About This Manual

For a complete guide to using your digital camera, see the Reference Manual (page vi). To get the most from your camera, please be sure to read this User’s Manual thoroughly and keep it where it will be read by all who use the product.

Camera Settings

The explanations in this manual assume that default settings are used.

Symbols and Conventions

To make it easier to find the information you need, the following symbols and conventions are used:

![This icon marks cautions; information that should be read before use to prevent damage to the camera.]

![This icon marks notes; information that should be read before using the camera.]

![This icon marks references to other pages in this manual.]

The lens generally used in this manual for illustrative purposes is a 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM.

⚠️ For Your Safety

Before using the camera for the first time, read the safety instructions in “For Your Safety” (vii–ix) and “Caring for the Camera and Battery: Cautions” (111).
The Reference Manual

For more information on using your Nikon camera, download a pdf copy of the camera Reference Manual from the website listed below. The Reference Manual can be viewed using Adobe Reader or Adobe Acrobat Reader 5.0 or later.

1 On your computer, launch a web browser and visit http://downloadcenter.nikonimglib.com/

2 Navigate to the page for the desired product and download the manual.
For Your Safety

To prevent damage to your Nikon product or injury to yourself or to others, read the following safety precautions in their entirety before using this equipment. Keep these safety instructions where all those who use the product will read them.

The consequences that could result from failure to observe the precautions listed in this section are indicated by the following symbol:

⚠️ This icon marks warnings. To prevent possible injury, read all warnings before using this Nikon product.

### WARNINGS

⚠️ Keep the sun out of the frame. Keep the sun well out of the frame when shooting backlit subjects. Sunlight focused into the camera when the sun is in or close to the frame could cause a fire.

⚠️ Turn off immediately in the event of malfunction. Should you notice smoke or an unusual smell coming from the equipment or AC adapter (available separately), unplug the AC adapter and remove the battery immediately, taking care to avoid burns. Continued operation could result in injury. After removing the battery, take the equipment to a Nikon-authorized service center for inspection.

⚠️ Do not use in the presence of flammable gas. Do not use electronic equipment in the presence of flammable gas, as this could result in explosion or fire.

⚠️ Do not disassemble. Touching the product’s internal parts could result in injury. In the event of malfunction, the product should be repaired only by a qualified technician. Should the product break open as the result of a fall or other accident, remove the battery and/or AC adapter and then take the product to a Nikon-authorized service center for inspection.

⚠️ Keep out of reach of children. Failure to observe this precaution could result in injury. In addition, note that small parts constitute a choking hazard. Should a child swallow any part of this equipment, consult a physician immediately.

⚠️ Do not place the strap around the neck of an infant or child. Placing the camera strap around the neck of an infant or child could result in strangulation.

⚠️ Follow the instructions of airline and hospital personnel.
Do not remain in contact with the camera, battery, or charger for extended periods while the devices are on or in use. Parts of the device become hot. Leaving the device in direct contact with the skin for extended periods may result in low-temperature burns.

Do not leave the product where it will be exposed to extremely high temperatures, such as in an enclosed automobile or in direct sunlight. Failure to observe this precaution could cause damage or fire.

Do not aim the flash at the operator of a motor vehicle. Failure to observe this precaution could result in accidents.

Observe caution when using a flash.
- Using the camera with the flash in close contact with the skin or other objects could cause burns.
- Using a flash close to the subject’s eyes could cause temporary visual impairment. The flash should be no less than one meter (3 ft 4 in.) from the subject. Particular care should be observed when photographing infants.

Avoid contact with liquid crystal. Should the display break, care should be taken to avoid injury due to broken glass and to prevent the liquid crystal from the display touching the skin or entering the eyes or mouth.

Do not carry tripods with a lens or camera attached. You could trip or accidentally strike others, resulting in injury.

Do not touch the moving parts of the lens. Failure to observe this precaution could result in injury.

Observe proper precautions when handling batteries. Batteries may leak, overheat, rupture, or catch fire if improperly handled. Observe the following precautions when handling batteries for use in this product:
- Use only batteries approved for use in this equipment.
- Do not short or disassemble the battery.
- Do not expose the battery or the camera in which it is inserted to powerful physical shocks.
- Be sure the product is off before replacing the battery. If you are using an AC adapter, be sure it is unplugged.
- Do not attempt to insert the battery upside down or backwards.
- Do not expose the battery to flame or to excessive heat.
- Do not immerse in or expose to water.
- Replace the terminal cover when transporting the battery. Do not transport or store the battery with metal objects such as necklaces or hairpins.
- Batteries are prone to leakage when fully discharged. To avoid damage to the product, be sure to remove the battery when no charge remains.
- When the battery is not in use, attach the terminal cover and store in a cool, dry place.
• The battery may be hot immediately after use or when the product has been used on battery power for an extended period. Before removing the battery turn the camera off and allow the battery to cool.

• Discontinue use immediately should you notice any changes in the battery, such as discoloration or deformation.

⚠️ **Observe proper precautions when handling the charger:**

• Keep dry. Failure to observe this precaution could result in injury or product malfunction due to fire or electric shock.

• Do not short the charger terminals. Failure to observe this precaution could result in overheating and damage to the charger.

• Dust on or near the metal parts of the plug should be removed with a dry cloth. Continued use could result in fire.

• Do not go near the charger during thunderstorms. Failure to observe this precaution could result in electric shock.

• Do not handle the plug or charger with wet hands. Failure to observe this precaution could result in injury or product malfunction due to fire or electric shock.

• Do not use with travel converters or adapters designed to convert from one voltage to another or with DC-to-AC inverters. Failure to observe this precaution could damage the product or cause overheating or fire.

⚠️ **Use appropriate cables.** When connecting cables to the input and output jacks, use only the cables provided or sold by Nikon for the purpose to maintain compliance with product regulations.
No part of the manuals included with this product may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language in any form, by any means, without Nikon’s prior written permission.

Nikon reserves the right to change the specifications of the hardware and software described in these manuals at any time and without prior notice.

Nikon will not be held liable for any damages resulting from the use of this product.

While every effort has been made to ensure that the information in these manuals is accurate and complete, we would appreciate it were you to bring any errors or omissions to the attention of the Nikon representative in your area (address provided separately).

Notice for Customers in Canada
CAN ICES-3 (B) / NMB-3 (B)

Notice for Customers in Europe

CAUTION: RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

This symbol indicates that electrical and electronic equipment is to be collected separately.

The following apply only to users in European countries:

• This product is designated for separate collection at an appropriate collection point. Do not dispose of as household waste.
• Separate collection and recycling helps conserve natural resources and prevent negative consequences for human health and the environment that might result from incorrect disposal.
• For more information, contact the retailer or the local authorities in charge of waste management.

This symbol on the battery indicates that the battery is to be collected separately.

The following apply only to users in European countries:

• All batteries, whether marked with this symbol or not, are designated for separate collection at an appropriate collection point. Do not dispose of as household waste.
• For more information, contact the retailer or the local authorities in charge of waste management.
Federal Communications Commission (FCC) Radio Frequency Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/television technician for help.

CAUTIONS

Modifications

The FCC requires the user be notified that any changes or modifications made to this device that are not expressly approved by Nikon Corporation may void the user’s authority to operate the equipment.

Interface Cables

Use the interface cables sold or provided by Nikon for your equipment. Using other interface cables may exceed the limits of Class B Part 15 of the FCC rules.

Notice for Customers in the State of California

WARNING: Handling the cord on this product may expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm. Wash hands after handling.

Nikon Inc., 1300 Walt Whitman Road, Melville, New York 11747-3064, U.S.A. Tel.: 631-547-4200
Notice Concerning Prohibition of Copying or Reproduction

Note that simply being in possession of material that has been digitally copied or reproduced by means of a scanner, digital camera, or other device may be punishable by law.

- **Items prohibited by law from being copied or reproduced**
  Do not copy or reproduce paper money, coins, securities, government bonds, or local government bonds, even if such copies or reproductions are stamped “Sample.”

  The copying or reproduction of paper money, coins, or securities which are circulated in a foreign country is prohibited.

  Unless the prior permission of the government has been obtained, the copying or reproduction of unused postage stamps or post cards issued by the government is prohibited.

  The copying or reproduction of stamps issued by the government and of certified documents stipulated by law is prohibited.

- **Cautions on certain copies and reproductions**
  The government has issued cautions on copies or reproductions of securities issued by private companies (shares, bills, checks, gift certificates, etc.), commuter passes, or coupon tickets, except when a minimum of necessary copies are to be provided for business use by a company. Also, do not copy or reproduce passports issued by the government, licenses issued by public agencies and private groups, ID cards, and tickets, such as passes and meal coupons.

- **Comply with copyright notices**
  The copying or reproduction of copyrighted creative works such as books, music, paintings, woodcuts, prints, maps, drawings, movies, and photographs is governed by national and international copyright laws. Do not use this product for the purpose of making illegal copies or to infringe copyright laws.
**Disposing of Data Storage Devices**

Please note that deleting images or formatting memory cards or other data storage devices does not completely erase the original image data. Deleted files can sometimes be recovered from discarded storage devices using commercially available software, potentially resulting in the malicious use of personal image data. Ensuring the privacy of such data is the user’s responsibility.

Before discarding a data storage device or transferring ownership to another person, erase all data using commercial deletion software, or format the device and then completely refill it with images containing no private information (for example, pictures of empty sky). Wi-Fi settings can be reset to default values by selecting **Reset Wi-Fi settings** for **Wi-Fi connection type** in the Wi-Fi menu (□ 92). Care should be taken to avoid injury when physically destroying data storage devices.

**AVC Patent Portfolio License**

This product is licensed under the AVC Patent Portfolio License for the personal and non-commercial use of a consumer to (i) encode video in compliance with the AVC standard (“AVC video”) and/or (ii) decode AVC video that was encoded by a consumer engaged in a personal and non-commercial activity and/or was obtained from a video provider licensed to provide AVC video. No license is granted or shall be implied for any other use. Additional information may be obtained from MPEG LA, L.L.C. See [http://www.mpegla.com](http://www.mpegla.com)

**Temperature Warnings**

The camera may become warm to the touch during use; this is normal and does not indicate a malfunction. At high ambient temperatures, after extended periods of continuous use, or after several photographs have been taken in quick succession, a temperature warning may be displayed, following which the camera will turn off automatically to minimize damage to its internal circuits. Wait for the camera to cool before resuming use.
**Use Only Nikon Brand Electronic Accessories**

Nikon cameras are designed to the highest standards and include complex electronic circuitry. Only Nikon brand electronic accessories (including chargers, batteries, AC adapters, and lens accessories) certified by Nikon specifically for use with this Nikon digital camera are engineered and proven to operate within the operational and safety requirements of this electronic circuitry.

The use of non-Nikon electronic accessories could damage the camera and may void your Nikon warranty. The use of third-party rechargeable Li-ion batteries not bearing the Nikon holographic seal shown at right could interfere with normal operation of the camera or result in the batteries overheating, igniting, rupturing, or leaking.

For more information about Nikon brand accessories, contact a local authorized Nikon dealer.
Use Only Nikon Brand Accessories

Only Nikon brand accessories certified by Nikon specifically for use with your Nikon digital camera are engineered and proven to operate within its operational and safety requirements. The use of non-Nikon accessories could damage your camera and may void your Nikon warranty.

Servicing the Camera and Accessories

The camera is a precision device and requires regular servicing. Nikon recommends that the camera be inspected by the original retailer or a Nikon-authorized service representative once every one to two years, and that it be serviced once every three to five years (note that fees apply to these services). Frequent inspection and servicing are particularly recommended if the camera is used professionally. Any accessories regularly used with the camera, such as lenses, should be included when the camera is inspected or serviced.

Before Taking Important Pictures

Before taking pictures on important occasions (such as at weddings or before taking the camera on a trip), take a test shot to ensure that the camera is functioning normally. Nikon will not be held liable for damages or lost profits that may result from product malfunction.

Life-Long Learning

As part of Nikon’s “Life-Long Learning” commitment to ongoing product support and education, continually-updated information is available on-line at the following sites:

- For users in the U.S.A.: http://www.nikonusa.com/
- For users in Europe and Africa: http://www.europe-nikon.com/support/
- For users in Asia, Oceania, and the Middle East: http://www.nikon-asia.com/

Visit these sites to keep up-to-date with the latest product information, tips, answers to frequently-asked questions (FAQs), and general advice on digital imaging and photography. Additional information may be available from the Nikon representative in your area. For contact information, visit http://imaging.nikon.com/
Wireless

This product, which contains encryption software developed in the United States, is controlled by the United States Export Administration Regulations and may not be exported or re-exported to any country to which the United States embargoes goods. The following countries are currently subject to embargo: Cuba, Iran, North Korea, Sudan, and Syria.

The use of wireless devices may be prohibited in some countries or regions. Contact a Nikon-authorized service representative before using the wireless features of this product outside the country of purchase.

Notices for Customers in the U. S. A.

This device complies with Part 15 of FCC Rules and Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

FCC WARNING

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Nikon Corporation may void the user’s authority to operate the equipment.

