsicords Vol. 1: TABGHARPSICO...69.95**  
**Post Harpsicords Vol. 2: TABGHARPSICQ...56.95**

**Purgatory Creek**

Rhodes for GigaSampler / GigaStudio

554 MB native Gigasampler format instrument with 4 velocity layers and separate release triggers! Classic 70’s Fender Rhodes 73 Suitcase Model A real Rhodes that won’t break your back or your wallet.

**Hammond B3 Organ**

Since the first introduction in 1935, the Hammond B3 Organ has been favored by rock, blues, gospel and jazz artists alike. And for good reason, it’s an incredible sounding instrument! Sonic Implants Hammond B3 Organ CD is a massive collection. 45 different Hammond B3 instruments all run through Leslie Speaker and programmed by one of Boston’s best B3 players. Long loops, stereo samples, complete keymaps, slow, fast and stopped rotor variations give you a ton of sounds to choose from. GigaCrossfades move smoothly between stopped, slow and fast rotors for ultimate playability. This B3 isn’t the pristine, clean, and pretty B3 sound you often find in a sample collection or soft synth. Instead, we chose to record a B3 with some character, some grit; what a B3 really sounds like after its been played a lot and gigged a lot. Documentation includes complete drawbar settings.

**Scarbee R.S.P. ’73**

Master sample developer Scarbee brings you one of the most comprehensively sampled Rhodes electric pianos ever made with the Scarbee R.S.P. ’73. Its depth and sophistication captures elusive soul of the original Rhodes!

The R.S.P. ’73 consists of a collection of truly authentic ‘deeply sampled’ renderings of the classic Fender Rhodes Stage Piano M.K.I - ’73, captured in high definition 24 bit quality. The piano sound was captured directly from the harp, bypassing the passive tone control on the front panel, in order to capture the full frequency range of the instrument and minimize unwanted noise. All sample editing - including noise reduction and normalizing - was also done at 24 bit resolution.

All samples on R.S.P. ’73 are full length and unlooped. Each of the 73 keys of the Rhodes was sampled at 12 different velocities, ranging from 0 to -26 dB...but that’s only half the story. In order to capture that magical feel of really ‘playing’ a Rhodes, Scarbee also recorded ‘release’ samples for each of the 12 velocities, at the exact same level as the corresponding 12 sustain samples. The release tone - a sound created when a damper bounces against the time as a key is released - is an intrinsic element of what musicians recognize as the original ‘Rhodes Sound’.

For that duller ‘old school’ sound, a special Hi-cut version of each program is also included. Plus, all programs are available in both Equal and Stretch tunings. Each Giga version utilizes 1752 samples and weighs in at 1.5 GB. Each key controls 24 unique samples: 12 different velocities of samples for the sustained notes, and another 12 velocities of samples for the release samples. If you’re looking for the ultimate Rhodes sound for Giga, you need to check out Scarbee’s R.S.P. ’73!

**Scarbee R.S.P. ’73...149.95**

**GigaStudio Mastery Tutorial**

Dave Govett, one of the developers of GigaSampler, has created a 4-CD multimedia tutorial that details GigaStudio. Each aspect, from setup through use of the Instrument Editor through making the most of the Quick Sound feature is covered.

**CDxtract—GigaEdition**

CDxtract was designed for musicians who want to manage and convert their Roland, Emu, SampleCell, SoundFont, and AKAI sample libraries to Giga. For example, an AKAI CD can store hundreds of programs and samples. To find the right sound you usually have to load them one by one in your sampler, which takes a lot of time. CDxtract reduces the time needed. Spend more time playing music! A sampler library is an expensive investment and usually if you buy a new sampler that uses a different format then you probably would have to buy the same sampler library again.

CDxtract allows you to convert your sampler libraries between popular sampler formats thus protecting your investment. Moreover, CDxtract cost the same as a single sampler CD.

**For Any Inquiries Regarding Your Order, Call Our Customer Service:**

(800) 221-5743 • (212) 239-7765 • FAX: (800) 947-2215 • (212) 239-7549
**Post Positif Organ**
The classic “Positif” organ captured with and without Release samples. It was recorded in full 24-bit digital audio quality using the world's best mics and recorders. Incredible attention was paid to every detail during editing. The recording was done using DPA 4000 cardioids & omnidirectional microphones going straight into ProTools, keeping both close and ambient microphones on separate tracks. The historic organ sound benefits in terms of realism from the note for note sampling. All typical characteristics of this instrument are captured. The release sample layer was added to achieve true realism!

*Please note, Gigasample libraries are 16 bit, though capture may be achieved at 24-bit resolution.

**Tab Positorg**

**VR Sound 3D Pipes**
The instrument represented on this CD is The McLane Organ at the Baylor University, Texas. 92 ranks 4 manual designed by Petty Madden Organ builders in 1993. The presets are a reflection of organ stops used by the great performer Dr. Joice Jones. This organ is so realistic that not even she could tell the difference between live and “memorex”.

**Post Organ Tool Kit**
The POST ORGAN TOOLKIT is one of the largest and most versatile collections of high quality organ samples ever assembled! There are 111 Gigasampler instrument files (291.4 MB); all perfect sounding, looped, and most in full stereo, divided into 6 folders: Solo Instruments, Tutti & Pleni, Max Organ, Simulations, Italian, and the Concertgebouw Organ. By combining several programs simultaneously you can create every possible registration any organ can produce...!

**The Denny Jaeger Private Collection**
Audio quality and patching that belong in the 21st century. Proven in high-end record, TV and film production. A comprehensive collection of high power, high utility sounds featuring keyboard pads, powerful orchestral string stabs, lyrical English horn and bassoon, vocal SFX & percussion.

**Post Theater Organ: Volume 1**
In 1935, Dutch organ builder Strunk built an immense organ in the Amsterdam City movie theatre. It consists of three rooms. The main room counts 11 ranks of pipes; the first Solo room has 7 ranks and the 2nd Solo room had 8 additional ranks, but was lost 10 years ago. Samples are 10 to 15 seconds long with perfect loops to enable playing of unlimited length of notes. The true release sound of the organ pipes was also recorded and is reproduced upon key-release. All Preset programs have 50 multisamples recorded in stereo, with the true release reverbation tail recorded in the theatre. The programs are around 100 M B each, making the total size of these individual stops approximately 1.4 GBs.

**Chicken Systems Translator for Giga**
Roland, Emu, Ensoniq, SoundFont, and AKAI file conversion to Giga products. (Kurzweil, SampleCel, and others coming soon.) Use your sampler’s hard drives and CD-ROM’s with Giga products. Translations are precisely optimized for the best possible sound - keymaps, looping, all possible program parameters, even effects.

Browsing any sample disk or file system is familiar, quick and easy. See your disk and PC files in a tree-view fashion, exactly how it is laid out on the disk. Translator allows you to audition any sample directly from disk or file, within the PC’s hard drive or proprietary hard drive, allowing you to find a specific sound. Single file or bulk translations (entire disks, folders, volumes, banks, directories, etc.) are available. For example, you can convert a Roland Performance to a .gig file with a single Giga instrument, or multiple Giga Instruments representing each Roland Patch contained in the Performance. Convert a single Emu E4 Preset, or a whole Bank. 

Many of the special utility functions of the full version (see Chicken Systems Translator on page 1065 for further details) are also included.
ARP Solina Strings

Created by Worra of Bigga Gigas, this is the classic ARP String Synthesizer of the late 70's faithfully captured in all its analog warmth. Every note of every Factory Preset is sampled! It is like buying the actual synth in perfect working order for an unbelievably low price. Now you can add the authentic sounds of this much sought after synth and take advantage of the awesome increase in polyphony made possible by Gigasampler. There are multiple variations of each Preset available through convenient “Key-Switch” mapping, making it possible to go from the stock, factory sound to a huge pad at the touch of key and without missing a beat. Stacking these warm analog sounds with modern strings and pads leads to endless hours of creative fun, searching for that perfect mix of old and new.

TABGARP .................................................................45.95

Dex Rex Collection

With 4 oscillators, 8 waveforms assignable to each, 8 algorithms possible per voice plus 3 assignable LFO waveforms, the Yamaha DX11 could do more than any FM synthesizer. And it was the quietest by far. It can duplicate any sound ever made by any previous FM synth and almost all the original analog sounds such as Moogs and ARPs. It’s kiss of death was that it had no onboard FX processor. So what happens when you apply OUTBOARD FX to the Yamaha DX11 and give it 64 note polyphony as a Gigasampler instrument? You get some of the best sounding FM ever. Fat pianos and clavs, killer organs, great lead synths, and even some big analog strings that rival modern synths and have unique qualities. .................................................................Call

Roland JX-3P Synthesizer

Over 950 M Bs of classic synth samples contained in a single 76 preset multi-instrument Gigasample file. All 32 original factory preset sounds are covered plus many custom created pads, filtered sounds and more. The JX-3P was Roland’s first MIDI capable synth in 1983. Now you can own every sound from this timeless classic and enjoy the advantages of modern polyphony and the endless possibilities by “stacking” these sounds. All samples are long envelope and retain the internal volume scaling of the original hardware synth, so you will get the exact “feel” and easy playability of the original and all the subtle nuances that only really long samples can provide. TABGX3P .................................................................44.95

ATTACK SYNTH: MemoryMoog

Another huge native Gigasample format library from Bigga Gigas’ Vintage Series of classic synths. The MemoryMoog library contains 101 Presets in 33 Gig files. Total size is 1.08 GB. Grab some vintage “feel” at a great price! TABGATTACKSY .................................................................44.95

Worra’s Prophet: Sequential Circuits P-5

It set the standard in the 80’s, yet the Prophet 5 is still loved by many. 5 voice polyphony - 2 oscillators per voice and a white noise generator. The analog filters, envelope and LFO all sound great and are extremely flexible. There are 36 gigs on the CD, ranging from ultra-punchy analog basses to spacey pads. All the samples were recorded digitally directly into the PC. The sounds that have no infinite sustain are full envelope recordings. The sample ends only when the synth note faded on its own. The voices that would sustain indefinitely ARE looped, but the loop point doesn’t occur until 10-12 seconds into the sample so in most cases you’ll play the unlooped sound. Each Prophet voice has been sampled in thirds, C, D#, F# and A. The Prophet had no velocity sensitivity, but Gigasampler adds velocity sensitivity by default, which helps make the voice more expressive.

TABGPROPHET .................................................................23.50

Monster Matrix

2 full CDs of native Gigasample sounds. 27 Gig files, 101 preset synth voices. The definitive library of classic Oberheim Matrix-12 voices. Leads, Pads, Basses; all are extremely long source samples to take full advantage of the Gigasampler’s power. Sounds designed and recorded by SonicEmulations; Gig files tweaked and post-edited by Bigga Gigas.

TABGMONSTERM .................................................................44.95

MiniMoog

A native Gigasampler format collection. Over 500 megabytes of pure synth sounds. Includes many of the most sought after Moog sounds; FX voices, basses, fat pads & great leads. Nothing compares to the real thing unless it is a Gigasample version that allows 160-note polyphony!

TABGMINIMOOG .................................................................44.95

VINTAGE STRING BOXES

Stunning strings, vocals, flute and brass samples from the famous Mellotron and Arp String Ensemble. Today we rely on digital samples and modern synthesizer technology for the culmination of realistic instrument sounds. But before there were microprocessors, there were string boxes. The Mellotron is one of the most well known and easily recognized early legends. It’s signature sound has shown up on hundreds of albums from the Beatles to Beck and has spanned decades of musical changes without ever going out of style. The Arp Solina String Ensemble is a product of the late 70’s. This keyboard has been made famous by Elton John, The Eagles, New Order, and The Cure to name a few. The CD contains a choice selection of sounds from the Mellotron tapes. All 8 seconds of every note is included! (Small memory versions also included.) Three different string recordings from the MK2, the M200 and the M300 plus the MK3x’ Choir and of course the infamous Mellotron Flute. The Solina Arp String Ensemble was recorded and programmed to give you every sound and knob variation the instrument is capable of. Fantastic pads, filter sweeps, FX and leads.

ONE HOUR FREE PARKING
Silk Road
The Silk Road is the most well-known trading route of ancient Chinese civilization. Spanning 7000 miles through China, Central Asia, Northern India, and the Parthian and Roman Empires, the trade route blended culture, music, art and religion for centuries. Performed by Middle Eastern musicians, the Silk Road CD captures 50 authentic melodic and percussion instruments from this region. The CD includes single note instruments and percussion loops and melodic improvisations. Use the loops & improve in your pieces or as guides to the style. Melodic Instruments include 3 Kaval, 3 Nays, May, Zurna, Arabic Violin, Bouzuk, Kanun, Oud, Persian Violin, Persian Sitar, Santur, Tar. Percussion Instruments include Egyptian Dumbek, Clay Dumbek, Bass Dumbek, Low & Hi Tombek, Low & Hi Uduts, Small-Med-Large Negato Drums, Copper Darbuka, 14˝ Frame Drum, 22˝ Frame Drum, Persian Daff, Bandir Frame Drum, Small & Large Bell Shakers, Egyptian Riqq 1 & 2, Asian Zill, Indian Zill, Turkish Zill, Sufi Triangle, Ankle Belis, 3 Copper Bowls, Small & Large Tibetan Bowls, Moroccan Gargaba, Vessel Shakers.

Spirit Voices: Native American Flutes
The unforgettable sound of handmade Native American flute captured by Werner John of Early Light Music. Werner's flute music CDs have sold over 150,000 copies. Now his handmade Native Flutes are available as Gigasample instruments. Multiple attacks such as Legato, Legato with vibrato, Tongued, Tongued with vibrato plus one super Gig that contains all these attacks at three velocity levels. Five separate flutes in all.

Voices of the Aztecs
Add ancient culture to your music... Voices of the Aztecs is a full compilation of Aztec instruments, loops and vocals. These samples were recorded in Mexico from archeological artifacts. From the big Huehuetl drum to the smallest of Ocarinas, all of the sounds are unique. Water drums and wood percussion, clay flutes and incredible sound of the sea shell horn all remind us of a distant culture disappeared 400 years ago. Voices of the Aztecs also includes Nahuat poems recited by Santos de la Cruz, a poet of Aztec descent. The booklet included offers a cultural history of the Aztecs.

