**FinePix X10**

Featuring a 12MP EXR CMOS sensor and bright optical viewfinder the FinePix X10 captures superb high resolution stills and 1080p HD video. It is equipped with a 4x (28-112mm equiv.) zoom lens with f/2.0-2.8 aperture and manual zoom capabilities. The ultimate in refined design, the upper control deck and base are made from lightweight, yet ultra strong, die-cast magnesium alloy; the mode dials and lens ring have an aluminium milled, textured finish.

- 2.8" 460K dot high contrast LCD screen
 - Program, Aperture- and Shutter-Priority and full manual
 - RAW shooting and in-camera RAW processing
 - 8 film simulation modes including Velvia, PROVIA and ASTIA
- #FUFPX10B **599.00**

**X-S1**

Fitting between the fun X10 and the serious X100, the X-S1 looks like a DSLR, but has a fixed 2x 24-624mm f/2.8 lens. Super macro setting allows you to get your shot right up to 1/2" from your subject. 12MP EXR CMOS sensor captures high res stills and 1080p HD video. The X-S1 has both a large, tiltable 3" LCD monitor and a sharp 1440,000-dot electronic viewfinder (EVF). Sensitivity from ISO 100 to ISO 12800 gives you confidence that you'll always get the shot, no matter how dim the light. Naturally, it captures RAW as well as JPEG files.

Solid construction include metal dials on top, a textured rubber-like finish for a solid grip, and the ability to use the built-in flash for macro shots as close as 11.8". The overall structure is designed to minimize moisture and dust. Film simulation mode allows you to mimic the look of Velvia, Provia or Astia Fuji films, or produce gorgeous black and white images with or without filtration. You can even bracket dynamic range, film simulation, exposure or ISO sensitivity for any given situation. (FUXS1B) .. **799.00**

FinePix X100

The FinePix X100 is a high precision digital compact camera that combines modern technology with a traditional camera design to deliver the ultimate in image quality. Featuring a 12.3 megapixel APS-C CMOS sensor, Fujinon 23mm f/2 lens, a 2.8" 460K LCD, and the world's first Hybrid Viewfinder, the FinePix X100 captures exceptionally high quality images.

- When shooting HD movies, the large f/2.0 aperture lets users create a soft out-of-focus image
- Hybrid Viewfinder combines the window-type "bright frame" optical viewfinder with the electronic viewfinder system. Can show both the shooting frame and a variety of electronic shooting data.
- Instantly switch between optical and electronic viewfinder modes

FinePix X100 (FUFPX100) **1199.00**

- Motion Panorama function makes it easy to capture 180° and 120° panoramic photos.
- Four types of bracketing functions: AE, ISO, Dynamic Range and Film Simulation. One click of the shutter captures 3 bracketed images of the scene so you know you've captured the moment.

FinePix REAL 3D W3 3D Digital Camera with 3D HD Video

Equipped with dual Fujinon 3x optical zoom lenses (35-105mm), two 10-megapixel sensors and two shutters that work like your eyes, the FinePix REAL 3D W3 captures true 3D by simultaneously capturing two images from two angles with the press of a button. After capturing an image (or video in 3-D), an internal processor merges these two images into one, which can be seen on the back of the camera in a stunning display—no special glasses required. If you want to see photos and videos in 3-D format other than on the camera's 3.5" display, you can view them on a 3D-ready TV or 3D-ready computer while wearing special glasses.

Mirrorless DSLRs

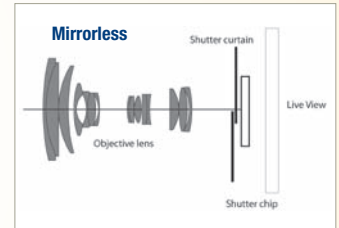

The difference between Mirrorless and 'normal' or true DSLR? Basically, mirrorless SLRs are smaller and lighter. By eliminating the mirror, and sometimes the entire viewfinder, mirrorless DSLRs are closer in size and weight to compact cameras (without the lens). This makes them more portable and draw less attention to you when shooting. True DSLRs include an optical viewfinder that uses mirrors to reflect light from the lens to the viewfinder (this reflective system is called a pentaprism).

The benefit of an optical viewfinder is that you see exactly what the lens sees. If the image is out of focus, you'll see it in the viewfinder. The optical viewfinder also lets you track moving subjects, snapping pictures as you go. This is why normal DSLRs are the only choice for action and sports photographers. By contrast, mirrorless DSLRs have electronic viewfinders and some have no viewfinder at all: the only way to compose pictures is by using the LCD screen on the back of the camera.