FCC Radio Frequency Interference Statement

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Co-location

This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

Nikon Inc., 1300 Walt Whitman Road, Melville, New York 11747-3064, U.S.A.
Tel.: 631-547-4200
**Notices for Customers in Canada**

This device complies with Part 15 of FCC Rules and Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

**FCC/IC RF Exposure Statement**

The available scientific evidence does not show that any health problems are associated with using low power wireless devices. There is no proof, however, that these low power wireless devices are absolutely safe. Low power Wireless devices emit low levels of radio frequency energy (RF) in the microwave range while being used. Whereas high levels of RF can produce heat effects (by heating tissue), exposure of low-level RF that does not produce heat effects causes no known adverse health effects. Many studies of low-level RF exposures have not found any biological effects. Some studies have suggested that some biological effects might occur, but such findings have not been confirmed by additional research. The 1 J5, which is equipped with a DW092 (FCC ID:EW4DW092 / IC ID:4634A-3149EC) wireless LAN module, has been tested and found to comply with FCC/IC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65 and RSS-102 of the IC radio frequency (RF) Exposure rules. Please refer to the SAR test report that was uploaded to FCC website.

**Notices for Customers in Europe**

Hereby, Nikon Corporation, declares that the 1 J5 is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. The declaration of conformity may be consulted at [http://imaging.nikon.com/support/pdf/DoC_1J5.pdf](http://imaging.nikon.com/support/pdf/DoC_1J5.pdf)

**Notice for Customers in Singapore**

This device complies with radio-frequency regulations. The content of certification labels not affixed to the device is given below.

![Certification Label](image-url)
Notice for Customers in Algeria

This device complies with Part 15 of FCC Rules and Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Co-location
This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

FCC/IC RF Exposure Statement
The available scientific evidence does not show that any health problems are associated with using low power wireless devices. There is no proof, however, that these low power wireless devices are absolutely safe. Low power Wireless devices emit low levels of radio frequency energy (RF) in the microwave range while being used. Whereas high levels of RF can produce health effects (by heating tissue), exposure of low-level RF that does not produce heating effects causes no known adverse health effects. Many studies of low-level RF exposures have not found any biological effects. Some studies have suggested that some biological effects might occur, but such findings have not been confirmed by additional research. The 1 J5, which is equipped with a DW092 (FCC ID: EW4DW092 / IC ID: 4634A-3149EC) wireless LAN module, has been tested and found to comply with FCC/IC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65 and RSS-102 of the IC radio frequency (RF) Exposure rules. Please refer to the SAR test report that was uploaded to FCC website.

Security
Although one of the benefits of this product is that it allows others to freely connect for the wireless exchange of data anywhere within its range, the following may occur if security is not enabled:

- Data theft: Malicious third-parties may intercept wireless transmissions to steal user IDs, passwords, and other personal information.
- Unauthorized access: Unauthorized users may gain access to the network and alter data or perform other malicious actions. Note that due the design of wireless networks, specialized attacks may allow unauthorized access even when security is enabled.
Introduction

The Camera and Accessories

The following items are included with purchase of this product or are available separately. Confirm that the package contains all items listed as included. For a complete list of the accessories available for separate purchase, see page 108.

Memory cards are sold separately.

- Body Cap BF-N1000 (included)
- Digital Camera Nikon 1 J5 (included)
- Rechargeable Li-ion Battery EN-EL24 (included with terminal cover)
- Lens (supplied only if lens kit is purchased with camera)
- Battery Charger MH-31 (included; plug adapter supplied in countries or regions where required; shape depends on country of sale)

Also included:
- Strap AN-N1000
- USB Cable UC-E20
- Warranty
- User’s Manual (this manual)
Parts of the Camera

Take a few moments to familiarize yourself with camera controls and displays. You may find it helpful to bookmark this section and refer to it as you read through the rest of the manual.

  - Close-up
  - Portrait
P, S, A, and M modes (49): Control shutter speed and aperture for advanced photographic effects.

- **P**: Programmed auto (49)
- **S**: Shutter-priority auto (50)
- **A**: Aperture-priority auto (51)
- **M**: Manual (52)

Best moment capture mode (55): Choose Active Selection to select the best picture from 20 shots in temporary storage, Slow view to choose the best timing for the shot while the scene plays back in slow motion, or Smart Photo Selector to let the camera pick the best shot based on composition and movement.

Motion Snapshot mode (65): Each time the shutter is released, the camera records a still image and about 1.6 s of movie footage. When the resulting “Motion Snapshot” is viewed on the camera, the movie will play back in slow motion over approximately 4 s, followed by the still image.

Advanced movie mode (38): Choose an exposure mode and adjust shutter-speed or aperture or record movies in slow or fast motion or with other special effects.
**The MENU Button**

Most shooting, playback, setup, and Wi-Fi options can be accessed from the camera menus. To view the menus, press the **MENU** button.

---

**Tabs**

Choose from the following menus:

- **Playback menu (100)**
- **Shooting menu (101)**
- **Setup menu (102)**
- **Wi-Fi menu (89, 103)**

**Menu options**

Options in current menu.

**Slider shows position in current menu.**

---

**Using the Menus**

The items listed may vary with camera settings. Items displayed in gray are not currently available. To exit the menus and return to shooting mode, press the shutter-release button halfway (30).
Using the Menus

Use the multi selector to navigate the playback, shooting, setup, and Wi-Fi menus.

1 Select a menu.
Press ▲ or ▼ to highlight tabs and press ◀ to position the cursor in the highlighted menu.

2 Select an item.
Press ▲ or ▼ to highlight menu items and press ◀ to view options for the highlighted item.

3 Select an option.
Press ▲ or ▼ to highlight the desired option and press OK to select.

Touch Controls
Slide up or down to scroll and tap menu items or icons to select options or adjust settings (16).
The **F (Feature) Menu**

To display the feature menu and adjust camera settings or access playback options, press **F** (feature) on the multi selector.

1 **Select an item.**
   Use the multi selector to highlight an item and press OK to display options (to exit the F menu, press the shutter-release button halfway as described on page 30 or highlight \(\times\) and press OK).

2 **Select an option.**
   Highlight the desired option or value and press OK to select.

---

**The F Menu**

The **F** menu is context-sensitive: its contents vary with camera settings or the type of image displayed; options that are currently unavailable are shown in gray. The **F** menu is not available in auto or sports mode.

Items in the **F** menu can also be selected by tapping the monitor.
Tilting the Monitor

The monitor can be angled and rotated as shown below.

**Normal use:** The monitor is normally used in storage position.

**Low-angle shots:** Tilt the monitor up to frame shots with the camera close to the ground. Once in the low-angle position, the monitor can be further lowered.

**High-angle shots:** Tilt the monitor down to frame shots while holding the camera over your head.
Self-portraits (83): Reverse the monitor to select self-portrait mode.

Using the Monitor

Rotate the monitor gently within the limits of the hinges. Do not use force. Failure to observe these precautions could damage the camera or monitor. If the camera is mounted on a tripod, care should be taken to ensure that the monitor does not contact the tripod.

Do not touch the area to the rear of the monitor. Failure to observe this precaution could cause product malfunction.

Be particularly careful not to touch these areas.
Using the Touch Screen

The touch-sensitive monitor supports the following operations:

**Tap**
Tap the monitor.

**Flick**
Flick a finger a short distance across the monitor.

**Slide**
Slide a finger over the monitor.

**Stretch/Pinch**
Place two fingers on the monitor and move them apart or pinch them together.
The touch screen responds to static electricity and may not respond when covered with third-party protective films or when touched with fingernails or gloved hands. Do not use excessive force or touch the screen with sharp objects.

Using the Touch Screen
The touch screen may not respond as expected if you attempt to operate it while leaving your palm or another finger resting on it in second location. It may not recognize other gestures if your touch is too soft, your fingers are moved too quickly or too short a distance or do not remain in contact with the screen, or if the movement of the two fingers in a pinch or stretch is not correctly coordinated.

Enabling or Disabling Touch-screen Controls
Touch controls can be enabled or disabled using the Touch-screen controls option in the setup menu (103).

Taking Pictures
The touch screen can be used for the following shooting operations.

| Take a picture (tap shooting) | ![Camera with touch screen]
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>In auto, creative, P, S, A, M, and self-portrait modes, you can focus and take a picture by tapping your subject in the display.</td>
<td></td>
</tr>
</tbody>
</table>

| Focus (tap shooting) | ![Camera with touch screen]
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>In advanced movie mode, you can focus by tapping your subject in the display.</td>
<td></td>
</tr>
</tbody>
</table>
Adjust settings

Tap highlighted icons to view settings and tap icons or sliders to change (the items available vary with camera settings). Tap OK to save changes and exit, or tap ⏯️ to exit to the previous display without saving changes.

Tap Shooting Options

Tap shooting options can be adjusted by tapping the icon shown at right (عناصر على الجانب الإضافي 86).

Viewing Pictures

The touch screen can be used for the following playback operations.

View other images

Flick left or right to view other images.

View movies or panoramas

Tap the on-screen guide to start movie or panorama playback (movies are indicated by a 🎥 icon). Tap the display to pause or resume.
### Using the Menus

The touch screen can be used for the following menu operations.

<table>
<thead>
<tr>
<th><strong>Zoom in</strong></th>
<th>Use stretch and pinch gestures to zoom in and out and slide to scroll. You can also double-tap a picture in full-frame playback to zoom in and double-tap again to exit zoom.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>View thumbnails</strong></td>
<td>To “zoom out” to a thumbnail view, use a pinch gesture in full-frame playback. Use pinch and stretch to choose the number of images displayed from 4, 9, or 16 frames.</td>
</tr>
<tr>
<td><strong>View other months</strong></td>
<td>Flick left or right to view other months in the calendar display.</td>
</tr>
<tr>
<td><strong>Use on-screen guides</strong></td>
<td>Various operations can be performed by tapping on-screen guides.</td>
</tr>
<tr>
<td><strong>Scroll</strong></td>
<td>Slide up or down to scroll.</td>
</tr>
</tbody>
</table>
Choose a menu

Tap a menu icon to choose a menu.

Select items/adjust settings

Tap menu items to display options and tap icons or sliders to change. Tap ➔ to exit to the previous display without changing settings.

The F Menu

The touch screen can be used to adjust settings in the F menu.

Select items/adjust settings

Tap menu items to display options and tap icons or sliders to change. Tap OK to save changes and exit, or tap ➔ to exit to the previous display without changing settings.
First Steps

1 Attach the camera strap.
   Attach the strap securely to the two camera eyelets.

2 Charge the battery.
   Insert the battery into the charger ① and plug the charger in ②. An exhausted battery fully charges in about two hours and 30 minutes. Unplug the charger and remove the battery when charging is complete.

The Plug Adapter
Depending on the country or region of purchase, a plug adapter may be supplied with the charger. The shape of the adapter varies with the country or region of purchase. If a plug adapter is supplied, raise the wall plug and connect the plug adapter as shown at right, making sure the plug is fully inserted. Attempting to forcibly remove the plug adapter could damage the product.
**3 Insert the battery and a memory card.**
The camera stores pictures on microSD, microSDHC, and microSDXC memory cards (available separately; \( \text{p} \) 109). Before inserting the battery or memory cards, check that they are in the correct orientation. Using the battery to keep the orange battery latch pressed to one side, slide the battery in until it latches, and then slide in the memory card until it clicks into place. Do not attempt to insert the card at an angle; failure to observe this precaution could damage the product.

**Formatting Memory Cards**
If this is the first time the memory card will be used in the camera or if the card has been formatted in another device, select **Format memory card** in the setup menu and follow the on-screen instructions to format the card (\( \text{p} \) 102). *Note that this permanently deletes any data the card may contain.* Be sure to copy any photographs and other data you wish to keep to a computer before proceeding (\( \text{p} \) 104).
4 Attach a lens.
Be careful to prevent dust from entering the camera when the lens or body cap is removed. The lens generally used in this manual for illustrative purposes is a 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM. When using the 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM, be sure not to touch the lens cover; failure to observe this precaution could result in product malfunction.

Remove the rear lens cap

Remove the camera body cap

Mounting mark (camera)

Mounting mark (lens)

Keeping the mounting marks aligned, position the lens on the camera
Lenses with Retractable Lens Barrel Buttons

Lenses with retractable lens barrel buttons can not be used when retracted. To unlock and extend the lens, readying the camera for use, keep the retractable lens barrel button pressed (1) while rotating the zoom ring as shown (2). The lens can be retracted and the zoom ring locked by pressing the button and rotating the ring in the opposite direction. Retract the lens before removal, and be careful not to press the retractable lens barrel button while attaching or removing the lens.

The camera will turn on automatically when the retractable lens barrel lock is released; in addition, if the view through the lens is displayed or the monitor is off, the camera will turn off when the lens barrel is locked (in the case of 1 NIKKOR VR 10–30mm f/3.5–5.6 and 1 NIKKOR VR 30–110mm f/3.8–5.6 lenses, firmware version 1.10 or later is required if locking the lens barrel is to turn the camera off when the monitor is off; for information on updating lens firmware, visit the Nikon website for your area).
5 Turn the camera on.