Voices of Native America Vol.1
An authentic collection of Native American & indigenous instruments. Includes percussion, Native vocabables, wooden & clay flute samples & performances, hand drums, rawhide drums & shakers. Vocal phrases are performed by members of the Navajo (Dine'), Crow, Shoshone-Bannock, Hopi, Apache & Nez Perce Nations. Flute and drum performances by Douglas Spotted Eagle. Produced by Douglas Morton.

Voices of Native America Vol.2
Sample producers Douglas Spotted Eagle and Doug Morton have teamed up again. This volume focuses more on component-based loops and rhythms of Native America. Instruments include deer toe shakers, Taos Drums, Social Drums, and shakers. Flute phrases, single hit big drums and vocals are also included.

Voices of Istanbul
Welcome to the world of Turkish sounds and rhythms. Recorded in Istanbul, this collection features single hit and multi-instrument loops of Turkish music.

NFX2 Chorus/Flanger
Complete range of modulation algorithms with spectral qualities ranging from smooth, rich choring to stiletto-sharp flange effects. Full control and MIDI automation of wet/dry levels, delay time (stereo), feedback, LFO rate, LFO depth and phase adjust. Screenshot, Expert Opinions.

NFX3 Tap Delay/Auto Pan
Quad multi-tap delay algorithm with individual delay time, level, pan, feedback and damping per tap. BPM mode allows entry of delay times in musical terms (beats per minute, note values). Screenshot, Expert Opinions.

NFX4 EQ
NFX4 is a semi-parametric stereo contour Equalizer. This effect gives you control over low-frequency shelving, mid-range, crossover point (low-to-mid) and high-frequency shelving.
Jim Corrigan’s Nashville High-Strung Guitars

From pioneering synth visionary, Jim Corrigan, comes the coolest, most playable acoustic guitar collection for GigaSampler. Recorded using proprietary studio techniques, this totally authentic collection of up and down strums represents the sound of Nashville at its finest. This incredible library also includes dynamically playable single strings for solo parts.

TANHSG1 ............................................................ 124.95

Jacaranda Guitars: Vol. 1

The standard of excellence for acoustic 6 string guitar samples. Fingerpick and Flatpick solo gigs and 12 different Chord Types recorded with down and upstrokes mapped so that you can strum them yourself. Popular chord types include up to three inversions, so you can jump octave registers like real guitarists. Includes MIDI Templates and demo songs, GSP Performance Presets for GigaStudio users and extensive Help File. Over 1400 M B's of 44.1kHz Stereo Gig files.

TABGJACARAND ............................................. 109.95

Whole Lotta Country

Get ready for a Hoe Down! The definitive collection of country instruments, plus the most outstanding array of country/ acoustic loops phrases and riffs ever assembled— and all performed by country guru Larry Campbell. Pedal Steel, Banjo, Fiddle, Dobro, Acoustic Guitar, High String Guitar, Mandolin, Electric Guitar, 6-String Bass, Tub Bass, 1,133 events - M ore than 2 HOURS of loops and notes. Pre-looped, ready to sample & 100% copyright free. 2 CD-ROM set.

TASHCOUNTRY .................................................. 189.95

Matt Ragan: Max Strength Acoustic Guitar

With over 1200 discreet, unlooped samples, the musical character of the beautiful Martin 000-16 is expressed in every possible hammer-on, pull-off, palm mute, release-damp, or slide combination with any open string or fretted sustain in 6 velocities - double-tracked effects, and other variations are also included for production versatility.

TASIAMPS .......................................................... 114.95
Dan Dean Giga Bass
This is the Gigasampler version of the highly regarded Dan Dean Bass Collection #1 and #2 combined with additional bonus banks not found on either of the first two disks. What's different about our samples? First, each and every note of all of the instruments has been sampled. This means that there is no pitch shifting, stretching or any other alteration of the original sample data. The notes that were played are the notes that you play. The body resonance is constant. The string overtones are constant. The harmonic content of each of the notes is consistent, and so on. This all translates into digital instruments that are more natural sounding.

Basses include Alembic Spoiler Bass, Toucan Fretless Bass, Guild Pilot 5-String Bass, Fender Jazz Bass (60's vintage), Fender Precision Bass (60's vintage), Rickenbacker 4001 Bass, Hofner Violin Bass (60's vintage), Gibson Thunderbird Bass, Alembic Spoiler 5-string Bass, Washburn AB-20 Fretless Acoustic Bass Guitar, Guild Ashbory (Rubberband) Bass, Hohner Fretless Acoustic Bass Guitar and an Acoustic Bass (German 100+ years old).

Larry Seyer: Upright Acoustic Bass
This library is over 500 MB in size, dedicated to this one fine classic Italian instrument. Every note of every string was sampled in stereo at 4 velocities with no loops. Features 'finger damped' staccato release resonance samples that will play on the note-up (release) and body resonance volume controlled by the Mod Wheel. There are fast and slow slides up and down all four strings, up and down from each note. Also included are some riffs, special effects, harmonics and noises.

Will Lee's Ultra Freakin' Bass Rock
A collection of licks, riffs & patterns inspired by many bass influences, as well as "conditions of the moment" stumbled upon at the sampling sessions. Sampled with an array of some of my favorite cool effects pedals handy including the Boss Octaver (the "Brown Pedal") and Digitech's DOD Envelope Filter (the green pedal) and Whammy (the purple one). Also used was the spring reverb from Will's Fender Deluxe Reverb amp. This library also contains samples of 5 of Will's favorite instruments, sampled all kinds ways to give you tools with which to make music at a high level of realism.

J-Slap & J-Fingered Electric Bass "Light"
Now get bass samples for Giga at a more affordable price. Based on the full versions of Scarbee J-Slap and J-Fingered the handmade Celinder J Update 4 has been recorded without the use of compression, tubes or advanced EQ to ensure you maximum flexibility in the sound production.

With the J-Fingered Light you can play sustained notes, do hammer-ons, pull-offs, fast grace-notes, staccato-releases or slides, using only the mod wheel and the foot controller. You can also add all kinds of fretnoise and pick-up clap to your bass line to make it sound even more real. 423 samples are dedicated to each of the 3 pickup settings: bridge, both and neck, giving you the total of 1269 samples (about 496 MB on this CD).

J-Slap Light gives you the chance to thumb and pluck sustained notes, do hammer-ons, pull-offs, fast grace-notes, staccato-releases or slides using only the mod wheel and the foot controller, like J-Fingered Light. Add all kinds of fretnoise and string clap to your bass line to make it come alive. 524 samples are dedicated to each of the 3 pickup settings: Bridge, Both and Neck, giving you the total of 1572 samples - about 464 MB on this CD.

The programming of J-Slap Light is almost identical to J-Fingered Light as these two libraries are meant to be used as one bass sound.

Scarbee J-Slap & J-Fingered Electric Bass
Novel sampling techniques and pristine audio signal quality combine to make the Scarbee J-series the standard in sampled electric bass libraries. Designed to maximize the enormous sample capacity, high polyphony, and pristine 32-bit signal processing exclusive to the GigaStudio system, the Scarbee J-series bass libraries provide levels of interactivity and musicality not found in other sampled electric bass libraries.

For the Scarbee J-Slap bass, more than 900 samples are dedicated to each of the 3 pick-up settings: bridge, both, and neck, providing a total of 2700 samples - or about 800 MB on the CD. The musicality of this handmade Celinder J Update 4 is expressed in every possible hammer-on, pull-off, grace-note, staccato-release or slide, with any sustain, mute, thumbed or plucked note combination reproducible in every authentic context.

For the Scarbee J-Fingered bass, 1046 samples are dedicated to each of the 3 pick-up settings: bridge, both, and neck, providing a total of 3138 samples, or 1.15 GB on the CD. As in J-Slap, the musicality of this handmade Celinder J Update 4 is expressed in every possible hammer-on, pull-off, grace-note, staccato-release or slide; with any sustained note combination reproducible in every authentic context.

For the first time, the sustained bass notes have been sampled with both right hand index and middle finger (up to 8 sustained note per note), providing very realistic sounding bass lines. This library also contains 2 different sets of staccato-release samples: loose and tight which really brings life into your bass playing. J-Fingered has also both soft and hard legato-tails, even more slides than J-Slap and a complete new set of fret-noises. The programming is almost identical to J-Slap as these two libraries are meant to be used as one bass sound.

TASCAM
Latin Groove Factory
The standard for Latin Music and percussion samples. This is the most comprehensive 3 volume collection of authentic traditional and contemporary drum and percussion grooves from Cuba and Brazil. Grooves from the cultures of Puerto Rico, Trinidad, and the Dominican Republic are also included in this smoking set of drum and percussion loops and samples. Produced by experts in the Latin music field, these CDs offers the maximum amount of feel and groove allowed in samplers today. The project is laid out in such a way that even the lay person will be able to understand and use "clave".

Vol. 1 Afro-Cuban
Styles represented include: Mambo, Cha-Cha-Cha, Songo, Guagüancó, Bomba, Merengue, Mozambique, Bolero, Salsa, Samba-Cruzado, Funk, Partito Alto, & Batucada, Bossa Nova, Bairo, Calypso.

Vol. 2 Brazil

Vol. 3 - Caribbean

Dave Samuels - Marimba & Vibes
Dave Samuels is a multiple Grammy award winner who has established himself as the top mallet player of his generation. He is recognized for his fresh new sound and creative approach to both the vibraphone and marimba. This disc contains the highest quality multi-samples of marimba and vibes ever recorded! Multiple mallet variations (timbre) and dynamics. Chromatic samples of the entire range of the instrument: Yamaha YV3710 3-1/2 octave vib and the YM 5000 5 octave rosewood marimba. Sustained Notes, Muted Notes, Rolls, Riffs, and more!

Christian/Lane: Ultimate Marimba & Vibes
This two disc library features a Marimba One five octave rosewood marimba, and a Musser Gold Century set of Vibes. With four sets of mallets to choose from for each instrument your composing possibilities are endless. The marimba patches include four velocities strikes, rolls, muted strikes, and rattan handle strikes. The "marimba extras" patch includes resonator strikes, glisses, various runs and more. The Vibraphone patches include three velocities strikes, pedal up strikes, bowed vibes, and many ethereal sounds. Three selectable motor speeds are programmed via the mod with each mallet of the vibes.

Christian/Lane: Ultimate Timpani Library
Using a set of Hinger Touch Tone timpani with calf heads, this six-disc library contains every performance nuance to allow the most realistic timpani imaginable. These incredible drums produce tones not possible with any standard drums using conventional heads. Five mallets from a warm legato cartwheel to wood have been recorded at eight velocity levels for amazing flexibility and playability. Both right and left hand samples are included to make fast articulate passages flow seamlessly and realistically. Files for each mallet include: hits (right and left hands; at eight velocities, rolls at four velocities with release triggers programmed for realistic roll endings, crescendo and decrescendo rolls at three lengths, and true hand muffled strikes at eight velocities. Also includes a fingers and hand patch at four velocities (right and left hands) ranging from a light tap with one finger to the entire hand at “ff". And don't forget the standard "special effect" timpani sounds including: glissando rolls, bowl hits, booming detuned earthy tones, and eerie rolling glissandos with a cymbal on the head.

Christian/Lane: Ultimate Percussion Library
A true pallet of orchestral percussion sounds with capabilities unmatched by anything else available. The samples were recorded with the natural acoustics of a professional hall built in. This allows sounds to instantly meld into your work with little or no additional special placement, and instruments sound like they are coming from their correct position in the ensemble, not “in your face”. Each instrument is provided with a vast array of performance possibilities including: right and left hand snare hits for realistic rapid passages, consonant and dissonant triangle strikes to create the perfect tonal shading; tambourines with right and left hand samples; thumb rolls, shake rolls, crescendos; multiple pairs of crash cymbals with sustained crashes, choked crashes and scrapes suspended cymbal rolls, crescendos, mallet hits, stick hits, chokes, bells and scrapes; mallet instruments and timpani with multiple mallet choices and all velocity switched for incredibly realistic dynamic changes. Also included is a great collection of exotic percussion: wind chimes, thunder sheet, almglocken, ratchet, finger cymbals, clay chimes, bamboo chimes, porch chimes, Chinese bells, Chinese bowl, Chinese nipple gong, and anvil.
Percussion Wall
This sampling CD offers Afro Techno Ritual Rhythms with drums and percussion as its foundation. Percussion Wall offers a wide range sounds, and arrangements with rhythmic pulse divisions (2, 3, 4, 6, 8 and quarter note triplets - 3 against 2). All the 599 loops on Percussion Wall are organized into 8 tempos 160, 140, 130, 120, 118, 110, 100 and 80 beats per minute. Also includes a listing of the original stereo loop points. Important data is listed for each loop which includes sound and music properties. The original loop points can be easily obtained with the information listed in this manual.

• Percussion Wall is an extremely versatile sampling CD because it contains compete larger than life rhythm loops that are production ready, also background or rhythms textures that can mix in with other existing music, as well as sonic construction material for creating new loops.
• Electronic Drummer Dick Gal performed and created a series of drum loops based on African/Jazz rhythm concepts but used contemporary percussion samples for his sound source. His inspiration for these rhythms are the songs from the tribes of the Yoruba, the Bambala, the Zingili the Mahafaly, the Baya, the Watusi, and the Badouma, and the work of the great BeBop drummers, such as Elvin Jones, Max Roach, Art Blakey and Philly Joe Jones.
• Ernest Cholakis took these loops and processed and transformed some of these loops into “Electro-Acoustic transformations” — a class of sound processes. Cholakis developed to dramatically alter and transform percussion loops in unique ways that are commercially unavailable. The transformed loops on this CD were designed to expand the range of sonic and musical creative potential for the user. The results are rhythm building blocks which can be manipulated by any musician or sound designer to create entirely new and different sounding loops from those heard on this CD.
• And lastly, in the process of separating the musical elements much work was done to enhance the clarity of many of the very complex rhythms as well as having expanded and extended the timbre of the original performances.

vrPercussion
A collection of hits and techniques of percussion instruments from around the world. High quality percussion samples for any kind of music. Single hits, riffs and technique samples. Create extremely realistic grooves without being locked into ethnic patterns.

New York City Percussionworks
Amazing percussion played by 7 of New York’s top percussionists. Congas, Bongos, Clave, Shakers, Triangle, CowBells, Tamborines, GoGo Bells, Whistles, Tabla, Shakere, FrameDrum, Udo, Dumbec, Talking Drum, Pandero, Cabasa, Guiro, Flexitone, Wood Blocks, Timbale, Gongs and Bells. 1,482 events. Over a GB of hits and loops - pre-looped, ready to sample & 100% copyright free! 2 CD-ROM set!

