

## USING YOUR SELFIE TRIGGER

The Vello Selfie Trigger works with an infrared signal that requires line of sight between the remote and the camera from up to 16 feet away. Make sure there are no physical obstructions between the camera and remote.

1. Set your camera for remote triggering. Consult your camera's manual for more information about the remote triggering feature.
2. Set up your shot and make sure everything is in focus.
3. Aim the remote at the infrared sensor on the front or back of your camera, and press the shutter release button.