Rotate the power switch to turn the camera on. The power lamp will briefly light green and the monitor will turn on. If the lens is equipped with a front lens cap, remove the cap before shooting. If a 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM lens is attached, the lens will automatically extend when the camera is turned on and retract when the camera is turned off.

Turning the Camera Off
To turn the camera off, rotate the power switch again. The monitor will turn off.

Auto Power Off
If no operations are performed for about a minute, the display will turn off and the power lamp will start to flash. The camera can be reactivated by operating the shutter-release button. If no operations are performed for about three minutes after the display has turned off, the camera will turn off automatically.

6 Choose a language.
A language-selection dialog will be displayed the first time the camera is turned on. Use the multi selector and button to choose a language.
7 Set the clock.

Use the multi selector and \( \textcircled{\text{OK}} \) button to set the time and date. *Note that the camera uses a 24-hour clock.*

Press \( \textcircled{\text{4}} \) or \( \textcircled{\text{2}} \) to highlight time zone and press \( \textcircled{\text{OK}} \).

Press \( \textcircled{\text{1}} \) or \( \textcircled{\text{3}} \) to highlight daylight saving time option and press \( \textcircled{\text{OK}} \).

Press \( \textcircled{\text{4}} \) or \( \textcircled{\text{2}} \) to highlight date format and press \( \textcircled{\text{OK}} \).

Press \( \textcircled{\text{1}} \) or \( \textcircled{\text{3}} \) to highlight items and press \( \textcircled{\text{4}} \) or \( \textcircled{\text{2}} \) to change. Press \( \textcircled{\text{OK}} \) to exit to shooting display when setup is complete.

*Note: Language and clock can be changed at any time using Language (\( \text{\textit{Language}} \) 103) and Time zone and date (\( \text{\textit{Time zone and date}} \) 103) options in setup menu.*
8 Check the battery level and memory card capacity.

Check the battery level and number of exposures remaining in the monitor (4).
**Taking and Viewing Photographs**

This chapter describes how to take, view, and delete photographs in auto and creative mode.

**Point-and-Shoot Photography (Auto Mode)**

Follow the steps below to take photographs in auto mode, a “point-and-shoot” mode in which the camera automatically detects the subject type and adjusts settings according to the subject and situation.

1. **Turn the camera on.**
   Rotate the power switch to turn the camera on.

2. **Select 📸 mode.**
   Rotate the mode dial to 📸 (auto).
3 Ready the camera.
Hold the camera securely with both hands, being careful not to obstruct the lens, AF-assist illuminator, or microphone. Rotate the camera as shown at lower right when taking pictures in “tall” (portrait) orientation.

Shutter speeds slow when lighting is poor; use of the built-in flash (77) or a tripod is recommended.

4 Frame the photograph.
Position your subject in the center of the frame. At default settings, the camera will automatically detect portrait subjects and position the focus point accordingly (31).

5 Focus.
Press the shutter-release button halfway to focus. If the subject is poorly lit, the flash may pop up (77) and the AF-assist illuminator (2) may light to assist the focus operation.

If the camera is able to focus, the selected focus area will be highlighted in green and a beep will sound (a beep may not sound if the subject is moving).

If the camera is unable to focus, the focus area will be displayed in red.
6 Shoot.

Smoothly press the shutter-release button the rest of the way down to release the shutter and record the photograph.

Pictures can also be taken using touch controls. Tap a subject anywhere in the frame to focus and release the shutter.

After the shutter is released, the memory card access lamp will light and the photograph will be displayed in the monitor for a few seconds (the photo will automatically clear from the display when the shutter-release button is pressed halfway). Do not eject the memory card or remove the battery until the lamp has gone out and recording is complete.

The Framing Grid

A framing grid can be displayed by selecting On for Display > Grid display in the setup menu (102).
**Viewing Photographs**

Press  to display your most recent photograph full frame in the monitor (full-frame playback).

Press  or  or rotate the multi selector to view additional pictures. You can also scroll through pictures by flicking left or right (15).

To zoom in on the center of the current image, rotate the command dial to the right. Rotate left to zoom out (you can also zoom in or out using touch controls: place two fingers on the monitor and spread them apart to zoom in or pinch them together to zoom out). To view multiple images, rotate the dial left when the picture is displayed full frame.

To end playback and return to shooting mode, press the shutter-release button halfway.
Deleting Pictures

To delete the current picture, press \( \text{\textdagger} \). Note that once deleted, pictures cannot be recovered.

1 Display the photograph.
Display the photograph you wish to delete as described on the preceding page.

2 Press \( \text{\textdagger} \).
A confirmation dialog will be displayed.

3 Delete the photograph.
Press \( \text{\textdagger} \) again to delete the picture and return to playback, or press \( \text{\textlarrow} \) to exit without deleting the picture.

Deleting Multiple Pictures
The Delete option in the playback menu (100) can be used to delete all or selected pictures.
The Shutter-Release Button
The camera has a two-stage shutter-release button. The camera focuses when the shutter-release button is pressed halfway. To take the photograph, press the shutter-release button the rest of the way down.

Focus: Press halfway
Shoot: Press the rest of the way down

Automatic Scene Selection
In auto mode, the camera automatically analyzes the subject and selects the appropriate scene. The selected scene is shown in the monitor.

Scene icon

**Portrait:** Human portrait subjects.

**Landscape:** Landscapes and cityscapes.

**Night portrait:** Portrait subjects framed against dark backgrounds.

**Close-up:** Subjects close to the camera.

**Night landscape:** Poorly-lit landscapes and cityscapes.

**Auto:** Subjects that do not fall into the categories listed above.
Using a Zoom Lens

Use the zoom ring to zoom in on the subject so that it fills a larger area of the frame, or zoom out to increase the area visible in the final photograph. During movie recording with the 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM, the zoom rate is unaffected by the speed with which the ring is rotated.

Face Priority

The camera detects and focuses on portrait subjects (face priority). A double yellow border will be displayed if a portrait subject is detected facing the camera (if multiple faces, up to a maximum of five, are detected, the camera will select the closest subject). Press the shutter-release button halfway to focus on the subject in the double yellow border. The border will clear from the display if the camera can no longer detect the subject (because, for example, the subject has looked away).
Recording and Viewing Movies

Recording Movies

1 Turn the camera on.
   Rotate the power switch to turn the camera on.

2 Choose a shooting mode.
   Rotate the mode dial to any of the positions shown at right.

3 Frame the opening shot.
   Frame the opening shot with your subject in the center of the display.

The Icon
A icon indicates that movies cannot be recorded.
4 Start recording.
Press the movie-record button to begin recording. A recording indicator, the time elapsed, and the time available are displayed while recording is in progress.

Audio Recording
Be careful not to cover the microphone and note that the built-in microphone may record sounds made by the camera or lens. Except when recording time-lapse or slow-motion movies in advanced movie mode, the camera focuses continuously; to avoid recording focus noise, select Single AF for Focus mode in the movie menu (102).

5 End recording.
Press the movie-record button again to end recording. Recording will end automatically when the maximum length is reached (40), the memory card is full, another mode is selected, the lens is removed, or the camera becomes hot (xiii).

Maximum Length
The camera can record movies up to 4 GB in size; note that depending on memory card write speed, shooting may end before this length is reached (109).
### Choosing a Shooting Mode

The features available in each mode are listed below.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>📸 Auto mode (<a href="#">25</a>)</td>
<td>Choose this mode to record HD movies while leaving the camera in charge of choosing settings. The camera automatically adjusts settings according to the subject and situation.</td>
</tr>
<tr>
<td>🎥 Creative mode (<a href="#">41</a>)</td>
<td>Record HD movies with the selected effect. Note, however, that the selected effect is not applied in the cases of HDR HDR, Soft, Easy panorama, Miniature effect, Toy camera effect, Cross screen, and Skin softening.</td>
</tr>
<tr>
<td>🏀 Sports mode (<a href="#">53</a>)</td>
<td>Record HD movies in exposure mode P.</td>
</tr>
<tr>
<td>🎥 Advanced movie mode (<a href="#">38</a>)</td>
<td>Choose an exposure mode (<a href="#">101</a>) and record HD movies at a selected shutter speed or aperture, or record movies in slow or fast motion or with other special effects.</td>
</tr>
</tbody>
</table>
Taking Photographs During Movie Recording

Press the shutter-release button all the way down to take a photograph without interrupting movie recording. Photographs taken during movie recording have an aspect ratio of 3 : 2.

Taking Photographs During Movie Recording

Up to 20 photographs can be taken with each movie shot. Please note that photographs can not be taken with slow-motion, 4K, or time-lapse movies in advanced movie mode.
**Viewing Movies**

Movies are indicated by a 🎥 icon in full-frame playback (28). Press the ⏯ button or tap the ▶ icon to start playback.

- **Icon/Length**
  - Icon: 🎥
  - Length: 128:16

- **Current position/total length**
  - Current position: 00:03
  - Total length: 00:10

The following operations can be performed:

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pause</td>
<td>⏯</td>
<td>Pause playback; the current position is shown at the top of the display. Playback can also be paused by tapping the monitor.</td>
</tr>
<tr>
<td>Play</td>
<td>⏯</td>
<td>Resume playback when the movie is paused or during rewind/advance.</td>
</tr>
<tr>
<td>Advance/rewind</td>
<td>⏯</td>
<td>Press ⏯ to rewind, ⏯ to advance. Speed increases with each press, from 2× to 4× to 8× to 16×. If playback is paused, the movie rewinds or advances one frame at a time; keep the button pressed for continuous rewind or advance.</td>
</tr>
<tr>
<td>Adjust volume</td>
<td>⏯</td>
<td>Rotate the command dial to adjust volume.</td>
</tr>
<tr>
<td>Return to full-frame playback</td>
<td>⏯</td>
<td>Press ⏯ or ⏯ to exit to full-frame playback.</td>
</tr>
</tbody>
</table>
Deleting Movies

To delete the current movie, press \( \text{Trash} \). A confirmation dialog will be displayed; press \( \text{Trash} \) again to delete the movie and return to playback, or press \( \text{Stop} \) to exit without deleting the movie. Note that once deleted, movies can not be recovered.

Recording Movies

Flicker, banding, or distortion may be visible in the display and in the final movie under fluorescent, mercury vapor, or sodium lamps or with subjects that are in motion, particularly if the camera is panned horizontally or an objects moves horizontally at high speed through frame (flicker and banding can be reduced by choosing a Flicker reduction option that matches the frequency of the local AC power supply, but note that the slowest shutter speed available is \( \frac{1}{100} \) s at 50 Hz, \( \frac{1}{60} \) s at 60 Hz; flicker reduction is not available with slow-motion movies). Bright light sources may leave after-images when the camera is panned. Jagged edges, color fringing, moiré, and bright spots may also appear. When recording movies, avoid pointing the camera at the sun or other strong light sources. Failure to observe this precaution could result in damage to the camera’s internal circuitry. The built-in flash will not fire during movie recording or when the camera is in advanced movie mode.
**Advanced Movie Options**

Advanced movie mode can be used not only to shoot HD movies, but also to record movies with a variety of effects. The following options can be accessed by pressing \( F \) and selecting **Advanced movie** in the \( F \) (feature) menu.

<table>
<thead>
<tr>
<th><strong>HD Movie</strong></th>
<th>Record HD movies in the exposure mode of your choice (101).</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>4K Movie</strong></td>
<td>Record movies at a frame size of ( 3840 \times 2160 ) pixels and a frame rate of 15 fps.</td>
</tr>
<tr>
<td><strong>Time-lapse Movie</strong></td>
<td>The camera automatically takes photographs at selected intervals and joins them together in a silent time-lapse movie.</td>
</tr>
<tr>
<td></td>
<td><strong>Recording</strong> [Approx. 25 min]</td>
</tr>
<tr>
<td></td>
<td><strong>Playback</strong> [Approx. 10 s]</td>
</tr>
<tr>
<td><strong>Slow Motion</strong></td>
<td>Record up to about three seconds of silent slow-motion footage. Slow-motion movies are recorded at 400 fps and play back at about 30 fps.</td>
</tr>
<tr>
<td></td>
<td><strong>Recording</strong> [Approx. 3 s]</td>
</tr>
<tr>
<td></td>
<td><strong>Playback</strong> [Approx. 40 s]</td>
</tr>
</tbody>
</table>
### Fast motion
Record silent fast-motion footage that plays back at about four times normal speed. Playback time is one quarter the recording time.

![Diagram: Recording time is approximately 20 minutes, playback time is approximately 5 minutes.]

### Jump cut
Record silent jump-cut movies. Recording pauses every other second for a drop-frame effect.

![Diagram: Recording time is approximately 20 minutes, playback time is approximately 10 minutes.]

### 4-second movie
Record a 4-second movie clip.

#### Adjusting Focus During Recording
To change focus during recording, tap the desired subject in the display. The camera will display the new focus area and adjust focus.