Afro-Cuban (Latin) Percussion
This is the Latin Percussion collection you’ve been waiting for. Ambient stereo and close miked mono versions included to give you complete control over your mix. TONS of articulations (hits) per instrument and up to 4 multi-velocity samples from soft to loud to make you sound like a pro. Vibraslap Instruments and playing provided by Joe Galeota of JAG Drums. Recorded at Blue Jay studios in Carlisle, Mass. with engineering by Mark Tanzer (NRBQ, Carly Simon, Patty Larkin, Jerry Marotta, Livingston Taylor, Lyle Mays and others).
Heavy Hitters Library

Three stellar drummers: Tommy Lee (Motley Crue), Alan White (Yes), and Jim Keltner (studio legend). Multiple dry/ambient hard, medium and soft hits. CD-ROM versions offer modular patching allowing easy kit construction. Recorded in world-class drum rooms like A & M Studios & Ocean Way. CD-Audio & CD-ROMs.

Peter Erskine - Living Drums!

What do Steely Dan, Weather Report, Rickie Lee Jones, Chick Corea, Joni Mitchell, Joe Henderson, Jaco Pastorius, Bob James, McCoy Tyner and Michael Brecker have in common? Peter Erskine! Thousands of carefully recorded drum performances, played and personally selected by Peter from his collection of world class drum sets, are compiled on this definitive collection of drum sounds guaranteed to make your tracks come alive.

Bun E in a Box

Multiple loops from every Cheap Trick hit, plus a comprehensive collection of single hits from his extensive drum collection. Produced and recorded by legendary engineer Steve Albini (Nirvana). Available in 24-bit/44k. Drum tracks from Cheap Tricks arsenal of hits highlight this stunning collection, such as: I Want You to Want Me, California Man and many others are offered in looped sections for easy customization into your existing productions.

Sly Dunbar - Remastered

Sly Dunbar, one of the world’s greatest drummers, has set new standards for dance music using his unique blend of Reggae, Funk and Hip Hop with his long-time associate Robbie Shakespeare. Dubbed the Riddim Twins, Sly and Robbie pioneered the fusion of Hip Hop and Reggae that is today taking the charts by storm - Dancehall Reggae has left a trail of music rich in rhythm and bass. Sly plays the numerous styles of Reggae and Ska, then opens the vault to his Dancehall grooves, which can only be described as a sonic hurricane. This CD is a chronology of the past, present and future of Reggae music. Included are 150 otherwise impossible to get Dancehall loops by Sly for hits including Shabba Ranks, Mai Priess, Chaka Demus & Pliers, Apache Indian, Snow, Cutty Ranks, Black Uhuru, Yellowman, Gregory Isaacs.

New York City Drumworks

1.2 GBs of awesome rhythm played by 6 of New York City’s top session drummers! Funk, Rock, House, Hip Hop, Latin, Cajun, R&B, Brazilian, Rockabilly, African, Reggae, Swing, Gospel, Country, Thrash beats and lots more! Played with sticks, blastix, brushes and mallets at multiple tempos per groove or style. The definitive collection of drum loops and hits from 6 of New York’s finest. 2 CD-ROM set.

Mark Walker - Latin Drums

Mark Walker (Paquito D’Rivera, Oregon, Caribbean Jazz Project, Michel Camilo) lays down slamming Cuban, Brazilian, Puerto Rican and other Latin American rhythms on drum set with percussion & complete assortment of drum hits and cymbals meticulously recorded at 24-bit resolution. Recorded specifically for the sampling musician with an extremely wide variation of tempo and feel. The drum hits are superb - some say the best ever recorded.

TOPAZ STUDIO KITS: Volume One

The ultimate in live acoustic drum sampling. Features 8 complete virtual drum kits created from Yamaha and Gretsch premium acoustic drum sets! From large rock kits, to studio and pop kits, to acoustic jazz and jungle, you are sure to find the ideal drumming solution here. All kits were played by New York session drummer Zach Danziger, who is well known in musicians’ circles, having recorded with such artists as David Holmes, Manic Street Preachers, U2, Jim Beard, Bill Evans, and Randy Brecker. The library fully utilizes the expressive power of GigaSampler and GigaStudio. Lightning fast performance, even on modest systems.

www.bhphotovideo.com
Dance Partition
1500 fresh, modern synthetic drum and percussion single shot samples. A huge variety of high quality sounds for many different styles, classic dance-floor, techno/hardcore, hip hop/rap, pop, trance & jungle. Produced by Andreas Luhymeyer and Christian Hoppner/TIB Studios/Germany
TAQUPDANCE

Boris’ Unitra Eltra Rytm16
Collectors’ item analog rhythm box circa 1989 from Poland. 32 rhythm patterns sampled at multiple tempo ranges and perfectly looped. Mapped to GigaSampler files clearly marked by tempo for ease of use. Check out the mp3 demo to see if this funky beat box appeals to you!
TA QBGORIS

Kodish Drum ‘n’ Bass
Pure adrenaline by Kodish, who offers the machine-like energy of Drum ‘n’ Bass with the emotional impact of real drums. Subsonic synth grooves and hits played by Cliff Hewitt (Apollo 440) round out this disc. You’ve heard Kodish live and on recordings by Apollo 440, Chemical Brothers, Maximum Roach, Jean Michel Jarre. Sampler layouts offer complete control over each instrument/loop in the set. This enables access to only the hat loop or kick loop. Overhead and room mics were recorded on discreet tracks thus enabling user control over tight and dry or big and wet. Mixes of the entire groove are also included. Some loops are heavily processed and trashed out. A complete set of multi-sample single hits are also included.
TAQUPKODISH

Dream Experience
Dream house, the new rage in hi-tech dance music sweeping Europe. Innovative bass, drums, FX, choir, textures, ambient film tools and complex soundscapes. Perfect for electronics, score to picture and remixes. Wake up and smell the dream. Produced in Germany by TIB/Andreas Luhymeyer and Chris Hoppner.
TAQUPDREAM

Increased Velocity—Surround Tools for Post Production
Surround and astound your listeners with radically futuristic loops, beats, ambiances, drones, hits, stinger FX & atmospheres. All sounds are processed in Dolby Stereo Surround (4-2-4). Fully endorsed by Dolby Laboratories, this library is the Swiss army knife for use in film, music, re-mixing, multimedia development, or any project requiring cutting edge audio production. The sounds were created by Canadian-based sound designers Sean Charles and Gordon Durity, who have created signature compositions & sound design work for the film, music, multimedia and video game industries.
TAQUPVELOCIT

Drone Archaeology
Constantly evolving drones are based on original sounds and acoustic palettes and have completely unique characteristics. These tones are the result of computer resynthesis with a series of proprietary computer programs. Each drone is rich yet is completely absent of noise. Contemporary and original in nature and scope, Drone Archaeology is a powerful tool in the hands of the contemporary and avant garde composer/musician, as well as being an invaluable resource for film composers creating soundtracks, soundbeds and sound design.
◆ Used as foundation material, they can be processed and transformed in any number of ways to assist you in developing your own particular sound.
◆ You can build one drone from 32 to 64 seconds of original material with no built-in loops.
◆ Film Composers: In order to aid multimedia and film production, the drones have been classified into seven categories: Nature, Science, Drama, Industry, Voice, Bell and Drones. They were designed to have “focused spectrums”. In other words: to occupy a measured amount of the sonic space in the stereo field. Even though they are extremely rich and evocative tones, they do not dominate or overpower the overall sound.
TAQUPDRONE
Effects Processor for VST and MAS

TC PowerCore is an open DSP hardware platform for your favorite VST/MAS recording application—Mac or Windows. A PCI card that acts as a DSP Turbo, TC PowerCore enables native users to run extremely DSP-intensive high-end effects that previously taxed the host computer to the utmost. Using state-of-the-art Motorola 56K DSPs designed for audio, TC PowerCore provides significant performance over sole native processing, providing the equivalent power of four Mac G4 processors and a PowerPC chip—on a single card. With TC PowerCore you can run 8 studio-quality TC MegaReverbs, TC Master X or up to 24 other high-end PowerCore plug-ins simultaneously without reducing your track count or using up all available CPU horsepower.

TC PowerCore adds incredible power to your existing work environment. It seamlessly integrates into any VST-compatible sequencer or audio application such as Cubase, Nuendo, Digital Performer, Spark, Peak or Logic—no proprietary add-on software is required to access the board’s audio processing power. PowerCore works in conjunction with any audio hardware supported by the hosting audio application, from ASIO to Direct I/O and even SoundManger. 24/96 is supported, of course requiring twice the amount of processing resources per plug-in. Multiple cards are also supported by the design, allowing for expansion as the need grows. Hardware I/O is supplied by the user’s existing I/O solution.

Finally, PowerCore includes a stack of extremely powerful high-end DSP tools, right out of the box. All in all, 22 different tools from Reverb to Synthesis and Metering to Dynamics processing are included—all in TC-quality.

**FEATURES**

**Flexibility**
Each TC PowerCore DSP can run any type of effect thanks to plenty of power and the dedicated external S-RAM. Depending on processing requirements, a single DSP can normally run multiple effects. Super-algorithms may even take up to 2 DSPs, as required. Open 3rd party policy ensures that there will always be plenty of options available to expand the scope of the system!

**PowerPC**
The unique design includes a Motorola PowerPC with 8MB of D-RAM for perfect integration with floating point processing. This chip is TC POWERCORE’s brain and bridge to the host-based native world - so the DSPs can do what they are best at: professional audio processing!

**Low-Host Load**
TC PowerCore doesn’t drain your computer’s performance with its sheer existence in the system. Even the PowerPC chip has its own RAM. So no effect has to access the host computer’s RAM, saving precious bandwidth on the PCI bus.

**Quality**
Four Motorola 56362 DSPs ensure professional signal processing quality. Each chip supports up to 24-bit/96kHz audio and 48-bit double-precision processing, which many consider superior to 32-bit floating point processing. The 56362 is the most widely used DSP chip around, found in many high-end products from digital audio workstations to effect processors and synthesizers!
Multiple PowerCore Cards
Up to 4 cards may be used simultaneously in one system, though each card provides you with so much power that you probably won’t need that. In fact, with 4 cards you can go as far as having a MASTER X3 virtual Finalizer on every track in a 32-track production.

The VST PowerCore Plug-in Format
With TC PowerCore you don't give up any of your VST features – instead, PowerCore adds the reliability and power of a DSP-based system to your native environment. The VST PowerCore plug-ins run as an extension to VST-plug-ins. The user interface code runs on the host and acts like a VST Plug-In, while all the CPU intensive DSP code runs on the card. This frees up precious performance resources on the host computer for other native processes like VST instruments. Of course, you can use VST and TC PowerCore plug-ins at the same time - even in the same signal path. PowerCore plug-ins are even stored in the same folder as your VST plug-ins.

I/O
TC PowerCore functions with all I/O systems supported by your application, making it the perfect addition to almost any existing system.

Compatibility
TC PowerCore supports both, MAC and PC computer platforms. The card is compatible with MacOS 9.x and Windows 98, 2000, ME, XP. It also compatible with any host application that supports VST or MAS-plug-ins, as well as any sound system supported by the application software (ASIO, Digidesign Direct I/O, SoundManger etc).

Options
An integral part of the TC PowerCore is it's open processing platform, allowing many more plug-ins by well-known 3rd party developers. Software like SONY's Oxford EQs, D-sounds Simulator and Waldorf's D-Coder take advantage of PowerCore's processing power to provide you with seamlessly integrated FX in your VST/MAS sequencer.

Bundled Plug-ins

TC Megareverb
Megareverb's unique algorithms are based on years of research and the core technology of the flagship TC Electronic M 5000. As performance requirements aren't issue with TC PowerCore, the software provides studio quality reverb inside the native production environment. Designed for professional use, you will find all the parameters required for proper reverb design— from separate initial reflections and tail controls to a reverb tail with 3 independent bands. Run up to 8 Megareverbs simultaneously on a single TC PowerCore card.

- With better diffusion, denser tails and more realistic room impressions than ever before, TC Megareverb is the ultimate reverb solution. Adds Initial Reflection and Tail Balance Faders for even more creative control!
- Intuitive user interface with an overview of all relevant parameters, combined with easy control of the parameters takes the guesswork out of the reverb creation process. You get the sound you want - fast.

TC VoiceStrip
This highly integrated plug-in is a complete channel strip for voice sound processing, with Compression, DeEssing, a dedicated Voice EQ, Lo-cut Filter and Gate!

The acclaimed TC-saturation technology and the vintage compressor model ensure that VoiceStrip can add the highly coveted TC emulation of tube gear warmth and presence to your recordings whenever required.

TC Vintage CL (Compressor/Limiter)
The Vintage CL employs a different compression algorithm from VoiceStrip - emulating the behavior of industry-standard analog compression, aiming at general purpose rather than specific applications. Run up to 6 of these versatile Compressor/Limiter plug-ins on only one of the four available DSPs.
**TC WORKS**

**TC PowerCore**

**MASTER X3**

Based on the technology of TC’s industry-standard Finalizer, the MASTER X3 provides knock-out punch for mixes and masters. MASTER X3 expedites the mastering process by integrating several phases of mastering into a single, easy to use interface. It features multiband expansion, compression and limiting, all optimized for mastering applications. High quality uncorrelated dithering is included as well.

- Intuitive user interface makes this critical process faster and easier. Overall processing characteristics are controlled via “Target Curves” that simplify handling by providing a global style for the bands in all modules.
- The interaction between the bands can be fine tuned by applying “Target Factors” which determine the frequency focus of each processing module, significantly reducing the number of required user parameters.
- During mastering, you need to know exactly what’s going on, so MASTER X3 includes accurate level metering with clipping counters and peak hold indicator.
- Digital ceiling parameter lets you precisely limit maximum volume whenever brick-wall limiting is required. “Soft Clipping” even provides “analog” sound when desired.
- Up to 8 instances of MASTER X3 can run simultaneously on one PowerCore board.

**TC EQsat**

TC EQsat provides the same high-quality EQ that you find in the TC Finalizer hardware. This 5 band EQ has 3 parametric bands plus one Low shelf and one High shelf band (±18 dB boost/cut per band). Naturally, bandwidth, frequency and gain are selectable per band. Plus, the unique SoftSat technology creates that warm, analog sound whenever desired. Clean-sounding and very easy to-use, it is ideal for any situation from recording to mastering. Up to 12 instances of EQSat can run simultaneously on one PowerCord card. A combination of TC Megareverb, EQSat and Chorus/Delay will only require one DSP to run (at 48kHz).