Have you ever missed a great shot with a compact camera because it wouldn't focus in time? With true DSLRs, autofocus response time is near instantaneous. However, mirrorless DSLRs use the type of autofocus found in compact cameras.

So focusing is slower. However, if you are shooting landscapes, there's no problem, the scene is going to stay put.

Nonetheless, mirrorless and true DSLRs both use interchangeable lenses.

Some lenses called "pancake" lenses add very little to the dimensions of the mirrorless DSLR - since they don't stick out from the camera body. With a pancake lens, the camera will fit into a spacious pocket. However, if you add a zoom lens, it probably won't fit in your pocket. Last, for videographers all mirrorless DSLR cameras offer HD video modes and include an HDMI port, which allows the camera to be connected directly to an HDTV.

Mirrorless DSLR Cameras

FUJIFILM

X-Pro1

Interchangeable Lens Digital Camera System

Featuring a 16MP X-Trans CMOS sensor, proprietary EXR Processor technology, original X-Mount and Hybrid Multi Viewfinder, the X-Pro1 delivers outstanding image quality that rivals high-end DSLR cameras. The camera is designed with a die-cast aluminum top and base, a leather like finish on the main body for grip and the look and feel of authentic leather, a natural fitting eyepiece, and other elegant touches like precise engraving on the top-plate. For convenience, the natural fit of the eyepiece provides excellent shielding from light leakage, and an optional dioptic adjustment lens can also be attached.

- Designed to maximize the mirrorless design of the body the X-Mount has a short flange back distance, so the rear lens elements are as close as possible to the sensor. The wide opening allows the lens to be mounted deeper within the body, reducing the back focus distance of each lens to the minimum, achieving high resolution all the way to the edge of the image.
- Hybrid Viewfinder can instantly switch between an optical and electronic viewfinder. For the brightest viewing image, and to keep shutter lag to a minimum, choose the optical viewfinder. Those wanting focus confirmation, exposure information, white balance information and depth of field indicators can switch to the electronic viewfinder. It also provides an excellent "Live View" of your composition. When attaching an XF-series lens, both the viewfinder magnification and bright frame size automatically switch to support the lens focal length.
- Incorporating a special anti-reflective coating, the 3-inch LCD features high water repellency, a stain-resistant acrylic film and superb anti-glare performance for comfortable composition and confirmation of shots even under bright sunlight.
- Color expression with Film Simulation - just like choosing the ideal photo film
 - "Studio Ready" professional color negative film modes for perfect portraits
 - Reproduce photo film expression with film simulation mode
 - Enhance monochrome expression with color filters
- Add a new dimension to photographic expression with multiplex exposure
- Select from four powerful auto bracketing functions (AE, ISO sensitivity, Dynamic Range and film simulation)

EF-S 17-40mm f/4.0 L USM

Delivers optical performance equal to similar fixed focal length lenses, with silent, high-speed focusing. High-precision molded glass aspherical lens and two replica aspherical lenses achieve the extended zoom range, while also correcting for aberrations that arise during zooming. Super UD (ultra-low dispersion) glass element help eliminate color bleed along the edges of the subject and achieve high image contrast and resolution.

CA17404LEF **Call or Log-on**

EF 24-70mm f/2.8L USM

This lens improves on the previous L-series 28-70 f/2.8 lens with something even better. The range has been extended to cover an ultra-wide-angle 24mm, which makes it ideal for digital as well as film shooters, and the optics are even better than before with two aspherical elements and a totally new UD glass element. It's now sealed and gasketed against dust and moisture, and an improved processing unit makes the AF faster than ever.

EF 50mm f/1.2L USM

Ideal for low-light photography, the high-performance EF 50mm f/1.2L USM is a standard focal length optic featuring an ultra-large aperture for a narrow depth of field that produces a soft background blur. Its weather-resistant with lens coating and construction that are designed to minimize the ghosting and flare that frequently occur with DSLRs, to deliver superb image resolution and contrast.

CA5012LEF **1619.00**

70-200mm f/2.8L IS II USM

Incorporating Canon's second generation two-stage Image Stabilization technology, this telephoto zoom responds in as little as 0.5 seconds, while providing up to three stops of correction for camera shake. Its AF system has been refined for better response time and tracking speed. And even the new 8-blade circular aperture offers a more pleasing out-of-focus image. Constructed to pro standards, this fast zoom is also highly resistant to dust and moisture.

100mm f/2.8 EF USM Macro Lens

The 100mm f/2.8 macro lens will focus over the full range from infinity down to life size (1:1 reproduction ratio). A high-performance ring-type ultrasonic motor provides fast and silent operation throughout its focus range. It also allows full-time manual focusing. An advanced optical formula with a three-group floating element system provides exceptional close-up performance, and a wide manual focusing ring offers smooth action and full-time manual focus override, even in the AF mode.