#### 4K Movies
4K movies can be viewed on a computer and edited using ViewNX-i, the latest version of which is available for download from the website listed below. Note that a high-performance system is required; for information, see the website below.

http://downloadcenter.nikonimglib.com/

When the camera is connected to a 4K-movie compatible television using an HDMI cable, 4K movies will play back in Full HD (1920 x 1080 pixels, 30p). Even if the television is 4K-movie compatible, 4K movies can not be viewed by inserting the camera memory card in a television microSD card slot.
The following table lists the approximate maximum recording times for individual movies shot at the default frame rate in each shooting mode.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Recording Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto, creative, P, S, A, M, sports modes</td>

<td>4 seconds</td>
</tr>
</tbody>
</table>
Other Shooting Modes

The camera offers a choice of modes that can be used to match settings to the subject or situation, take photos using special effects, control shutter speed and aperture, help with hard-to-time shots, or combine photos with brief movie vignettes.

Choosing a Creative Mode

Choose creative mode to match settings to the subject or situation or take photos using special effects.

1 Select **Cc** mode.
   Rotate the mode dial to **Cc** (creative).

2 Choose an option.
   Press **F** (feature) on the multi selector to display the **F** menu, then highlight **Creative** and press **OK**. Highlight an option suited to your subject and creative intent (42) and press **OK**.
Choosing a Mode That Matches the Subject or Situation

Choose a creative mode according to the subject or situation:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pop (POP)</td>
<td>Shoot bright, vivid pictures.</td>
</tr>
<tr>
<td>Retro (RETRO)</td>
<td>Choose for a faded, retro effect. Use the ( F ) (feature) menu (10) to choose a hue from red and yellow.</td>
</tr>
<tr>
<td>High-contrast monochrome (I)</td>
<td>Shoot in high-contrast black-and-white.</td>
</tr>
<tr>
<td>Nostalgic sepia (SEPIA)</td>
<td>Shoot in sepia for an antique look.</td>
</tr>
<tr>
<td>HDR (HDR)</td>
<td>Photograph high-contrast scenes (44).</td>
</tr>
</tbody>
</table>
| Soft (S)                      | Shoot photographs with a soft filter effect. Use the \( F \) menu to select the amount of softening and to choose how softening applies when a portrait subject is detected:  
  - **Filter strength**: Choose from \( H \) (high), \( N \) (normal), and \( L \) (low).  
  - **Portrait**: If \( ON \) is selected and the camera detects portrait subjects (up to three), softening will be adjusted to make them stand out. If \( OFF \) is selected, softening will be applied equally to the portrait subject and the background. |
<p>| Easy panorama (L)             | Shoot panoramas for later viewing on the camera (45).                       |
| Miniature effect (F)          | The top and bottom of each photo is blurred so that the subject appears to have been a diorama photographed at short range. Works best when shooting from a high vantage point. |
| Selective color (G)           | Take photos in which only a selected hue appears in color (48).            |
| Cross process (E)             | Choose a base color to create photographs with different hues. Use the ( F ) menu to choose a base color from red, green, blue, and yellow. |</p>
<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>

<tr>
<td>Portrait</td>
<td>Use for portraits with soft, natural-looking skin tones.</td>
</tr>
</tbody>
</table>
**HDR**

Details in highlights and shadows are preserved using HDR (high dynamic range). Each time the shutter-release button is fully pressed, the camera takes two shots in quick succession and combines them to preserve details in highlights and shadows in high-contrast scenes; the built-in flash does not fire. Some time may be required to process the pictures; the final photograph will be displayed when processing is complete.

![First exposure (darker)](image1) ![Second exposure (brighter)](image2) ![Combined HDR image](image3)

**Framing HDR Photographs**

The edges of the image will be cropped out. The desired results may not be achieved if the camera or subject moves during shooting. Depending on the scene, shading may be uneven and shadows may appear around bright objects or halos around dark objects.
**Easy Panorama**

Follow the steps below to shoot panoramas. During shooting, the camera focuses using auto-area AF (102); face detection (31) is not available. Exposure compensation can be used, but the built-in flash will not fire.

1 **Set focus and exposure.**
   Frame the start of the panorama and press the shutter-release button halfway. Guides will appear in the display.

2 **Start shooting.**
   Press the shutter-release button the rest of the way down and then lift your finger from the button. 1, 3, 4, and 2 icons will appear in the display to indicate the possible pan directions.

3 **Pan the camera.**
   Slowly pan the camera up, down, left, or right as shown below. Shooting will start when the camera detects the pan direction and a progress indicator will appear in the display. Shooting ends automatically when the end of the panorama is reached.
An example of how to pan the camera is shown below. Without changing your position, pan the camera in a steady curve either horizontally or vertically. Time the pan according to the option selected for **Image size** in the shooting menu: about 15 seconds are needed to complete the pan when **STD Normal panorama** is selected, about 30 seconds when **WIDE Wide panorama** is selected.

**Panoramas**

High-distortion wide-angle lenses may fail to produce the desired results. An error message will be displayed if the camera is panned too quickly or unsteadily. Note that because panoramas are composed of multiple images, the joins between images may be visible and the desired results may not be achieved with moving subjects or with neon lights or other subjects that exhibit rapid changes in color or brightness, subjects that are too close to the camera, poorly-lit subjects, and subjects such as the sky or sea that are a solid color or contain simple repeating patterns.

The completed panorama will be slightly smaller than the area visible in the display during shooting. No panorama will be recorded if shooting ends before the halfway point; if shooting ends after the halfway point but before the panorama is complete, the unrecorded portion will be shown in gray.
### Viewing Panoramas

Panoramas can be viewed by pressing OK when a panorama is displayed full frame (28). The start of the panorama will be displayed with the smallest dimension filling the display and the camera will then scroll through the picture in the original pan direction.

The following operations can be performed:

<table>
<thead>
<tr>
<th>To</th>
<th>Use</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pause</td>
<td><img src="Dia_Pause.png" alt="Pause" /></td>
<td>Pause playback. A navigation window will appear at the bottom of the display.</td>
</tr>
<tr>
<td>Play</td>
<td>OK</td>
<td>Resume playback when the panorama is paused or during rewind/advance.</td>
</tr>
<tr>
<td>Advance/rewind</td>
<td><img src="Dia_AdvRewind.png" alt="Advance/rewind" /></td>
<td>Press 1 to rewind, 2 to advance. If playback is paused, the panorama rewinds or advances a segment at a time; keep the button pressed for continuous rewind or advance.</td>
</tr>
<tr>
<td>Return to full-frame playback</td>
<td><img src="Dia_ReturnFrame.png" alt="Return to full-frame playback" /></td>
<td>Press 1 or 2 to exit to full-frame playback.</td>
</tr>
</tbody>
</table>
**Selective Color**

Take black-and-white pictures in which one hue appears in a color.

1 **Choose Select color.**
   Press F to display the F (feature) menu, then highlight **Select color** and press OK.

2 **Choose a color.**
   Use the multi selector to choose a color and press OK.

3 **Take pictures.**
   Press the shutter-release button all the way down to take pictures. Only the selected hue will appear in color; all other hues will be recorded in shades of gray.
**Taking Photos in P, S, A, and M Modes**

**P Programmed Auto**

In this mode, the camera automatically adjusts shutter speed and aperture for optimal exposure in most situations. This mode is recommended for snapshots and other situations in which you want to leave the camera in charge of shutter speed and aperture.

**Choosing a Combination of Shutter Speed and Aperture**

Although the shutter speed and aperture chosen by the camera will produce optimal results, you can also rotate the command dial to choose other combinations that will produce the same exposure (“flexible program”). ♣ is displayed while flexible program is in effect.

**ISO Sensitivity (P, S, A, and M Modes)**

When an “auto” option is selected for ISO sensitivity (101), the camera will automatically adjust sensitivity within the selected range if optimal exposure can not be achieved at the selected shutter speed or aperture.
**S Shutter-Priority Auto**

In shutter-priority auto, you choose the shutter speed while the camera automatically selects the aperture that will produce the optimal exposure. Use slow shutter speeds to suggest motion by blurring moving subjects, fast shutter speeds to “freeze” motion.

![Fast shutter speed (1/6000 s)](image1)

![Slow shutter speed (1 s)](image2)

### Choosing a Shutter Speed

Rotate the command dial to choose from shutter speeds between 30 s and 1/16000 s. Rotate the dial to the right for faster shutter speeds, to the left for slower shutter speeds.

### Continuous Shooting

The selected shutter speed may change when a frame rate of 10 fps or faster is selected in continuous shooting mode (73).
A Aperture-Priority Auto

In aperture-priority auto, you choose the aperture while the camera automatically selects the shutter speed that will produce the optimal exposure. Large apertures (low f-numbers) reduce depth of field, blurring objects behind and in front of the main subject. Small apertures (high f-numbers) increase depth of field, bringing out details in the background and foreground. Short field depths are generally used in portraits to blur background details, long field depths in landscape photographs to bring the foreground and background into focus.

Choosing an Aperture

Rotate the multi selector counterclockwise for larger apertures (lower f-numbers), clockwise for smaller apertures (higher f-numbers). The minimum and maximum values depend on the lens currently in use.
**M Manual**

In manual mode, you control both shutter speed and aperture.

**Choosing Shutter Speed and Aperture**

Adjust shutter speed and aperture with reference to the exposure indicator (32). Rotate the command dial to adjust shutter speed and the multi selector to adjust aperture: rotate the control to the right for faster shutter speeds or smaller apertures (higher f-numbers), to the left for slower shutter speeds and larger apertures (lower f-numbers). Shutter speeds can be set to values as fast as $\frac{1}{16,000}$ s or as slow as 30 s, or to “Bulb” to hold the shutter open indefinitely for a long time-exposure. Aperture can be set to values between the minimum and maximum for the lens.

**Continuous Shooting**

The selected shutter speed may change when a frame rate of 10 fps or faster is selected in continuous shooting mode (73).

**The Exposure Indicator**

When shutter speeds other than “Bulb” are selected, the exposure indicator shows whether the photograph would be under- or over-exposed at current settings.
Photographing Subjects in Motion (Sports Mode)

Choose 🏈 (sports) mode for sporting events and other scenes with fast-moving subjects. The camera takes pictures continuously while the shutter-release button is pressed (73).

1 Select sports mode.
   Rotate the mode dial to 🏈.

2 Display release mode options.
   Press 🖼 ( предусмотрен for display release mode options.

3 Select a frame rate.
   Highlight the desired frame rate and press 🎯. Frame rate is expressed in terms of the number of frames recorded per second (fps); choose from frame rates of approximately 5, 10, 20, 30, and 60 fps (5, 10, 20, 30, and 60, respectively). Except when 🏄 is selected, the maximum number of shots that can be recorded in a single burst is 20.

4 Compose the shot and start shooting.
   The camera takes pictures while the shutter-release button is held all the way down.
Sports Mode
The camera uses single-point, continuous-servo autofocus. The flash, AF-assist illuminator, face priority (102), and image review (102) turn off automatically.

Burst Photography
While photographs are being recorded to the memory card, the memory card access lamp will light (27). Depending on shooting conditions and memory card write speed, recording may continue for some time after shooting ends. If the battery is exhausted before all photographs are recorded, the shutter-release will be disabled and the remaining images transferred to the memory card.

Viewing Photographs
Each burst plays back as a group. This can be changed using the Sequence display options item in the playback menu (100).
Choosing the Moment (Best Moment Capture)

Choose a shot from 20 frames recorded to temporary storage shortly before or after the shutter is released (Active Selection), choose the moment to release the shutter as the scene plays back in slow motion (slow view), or let the camera choose the best shot based on composition and movement (Smart Photo Selector).

Choosing a Shot Manually (Active Selection)

Choose up to 20 shots from 20 frames recorded shortly before or after the shutter-release button is pressed all the way down.

Select 

Select mode.
Rotate the mode dial to (best moment capture).
2 Choose Active Selection.
Press F (feature) to display the F menu. Highlight **Best moment capture** and press OK, then highlight **Active Selection** and press OK.

3 Frame the photograph.
Compose the photograph with your subject in the center of the frame.

4 Begin buffering photographs.
Press the shutter-release button halfway to focus (26). A icon will be displayed as the camera begins recording images to the memory buffer.
5 **Shoot.**
Smoothly press the shutter-release button the rest of the way down. The 20 frames recorded to the buffer in the moments before and after the shutter-release button was pressed all the way down will be copied to temporary storage, and an indicator will appear at the top of the display.

6 **Select up to 20 frames.**
Press ‹ or › to scroll through the frames and press ‹ or › to select or deselect (the number of frames selected by default varies with the option selected for **Frames saved (default)** in the F (feature) menu). Selected images are shown by dots in the indicator.

7 **Save the selected frames.**
Press OK to save the selected frames to the memory card. The memory card access lamp will light while recording is in progress; note that depending on shooting conditions and memory card write speed, some time may be required to save the selected frames. Once recorded, the frames will be treated as a single group during playback.
**Best Moment Capture Mode**
Movies can not be recorded, and pressing the movie-record button has no effect. The flash can not be used.

**Active Selection**
At default settings, the frame recorded at the moment the shutter-release button was pressed all the way down is automatically marked with a 📸 icon in Step 6.
Choosing Your Moment (Slow View)

When slow view is selected in (best moment capture) mode, the camera captures a short sequence of still images and plays them back in slow motion so that you can choose the precise moment for a photograph.