**TC Chorus/Delay**

Chorus/Delay was modeled after the TC Electronic 1210 Spatial Expander, the legendary classic device for modulation and delay FX with very flexible routing and filtering facilities. This plug-in provides Flanging, Chorus, Delay, Slap Delay and combined modulation and delay multi FX, complete with BPM-based delay time input! Chorus/Delay creates unique images which are rich, yet never sound “overdone”. Hear it to believe it!

**Spark LE**

Spark LE is the bundle version of Spark, TC’s effects processing and mastering application for Macintosh. However, if you only expected a “Lite” version, think again: Spark LE supports 24/96, VST plug-ins, includes a native mastering limiter, delay line and EQ, realtime crossfades, etc., etc! And if you want even more power - an upgrade path to Spark is included as well. Compatible with Mac OS X and Mac OS Classic, Spark LE comes with a mastering quality Audio Maximizer, a flexible Tempo Delay and a One-Band EQ with selectable Notch, Low Pass, High Pass, Parametric types of equalization and a Master window with high resolution metering and 4 slots for real-time plug-in processing.
TC PowerCore 01 Synthesizer

PowerCore 01 is a synthesizer plug-in for PowerCore. Modeled after a classic monophonic analog synth, it sounds fantastic.

The TC PowerCore instrument format allows virtual synthesizers to use the available DSP-power for signal processing while running seamlessly integrated within any VST-instrument compatible sequencer, such as Logic, Nuendo or Cubase. As PowerCore is an open platform, other manufacturers such as Waldorf and Access are building synths based on PowerCore's processing power.

Classic Verb

Modeled on a world renowned studio reverb to achieve its distinctive rich and textured classic reverb sound, Classic Verb's algorithm follows a completely different design philosophy, offering a completely different sound from Megareverb. Apart from the elegant user interface, Classic Verb features a choice of modulation types for sonically rich timbres. Fifteen room types provide a wealth of different unique spaces, featuring Halls, Plates, Cathedral, Spring as well as three rooms tuned especially for vocal processing. 2 instances of the plug-in require only one single DSP to run, allowing a total of up to 8 Classic Verbs on a single PowerCore—leaving room for more plug-ins.

24/7-C Limiting Amplifier

24/7-C is meticulously modeled after a legendary dynamics processor, allowing it to match its distinctively warm tone, while adding sophisticated extra possibilities with today's flexible software technology. 24/7-C extends PowerCore's dynamics processing to include a total of 4 plug-ins dedicated to a variety of compression needs. 7 mono instances of the plug-in require only one single DSP to run, allowing a total of up to 28 mono 24/7-C's on a single PowerCore. Supports 96 kHz.

Assimilator

EQ-Curve Assimilation and Morphing

Learn the sound of your favorite mix and apply it to your own. This in short is what Assimilator does. Equalization is one of the more difficult tasks in recording, mixing and mastering - especially when you are trying to match a certain sound. Assimilator makes the process fast and instantaneous—3 steps and you're done.

The user interface provides two complete sets of curves and a morph page. On the morph page, you can morph between two complete curve sets by simply moving one fader. The applications of this processor range from film sound to mastering and of course creative use.

- FFT-resolutions of 2048, 4096, 8192
- Freely adjustable Apply strength
- Curve presets (Loudness etc.)
- Limiters
- Draw tools for EQ-curve editing
- 1 per DSP in high resolution

PowerCore FireWire

TC Electronic introduced PowerCore Firewire, providing audio professionals on the move with audio processing on laptop or desktop systems. This addition to the PowerCore platform offers almost twice the power of the PCI-card version. Now even complex mixes become a reality using just a laptop computer and one PowerCore Firewire. Of course the PCI-card and the Firewire version of PowerCore can be used at the same time.

PowerCore Firewire offers the same unique architecture as PowerCore PCI, featuring a Motorola PowerPC and 4 Motorola DSPs. All signal processing is performed on the PowerCore unit, freeing up precious host performance resources for virtual instruments or native Plug-Ins. The hardware specifications go beyond those of the original card, featuring faster DSPs, a faster PowerPC and 3-times the amount of RAM per DSP.
Waldorf D-Coder
Synthesizer Vocoder
Waldorf's D-Coder for PowerCore goes beyond classic Vocoder concepts by providing an integrated synthesizer as tone generator. This way no external carrier signal is required to make the vocoding effect audible. D-Coder is based on DSP technology used in the popular Waldorf synthesizers, made accessible to PowerCore users from inside any VST or MAS compatible sequencer.
D-Coder has everything you need to create sophisticated vocoding effects, in one easy to use interface! The included polyphonic synthesizer, featuring that classic Waldorf sound, eliminates the need for external carriers. Integrated effects include 3-band EQ, Chorus and Drive.
D-Coder can be played from a MIDI track or in real-time from a keyboard. D-Coder is so flexible, the synthesizer section can be played independently of the vocoder section! If you are using a VST 2.0 compatible sequencer, all LFOs can follow MIDI sync, allowing you to independently modulate the synthesizer and the vocoder in musically relevant values such as “8 bars”.

DSound VL2
Multichannel Valve Interface
The VL2 is an 8-channel virtual valve interface for mixing and mastering, adding the warmth and life of tube processing to any digital recordings. This Plug-In was developed by DSound as a direct result of the phenomenal growth in popularity of affordable hard disk recording systems, to fix the sometimes cold and clinical sound of digital recordings with its unobtrusive processing. The VL2 is an elegant solution with a simple interface and a superior audio quality. The VL2 goes beyond the functionality of common valve interfaces by allowing you to control the amount of saturation with a single, finely tuned control. Each channel of the VL2 has unity gain - so levels are unaffected - but as each channel incorporates a valve stage, the audio signal benefits from the warmth of the finely modeled valve characteristics.

Steinberg Surround Verb (For Nuendo)
TC-quality 5.1 reverb has been available to users of Steinberg's Nuendo for quite a while thanks to this plug-in's native version. Now this version adds Powercore support. Surround Verb features a graphic display for visualizing the reverb expansion in the virtual space, and a powerful algorithm core delivering dense and convincing state-of-the-art reverbs. The tail parameter offers the same flexibility as MEGA REVERB with 3-band control and adjustable crossovers. The additional EQ stage provides additional sound flexibility with its low and high shelving features.
- 4 Room Types: Hall, Horseshoe, Club, Room
- Power-panning for position in a room
- Discrete tail for each channel in a 5.1 setup
Sony Oxford EQs EQ Suite

Sony Oxford EQs deliver an unparalleled quality and flexibility with very musical results and extremely low noise and distortion, below -130 dB. The EQ and Filters plug-in comprises out of 5 different sections including HF and LF selectable to shelf. Two additional HF and LF filters add to the power with variable slopes from 6 dB to 36 dB per octave. The models and technology of these plug-ins are based on the same as in the popular Sony Oxford consoles and Pro Tools plug-ins. The package includes different plug-in versions for greater DSP-efficiency. If you are looking for the ultimate in EQ, this is your solution!

- Very musical results
- 24-bit/96kHz processing
- 4 EQ-style models for a maximum of artistic flexibility – from British to transparent
- Low noise and distortion (below -130 dB)
- HF sections are fully decramped
- A/B and selection between two complete sets of settings

Sony Oxford Inflator

Tube Emulated Dynamics Processor

The Inflator is a unique process that can provide an increase in the apparent loudness of almost any program, without obvious loss of quality or audible reduction of dynamic range, yet avoiding damaging increases in the peak level of the signal. The Inflator process can also bring power, presence and warmth to program material and even provide headroom overload margin above digital maximum with a subtlety and musical character reminiscent of tube systems.

- Increases the loudness of almost any program material
- Creates warmth, character and dynamic excitement, similar to that of analog systems
- Provides virtual headroom above digital maximum
- Creates artistic effects ranging from subtle tube-like harmonic characteristics for warmth, presence and ‘in your face’ fatness, to outright saturation distortion modeling
- 2 modes of operation for maximum flexibility, artistic creativity and optimal DSP usage

Sony Oxford Dynamics

Full Dynamics and Compression from the OXF-R3

Resulting from many years of research into professional dynamics applications, the channel dynamics offers separate Compress, Limit, Expand, Gate and side chain EQ functions, with full independent control of all parameters. Also separately included is a bus Compressor/Limiter which is fully surround multi-format compatible.

Features such as selectable time constant curves and variable soft compress functions allow you to confidently tackle all common uses of compression, from subtle level control and mastering functions to the production of great artistic effects. The use of a feed-forward architecture with logarithmic side chain processing ensures exemplary sonic characteristics and dynamic accuracy. This highly sophisticated and professional product has the power and flexibility to provide an artistic capability unavailable from other units, analogue or digital.

- Channel Dynamics with separately controlled sections for Compressor, Limiter, Gate and Expander
- All functions are fully automated.
- Separate Bus Compressor/Limiter with surround support and selectable Sub channel filtering and gain contribution control.
- Variable harmonic enhancement for extra loudness, presence and ‘punch’.
- Fully variable soft ratio function for extreme program tolerance and highly musical compression.
- Selectable re-dithering function for word length reduction in mastering situations.
- Low noise and distortion (below -130 dB)
TC VoiceTools is a dedicated all-in-one voice processing solution plug-in bundle featuring Intonator for pitch correction and Voicestrip for sound and dynamics adjustment.

**TC INTONATOR TDM**
TC INTONATOR TDM fixes out of tune notes on the fly - by adjusting a few intuitive parameters, an otherwise great vocal performance can be brought into shape in realtime. A definable pitch “window” allows you to narrow or widen the re-intonation range, set scale and amount - done!

- Realtime pitch correction (maximum range ±400 cent)
- Choose from major, minor, chromatic and manual and user definable custom scales
- Adaptive Lo Cut Filter: Automatically adjusts its frequency according to the material’s shape
- Tune Parameter for adjusting the tuning reference
- Tune Reference Mode (keyboard acts as synthesizer)
- Extremely intuitive interface: very few parameters required to set up the process
- Up to instances per Mix DSP

**TC VOICE STRIP**
TC VOICE STRIP includes all you need for voice sound processing: Compression, De-essing, a dedicated Voice EQ, Lo Cut Filter and Gate - that’s total recall of your vocal processing sound! Thanks to our acclaimed SoftSat technology TC VOICE STRIP can even emulate the sound of analog gear, adding the highly coveted TC emulation of tube gear warmth and presence to your audio whenever required.

- All-in-one voice sound processing
- Single Band Vintage Compressor
- Level independent De-esser
- Dedicated 3-Band Voice EQ
- Switchable SoftSat saturation for analog emulation
- Gate and Lo Cut EQ
- All processes can be used simultaneously

TC MEGA REVERB’s unique algorithms are based on years of ongoing research and the core flagship technology of the M 5000. With even better diffusion, denser tails and more realistic room impressions than ever before, TC MEGA REVERB provides the ultimate reverb solution.

TC EQSat is a 5 band EQ with 3 parametric bands plus one Low shelve and one High shelve band. It is capable of boosting or cutting up to 18 dB. Naturally, bandwidth, frequency and gain are selectable per band. And what’s more, the unique SoftSat circuit creates that warm, analogue sound whenever desired.

TC CHORUS/Delay recreates the sound known from the classic TC 1210 Spatial Expander, creating unique images which are effective without sounding “overdone”. This Plug-In allows you to create all sorts of different modulation effects like Chorus, Flanging, and Slap Delay with very flexible routing and filtering facilities.

TC/VoiceTools 3.6 includes the essential processing tools for your Pro Tools 24 Mix and HD systems including systems running on OS X and Windows XP. These include the powerful TC MegaReverb, TC EQSat and TC Chorus/Delay. Support is provided for sampling rates up to 96 kHz using HD systems.
The TC Native Bundle 3.0 includes seven high-end processing tools for VST and MAS users that cover all needs for equalization, dynamic processing (including de-essing), reverberation, limiting and maximizing. Tools are heavily performance optimized, so they really work in your multi-track environment - without bringing the computer to its knees. Their intuitive user interfaces allow you to use them instantly. All of Native Bundle 3.0’s plug-ins have been completely rewritten in order to achieve even better sound and system performance. They process you audio with 32-bit floating point accuracy, and support 24-bit/96kHz files. Compatible with Mac OS X, OS Classic and Windows.

**Filtrator**
Synth style filtering-LFO Modulation, Envelope follower, SoftSat for vintage sound, and more. Filtrator underlines the creative possibilities with Native Bundle as its innovative controls support intuitive and fast effects design. Its Envelope Follower allows for classic Filter effects with the filter being modulated by the amplitude of the incoming audio signal. The LFO modulation is syncable to MIDI clock, providing easy synchronization for modulated filter sweeping. Furthermore, Filtrator includes 12, 18 and 24dB Slope, Lo and Hi Pass Types, a Separate Drive Section for Filter Distortion and a Saturation algorithm for a warm, analog sound.

**Compressor**
In addition to standard controls like Attack, Release, Threshold and Ratio, the Compressor section features a Hold Time, Automatic Make-Up Gain and Soft Knee controls. These parameters allow you to “fine-tune” the sound characteristics of the compressor from “analog” to digital - and to adjust the overall behavior for processing a single track or mastering a complete playback. Make-Up Gain automatically brings peak levels up to 0dB.

**De-Esser**
Most de-essers operate with an “absolute” threshold, requiring you to send the signal in at an optimal level close to 0 dB. This makes working with heavily dynamic material and fades a nightmare, because all the sibilant, unwanted frequencies would suddenly reappear. With the TC plug-in, de-essing is level independent so you get optimal results — even at very low input levels, with highly dynamic material or in fade outs.

**Reverb PLUS**
TC reverbs are the cornerstone of many professional recording studios. And the Native Reverb PLUS is no different. A successor to the original Native Reverb, the easy-to-use Reverb PLUS features an enhanced algorithm, new user interface with additional parameters to significantly extend the creative possibilities for creating convincing spaces, and over 100 new presets for a wealth of added flexibility.

**Graphic EQ & Parametric EQ**
All the equalization tools necessary for recording, editing or mastering - and more. Innovative controls make using these two plug-ins an intuitive and creative experience. Both EQs also have the SoftSat advantage: a proprietary algorithm which generates that warm sound often associated with analog equipment. The key to a better sounding EQ.