1.4x & 2x Teleconverters

High-quality teleconverters that preserve the image quality of the lens their mounted to and multiply the focal length by 1.4x or 2x. Near imperviousness to weather extremes is achieved thanks to rubber gasket seals.

SIGMA

DP1x 14-Megapixel Digital Camera

Featuring a 14-megapixel Foveon X3 image sensor—8x the size of a sensor in a typical compact digital camera), Sigma's True II image processing engine and a 16.6mm (28mm equivalent) f/4 lens, the DP1x delivers the same image quality as a professional DSLR. It offers five exposure modes and three metering modes, and is equipped with a built-in flash, hot shoe, and 2.5" TFT color LCD monitor. It records images in RAW or JPEG format in four resolution modes.

DP2x 14-Megapixel Digital Camera

Like the DP1x, the DP2x features a 14-megapixel Foveon X3 image sensor and Sigma's True II image processing engine. However, it offers a 24mm f/2.8 (41mm equivalent) and incorporates AFE (Analog Front End). This process converts the color data, which full-color captures systems record, to a digital signal. This enables the camera to reproduce high definition and richly colored images. Has five exposure modes, three metering modes, built-in flash, hot shoe, and 2.5" TFT color LCD monitor. It records images in RAW or JPEG format in four resolution modes.

DSLR-A900

Features a massive 24.6-megapixel 35mm full-frame CMOS image sensor for a larger capture area, improved wide-angle performance and tighter depth of field control—as well as amazing image quality. Body-integrated, full-size SteadyShot INSIDE image stabilizer compensates for up to four shutter speed steps, giving you more freedom in low light. It can shoot up to 5 fps, has a large, ultra-bright viewfinder with 100% coverage, 3-inch Xtra Fine (921,000 pixels) LCD and HDMI output. Has mirror lockup mode, built-in eyepiece shutter, user-replaceable focusing screens, ±2EV exposure bracketing (3 exposures), and remote camera control from your PC.

SLT-A35 • SLT-A55

Incorporating Translucent Mirror Technology, the 16.2 megapixel SLT-A35 and SLT-A55 achieve the highest-level of auto focus speed for both still image and movie shooting. It also allows them to shoot continuously at up to 7 fps (SLT-A35) or 10 fps (SLT-A55). The absence of the moving mirror mechanism also makes them much more compact than traditional DSLR cameras. Otherwise the same, the SLT-A55 adds a built-in GPS.

- They record Full HD 1080/60i Full HD AVCHD format and have an HDMI output.
- Ultra-high ISO sensitivity (ISO 100 - 12,800) plus Auto HDR and Multi frame NR
- Full-time Live View using viewfinder or articulated 3" Xtra Fine (921,600 pixel) LCD
- The Tru-Finder eye-level viewfinder (1.15 million dots) provides 100% coverage and 1.1x magnification for easy and natural framing.

It also features an OLED viewfinder, can shoot at 10 fps and records HD movies with full manual control. Built-in flash allows for spur of the moment or snapshot capture, while the integrated hot shoe lets you add on flashes or other flash accessories. Dual media slots help you to shoot longer and provide you with the option of storing two different cards at once. Fill one with Memory Stick media perhaps and the other with SD/SDHC/SDXC cards if you feel like it.

GXR

GXR is a new camera system that consists of a body and camera units. Each camera unit contains a lens (focal lengths differ between units), an image sensor of optimum type and size for the unit, and an image processing engine. By changing units, the photographer can handle a diverse range of scenes in a way that satisfies sophisticated requirements for photo expression. The slide mechanism adopted for attaching and removing camera units enables changes to be made quickly and securely. Hot shoe allows for adding accessories such as a flash or viewfinder. The Body also has a built-in flash and tripod mount for added flexibility. A 3.0" LCD provides a generous platform for composing and reviewing shots or scrolling through the menu. An SD/SDHC memory card slot, slot for the rechargeable battery, and an ample supply of controls round out the exterior.

impact. Umbrella Mount Kit For Digital Flash

Umbrellas soften, broaden, and diminish the light output of any tungsten or flash light source. A white umbrella without a black backing may also be used as a makeshift softbox, although the use of the light will not be as efficient as with a light box.

Kit Includes:

- 2 32" Umbrellas-White with Removable Black Cover
- 2 Umbrella Bracket with Swivel Mount & Flash Shoe
- 2 8' Black air-cushioned Light Stands

Bounce Diffusers

This bounce diffuser is a half-dome shaped flash diffuser that slips securely over the front of the flash, with use of the included model-specific flash adapter. The half dome design allows for a larger diffusion surface and spreads the light evenly and over a larger area, producing the effect of a much larger diffuser and light source.