1 Select mode.
   Rotate the mode dial to (best moment capture).

2 Select Slow view.
   Press (feature) to display the menu. Highlight **Best moment capture** and press , then highlight **Slow view** and press .

3 Frame the photograph.
   Compose the photograph with your subject in the center of the frame.
4 Press the shutter-release button halfway.
After focusing, the camera will record 20 frames to a temporary memory buffer. It will then slowly play them back in a continuous loop while the shutter-release button is kept pressed halfway. A □ icon is displayed in the monitor.

When the desired frame is displayed, press the shutter-release button the rest of the way down to record the current frame and discard the remaining images. The selected frame will be displayed for a few seconds when recording is complete. To delete the buffer contents and exit without recording a photograph, release the button without pressing it the rest of the way down.
Letting the Camera Choose the Moment
(Smart Photo Selector)

The Smart Photo Selector helps you capture a fleeting expression on the face of a portrait subject or other hard-to-time shots such as group photos in party scenes. Each time the shutter is released, the camera automatically selects the best shot and four best shot candidates based on composition and motion.

1 Select \( \mathbb{M} \) mode.
   Rotate the mode dial to \( \mathbb{M} \) (best moment capture).

2 Choose Smart Photo Selector.
   Press \( \mathbb{F} \) (feature) to display the \( \mathbb{F} \) menu. Highlight Best moment capture and press \( \mathbb{OK} \), then highlight Smart Photo Selector and press \( \mathbb{OK} \).
3 Frame the photograph.
Compose the photograph with your subject in the center of the frame.

4 Begin buffering photographs.
Press the shutter-release button halfway to focus (26). A icon will be displayed as the camera begins recording images to the memory buffer. The camera continuously adjusts focus to account for changes in the distance to the subject while the shutter-release button is pressed halfway.

5 Shoot.
Smoothly press the shutter-release button the rest of the way down. The camera will compare shots recorded to the buffer both before and after the shutter-release button was pressed all the way down, and select the best shot and four best shot candidates to the memory card; during playback, these frames will be treated as a single group. The best shot is displayed in the monitor when recording is complete; note that some time may be required.

Smart Photo Selector
The camera automatically chooses a scene mode appropriate to the subject.
Viewing Photos Taken with the Smart Photo Selector

Press \( \text{Playback} \) and use the multi selector to display photographs taken with the Smart Photo Selector (28; pictures taken with the Smart Photo Selector are indicated by a \( \text{Smart Photo Selector} \) icon). Of the photographs recorded by the Smart Photo Selector, only the best shot will be displayed (when you press \( \text{Next} \) to view the next picture, the camera will skip over the best shot candidates, with the result that the next picture displayed will not have a file number that immediately follows that of the current picture). To end playback and return to shooting mode, press the shutter-release button halfway.

Choosing the Best Shot

When a photograph taken with the Smart Photo Selector is displayed, you can choose the best shot by pressing \( \text{OK} \). Press \( \text{Up} \) or \( \text{Down} \) to view the other pictures in the sequence and press \( \text{OK} \) to select the current picture as the best shot. To return to normal playback, press \( \text{Playback} \).
Deleting Pictures
Pressing \( \text{\textregistered} \) when a picture taken with the Smart Photo Selector is selected displays a confirmation dialog; press \( \text{\textregistered} \) again to delete the best shot and the best shot candidates, or press \( \text{\textrightarrow} \) to exit without deleting the pictures. *Note that once deleted, pictures can not be recovered.*

Deleting Individual Photographs
Pressing the \( \text{\textregistered} \) button in the best shot selection dialog displays the following options; highlight an option using the multi selector and press \( \text{\textrightarrow} \) to select.

- **This image:** Delete the current photo (note that the picture currently selected as the best shot can not be deleted).
- **All except best shot:** Delete the best shot candidates, but not picture currently selected as the best shot.

A confirmation dialog will be displayed; to delete the selected image or images, highlight **Yes** and press \( \text{\textrightarrow} \).
Combining Photos with Brief Movie Vignettes (Motion Snapshot Mode)

Record brief movie vignettes with your photographs. Each time the shutter is released, the camera records a still image and about 1.6 s of movie footage. When the resulting “Motion Snapshot” is viewed on the camera, the movie will play back in slow motion over approximately 4 s, followed by the still image.

1 Select  mode.
   Rotate the mode dial to  (Motion Snapshot).

2 Frame the picture.
   Compose the photograph with your subject in the center of the frame.
3 Begin buffering.
Press the shutter-release button halfway to focus (26). A icon will be displayed as the camera begins recording footage to the memory buffer.

4 Shoot.
Smoothly press the shutter-release button the rest of the way down. The camera will record a photograph, together with about 1.6 s of movie footage beginning before and ending after the time the shutter-release button was pressed all the way down. Note that some time may be required. When recording is complete, the photograph will be displayed for a few seconds.

Motion Snapshot Mode
Movies can not be recorded using the movie-record button and the flash can not be used.
### Movie Before/After

Use the **Movie before/after** option in the **F** (feature) menu to choose whether the movie portions of Motion Snapshots end when the shutter-release button is pressed all the way or about 0.6 s after (page 65). If **1.6 s : 0 s** is selected, the photograph used for the Motion Snapshot will feature the last frame of the movie.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.0 s : 0.6 s</strong></td>
<td>Movie footage starts about a second before the shutter-release button is pressed all the way down and ends about 0.6 s after.</td>
</tr>
</tbody>
</table>

- **Shutter-release button pressed halfway**
- **Shutter-release button pressed all the way down**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.6 s : 0 s</strong></td>
<td>The camera records about 1.6 s of movie footage, ending when the shutter-release button is pressed all the way down.</td>
</tr>
</tbody>
</table>

- **Shutter-release button pressed halfway**
- **Shutter-release button pressed all the way down**
File Format

The File format option in the menu can be used to choose the file format for Motion Snapshots.

| NMS files | Motion Snapshots are recorded as a MOV file about 4 s long and a JPEG image. Motion Snapshots can only be viewed on the camera or using ViewNX-i (104). |
| MOV file  | Motion Snapshots are recorded as a MOV file about 10 s long that can be viewed in a variety of computer applications. The Motion Snapshot is not displayed automatically when shooting ends (66, 102); for information on viewing Motion Snapshot movies, see page 36. |

Audio

To record about four seconds of sound with Motion Snapshots beginning at the start of movie recording, use the multi selector and button to select Ambient for Audio in the (feature) menu. Motion Snapshots can also be recorded with background music (Background music) or no sound (None).
**Viewing Motion Snapshots**

Press \[\text{\texttt{\textdagger}}\] and use the multi selector to display a Motion Snapshot (28; Motion Snapshots are indicated by a \[\text{\textdagger}\] icon). Pressing the \[\text{\texttt{\textdaggerdbl}}\] button or tapping the \[\text{\textdagger}\] icon when a Motion Snapshot is displayed plays back the movie portion in slow motion over a period of about 4 s, followed by the photo; playback is accompanied by the audio track selected using the **Audio** option (68). To end playback and return to shooting mode, press the shutter-release button halfway.

**Deleting Motion Snapshots**

To delete the current Motion Snapshot, press \[\text{\texttt{\textbullet}}\]. A confirmation dialog will be displayed; press \[\text{\texttt{\textbullet}}\] again to delete the photo and movie and return to playback, or press \[\text{\texttt{\textdagger}}\] to exit without deleting the file. *Note that once deleted, Motion Snapshots can not be recovered.*
More on Photography

This section describes the other features you can use when taking pictures.

Live Image Control

Live image control lets you preview how changes to each control will affect the final photography. Live image controls are available in the modes shown at right (in modes other than auto, live image controls are available only when Scene auto selector is selected for exposure mode, 101). In advanced movie mode, live image controls apply to HD, fast-motion, jump-cut, and 4-second movies. In best moment capture mode, live image controls apply to Active Selection and slow view, but the Active D-Lighting control is not available.

1 Choose a live image control.
Press in the shooting display, then highlight an option and press to view the selected control. For more information, see page 71.

2 Choose a setting.
Rotate the multi selector to adjust the control, using the preview in the monitor as your guide. Press when the control is adjusted to your satisfaction. For information on using the creative palette, see page 72.
Active D-Lighting: Preserve details in highlights and shadows for natural contrast.

Active D-Lighting: High  Active D-Lighting: Low

Background softening: Soften background details to make your subject stand out, or bring both background and foreground into focus.

Background sharp  Background softened

Motion control (auto mode only): Suggest motion by blurring moving objects, or “freeze” motion to capture moving objects clearly.

Freeze motion  Blur motion
Brightness control: Make pictures brighter or darker.

Creative palette: To choose a creative effect, rotate the multi selector or use a finger to rotate the creative palette in the monitor. The selected effect is visible in the monitor and changes gradually as the palette is rotated (to reset the palette, tap Reset while the creative palette cursor is displayed).

Photographs and movies will be recorded with the selected effect, but note that tap shooting options are not available when the creative palette is displayed (86).

Live Image Control
Continuous shooting is not available (73) and the built-in flash cannot be used when live image control is in effect.
Continuous Mode

Shoot a continuous series (burst) of photographs.

1 Display release mode options.
   Press 4 (4) to display release mode options.

2 Select ő.
   Highlight ő (continuous) and press ő to display frame rate options.

3 Select a frame rate.
   Highlight the desired frame rate and press Î. Frame rate is expressed in terms of the number of frames recorded per second (fps); choose from frame rates of approximately 5, 10, 20, 30, and 60 fps (5, 10, 20, 30, and 60, respectively). Except when ő is selected, the maximum number of shots that can be recorded in a single burst is 20.

4 Frame your subject and shoot.
   Press the shutter-release button all the way down to shoot the burst.
Continuous Mode
Only one picture will be taken if the flash fires when 📷 is selected; at settings of 10, 20, 30, and 60 fps, the built-in flash will not fire.

While photographs are being recorded to the memory card, the memory card access lamp will light. Depending on shooting conditions and memory card write speed, recording may take some time. If the battery is exhausted before all photographs are recorded, the shutter release will be disabled and the remaining images transferred to the memory card.

Continuous shooting is not available with live image controls ( 📷 70) or in self-portrait, creative, best moment capture, advanced movie, or Motion Snapshot mode.

Viewing Pictures Taken in Continuous Mode
Each burst plays back as a group. This can be changed using the Sequence display options item in the playback menu ( 📷 100).

Single Frame
To take only one picture each time the shutter-release button is pressed all the way down, select 📷 (single frame) for release mode. Single frame is not available in sports mode.
**Self-Timer Modes**

The self-timer is used to delay shutter release until 10 or 2 seconds after the shutter-release button is pressed all the way down.

1. **Display release mode options.**
   Press \( \text{Mode Button} \) to display release mode options.

2. **Select \( \bigcirc \).**
   Highlight \( \bigcirc \) (self-timer) and press \( \text{OK} \) to display self-timer options.

3. **Select the desired self-timer option.**
   Use the multi selector to highlight \( \bigcirc \)10s or \( \bigcirc \)2s and press \( \text{OK} \).

4. **Mount the camera on a tripod.**
   Mount the camera on a tripod or place the camera on a stable, level surface.
5 Frame the photograph and shoot.
Press the shutter-release button half-way to focus, and then press the button the rest of the way down. The self-timer lamp will start to flash and a beep will begin to sound. Two seconds before the photo is taken, the lamp will stop flashing and the beeping will become more rapid.

Note that the timer may not start or a photograph may not be taken if the camera is unable to focus or in other situations in which the shutter can not be released. Turning the camera off cancels the self-timer.

Movie Mode
To record movies using the self-timer, select advanced movie mode and use the movie-record button to start the timer. Movie recording ends when the movie-record button is pressed a second time.

Raising the Flash
In P, S, A, or M mode, press the flash pop-up button to raise the flash before shooting. Shooting will be interrupted if the flash is raised while the timer is counting down.
The Built-in Flash

Use the built-in flash for additional lighting when the subject is poorly lit or to “fill-in” (illuminate) back-lit subjects. The built-in flash is available in the following shooting modes, but note that some camera settings automatically disable the built-in flash:

Auto Pop-up Modes

In (auto) mode and when an option other than HDR (HDR), easy panorama (p), night landscape (j), or landscape (l) is selected in (creative) mode, the flash will pop-up automatically and fire when required.

1 Choose a flash mode.

Press ( on the multi selector to display a list of flash modes, then use the multi selector to highlight the desired mode and press to select.

2 Take pictures.

Press the shutter-release button halfway to focus and the rest of the way down to shoot. The flash will pop up and fire when required.
Flash Modes

The following flash modes are available:

- **Flash Auto (auto flash)**: When lighting is poor or the subject is backlit, the flash pops up automatically when the shutter-release button is pressed halfway and fires as required.
- **Auto with red-eye reduction**: Use for portraits. The flash pops up and fires as required, but before it fires, the red-eye reduction lamp lights to help reduce “red-eye.”
- **Off (off)**: The flash does not fire.
**Manual Pop-up Modes**

In P, S, A, M, and self-portrait modes, the flash must be raised manually. The flash will not fire if it is not raised.