**Parametric EQ**
The Parametric EQ is a powerful 10-band EQ (7 fully configurable bands and 3 additional bands) controlled by a unique virtual joystick for simultaneous and fast treble and loudness control. The 7 bands can be assigned to work as Parametric, Hi/Lo Shelf or even Notch filters - and any combination of these. Split gain controls for left and right channels give you instant access for working on channels discreetly, or moving the frequency spectrum around in the stereo image.

**Graphic EQ**
The Graphic EQ is a 28 band graphic equalizer with a unique graphic interface (touch screen) for intuitive access to the band gain controls - simply draw the desired frequency response onto the display with the mouse, and the EQ is set. Operate with full 28 or alternatively 14 or 7 bands. The bands can be grouped for even easier handling. The Master Fader is an additional tool for quickly adjusting the overall gain relations of complex EQ settings.
Realtime Digital Audio Editor for Mac

More than a classic two-track editor, Spark XL is a complete mastering and editing environment with a stack of powerful tools to get the job done. Spark represents a new approach to stereo-based audio editing, realtime processing, and mastering, featuring a unique Browser window, integrating Wave editing, project file management, and play list, all at once. SPARK XL also includes the FX MACHINE and all its plug-ins. The Browser View is used to edit a file, or build a play list, the Master View gives you Master Faders with highly accurate PPM level meters, phase correlation meter, built-in Dithering, and a realtime “FXmachine” with extensive routing capabilities. Up to 4 stereo streams with 5 plug-ins each can be routed and processed simultaneously. A histogram display visualizes the “level distribution” in your recording, for valuable feedback about the signal processing being applied, thus simplifying finding the right settings.

BROWSE

Thanks to SPARK XL’s unique one window approach, you always keep the overview: The BROWSER VIEW integrates all aspects of editing into one window: Audio Database, Wave Editor and Play List. The Database allows you to create a virtual view of all used audio material, and to store all project relevant information in one global Project file. Accessing files is instantaneous; the waveform overview is always displayed immediately in the editor. Import and export are a breeze – full drag and drop support allows importing files directly from the desktop and vice versa.

The Edit View features the waveform display with two views for details and overview. Separate Play and Edit cursors simplify the location in the file and the generation of Segments and Regions. Markers can be created on-the-fly, even during record, and a padlock function ensures they can not be moved by accident.

The Play List View provides a numerical play list for CD-preparation, complete with realtime Cut and Crossfade Editor. Multiple entries can be assigned to one index and the CD-Export saves the master into Roxio Toast and Jam compatible formats. The FX Machine’s processing can be applied to the Play List on export.

The realtime CUT & CROSSFADE EDITOR is accessible directly from the PLAY LIST and displays two transitions at the same time, with crossfades of unlimited lengths, different curves and even user presets. A temporary A/B memory allows to compare different settings for the same transition. Extensive preview and nudging features complete the picture.

Time Stretch processing can be performed in realtime, without affecting the pitch, and even accessible from the Play List, so the same take can be played at different speeds easily.

SPARK XL, our award-winning audio processing and mastering application, now features direct CD-Burning. Even complex Play Lists can be turned into a CD instantly, as crossfades and pauses are taken straight from Spark’s Play List. Track indexes may be activated or deactivated per region - so several regions can be used to create one track without the need for any additional work or rendering.
**General**
- Record/playback up to 32-bit/192 kHz files
- AIFF, SoundDesigner (SD2), WAV Files and all file formats supported by QuickTime
- MP3 encoding
- VST-plug-in support
- Supports ASIO and DigiDesign Direct I/O
- Keyboard commands for all important functions like transport controls etc.

**Wave Editor**
- Virtual File Engine with instant cut, copy and paste
- Single channel editing
- Multiple undo/redo
- Direct editing of split stereo files
- Markers (with “on-the-fly” creation, even during record)
- Off-line Processing: Normalize, change gain, DC Removal, reverse, sample-rate and bit-depth conversion and fades
- Off-line mode for VST plug-ins allowing for easy selection-based processing
- Info line with all important wave parameters at one glance
- Up to 40 realtime plug-ins during recording of files
- Drawing tool and eraser

**Play List**
- Linked to file database
- Plays up to 2 stereo tracks simultaneously
- Realtime crossfades
- Cut/Crossfade Edit Dialog: Extensive editing and nudging controls

**Batch Converter**
- Process loads of files in one go
- Off-line Processes: Format, bit-depth, sample rate, channels, D.C. removal, normalize and dither

**Sampler Support**
- AKAI S1000/1100 and 3000 series, ESI and E4 series, Kurzweil K2000 and 2500 series, Roland S760, Yamaha A3000, EX5, EX7, EX5R, SY85, SY99, and any samplers supporting the SM D1 protocol
- Reads AKAI S1000 format CD-ROM S

**Master View & FX Machine**
The FX Machine is part of the Master View, Spark XL’s second main window with all the master controls and FX-routing matrix. Everything you need for processing at a single glance! This extremely flexible FX-routing matrix is a creative power tool with endless possibilities for creative realtime sound manipulation, sound design and of course mastering processing. The matrix size is freely adjustable, so you can create whatever size you need... your CPU power is the only limitation.

Of course, SPARK XL utilizes the FX Machine’s realtime effects. But for detailed section edits, the offline processes come in handy. They cover all the basics like Normalize and Remove DC but there’s more. You can apply any VST plug-in offline as well. Additionally, Pitch Shifting and Time Stretching allow for speed and pitch adjustments. Time Stretch is also available in realtime.

**Bundled with over 20 Plug-in (VST Compatible) Including:**
- Metergraph and Sonograph Analyzer plug-ins let you easily check your material. The Sonograph provides detailed information on the material’s frequency distribution. Issues like 15 kHz monitor hum become visible instantly.
- DeClick removes vinyl/digital clicks and crackle – the process is fully automatic and requires only 2 parameters for fine-tuning. An Audition function provides optimal monitoring possibilities. The Click/Crackle parameter can be automated so the algorithm checks the material for the characteristics of the artifact and adjusts the setting without user interaction.
- Denoiser is optimized for broadband noise and utilizes a fingerprint method, so it is easy to control the behavior. Three parameters are required to fine-tune the denoising process. Function ensures that only noise is removed, not your material.
- TC Native Bundle cover all your needs for pro-equalization, dynamics processing and reverberation:
  - DeX compressor and de-esser
  - EQ-P 10-band parametric EQ
  - EQ-G 28-band stereo graphic EQ
  - Native L and Reverb: mastering limiter and award-winning TC-reverb

**QuickTime Movies**
Spark XL loads QuickTime movies and splits the audio off for editing. This way, mastering jobs for QuickTime movies become a breeze. Spark XL supports all file formats compatible with QuickTime including MPEG-4.

**TDM Master**
Spark XL comes with an additional MasterView for TDM plug-ins. You can use native and TDM plug-ins in the same audio stream! And with the Direct Connect, you can run Virtual Instruments in Spark XL, then stream the output directly into your simultaneously running Pro Tools.

**MegabitMAX**
MegabitMAX is a novel Word Length Reduction technology developed for high-end audio mastering. MegabitMAX is created for applications that demand the highest level of detail resolution from audio master. MegabitMAX is an excellent solution for recordings with high dynamic range, such as classical, jazz, film music, etc.

Unlike the noise of other word length reduction systems, the dither noise of MegabitMAX is not disturbing to the human ear. It has natural spectrum across the audible frequency range, so users can describe the sound as “vinyl-like” and "analog". While preserving the finest detail of your high-resolution master, the dither noise of MegabitMAX has very small amplitude, so it won’t present any problems for post-processing/duplication equipment. MegabitMAX is completely optimized for 44.1 kHz and higher (96 kHz and 192 kHz...) sampling rates.
Plugsound Volume 1: Keyboards Collection

The Keyboards Collection features acoustic pianos in classical, jazz and pop styles, and alternative sounds like honky-tonk and detuned. It also features a best-of selection of famous “suitcase-style” electric pianos from the most respected manufacturers of these bygone instruments. A wealth of clavinets, electric organs and synth-based keyboard sounds complete the modern part of the collection. Featured traditional keyboard instruments include church organs, accordion, celesta, vibraphone, music box and xylophone. Finally, an extensive Harpsichord section benefits from the “Release Trigger” feature that allows a realistic recreation of this difficult instrument. (Synth sounds can be found on Plugsound Volume 5.)

Keyboard instruments may seem simple to reproduce in a library, but that’s only true when you let each preset consume hundreds of MBs, and even that doesn’t guarantee a better sound. Plugsound’s sound design team went out of their way to ensure that all instruments use the amount of RAM they need, and no more. Why create a 200 MB Piano if you can achieve a better sound with 96 MB? In return, this extra work allowed the team to include more sounds in the 650 MB sample library, and make sure that this collection is as complete as possible.

Plugsound Volume 2: Fretted Instruments

Fretted Instruments kicks off with an acoustic guitar section. It includes a Nylon guitar custom-made by acclaimed maker Gerome, and a wonderful “Spanish-style” nylon guitar. Moving on, numerous steel string guitars like a 12-string and several 6-string acoustics (from makers like Guild, Martin, Gerome and Maruha) are featured. Many Dobro and Bottleneck presets add their unique color to the acoustic section.

The electric guitar section packs several clean Strat sounds through D.I. or amps like Jazz Chorus or Twin reverb. The D.I. presets are especially handy if you own an amp modeling effect plug-in. Distorted Strat is included too, captured with the ubiquitous SM 57. The Gibson Les Paul is next, sampled through several different amps. The electric section provides the Gibson 335, Jazz guitars, muted playing style guitars and more. The bass section starts with an awesome selection of Double Basses. A wide range of electric basses are covered, both fretted and fretless, including all the classic instruments like Jazz Bass, and many others, covering all current styles. ‘Ethnic’ section includes church organs, accordion, celesta, vibraphone, music box and xylophone. Finally, an extensive Harpsichord section benefits from the “Release Trigger” feature that allows a realistic recreation of this difficult instrument. (Synth sounds can be found on Plugsound Volume 5.)

Keyboard instruments may seem simple to reproduce in a library, but that’s only true when you let each preset consume hundreds of MBs, and even that doesn’t guarantee a better sound. Plugsound’s sound design team went out of their way to ensure that all instruments use the amount of RAM they need, and no more. Why create a 200 MB Piano if you can achieve a better sound with 96 MB? In return, this extra work allowed the team to include more sounds in the 650 MB sample library, and make sure that this collection is as complete as possible.

Plugsound Volume 2: Fretted Instruments

Fretted Instruments kicks off with an acoustic guitar section. It includes a Nylon guitar custom-made by acclaimed maker Gerome, and a wonderful “Spanish-style” nylon guitar. Moving on, numerous steel string guitars like a 12-string and several 6-string acoustics (from makers like Guild, Martin, Gerome and Maruha) are featured. Many Dobro and Bottleneck presets add their unique color to the acoustic section.

The electric guitar section packs several clean Strat sounds through D.I. or amps like Jazz Chorus or Twin reverb. The D.I. presets are especially handy if you own an amp modeling effect plug-in. Distorted Strat is included too, captured with the ubiquitous SM 57. The Gibson Les Paul is next, sampled through several different amps. The electric section provides the Gibson 335, Jazz guitars, muted playing style guitars and more. The bass section starts with an awesome selection of Double Basses. A wide range of electric basses are covered, both fretted and fretless, including all the classic instruments like Jazz Bass, and many others, covering all current styles. ‘Ethnic’ section includes a great selection of rare multisamples like Banjo, Mandolin, Celtic guitar, Lute, Sitar (and electric Sitar), Baglamas, Bozouki, Jubus, Oud, a Lute from Morocco, Saz and Tzouras.
Plugsound Volume 3: Drums & Percussion Elements

A superb collection of 5000 drum sounds noted for their versatile and professional characteristics. Acoustic Drum kits are sorted by style: Jazz, Natural (Brushes and Hot Rods), Raw (for pop and rock) and Treatment (distortion, gate and spring reverb). Next comes the electronic drum section. The first folder offers a selection of sounds sorted by the machines from which they originate—from the 70s to the 90s there aren’t many missing boxes. All the classics are there, and many forgotten models as well! The Stylistic kits offer another wide selection of electronic drums which are not so instantly recognizable, and are sorted by style rather than by machine: drums for Dance, Electro, Groove, House, Techno, Trash, Jungle, Disco, Lo-Fi, Vinyl, more.

With so many presets available, emphasis was put on the ease of use. This is why each drum sound is accessible in the three following ways:

◆ As part of a GM-compliant drum kit.
◆ In a drum-specific program, e.g. 61 snare samples mapped on the keyboard.
◆ In a unique “Element” folder allowing quick auditioning of every drum sound in the library simply by browsing presets one by one while your existing sequence plays.

To complete this rhythmic arsenal, an extraordinary percussion selection is provided. It features more than 60 different instruments such as Congas, Djembe, Bongos, Shakas, Triangle, Tambourine, Castanets, Windchimes, Clave, Darbuka, Woodblock, Timbales, Rainstick and many more. Most have velocity-switched presets for added realism. The percussion is also used in GM-compliant “drum and perc” presets.

Plugsound Volume 4: Hip Hop & R’n’B Toolkit

This virtual instrument offers the most complete sonic arsenal for Hip Hop, R’n’B and New Pop/Rock productions. It’s made of more than 600 presets using 1,500 samples. Though created by Hip Hop and R’n’B artists, this library offers sounds that will be useful to composers working in many modern musical genres.

The first section features “construction kits” of the latest styles: Timba-style, Funk Mood, Talk-boxed, M&M, Pure R’n’B, Hip Hop. The next section offers drum loops sorted by tempo, instrument phrase combinations, single phrases mapped to the entire keyboard for easy transposition (Bass, FX, Guitar, Hits, Keys, Synth). Vinyl Sounds, Basses (phat, R’n’B), Keyboards, Guitars, Synths, Bass/Synth splits, Vinyl FX, Drum Kits, and sorted Drum presets. This last section features the most powerful R’n’B style drum selection on the planet—the real, heavy stuff!

Plugsound Volume 5: World of Synthesizers

512 patches, over 600 MB of sounds, a huge collection of retro and modern synth sounds. The focus of this collection is to offer presets based on a very wide variety of analog, digital, virtual analog and plug-in synthesizers. World Of Synthesizers focuses on real synth sounds taken from a range of essential machines, from expensive workstations to specialized sound modules. It gives this collection a variety of textures and patches unrivaled by most hardware modules. When compared with recent sample-based sound modules, this Plugsound is the equivalent of having a synth with over thirty expansion cards! But this is only the beginning.