Manufactured from 100% closed-cell neoprene, offering protection from bumps, jars, and nicks, with a camouflage-pattern fabric cover. Lens Covers also provide a thermal barrier, protecting your hands from cold lenses in lower temperatures. They are easy to install and remove, leaving no residue on the lens. Moving a big white (or black) lens near skittish wildlife is like waving your arms – a sure way to flush your subject and ruin what could be a once-in-a-lifetime photo opportunity. LensCoat™ Lens Covers mask your large lens, giving you a better chance at getting the shot.

M7 Series 35mm Rangefinder Camera

Classics are works that clash with the present. They are never modified – instead they are re-interpreted on the basis of a changed world. With the M7, a classic camera has been infused with modern electronic advantages that results in a camera that is faster than ever while still having the soul of a Leica.

- Choose between three viewfinder magnifications: the standard 0.72x, an 0.85x viewfinder magnification for longer focal lengths, and an 0.58x viewfinder magnification for wide-angle.

H4D-40 40-Megapixel Medium Format DSLR Camera

Delivers unsurpassed image quality via powerful features and precision optics. True Focus technology with Absolute Position Lock (APL) allows you to capture close distance shots with a unique yaw sensor to measure angular velocity. The low noise color filter of the H4D-40's sensor provides for increased clarity and increased depth of field. The Natural Color Solution (HNCS) achieves consistent color reproduction using a single color profile, and digital lens correction perfects each image captured through HC/HCD lenses by removing any trace of distortion, vignetting, or chromatic aberrations.

VORTEX **Escape**

Collapsing to under 2' and extending to 6', the 2.4 lb. Escape is ideal for sport optics use. The head has adjustable tension control, so that you can follow subjects with the head unlocked and not have to worry about the head 'dumping' to gravity if you should take your hands away for a moment.

The Escape's quick release system is an open-channel type, meaning that the relationship of the plate to the clamp is horizontally variable. This makes it possible to adjust the fore/aft position of your optics so that the weight is perfectly positioned over the legset, allowing you to carry a little less weight. Load capacity is 14 lbs. 24", 36" and 44" Corporate and CAD Printers

The 24" imagePROGRAF iPF610 features a Reactive Ink system consisting of four highly colorfast dye inks - Cyan, Magenta, Yellow and Black - plus two channels of pigment-based matte black. It has a large LCD panel and operates with very little noise. The L-COA controller drives the best quality output at the highest possible speeds.

Otherwise the same, the 36" iPF710 is designed to meet the speed and precision requirements for CAD, MCAD, ECAD and GIS applications, with versatility to handle all-purpose, office applications. Otherwise the same, the 44" iPF810 also features exceptional line accuracy, high-speed throughput and an 80GB hard drive that makes handling multiple complex jobs simple, especially in shared printer environments.

Hahnemühle

FINEART

Inkjet Paper

The Hahnemühle paper mill has been producing quality mould made artists papers for over 400 years. Since its founding they have developed a tradition of excellence in art materials that have now been brought to the digital age. The result is the Hahnemühle collection of Digital Fine Art papers. Designed for discerning users, these grades of Digital Fine Art paper can be used to create limited editions, giclees, original digital art, traditional output, photographic and historic photographs on a choice of paper textures, multiple colors and a huge variety of sheet sizes and weights. These are available in cut sheet sizes of A4, A3, A2 and are compatible with all inkjet printers up to a printed resolution of 1440 dpi, while printers that feed flat from the bottom and bending the paper up round only being recommended up to 210 gsm. The Hahnemühle papers work equally well with both dye and pigmented based inks on a wide variety of printers providing a color intensity and crispness not possible with non-coated art papers. The Hahnemühle collection is manufactured in the traditional mould-made and fourdrinier techniques that artists value for its unique rich look, feel and texture. No longer does the digital artist have to compromise on paper quality when producing or reproducing their work digitally. Surface coating in combination with the traditional paper base and the right inks will produce sharp, high resolution output with the warmth and quality of the hand generated artwork. In many cases it is difficult to identify the original with the copy.

Technical (Manual) & Powertech (Electrical) Cutters

The Technical/Powertech range use a unique, self adjusting triple roller cutting head to effortlessly slice through almost any flexible sheet, including thin films and foils, up to 4mm thick. They are ideal for display/exhibition applications. The Powertech models have the cutting head electrically driven by a steel reinforced belt, via a foot operated pneumatic switch, leaving both hands free for speedy repositioning and faster throughput.