1. **Raise the flash.**
   - Press the flash pop-up button to raise the flash.

2. **Choose a flash mode.**
   - Press \( \bigcirc \) \( \uparrow \) on the multi selector to display a list of flash modes, then use the multi selector to highlight the desired mode and press \( \bigcirc \) to select.

3. **Take pictures.**
   - The flash will fire with every shot. To disable the flash, press it gently downward until it latches.
Flash Modes

The following flash modes are available:

- **N** (fill flash): The flash fires with every shot.
- **NY** (red-eye reduction): Use for portraits. The flash fires with every shot, but before it fires, the red-eye reduction lamp lights to help reduce “red-eye.”
- **NYp** (red-eye reduction with slow sync): As for “red-eye reduction”, above, except that shutter speed slows automatically to capture background lighting at night or under low light. Use when you want to include background lighting in portraits. Available only in modes **P** and **A**.
- **NP** (fill flash + slow sync): As for “fill flash”, above, except that shutter speed slows automatically to capture background lighting at night or under low light. Use when you want to capture both subject and background. Available only in modes **P** and **A**.
- **Nq** (rear-curtain sync): The flash fires just before the shutter closes, creating a stream of light behind moving light sources as shown below at right. Available only in modes **S** and **M**.

![Front-curtain sync](image1) ![Rear-curtain sync](image2)
Raising the Flash
When using the flash, be sure it is fully raised as shown at right. Do not touch the flash during shooting.

Lowering the Built-in Flash
To save power when the flash is not in use, press it gently downward until the latch clicks into place. Do not use force. Failure to observe this precaution could result in product malfunction.

The Flash-Ready Indicator
The flash-ready indicator (ledon) lights to show that the flash is fully charged when the shutter-release button is pressed halfway.
Using the Built-in Flash
If the flash is fired multiple times in quick succession, the flash and shutter may be temporarily disabled to protect the flash. Shooting can be resumed after a brief pause.

Objects close to the camera may be overexposed in photographs taken with the flash at high ISO sensitivities.

To avoid vignetting, remove lens hoods and shoot at ranges of at least 0.6 m (2 ft). Some lenses may cause vignetting at greater distances or obstruct the red-eye reduction lamp, interfering with red-eye reduction. The following illustrations show the effect of vignetting caused by shadows cast by the lens when the built-in flash is used.

Aperture, Sensitivity, and Flash Range
Flash range varies with sensitivity (ISO equivalency) and aperture.
**Self-Portraits**

To frame self-portraits in the monitor, reverse it as shown and follow the steps below.

1. **Reverse the monitor.**
   The camera will select self-portrait mode.
2 Adjust settings.
The following settings can be adjusted using touch controls:

- **Skin softening**
  - Tap to enable or disable skin softening. Enabling skin softening softens the look of skin for portrait subjects detected by the camera (up to a maximum of three), but note that the effect cannot be previewed in the monitor.

- **Self-timer**
  - Tap to cycle through self-timer settings as follows: 2 s timer, 10 s timer, and self-timer off.

- **Exposure compensation**
  - Tap the exposure indicator to adjust exposure compensation and tap OK to exit when adjustments are complete.

3 Shoot.
Tap the monitor to focus on the selected subject and shoot, or press the shutter-release button halfway to focus and all the way down to take photographs. Use the movie-record button to shoot movies. Movies are recorded at 1080/30p.

4 Exit self-portrait mode.
Moving the monitor out of the self-portrait position ends self-portrait mode.
Self-Portrait Mode

Touch-screen controls are always available in self-portrait mode regardless of the option selected for **Touch-screen controls** in the setup menu (p. 103). All other controls except the power switch and the shutter-release, movie-record, and flash pop-up buttons are disabled; use the flash pop-up button to raise the flash as required. The flash fires in *AUTO (auto + red-eye reduction) mode. Photographs taken in self-portrait mode with **NEF (RAW)** or **NEF (RAW) + JPEG fine** selected for image quality will be recorded as fine-quality JPEG images.

If **Off** is selected for **Self-portrait mode** in the setup menu (p. 103), the camera will not enter self-portrait mode when the monitor is reversed, and pictures will instead be taken in the mode selected with the mode dial.
## Tap Shooting Options

Tap the icon shown at right to choose the operation performed by tapping the monitor in shooting mode. The options available vary with the shooting and focus mode.

### Auto, Creative, and Self-Portrait Modes

Choose from the following options.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Icon]</td>
<td>When you tap a subject in the display, the camera will focus and take a picture.</td>

<tr>
<td>![Icon]</td>
<td>Tapping the display during shooting has no effect.</td>
</tr>
</tbody>
</table>
P, S, A, and M Modes

The operation performed by tapping the display depends on whether the camera is in autofocus or manual focus mode.

AutoFocus Modes

The following options are available in autofocus modes (AF-A, AF-S, and AF-C).

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Camera" /></td>
<td>When you tap a subject in the display, the camera will focus and take a picture.</td>
</tr>
<tr>
<td>![Display]</td>
<td>Tap the display to position the focus area when single-point AF is selected for AF-area mode (102). To focus, press the shutter-release button halfway.</td>
</tr>
<tr>
<td>![Subject]</td>
<td>Tap a subject to start tracking when subject tracking is selected for AF-area mode (102).</td>
</tr>
<tr>
<td>![Display Off]</td>
<td>Tapping the display during shooting has no effect.</td>
</tr>
</tbody>
</table>

Manual Focus Mode

The following options are available in manual focus mode.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Camera" /></td>
<td>When you tap the display, the camera will take a picture without first adjusting focus.</td>
</tr>
<tr>
<td>![Display]</td>
<td>Tap a subject to display it at a higher magnification in the monitor.</td>
</tr>
<tr>
<td>![Display Off]</td>
<td>Tapping the display during shooting has no effect.</td>
</tr>
</tbody>
</table>
Advanced Movie Mode

The operation performed by tapping the display depends on whether the camera is in autofocus or manual focus mode.

AutoFocus Modes

The following options are available in autofocus modes (AF-F and AF-S).

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>📷 AF</td>
<td>To focus when auto-area AF or single-point AF is selected for AF-area mode (📖 102), tap your subject in the display.</td>
</tr>
<tr>
<td>📷</td>
<td>Tap a subject to start tracking when subject tracking is selected for AF-area mode (📖 102).</td>
</tr>
<tr>
<td>📷 off</td>
<td>Tapping the display during shooting has no effect.</td>
</tr>
</tbody>
</table>

Manual Focus Mode

The following options are available in manual focus mode.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>📷</td>
<td>Tap a subject to display it at a higher magnification in the monitor.</td>
</tr>
<tr>
<td>📷 off</td>
<td>Tapping the display during shooting has no effect.</td>
</tr>
</tbody>
</table>

Unsupported Modes

Tap shooting options are not available in best moment capture and Motion Snapshot modes or when 4K movie is selected in advanced movie mode.

Taking Pictures Using Tap Shooting Options

Avoid tapping too hard. The camera may move when the shutter is released, blurring photographs.

The shutter-release button can be used to focus and take pictures even when the 📷 icon is displayed to show that tap shooting options are active. Use the shutter-release button to take photographs in continuous shooting mode (📖 73) and during movie recording. Tap shooting options can be used only to take pictures one at a time in continuous shooting mode and can not be used to take photographs during movie recording. In self-timer mode (📖 75), tapping the monitor locks focus and starts the timer; the photograph will be taken after ten or two seconds.
What Wi-Fi Can Do for You

The camera can connect via Wi-Fi wireless networks to a smart device (smartphone or tablet) running Nikon’s dedicated Wireless Mobile Utility app (93).

Download pictures

Remote control

Installing the Wireless Mobile Utility App

1 Find the app.
On the smart device, connect to the Google Play service, the App Store, or another app marketplace and search for “Wireless Mobile Utility”. For more information, see the instructions provided with the smart device.

2 Install the app.
Read the app description and install the app. A pdf manual for the Wireless Mobile Utility is available for download at the following URLs:
- **Android**: [http://nikonimlib.com/ManDL/WMAU/](http://nikonimlib.com/ManDL/WMAU/)
- **iOS**: [http://nikonimlib.com/ManDL/WMAU-ios/](http://nikonimlib.com/ManDL/WMAU-ios/)
Wireless Security

At default settings, wireless security is not enabled. Enable wireless security on the camera before connecting.

Enable Wireless Security

Follow the steps below to enable wireless security.

1 Select Wi-Fi connection type.
Select Wi-Fi connection type in the Wi-Fi menu.

2 Enable encryption.
Select Authentication/encryption to display encryption options. Highlight WPA2-PSK-AES and press OK to enable wireless security. A password will now be required when connecting to the camera; the default password is “NIKON_J5” (the current password can be viewed at any time by selecting Current settings in the Wi-Fi menu). To allow connection without a password, select Open for Authentication/encryption.
Changing the Password
The password can be changed as described below. The password can only be changed when WPA2-PSK-AES is selected for Authentication/encryption in the Wi-Fi menu.

1 Select Wi-Fi connection type > Password.
Select Wi-Fi connection type in the Wi-Fi menu, then highlight Password and press OK.

2 Enter a password.
The text-entry dialog shown at right will be displayed with the current password (by default, “NIKON_J5”) in the password area. Tap to highlight characters in the password area or rotate the command dial to move the cursor. To enter a new character at the current cursor position, tap the keys in the keyboard area or highlight characters using the multi selector and press OK. To switch between lower and upper case, numbers, and symbols, press the Fn button or tap the shift key.

Passwords can be from 8 to 36 characters long. After entering the password, tap OK. The password can be viewed at any time by selecting Current settings in the Wi-Fi menu.
**Security**

Although one of the benefits of a wireless-enabled device is that it allows others to freely connect for the wireless exchange of data anywhere within its range, the following may occur if security is not enabled:

- **Data theft:** Malicious third-parties may intercept wireless transmissions to steal user IDs, passwords, and other personal information.
- **Unauthorized access:** Unauthorized users may gain access to the network and alter data or perform other malicious actions. Note that due to the design of wireless networks, specialized attacks may allow unauthorized access even when security is enabled.

**Wi-Fi Connection Type**

In addition to authentication/encryption and password options, the **Wi-Fi connection type** menu contains the following items:

- **SSID:** Choose the camera SSID (network name). The process for entering the SSID is the same as that for editing the password.
- **Channel:** The wireless channel used for wireless connections. Press ‹ or › to choose from channels 1 through 11 and press OK to select.
- **Subnet mask/DHCP server IP address:** We recommend that you use the default sub-net mask (255.255.255.0) and DHCP server IP address (192.168.0.1).
- **Reset Wi-Fi settings:** Select Yes to reset wireless settings to their default values.

**Current Settings**

Select **Current settings** to view the current SSID, authentication/encryption settings, password, channel, subnet mask, and DHCP server IP address.
Connecting via Wi-Fi

Before connecting via Wi-Fi (wireless LAN), install the Wireless Mobile Utility on your compatible Android or iOS smart device.

Android and iOS: Connecting via SSID

Enable Wi-Fi on the smart device before connecting. For details, see the documentation provided with the smart device.

1 Press the (Wi-Fi) button.
The camera SSID will be displayed (the camera SSID can also be displayed by highlighting Connect to smart device in the Wi-Fi menu and pressing ).

2 Select the camera SSID.
On the smart device, select Settings > Wi-Fi and select the camera SSID to connect via Wi-Fi. If this is the first time you have connected since changing password settings (91), enter the new password when prompted.

3 Launch the Wireless Mobile Utility.
Launch the copy of Wireless Mobile Utility installed on the smart device. See Wireless Mobile Utility manual for details (89).
**Android: Connecting via NFC**

If the smart device supports NFC (Near Field Communication), a Wi-Fi connection can be established simply by touching the camera \( N \) (N-Mark) logo to the smart device NFC antenna. Before connecting, enable NFC and Wi-Fi on the smart device as described in the documentation provided with the smart device.

To connect via NFC, touch the camera \( N \) (N-Mark) logo to the smart device NFC antenna (for the location of the NFC antenna, see the documentation provided with the smart device). Maintain contact until the camera displays a message stating that an NFC device has been detected.

Once the smart device has been detected, a Wi-Fi connection will be established and the Wireless Mobile Utility will launch automatically. See the Wireless Mobile Utility manual for more information (page 89).
NFC
NFC (Near Field Communication) is an international standard for short-range wireless communications technology.

No Connection
If you are unable to establish a connection using NFC as described above, connect by manually selecting the camera SSID (page 93).

Wi-Fi
Before using the Wi-Fi function, read the warnings on pages xvi to xviii; to prevent loss of power while connected, you should also charge the camera battery. Do not use Wi-Fi in settings in which its use is prohibited. Note that the camera Wi-Fi function can not be used when a USB cable is connected.

Terminating Wi-Fi Connections
Wi-Fi will terminate automatically if the smart device does not initiate a connection within five minutes. To terminate Wi-Fi manually, press the MENU button to exit the Wi-Fi standby or connection display.
Uploading Photos to a Smart Device

Follow the steps below to upload photos from the camera to a smart device. Movies cannot be selected for upload.