Synth categories offered in the library include Composites (stacks), Flutes, Voices, Tines & Bells, Basses (Acid, Analog, Disco/House, Garage, Electropop, Hip Hop/ R’n’B, Sub, Techno), Pads, Soft Pads, Filter Sweeps, Analog Brass, Leads, Organs, Piano-like, Textures/FX and Short-Reso.

Plugsound Volume 6: Global Collection

The latest and greatest General-MIDI tone module is here! In fact, Plugsound is more than that. It’s the next generation of sound module, leaving its hardware counterparts in the dust. Most musicians will find this Plugsound invaluable. It provides a realistic and contemporary library designed to replace yesterday’s cheesy GM players, whether software or hardware, with a high-end, professional sound.

Fire up Plugsound Volume 6 and suddenly the music you thought dated sounds wonderful! It is also a dream come true for facilities that want to be compatible with musicians without investing in bulky and dated hardware, just for the sake of playing back a few sounds on a session. Finally it will allow musicians who work via the Internet to have an inspiring reference library instead of having to settle for the lowest common denominator.

Global collection faithfully follows the GM standard for sound classification. The Acoustic and Electric Piano category is first, followed by Pitched Percussions, Organs, Guitars, Basses, Strings, Ensemble Sounds, Brass, Reeds, Pipes and so on. The collection then moves on to Synth Leads, Pads and Composites, followed by Ethnic, Percussive and Sound Effect categories. Volume 6 also offers another 128 presets consisting of light versions of the original 128 GM presets. Finally, 7 GM drum kits are supplied, followed by 7 light versions. Most categories feature exceptional samples, including those difficult to get orchestral sounds that are particularly good in this global collection. The keyboards, drums and guitars are also outstanding.
Universal Audio's line of plug-ins, the spot-on digital recreations of the LA-2A, 1176LN, Cambridge, DreamVerb Reverb and Pultec EQ, were previously only available for the UAD-1 card, but are now available for Pro Tools|HD and Pro Tools 24|MIX systems.

**Cambridge EQ**
When the engineers at UA set out to create the ultimate EQ, they didn’t compromise. The algorithm was designed from the ground up to emulate the response of a high-end analog EQ. The result is Cambridge, which boasts five bands of switchable parametric or shelving EQ and two comprehensive high and lowpass filters, including brickwall elliptical filters. Advanced editing features include graphical frequency response curve with zoom controls for fine adjustment, as well as adjustment of the gain, Q, and frequency of each band on the graphic display. A/B switching is also included for easy comparison of two settings. All these features allow the Cambridge EQ to handle every EQ’ing chore, from the subtleties of mastering to radical tone shaping..................

**Pultec EQ-P1A**
A faithful electronic reproduction of the classic hardware equalizer. The Pultec EQ has long been a choice of recording and mastering engineers for its ability to bring out individual frequency ranges without significantly altering other frequencies. In addition, the Pultec is one of those magical pieces of gear that makes audio sound better - just by passing through it. The sophisticated modeling technology used in the Pultec EQP-1A plug-in captures both of these key characteristics..............................................................

**1176LN Stereo Compressor**
An analog classic that is well known throughout the audio industry. Designed and built during the 1960’s, the 1176LN was the first to use a field effect transistor (FET) as a voltage controlled variable resistor, and that innovation was the key to the product’s unique character. An in-depth analysis of the 1176LN’s “personality” allowed Universal Audio to methodically reproduce those results within a plug-in architecture, and now offer that same character to Pro Tools TDM HD and Mix Systems................00.00

**LA-2A Leveling Amplifier**
The Teletronix LA-2A leveling amplifier is practically the definition of vintage audio gear. The original opto-electrical attenuator circuit is responsible for the incredibly rich and magic sound embracing the tracks of so many classic recordings in circulation today. In an effort to bring this product and its character into the world of DAWs, Universal Audio studied not just the sound, but how each and every component interacted and behaved under a full range of studio conditions. The word, “emulation”, hardly does this plug-in justice. It is in fact a digital copy of the LA-2A, and upholds all the classic, analog characteristics of the original with unprecedented clarity and sound quality....................00.00

**DreamVerb Reverb**
DreamVerb, Universal Audio’s flagship stereo reverb plug-in, draws on the unparalleled flexibility of RealVerb Pro. It’s intuitive and powerful interface lets you create a room from a huge list of different materials and room shapes. These acoustic spaces can be customized further by blending or “morphing” the different room shapes and surfaces with one another, while the density of the air can be changed to simulate different ambient situations. DreamVerb also features a flexible 5-band active EQ and unique level ramping for the early and late reflections for ultra-realistic dynamic room simulation. And with Universal Audio’s proprietary smoothing algorithm, all parameters can be adjusted in real-time with no “zipper-noise” or audible artifacts. From a vibrantly dynamic room to a rich, deep cathedral, DreamVerb is the reverb of your dreams..............................................................

**BUNDLES:**
Since you’ll discover that owning only one of the finest plug-ins for TDM is not enough, Universal Audio offers plug-in bundles for a substantial savings.

- **Compressor Bundle** (LA-2A and 1176LN)
- **EQ Bundle** (Cambridge EQ and Pultec EQP-1A)
- **Studio Bundle** (Compressor and EQ Bundles)
- **Super Studio Bundle** (Studio Bundle plus Dreamverb)
Software Surround Encoders for Pro Tools (AudioSuite)

No surround production is complete without encoding. And in a busy production facility, efficiency is critical. SmartCode Pro streamlines the surround sound production process. By encoding in 5.1 within Pro Tools, your facility avoids the bottleneck of dedicated hardware encoders which saves you both time and money.

SmartCode Pro comes in three versions to accommodate the two most widely used surround formats: Dolby Digital and DTS. All three versions are AudioSuite software programs that allow Pro Tools users to preview their 5.1 surround mixes in real time 5.1, then encode and decode the mix to create a 6-channel surround master.

FEATURES

One Step Encoding
All three SmartCode products allow you to create encoded files ready for DVD production or CD playback directly from Pro Tools. To create an encoded file in SmartCode Pro/DTS or SmartCode Pro/Dolby, select the six Pro Tools tracks that comprise your surround mix—then press the “Encode” button to create your new .dts or .AC3 file.

Preview Your Mix
There is simply no easy way to preview a complete surround mix outside the studio. With SmartCode Pro/DTS-CD (included with the full DTS encoder), you can make a preview CD that will play on any CD/DVD system equipped with a DTS decoder. Even if the project is destined for Dolby Digital, you’ll love this valuable tool for providing a quick and cost-effective way to test your surround mix.

Smartcode Pro Dolby

- Encodes Dolby Digital (AC3) surround format
- Includes right to use Dolby logo on encoded material
- Complete integration with Pro Tools
- One button to launch encode process
- Supports all Dolby Digital bit rates
- Supports all surround modes including 5.1, mono, stereo, LCR, LCRS, 5.0, etc.
- Flexible channel/track assignment
- Pre-processing options include Low-pass, LFE low-pass, DC filter and 90° phase shift
- Selectable 3dB attenuation option for surround channels

Smartcode Pro DTS-CD

- Right to use DTS logo on encoded material
- Complete integration with Pro Tools
- One button to launch encode process
- Supports 44.1 (DTS-CD) and 48 kHz/24 bit audio files
- Flexible channel/track assignment
- LFE encoding option
- Rear channel attenuation option
- Supports HDCD (High Definition CD) flag

VirSyn TERA
The Next Generation of Software Synthesis

Tera is a modular software synthesizer based on five different synthesis technologies including the revolutionary “Spectrum Synthesis”. This synthesis allows the creation and manipulation of resonant bodies with up to 128 formant frequencies. The innovative user interface of TERA sets a new standard in design and functionality. This simplifies the access to the huge sound space of its predecessor. The classical modulation matrix together with a simple method for patching modules with virtual cables makes operating the modular system of VirSyn TERA as easy as other synths with a fixed structure. The integrated step sequencer is pattern/song oriented and can even be used in a VST host environment.
WAVE MECHANICS

PitchDoctor

Formant-Preserving Automatic Pitch Corrector

PitchDoctor is a realtime, fully automatable TDM-based plug-in that combines ultra-smooth pitch-shifting with an advanced intelligent pitch analyzer for pitch correcting out-of-tune vocals and solo instrument performances. When an out-of-tune performance is a problem, PitchDoctor is nothing less than a session-saving miracle. Simply enter the desired key and scale, and Pitch Doctor automatically adjusts the intonation of any out-of-tune notes. Because Pitch Doctor is the only intonation correction plug-in with total automation and PurePitch's formant-preserving quality (no chipmunks!), it's the only choice for truly challenging correction work. And it's only available for Digidesign's TDM hardware system.

FEATURES

- Automatically adjusts the intonation of any out-of-tune notes to a preset or user-defined key and scale in realtime.
- Full automation capabilities (Pro Tools 4.0 or later) allows key, scale, and scale customizations to be changed mid-track.
- Score Control allows you to specify the correct melody to which Pitch Doctor will correct pitch. The score editing feature works seamlessly with ProTools automation editor, allowing easy, and intuitive editing of the desired musical score.
- On-screen keyboard displays an editable musical scale for correcting pitch as well as a visual readout of the detected note.
- Guide Track works in with score generation to allow any instrument to be used to create a score to guide PitchDoctor through the pitch correction process.
- Pitch Quantizing controls including pitch correction amount, smoothing, capture range and sensitivity can be used to fine tune the pitch correction process.
- Shift Mode uses PurePitch's formant-preserving quality to eliminate 'chipmunk' effect and give PitchDoctor a wider usable pitch shift range.
- In addition to automated pitch correction, Pitch Doctor provides a large, high-resolution pitch correction fader. The manual correction fader can either be used alone, or in conjunction with the automatic pitch correction mode. Data is easily editable in Pro Tools' automation window.

UltraTools — The Complete Bundle

Now get all four Wave Mechanics plug-ins in one convenient bundle. Three of the processors, PitchDoctor, PurePitch and SoundBlender are some of the most powerful and DSP-intensive plug-ins available for TDM and feature full realtime controlability as well as complete automation capabilities within ProTools 4.0 or later. The fourth processor, Speed uses the AudioSuite environment and is therefore compatible with all levels of Pro Tools including Pro Tools LE and even Pro Tools Free.
Formant-preserving Pitch Effects Processor

A high quality TDM-based plug-in designed to accomplish natural-sounding pitch-shifting in real-time, PurePitch has become the standard for its high-quality pitch alteration and unique vocal-processing effects. Using PurePitch, you can easily create realistic harmony parts from a lead vocal or instrument, deepen a vocal part without changing its pitch, or add vibrato to a flat performance. For voice-over work, PurePitch can be used to alter the formants and pitch inflections of a speaker, producing subtle character alterations, or more extreme gender and species morphing effects. PurePitch includes over 50 preset patches for music production, sound design, and post-production. And since it is a realtime plug-in — as soon as a knob is tweaked you’ll hear its effect. PurePitch is even automatable under ProTools 4.0 or higher so you can edit harmonies to create a virtual background vocal section or morph parameters through extreme sound transformations. And it’s only available for Digidesign’s TDM hardware system.

FEATURES

- Pitch Control Panel uses a keyboard display with interval indicators for selecting vocal harmonies. This allows you to create musically useful harmony vocals without another singer. All harmony intervals can be easily recorded and edited using Pro Tools automation.
- The Pitch Bend slider alters the amount of pitch shift in cents (100 cents = 1 semitone) and can be used for double tracking or detuning a track.
- Vocals can be pitch shifted without affecting their formant structure — the natural resonances that make voices unique.
- The Formant slider can be adjusted in small amounts to create subtle double-tracking effects, in larger amounts to deepen voices or for gender bending effects or at the most extreme warp voices for animated 'chipmunk' and 'alien' effects.
- The formant amount can even be automated to morph vocal characteristics in real-time.
- Mixer Control Panel — Provides control over Wet/Dry mix, Dry delay time and pitch shifted delay time with feedback control.
- The Modulation Control Panel allows you to apply an LFO (Low Frequency Oscillator), with a choice of 6 waveforms and a variable rate control, to modulate pitch shift amount, formant amount and amplitude.
- The Shift Mode Control Panel allows you to select between conventional or formant preserving pitch shifting.
- PurePitch's exclusive Expression Control Panel allows you to dynamically compress or expand the pitch envelope of vocal tracks. This enables the emotional content of dialogue tracks to be modulated, in subtle, or not-so-subtle amounts. The more the track is compressed, the more monotone it becomes. (Adding expansion increases expressiveness).
- Tweaks Control Panel — helps optimize the quality of pitch processing by offering control over minimum and maximum frequency ranges, a Highpass filter and a Pitch Slew (portamento) control adjustable in ms.
- Includes over 50 preset patches for music production, sound design, and post-production — Vocal Harmonizing, Chorus and Doubling, Tremolo & Vibrato, Dialogue Enhancement, Vocal Transforms for game designers, animated characters, and sound design, Spacey Delay Effects, Wacky sound design effects.

Create Bizarre, Unheard-of Effects

- With its built-in digital delays, multi-waveform LFO, and pitch, formant and amplitude modulation, PurePitch is a veritable cornucopia of new and fantastic designer sounds. But you don't need to be a sound designer to use PurePitch - they've included dozens of hand-crafted effects.
- Perfect for game designers, animated characters, and sound design.
- One-hundred percent real-time.
- Uses one DSP chip for each channel of pitch processing.
- Automation of all parameters.
**SPEED**

Time Compression/Expansion for AudioSuite

SPEED is an AudioSuite plug-in that allows you to change the tempo of audio tracks without affecting pitch, transpose pitch without affecting tempo or even alter tempo and pitch simultaneously. SPEED works equally well on drum tracks, single instruments and even entire mixes — processed audio tracks are free from unwanted artifacts while transients and rhythmic consistency are preserved. SPEED is perfect for time conforming commercial spots and is the ideal tempo and pitch matching utility for today’s loop-based music productions. Available by itself or as part of the UltraTools bundle for Mac and Windows XP.

