

Tripod Head Quick Release System

One tripod, several tripod heads, and tired of screwing them on and off?

We have the perfect solution for you.

Our new tripod head quick release system will give you the ability to quickly and easily switch between ball heads, pan heads, gimbal heads and more.

Our system consists of two parts – the tripod quick release and our tripod head quick release plates, both shown below.

Installation is simple. By installing the quick release on the top of your tripod and installing

one of the two quick release plates on your tripod head that best suits your needs – you will be up and going in no time.

The tripod head quick release plates offer a 3/8-16 mounting bolt, anti-rotation screw and two over-sized safety stops to ensure a perfect and safe assembly.

Depending upon the base size of your tripod heads, decide which assembly will work best for your needs and follow the steps below.

Tripod Quick Release Assembly

Tripod quick release is constructed from 6061-T6 aluminum and stainless. The mounting hole size will accept a 3/8-16 tripod stud. Also offered in the quick release is an anti-rotation lock screw, over-sized safety stop pockets and a captive quick release knob.

Please note: The KES tripod head quick release assembly does accept both the small and large KES tripod head mounting plates.

Tripod Head Quick Disconnect Plates

Follow the technique shown to decide which quick disconnect plate will suit your needs.

The **small** quick disconnect plate is recommended for tripod head bases 2.250 inches and under

The **large** quick disconnect plate is recommended for tripod heads 2.250 and over.