**Uploading Photos One at a Time**

Use the (Wi-Fi) button to upload the photo currently displayed in full-frame playback.

1. Display the photo on the camera.
   Display the desired photo in full-frame playback.

2. Press the (Wi-Fi) button.
   Pressing the (Wi-Fi) button initiates a Wi-Fi connection; the camera SSID will be displayed in the monitor.

3. Select the camera SSID.
   On the smart device, select Settings > Wi-Fi and select the camera SSID to connect via Wi-Fi. If this is the first time you have connected since changing password settings (91), enter the new password when prompted.

4. Download the photo to the smart device.
   Launch the Wireless Mobile Utility on the smart device and follow the instructions on page 99 to download the photo.

The (Feature) Menu

Photos can also be uploaded by pressing (Feature) in full-frame playback and then highlighting Wi-Fi upload and pressing .
Uploading Multiple Selected Photos

To upload multiple selected photos, use the **Upload from camera** option in the Wi-Fi menu.

1. **Choose Upload from camera.**
   Press the **MENU** button to display the menus. Highlight **Upload from camera** in the Wi-Fi menu and press **OK**.

2. **Select photos.**
   Press **4** or **2** to scroll through pictures and press **OK** to select or deselect. You can also tap the monitor to select or deselect photos. Selected photos are indicated by a **&** icon.

3. **Press OK.**
   Press **OK** to complete the operation. The camera SSID will be displayed in the monitor.
4 Select the camera SSID.
On the smart device, select **Settings** > **Wi-Fi** and select the camera SSID to connect via Wi-Fi. If this is the first time you have connected since changing password settings (page 91), enter the new password when prompted.

5 Download the photos to the smart device.
Launch the Wireless Mobile Utility on the smart device and follow the instructions on page 99 to download the selected photos.

**Uploading Photos via NFC**
Photos displayed full frame or highlighted in the thumbnail list can be uploaded via NFC (page 94).

1 Display or highlight the desired photo.
Display the photo full frame or highlight it in the thumbnail list.

2 Connect.
Touch the camera 📺 (N-Mark) logo to the smart device NFC antenna until the camera displays a message stating that an NFC device has been detected.

3 Download the photos to the smart device.
The Wireless Mobile Utility will launch automatically on the smart device; follow the instructions on page 99 to download the selected photos.
To download the selected pictures to the smart device, establish a Wi-Fi connection with the camera (93, 94) and select **View photos** in the Wireless Mobile Utility. A confirmation dialog will be displayed; select **OK** to download the pictures selected with the camera.

**Android OS**

**iOS**
Menu Options

To display the playback, shooting, setup, and Wi-Fi menus, press the MENU button. Following menu options are available:

### Playback Menu Options

<table>
<thead>
<tr>

Connecting to a Computer

Copying Pictures to a Computer

Pictures can be copied to a computer using ViewNX-i.

Installing ViewNX-i

To upload and view pictures, download the latest version of the ViewNX-i installer from the following website and follow the on-screen instructions to complete installation. An Internet connection is required. For system requirements and other information, see the Nikon website for your region (xv).

http://downloadcenter.nikonimglib.com/

Capture NX-D

Use Nikon’s Capture NX-D software to fine-tune photos or to change settings for NEF (RAW) pictures and save them in other formats. Capture NX-D is available for download from:

http://downloadcenter.nikonimglib.com/

Motion Snapshots

ViewNX-i is required to view Motion Snapshots saved using the File format > NMS files option (68).
Copying Pictures to the Computer

Before proceeding, be sure you have installed ViewNX-i ( 104).

1 Connect the USB cable.
After turning the camera off and ensuring that a memory card is inserted, connect the supplied USB cable as shown and then turn the camera on.

⚠️ Use a Reliable Power Source
To ensure that data transfer is not interrupted, be sure the camera battery is fully charged.

⚠️ Connecting Cables
Be sure the camera is off when connecting or disconnecting interface cables. Do not use force or attempt to insert the connectors at an angle.

✔️ During Transfer
Do not turn the camera off or disconnect the USB cable while transfer is in progress.

✔️ USB Hubs
Transfer may not proceed as expected if the camera is connected via a USB hub or keyboard.
2 Start Nikon Transfer 2 component of ViewNX-i. 
If a message is displayed prompting you to choose a program, select Nikon Transfer 2.

Windows 7
If the following dialog is displayed, select Nikon Transfer 2 as described below.

1 Under **Import pictures and videos**, click **Change program**. A program selection dialog will be displayed; select **Import File using Nikon Transfer 2** and click **OK**.

2 Double-click **Import File**.

Windows 8.1
Windows 8.1 may display an AutoPlay prompt when the camera is connected. Tap or click the dialog and then tap or click **Import File/Nikon Transfer 2** to select Nikon Transfer 2.
3 Click **Start Transfer**.
At default settings, pictures on the memory card will be copied to the computer.

![Start Transfer](image)

4 **Terminate the connection.**
When transfer is complete, turn the camera off and disconnect the USB cable.

⚠️ **For More Information**
Consult online help for more information on using ViewNX-i.
Technical Notes

Read this chapter for information on compatible accessories, cleaning and storing the camera, and what to do if an error message is displayed or you encounter problems using the camera.

Optional Accessories

At the time of writing, the following accessories were available for your camera.

<table>
<thead>
<tr>
<th>Lenses</th>
<th>1 mount lenses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mount adapters</td>
<td>Mount Adapter FT1</td>
</tr>
<tr>
<td>Note: Some long telephoto lenses can not be used. See the Reference Manual for more information.</td>
<td></td>
</tr>
<tr>
<td>Power sources</td>
<td>Rechargeable Li-ion Battery EN-EL24 (18–19): Additional EN-EL24 batteries are available from local retailers and Nikon-authorized service representatives.</td>
</tr>
<tr>
<td></td>
<td>Battery Charger MH-31 (18): Recharge EN-EL24 batteries.</td>
</tr>
<tr>
<td></td>
<td>Power Connector EP-5F, AC Adapter EH-5b: These accessories can be used to power the camera for extended periods (EH-5a and EH-5 AC adapters can also be used). An EP-5F power connector is required to connect the camera to the EH-5b, EH-5a, or EH-5.</td>
</tr>
<tr>
<td>Body caps</td>
<td>Body Cap BF-N1000: The body cap keeps the dust shield free of dust when a lens is not in place.</td>

</tr>
</tbody>
</table>

Optional Accessories

Availability may vary with country or region. See our website or brochures for the latest information.
Approved Memory Cards

The following cards have been tested and approved for use in the camera. Cards with class 6 or faster write speeds are recommended for movie recording. Recording may end unexpectedly when cards with slower write speeds are used.

<table>
<thead>

</table>

¹ Check that any card readers or other devices with which the card will be used are SDHC-compliant. The camera supports UHS-I.

² Check that any card readers or other devices with which the card will be used are SDXC-compliant. The camera supports UHS-I.

Other cards have not been tested. For more details on the above cards, please contact the manufacturer.
## Storage and Cleaning

### Storage

If the camera will not be used for an extended period, remove the battery and store it in a cool, dry area with the terminal cover in place. To prevent mold or mildew, store the camera in a dry, well-ventilated area. Do not store your camera with naphtha or camphor moth balls or in locations that:
- are poorly ventilated or subject to humidities of over 60%
- are next to equipment that produces strong electromagnetic fields, such as televisions or radios
- are exposed to temperatures above +50 °C (122 °F) or below –10 °C (14 °F)

### Cleaning

<table>
<thead>
<tr>
<th>Part</th>
<th>Cleaning Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Camera body</td>
<td>Use a blower to remove dust and lint, then wipe gently with a soft, dry cloth. After using the camera at the beach or seaside, wipe off sand or salt with a cloth lightly dampened in distilled water and dry thoroughly. <strong>Important:</strong> Dust or other foreign matter inside the camera may cause damage not covered under warranty.</td>
</tr>
<tr>
<td>Lens</td>
<td>Lenses are easily damaged. Remove dust and lint with a blower. If using an aerosol blower, keep the can vertical to prevent the discharge of liquid. To remove fingerprints and other stains, apply a small amount of lens cleaner to a soft cloth and clean with care.</td>
</tr>
<tr>
<td>Monitor</td>
<td>Remove dust and lint with a blower. When removing fingerprints and other stains, wipe the surface lightly with a soft cloth or chamois leather. Do not apply pressure, as this could result in damage or malfunction.</td>
</tr>
<tr>
<td>Dust shield</td>
<td>The dust shield is easily damaged. Remove dust and lint with a blower.</td>
</tr>

*Do not use alcohol, thinner, or other volatile chemicals.*
Caring for the Camera and Battery: Cautions

**Do not drop:** The product may malfunction if subjected to strong shocks or vibration.

**Keep dry:** This product is not waterproof, and may malfunction if immersed in water or exposed to high levels of humidity. Rusting of the internal mechanism can cause irreparable damage.

**Avoid sudden changes in temperature:** Sudden changes in temperature, such as those that occur when entering or leaving a heated building on a cold day, can cause condensation inside the device. To prevent condensation, place the device in a carrying case or plastic bag before exposing it to sudden changes in temperature.

**Keep away from strong magnetic fields:** Do not use or store this device in the vicinity of equipment that generates strong electromagnetic radiation or magnetic fields. Strong static charges or the magnetic fields produced by equipment such as radio transmitters could interfere with the display, damage data stored on the memory card, or affect the product’s internal circuitry.

**Keep the lens mount covered:** Be sure to attach the body cap if the camera is without a lens.

**Do not touch the dust shield:** The dust shield covering the image sensor is easily damaged. Under no circumstances should you exert pressure on the shield or poke it with cleaning tools. These actions could scratch or otherwise damage the shield.

**Turn the product off before removing or disconnecting the power source:** Do not unplug the product or remove the battery while the product is on or while images are being recorded or deleted. Forcibly cutting power in these circumstances could result in loss of data or in damage to product memory or internal circuitry. To prevent an accidental interruption of power, avoid carrying the product from one location to another while the AC adapter is connected.
Cleaning: When cleaning the camera body, use a blower to gently remove dust and lint, then wipe gently with a soft, dry cloth. After using the camera at the beach or seaside, wipe off any sand or salt using a cloth lightly dampened in pure water and then dry the camera thoroughly.

Lenses are easily damaged. Dust and lint should be gently removed with a blower. When using an aerosol blower, keep the can vertical to prevent discharge of liquid. To remove fingerprints and other stains from the lens, apply a small amount of lens cleaner to a clean, soft cloth and wipe the lens carefully.

Storage: To prevent mold or mildew, store the camera in a cool, dry, well-ventilated area. If you are using an AC adapter, unplug the adapter to prevent fire. If the product will not be used for an extended period, remove the battery to prevent leakage and store the camera in a plastic bag containing a desiccant. Do not, however, store the camera case in a plastic bag, as this may cause the material to deteriorate. Note that desiccant gradually loses its capacity to absorb moisture and should be replaced at regular intervals.

To prevent mold or mildew, take the camera out of storage at least once a month. Turn the camera on and release the shutter a few times before putting it away.

Store the battery in a cool, dry place. Replace the terminal cover before putting the battery away.

Notes on the monitor: The monitor is constructed with extremely high precision; at least 99.99% of pixels are effective, with no more than 0.01% being missing or defective. Hence while these displays may contain pixels that are always lit (white, red, blue, or green) or always off (black), this is not a malfunction and has no effect on images recorded with the device.

Images in the monitor may be difficult to see in a bright light.

Do not apply pressure to the display, as this could cause damage or malfunction. Dust or lint on the display can be removed with a blower. Stains can be removed by wiping lightly with a soft cloth or chamois leather. Should the monitor break, care should be taken to avoid injury from broken glass and to prevent liquid crystal from the display touching the skin or entering the eyes and mouth.
Do not leave the lens pointed at the sun:
Do not leave the lens pointed at the sun or other strong light source for an extended period. Intense light may cause the image sensor to deteriorate or produce a white blur effect in photographs.

Moiré: Moiré is an interference pattern created by the interaction of an image containing a regular, repeating grid, such as the pattern of weave in cloth or windows in a building, with the camera image sensor grid. In some cases, it may appear in the form of lines. If you notice moiré in your photographs, try changing the distance to the subject, zooming in and out, or changing the angle between the subject and the camera.

Lines: Noise in the form of lines may in rare cases appear in pictures of extremely bright or backlit subjects.

Batteries: Batteries may leak or explode if improperly handled. Observe the following precautions when handling batteries:
• Use only batteries approved for use in this equipment.
• Do not expose the battery to flame or excessive heat.
• Keep the battery terminals clean.
• Turn the product off before replacing the battery.