- Alter tempo from half-speed to double-speed, transpose pitch over a two-octave range (±1200 cents) without distortion
- Maintains phase synchronization between left and right channels when processing stereo tracks
- Compatible with Digidesign’s AudioSuite native plug-in format — no TDM hardware required
- Preview tempo and pitch changes in real-time before committing the changes to disk (CPU dependent)

**Simple Control Panel**

- The Simple control panel provides straightforward tempo and pitch knobs adjustable in different units — percentage of tempo, length, pitch in semitones, cents, or frequency ratio

**Graphical Control Panel**

- The Graphical control panel works just like ProTools automation, letting you draw time-varying pitch and tempo changes using a waveform/timeline graph
- Effects created in the graph mode can be saved as a preset

**Calculator Control Panel**

- Makes it easy to transform any tempo, length, or musical key to any other. Values for the original, modified and change for Tempo/Length and Key are clearly displayed.
- Tempo and Length calculators control speed without affecting pitch and the Key calculator Transposes pitch without affecting Tempo/Length.

---

**Sound Toys – FilterFreak**

FilterFreak is an analog-modeling filter plug-in that takes a truly musical approach to creative sound design. Though it was inspired by studio filtering boxes like the Mutronics Mutator and the Sherman FilterBank, FilterFreak goes far beyond what any of those boxes are capable of.

- The super-steep 48dB per octave analog modeling filter features variable filter slope, resonance and filter shape, allowing you to create nearly any filter character - from smooth and gentle to aggressively resonant.
- Overdriving the input or output stage allows you to achieve an even dirtier sound.
- The modulation section offers five different modulation sources for creating radical filtering effects. These include: Tempo-locked LFO, Envelope Follower, Random LFO, ADSR, and Triggered Random Stepper.
- User programmable waveshapes, programmable rhythmic patterns are also provided.

- All of this flexibility is available with a user interface that is as familiar and intuitive as an analog compressor or EQ.
- Support is currently provided for RTAS, HTDM and AudioSuite plug-in formats.
- Keep an eye out for seven more plug-ins over the next several months.
SoundBlender is a TDM-based plug-in that combines classic hardware effects such as pitch-shifters and digital delays with the resonant filtering, arpeggiation and modulation capabilities of analog synths to produce thousands of never-heard-before signal-processing effects. SoundBlender is broken down into two distinct realtime plug-ins — PitchBlender and TimeBlender each with their own effects-processing modules with a unique Tri-Modulation Matrix and Tempo-Based control. Hundreds of pre-programmed patches are included ranging from subtle choruses to radical over-the-top sonic experiences. Available by itself for the Mac or as part of the UltraTools 2.0 bundle for Mac and Windows.

**Features**

- **BPM** Control synchronizes delay and modulation effects to the tempo of your song.
- **Pitch Shifter/Pitch Mapper**
  - Pitch-shift range of ±2400 cents (2 octaves) can be used to create anywhere from traditional chorusing, double-track effects and harmonies to abstract arpeggiation and wild pitch modulation. Each pitch-shifter has its own pan and level control and can be modulated by the modulation matrix.
  - Pitch Mapping is an intelligent harmony and arpeggiation feature that detects the pitch of the input signal, and dynamically adjusts the pitch shift interval depending on the selected scale, key and pitch shift interval.
  - Pitch Map parameters let you use a chromatic instrument (piano), and map it through one of 21 western and ethnic scales.
  - Any modulation source may be used to control the pitch-shift interval to create interesting in-key arpeggiation and randomized harmony effects.

- **Delay**
  - The two Digital Delays can be controlled in either time (up to 1000ms) or beats.
  - Each delay has its own pan and level control and can be controlled by the modulation matrix.

- **Filters**
  - Each of the two Filters has an adjustable center frequency and resonance (Q) control and can be configured as a lowpass, highpass, bandpass or notch filter. The center frequency can be modulated by the modulation matrix.

- **Signal Flow Parameters**
  - There are four selectable algorithms that allow you to re-wire and modulate the effects-processing modules in a variety of useful configurations.
  - The relative feedback level for channel 1 and 2 can be adjusted as well as blended and crossfaded for creating dense chorus and reverb-like textures.
  - Filter effects can be assigned to any location in the signal chain.

- **Reverse Pitch Shifting**
  - Reverse pitch shifting with a range of ±2400 cents (2 octaves) samples sections of the input audio (up to 1000ms) and plays it backwards mimicking backwards tape effects.
  - The two Digital Delays can be controlled in either time (up to 1000ms) or beats.
  - Each Reverse Pitch Shifter has its own pan and level control and can be modulated by the modulation matrix.
  - The relative feedback level for channel 1 and 2 can be adjusted as well as blended and crossfaded for creating dense chorus and reverb-like textures.

- **Presets**
  - Bundled with hundreds of presets handcrafted by audio professionals. Includes stereo detuning, intelligent pitch-shifting, diatonic arpeggiation, ducked delay effects, envelope filtering, auto-panning, tremolo, flanging, chorus, reverse pitch-shifting, and much more.
Plug-in Software Bundles

You need pro-audio equalizers, compressors, reverbs, dynamics, multi-tap delay, mastering processors and more to make your productions the best they can be. They're all here. Waves' Native Power Pack and TDM Bundle are complete software bundles of audio processing essentials.

Designed for musicians in mastering, remix and restoration applications, they are also ideal for those creating multimedia titles, authoring audio for the web, or designing sound for games. Everything you need to process audio is provided, so you can finish an entire project without requiring any other plug-ins.

The high-quality plug-ins bundled in the Native Power Pack and TDM Bundle include the famous TrueVerb virtual-space reverb, the "Swiss-army knife" Q10 equalizer, C1-compressor and C1-gate, the incomparable S1-Stereo Imager, and of course, the essential L1-UltraMaximizer mastering peak limiter. Together, they let you shape your audio with precision and creativeness.

The Native version supports RTAS, AudioSuite, VST, MAS and DirectX formats on Mac and Windows with sample rates up to 88.2/96kHz. The TDM version adds support for Digidesign's ProTools TDM format on the Mac, including 192kHz compatibility for ProTools HD. And for those that will later need more processing, Waves offers an upgrade path to the Gold or Platinum Native and TDM Bundles.

L1 Ultramaximizer: The L1 is a mastering level brickwall limiter that combines state-of-the-art peak-limiting with advanced requantization, delivering the maximum level and highest resolution with little or no loss of dynamics.

SuperTap: Provides two taps with up to 6 seconds of delay with complete precision control of gain, panning, and filtering on every tap, plus feedback with filtering. Use the tap pad to set rhythms or tempo.

S1 Stereo Imager: The S1 offers unmatched stereo image tools, with widening, rebalancing, recentering, and MS functions. Adjust left and right independent of center channel. Includes phase-compensated Blumlein shuffler.

Q10 Paragraphic Equalizer: The Q10 is the most powerful transparent EQ available. It offers over 200 presets including notch, super notch (-46dB), hum removal, comb, Baxandall, brickwalls and more.

De-esser: Excellent dynamics processor gives you precision editing of annoying "hiss" that can mar your recordings.

Trueverb Room Emulator: TrueVerb offers virtual real-room acoustic emulation. Implementing the acoustically correct approach, you define the room size, frequency response and distance the listener is from the sound source. Includes a comprehensive setup library.

C1 Compressor/Gate: The C1 is a powerful and transparent compressor capable of frequency specific compression and gate using the sidechain. Its presets include de-essers, enhancers, expanders, dehissers, dereverb, ducking, keyed effects and more.

PAZ Psychoacoustic Analyzer (TDM Bundle only): A realtime analyzer based on human hearing, PAZ shows 52 or 68 bands with RMS, peak, weighting, variable integration time, and more. Perfect for mastering, trouble-shooting, environmental analysis.

Waves has built a worldwide reputation for quality and technical leadership in the professional audio signal processing market. They are the market leader for software Plug-Ins used in the audio content creation process for music, movies and computer games with over 150,000 users worldwide. Waves offers both the broadest selection and the highest quality set of software solutions available. Its software solutions support over 20 different audio editing environments, both for native CPU operation (Windows and Mac operating systems) and DSP accelerator solutions.
**Q10 ParaGraphic EQ**

The Swiss-army knife of equalizers, the Q10 provides up to 10-bands of precision mono or stereo EQ. An extensive Setup Library includes 200+ presets, from gentle sweetening EQs for mastering to extreme filters for hum removal and creative effects, suitable for every aspect of audio production.

- **Easy To Use Graphic Interface**
  - Left and Right Input trim controls with phase reversal switches for each channel
  - Left and Right Output trim controls plus an Auto Trim button
  - Left/right peak meters with clipping indicators
  - Frequency Curve Window lets you adjust the gain and frequency of active bands and offers a graphic representation of the adjustments in relation to the filter type being used and the interaction between any of the active bands.
  - Matrix style interface with separate controls for each of the 10 EQ bands
  - Selectable filter types - Bandpass (or bell curve), Low shelf, Hi shelf, Low and Hi Pass
  - Gain Control ±18.0 dB in 0.1 dB increments
  - Frequency control with 16 Hz - 21.357 kHz range in 1/16-tone steps (96 steps per octave)
  - Q parameter offers exceptionally wide to narrow bandwidth control; constant bandwidth filter boost or cut gain as needed.

- **Frequency Curve Graph and Value Windows provide interactive control over Frequency, Gain and Q**

- **Extensive Setup Library**
  - Instant access to over 200 complex filters divided into manageable categories including Multimedia Tools, Pseudo Stereo, Band-limiting, Pre/De-emphasis, Plateau and Tilt filters, Crossovers, Harmonic combs, etc.
  - Setups are adjustable and cover applications for mastering, hum and hiss reduction, AM radio and telephone simulation effects, pseudo-stereo, comb filtering, brickwall crossover filters and many more.
The C1 consists of three independent stereo processing modules: Compressor/expander, Gate/expander, and Filter/equalization. The EQ mode of the Compressor/expander may be chosen independently of each other. For example, you can combine a wideband compressor with a high frequency gate. The Threshold/GateOpen, Attack, Release, EQ Mode controls of the two dynamics modules can be operated simultaneously.

**C1 Parametric Compander**

Compander/Expander Module

Provides basic soft knee variable-ratio compression, expansion and limiting using the following controls:

- **Toggle between two reference modes to control how the Makeup Gain stage will react to gain reduction:**
  - **LowRef** (low-level) is the standard mode for compressors
  - **PeakRef** (Peak-level) the output gain automatically increases as the threshold is lowered, maintaining a consistent output level

- **Makeup Gain** controls the output level with a range of -40 dB to +40 dB
- **Threshold** sets the input level, in dB, above which the compression/expansion takes place
- **Ratio** control is variable from 0.5:1 (Expansion) to 50:1 (Limiting)
- **Attack** time from 0.01 msec to 1 second
- **Release** time from 1 msec to 10 seconds
- **Program Dependent Release** can apply a short release time to transient signals while at the same time maintains a more relaxed release time for normal dynamic material.

Gate/Expander Module

- **Full range of adjustments independent of those in the Comp/Exp module. However, some of the controls of the two modules may be linked together for ease and speed of adjustment.**
- **Floor** sets the lowest level, up to 12 dB, that a sound will be taken to when gated or expanded. When set to infinity, the level can be taken down to digital silence.
- **GateOpen** sets the input threshold level, in dB, to let signal through. In Expander mode, GateOpen is the level at which soft knee expansion starts acting to a significant degree
- **GateClose** controls the level below which gate is closed to stop signals from getting through.
- **Attack** time from 0.01 msec to 1 second
- **Release** time from 1 msec to 10 seconds
- **Hold** adjusts the length of time in milliseconds that the gate is to be held open — useful for creating gated effects such as gated reverb
- **Control level** meter shows the level of the wideband or sidechain EQ signal controlling the processor. The meter time constants match the Gate/Exp attack and release times.
WAVES

NATIVE POWER PACK/ TDM BUNDLE continued

◆ The EQ Mode switch has three modes:
  — **Wideband mode** operates as a conventional expander/gate or compressor
  — **Sidechain mode** passes the desired sidechain audio signal used to control the dynamics through the filters in the EQ module so that the dynamics respond only to a defined frequency band
  — **Split mode** not only filters the sidechain audio signal, it also separates the main signal into two bands: an active band which will be processed and a passive band which is not processed

◆ The Gain Reduction Meter shows instantaneous gain reduction and increase changes below and above 0 dB. A value window above each meter shows the largest absolute peak since the last ‘reset’ of the meter.

**Filter Module**

The Filter module allows you to designate frequency bands for use with the Sidechain EQ and Band split modes:

◆ **Type** selects one of the four filter (bandpass, band reject, high pass, or low pass) to be applied to the active band

◆ **Frequency range** is selectable from 16 Hz to 21 kHz. When the band pass or reject filter is selected, the chosen frequency is at the center of the pass or reject band. When a low or high pass filter is used, the chosen frequency is at the crossover point between the two bands

◆ **Q** range is selectable from 0.1 to 0.6. When using a band pass or reject filter, Q controls the width of the band. For low and high-pass filters, Q determines the steepness of filter cutoffs

◆ **Graphic Display** shows the filter type and the interaction of the active/passive bands

**TrueVerb Reverb/ Room Simulator**

TrueVerb is a room emulator/reverb processor that uses separate early reflection and reverb algorithms to generate compelling virtual spaces. Control the Room size, its decay time and frequency characteristics as well as the Distance between the sound source and listener.

▸ Create natural sounding rooms without distorting the original stereo image

▸ True Stereo compatibility

▸ Two user modes: Send mode or Thru Mode where TrueVerb is inserted on a stereo submix or master outputs to create a virtual room for groups of instruments or an entire mix

▸ Constant Perceived Level ensures a consistent overall mix as you tweak TrueVerb’s parameters

▸ Extensive setup library with dozens of presets, many tailored specifically for either Send or Thru mode usage

▸ Separate editable graphic Time Response and Frequency Response displays

**Input/Output Section**

◆ **Input Gain** A full-range control, from 0.0 to silence (-infinity), adjusting the input level

◆ **Direct On/Off** toggle switch for the dry input signal with a Direct level gain control

◆ **EarlyRef On/Off** toggle switch for the early reflection signal with an Early Reflection level gain control

◆ **The Reverb On/Off** toggle switch with a Reverb level gain control

◆ **VU meters** show the stereo output level. A clip indicator lights red if a single sample reaches 0dBFS (Full Digital Scale). A numeric sample-accurate peak hold shows the highest output level value

**Frequency Response Controls**

◆ **ER Absorb**– output HF filter for the Early Reflections

◆ **Freq control**– sets the frequencies for the RevShelf and the ER Absorb

◆ **RevShelf**– HF shelving filter for the Reverb

◆ **Control** the high and low frequency character of the Reverb using adjustable frequency and Damp Ratio controls

**Time Response Controls**

◆ **Dimension** controls the character of the Early Reflections to simulate a 1-4 dimensional space

◆ **RoomSize** controls the size of the room in cubic meters

◆ **Distance** controls the apparent distance, in meters, from the listener to the input source

◆ **Link** matches the level of the Reverb and Predelay to the last reflection in the Room

◆ **Balance** controls the balance between the Reverb and the Direct/EarlyReflections levels

◆ **DecayTime** determines the rate at which the early reflections and reverb fade away

◆ **Predelay** controls the delay time, in milliseconds before the reverb begins

◆ **Density** controls the initial buildup of reflections in the Reverb
WAVES

NATIVE POWER PACK/ TDM BUNDLE continued

S1 Stereo Imager

S1 combines a number of stereo processing techniques, based on recognized engineering principles, with an intuitive user interface. Four component plug-ins, S1 provides powerful stereo enhancing and re-balancing tools for use in mixing, mastering and digital editing without adding unwanted tonal, phase coloration and with a high level of mono compatibility with minimal side effects. Supports 88.2/96kHz native host applications as well as 48-bit double precision resolution for TDM.