• Do not use the battery at ambient temperatures below 0°C (32°F) or above 40°C (104°F); failure to observe this precaution could damage the battery or impair its performance. Capacity may be reduced and charging times may increase at battery temperatures from 0°C (32°F) to 10°C (50°F) and from 45°C (113°F) to 60°C (140°F); the battery will not charge if its temperature is below 0°C (32°F) or above 60°C (140°F).
• Remove the battery from the camera or charger when not in use and replace the terminal cover. These devices draw minute amounts of charge even when off and could draw the battery down to the point that it will no longer function. If the battery will not be used for some time, insert it in the camera and run it flat before removing it and storing it in a location with an ambient temperature of 15 °C to 25 °C (59 °F to 77 °F; avoid hot or extremely cold locations). Repeat this process at least once every six months.
• Turning the camera on and off repeatedly when the battery is fully discharged will shorten battery life. Batteries that have been fully discharged must be charged before use.
• The internal temperature of the battery may rise while the battery is in use. Attempting to charge the battery while the internal temperature is elevated will impair battery performance, and the battery may not charge or charge only partially. Wait for the battery to cool before charging.
• Continuing to charge the battery after it is fully charged can impair battery performance.
• A marked drop in the time a fully charged battery retains its charge when used at room temperature indicates that it requires replacement. Purchase a new EN-EL24 battery.
• Charge the battery before use. When taking photographs on important occasions, ready a spare EN-EL24 battery and keep it fully charged. Depending on your location, it may be difficult to purchase replacement batteries on short notice. Note that on cold days, the capacity of batteries tends to decrease. Be sure the battery is fully charged before taking photographs outside in cold weather. Keep a spare battery in a warm place and exchange the two as necessary. Once warmed, a cold battery may recover some of its charge.
• Used batteries are a valuable resource; recycle in accord with local regulations.

**The battery charger:** Charge the battery at ambient temperatures between 5°C (41°F) and 35°C (95°F). If the **CHARGE** lamp flashes quickly during charging, cease use immediately and take battery and charger to your retailer or a Nikon-authorized service representative.

Do not move the charger or touch the battery during charging. Failure to observe this precaution could in very rare instances result in the charger showing that charging is complete when the battery is only partially charged. Remove and reinsert the battery to begin charging again.

Use the charger with compatible batteries only. Unplug when not in use.

**Memory Cards:**
• Do not remove memory cards from the camera, turn the camera off, or remove or disconnect the power source during formatting or while data are being recorded, deleted, or copied to a computer. Failure to observe these precautions could result in loss of data or in damage to the camera or card.
• Do not touch the card terminals with your fingers or metal objects.
• Do not bend, drop, or subject to strong physical shocks.
• Do not apply force to the card casing. Failure to observe this precaution could damage the card.
• Do not expose to water, heat, high levels of humidity, or direct sunlight.
• Do not format memory cards in a computer.

Servicing the Camera and Accessories
The camera is a precision device and requires regular servicing. Nikon recommends that the camera be inspected by the original retailer or Nikon-authorized service representative once every one to two years, and that it be serviced once every three to five years (note that fees apply to these services). Frequent inspection and servicing are particularly recommended if the camera is used professionally. Any accessories regularly used with the camera, such as lenses, should be included when the camera is inspected or serviced.
**Troubleshooting**

If the camera fails to function as expected, check this list of common problems before consulting your retailer or Nikon representative.

**Battery/Display**

The camera is on but does not respond: Wait for recording or any other processing to end. If the problem persists, turn the camera off. If the camera still does not respond, remove and replace the battery or disconnect and reconnect the AC adapter, but note that this will delete any data not yet saved. Data already saved to the memory card are unaffected.

The display is off:
- The camera is off (\(\text{22}\)) or the battery is exhausted (\(\text{4, 18}\)).
- The display has turned off automatically to save power (\(\text{22}\)). The display can be reactivated by pressing the shutter-release button.
- The camera is connected to a computer (\(\text{105}\)) or television.

The camera turns off without warning:
- The battery is low (\(\text{4, 18}\)).
- The display has turned off automatically to save power (\(\text{22}\)). The display can be reactivated by pressing the shutter-release button.
- The camera's internal temperature is high (\(\text{xiii, 120}\)). Wait for the camera to cool before turning it on again.

Indicators are not displayed: Use the Display > Shooting and Display > Playback options in the setup menu to choose the information displayed (\(\text{102}\)).

**Shooting (All Modes)**

The camera takes time to turn on: Delete files or format the memory card.

The shutter-release is disabled:
- The battery is exhausted (\(\text{4, 18}\)).
- The memory card is full (\(\text{24}\)).
- The flash is charging (\(\text{81}\)).
- The camera is not in focus (\(\text{26}\)).
- You are currently filming a slow-motion, 4K, or time-lapse movie (\(\text{35}\)).
Only one picture is taken each time the shutter-release button is pressed in continuous release mode: is selected in continuous mode (73) and the built-in flash is raised.

Smudges appear in photographs: Clean the front and rear lens elements or the dust shield (110).

Flicker or banding appears in movies or in the display: Choose a Flicker reduction setting that matches the local AC power supply (103).

No flash: See page 82. The flash will not fire when off (78); in P, S, A, M, and self-portrait modes, the flash will not fire when lowered.

Menu items are grayed out and unavailable: Some options are only available in particular shooting or exposure modes.

Movies

Cannot record movies: The movie-record button can not be used to record movies in best moment capture or Motion Snapshot mode (58, 66).

No sound is recorded for movies:

- Microphone off is selected for Movie sound options > Microphone (101).
- Live audio is not recorded with time-lapse, slow-motion, fast-motion, or jump-cut movies (38) or with Motion Snapshots recorded with None selected for Audio (68).

Tap Shooting Options

The touch screen can not be used for shooting or focus:

- Touch shooting options are not available in best moment capture or Motion Snapshot mode.
- The edges of the display can not be used for shooting or focus. Tap closer to the center of the display.

Pictures are blurred: The camera may move when the display is tapped, which may under some conditions result in blurred pictures. Use both hands to hold the camera steady.
**Playback**

“Tall” (portrait) orientation photos are displayed in “wide” (landscape) orientation:
- Select **On** for Rotate tall (100).
- The photos were taken with Auto image rotation off (103).
- Camera was pointed up or down when the photo was taken.
- Photo is displayed in image review.

**Cannot hear movie sound:**
- Rotate the command dial right to raise the volume (36). If the camera is connected to a television, use the controls for the TV to adjust the volume.
- Live audio is not recorded with time-lapse, slow-motion, fast-motion, or jump-cut movies (38) or with Motion Snapshots recorded with None selected for Audio (68).

**Cannot delete images:** Remove protection from the files before deletion (100).

**Wi-Fi (Wireless Networks)**

Smart devices do not display the camera SSID (network name):
- Confirm that camera Wi-Fi is enabled (93).
- Try turning the smart device Wi-Fi off and then on again.

**Can not connect to smart devices using NFC (94):** Connect using the camera SSID (95).

**Miscellaneous**

**The date of recording is not correct:** Set the camera clock.

**Menu items are grayed out and unavailable:** Some options are only available at particular settings or when a memory card is inserted.
## Error Messages

This section lists the error messages that appear in the display.

### Storage

| **File format** | • **NEF (RAW)**: 12-bit, compressed  
• **JPEG**: JPEG-Baseline compliant with fine (approx. 1:4), normal (approx. 1:8) compression  
• **NEF (RAW) + JPEG**: Single photograph recorded in both NEF (RAW) and JPEG formats |
| **Picture Control system** | Standard, Neutral, Vivid, Monochrome, Portrait, Landscape; selected Picture Control can be modified |
| **Media** | microSD (micro Secure Digital), microSDHC, and microSDXC memory cards |
| **File system** | DCF 2.0, Exif 2.3, PictBridge |

### Shooting modes

- auto; ✈️ sports; 🎨 creative, with a choice of the following options: POP pop, RETRO retro, ✪ high-contrast monochrome, SEPIA nostalgic sepia, HDR HDR, ✧ easy panorama, ✲ soft, ✿ miniature effect, 🌟 selective color, ✤ cross process, ✧ toy camera effect, ✧ cross screen, ✧ fisheye, ✟ skin softening, ✧ night landscape, ✧ night portrait, 🏞️ landscape, 📸 close-up, and ✧ portrait; P programmed auto with flexible program, S shutter-priority auto, A aperture-priority auto, and M manual; 📷 best moment capture (Active Selection, 📷 slow view and 📷 Smart Photo Selector);  📷 advanced movie (HD HD movie, 4K 4K movie, ✡️ time-lapse movie, ✡️ slow motion, ✡️ jump cut, ✡️ fast motion and ✡️ 4-second movie); ✥ Motion Snapshot; ✥ self-portrait

### Shutter

| **Type** | Electronic shutter |
| **Speed** | $\frac{1}{16,000} – 30$ s in steps of $\frac{1}{2}$ EV; Bulb  
*Note*: Bulb ends automatically after approximately 2 minutes |
| **Flash sync speed** | Synchronizes with shutter at $X = \frac{1}{60}$ s or slower |
### Release

| Mode                        | Single frame, continuous  
|                            | Self-timer  
|                            | Interval timer shooting  

| Frame advance rate          | Approx. 5, 10, 20, 30, or 60 fps  
| Self-timer                  | 2 s, 10 s  

### Exposure

| Metering                   | TTL metering using image sensor  
| Metering method            | Matrix  
|                            | Center-weighted: Meters 4.5 mm circle in center of frame  
|                            | Spot: Meters 2 mm circle centered on selected focus area  

| Mode                                      | P programmed auto with flexible program; S shutter-priority auto; A aperture-priority auto; M manual; scene auto selector  
| Exposure compensation                     | –3 –+3 EV in increments of 1/3 EV  
| Exposure lock                             | Luminosity locked at metered value when shutter-release button is pressed halfway  
| ISO sensitivity (Recommended Exposure Index) | ISO 160; ISO 200–12800 in steps of 1 EV; 6400 (NR); 12800 (NR); auto ISO sensitivity control (ISO 160–6400, 160–3200, 160–800) available (user controlled in exposure modes P, S, A, and M)  
| Active D-Lighting                        | On, off  

### Focus

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Autofocus</strong></td>
<td>Hybrid autofocus (phase-detection/contrast-detect AF); AF-assist illuminator</td>
</tr>
</tbody>
</table>
| **Lens servo**           | • **Autofocus (AF):** Single AF (AF-S); continuous AF (AF-C); auto AF-S/AF-C selection (AF-A); full-time AF (AF-F)  
                           • **Manual focus (MF)**                                                      |
| **AF-area mode**         | Single-point, auto-area, subject tracking                                    |
| **Focus area**           | • **Single-point AF:** 171 focus areas; the center 105 areas support phase-detection AF  
                           • **Auto-area AF:** 41 focus areas                                           |
| **Focus lock**           | Focus can be locked by pressing shutter-release button halfway (single AF)   |
| **Face priority**        | On, off                                                                      |

### Flash

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Built-in flash**       | • **Auto and all creative modes other than HDR, easy panorama, landscape, and night landscape:** Flash pops up automatically and fires as required  
                           • **P, S, A, M, and self-portrait:** Manual                                  |
| **Guide Number (GN)**   | Approx. 5/16 (m/ft, ISO 100, 20 °C/68 °F; at ISO 160, Guide Number is approx. 6.3/20.7) |
| **Control**              | i-TTL flash control using image sensor                                       |
| **Mode**                 | Auto, auto + red-eye reduction, fill flash, fill flash + slow sync, red-eye reduction, red-eye reduction + slow sync, rear-curtain sync, rear curtain + slow sync, off |
| **Flash compensation**  | −3 − +1 EV in increments of ⅓ EV                                           |
| **Flash-ready indicator**| Lights when built-in flash unit is fully charged                            |
| **White balance**        | Auto, incandescent, fluorescent, direct sunlight, flash, cloudy, shade, preset manual, all except preset manual with fine tuning |

**Battery Life**

The number of shots or movie footage that can be recorded with fully-charged batteries varies with the condition of the battery, temperature, the interval between shots, and the length of time menus are displayed. Sample figures for EN-EL24 (850 mAh) batteries are given below.

- **Still images: Approximately 250 shots**
- **Movies: Approximately 60 minutes at 1080/30p**

  Measured according to CIPA standards at 23 ±2 °C (73.4 ±3.6 °F) with the camera at default settings, a fully-charged battery, a 1 NIKKOR VR 10–30mm f/3.5–5.6 PD-ZOOM lens, and a 16 GB SanDisk SDSDQXP-016G-J35A UHS-I microSDHC card. Value for still images obtained under the following test conditions: photographs taken at intervals of 30 s with the built-in flash fired with every other shot and the camera turned off and then on after every ten shots. Value for movies obtained under the following test conditions: a series of 17 minute movies with a file size of up to 4 GB were recorded; recording was only interrupted when temperature warning was displayed.

The following can reduce battery life:
- Keeping the shutter-release button pressed halfway
- Repeated autofocus operations
- Taking NEF (RAW) photographs
- Slow shutter speeds
- Using Wi-Fi
- Using vibration reduction mode with VR lenses
- Using zoom with power zoom lenses

To ensure that you get the most from rechargeable Nikon EN-EL24 batteries:
- Keep the battery contacts clean. Soiled contacts can reduce battery performance.
- Use batteries immediately after charging. Batteries will lose their charge if left unused.