Easy To Use Graphic Interface

- **Width** control alters the width of the input stereo signal. Can be narrowed to mono or widened to move beyond the loudspeakers
- **Asymmetry** is a post-width control that adjusts the relative level of left and right sounds without moving the mix off-center or favoring either side of the stereo image
- **Rotation** control is used for centering a stereo mix biased to one side without altering the mix level balance, or as a true stereo 'pan' control for mixing stereo-miked sources
- **Shuffling and Frequency** work in tandem to increase the stereo width and spaciousness of bass frequencies which are usually perceived as omnidirectional sound energy
- **Shuffling** controls the bass width while the **Frequency** controls the frequency (between 350 and 1400 Hz) below which the Shuffling effect is increased
- **Bass Trim** adjusts the level of bass which may shift when Shuffer is in use
- **LR/MS** button changes the input mode to accept either standard Left-Right inputs or Mid/Side (MS) inputs for decoding tracks recorded with a M1D/Side stereo mic configuration. Left and right channels can be swapped and polarities can be switched
- **Gain** controls overall gain level

Four S1 component plug-ins let you select the amount of audio processing you need.

- **S1 Shuffler** is the full plug-in, with all controls, for mastering, fixing off-center or unbalanced mixes, precision image adjustment, changing wideband width or expanding the low frequency image as well as Rotating true stereo sources without narrowing the stereo stage
- **S1 Shuffler (48)** is the full mastering plug-in for TDM users with 48-bit double precision resolution dithered to a 24-bit output
- **S1 Imager** is less processor intensive then S1 Shuffler with **Width**, **Rotation**, and **Asymmetry** controls for enhancing stereo mixes or Rotating stereo-mic and submixes into place
- **S1 MS** converts left-right input into Mid/Side stereo (MS) output or vice versa.

De-Esser

High Frequency Dynamics Processor

Equipped with only a few simple controls, De-Esser provides fast and easy de-essing and High Frequency limiting that can be applied to a wide variety of sources especially singing and voice-overs to remove sibilant 'esses' and 'sshs'. A choice of Wideband and SideChain mode allows you to use De-Esser as a high frequency dynamics processor or as a straightforward compressor/limiter. Supports 88.2/96kHz z native host applications.

De-Esser Controls

- **Threshold** slider adjusts the level above which attenuation takes place in the SideChain. To adjust the threshold, click and drag the slider down until the 'esses' are sufficiently reduced
- **Audio** control toggles between **Wideband** and **Split** compression modes. In **Wideband** mode, attenuation is applied to the entire audio band. In **Split** mode the audio is split into low and high frequency signals and attenuation is applied only to the **HighPass** signals
- **Frequency** window allows you to set the center frequency used in the SideChain filter
- **SideChain** button toggles between a **HighPass** filter which looks at all frequencies above the set frequency and a **BandPass** filter which is a narrow band around the set frequency
- **Monitor** button toggles between **Wideband** and **SideChain** only monitoring

De-Esser Displays

- **Attenuation** meter displays instantaneous gain reduction applied to the audio (in dBs)
- **Output** meter provides an infinite peak hold feature that shows the highest output level
- **Energy Detector** located next to the threshold control, displays the energy of the **SideChain** in dB below 0 dBFS. The energy bar-meter and threshold-slider are aligned for easy adjustments and visual feedback
SuperTap 2-tap

SuperTap 2-tap is a two-tap delay with up to six seconds of mono or true stereo delay. There’s a dedicated Eq/Filter section for each tap derived from the acclaimed Q10 as well as Global LFO and a feedback section capable of overmodulation and positive gain feedback loops capable of serious distortion. SuperTap 2-tap can produce a wide range of creative delay effects, including analog and tape delays, slapback echo, chorusing and more.

Each Tap Features
- Controls for each tap are arranged in a row from left to right — On/Off, Gain, Rotate, Tap Marker, and Eq/Filter section
- Gain is adjustable in 0.1 dB steps
- Rotate controls the tap’s stereo position ±45°
- Each tap has its own slider located in the Tap Delay Grid that is adjusted by dragging the slider from left to right. Each slider shows a value either in BPM or milliseconds (ms)
- Each tap has an EQ/filter section. Each filter has a selectable frequency (100Hz to 20kHz) and six filter curves — Bell (wide) Bell (narrow), Hi and Low Shelf, High and Low Pass. Gain control lets you boost or cut filtered bands without affecting the pass bands
- Pan Graph shows the stereo location of each tap with a marker. Tap markers can be dragged from left to right to adjust Rotation (±45°) and up and down to adjust Gain (from 0.0 to -24dB).

Global Controls
- Grid Mode button changes between BPM (adjustable from 4 to 1200bpm) or ms
- Snap-to-grid feature lets you quantize each tap to a beat selected with the Grid button. Note divisions include quarter, quarter triplet, eighth, eighth triplet, and sixteenth. A Free mode can be used to accommodate complex rhythms and odd time signatures
- Modulation section allows you to control the depth (from 0 to 500ms) and the LFO rate (from 0.0 to 20Hz) of the taps
- Tempo Controls allow you to raise or lower the BPM and corresponding quarter note value in milliseconds
- Two distinct Feedback Modes:
  - Normal mode where the feedback sends each tap back into the input again and Tap Feedback mode, where the feedback has its own delay time that sets the repeat time for a rhythmic pattern
  - Feedback Gain controls how much signal is fed back into the input. In Normal mode, this effect can range from gently decaying repeats to positive gain feedback that develops into distortion. In Tap Feedback mode, a gain setting of 100% will continuously cycle the delay loop while a lower percentage will cause the loop to gradually fade out.
- Feedback Rotation control allows you to shift the entire stereo signal ±45° without collapsing the stereo image
- Feedback EQ/Filter section offers 3 filter types: Low Pass, Low Shelf, and a unique Low Decay mode which allows you to tap a rhythmic sequence to use for the delay values
- Feedback Rotation control allows you to shift the entire stereo signal ±45° without collapsing the stereo image
- Feedback EQ/Filter section offers 3 filter types: Low Pass, Low Shelf, and a unique Low Decay mode which allows you to tap a rhythmic sequence to use for the delay values
- Feedback Rotation control allows you to shift the entire stereo signal ±45° without collapsing the stereo image
- Feedback EQ/Filter section offers 3 filter types: Low Pass, Low Shelf, and a unique Low Decay mode which allows you to tap a rhythmic sequence to use for the delay values

PAZ Realtime Psychoacoustic Analyzer

PAZ (TDM bundle only) provides accurate visualization of psychoacoustic experiences and contains three modules: Frequency Analysis, Stereo Position Display, Loudness/Peak Meter. Useful for mastering and analysis, troubleshooting sound systems, room tuning and more.

Four Plugin Modes
- Each ‘mode’ can be used as a separate plug-in, or all three can be used in a single window
- PAZ-Analyzer — This is the full plug-in with all 3 measurement functions (Frequency, Stereo Position, and Level);
- PAZ-Position — Shows only the Stereo Position Display with the controls related to it
- PAZ-Frequency — This shows only the real-time frequency analysis with related controls
- PAZ-Meters — Shows only the meters for Left, Right, and Sum. The Sum meter can be selected for Peak or RMS display

Frequency Analysis Display
- The Frequency Analysis display can be used for Peak or RMS display of dual channel, mono analysis and total stereo energy from DC to Nyquist (the highest frequency allowed by the current sample rate)
- It employs 52 frequency bands nearly identical to the constant Q critical frequency bands of human ears. This provides the most accurate visualization of sound as we experience it
- The resolution below 250Hz can be increased to 10 Hz steps for a total of 68 bands
- Energy spectrum can be “A” or “C” weighted

Stereo Position Display
- Stereo Position Display shows the loudness energy across the Stereo stage as well as anti-phase information

Loudness/Peak Meters
- Loudness/Peak Meters are shown against each other. Loudness is computed according to the selected weighting curve
**Software Emulation of Vintage Analog Hardware with Simple Intuitive Controls**

Unbeatable sound and power at an incredible price. The Renaissance Collection puts the three essential processors at your fingertips: equalization, dynamics, and reverb— all with classic interfaces. Each sports an elegant and simplified interface, and respond immediately to any parameter changes. The Native version supports RTAS, AudioSuite, VST, MAS and DirectX formats on Mac and Windows with sample rates up to 88.2/96kHz. The TDM version adds support for Digidesign’s ProTools TDM format on the Mac, including 192kHz compatibility for ProTools HD.

---

**Renaissance Compressor**

The Renaissance Compressor is a vintage style compressor/expander with a barebones, no nonsense interface. The five standard compressor controls— threshold, ratio, attack, release and gain are enhanced with Mode, Character and Behavior controls that let you choose between manual or auto-release functionality, analog warmth or an uncolored sound, and Electro or Opto circuit emulation. A diverse range of factory presets for use in mastering, voiceovers, vocals, drums, guitar and bass, transient restoring expanders as well as aggressive pumping effect, provide a starting off point to get you going.

- 64-bit floating point resolution dithered to 32-bit for Native applications
- 56-bit resolution dithered to 24-bit (TDM)
- Auto Release (ARC) or Manual release control. ARC dynamically chooses the optimal release value for a wide-ranging input, allowing greater compression with less artifacts.
- Compression behavior can be set to emulate either an Electro or Opto circuit for applications ranging from tracking to mastering
- Electro mode increases release time as gain reduction approaches zero. This ideal for increasing the level of sound sources for loud applications such as voiceovers and pop music
- Opto mode slows down release time as gain reduction returns to 0 and increases as gain reduction exceeds 3 dB, adding sustain to percussive tracks while taming transient peaks
- Choose between Smooth (leaves the sound uncolored) and Warm (adds low frequency harmonics as more gain reduction is applied).
- Threshold fader, adjustable in 0.1 dB steps, controls the input level above which the soft knee compression or expansion begins
- Adjust the compression and expansion ratios (1.01:1 to 50.0:1 and 0.99:1 to 0.50:1 respectively), for signal above Threshold
- Adjustable attack fader (0.5 to 5000 ms in 1/100 ms steps) to control the response time of the onset of compression or expansion
- Adjustable release fader (5 to 5000 ms in 1/100 ms steps)
- Gain fader adjusts the output gain of the compressor in 0.1dB steps, ±30 dB. Gain meter displays real-time gain reduction or increase
- Input/output Meters are logarithmic displays from 0 to -60 dBFS, with resettable peak hold values at the bottom of each meter
- L1-style limiter at the output stage is activated if the output level exceeds 0dBFS.
Renaissance EQ

Renaissance EQ is a 2, 4 and 6-band audiophile quality EQ. The Q10 style functionality of Renaissance EQ includes separate Gain, Frequency Q and Filter Type controls for each band that can be controlled via dedicated buttons or graphically using the intuitive Frequency Response Graph. The various filter-curves, based on the theoretical designs of renowned engineers emulate the warm, sweet sounds of vintage style EQ filters including prized Pultec EQs.

- Gain for each EQ band is adjustable ±18 dB, in 0.1 dB increments, via the Gain Value Window or by dragging the EQ curve in the frequency response graph
- Frequency control displays the center frequency for each band when a bell filter is selected or the corner frequency of the filter when in cut or shelf modes. Adjustable in 1/16th tone increments (96 steps per octave)
- Q control works differently for each filter type. When using a Bell filter, Q adjusts the width of the filter in relation to the center frequency.
- Each of the six EQ bands has its own Gain, Frequency, Q, In-Out and Filter Type controls
- When using a Shelf filter - Q controls the slope of the “side” of the shelf and the resonant dips and peaks
- When the Cut filter is used, available for bands 1 or 6 only, Q controls the slope of the cut filter (from about 10dB/oct to 18dB/oct)
- Individual EQ bands can be bypassed
- There are different sets of filters available depending on the band — bands 1 and 6 have Cut, Bell, and shelf filters, bands 2 and 3 have Bell and Low Shelf filters, bands 4 and 5 have Bell and High shelf filters

Renaissance Reverberator

Renaissance Reverberator is a classic sounding reverb processor that excels in any level of music production. Designed to be straightforward and musical, it provides twelve selectable reverb types, controllable with an undeterred yet highly functional graphic interface.

- Nine sliders control the properties and levels of of the Early Reflection and Reverb
- Installs two component plug-ins in your host application — the full Reverb, and a Reverb Tail only plug-in without Early Reflections
- Three intuitive graphic displays — Damping Graph with moveable High and Low Freq. markers, Early Reflection and Reverb Tail Response Time Graph and Reverb EQ Graph with moveable High and Low Freq. markers

Reverb Controls and Faders

- Reverb types control the sound characteristics of the reverb and early reflection: Hall 1/2, Room, Chamber, Church, Plate 1/2, Reverse, Gated, Non-Linear, EchoVerb, and ResoVerb
- Six variations of the amount of correlation between the left and right channels within the early reflections
- Diffusion fader serves as a balance control between the direct and early reflection signals that feed the reverb tail.
- ±160.0 milliseconds predelay range. Positive delay times offset the signal sent to the reverb tail generator (negative delay the direct signal
- Time fader sets the decay time of the reverb tail from 0.1 to 20.0 seconds
- Adjust size related parameters corresponding to the current Reverb Type such as early reflection spacing or reverb tail dimension
